TO: Members of Actuarial Organizations Governed by the Standards of the Actuarial Standards Board and Other Persons Interested in Discounting of Property/Casualty Unpaid Claim Estimates

FROM: Actuarial Standards Board (ASB)

SUBJ: Actuarial Standard of Practice (ASOP) No. 20

This document contains the final version of a revision of ASOP No. 20, *Discounting of Property/Casualty Unpaid Claim Estimates*.

Background

ASOP No. 20 was originally adopted by the ASB in April 1992. The ASB charged the Casualty Committee with preparing this revision to ASOP No. 20 to reflect current terminology and practice, and to provide more consistency with the language in ASOP No. 43, *Property/Casualty Unpaid Claim Estimates*.

Exposure Draft

The exposure draft of this revised ASOP was issued in December 2010 with a comment deadline of May 1, 2011. The Casualty Committee carefully considered the five comment letters received and made changes in several sections in response. For a summary of the issues contained in these comment letters, please see appendix 2.

The ASB thanks everyone who took the time to contribute comments and suggestions on the exposure draft.

The ASB adopted this revised standard at its September 2011 meeting.

Thomas D. Levy	James F. Verlautz

The ASB establishes and improves standards of actuarial practice. These ASOPs identify what the actuary should consider, document, and disclose when performing an actuarial assignment. The ASB's goal is to set standards for appropriate practice for the U.S.

ACTUARIAL STANDARD OF PRACTICE NO. 20

DISCOUNTING OF PROPERTY/CASUALTY UNPAID CLAIM ESTIMATES

STANDARD OF PRACTICE

Section 1. Purpose, Scope, Cross References, and Effective Date

1.1 Purpose— This actuarial standard of practice (ASOP) provides guidance to actuaries when performing professional services relating to discounting an unpaid claim estimate to present value for property/casualty coverages. Any reference to "unpaid claims" in this standard includes (unless explicitly stated otherwise) the associated unpaid claim adjustment expense even when not accompanied by the estimation of unpaid claims.

1.2 Scope—This standard addresses the discounting to present value of unpaid claim estimates for property/casualty coverages. In determining the undiscounted unpaid claim estimate, the actuary should be guided by ASOP No. 43, *Property/Casualty Unpaid Claim Estimates*.

This standard applies when performing professional services related to developing discounted unpaid claim estimates only for events that have already occurred or will have occurred, as of an accounting date, exclusive of estimates developed solely for ratemaking purposes. This standard applies when estimating discounted unpaid claims for all classes of entities, including self-insureds, insurance companies, reinsurers, and governmental entities. This standard applies to estimates of gross amounts before recoverables (such as deductibles, ceded reinsurance, and salvage and subrogation), estimates of amounts after such recoverables, and estimates of amounts of such recoverables.

This standard applies only with respect to discounted unpaid claim estimates that are communicated as an actuarial finding in an actuarial document (as described in ASOP No. 41, *Actuarial Communications*). Actions taken by the actuary's principal regarding such estimates are beyond the scope of this standard.

The terms "reserves" and "reserving" are sometimes used to refer to "unpaid claim estimates" and "unpaid claim estimate analysis." In this standard, the term "reserve" is limited to its strict definition as an amount booked in a financial statement. Services described above are covered by this standard, regardless of whether the actuary refers to the work performed as "reserving," "estimating unpaid claims" or any other term.

This standard does not address the appropriateness of using discounted unpaid claim estimates in specific contexts.

This standard does not address the appropriateness of including a risk margin in specific contexts.

This standard does not apply to the estimation of items that may be a function of discounted unpaid claim estimates or claim outcomes, such as (but not limited to) loss-based taxes, contingent commissions and retrospectively rated premiums.

This standard does not apply to unpaid claims under a "health benefit plan" covered by ASOP No. 5, *Incurred Health and Disability Claims*, ASOP No. 6, *Measuring Retiree Group Benefit Obligations*, or included as "health and disability liabilities" under ASOP No. 42, *Determining Health and Disability Liabilities Other Than Liabilities for Incurred Claims*. However, this standard does apply to health benefits associated with state or federal workers' compensation statutes and liability policies.

An actuary may develop a discounted unpaid claim estimate in the context of issuing a written statement of actuarial opinion regarding property/casualty loss and loss adjustment expense reserves. In such context, the actuary should be guided by ASOP No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*, to address additional considerations associated with the issuance of such a statement.

If the actuary departs from the guidance set forth in this standard in order to comply with applicable law (statutes, regulations, and other legally binding authority) or for any other reason the actuary deems appropriate, the actuary should refer to section 4.

1.3 Cross References—When this standard refers to the provisions of other documents, the reference includes the referenced documents as they may be amended or restated in the future, and any successor to them, by whatever name called. If any amended or restated document differs materially from the originally referenced document, the actuary should consider the guidance in this standard to the extent it is applicable and appropriate.

1.4 Effective Date—This standard is effective for any actuarial work product covered by this standard's scope issued on or after January 1, 2012.

Section 2. Definitions

The terms below are defined for use in this actuarial standard of practice.

2.1 Book Value—The value of an asset or assets, as included in a financial statement or other financial reporting context.

2.2 Discounted Unpaid Claim Estimate—The actuary's estimate of the present value of the

unpaid claim estimate.

2.3 Investment Risk—Uncertainty surrounding the realization of a specified investment income stream.

2.4 Present Value—The value on a given date of a future payment or series of future payments, discounted to reflect the time value of money.

2.5 Risk-Free Interest Rate—The theoretical rate of return of an investment with zero risk with respect to payment timing and amount.

2.6 Risk Margin—A provision for uncertainty in an unpaid claim estimate.

2.7 Unpaid Claim Estimate—The actuary's estimate of the obligation for future payment resulting from claims due to past events. For clarity and unless otherwise indicated, this estimate is on an undiscounted basis and the terms "unpaid claim estimate" and "undiscounted unpaid claim estimate" are used interchangeably throughout this standard.

Section 3. Analysis of Issues and Recommended Practices

3.1 Appropriateness in Context—The actuary should be aware of the context in which the discounted unpaid claim estimate is to be used. The actuary should use a methodology and assumptions in the discounting process that are appropriate for that context.

3.2 Relative Significance of Assumptions—If both an undiscounted unpaid claim estimate and a discounted unpaid claim estimate are determined, the actuary should be aware of the differences in the relative significance of various assumptions between undiscounted and discounted unpaid claim estimates. For example, a development factor at an advanced maturity (such as a "tail factor") is less significant to a discounted unpaid claim estimate than to an undiscounted unpaid claim estimate. Conversely, a change in the timing of loss payments may be more significant to a discounted unpaid claim estimate.

3.3 Payment Timing for Discounting—The actuary should derive the discounted unpaid claim estimate based on assumptions regarding the timing of future payments. A range of estimates for the timing of payments may be reasonable.

3.3.1 Assumptions—The actuary should consider the reasonableness of the assumptions underlying the estimated timing of future payments. Assumptions generally involve significant professional judgment. Assumptions may be implicit or explicit, and may involve interpreting past data or projecting future trends. The actuary should use assumptions that, in the actuary's professional judgment, have no known significant bias to underestimation or overestimation of the identified intended measure and are not internally inconsistent.

The actuary should consider the sensitivity of the timing of future payments to reasonable alternative assumptions. (See section 4.1(f) for related disclosure requirements.)

The actuary may provide the principal with results based on a set of assumptions that differ from the actuary's assumptions, subject to appropriate disclosure as described in section 4.1.

3.3.2 Reconciliation of Estimates—The cumulative amount of payments used by the actuary for discounting should be consistent with the amount of the unpaid claim estimate, even if the latter has not been derived by techniques based on payment data.

3.3.3 Consistency of Assumptions—The actuary should use assumptions in estimating the timing of payments that are consistent with the assumptions used in developing the undiscounted unpaid claim estimate to the extent appropriate.

3.3.4 Consistency with Expected Future Conditions—The actuary should determine estimates of the timing of payments that are consistent with conditions expected to prevail during the future payment period. If such conditions are expected to be different from those prevailing during the historical evaluation period, the actuary should make appropriate adjustments.

3.3.5 Data—The actuary should refer to ASOP No. 23, *Data Quality*, with respect to selection of data to be used, relying on data supplied by others, reviewing data, and using data.

3.3.6 Recoverables—The actuary should consider to the extent appropriate the timing and amount of expected recoverables (for example, deductibles, ceded reinsurance, and salvage and subrogation) when projecting the timing of future payments.

3.3.7 Unpaid Claim Components—The actuary should consider whether such components that have a material effect on the timing and amount of future payments have been reflected appropriately when projected future payments are comprised of multiple components (for example, line of business, accident year, claim adjustment expense).

3.4 Discount Rates—Projected future payments are discounted to present value using discount rate assumptions.

3.4.1 Discount Rate Basis—Discounted unpaid claim estimates may be used in a variety of contexts and the appropriate selected discount rates are a function of the context. A range of discount rates may be reasonable. Common approaches to selecting a discount rate include:

a. Risk-Free Approach—The selected discount rates in this approach approximate risk-free interest rates. Risk-free interest rates can be approximated by rates of investment return available on fixed income assets having low investment risk and timing characteristics comparable to those assumed in the discounting of unpaid claim estimates.

b. Portfolio Approach—The selected discount rates in this approach are based on the anticipated return from a selected portfolio of assets. The actuary should consider to the extent appropriate the relationships between the book and market values of assets, between the anticipated portfolio rates of return and market rates of return, and between the maturities of the assets and the estimated timing of future payments on unpaid claims. The portfolio rates of return should be net of investment expenses.

c. Discount Rates Requested by Another Party— The actuary is responsible for the discount rates employed in preparing the actuarial findings unless the actuary appropriately discloses otherwise. The actuary should be guided by section 3.4.4 of ASOP No. 41, when using discount rates requested by another party.

3.4.2 Effect of Income Taxes—The actuary should consider whether the discount rates should be consistent with investment returns before or after the payment of income taxes.

3.5 Ranges—The actuary should consider the uncertainty in the discounted unpaid claim estimate when determining a range of estimates. The actuary should recognize that the uncertainty inherent in discounted unpaid claim estimates generally is different than the uncertainty inherent in undiscounted unpaid claim estimates.

Section 4. Communications and Disclosures

4.1 Actuarial Communication—When issuing an actuarial communication subject to this standard, the actuary should consider the intended purpose or use of the discounted unpaid claim estimate and refer to ASOP Nos. 23 and 41 for additional guidance on disclosure.

In addition, consistent with the intended purpose or use, the actuary should disclose the following in an appropriate actuarial communication:

a. the assumptions as to selected discount rates and the basis for those assumptions, including the effect of income taxes, as described in section 3.4;

b. to the extent practical, the difference between the undiscounted unpaid claim

estimate and the discounted unpaid claim estimate;

c. whether the discounted unpaid claim estimate includes a risk margin, and if so, the basis for the risk margin (for example, stated percentile of distribution or stated percentage load above expected);

d. significant limitations, if any, that constrained the actuary's discounted unpaid claim estimate analysis such that, in the actuary's professional judgment, there is a significant risk that a more in-depth analysis would produce a materially different result;

e. the following dates: (1) the accounting date of the discounted unpaid claim estimate, which is the date used to separate paid versus unpaid claim amounts; (2) the valuation date of the discounted unpaid claim estimate, which is the date through which transactions are included in the data used in the discounted unpaid claim estimate analysis; and (3) the review date of the discounted unpaid claim estimate, which is the cutoff date for including information known to the actuary in the discounted unpaid claim estimate analysis, if appropriate;

f. specific significant risks and uncertainties, if any, with regard to actual timing of future payments;

g. significant events, assumptions, or reliances, if any, underlying the discounted unpaid claim estimate that, in the actuary's professional judgment, have a material effect on the discounted unpaid claim estimate, including assumptions regarding the accounting basis or application of an accounting rule;

h. the disclosure in ASOP No. 41, section 4.2, if any material assumption or method was prescribed by applicable law (statutes, regulations, and other legally binding authority);

i. the disclosure in ASOP No. 41, section 4.3, if the actuary states reliance on other sources and thereby disclaims responsibility for any material assumption or method selected by a party other than the actuary; and

j. the disclosure in ASOP No. 41, section 4.4, if, in the actuary's professional judgment, the actuary otherwise deviated materially from the guidance of this ASOP.

4.2 Additional Disclosures—In certain cases, consistent with the intended purpose or use, the actuary may need to make the following disclosures in addition to those in section 4.1:

a. When the actuary specifies a range of estimates, the actuary should disclose the basis of the range provided.

b. When the unpaid claim estimate is an update of a previous estimate, the actuary should disclose changes in assumptions, procedures, methods or models that the actuary believes to have a material impact on the discounted unpaid claim estimate and the reasons for such changes to the extent known by the actuary. This standard does not require the actuary to measure or quantify the impact of such changes.

Appendix 1

Background and Current Practices

Note: This appendix is provided for informational purposes, but is not part of the standard of practice.

Background

In 1992, the ASB issued ASOP No. 20, *Discounting of Property and Casualty Loss and Loss Adjustment Expense Reserves*. Prior to that, there was no standard of practice concerning discounting of property and casualty loss and loss adjustment expense reserves. Since the issuance of ASOP No. 20, the ASB has issued ASOP No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves* and, ASOP No. 43, *Property/Casualty Unpaid Claim Estimates*. This revision provides more consistency with the language in these two ASOPs, and is more relevant now with the increased use of discounting related to fair value calculations.

The appropriateness of discounting unpaid claim estimates in various financial reporting contexts is a controversial topic. Traditionally, property and casualty unpaid claim estimates have not been discounted except in certain narrowly defined circumstances. However, the issue of discounting reserves has been discussed for many years. For example, the issue appeared in the 1927 *Proceedings of the Casualty Actuarial Society,* in an article by Benedict D. Flynn. In 1986, the U.S. Congress passed legislation prescribing discounting procedures for income-tax purposes. In the past, most state insurance departments prohibited discounting; some departments have permitted discounting for some lines of business. The National Association of Insurance Commissioners has consistently been opposed to discounting except in certain specific circumstances. The accounting profession is studying the issue as it relates to financial reporting.

Historically, the issue of reserve discounting has been closely related to the issue of risk margins. Undiscounted reserves are often considered to contain a needed implicit risk margin in the difference between undiscounted reserves and discounted reserves. If discounted reserves were incorporated into financial statements, many would argue that an explicit risk margin would become necessary. Suggestions for the treatment of that risk margin include treatment as a liability item, a segregated surplus item, or an off-balance-sheet item.

The discounting of unpaid claim estimates and risk margins are both important elements in estimating the fair value of unpaid claim estimates, yet neither is explicitly included in most current financial reporting. Much of the rationale for unpaid claim estimate discounting is related to the issue of fair value; however, some believe that discounted unpaid claim estimates without risk margin may be a poorer estimate of fair value than undiscounted unpaid claim estimates.

Unpaid claim estimate discounting calculations are commonly performed in conjunction with

valuations of insurance companies for purposes such as acquisition or merger, or with transfers of portfolios or unpaid claims. In these instances and for other reasons, there are increasing numbers of circumstances where actuaries are asked to determine or evaluate discounted unpaid claim estimates.

Current Practices

Actuaries are currently guided by the existing ASOP No. 20. Other ASOPs issued by the Actuarial Standards Board pertaining to discounting of unpaid loss and loss adjustment expense estimates include ASOP No. 23, *Data Quality*; ASOP No. 36; ASOP No. 41, *Actuarial Communications*; and ASOP No. 43. In addition, disclosures related to discounting are required by the National Association of Insurance Commissioners, and guidance may be forthcoming as part of new International Financial Reporting Standards that are currently under development.

Numerous educational papers are in the public domain that are relevant to the topic of discounting and risk loads, including those published by the Casualty Actuarial Society. While these may provide useful educational guidance to practicing actuaries, these are not actuarial standards and are not binding.

Appendix 2

Comments on the Exposure Draft and Responses

The exposure draft of this ASOP, *Discounting of Property/Casualty Unpaid Claim Estimates*, was issued in December 2010 with a comment deadline of May 1, 2011. Five comment letters were received, one of which was submitted on behalf of multiple commentators. For purposes of this appendix, the term "commentator" may refer to more than one person associated with a particular comment letter. All comments were carefully considered and the Casualty Committee and ASB reviewed (and modified, where appropriate) the proposed changes.

Summarized below are the significant issues and questions contained in the comment letters and the responses.

The term "reviewers" in appendix 2 includes the Casualty Committee and the ASB. Also, unless otherwise noted, the section numbers and titles used in appendix 2 refer to those in this revised standard.

SECTION 1. PURPOSE, SCOPE, CROSS REFERENCES, AND EFFECTIVE DATE	
Section 1.2, Scope	
Comment	One commentator suggested that the standard be modified to apply broadly to loss sensitive estimates, such as retrospective premiums or the payment of claims-related assessments.
Response	The reviewers note the focus of this standard was on discounting unpaid claim estimates and, therefore, section 1.2 reiterates similar exclusions found in section 1.2 of ASOP No. 43, *Property/Casualty Unpaid Claim Estimates*, which does not apply to loss sensitive estimates.
SECTION 2. DEFINITIONS	
Comment	One commentator noted that the terms "payments" and "future payments" were used throughout the document and suggested that the terms be defined to include the inflow of recoveries in order for it to be clear that potential inflows should be considered.
Response	Section 1.2 identifies that this standard applies to estimates of gross amounts before recoverables (such as deductibles, ceded reinsurance, and salvage and subrogation), estimates of amounts after such recoverables, and estimates of amounts of such recoverables. As such, the reviewers believe that it is clear that payments and future payments should consider potential inflows and outflows depending on the context.
Comment	One commentator suggested that a definition for discount rate be added to the standard.
Response	The reviewers do not believe that a definition is necessary because it is sufficiently described in sections 2.4 and 3.4.
Section 2.1, Book Value	
Comment	One commentator suggested that the definition of book value be removed because the term is not used in the standard.
Response	The reviewers note the definition is referenced in section 3.4.1(b) and thus made no change.

Section 2.3, Investment Risk	
Comment	Several commentators suggested expanding the list of examples of investment risk to include market risk and reinvestment risk.
Response	The reviewers believe that the definition is sufficiently clear without the need for examples. The examples given previously with credit risk and liquidity risk, and their associated definitions were removed in order to avoid the misunderstanding that they were an exhaustive list.
SECTION 3. ANALYSIS OF ISSUES AND RECOMMENDED PRACTICES	
Section 3.1, Appropriateness in Context	
Comment	Several commentators suggested that there may be circumstances where the actuary may use more than one methodology when performing the discounting calculation. For example, multiple methods may be used to determine a reasonable range of discounted unpaid claim estimates.
Response	The reviewers believe that actuaries generally use only one methodology when discounting unpaid claim estimates; however, the reviewers acknowledge that an actuary may want to use more than one methodology in some circumstances. The reviewers believe that use of more than one methodology in this context would be characterized as "a methodology" and hence no change was made.
Section 3.3, Payment Timing for Discounting	
Comment	Commentators interpreted the wording of section 3.3 to imply that an actuary must explicitly project the timing of future payments and that an implicit assumption regarding the timing might be a violation of the standard.
Response	The reviewers acknowledge that the timing of future payments might be estimated implicitly and rephrased this paragraph to avoid confusion.
Section 3.4, Discount Rates	
Comment	One commentator suggested that the term "discount rate" was incorrect and this standard should use "interest rate" in its place.
Response	The reviewers disagree. The term discount rate was chosen to be consistent with other standards of practice as well as other practice areas.
Comment	One commentator interpreted the approaches in section 3.4.1 to be a complete and exhaustive list and asked if that is what was intended.
Response	The approaches are not intended to be an exhaustive list. This section was rephrased to indicate that there may be other approaches.
Comment	One commentator suggested that some liability cash flows may extend beyond the normal range of asset maturity dates and that this standard provides no guidance in these situations.
Response	The reviewers believe techniques to address this situation, such as extrapolation, are consistent with the guidance in sections 3.4.1(a) and 3.4.1(b), and made no change.
Comment	One commentator requested that reference be made to U.S. Treasuries when discussing the use of a risk-free rate for the discount rate.
Response	The reviewers do not believe that sovereign debt or any other asset can be unequivocally defined as having low investment risk even though U.S. Treasuries have been historically viewed as low-risk. The reviewers believe that the risk-free approach in section 3.4.1(a) provides sufficient guidance for the actuary when approximating a

	risk-free interest rate.
Comment	One commentator suggested that a discount rate might be based on a benchmark portfolio of assets and questioned whether or not this was accepted practice according to the standard.
Response	The reviewers note that section 3.4.1(b) does not prescribe whether the portfolio of assets is derived from actual assets or a benchmark. The use of either type of asset will depend on the context as mentioned in section 3.4.1.
Comment	Several commentators objected to the phrase that it is "generally expected" that the actuary is responsible for the discount rates employed in preparing the actuarial findings and suggested section 3.4.1(c) be rephrased accordingly.
Response	The reviewers agree and rephrased section 3.4.1(c).
Section 3.5, Ranges	
Comment	One commentator noted that there are many types of ranges, such as a range of best estimates or a range of possible outcomes, and this section was not clear which type of range was being referenced.
Response	The reviewers changed the word "range" to "range of estimates" in this section. The type of range used will depend on the context and, according to section 4.2(a), the actuary should disclose the basis of the range, if one is provided.
Section 3.6, Risk Margins [Exposure Draft]	
Comment	One commentator disagreed that an undiscounted unpaid claim estimate contains a margin.
Response	This section was removed and a sentence was added to section 1.2, which states: "This standard does not address the appropriateness of including a risk margin in specific contexts."
SECTION 4. COMMUNICATIONS AND DISCLOSURES	
Section 4.1, Actuarial Communication	
Comment	One commentator suggested that the amount of the risk margin should be disclosed to the extent practical.
Response	The reviewers believe that in certain cases it may be difficult to quantify the amount of a risk margin and language requiring disclosure of the amount "to the extent practical" could place an undue burden on the actuary.
Comment	One commentator suggested deleting sections (d), (e), and (g) because they are duplicative with other standards.
Response	The reviewers acknowledge that the wording is similar to ASOP No. 43 but these sections are used in this standard to address the context of discounted unpaid claims estimates.
Comment	One commentator suggested that in some cases an estimate is discounted to a different date that may not coincide with the accounting date and suggested that section 4.1(e) include the concept of a separate "discount to" date.
Response	The reviewers agree that there may be circumstances where the estimate is discounted to a date different from the accounting date and believe this standard does not prevent the actuary from using and disclosing the different date. In addition, section 4.1(g) would require the disclosure of a different "discount to" date by virtue of it being a significant assumption underlying the discounted unpaid claim estimate.

December 2010

TO: Members of Actuarial Organizations Governed by the Standards of Practice of the Actuarial Standards Board and Other Persons Interested in Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves

FROM: Actuarial Standards Board (ASB)

SUBJ: Actuarial Standard of Practice (ASOP) No. 36

This document contains the final version of a revision of ASOP No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves.*

Background

In March 2000, the Actuarial Standards Board originally adopted ASOP No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves* (Doc. No. 069). This standard provides guidance to actuaries when issuing specific types of Statements of Actuarial Opinion.

ASOP No. 43, *Property/Casualty Unpaid Claim Estimates*, was adopted by the Actuarial Standards Board in June 2007. This standard provides guidance to actuaries regarding the estimation of unpaid claims, both when such estimates are performed to support a Statement of Actuarial Opinion covered by ASOP No. 36 and in other circumstances.

The Casualty Committee's Subcommittee on Reserving has prepared this revision to ASOP No. 36 to eliminate redundant guidance and language that exists between ASOP Nos. 36 and 43, to maintain consistency between ASOP Nos. 36 and 43, and to clarify and provide further guidance within ASOP No. 36.

First Exposure Draft

The first exposure draft of this revised ASOP was issued in March 2009 with a comment deadline of June 15, 2009. The Subcommittee on Reserving carefully considered the eleven comment letters received and made changes that were reflected in the second exposure draft.

Second Exposure Draft

The second exposure draft of this ASOP was issued in March 2010 with a comment deadline of June 30, 2010. The Subcommittee on Reserving carefully considered the six comment letters received and made changes in several sections in response.

For a summary of the issues contained in these comment letters, please see appendix 2.

The ASB thanks everyone who took the time to contribute comments and suggestions on both exposure drafts.

The ASB adopted this revised standard at its December 2010 meeting.

The ASB establishes and improves standards of actuarial practice. These ASOPs identify what the actuary should consider, document, and disclose when performing an actuarial assignment. The ASB's goal is to set standards for appropriate practice for the U.S.

ASOP No. 36—December 2010

ACTUARIAL STANDARD OF PRACTICE NO. 36

STATEMENTS OF ACTUARIAL OPINION REGARDING PROPERTY/CASUALTY LOSS AND LOSS ADJUSTMENT EXPENSE RESERVES

STANDARD OF PRACTICE

Section 1. Purpose, Scope, Cross References, and Effective Date

1.1 Purpose—The purpose of this actuarial standard of practice (ASOP) is to provide guidance to the actuary in issuing a written statement of actuarial opinion regarding property/casualty loss and loss adjustment expense reserves.

1.2 Scope—This standard applies to actuaries when providing written statements of actuarial opinion with respect to property/casualty loss and loss adjustment expense reserves of insurance or reinsurance companies and other property/casualty risk financing systems, such as self-insurance, that provide similar coverages, under one of the following circumstances:

a. the statement of actuarial opinion is prepared to comply with NAIC Property and Casualty Annual Statement Instructions, or

b. the statement of actuarial opinion is otherwise prescribed by law or regulation, or

c. the statement of actuarial opinion is represented by the actuary as being in compliance with this standard.

References in the standard to "insurance," "reinsurance," or "self-insurance" should be interpreted to include risk financing systems that provide for risk retention in lieu of risk transfer. This standard does not apply to statements of actuarial opinion subject to ASOP No. 22, *Statements of Opinion Based on Asset Adequacy Analysis by Actuaries for Life or Health Insurers*; ASOP No. 28, *Compliance with Statutory Statement of Actuarial Opinion Requirements for Hospital, Medical, and Dental Service or Indemnity Corporations, and for Health Maintenance Organizations*; or Actuarial Compliance Guideline No. 4, *Statutory Statements of Opinion Not Including an Asset Adequacy Analysis by Appointed Actuaries for Life or Health Insurers.*

If the actuary's statement of actuarial opinion includes an opinion regarding amounts for items other than loss and loss adjustment expense reserves, this standard applies only to the portion of the statement of actuarial opinion that relates to loss and loss adjustment expense reserves.

If the actuary is providing a statement of actuarial opinion for discounted loss and loss adjustment expense reserves, the actuary should be guided by both this standard and ASOP No. 20, *Discounting of Property and Casualty Loss and Loss Adjustment Expense Reserves*.

If the actuary departs from the guidance set forth in this standard in order to comply with applicable law (statutes, regulations, and other legally binding authority) or for any other reason the actuary deems appropriate, the actuary should refer to section 4.

1.3 Cross References—When this standard refers to the provisions of other documents, the reference includes the referenced documents as they may be amended or restated in the future, and any successor to them, by whatever name called. If any amended or restated document differs materially from the originally referenced document, the actuary should consider the guidance in this standard to the extent it is applicable and appropriate.

1.4 Effective Date—This standard is effective for all statements of actuarial opinion regarding loss and loss adjustment expense reserves issued on or after May 1, 2011.

Section 2. Definitions

The terms below are defined for use in this actuarial standard of practice.

2.1 Accounting Date—The stated cutoff date for reflecting events and recording amounts as paid or unpaid in a financial statement or accounting system. The accounting date is sometimes referred to as the "as of date."

2.2 Coverage—The terms and conditions of a plan or contract, or the requirements of applicable law, that create an obligation for claim payment associated with contingent events.

2.3 Event—The incident or activity that triggers potential for claim or claim adjustment expense payment.

2.4 Explicit Risk Margin—An explicit provision for uncertainty in a reserve or unpaid claim estimate.

2.5 Loss—The cost that is associated with an event that has taken place and that is subject to coverage. It is also known as "claim amount." The term "loss" may include loss adjustment expenses as appropriate.

2.6 Loss Adjustment Expense—The costs of administering, determining coverage for, settling, or defending claims even if it is ultimately determined that the claim is invalid. It is also known as "claim adjustment expense."

2.7 Present Value—The value at a point in time of cash flows at other points in time, calculated at selected interest rates. It is also known as "discounted present value" or "discounted value."

2.8 Reserve—An amount recorded in financial statements or accounting systems in order to reflect potential obligations.

2.9 Reserve Evaluation—The process of evaluating the reasonableness of a reserve.

2.10 Review Date—The date (subsequent to the valuation date) through which material information known to the actuary is included in forming the reserve opinion.

2.11 Unpaid Claim Estimate—The actuary's estimate of the obligation for future payment resulting from claims due to past events.

2.12 Unpaid Claim Estimate Analysis—The process of developing an unpaid claim estimate.

2.13 Valuation Date—The date through which transactions are included in the data used in the unpaid claim estimate analysis.

Section 3. Analysis of Issues and Recommended Practices

3.1 Legal and Regulatory Requirements—When an actuary prepares a statement of actuarial opinion to satisfy the requirements of law or regulation, the actuary should have the necessary knowledge to comply with the specific requirements of that law or regulation. The actuary should be satisfied that the statement of actuarial opinion is consistent with relevant requirements of applicable laws and regulations.

3.2 Purpose and Users of the Statement of Actuarial Opinion—The actuary should identify the intended purpose and intended users of the statement of actuarial opinion. For example, the intended purpose may be to satisfy the requirements for such an opinion under the NAIC Annual Statement Instructions, and the intended users may be the company and its regulators.

3.3 Reserves Being Opined Upon—The actuary should identify the following regarding the reserves being opined upon:

a. the reserve amount(s);

b. the accounting date; and

c. the accounting standards applicable for the reserves, if relevant (for example, US SAP, US GAAP, IFRS, etc.).

3.4 Stated Basis of Reserve Presentation—The actuary should identify the stated basis of reserve presentation, which is a description of the nature of the reserves, usually found in the financial statement and the associated footnotes and disclosures. The stated basis often depends upon regulatory or accounting requirements. It includes, as appropriate, the following:

a. whether reserves are stated as being nominal or discounted for the time value of money and, if discounted, the items discounted (for example, tabular reserves only) and the stated basis for the interest rate (for example, risk-free rate, portfolio rate, or fixed rate of x%);

b. whether the reserves are stated to include an explicit risk margin and, if so, the stated basis for the explicit risk margin (for example, stated percentile of distribution, or stated percentage load above expected);

c. whether the reserves are gross or net of specified recoverables (for example, deductibles, ceded reinsurance, and salvage and subrogation);

d. whether the potential for uncollectible recoverables is considered in the reserves, when recoverables are involved and, if so, the categories of such uncollectible recoverables considered and whether those categories reflect currently known collectibility concerns or potential ultimate collectibility concerns. Possible categories of uncollectibles include those related to disputes and those related to counterparties in financial difficulty (credit default);

e. the types of unpaid loss adjustment expenses covered by the reserve (for example, coverage dispute costs, defense costs, and adjusting costs);

f. when the opinion is only for a portion of a reserve, the claims exposure to be covered by the opinion (for example, type of loss, line of business, year, and state); and

g. any other items that, in the actuary's professional judgment, are needed to describe the reserves sufficiently for the actuary's evaluation of the reserves.

To the extent the actuary does not know the above items, the actuary should request this information from the principal. If unable to obtain these items from the principal, the actuary should identify what the actuary assumed to be the intended basis of reserve presentation for purposes of the reserve evaluation.

3.5 Scope of the Analysis Underlying the Statement of Actuarial Opinion—The actuary should identify the scope of the analysis upon which the opinion is based. This includes the following:

a. the review date, if it differs from the date the opinion is signed;

b. if separate reserve amounts for different reserve items, such as losses and loss adjustment expenses, are disclosed in the statement of actuarial opinion, whether the actuary's opinion applies to those items in the aggregate or individually; and

c. any other items that, in the actuary's professional judgment, are needed to describe the scope of the actuary's analysis sufficiently.

3.6 Materiality—The actuary should evaluate materiality based on the actuary's professional judgment, any applicable materiality guidelines or standards, and the intended purpose for which the actuary is preparing the statement of actuarial opinion.

The actuary should understand which financial values are usually important to the intended users of the statement of actuarial opinion and how those financial values are likely to be affected by changes in the reserves and future payments for losses and loss adjustment expenses. For example, for a statement of actuarial opinion for an insurance company to be used for financial reporting to insurance regulators, materiality might be evaluated in terms of the company's reported reserves or statutory surplus.

3.7 Reserve Evaluation—The actuary should consider a reserve to be reasonable if it is within a range of estimates that could be produced by an unpaid claim estimate analysis that is, in the actuary's professional judgment, consistent with both ASOP No. 43, *Property/Casualty Unpaid Claim Estimates*, and the identified stated basis of reserve presentation.

The actuary should consider the relevant characteristics of the entity's exposures to the extent that they are likely to have a material effect on the results of the actuary's reserve evaluation. These characteristics may be influenced by the methods used to sell or provide coverages, the distribution channels from which the entity's business is obtained, the general underwriting practices and pricing philosophy of the entity, and the marketing objectives and strategies of the entity.

If the actuary makes use of other personnel within the actuary's control to carry out assignments relative to analyses supporting the opinion, the actuary should review their contributions and be satisfied that those contributions are reasonable.

The actuary may develop estimates of the unpaid claims for all or a portion of the reserve or make use of another's unpaid claims estimate analysis or opinion for all or a portion of the reserve. For purposes of this section, "another" refers to one not within the actuary's control.

3.7.1 Evaluation Based on Actuary's Unpaid Claim Estimates—When developing unpaid claim estimates to evaluate the reasonableness of a reserve, the actuary may develop a point estimate, a range of estimates, or both. The actuary should be guided by ASOP No. 43 for the development of these unpaid claim estimates.

3.7.2 Evaluation Based on Actuary's Use of Another's Unpaid Claims Estimate Analysis or Opinion—In the course of conducting a reserve evaluation, the actuary may make use of another's supporting analyses or opinions. The actuary should understand the intended purpose of the analyses or opinions, and assess whether the analyses or opinions are consistent with the stated basis of presentation of the reserves. (See section 4.2(f) for related disclosure requirements.)

The actuary should only make use of another's analyses or opinions when, in the actuary's professional judgment, it is reasonable to do so. In making this determination, the actuary should consider the following:

a. the amount of the reserves covered by another's analyses or opinions in comparison to the total reserves subject to the actuary's opinion;

b. the nature of the exposure and coverage;

c. the way in which reasonably likely variations in estimates covered by another's analyses or opinions may affect the actuary's opinion on the total reserves subject to the actuary's opinion; and

d. the credentials of the individual(s) that prepared the analyses or opinions.

Where, in the opinion of the actuary, the analyses or opinions of another need to be modified or expanded, the actuary should perform such analyses as necessary to issue an opinion on the total reserves.

If in using the analyses or opinions of another the actuary reaches conclusions materially different from those in the analyses or opinions used, the actuary should, when practical, contact the appropriate parties to discuss the differences. Where material differences exist, the issues underlying the differences should be understood by the actuary. Materiality in this situation should be measured relative to the actuary's opinion, not relative to the analyses or opinions used.

3.8 Prior Opinion—If the actuary prepared the most recent prior opinion, or if the actuary is able to review the prior opining actuary's work, then the actuary should determine whether the current assumptions, procedures, or methods differ from those employed in providing the most recent prior opinion prepared in accordance with this standard. If the current assumptions, procedures, or methods differ from those employed in the prior opinion, the actuary should consider whether the changes are likely to have had a material effect on the actuary's unpaid claim estimate. (See section 4.2(a) for related disclosure requirements.)

The use of assumptions, procedures, or methods for new reserve segments (for example, line of business or accident year) that differ from those used previously is not a change in assumptions, procedures, or methods within the meaning of this section. Similarly, when

the determination of the reasonableness of reserves is based on the periodic updating of experience data, factors, or weights, such periodic updating is not a change in assumptions, procedures, or methods within the meaning of this section.

3.9 Adverse Deviation—The actuary should consider whether there are significant risks and uncertainties that could result in future paid amounts being materially greater than those provided for in the reserves. (See section 4.2(e) for related disclosure requirements.)

When the actuary's analysis derives separate reserve estimates for various segments or claim groupings, the actuary should consider the combined risks and uncertainties associated with the reserves that are the subject of the opinion.

3.10 Collectibility of Ceded Reinsurance—If the scope of the statement of actuarial opinion includes reserves net of ceded reinsurance and the amount of ceded reinsurance is material, the actuary should consider the collectibility of ceded reinsurance in evaluating net reserves. The actuary should solicit information from management regarding collectibility problems, significant disputes with reinsurers, and practices regarding provisions for uncollectible reinsurance. The actuary's consideration of collectibility does not imply an opinion on the financial condition of any reinsurer.

3.11 Statements of Actuarial Opinion—An actuary who is issuing a statement of actuarial opinion cannot claim reliance on another's work or opinion except as described in section 3.7.2. The statement of actuarial opinion should be one of the following types:

a. Determination of Reasonable Provision—The actuary should opine that the reserve amount makes a reasonable provision for the liabilities associated with the specified reserve when the reserve is found to be reasonable. (See section 3.7).

b. Determination of Deficient or Inadequate Provision—The actuary should opine that the reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves when the reserve amount is less than the minimum amount that the actuary believes is reasonable. Furthermore, the actuary should determine the minimum amount that the actuary believes is reasonable. (See section 4.2(b) for related disclosure requirements.)

c. Determination of Redundant or Excessive Provision—The actuary should opine that the reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves when the reserve amount is greater than the maximum amount that the actuary believes is reasonable. Furthermore, the actuary should determine the maximum amount that the actuary believes is reasonable. (See section 4.2(c) for related disclosure requirements.)

d. Qualified Opinion—The actuary should issue a qualified statement of actuarial opinion when, in the actuary's opinion, the reserves for a certain item or items within the scope of the opinion are in question because they cannot be reasonably estimated or the actuary is unable to issue an opinion on the reserves for those items. The actuary should determine whether the reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, except for the item or items to which the qualification relates. (See section 4.2(d) for related disclosure requirements.) The actuary is not required to issue a qualified opinion if the actuary reasonably believes that the item or items in question are not likely to be material.

e. No Opinion—The actuary's ability to give an opinion is dependent upon data, analyses, assumptions, and related information that are sufficient to support a conclusion. If the actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions, or related information, then the actuary should either issue a statement of no opinion or choose not to issue any opinion at all. A statement of no opinion should include a description of the reasons no opinion could be given.

3.12 Adequacy of Assets Supporting Reserves—This standard does not obligate the actuary to undertake an evaluation of the adequacy of the assets supporting the stated reserve amount except as may be needed to comply with any applicable law, regulatory requirement, or other ASOP.

3.13 Documentation—The actuary should consider the intended purpose of the statement of actuarial opinion when documenting work, and should refer to ASOP No. 41, *Actuarial Communications*. When the statement is provided to meet regulatory requirements, the actuary should follow the detailed requirements specified by regulators as to the form and content of supporting reports and other documentation.

Section 4. Communications and Disclosures

4.1 Actuarial Communication—When issuing a statement of actuarial opinion subject to this standard, the actuary should consider the intended purpose of the statement of actuarial opinion and be guided by ASOP No. 41.

In addition, consistent with the intended purpose, the actuary should disclose the following in the statement of actuarial opinion:

a. the words "statement of actuarial opinion," or alternative words with similar meaning if required by law or regulation governing the opinion, in the title of the written opinion;

b. the intended user(s) of the statement of actuarial opinion;

c. the intended purpose of the statement of actuarial opinion, as described in section 3.2;

d. the reserves being opined upon, as described in section 3.3;

e. the stated basis of reserve presentation, as described in section 3.4. In certain circumstances, referring to specific financial statement reserve figures and their specific source (for example, Statutory Annual Statement of Company ABC as filed with the Company's state of domicile) would satisfy disclosures related to section 3.4;

f. the scope of the analysis underlying the statement of actuarial opinion, as described in sections 3.5(b) and 3.5(c), and the review date (see section 3.5(a)) if different from the date the opinion is signed;

g. the type of opinion, as described in section 3.11;

h. the disclosure in ASOP No. 41, section 4.2, if any material assumption or method was prescribed by applicable law (statutes, regulations, and other legally binding authority);

i. the disclosure in ASOP No. 41, section 4.3, if the actuary states reliance on other sources and thereby disclaims responsibility for any material assumption or method selected by a party other than the actuary; and

j. the disclosure in ASOP No. 41, section 4.4, if, in the actuary's professional judgment, the actuary has otherwise deviated materially from the guidance of this ASOP.

4.2 Additional Disclosures—In certain cases, consistent with the intended purpose, the actuary may need to make the following disclosures in addition to those in section 4.1:

a. The actuary should disclose the nature of changes in assumptions, procedures, or methods from those employed in the most recent prior opinion prepared in accordance with this standard, unless the actuary concludes the changes are not likely to have a material effect on the actuary's unpaid claim estimate. This standard does not require the actuary to quantify the impact of such changes. If the actuary is not able to review the prior opining actuary's work, then the actuary should disclose that the prior assumptions, procedures and methods are unknown. (See section 3.8.)

b. If the actuary determines that the reserve amount is deficient or inadequate, the actuary should disclose the minimum amount that the actuary believes is reasonable.

c. If the actuary determines that the reserve amount is redundant or excessive, the actuary should disclose the maximum amount that the actuary believes is reasonable.

d. If the actuary issues a qualified opinion, the actuary should disclose in the opinion the item or items to which the qualification relates, the reasons for the qualification, and the amounts for such items, if disclosed by the entity, that are included in the reserve. If the amounts for such items are not disclosed by the entity, the actuary should disclose that the reserve includes unknown amounts for such items. The actuary should also disclose whether the reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, except for the item or items to which the qualification relates.

e. If the actuary reasonably believes that there are significant risks and uncertainties that could result in material adverse deviation, an explanatory paragraph should be included in the statement of actuarial opinion. (See sections 3.6 and 3.9 for guidance on evaluating materiality and adverse deviation.) The explanatory paragraph should contain the amount of adverse deviation that the actuary judges to be material with respect to the statement of actuarial opinion, and a description of the major factors or particular conditions underlying risks and uncertainties that the actuary believes could result in material adverse deviation.

The actuary is not required to include in the explanatory paragraph general, broad statements about risks and uncertainties due to economic changes, judicial decisions, regulatory actions, political or social forces, etc., nor is the actuary required to include an exhaustive list of all potential sources of risks and uncertainties.

f. If the actuary makes use of an analysis or opinion of another not within the actuary's control for a material portion of the reserves, the actuary should disclose whether the actuary reviewed the others' underlying analysis. If a review was conducted, the actuary should disclose the extent of the review including items such as the methods and assumptions used and the underlying arithmetic calculations.

g. If the statement of actuarial opinion relies on present values and if the actuary believes that such reliance is likely to have a material effect on the results of the actuary's reserve evaluation, the actuary should disclose that present values were used in forming the opinion, the interest rate(s) used by the actuary, and the monetary amount of discount that was reflected in the reserve amount.

h. If the reserves being opined upon are net of ceded reinsurance and the amount of ceded reinsurance is material, the actuary should comment on the collectibility of that reinsurance. This standard does not require the actuary to quantify the collectibility. (See section 3.10.)

i. When the statement is provided to meet regulatory requirements, the actuary should follow the detailed requirements specified by regulators as to the form and content of the required disclosures, to the extent not addressed above.

Appendix 1
Background and Current Practices

Note: This appendix is provided for informational purposes, but is not part of the standard of practice.

Background

In 2000, the ASB issued ASOP No. 36, *Statements of Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*. At that time, there was no standard of practice concerning the underlying actuarial analyses. Guidance was provided in the *Statement of Principles Regarding Property and Casualty Loss and Loss Adjustment Expense Reserves* adopted by the Board of Directors of the Casualty Actuarial Society in May 1988.

Since the issuance of ASOP No. 36, the ASB has issued ASOP No. 43, *Property/Casualty Unpaid Claim Estimates* in 2007. ASOP No. 43 provides guidance to actuaries concerning the actuarial analyses typically underlying the opinions subject to ASOP No. 36. Certain material is duplicated in these two ASOPs. This revision eliminates the duplications and brings consistency in language with ASOP No. 43.

Current Practices

Actuaries are guided by ASOP No. 43, *Property/Casualty Unpaid Claim Estimates*. Other ASOPs issued by the Actuarial Standards Board pertaining to unpaid loss and loss adjustment expense estimates include ASOP No. 20, *Discounting of Property and Casualty Loss and Loss Adjustment Expense Reserves*; ASOP No. 23, *Data Quality*; and ASOP No. 41, *Actuarial Communications.* Guidance is also provided by the *Statement of Principles Regarding Property and Casualty Loss and Loss Adjustment Expense Reserves* of the Casualty Actuarial Society, which is currently under review.

In addition, since 1993, the Casualty Practice Council of the American Academy of Actuaries has published practice notes addressing current National Association of Insurance Commissioners' requirements for the statement of actuarial opinion required for the Statutory Annual Statement. The practice notes describe some current practices and show illustrative wording for handling issues and problems. While these practice notes (and future practice notes issued after the effective date of this standard) can be updated to react in a timely manner to new concerns or requirements, they are not binding, and they have not gone through the exposure and adoption process of the standards of practice promulgated by the Actuarial Standards Board.

Numerous educational papers are in the public domain that are relevant to the topic of reserves and reserve evaluations, including those published by the Casualty Actuarial Society. While these may provide useful educational guidance to practicing actuaries, these are not actuarial standards and are not binding.

Appendix 2

Comments on the Exposure Draft and Responses

The exposure draft of this ASOP, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*, was issued in March 2010 with a comment deadline of June 30, 2010. Six comment letters were received, some of which were submitted on behalf of multiple commentators, such as by firms or committees. For purposes of this appendix, the term "commentator" may refer to more than one person associated with a particular comment letter. The Subcommittee on Reserving carefully considered all comments received, and the Casualty Committee and ASB reviewed (and modified, where appropriate) the proposed changes.

Summarized below are the significant issues and questions contained in the comment letters and the responses.

The term "reviewers" in appendix 2 includes the subcommittee, the Casualty Committee, and the ASB. Also, unless otherwise noted, the section numbers and titles used in appendix 2 refer to those in this final version.

GENERAL COMMENTS	
Comment	One commentator thought the use of the word "loss" was confusing and recommended it be eliminated from the standard and replaced by "claim" with a note that the term "loss" is often used in practice.
Response	The reviewers retained the references to "loss reserves" as in the title of the standard, as such use is common and understood. The definition of "loss" states that it is also known as "claim amount."
SECTION 1. PURPOSE, SCOPE, CROSS REFERENCES, AND EFFECTIVE DATE	
Section 1.2, Scope	
Comment	One commentator suggested the scope be changed to include the actuarial opinion summary and supporting reports.
Response	The reviewers disagree and made no change. The actuarial opinion summary and supporting reports are subject to ASOP Nos. 9, *Documentation and Disclosure in Property and Casualty Insurance Ratemaking, Loss Reserving, and Valuations*; 41, *Actuarial Communications*; and 43, *Property/Casualty Unpaid Claim Estimates;* but 36 is intended to apply solely to the statement of actuarial opinion.
SECTION 2. DEFINITIONS	
Section 2.1, Accounting Date	
Comment	One commentator felt the reference to "as of" date was unclear.
Response	The reviewers think the reference helps clarify the definition for some and have left it unchanged.
Comment	One commentator suggested deleting the phrase "as paid."
Response	The reviewers modified the definition to refer to both "paid" and "unpaid."
Comment	One commentator suggested changing to "the date on which an accounting period ends"
Response	The reviewers do not believe this adds clarity and made no change.

2.6, Loss Adjustment Expense	
Comment	One commentator thought this definition should be clarified as to whether it includes both unallocated and allocated claim adjustment expenses, thinking the language of the definition implies only "allocated" (i.e., "defense and cost containment" in Annual Statement vernacular) because it leaves out "adjusting and other" (Annual Statement vernacular for unallocated) as examples of types of costs.
Response	The reviewers note the definition does include "administration" and "determining coverage for" which would be Adjusting and Other expenses. Thus, no change was made to the definition.
Section 2.13, Valuation Date	
Comment	One commentator suggested changing to "the date as of which the actuary's estimate applies to the opinion."
Response	The reviewers disagree with this definition, as it is possible for a valuation date to differ from the date at which the estimate applies. For example, if an actuary used data through December 31, 2008 to opine on the reasonableness of a reserve booked at December 31, 2007, the valuation date in this case would be December 31, 2008, while the accounting date would be December 31, 2007.
SECTION 3. ANALYSIS OF ISSUES AND RECOMMENDED PRACTICES	
Comment	Two commentators suggested the removal of the section on Risk Transfer Requirements be mentioned in the transmittal memorandum.
Response	The reviewers do not believe this is necessary and made no change. The reason for its removal, as noted in the appendix of the second exposure draft, was that the reviewers decided this is an accounting issue outside the scope of this ASOP. The deletion of this section does not in any way imply the actuary is obligated to opine that the reserves are established in accordance with regulatory or accounting requirements regarding risk transfer in reinsurance contracts.
Section 3.3, Reserves Being Opined On	
Comment	One commentator questioned the need to identify the reserve amount and accounting date, stating they should be simply disclosed. The commentator further noted the accounting date is not mentioned in the disclosures.
Response	The reviewers note it is reasonable to first identify something before disclosing it. Furthermore, the reviewers note the disclosure in 4.1(d) does include both the reserve amount and the accounting date.
Comment	One commentator suggested changing language to state "if there are specific accounting standards applicable to the stated basis (per section 3.4) of the reserves (for example, US SAP, US GAAP, IFRS, etc.), then the actuary should reflect such stated basis in developing their opinion."
Response	The reviewers have modified the language by adding the words "if relevant."
Section 3.4, Stated Basis of Reserve Presentation	
Comment	One commentator suggested the last word in this section be changed from "reserve evaluation" to "opinion."
Response	The reviewers believe "reserve evaluation" is appropriate.

Section 3.5, Scope of the Analysis Underlying the Statement of Actuarial Opinion	
Comment	One commentator suggested revising section 3.5(a) to read "the review date of the actuary's unpaid claim estimate analysis…."
Response	The reviewers disagree, as it is the review date of the opinion that should be disclosed in the opinion, which may differ from the review date of an underlying unpaid claim estimate analysis. The language in section 3.5 and the definition in section 2.10 were modified to clarify this.
Section 3.7, Reserve Evaluation	
Comment	One commentator suggested changing the word "producers" in section 3.7.2 to "authors."
Response	The reviewers decided to change the word to "appropriate parties."
Comment	One commentator stated the second paragraph of this section was educational in nature and therefore inappropriate for a standard of practice.
Response	While the reviewers agree the second sentence of that paragraph is partly educational, the reviewers believe it adds clarity and have retained it.
Comment	One commentator suggested that the paragraph beginning, "If the actuary makes use of other personnel within..." be moved to section 3.7.1., as the commentator believes an actuary making use of other personnel within the actuary's control to carry out assignments is essentially developing his/her own estimates, so section 3.7.2 would not apply.
Response	The reviewers did not make the change, as it is possible for an actuary to make use of personnel within the actuary's control in the process of making use of another's analysis or opinion per section 3.7.2.
Comment	Multiple commentators disagreed with the removal of the references to "review opinion" and suggested changes to allow for a more limited review in certain cases.
Response	The reviewers disagreed, believing that all opinions subject to the standard should be held to the same requirements. The reviewers note that when conducting a "review opinion" the actuary may decide to make use of data accumulations, methods, assumptions and calculations performed by another actuary, so long as, in the actuary's professional judgment, it is reasonable to do so, as discussed in section 3.7.2. Additional language was added to section 4.2(f) regarding the disclosure of the extent of the actuary's review of the underlying analysis.
Comment	Some commentators thought the final sentence in the first paragraph of section 3.7.2 was long and could be clarified.
Response	The reviewers edited this sentence, using an outline form, to clarify.
Comment	Some commentators thought the actuary should be required to disclose issues underlying material differences between the actuary's conclusions and those of an actuary whose work is reviewed.
Response	The reviewers do not believe such disclosure is relevant to the opinion on the reserves.
Comment	One commentator suggested adding language stating the actuary should consider the reasonableness of the unpaid claims estimate.
Response	The reviewers note this is not necessary, as the standard refers to ASOP No. 43, and ASOP No. 43 addresses the topic of reasonableness.
Section 3.8 , Prior Opinion	
Comment	One commentator suggested adding a reference to section 4.2(a).
Response	The reviewers agreed and made the addition.

Section 3.10, Collectibility of Ceded Reinsurance	
Comment	One commentator suggested adding a sentence, "This standard does not obligate the actuary to quantify uncollectible reinsurance recoveries in cases where the applicable accounting standard does not require it."
Response	The reviewers believe the instruction to "consider" to be appropriate, and did not make any change.
Section 3.11, Statements of Actuarial Opinion	
Comment	One commentator suggested switching the order of the last two sentences in section 3.11(d).
Response	The reviewers agreed and made the change.
SECTION 4. COMMUNICATIONS AND DISCLOSURES	
Section 4.1, Actuarial Communication	
Comment	One commentator thought the requirement of identifying the intended user of the SAO should be removed, stating they are generally addressed to and paid for by the Board of Directors but there is also clearly an intended use for regulators, and that this is confusing and will lead to criticisms about independence and conflicts of interest.
Response	The reviewers disagree with the suggested change, as the disclosure should add clarity. An example of intended users has been added to section 3.2.
Comment	Some commentators suggested expanding 4.1(f) to include disclosure of the valuation date. One commentator believed this would help provide clarity when an unpaid claim estimate analysis is performed prior to the accounting date with a subsequent roll-forward to the accounting date.
Response	The reviewers believe this disclosure is more appropriate in the underlying report than in the opinion, and have deleted the reference to valuation date in section 3.5. The preparation of the underlying report is covered by ASOP No. 43, which states the actuary should disclose the valuation date.
Comment	One commentator suggested that the requirement in section 4.1(h) of the second exposure draft to make a statement to the effect that the actuary does not reasonably believe that there are significant risks and uncertainties that could result in material adverse deviation is inappropriate. The commentator indicated that while this is the current standard for US statutory statements of actuarial opinions, extending this requirement to other opinions could lead to instances of misinterpretation by less sophisticated audiences, especially in cases where the perception of materiality could differ among the various audiences (for example, a state workers' compensation loss certification for a self-insured employer).
Response	The reviewers agreed and have deleted section 4.1(h) and modified section 4.2(e). The reviewers note that for US statutory statements of actuarial opinion, the actuary would still be required to make such disclosures per the NAIC annual statement instructions.
Comment	One commentator stated the disclosure requirements in section 4.1(e) were burdensome and inappropriate for an opinion.
Response	The reviewers do not believe the requirement to be burdensome, as in many cases it could be satisfied through referring to specific items in financial statements. The standard does not require an exhaustive list of disclosures as suggested by the commentator.
Comment	Two commentators noted the references to ASOP No. 41 correspond to an exposure draft rather than the standard in place.
Response	This final version refers to the final version of ASOP No. 41 effective April 1, 2011.

Section 4.2, Additional Disclosures	
Comment	One commentator suggested editing section 4.2(a) to read, "If the actuary is not able to review the prior opining actuary's work…."
Response	The reviewers agreed and made the change.
Comment	One commentator suggested limiting the disclosure in section 4.2(e) to only those cases where the material adverse deviation would be within the actuary's range of unpaid claim estimates.
Response	The reviewers did not make this change. First, the reviewers believe material adverse deviation that goes beyond the actuary's range of unpaid claim estimates can be a very useful thing to disclose. The range of reasonably possible outcomes is generally much wider than the range of reasonable unpaid claim estimates, and to the extent there are significant risks and uncertainties that could lead to an outcome that would result in a material adverse deviation, it is useful to disclose such information, even if such outcomes are outside the actuary's range of estimates. Second, there is no requirement for an actuary to determine a range of unpaid claim estimates, which would be needed in order to modify the standard as the commentator suggested. The commentator used the phrase "significant risk of material adverse deviation." The reviewers note the language in the standard is "significant risks and uncertainties that could result in a material adverse deviation," not "significant risk of material adverse deviation."

December 2010

TO: Members of Actuarial Organizations Governed by the Standards of Practice of the Actuarial Standards Board and Other Persons Interested in Actuarial Communications

FROM: Actuarial Standards Board (ASB)

SUBJ: Actuarial Standard of Practice (ASOP) No. 41

This document contains the final version of the revision of ASOP No. 41, *Actuarial Communications*.

Background

The current version of ASOP No. 41 has been in effect for eight years, and applies to all U.S. actuaries in all areas of practice. During that time, the ASB has received comments regarding a lack of clarity in the document and confusion in respect to its wording and structural arrangement. One of the ASB's priorities is to make sure that all ASOPs are clear and unambiguous.

First Exposure Draft

In September 2008, the ASB approved the first exposure draft of a revised ASOP No. 41 with a comment deadline of December 31, 2008. Twenty-three comment letters were received. Most had multiple comments, many of which were substantive. The majority of commentators were supportive of the effort to revise this ASOP, and most comments were positive in nature, but some indicated that the first draft needed significant revision.

In September 2008, the ASB also adopted "Revision of Deviation Language for Standards and Removal of References to PSAOs from Standards" pending the issuance of ASOP No. 41 as a final revision. Due to the passage of time since that adoption, the ASB will update this document to reflect changes in ASOP No. 41, as well as to update references for other new and revised ASOPs. It is expected that the ASB will adopt this document as a final revision at its March meeting, with an effective date of May 1, 2011, consistent with the effective date of this revised standard.

Second Exposure Draft

In December 2009, the ASB approved a second exposure draft of a revised ASOP No. 41, reflecting significant modifications of the first draft, with a comment deadline of March 31, 2010. Thirty-seven comment letters were received in response. For a summary of the substantive issues contained in the second exposure draft comment letters and the responses, please see appendix 2.

Changes from Second Exposure Draft

The review and revision of the second exposure draft focused on the dominant issue raised in 19 of 37 comment letters; namely, the apparent requirement for an actuary to complete an actuarial report with full disclosures in nearly all circumstances. This was not the intent of the second exposure draft, but the reviewers were sensitive to this possible interpretation. Accordingly, this final version reflects clarification to the guidance within this standard, in particular to recognize that in some internal and informal settings, complete disclosure of all applicable supporting information is neither practical nor necessary. Section 3.3 (formerly section 3.5) has been moved and expanded to provide guidance in these situations. Additional discussion has also been added to appendix 1.

In response to other comments some definitions have been added and other clarifying modifications have been made.

Summary of Key Changes from Current ASOP

1. The concept of a single formal actuarial report, which is required to contain all necessary disclosures, has been removed. Instead, the concept that communication is an ongoing and interactive process and that an actuarial report with all necessary disclosure elements may comprise several different pieces of communication, perhaps delivered in different forms, has been adopted. The standard directs the actuary to identify all applicable documents whenever multiple documents are used to satisfy all of the disclosure requirements of an actuarial report.

2. Section 3.4.4 makes it clear that the actuary is responsible for all actuarial assumptions and methods utilized in producing the actuarial communication, unless the actuary discloses otherwise.

3. Section 3 has been reorganized. All disclosure requirements have been moved to section 4, while additional guidance relating to disclosures remains in section 3.4.

4. The treatment of deviations from the guidance of any ASOP (including situations where assumptions are not set by the actuary) is also codified in section 4.

5. Reference to Prescribed Statements of Actuarial Opinion (PSAOs) has been removed.

6. The ASB has decided that specifying what material should be retained and for how long is not appropriate for this standard (except as may be provided in section 3.8).

The General Committee thanks everyone who took the time to contribute comments and suggestions on both exposure drafts.

The ASB voted in December 2010 to adopt this standard.

The ASB establishes and improves standards of actuarial practice. These ASOPs identify what the actuary should consider, document, and disclose when performing an actuarial assignment. The ASB's goal is to set standards for appropriate practice for the U.S.

ACTUARIAL STANDARD OF PRACTICE NO. 41

ACTUARIAL COMMUNICATIONS

STANDARD OF PRACTICE

Section 1. Purpose, Scope, Cross References, and Effective Date

1.1 Purpose—This actuarial standard of practice (ASOP) provides guidance to actuaries with respect to actuarial communications.

1.2 Scope—This standard applies to actuaries issuing actuarial communications within any practice area. This standard does not apply to communications that do not include an actuarial opinion or other actuarial findings (for example, this standard does not apply to brochures, fee quotes, or invoices).

This standard provides guidance for preparing actuarial communications, including those that may be required by the *Qualification Standards* or by other ASOPs. If such other guidance contains communication requirements that are additional to or inconsistent with this standard, the requirements of such other guidance supersede the guidance of this ASOP. However, the guidance in this ASOP applies to the extent it is not inconsistent with such other guidance.

Law, regulation, or another profession's standards may prescribe the form and content of a particular actuarial communication (such as a government form). In such situations, the actuary should comply with the guidance in this standard to the extent not prohibited by applicable law, regulation, or standard.

If the actuary departs from the guidance set forth in this standard in order to comply with applicable law (statutes, regulations, and other legally binding authority), or for any other reason, the actuary should refer to section 4 regarding deviation.

1.3 Cross References—When this standard refers to the provisions of other documents, the reference includes the referenced documents as they may be amended or restated in the future, and any successor to them, by whatever name called. If any amended or restated document differs materially from the originally referenced document, the actuary should consider the guidance in this standard to the extent it is applicable and appropriate.

1.4 Effective Date—This standard is effective for actuarial communications issued on or after May 1, 2011.

Section 2. Definitions

The terms below are defined for use in this actuarial standard of practice.

2.1 Actuarial Communication—A written, electronic, or oral communication issued by an actuary with respect to actuarial services.

2.2 Actuarial Document—An actuarial communication in any recorded form (such as paper, e-mail, spreadsheets, presentations, audio or video recordings, web sites, and court or hearing transcripts). Notes taken by someone other than the actuary are not considered actuarial documents.

2.3 Actuarial Finding—The result (including advice, recommendations, opinions, or commentary on another actuary's work) of actuarial services.

2.4 Actuarial Report—The set of actuarial documents that the actuary determines to be relevant to specific actuarial findings that is available to an intended user.

2.5 Actuarial Services—Professional services provided to a principal by an individual acting in the capacity of an actuary. Such services include the rendering of advice, recommendations, findings, or opinions based upon actuarial considerations.

2.6 Deviation—The act of departing from the guidance of an ASOP.

2.7 Intended User—Any person who the actuary identifies as able to rely on the actuarial findings.

2.8 Oral Communication—An actuarial communication made orally that has not, to the knowledge of the actuary, been recorded or transcribed verbatim. Such an oral communication is an actuarial communication, but is not an actuarial document.

2.9 Other User—Any recipient of an actuarial communication who is not an intended user.

2.10 Principal—A client or employer of the actuary.

Section 3. Analysis of Issues and Recommended Practices

3.1 Requirements for Actuarial Communications—The performance of a specific actuarial engagement or assignment typically requires significant and ongoing communications between the actuary and the intended users regarding the following: the scope of the requested work; the methods, procedures, assumptions, data, and other information required to complete the work; and the development of the communication of the actuarial findings.

3.1.1 Form and Content—The actuary should take appropriate steps to ensure that the form and content of each actuarial communication are appropriate to the particular circumstances, taking into account the intended users.

3.1.2 Clarity—The actuary should take appropriate steps to ensure that each actuarial communication is clear and uses language appropriate to the particular circumstances, taking into account the intended users.

3.1.3 Timing of Communication—The actuary should issue each actuarial communication within a reasonable time period, unless other arrangements as to timing have been made. In setting the timing of the communication, the needs of the intended users should be considered.

3.1.4 Identification of Responsible Actuary—An actuarial communication should clearly identify the actuary responsible for it. When two or more individuals jointly issue a communication (at least some of which is actuarial in nature), the communication should identify all responsible actuaries, unless the actuaries judge it inappropriate to do so. The name of an organization with which each actuary is affiliated also may be included in the communication, but the actuary's responsibilities are not affected by such identification. Unless the actuary judges it inappropriate, the actuary issuing an actuarial communication should also indicate the extent to which the actuary is available to provide supplementary information and explanation.

3.2 Actuarial Report—The actuary should complete an actuarial report if the actuary intends the actuarial findings to be relied upon by any intended user. The actuary should consider the needs of the intended user in communicating the actuarial findings in the actuarial report.

An actuarial report may comprise one or several documents. The report may be in several different formats (such as formal documents produced on word processing, presentation or publishing software, e-mail, paper, or web sites). Where an actuarial report for a specific intended user comprises multiple documents, the actuary should communicate which documents comprise the report.

In the actuarial report, the actuary should state the actuarial findings, and identify the methods, procedures, assumptions, and data used by the actuary with sufficient clarity

that another actuary qualified in the same practice area could make an objective appraisal of the reasonableness of the actuary's work as presented in the actuarial report.

3.3 Specific Circumstances—The content of an actuarial report may be constrained by circumstances. The actuary should follow the guidance of this standard to the extent reasonably possible within such constraints. When those constraints exist, it may be appropriate not to include some of the otherwise required content in the actuarial report. However, limiting the content of an actuarial report may not be appropriate if that report or the findings in that report may receive broad distribution.

If the actuary believes circumstances are such that including certain content is not necessary or appropriate, the actuary must be prepared to identify such circumstances and justify limiting the content of the actuarial report.

3.4 Disclosures Within an Actuarial Report—Consideration of the items to be disclosed is an important part of the preparation of any actuarial communication. The actuary should review the list of required disclosure items included in section 4 of this ASOP, and in any other relevant ASOP. Further discussion regarding some of these disclosure items follows:

3.4.1 Uncertainty or Risk—The actuary should consider what cautions regarding possible uncertainty or risk in any results should be included in the actuarial report.

3.4.2 Conflict of Interest—An actuary who is not financially, organizationally, or otherwise independent concerning any matter related to the subject of an actuarial communication should disclose any pertinent information that is not apparent. This includes any situation where the actuary acts, or may appear to be acting, as an advocate. However, applicable financial disclosure is limited in accordance with Precept 6 of the *Code of Professional Conduct* to sources of material compensation that are known to, or are reasonably ascertainable by, the actuary.

3.4.3 Reliance on Other Sources for Data and Other Information—An actuary who makes an actuarial communication assumes responsibility for it, except to the extent the actuary disclaims responsibility by stating reliance on other sources. Reliance on other sources for data and other information means making use of those sources without assuming responsibility for them. An actuarial communication making use of any such reliance should define the extent of reliance, for example by stating whether or not checks as to reasonableness have been applied. An actuary may rely upon other sources for information, except where limited or prohibited by applicable standards of practice or law or regulation. Further guidance on when such reliance is appropriate, and what the actuary's responsibilities are when such reliance is stated, is found in ASOP No.23, *Data Quality*.

3.4.4 Responsibility for Assumptions and Methods—An actuarial communication

should identify the party responsible for each material assumption and method. Where the communication is silent about such responsibility, the actuary who issued the communication will be assumed to have taken responsibility for that assumption or method. The actuary's obligation when identifying the other party who selected the assumption or method depends upon how the assumption or method was selected.

a. If the assumption or method is specified by applicable law (statutes, regulations, and other legally binding authority), the actuary should include the disclosures identified in section 4.2. These disclosures should be made whether or not the actuary believes the assumption or method is reasonable for the purpose of the communication. The actuary should also follow the guidance in paragraph (b) below whenever required by another ASOP.

b. If a material assumption or method is selected by another party, the actuary has three choices:

   1. If the assumption or method does not conflict significantly with what, in the actuary's professional judgment, would be reasonable for the purpose of the assignment, the actuary has no disclosure obligation;

   2. If the assumption or method significantly conflicts with what, in the actuary's professional judgment, would be reasonable for the purpose of the assignment, the actuary must disclose that fact and the additional information specified in section 4.3; and

   3. If the actuary has been unable to judge the reasonableness of the assumption or method without performing a substantial amount of additional work beyond the scope of the assignment, or if the actuary was not qualified to judge the reasonableness of the assumption, the actuary should disclose that fact as specified in section 4.3.

c. In all other situations, the actuary is responsible for all assumptions and methods utilized in the preparation of a communication unless the actuary discloses otherwise within the communication by including the disclosures identified in section 4.4.

3.4.5 Information Date of Report—The actuary should communicate to the intended user the date(s) through which data or other information has been considered in developing the findings included in the report.

3.4.6 Subsequent Events—The actuary should disclose any relevant event that meets the following conditions:

a. it becomes known to the actuary after the latest information date described in section 3.4.5;

b. it becomes known to the actuary before the report is issued;

c. it may have a material effect on the actuarial findings if it were reflected in the actuarial findings; and

d. it is impractical to revise the report before it is issued.

If the actuary learns of changes to data or other information (on or before the information date) after some findings have been communicated, but before the report is completed, the actuary should communicate those changes, and their implications, to any intended user to whom the actuary has communicated findings.

3.5 Explanation of Material Differences—If a later actuarial communication produced by the same actuary, which opines on the same issue, includes materially different results or expresses a different opinion from the former communication, then the later communication should make it clear that the earlier results or opinion are no longer valid and explain why they have changed. If the later communication is oral, the actuary should follow-up with a document that clarifies the reason(s) for the changes.

3.6 Oral Communications—When the actuary is providing an oral communication, the actuary should consider the extent to which (if any) the disclosures listed under section 3.4 should be included in the oral communication and include each such disclosure if appropriate in the particular circumstances. Where the actuary has a concern that the oral communication may be passed on to other parties, the actuary should consider following up with an actuarial document.

3.7 Responsibility to Other Users—An actuarial document may be used in a way that may influence persons who are not intended users. The actuary should recognize the risks of misquotation, misinterpretation, or other misuse of such a document and should take reasonable steps to ensure that the actuarial document is clear and presented fairly. To help prevent misuse, the actuary may include language in the actuarial document that limits its distribution to other users (for example, by stating that it may only be provided to such parties in its entirety or only with the actuary's consent).

Nothing in this standard creates an obligation for the actuary to communicate with any person other than the intended users.

3.8 Retention of Other Materials—An actuary may choose to keep file material other than that which is to be disclosed under this ASOP. Nothing in this ASOP requires the actuary to disclose such additional materials to any party.

If, as may be appropriate in accordance with section 3.3., a report does not include all of the supporting information identified in this ASOP, the actuary should consider retaining the supporting information that was not included in the report. The actuary is not required to create additional documentation for this purpose.

An actuary should consider retaining sufficient information for any recurring project so that another actuary could assume the assignment.

Section 4. Communications and Disclosures

4.1 Disclosures in any Actuarial Communication—Disclosures in any actuarial communication should include the following:

4.1.1 Identification of Responsible Actuary—Any actuarial communication should identify the actuary who is responsible for the actuarial communication (see section 3.1.4).

4.1.2 Identification of Actuarial Documents—Any actuarial document should include the date and subject of the document with any additional modifier (such as "version 2" or time of day) to make this entire description unique.

4.1.3 Disclosures in Actuarial Reports—In addition to the information necessary to satisfy section 3.2, any actuarial report should disclose the following information, unless the actuary determines that it is inappropriate to do so (see section 3.3):

a. the intended users of the actuarial report;

b. the scope and intended purpose of the engagement or assignment;

c. the acknowledgement of qualification as specified in the *Qualification Standards*;

d. any cautions about risk and uncertainty (see section 3.4.1);

e. any limitations or constraints on the use or applicability of the actuarial findings contained within the actuarial communication including, if appropriate, a statement that the communication should not be relied upon for any other purpose;

f. any conflict of interest as described in section 3.4.2;

g. any information on which the actuary relied that has a material impact on the actuarial findings and for which the actuary does not assume responsibility (see section 3.4.3);

h. the information date as described in section 3.4.5;

i. subsequent event(s) (if any) as described in section 3.4.6.; and

j. if appropriate, the documents comprising the actuarial report.

Note that other ASOPs that apply to a particular assignment may have additional disclosure requirements that should also be followed.

4.2 Certain Assumptions or Methods Prescribed by Law—Where any material assumption or method was prescribed by applicable law (statutes, regulations, and other legally binding authority), the actuary should disclose the following in the actuarial report:

a. the applicable law under which the report was prepared;

b. the assumptions or methods that are prescribed by the applicable law; and

c. that the report was prepared in accordance with the applicable law.

If the actuarial report is in a prescribed form that does not accommodate these disclosures, the actuary should make these disclosures in a separate communication (such as a cover letter to the principal), requesting that both communications be disseminated together where practicable.

4.3 Responsibility for Assumptions and Methods—In any situation not covered under section 4.2, where the actuary states reliance on other sources (as described in section 3.4.4(b) 2 and 3) and thereby disclaims responsibility for any material assumption or method, the actuary should disclose the following in the actuarial report, unless it is inappropriate to do so (see section 3.3):

a. the assumption or method that was set by another party;

b. the party who set the assumption or method;

c. the reason that this party, rather than the actuary, has set the assumption or method; and

d. either

1. that the assumption or method significantly conflicts with what, in the actuary's professional judgment, would be reasonable for the purpose of the assignment; or

2. that the actuary was unable to judge the reasonableness of the assumption or method without performing a substantial amount of additional work beyond the scope of the assignment, and did not do so, or that the actuary

was not qualified to judge the reasonableness of the assumption.

If the actuarial report is in a prescribed form that does not accommodate these disclosures, the actuary should make these disclosures in a separate communication (such as a cover letter to the principal), requesting that both communications be disseminated together where practicable.

4.4 Deviation from the Guidance of an ASOP—If, in the actuary's professional judgment, the actuary has deviated materially from the guidance set forth in an applicable ASOP, other than as covered under sections 4.2 or 4.3 of this standard, the actuary can still comply with that ASOP by providing an appropriate statement in the actuarial communication with respect to the nature, rationale, and effect of such deviation.

Appendix 1

Background and Current Practices

Note: This appendix is provided for informational purposes, but is not part of the standard of practice.

Background

The current version of ASOP No. 41, adopted in March 2002, was adapted from and superseded Interpretative Opinion No. 3, *Professional Communications of Actuaries*. Interpretive Opinion No. 3 was itself adopted by the American Academy of Actuaries in 1981. The 2002 version of ASOP No. 41 conformed to the format adopted by the Actuarial Standards Board in May 1996 for all actuarial standards of practice, and while this standard generally followed Interpretative Opinion No. 3, it also expanded upon, clarified, and eliminated portions of that opinion.

This standard offers guidance to complement the requirements imposed by the *Code of Professional Conduct*. It was drafted and is still intended to help actuaries apply the *Code of Professional Conduct* when making professional communications (by written, electronic, or oral means) to clients, employers, regulators, policyholders, plan participants, investors, and other users of actuarial services. Actuaries commonly deal with confidential or proprietary information. The *Code of Professional Conduct* clearly precludes the actuary from disclosing this type of information to inappropriate parties.

This revision has used definitions that are consistent with those found in the *Code of Professional Conduct* and in the recently revised *Qualification Standards for Actuaries Issuing Statements of Actuarial Opinions*. This revision also incorporates language in section 4 that is the foundation of the ASB's new approach to creating consistency in the treatment of deviation language within all ASOPs.

It should be noted that all recorded forms of communication (including—but not limited to—paper, e-mail, spreadsheets, presentations, audio or video recordings, web sites, and court or hearing transcripts) could be considered records of such communications and may be, therefore, discoverable in legal proceedings.

Current Practices

Actuaries are currently guided by the *Code of Professional Conduct*, by ASOP No. 41, and by other actuarial standards of practice, depending on the nature of the work at hand.

In general, actuarial communications are provided in order to answer questions or address specific needs of one or more intended users. Actuarial communications may be made available to a variety of users of actuarial work products including clients, employers, regulators, policyholders, plan participants, and investors, as well as external audiences such as the general public. Actuarial communications may be delivered in many forms, including written, electronic,

or oral; and may stand alone or be part of a broader pattern of communication. While preparing an actuarial communication, an actuary should be mindful of the needs and concerns of each of the intended users. In certain situations, some intended users may receive different actuarial documents. Thus, an actuarial report for one intended user may differ from the report for a different intended user. Even the least comprehensive version of an actuarial report is subject to the guidance of this standard.

An actuary, while functioning in a professional capacity, may be involved in informal communication with others. Actuarial findings may be communicated under circumstances that make inclusion of all supporting information impractical or unnecessary. This may be particularly common in a company environment. Other circumstances such as severe time constraints (for example, union negotiations, mergers and acquisitions) may make inclusion of all recommended disclosure items impractical, if not impossible. In these instances, the content of the actuarial report is often limited. These situations are addressed in section 3.3.

Appendix 2

Comments on the Second Exposure Draft and Responses

The second exposure draft of this ASOP, *Actuarial Communications*, was issued in December 2009 with a comment deadline of March 31, 2010. Thirty-seven comment letters were received, some of which were submitted on behalf of multiple commentators, such as by firms or committees. For purposes of this appendix, the term "commentator" may refer to more than one person associated with a particular comment letter. The General Committee carefully considered all comments received, reviewed the exposure draft and proposed changes. The ASB reviewed the proposed changes and made modifications where appropriate.

Summarized below are the significant issues and questions contained in the comment letters and the responses.

The term "reviewers" in appendix 2 includes the General Committee and the ASB. Also, unless otherwise noted, the section numbers and titles used in appendix 2 refer to those in the second exposure draft.

GENERAL COMMENTS	
Comment	Several commentators raised the issue of a potential deficiency in guidance should the proposed ASOP No. 41 be adopted as final at the same time current ASOP No. 9, *Documentation and Disclosure in Property and Casualty Insurance Ratemaking, Loss Reserving, and Valuations*, is withdrawn.
Response	The reviewers do not believe that this issue can or should be resolved within ASOP No. 41.
Comment	One commentator believed that the distinction between the guidance for "oral only communication" (for example, a phone call) and guidance for e-mail may not be practical.
Response	The reviewers disagree. E-mail creates a permanent record that can be discovered and referred to in subsequent proceedings (legal or otherwise). Accordingly, the reviewers believe that it is appropriate to consider e-mail as a "document" and subject to the applicable guidance.
Comment	Several commentators expressed concern that the guidance in the second exposure draft was slanted to the consulting environment and not practical within many company situations.

Response	The reviewers did not intend this interpretation. In rewriting the final version of ASOP No. 41 the reviewers have attempted to be more sensitive to this issue. It is not the intention of this ASOP to impose unnecessary burdens on the internal communications of an organization.
TRANSMITTAL MEMORANDUM	
Question 1: Is the revised concept of an actuarial report reflected in this draft both clear and appropriate?	
Comment	Nineteen commentators responded to this question; only one responded in the affirmative. Most interpreted the second exposure draft to significantly "raise the bar," requiring a full-fledged report in many situations where it would be neither necessary nor practical.
Response	This interpretation was not the intent of the second exposure draft. The reviewers have been sensitive to these concerns in this revision. Section 3.3 of this standard has been expanded to clarify the guidance in those circumstances where it is not necessary or practical to include all supporting information. Additional discussion was added to appendix 1.
Question 2: Is the revised ASB position on documentation appropriate?	
Comment	A few commentators felt it was appropriate. The ones that disagreed were those that raised concerns about the withdrawal of ASOP No. 9 (see the first "General" comment above).
Response	After considering the comments, the reviewers still believe that the general approach is appropriate. Some modifications have been made to section 3.8 to incorporate guidance in those situations where full supporting information is not supplied within the document(s) of an actuarial report.
Question 3: Does this revised draft incorporate an appropriate emphasis on the need for the actuary to consider the needs of the intended users?	
Comment	The few commentators that did respond to this question answered in the affirmative. One suggested that the second exposure draft may have gone too far in this regard.
Response	The reviewers believe that the purpose of an actuarial communication is to satisfy the needs of the intended user. Accordingly, this final version has retained this perspective.

SECTION 1. PURPOSE, SCOPE, CROSS REFERENCES, AND EFFECTIVE DATE	
Comment	Two commentators made suggestions with respect to the description of the standard's guidance.
Response	The description has been revised.
Comment	One commentator expressed concern that the term "actuarial opinion" is not defined.
Response	The reviewers believe that "actuarial opinion" is well understood and did not add a definition.
Comment	One commentator suggested an expansion of the commentary on which communications did not fall within the purview of the standard.
Response	The reviewers believe that the wording is satisfactory.
SECTION 2. DEFINITIONS	
Comment	Several commentators suggested that the definitions in the ASOP adopt the definitions in the Qualification Standards.
Response	The reviewers agreed and adopted the Qualification Standards' definitions for "actuarial communication" and "actuarial services."
Comment	One commentator suggested that "actuarial services" be clearly defined.
Response	A definition consistent with the Qualification Standards has been added. Furthermore, the definition of "actuarial finding" was modified to tie more consistently to this definition.
Comment	One commentator suggested that definitions be added for "data," "methods," and "procedures."
Response	The reviewers concluded that the meanings of these terms were well understood and specific definitions were not needed.
Comment	Several commentators were concerned that the proposed standard can be read to imply that any notes taken by an actuary may be considered an actuarial document.

Response	The reviewers do not believe that an actuary's notes constitute an actuarial communication unless they are provided to an intended user. If an actuary does not distribute his/her notes to an intended user, there is no actuarial communication and the personal notes taken by the actuary are not subject to the requirements of ASOP No. 41. If either the notes or the material contained in the notes is distributed to an intended user or becomes part of the actuarial report, this creates an actuarial communication and the resulting documents would be subject to the requirements of the standard.
Section 2.1, Actuarial Communication	
Comment	A few commentators suggested that the word "electronic" be deleted from definition 2.1, stating that actuarial communications may be written or oral. Either type (written or oral) can be in electronic or hard copy form. One commentator noted the definition of "actuarial communication" deleted the current reference to a principal.
Response	The reviewers retained the definition to remain consistent with the *Code of Professional Conduct* and the Qualification Standards.
Section 2.6, Intended Audience	
Comment	Several commentators suggested deletion of the definition "intended audience" and that definitions be provided for "principal" and "actuarial services."
Response	The reviewers agree with these suggestions and have removed the definition of "intended audience" and provided definitions for "principal" and "actuarial services."
SECTION 3. ANALYSIS OF ISSUES AND RECOMMENDED PRACTICES	
Section 3.1, Requirements for Actuarial Communications	
Comment	One commentator requested the definition of "principal" be retained; another questioned the usage in sections 3.1.3 and 3.2.
Response	The reviewers agreed. The definition of "principal" from the *Code of Professional Conduct* was added, and it was used only when appropriate in the context of the guidance throughout the standard.
Comment	One commentator requested wording in section 3.1 and the addition of a section 3.1.5 to make it clear that, when an actuary communicates to the designated representative of a group of intended users, the actuary is deemed to have communicated to the group.

Response	The reviewers considered this a non-actuarial issue and made no change.
Section 3.1.2, Clarity	
Comment	One commentator felt the phrase "language appropriate to the particular circumstances, taking into account the intended audience" needed further guidance.
Response	The reviewers believe this language is sufficient; not all circumstances can be anticipated.
Section 3.1.3, Timing of Communication	
Comment	Several commentators questioned the wording of section 3.1.3, while one commentator preferred the "guidance" in appendix 1 of the Qualification Standards.
Response	The reviewers agreed and revised section 3.1.3. The reviewers note that appendix 1 of the Qualification Standards is not guidance, and made no change on this account.
Section 3.1.4, Identification of Responsible Actuary	
Comment	Several commentators suggested revised wording for section 3.1.4.
Response	The reviewers were generally satisfied with the wording in the exposure draft but did incorporate minor changes.
Section 3.2, Actuarial Report	
Comment	Several commentators felt that the ASB had "raised the bar" too much in section 3.2 or that the wording seemed only to address consulting situations.
Response	The reviewers modified and expanded former section 3.5 and moved it to section 3.3 to clarify that an actuarial report may be abbreviated in certain situations.
Comment	One commentator felt that the requirement to provide adequate information so that another actuary could assess the reasonableness of the findings was more than was needed if the report was directed to non-actuaries.
Response	Absent circumstances allowing for an abbreviated report under section 3.3, the reviewers believe that information sufficient to make an objective appraisal of the work is a valuable standard. This information does not have to detract from the understandability of a report; it can be presented separately, such as in an appendix.

Comment	One commentator indicated that the principal, as well as the actuary, should be able to determine what was relevant to an actuarial report.
Response	The reviewers disagreed and did not include such authority for the principal.
Section 3.3 (formerly 3.5), Specific Circumstances	
Comment	Two commentators suggested that further examples or clarification of time pressure was needed.
Response	The reviewers believe this is accomplished as part of the modification of this section for clarity, and the additional discussion added to appendix 1.
Section 3.4.2 (formerly 3.3.2), Conflict of Interest	
Comment	One commentator requested a definition of "information."
Response	The reviewers did not feel such a definition was needed and made no change.
Section 3.4.4 (formerly 3.3.4), Responsibility for Assumptions and Methods	
Comment	One commentator felt that the actuary is always responsible for the assumptions and methods; that the lead paragraph of 3.4.4 should so state and that 3.4.4.c. should be deleted. A second commentator suggested that the ASOP should allow the actuary to simply disclose that the assumption or method was not set by the actuary and does not represent the actuary's professional judgment.
Response	The reviewers disagree with both commentators. The first position is not practical in all situations. The second position would be an overly broad exception enabling an actuary to inappropriately avoid professional responsibility. The reviewers believe that the revisions to section 3.4.4 in this version of the standard strike the proper balance between professional responsibility and real-life practicality.
Comment	Two commentators wondered whether "specified by law" (section 3.4.4(a)) could be interpreted to include situations (FAS 87) where assumptions are specified by a third party under some binding authority.
Response	The reviewers believe the language and intent are clear. FAS 87 situations (and all circumstances where the assumption or method is not specified within law) fall under section 3.4.4(b).
Section 3.4.4(b) (formerly 3.3.4(b), Responsibility for Assumptions and Methods	

Comment	One commentator suggested rewording to accommodate assumptions the actuary is not qualified to make.
Response	The reviewers agreed and changed the wording of 3.4.4(b)(3) and 4.3(d)(2) to reflect this.
Comment	One commentator thought that the actuary should be required to provide an affirmative statement of agreement with assumptions that "do not conflict significantly with what the actuary considers to be reasonable."
Response	The reviewers believe this would be an impractical and unnecessary requirement.
Section 3.4.4(c) (formerly 3.3.4(c), Responsibility for Assumptions and Methods	
Comment	One commentator suggested removing the word "prominently."
Response	The reviewers agreed and removed it.
Section 3.4.5 (formerly 3.3.5), Information Date of Report	
Comment	One commentator suggested making dates plural as different information may have different dates.
Response	The reviewers agreed and changed the word to "date(s)."
Section 3.4.6 (formerly 3.3.6), Subsequent Events	
Comment	Two commentators suggested wording changes.
Response	The reviewers agreed and changed some words.
Comment	One commentator suggested that if an actuary is aware of an event that has a material effect on the findings, then it is possible that the actuary would need to submit a revised report.
Response	The reviewers agree, but recognize that this is not always possible. Section 3.4.6(d) has been added to clarify this situation.
Section 3.5 (formerly 3.4), Reconciliation of Material Differences	
Comment	Several commentators suggested "reconcile" was too strong a requirement, and "same assignment" was imprecise.
Response	The reviewers agreed and revised this section.
Section 3.6, Oral Communications	

Comment	One commentator expressed concern that "passed on to other parties" was too broad, and should be restricted to intended users.
Response	The reviewers disagreed and made no change.
Section 3.8, Documentation	
Comment	One commentator felt the actuary should take reasonable steps to ensure that another qualified actuary could take over the work if necessary.
Response	The reviewers agreed and revised this section.
SECTION 4. COMMUNICATIONS AND DISCLOSURES	
Section 4.1.2, Identification of Actuarial Documents	
Comment	One commentator suggested that this provision seems overly broad and cumbersome, and should be removed.
Response	The reviewers disagreed, feeling identification of documents is important, and made no change.
Section 4.1.3, Disclosures in Actuarial Reports	
Comment	One commentator felt that a report provided by the actuary will be so laden down by disclosures that clear and concise communications will be difficult.
Response	The reviewers disagreed and made no change. They noted that disclosures could be in a separate section of the report from the findings, and so do not prevent clarity of communication.
Comment	One commentator felt section 4.1.3 should be expanded to include disclosures required by section 3.4.4.
Response	The reviewers disagreed and made no change The disclosures required by section 3.4.4 are addressed in sections 4.2 and 4.3.
Comment	One commentator felt section 4.1.3 should reference the exceptions addressed in section 3.3.
Response	The reviewers agreed and referenced section 3.3 in section 4.1.3.
Comment	One commentator felt where the actuarial report consists of more than one document, the actuary should disclose the documents that comprise the full report.

Response	The reviewers agreed and added paragraph j. to section 4.1.3.
Comment	One commentator felt that "on which the actuary relied" should be moved to immediately after "any information."
Response	The reviewers agreed and made this change.
Comment	One commentator felt it would be helpful to include examples to clarify the phrase "unless it is inappropriate to do so."
Response	The reviewers felt that incorporating a list of examples may limit the actuary's judgment, and made no change.
Section 4.2, Certain Assumptions or Methods Prescribed by Law	
Comment	One commentator requested that section 4.2 should be expanded to clarify that assumptions and methods prescribed by or under the authority of FASB, should be treated as "prescribed by law."
Response	The reviewers disagreed in part and made no change. An assumption or method prescribed by FASB would come under section 4.2 (assuming FASB is "other binding authority"). An assumption or method prescribed by a third party under the authority of FASB would not be covered by section 4.2.
Section 4.3, Responsibility for Assumptions and Methods	
Comment	One commentator questioned whether every assumption or method used for a monthly valuation had to be addressed in each actuarial report, or could reference be made to a master document?
Response	The reviewers made no change as this is the intent of section 3.2, which recognizes that an actuarial report often consists of multiple documents. The master document referred to in the comment fits this concept well.
Comment	One commentator questioned the need to disclose in an internal document "the reason why the other party set the assumption or method"
Response	The reviewers agreed and qualified section 4.3 by reference to section 3.3.
Comment	One commentator suggested adding a section 4.3(d)(3) with language such as "that the actuary agreed with the assumption or method."
Response	The reviewers made no change, since section 4.3 is only triggered if the actuary disowns the assumption or method.

Comment	One commentator pointed out that the guidance in this section is different than the guidance for similar situations under section 5.4.5 of ASOP No. 20.
Response	The reviewers believe the guidance in this section is appropriate to the general situation and have made no change. Section 1.2 of this standard states that where guidance of other standards conflicts with the guidance in this standard, the other standard applies.
Section 4.4, Deviation From the Guidance of an ASOP	
Comment	One commentator objected to the revision of section 4.4 (from the existing ASOP) and requested the original language be retained.
Response	The reviewers disagreed and made no change. The reviewers believe that the disclosures required under section 4.4 are adequately strong to address the concerns of the commentator. The revised section 4.4 is part of the ASB initiative to move all substantive guidance on deviation into ASOP No. 41 (and thus achieve consistency across ASOPs.) Part of this initiative is to clarify that "deviation" means deviating from the guidance of an ASOP. Compliance with the ASOP is still possible through adequate disclosure.

TO: Members of Actuarial Organizations Governed by the Standards of Practice of the Actuarial Standards Board and Other Persons Interested in Property/Casualty Unpaid Claim Estimates

FROM: Actuarial Standards Board (ASB)

SUBJ: Actuarial Standard of Practice (ASOP) No. 43

This booklet contains the final version of ASOP No. 43, *Property/Casualty Unpaid Claim Estimates.*

Background

Currently, no ASOP exists to provide guidance to actuaries developing unpaid claim estimates. ASOP No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*, provides guidance to the actuary in issuing a written statement of actuarial opinion but not in developing an unpaid claim estimate. The Casualty Actuarial Society's *Statement of Principles Regarding Property and Casualty Loss and Loss Adjustment Expense Reserves* contains some guidance. However, that document is currently under review and the revised document is expected to contain significantly less guidance than the current version. Therefore, to address this issue, the ASB charged the Subcommittee on Reserving of the ASB Casualty Committee with creating an ASOP to provide guidance to actuaries regarding property/casualty unpaid claim estimates.

First Exposure Draft

The first exposure draft of this ASOP was approved for exposure in February 2006 with a comment deadline of June 30, 2006. Thirty-two comment letters were received and considered in developing modifications that were reflected in the second exposure draft.

Second Exposure Draft

The second exposure draft of this ASOP was approved for exposure in February 2007 with a comment deadline of May 1, 2007. The Subcommittee on Reserving carefully considered the nine comment letters received and made changes to the language in several sections in response. For a summary of the issues contained in these comment letters, please see appendix 2.

Due to the volume of comments received throughout the exposure period on the Actuarial Central Estimate concept, an additional appendix (see appendix 3) was added to address the

comments.

The Subcommittee on Reserving thanks everyone who took the time to contribute comments and suggestions on both exposure drafts.

The ASB voted in June 2007 to adopt this standard.

ACTUARIAL STANDARD OF PRACTICE NO. 43

PROPERTY/CASUALTY UNPAID CLAIM ESTIMATES

STANDARD OF PRACTICE

Section 1. Purpose, Scope, Cross References, and Effective Date

1.1 Purpose—This actuarial standard of practice (ASOP) provides guidance to actuaries when performing professional services relating to the estimation of loss and loss adjustment expense for unpaid claims for property/casualty coverages. Any reference to "unpaid claims" in this standard includes (unless explicitly stated otherwise) the associated unpaid claim adjustment expense even when not accompanied by the estimation of unpaid claims.

1.2 Scope—This standard applies to actuaries when performing professional services related to developing unpaid claim estimates only for events that have already occurred or will have occurred, as of an accounting date, exclusive of estimates developed solely for ratemaking purposes. This standard applies to the actuary when estimating unpaid claims for all classes of entities, including self-insureds, insurance companies, reinsurers, and governmental entities. This standard applies to estimates of gross amounts before recoverables (such as deductibles, ceded reinsurance, and salvage and subrogation), estimates of amounts after such recoverables, and estimates of amounts of such recoverables.

This standard applies to the actuary only with respect to unpaid claim estimates that are communicated as an actuarial finding (as described in ASOP No. 41, *Actuarial Communications*) in written or electronic form. Actions taken by the actuary's principal regarding such estimates are beyond the scope of this standard.

The terms "reserves" and "reserving" are sometimes used to refer to "unpaid claim estimates" and "unpaid claim estimate analysis." In this standard, the term "reserve" is limited to its strict definition as an amount booked in a financial statement. Services described above are covered by this standard, regardless as to whether the actuary refers to the work performed as "reserving," "estimating unpaid claims" or any other term.

This standard does not apply to the estimation of items that may be a function of unpaid claim estimates or claim outcomes, such as (but not limited to) loss-based taxes, contingent commissions and retrospectively rated premiums.

This standard does not apply to unpaid claims under a "health benefit plan" covered by ASOP No. 5, *Incurred Health and Disability Claims*, or included as "health and disability liabilities" under ASOP No. 42, *Determining Health And Disability Liabilities Other Than Liabilities for Incurred Claims*. However, this standard does apply to health benefits

associated with state or federal workers compensation statutes and liability policies.

With respect to discounted unpaid claim estimates for property/casualty coverages, this standard addresses the determination of the undiscounted value of such estimates. The actuary should be guided by ASOP No. 20, *Discounting of Property and Casualty Loss and Loss Adjustment Expense Reserves*, to address additional considerations to reflect the effects of discounting.

An actuary may develop an unpaid claim estimate in the context of issuing a written statement of actuarial opinion regarding property/casualty loss and loss adjustment expense reserves. This standard addresses the determination of the unpaid claim estimate. The actuary should be guided by ASOP No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*, to address additional considerations associated with the issuance of such a statement.

If the actuary departs from the guidance set forth in this standard in order to comply with applicable law (statutes, regulations, and other legally binding authority), or for any other reason the actuary deems appropriate, the actuary should refer to section 4.

.

1.3 Cross References—When this standard refers to the provisions of other documents, the reference includes the referenced documents as they may be amended or restated in the future, and any successor to them, by whatever name called. If any amended or restated document differs materially from the originally referenced document, the actuary should consider the guidance in this standard to the extent it is applicable and appropriate.

1.4 Effective Date—This standard will be effective for any actuarial work product covered by this standard's scope produced on or after September 1, 2007.

Section 2. Definitions

The terms below are defined for use in this actuarial standard of practice.

2.1 Actuarial Central Estimate—An estimate that represents an expected value over the range of reasonably possible outcomes.

2.2 Claim Adjustment Expense—The costs of administering, determining coverage for, settling, or defending claims even if it is ultimately determined that the claim is invalid.

2.3 Coverage—The terms and conditions of a plan or contract, or the requirements of applicable law, that create an obligation for claim payment associated with contingent events.

2.4 Event—The incident or activity that triggers potential for claim or claim adjustment expense payment.

2.5 Method—A systematic procedure for estimating the unpaid claims.

2.6 Model—A mathematical or empirical representation of a specified phenomenon.

2.7 Model Risk—The risk that the methods are not appropriate to the circumstances or the models are not representative of the specified phenomenon.

2.8 Parameter Risk—The risk that the parameters used in the methods or models are not representative of future outcomes.

2.9 Principal—The actuary's client or employer. In situations where the actuary has both a client and an employer, as is common for consulting actuaries, the facts and circumstances will determine whether the client or the employer (or both) is the principal with respect to any portion of this standard.

2.10 Process Risk—The risk associated with the projection of future contingencies that are inherently variable, even when the parameters are known with certainty.

2.11 Unpaid Claim Estimate—The actuary's estimate of the obligation for future payment resulting from claims due to past events.

2.12 Unpaid Claim Estimate Analysis—The process of developing an unpaid claim estimate.

Section 3. Analysis of Issues and Recommended Practices

3.1 Purpose or Use of the Unpaid Claim Estimate—The actuary should identify the intended purpose or use of the unpaid claim estimate. Potential purposes or uses of unpaid claim estimates include, but are not limited to, establishing liability estimates for external financial reporting, internal management reporting, and various special purpose uses such as appraisal work and scenario analyses. Where multiple purposes or uses are intended, the actuary should consider the potential conflicts arising from those multiple purposes and uses and should consider adjustments to accommodate the multiple purposes to the extent that, in the actuary's professional judgment, it is appropriate and practical to make such adjustments.

3.2 Constraints on the Unpaid Claim Estimate Analysis—Sometimes constraints exist in the performance of an actuarial analysis, such as those due to limited data, staff, time or other resources. Where, in the actuary's professional judgment, the actuary believes that such constraints create a significant risk that a more in-depth analysis would produce a materially different result, the actuary should notify the principal of that risk and communicate the constraints on the analysis to the principal.

3.3 Scope of the Unpaid Claim Estimate—The actuary should identify the following:

a. the intended measure of the unpaid claim estimate;

1. Examples of various types of measures for the unpaid claim estimate include, but are not limited to, high estimate, low estimate, median, mean, mode, actuarial central estimate, mean plus risk margin, actuarial central estimate plus risk margin, or specified percentile.

   As defined in section 2.1, the actuarial central estimate represents an expected value over the range of reasonably possible outcomes. Such range of reasonably possible outcomes may not include all conceivable outcomes, as, for example, it would not include conceivable extreme events where the contribution of such events to an expected value is not reliably estimable. An actuarial central estimate may or may not be the result of the use of a probability distribution or a statistical analysis. This description is intended to clarify the concept rather than assign a precise statistical measure, as commonly used actuarial methods typically do not result in a statistical mean.

   The terms "best estimate" and "actuarial estimate" are not sufficient identification of the intended measure, as they describe the source or the quality of the estimate but not the objective of the estimate.

2. The actuary should consider whether the intended measure is appropriate to the intended purpose or use of the unpaid claim estimate.

3. The description of the intended measure should include the identification of whether any amounts are discounted.

b. whether the unpaid claim estimate is to be gross or net of specified recoverables;

c. whether and to what extent collectibility risk is to be considered when the unpaid claim estimate is affected by recoverables;

d. the specific types of unpaid claim adjustment expenses covered in the unpaid claim estimate (for example, coverage dispute costs, defense costs, and adjusting costs);

e. the claims to be covered by the unpaid claim estimate (for example, type of loss, line of business, year, and state); and

f. any other items that, in the actuary's professional judgment, are needed to describe the scope sufficiently.

3.4 Materiality—The actuary may choose to disregard items that, in the actuary's professional judgment, are not material to the unpaid claim estimate given the intended purpose and use. The actuary should evaluate materiality based on professional judgment, taking into account the requirements of applicable law and the intended purpose of the unpaid claim estimate.

3.5 Nature of Unpaid Claims—The actuary should have an understanding of the nature of the unpaid claims being estimated. This understanding should be based on what a qualified actuary in the same practice area could reasonably be expected to know or foresee as being relevant and material to the estimate at the time of the unpaid claim estimate analysis, given the same purpose, constraints, and scope. The actuary need not be familiar with every aspect of potential unpaid claims.

Examples of aspects of the unpaid claims (including any material trends and issues associated with such elements) that may require an understanding include the following:

a. coverage;

b. conditions or circumstances that make a claim more or less likely or the cost more or less severe;

c. the underlying claim adjustment process; and

d. potential recoverables.

3.6 Unpaid Claim Estimate Analysis—The actuary should consider factors associated with the unpaid claim estimate analysis that, in the actuary's professional judgment, are material and are reasonably foreseeable to the actuary at the time of estimation. The actuary is not expected to become an expert in every aspect of potential unpaid claims.

The actuary should consider the following items when performing the unpaid claim estimate analysis:

3.6.1 Methods and Models—The actuary should consider methods or models for estimating unpaid claims that, in the actuary's professional judgment, are appropriate. The actuary should select specific methods or models, modify such methods or models, or develop new methods or models based on relevant factors including, but not limited to, the following:

a. the nature of the claims and underlying exposures;

b. the development characteristics associated with these claims;

c. the characteristics of the available data;

d. the applicability of various methods or models to the available data; and

e. the reasonableness of the assumptions underlying each method or model.

The actuary should consider whether a particular method or model is appropriate in light of the purpose, constraints, and scope of the assignment. For example, an

unpaid claim estimate produced by a simple methodology may be appropriate for an immediate internal use. The same methodology may be inappropriate for external financial reporting purposes.

The actuary should consider whether, in the actuary's professional judgment, different methods or models should be used for different components of the unpaid claim estimate. For example, different coverages within a line of business may require different methods.

The actuary should consider the use of multiple methods or models appropriate to the purpose, nature and scope of the assignment and the characteristics of the claims unless, in the actuary's professional judgment, reliance upon a single method or model is reasonable given the circumstances. If for any material component of the unpaid claim estimate the actuary does not use multiple methods or models, the actuary should disclose and discuss the rationale for this decision in the actuarial communication.

In the case when the unpaid claim estimate is an update to a previous estimate, the actuary may choose to use the same methods or models as were used in the prior unpaid claim estimate analysis, different methods or models, or a combination of both. The actuary should consider the appropriateness of the chosen methods or models, even when the decision is made not to change from the previously applied methods or models.

3.6.2 Assumptions—The actuary should consider the reasonableness of the assumptions underlying each method or model used. Assumptions generally involve significant professional judgment as to the appropriateness of the methods and models used and the parameters underlying the application of such methods and models. Assumptions may be implicit or explicit and may involve interpreting past data or projecting future trends. The actuary should use assumptions that, in the actuary's professional judgment, have no known significant bias to underestimation or overestimation of the identified intended measure and are not internally inconsistent. Note that bias with regard to an expected value estimate would not necessarily be bias with regard to a measure intended to be higher or lower than an expected value estimate.

The actuary should consider the sensitivity of the unpaid claim estimates to reasonable alternative assumptions. When the actuary determines that the use of reasonable alternative assumptions would have a material effect on the unpaid claim estimates, the actuary should notify the principal and attempt to discuss the anticipated effect of this sensitivity on the analysis with the principal.

When the principal is interested in the value of an unpaid claim estimate under a particular set of assumptions different from the actuary's assumptions, the actuary may provide the principal with the results based on such assumptions, subject to appropriate disclosure.

3.6.3 Data—The actuary should refer to ASOP No. 23, *Data Quality*, with respect to the selection of data to be used, relying on data supplied by others, reviewing data, and using data.

3.6.4 Recoverables—Where the unpaid claim estimate analysis encompasses multiple types of recoverables, the actuary should consider interaction among the different types of recoverables and should adjust the analysis to reflect that interaction in a manner that the actuary deems appropriate.

3.6.5 Gross vs. Net—The scope of the unpaid claim estimate analysis may require estimates both gross and net of recoverables. Gross and net estimates may be viewed as having three components, which are the gross estimate, the estimated recoverables, and the net estimate. The actuary should consider the particular facts and circumstances of the assignment when choosing which components to estimate.

3.6.6 External Conditions—Claim obligations are influenced by external conditions, such as potential economic changes, regulatory actions, judicial decisions, or political or social forces. The actuary should consider relevant external conditions that are generally known by qualified actuaries in the same practice area and that, in the actuary's professional judgment, are likely to have a material effect on the actuary's unpaid claim estimate analysis. However, the actuary is not required to have detailed knowledge of or consider all possible external conditions that may affect the future claim payments.

3.6.7 Changing Conditions—The actuary should consider whether there have been significant changes in conditions, particularly with regard to claims, losses, or exposures, that are likely to be insufficiently reflected in the experience data or in the assumptions used to estimate the unpaid claims. Examples include reinsurance program changes and changes in the practices used by the entity's claims personnel to the extent such changes are likely to have a material effect on the results of the actuary's unpaid claim estimate analysis. Changing conditions can arise from circumstances particular to the entity or from external factors affecting others within an industry. When determining whether there have been known, significant changes in conditions, the actuary should consider obtaining supporting information from the principal or the principal's duly authorized representative and may rely upon their representations unless, in the actuary's professional judgment, they appear to be unreasonable.

3.6.8 Uncertainty—The actuary should consider the uncertainty associated with the unpaid claim estimate analysis. This standard does not require or prohibit the actuary from measuring this uncertainty. The actuary should consider the purpose and use of the unpaid claim estimate in deciding whether or not to measure this uncertainty. When the actuary is measuring uncertainty, the actuary should consider the types and sources of uncertainty being measured and choose the methods, models, and

assumptions that are appropriate for the measurement of such uncertainty. For example, when measuring the variability of an unpaid claim estimate covering multiple components, consideration should be given to whether the components are independent of each other or whether they are correlated. Such types and sources of uncertainty surrounding unpaid claim estimates may include uncertainty due to model risk, parameter risk, and process risk.

3.7 Unpaid Claim Estimate—The actuary should take into account the following with respect to the unpaid claim estimate:

3.7.1 Reasonableness—The actuary should assess the reasonableness of the unpaid claim estimate, using appropriate indicators or tests that, in the actuary's professional judgment, provide a validation that the unpaid claim estimate is reasonable. The reasonableness of an unpaid claim estimate should be determined based on facts known to, and circumstances known to or reasonably foreseeable by, the actuary at the time of estimation.

3.7.2 Multiple Components—When the actuary's unpaid claim estimate comprises multiple components, the actuary should consider whether, in the actuary's professional judgment, the estimates of the multiple components are reasonably consistent.

3.7.3 Presentation—The actuary may present the unpaid claim estimate in a variety of ways, such as a point estimate, a range of estimates, a point estimate with a margin for adverse deviation, or a probability distribution of the unpaid claim amount. The actuary should consider the intended purpose or use of the unpaid claim estimate when deciding how to present the unpaid claim estimate.

3.8 Documentation—The actuary should consider the intended purpose or use of the unpaid claim estimate when documenting work, and should refer to ASOP No. 41, *Actuarial Communications*.

Section 4. Communications and Disclosures

4.1 Actuarial Communication—When issuing an actuarial communication subject to this standard, the actuary should consider the intended purpose or use of the unpaid claim estimate and refer to ASOP Nos. 23 and 41.

In addition, consistent with the intended purpose or use, the actuary should disclose the following in an appropriate actuarial communication:

a. the intended purpose(s) or use(s) of the unpaid claim estimate, including adjustments that the actuary considered appropriate in order to produce a single work product for multiple purposes or uses, if any, as described in section 3.1;

b. significant limitations, if any, which constrained the actuary's unpaid claim estimate analysis such that, in the actuary's professional judgment, there is a significant risk that a more in-depth analysis would produce a materially different result, as described in section 3.2;

c. the scope of the unpaid claim estimate, as described in section 3.3;

d. the following dates: (1) the accounting date of the unpaid claim estimate, which is the date used to separate paid versus unpaid claim amounts; (2) the valuation date of the unpaid claim estimate, which is the date through which transactions are included in the data used in the unpaid claim estimate analysis; and (3) the review date of the unpaid claim estimate, which is the cutoff date for including information known to the actuary in the unpaid claim estimate analysis, if appropriate. An example of such communication is as follows: "This unpaid claim estimate as of December 31, 2005 was based on data evaluated as of November 30, 2005 and additional information provided to me through January 17, 2006.";

e. specific significant risks and uncertainties, if any, with respect to whether actual results may vary from the unpaid claim estimate;

f. significant events, assumptions, or reliances, if any, underlying the unpaid claim estimate that, in the actuary's professional judgment, have a material effect on the unpaid claim estimate, including assumptions provided by the actuary's principal or an outside party or assumptions regarding the accounting basis or application of an accounting rule. If the actuary depends upon a material assumption, method, or model that the actuary does not believe is reasonable or cannot determine to be reasonable, the actuary should disclose the dependency of the estimate on that assumption/method/model and the source of that assumption/method/model. The actuary should use professional judgment to determine whether further disclosure would be appropriate in light of the purpose of the assignment and the intended users

of the actuarial communication;

g. the disclosure in ASOP No. 41, section 4.2, if any material assumption or method was prescribed by applicable law (statutes, regulations, and other legally binding authority);

h. the disclosure in ASOP No. 41, section 4.3, if the actuary states reliance on other sources and thereby disclaims responsibility for any material assumption or method selected by a party other than the actuary; and

i. the disclosure in ASOP No. 41, section 4.4, if, in the actuary's professional judgment, the actuary has otherwise deviated materially from the guidance of this ASOP.

4.2 Additional Disclosures—In certain cases, consistent with the intended purpose or use, the actuary may need to make the following disclosures in addition to those in section 4.1:

a. In the case when the actuary specifies a range of estimates, the actuary should disclose the basis of the range provided, for example, a range of estimates of the intended measure (each of such estimates considered to be a reasonable estimate on a stand-alone basis); a range representing a confidence interval within the range of outcomes produced by a particular model or models; or a range representing a confidence interval reflecting certain risks, such as process risk and parameter risk.

b. In the case when the unpaid claim estimate is an update of a previous estimate, the actuary should disclose changes in assumptions, procedures, methods or models that the actuary believes to have a material impact on the unpaid claim estimate and the reasons for such changes to the extent known by the actuary. This standard does not require the actuary to measure or quantify the impact of such changes.

Appendix 1

Background and Current Practices

Note: This appendix is provided for informational purposes but is not part of the standard of practice.

Background

This standard defines issues and considerations that an actuary should take into account when estimating unpaid claim and claim adjustment expense for property and casualty coverages or hazard risks. The *Statement of Principles Regarding Property and Casualty Loss and Loss Adjustment Expense Reserves* was adopted by the Board of Directors of the Casualty Actuarial Society in May 1988. The *Statement of Principles* has served as the primary guidance regarding estimation of unpaid property and casualty claim and claim adjustment expense amounts providing both principles and considerations related to practice. In conjunction with the development of this standard, the *Statement of Principles* is undergoing revision to focus on principles rather than also discussing considerations.

A decision was made to exclude unpaid claim estimates developed for ratemaking purposes from the scope of this standard. This was done to avoid placing inappropriate requirements on unpaid claim estimates in the ratemaking context, and to keep the scope workable by excluding additional considerations only applicable to the ratemaking context. Ratemaking requires more of a hypothetical analysis of possible future events than an analysis of the cost of past events. Hence, the selection and evaluation of assumptions and methods for ratemaking purposes may be different from the selection and evaluation of such for past event unpaid claim estimates.

Current Practices

Actuaries are guided by the *Statement of Principles Regarding Property and Liability Loss and Loss Adjustment Expense Reserves* of the Casualty Actuarial Society. Other ASOPs issued by the Actuarial Standards Board pertaining to claim and claim adjustment expense estimates have included ASOP No. 9, *Documentation and Disclosure in Property and Casualty Insurance Ratemaking, Loss Reserving, and Valuations*; ASOP No. 20, *Discounting of Property and Casualty Loss and Loss Adjustment Expense Reserves*; ASOP No. 23, *Data Quality*; ASOP No. 36, *Statement of Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*, and ASOP No. 41, *Actuarial Communications*. In addition, since 1993, the Casualty Practice Council of American Academy of Actuaries has published practice notes addressing current National Association of Insurance Commissioners' requirements for the statement of actuarial opinion. The practice notes describe some current practices and show illustrative wording for handling issues and problems. While these practice notes (and future practice notes issued after the effective date of this standard) can be updated to react in a timely manner to new concerns or requirements, they are not binding, and they have not gone through the exposure and adoption process of the standards of actuarial practice promulgated by the Actuarial Standards

Board.

There are also numerous educational papers in the public domain relevant to the topic of unpaid claim estimates, including those published by the Casualty Actuarial Society. Some of these are refereed and others are not. While these may provide useful educational guidance to practicing actuaries, none is an actuarial standard.

Appendix 2

Comments on the Second Exposure Draft and Responses

The second exposure draft of this ASOP, *Property/Casualty Unpaid Claim Estimates*, was issued in February 2007 with a comment deadline of May 1, 2007. Nine comment letters were received, some of which were submitted on behalf of multiple commentators, such as by firms or committees. For purposes of this appendix, the term "commentator" may refer to more than one person associated with a particular comment letter. The Subcommittee on Reserving carefully considered all comments received and the Casualty Committee and ASB reviewed (and modified, where appropriate) the proposed changes.

Summarized below are the significant issues and questions contained in the comment letters and the responses.

The term "reviewers" in appendix 2 includes the subcommittee, the Casualty Committee, and the ASB. Also, unless otherwise noted, the section numbers and titles used in appendix 4 refer to those in the second exposure draft.

GENERAL COMMENTS	
Comment	Two commentators requested that the standard comment on what would constitute reasonable review of a previous estimate. Specifically, they were concerned with actuaries reviewing an earlier estimate with the benefit of hindsight, particularly in a litigation situation.
Response	A sentence has been added to section 3.7.1, Reasonableness, to address this issue.
SECTION 1. PURPOSE, SCOPE, CROSS REFERENCES, AND EFFECTIVE DATE	
Section 1.2, Scope	
Comment	One commentator suggested a clarification to section 1.2, inserting the words "or will have occurred" immediately after the words "for events that have already occurred."
Response	The reviewers agree and made the change.
Comment	One commentator was concerned that the development of unpaid claim estimates for ratemaking purposes would benefit from much of what is in this standard, despite the ratemaking scope exclusion in this standard. The recommendation was to retain the ratemaking exclusion in this standard but to then begin work on a revision that would remove such an exclusion.
Response	The reviewers agree with retaining the ratemaking scope exclusion for this standard but believe the ratemaking situation is outside their current charge.

Comment	One commentator suggested adding the words "specific types of" before the word "recoverables" in the first paragraph of section 1.2, as otherwise it might imply that all types of recoverables are being discussed.
Response	The reviewers disagree with the suggestion, as the intent is to potentially include all types of recoverables related to unpaid claims, relying on the actuary in section 3.3, Scope of the Unpaid Claim Estimate, to identify the particular recoverables (if any) applicable to the given purpose or use of the unpaid claim estimate(s) being developed. The reviewers made no change.
Comment	Two commentators were concerned that some may be confused by the use of the term "unpaid claim estimates" rather than "reserves."
Response	The reviewers added a paragraph to section 1.2 for clarity.
Comment	One commentator was concerned that the scope exclusion for items that "may be a function of unpaid claim estimates" would inadvertently exclude recoverables that are included in unpaid claims.
Response	The reviewers believe that the standard is sufficiently clear (as reflected in the first paragraph, last sentence of section 1.2) that such recoverables are covered by the standard.
Comment	One commentator suggested adding "pricing" and "premiums" to the list of items that are a function of unpaid claim estimates or claim outcomes but not included in this standard's scope.
Response	The reviewers do not feel this is necessary, as ratemaking is already excluded in the section's first paragraph, and this list is not meant to be all inclusive.
Comment	Two commentators expressed concern that health insurance written by companies filing property/casualty annual statements may be included in the scope. One of these commentators recommended addressing this by explicitly excluding health insurance from the scope. The other commentator recommended that there was no need for a separate property casualty standard on unpaid claim estimates, as the property/casualty perspective could probably be addressed in the current ASOP No. 5, *Incurred Health and Disability Claims*. The latter commentator also suggested a definition of "property/casualty" be provided if a separate property/casualty standard was to be adopted.
Response	The reviewers agree that such confusion may exist, and added a paragraph to section 1.2, Scope.
Comment	One commentator stated the end of section 1.2 dealing with conflict with applicable law, etc. is not necessary, and that the term "provision" (found in section 1.3, Cross References) is also used in some jurisdictions in place of policy or loss reserves.
Response	The reviewers disagree as this wording is standard for all ASOPs and made no change.

SECTION 2. DEFINITIONS	
Section 2.1, Actuarial Central Estimate	
Comment	One commentator objected to the term "actuarial central estimate," due to the concern that it would be a truncated mean in most situations, biased low relative to the expected value, and recommended that if absolutely needed in the standard that it be relabeled without the word "actuarial" as part of the label.
Response	The reviewers disagree with the deletion of the term "actuarial" and made no change. Refer to appendix 3.
Comment	One commentator was concerned that the use of the term "expected value" in the definition of "actuarial central estimate" would imply a statistical mean. The commentator suggested changing "expected value" to "central tendency…such as an average or an expected value."
Response	The reviewers considered similar wording in the drafting process and made no change. Refer to appendix 3.
Comment	One commentator suggested that different terms be used to describe the results from methods vs. models. Specifically, the commentator suggested the term "actuarial central estimate" be limited to describing a result from a method, while the term "actuarial distribution estimate" or some other term be used to describe the results of a model.
Response	The reviewers believe the standard allows the actuary to describe the results using whatever term the actuary sees fit to use (the term "actuarial central estimate" is provided as just one of many possible terms that can be used) and made no change.
Section 2.3, Coverage	
Comment	One commentator was concerned that the definition of "coverage" did not include self-insured first party claims.
Response	The reviewers could not envision a situation where a "liability" or claim would exist with regard to first party self-insured losses. Rather, this was viewed as more of a reduction in asset value. As such, the reviewers did not agree with the need to address self-insured first party claims and made no change.
Section 2.5, Method and 2.6, Model	
Comment	One commentator stated, "There are definite differences between 'methods' and 'models' that are much more substantial and fundamental than" what is in the proposed standard. The commentator suggested that more complete definitions be taken from the CAS Working Party paper on reserve variability.
Response	The definitions in the standard are abbreviated versions of what is in the referenced Working Party paper. The reviewers believe that further elaboration is unnecessary, although reference to various CAS publications has been added to appendix 1.
Section 2.7. Model Risk	
Comment	One commentator believed that combining reference to methods and models in the definition of "model risk" in section 2.7 caused grammatical problems. The suggested fix was to create a new term, "method risk," which would also lead to a slight change in paragraph 3.6.8, Uncertainty.
Response	The reviewers believe that common usage is to include what was described as "method risk" in the category of "model risk." Hence, a change was made to the definition, but a separate term (and definition) for "method risk" was not added.

Section 2.8, Parameter Risk	
Comment	One commentator objected to the reference to "methods" in the definition of "parameter" risk, due to a belief that "since a 'method' does not have an underlying distribution there are no parameters to estimate."
Response	The reviewers believe that this is within the purview of common usage of the terms "methods" and "parameters," and made no change.
Comment	One commentator suggested adding a definition of "parameter" for consistency purposes.
Response	The reviewers believe that such a definition is unnecessary and made no change.
Section 2.11, Unpaid Claim Estimates	
Comment	One commentator suggested modifying this definition (and the unpaid claim estimate analysis definition) to clarify that unpaid claim estimates are synonymous with loss reserve estimates or unpaid claim liability estimates in financial reporting contexts.
Response	The reviewers added language to section 1.2, Scope, for clarity.
SECTION 3. ANALYSIS OF ISSUES AND RECOMMENDED PRACTICES	
Section 3.1, Purpose or Use of the Unpaid Claim Estimate	
Comment	One commentator agreed with the use of the term "unpaid claim estimate" rather than "reserve" to avoid the financial reporting context, but believed that reference to the "intended purpose" of the estimate forced the discussion back solely to reserves and financial reporting. The suggested fix was to remove any discussion of "intended purpose" in the standard, and focus solely on estimating the distribution of possible future outcomes in the standard. (This concern also led to minor changes suggested in section 1.2, Scope.)
Response	The reviewers disagree that the only "intended purposes" would be those relating to financial reporting. Other "intended purposes" (some of which are listed in section 3.1) include merger/acquisition-related valuations, scenario analyses for risk management purposes, valuations as part of commutation discussions, etc. The reviewers made no change.
Comment	The last sentence of this section states "the actuary…should consider adjustments to accommodate the multiple purposes to the extent…it is appropriate and practical" to do so. One commentator asked if the intent was for the actuary to adjust the estimate or to provide different estimates for each purpose/use.
Response	The reviewers discussed different possible approaches to addressing this situation and decided that the standard should be silent on whether to produce multiple estimates, produce a single estimate that attempts to accommodate both purposes (assuming that this is possible), or some other option. Instead, the standard requires the actuary to consider some adjustment and leaves it up to the actuary's professional judgment as to whether or what kind of adjustment to make. The reviewers made no change.

Section 3.2, Constraints on the Unpaid Claim Estimate Analysis	
Comment	One commentator suggested replacing "staff" with "resources" in this section as to be more general.
Response	The reviewers agree and changed the language.
Comment	One commentator suggested replacing "result" with "estimate" in this section so that it is more consistent with the rest of the ASOP.
Response	The reviewers disagree. As worded, "result" could incorporate other parts of the analysis beyond the estimate, such as analysis of uncertainty (if included in the assignment's scope). The reviewers made no change.
Comment	Where there is a significant risk of the type described in this section, one commentator recommended that this situation be a required disclosure.
Response	The reviewers disagree noting that required disclosure is already addressed in section 4.1(b) and made no change.
Section 3.3, Scope of the Unpaid Claim Estimate	
Comment	One commentator was concerned that the wording in 3.3(a)(1) may cause actuaries to limit themselves to only the alternatives listed. Alternate wording was suggested.
Response	The reviewers agree and changed the wording in response.
Comment	One commentator suggested an editorial change for section 3.3(c), whereby "is to be considered" would be changed to "is considered."
Response	The reviewers disagree with the suggestion, as section 3.3 addresses identification of the scope of the work in advance of the actual analysis. Hence, "is to be" is more appropriate than "is" in this context. The reviewers made no change.
Comment	One commentator suggested replacing the phrase "any other items" in section 3.3(f) with "other items" or "any other significant items," due to a concern that the current wording would be too all inclusive and could result in excessive procedures.
Response	The reviewers disagree, as the reference at the end of the paragraph ("needed to describe the scope sufficiently") already addresses the stated concern, and made no change.
Comment	One commentator suggested replacing "material to the actuary" with "material to the estimate" in section 3.5, Nature of Unpaid Claims, first paragraph.
Response	The reviewers agree and made the change.
Section 3.6, Unpaid Claim Estimate Analysis	
Comment	One commentator was concerned with the possible ambiguity with the term "factors" in this paragraph.
Response	The reviewers believe that this possible ambiguity is sufficiently addressed by the discussion in section 3.6.

Comment	One commentator suggested that additional guidance on unpaid claim adjustment expenses be provided for situations involving prepaid expenses and third party administrators (TPAs).
Response	The standard already includes claim adjustment expenses in its scope, as "unpaid claims" is defined in section 1.1, Purpose, as including the related claim adjustment expenses. The reviewers also believe that prepayments to TPAs for the expense of adjusting claims is a specific situation and, as such, is too detailed for the general guidance in this standard. The reviewers made no change.
Section 3.6.1, Methods and Models	
Comment	One commentator stated that "we should be doing all we can to foster the rigorous use of stochastic models in favor of traditional deterministic methods" and objected to the use of "methods" and "models" as essentially interchangeable terms.
Response	The reviewers consider judgment to be a major component of the application of both methods and models. As such, the reviewers do not consider one to be clearly superior to the other in all situations. The reviewers made no change.
Comment	In section 3.6.1, in the phrase that says, "For example, different coverages within a line of business may require different methods," one commentator questioned whether the word "require" was appropriate.
Response	The reviewers believe that the word "require" is appropriate in this context, given that it is used in the context of an example and not in providing a direct requirement. The reviewers made no change.
Comment	One commentator suggested wording with regard to required disclosure if multiple methods were not used for "any component." The suggestion limited the disclosure to only material components. The same commentator also asked for clarification of the term "component."
Response	The reviewers reworded the section to clarify that the requirement only existed for material components. The suggested clarification of the term "component" was not adopted, as the reviewers felt that it would lead to a list of component examples that would never be complete for all applications.
Section 3.6.3, Data	
Comment	One commentator suggested adding guidance that "additional liabilities may be necessary if the data does not balance to recorded claim expenses, i.e., if there is a timing difference between when a claim is shown as paid in the actuarial data and when it is recorded by the principal."
Response	The reviewers believe that this is a specific situation and is covered by the general guidance in section 3.6.1(c). The reviewers made no change.
Section 3.6.6, External Conditions	
Comment	One commentator suggested that section 3.6.6, External Conditions, focused on past or current conditions, while section 3.6.7, Changing Conditions, focused on current or future conditions, and that these time horizons might be clarified in the standard.
Response	The reviewers do not agree that the time horizons in the two sections are constrained as suggested by the commentator and made no change.

Section 3.6.7, Changing Conditions	
Comment	Two commentators suggested that the actuary should be required to evaluate the reasonableness of management's representations (as referred to in section 3.6.7) under certain circumstances. One of these commentators stated the reference to "reasonable representations" in section 3.6.7 already implies the actuary is required to perform such an evaluation but suggested the standard state this requirement explicitly.
Response	The reviewers disagreed that the standard should require an actuary to perform an evaluation affirming the reasonableness of management's representations and have revised the language to indicate the actuary may rely upon their representations unless, in the actuary's professional judgment, they appear to be unreasonable**.**
Section 3.6.8, Uncertainty	
Comment	One commentator suggested that examples of uncertainty measures be provided.
Response	The reviewers did not believe that such a list was necessary and made no change.
Comment	One commentator suggested that the original reference to the covariance of multiple component's estimates implied particular statistical tests or relationships that may not be amenable to testing. Replacement wording was suggested.
Response	The reviewers acknowledge the concern and developed new wording that addressed the concern expressed.
Comment	One commentator stated that since the concept of a risk margin is implied by this section, this section should discuss risk margins explicitly.
Response	The reviewers disagree that discussion of uncertainty requires discussion of a risk margin and made no change.
Section 3.7.1, Reasonableness	
Comment	One commentator asked if the actuary should also be assessing the reasonableness of the estimate relative to its intended purpose.
Response	The reviewers believe that the required disclosures in section 4.1, Actuarial Communications, and ASOP No. 41, *Actuarial Communications*, sufficiently address the commentator's concerns and made no change.

Section 3.7.2, Multiple Components	
Comment	One commentator stated, "I am not certain how 'estimates of the multiple components' can be consistent. I can see how the assumptions used can be consistent, the methods can be consistent, or they can be consistently developed." As a result, the commentator suggested that this section be clarified.
Response	The reviewers believe that the correct focus is on consistency of the estimates of the multiple components as stated. It is not always apparent whether or not the assumptions and/or models/methods underlying the estimates are consistent until the results of those assumptions/models/methods are evaluated. For example, an estimate of gross claim liabilities and a separate estimate of net claim liabilities may each seem to be reasonable when evaluated individually based on the underlying assumptions/models/methods used in their estimation, but the resulting relationship between gross and net estimates may be found to be unreasonable, indicating that the estimates were not reasonably consistent. The reviewers made no change.
Section 3.7.3, Presentation	
Comment	One commentator recommended that the standard require that the methods and/or models be appropriate to the intended purpose of the estimate, and that this is more important than requiring such of the estimate presentation.
Response	The wording in section 3.6.1, Methods and Models, already addresses this issue and no change was made.
Section 4. Communications and Disclosures	
Section 4.1, Actuarial Communications	
Comment	One commentator noted that the definition of "valuation date" found in section 4.1(d) differed from that found in ASOP No. 41, *Actuarial Communications*, "the date as of which the liabilities are determined."
Response	The reviewers believe that the definition in section 4.1(d) of this standard conforms with standard usage of the term among casualty actuaries and made no change.
Comment	One commentator suggested further elaborating on this disclosure requirement by requiring "specific comments regarding the major factors or particular conditions applicable to the unpaid claim estimate." Otherwise, the commentator was concerned that this would result in too many boilerplate disclosures about the risk.
Response	The reviewers acknowledge the concern and addressed it by adding the word "specific" before "significant" in section 4.1(e).
Section 4.2, Additional Disclosures	
Comment	Where the unpaid claim estimate is an update of a previous estimate, one commentator suggested requiring that the amount of change in estimate be disclosed, with reasons provided whenever the change was significant and the reasons for the change were known.
Response	The reviewers did not agree and made no change.

Appendix	
Appendix 1—Background	
Comment	One commentator suggested a change to appendix 1 regarding the proposed revision to the CAS *Statement of Principles Regarding Property and Casualty Loss and Loss Adjustment Expense Reserves*. The commentator recommended that the wording be changed from "focus more narrowly on principles" to "focus more broadly on principles."
Response	The reviewers disagree, as the proposed revision would remove various sections in the current Principles statement, including extensive discussion on Considerations, and made no change.

Appendix 3

Note: This appendix is provided for informational purposes but is not part of the standard of practice.

Comments on "Actuarial Central Estimate"

During this standard's development, the "actuarial central estimate" concept and definition elicited the most comments of any of the topics covered. The subcommittee believes that the issues raised by this topic are worthy of expanded discussion. The following is meant to provide additional clarity to these key concepts.

This appendix is organized by first providing a background as to the originally proposed wording regarding the actuarial central estimate, followed by a summary of comments received on the actuarial central estimate proposal and subcommittee responses.

Background

The term "actuarial central estimate" was originally created by the subcommittee due to a desire to have a "default" intended measure for the unpaid claim estimate.

The standard requires that the actuary identify (and disclose) the intended measure. The subcommittee had debated whether or not to require disclosure of the estimate's intended measure in all cases, or to allow for a default intended measure.[1] If a default did exist, the subcommittee felt that it needed to allow for many of the traditional actuarial estimation methods. But many traditional actuarial methods do not explicitly define the intended measure that results from their application. Implicitly, they attempt to produce a central estimate[2] of some sort with regard to the distribution of possible outcomes, but the resulting intended measure does not have a well-defined statistical definition. Hence, if the standard were to include a default intended measure, the subcommittee believed that it would have to create a new term and a corresponding definition.

As to the definition of the term, it is generally agreed that most traditional actuarial methods are meant to produce some measure of central tendency. But what measure? There are several different measures of central tendency, including (for example) mean, median, mode, and truncated mean. The subcommittee believed that "mean" best represented the central tendency measure implicitly underlying most traditional actuarial methods, even if such traditional methods are not statistical in nature. (For further discussion, this will be referred to as a "conceptual mean" rather than a "statistical mean.")

Next, the subcommittee considered the issue of whether this conceptual mean is intended to

1 Note that several accounting frameworks use the term "measurement objective" for this concept, rather than "intended measure."

2 Note that "central estimate" does not imply a midpoint. One respondent suggested using the words "medium or intermediate" estimate to avoid any incorrect interpretation that a "central estimate" must be a midpoint.

incorporate the entire range of all possible outcomes. In some lines of business, the subcommittee felt that this would be problematic due to the potential for doomsday and/or systemic shocks in the tail of the distribution. For example, it is doubtful whether any actuarial estimate (stochastic or deterministic) in 1999 considered the liability for Y2K events to the extent they were forecasted at that time. Many of those Y2K-event liability estimates proved to be overly pessimistic, and most financial statement preparers did not incorporate such estimates in their financial statements prior to January 1, 2000. Similarly, estimates of future mass torts that have yet to be identified (for example, "the next asbestos") are generally viewed as not reliably estimable. Hence, the subcommittee felt that requiring that the entire range of all possible outcomes be considered in the estimation of the mean is unrealistic.

In looking for other approaches for dealing with this situation, the subcommittee looked at developments in other parts of the world. The subcommittee found that the term "central estimate" was being used in various locations to describe the intended measure of traditional methods.[3] [4] Initial drafts of this standard also used the same term, but it was eventually decided that the phrase "central estimate" was too generic, with risk of confusion and misinterpretation due to common meanings of the term "central." The subcommittee felt that a new term needed to be developed that conveyed the same concepts but without the same risk of misinterpretation. This led to the term "Actuarial Central Estimate," which was designed to be non-generic, and hence capable of being defined solely by this standard.

As a result of the deliberations discussed above, the subcommittee had developed a rudimentary definition ("conceptual mean," excluding remote or speculative outcomes) and a name for a default intended measure consistent with the desired default. The resulting paragraph in the first exposure draft was as follows:

2.1 *Actuarial Central Estimate—An estimate that represents a mean excluding remote or speculative outcomes that, in the actuary's professional judgment, is neither optimistic nor pessimistic. An actuarial central estimate may or may not be the result of the use of a probability distribution or a statistical analysis. This definition is intended to clarify the concept rather than assign a precise statistical measure, as commonly used actuarial methods typically do not result in a statistical mean.*

3 "'Central Estimate': an estimate that contains no deliberate or conscious over or under estimation," from http://www.actuaries.org.nz/publications/PS4%20General%20Insurance.pdf#search=%22central%20estimate%20actuarial%22, September 5, 2006

4 As the recently modified AASB1023 now requires companies to disclose the central estimate of their liabilities (that is the 50% PoS or "best estimate" figure). INFORMATION FOR OBSERVERS, IASB Meeting: 19 April 2005, London, Topic: Insurance Contracts - Education session (Agenda item 3)

Comments and Responses

The comments from this standard's first exposure draft on "actuarial central estimate" and its later usage could generally be grouped into the following five categories:

- Concern with the use of the term "mean" in the "actuarial central estimate" definition, as doing so may imply statistical approaches and distributions regardless of the caveats of such in the proposed definition.
- Concern with the exclusion of "remote or speculative" outcomes in the "actuarial central estimate" definition, as doing so may lead to an estimate biased low (relative to a mean reflecting the entire distribution of possible outcomes).
- Desire for the default to allow for or possibly even promote conservatism.
- Desire that the standard promote statistical techniques.
- Preference for the term "best estimate" over "actuarial central estimate."

As a result of the comments that were received, the subcommittee decided to eliminate the concept of prescribing a default measure since opinions differed widely on what the default measure ought to be. It was felt that requiring the actuary to identify the intended measure in all circumstances allowed the actuary to describe the intended measure in the actuary's own words. However, the subcommittee felt that it was important to have terminology for the measure that results from traditional actuarial methods where the actuary is conceptually aiming for a mean estimate. The subcommittee therefore retained the term "actuarial central estimate," revised the definition and included it as an example of an intended measure in the non-exhaustive list that was provided in section 3.3(a)(1).

More detailed responses to the comments are shown below:

Comment:
Some commentators objected to the use of the term "mean" in the definition of "actuarial central estimate," as they believed that it was impossible to use the term without conveying an implied statistical approach.

Response:
The final definition replaced the term "mean" with "expected value." Additional clarification is provided in 3.3(a)(1), where it states that the "description [of actuarial central estimate] is intended to clarify the concept rather than assign a precise statistical measure, as commonly used actuarial methods typically do not result in a statistical mean."

Comment:
Some commentators had a concern with the exclusion of "remote or speculative" outcomes in the originally proposed "actuarial central estimate" definition, as they felt that this would lead to estimates that were biased low (relative to a statistical mean reflecting the entire distribution).

Response:
The subcommittee believes that nearly all methods currently in use for estimating unpaid claims, whether stochastic or deterministic, do not reflect all possible outcomes, nor should they necessarily do so. The major concern of the subcommittee in this area are those outcomes where reliable determination of the outcomes' contribution to a mean estimate are so problematic as to be speculative and which are not expected to be normal or recurring on a regular basis. Examples include the Y2K concerns prior to January 1, 2000, and estimates of future mass torts that have yet to be identified (for example, "the next asbestos"). This concern is also limited to those outcomes that could be material to an expected value estimate.

The exposure draft did not and the final standard does not require exclusion of such outcomes in the determination of the unpaid claim estimate, but the subcommittee believes that the actuary should consider whether truly all possible outcomes are included in the actuary's unpaid claim estimate (where the intended measure purports to reflect the entire distribution of possible outcomes). With regard to the "actuarial central estimate" definition, the subcommittee has eliminated the terms "speculative" and "remote," and has replaced them with wording that focused more directly on the concern that reliable estimates of such outcomes cannot be produced.

Comment:
Some commentators were concerned that the "actuarial central estimate" definition precluded the use of conservatism (described in some instances as a margin for adverse deviation) in the unpaid claim estimate intended measure.

Response:
This standard was meant to apply to work done in a variety of situations. In many of those situations, the purpose and/or use of the unpaid claim estimate will dictate whether a margin for adverse deviation is required, allowed or prohibited. The subcommittee does not believe it is the role of the actuary or ASB to dictate a certain singular treatment of margins for adverse deviation for all unpaid claim estimates. In fact, in certain instances the subcommittee believes that the treatment of such in the unpaid claim estimate is clearly not part of the role of the actuary.

The subcommittee also believes that the actuary should clearly disclose the basis of the unpaid claim estimate regarding all the items listed in section 3.3. Hence, in those instances where the unpaid claim estimate includes a margin for adverse deviation, the presence of such margin should be explicitly disclosed.

Comment:
Some of the commentators wanted the standard to advocate only certain techniques for calculating any unpaid claim estimate, regardless of the intended measure. In particular, these comments wanted the standard to dictate the use of stochastic models.

Response:
The subcommittee believes the choice of methodology should be determined by the actuary.

PREFACE

This discussion paper was developed by the Task Force on Materiality of the Council on Professionalism of the American Academy of Actuaries for discretionary use by actuaries. Its purpose is to assist actuaries in considering various aspects of materiality as they provide professional services to their principals. This paper was not promulgated by the Actuarial Standards Board and is not binding upon any actuary. No affirmative obligation is intended to be imposed on any actuary by this paper, nor should such an obligation be inferred from any of the ideas expressed or suggestions made herein. This discussion paper is intended to stand on its own and be freely interpreted.

In considering materiality in one's professional work, actuaries should be guided by the Code of Professional Conduct. To the extent any conflict exists or could be implied between this paper and the Code of Professional Conduct, the Code prevails. Members, reflecting upon the Code and other professional standards that apply to them, are free to accept or reject any part or the whole of this discussion paper as they choose.

Members of the Materiality Task Force represented both the American Academy of Actuaries and the Canadian Institute of Actuaries. We acknowledge the combined efforts of both organizations and their contributions to the research, analysis and composition of the original draft document titled “Materiality.” We recognize that the Academy and the CIA will each use the draft document in whole or in part as they individually develop final documents that address their country-specific approaches to materiality.

Members are encouraged to share their comments on this paper with the Task Force on Materiality to facilitate improvement in any future releases on this topic. Comments can be submitted to **paper@actuary.org**.

JUNE 2006

The Materiality Task Force presents these ideas with the expectation that they will be both useful and thought-provoking and will enhance the actuarial profession’s consideration of aspects of materiality in professional practice. Ultimately, it is the Code of Professional Conduct that governs the responsibilities of actuaries in this area. However, the ideas and suggestions offered in this paper are intended to assist actuaries in applying the Code of Professional Conduct to their individual situations. The Task Force believes that expanded discussion of the concepts and suggestions offered in this paper will benefit the profession.

TASK FORCE ON MATERIALITY
Jacqueline Friedland, Chairperson
Andrea Sweeny *Thomas Custis*
Rick Farrell *Ken Hartwell*
Mike Lombardi *Paul McCrossan*

BACKGROUND

The concept of materiality is central to the reporting and interpretation of financial information. Loosely defined as "importance," the question of whether or not something is "material" means, quite literally, whether or not it matters. When related to financial information, the question of materiality arises in the context of inclusion (whether or not an item needs to be considered), in the context of refinement (whether or not a number is accurate enough to convey its intended message), and in the context of disclosure (whether or not a fact needs to be reported).

Accountants have long recognized the issue of materiality and its role in the reporting of financial information. They have defined the concept in both qualitative and quantitative terms, although judgment, by necessity, plays a significant role as well. However, while the concept of materiality is of no less importance to the actuary's work than it is to the accountant's, and while the term and related concepts are pervasive in the actuarial literature, there is very little guidance for the actuary seeking to evaluate what is and what is not material – what does and does not matter – in a particular situation.

Materiality is a critical element of financial reporting for insurance companies, employee benefit plans and other financial entities to which actuaries provide professional services. Actuaries' clients and employers, as well as other interested persons, may not always understand the differences between materiality from an accounting perspective and materiality as it is understood and used by actuaries. Moreover, actuaries working in different practice areas may address materiality somewhat differently, and the guidance on materiality available to actuaries differs among the various practice areas.

In the United States, there is no Actuarial Standard of Practice (ASOP) devoted to materiality. The word "material" is defined in only two ASOPs (No. 5, Incurred Health and Disability Claims, and No. 17, Expert Testimony by Actuaries), but the term is used in as many as sixteen ASOPs. The *Code of Professional Conduct*, in requiring actuaries to report "material" violations of the Code to the profession's investigative and disciplinary bodies, defines a "material" violation as one that is "important or affects the outcome of a situation, as opposed to a violation that is trivial, does not affect an outcome, or is one merely of form." Where the ASOPs use the word "material," they typically do so in a manner consistent with the definition in the *Code*.

The Actuarial Standards Board considered issuing a separate standard dealing with materiality but ultimately decided not to do so. As a result, the leadership of the American Academy of Actuaries (Academy) determined that it would be helpful to develop a discussion paper offering non-binding guidance on materiality. Therefore, the Academy's Council on Professionalism established the Task Force on Materiality (Task Force) to prepare a discussion paper for broad dissemination to the membership. The purpose of the paper would not be to impose mandatory requirements on actuaries, but to identify issues, enhance awareness, and assist actuaries and others toward a clearer understanding of the topics addressed in this discussion paper.

PURPOSE AND SCOPE

This discussion paper is intended to stimulate thinking and discussion about materiality; the purpose is to not only build upon what has already occurred in the property/casualty practice area but to extend the discussion into other practice areas where there is no current US guidance. The Task Force hopes to promote discussion of materiality within the entire US actuarial profession. We are hopeful that, over time, such discussions might lead to the evolution of generally accepted practices regarding materiality in the U.S.

Concepts in this paper are broadly applicable to all practice areas (life, health, pension, and property/casualty). The considerations set forth here also apply to all actuarial work, including that done by actuaries employed by an insurance company or other entity, as well as by consulting actuaries in assignments for their clients.

This paper is intended to be broadly shared among the membership of the Academy and its sister organizations. The Task Force is not advocating any mandatory practices beyond those required by the Code, the ASOPs, and the Qualification Standards for Prescribed Statements of Actuarial Opinion (Qualification Standards). By sharing the thoughts of several experienced actuaries, the Task Force encourages each actuary to give appropriate consideration to the concepts and suggestions contained in this paper. Ultimately, however, each actuary must decide how to fulfill professional responsibilities in this area.

DEFINING MATERIALITY

Using the various definitions contained in the Appendix at the end of this paper, the Task Force has developed a very generalized description of the concept of materiality:

> An omission, understatement or overstatement in a work product is material if it is likely to affect either the intended principal user's decision-making or the intended principal user's reasonable expectations.[1]

The reader may find it helpful to keep this in mind when reading this discussion paper. Further discussion of the description of materiality appears in the next section, "Reflecting Upon Materiality: The User Is Key."

In understanding what materiality is, it is also important to recognize what materiality is not. The Task Force wishes to emphasize that the concept of materiality is different from the concepts of:

— The range of reasonable values in an actuarial estimate; and
— The inherent uncertainty associated with actuarial estimates.

As explained in the Background section of this paper, there is no ASOP in the United States that is devoted exclusively to materiality. The primary guidance for actuaries in the property/casualty practice area in the United States is the language in section 3.4 of ASOP No. 36, Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves. This ASOP was effective for statements of actuarial opinion provided for reserves with a valuation date on or after October 15, 2000.

There are grounds for thinking that the advent of this ASOP together with discussions among regulators during and after its promulgation, have affected the way in which property/ casualty actuaries approach the subject of materiality. In a paper to the Casualty Actuarial Society (CAS) titled "Materiality and Statements of Actuarial Opinion" written by Joseph A. Herbers, ACAS, MAAA, we see on page 115 the results of an informal survey the author conducted of insurance regulators, inquiring as to the "materiality threshold commonly used in testing the adequacy of a company's … reserves." Perhaps of more significance is the statement on page 117: "From anecdotal evidence, this author can state that the materiality thresholds used by many practitioners for year-end 2001 . . . were much more narrow than those used previously." [2]

---

[1] However, the actuary is not expected to determine "materiality" with respect to user objectives not expressed to the actuary and not reasonably understood by him/her.

[2] Herbers, Joseph A. "Materiality and Statements of Actuarial Opinion". Casualty Actuarial Society Forum 2002 volume: Fall; pages 103 – 138. Available on the CAS website: http://www.casact.org.

Other sources of guidance to which actuaries have access include:

— Actuarial and accounting guidance from other countries or from International Standards on Auditing

— Securities and Exchange Commission

— Financial Accounting Standards Board

— National Association of Insurance Commissioners Financial Examiners' Handbook and Accounting Practices and Procedures Manual

— Valuation, Finance and Investment Committee (VFIC) of the CAS

— Federal and state courts

— Practice Notes

In the Appendix, which begins on page 13, we include a wide range of extracts from relevant literature to assist actuaries in their consideration of materiality standards.

REFLECTING UPON MATERIALITY: USER IS KEY

Although the Task Force has developed a generalized description of what is "material," this discussion paper does not seek to propose a universal definition of materiality for actuarial purposes. We preferred to focus on applying judgment about materiality. We were somewhat startled at the strong emphasis of the Merriam-Webster OnLine dictionary's definition of "material - having real importance or great consequences" – and in particular the word "great." Be that as it may, one immediately responds "to whom?"

User perspective is typically the key element in materiality determinations. In applying judgment to determine how to address materiality, the actuary normally focuses on the purpose of the work and its intended use(s). The definitions in the Appendix at the end of this paper collectively appear to send the message: "know your user." However, this is sometimes more difficult than it may seem, since it is quite common for actuarial work products to be used, in one way or another, by indirect users about whom the actuary cannot possibly be knowledgeable. Indeed, different users (including unintended users) may have different expectations regarding materiality. Although ASOP 41 (discussed below) states that the actuary is not responsible to unintended users with whom they did not intend to communicate, at a minimum, actuaries do retain some responsibility to assure that a report is not misused or misapplied by all users of the work product.

Having decided upon the selected materiality standard for a particular assignment, the actuary might be well advised to test it by asking rhetorically "would my user come to a different conclusion or a different decision if I used some other materiality standard?" Then we immediately encounter the difficulty referred to above, i.e., the actuary cannot possibly be knowledgeable about all indirect users.

One good approach is to use the framework of ASOP No. 41, *Actuarial Communications*, (which is of course binding for actuaries providing services in the U.S.) to resolve this difficulty. Section 2.5 thereof defines "intended audience" as "The persons to whom the actuarial communication is directed and with whom the actuary, *after discussion with the principal* (emphasis added), intends to communicate." The rest of the definition makes it clear that, unless otherwise agreed, the principal is always part of the intended audience, and gives examples of others (such as regulators, policyholders and plan participants) who may be designated by the principal, with consent of the actuary, as members of the intended audience.

Section 2.6 of ASOP No. 41 defines "other user" as "any user of an actuarial communication who is not a principal or member of the intended audience." We believe that using this framework provides valuable protection for the actuary, who is entitled to be in control at all times regarding the intended audience and therefore cannot be taken by surprise by the existence of "other users" about whom the actuary is ignorant. Note too that Section 3.5.2 of ASOP No. 41 provides that there is no obligation for the actuary to communicate with any person other than the intended audience.

Section 3.1.2 of ASOP No. 41 requires the actuary to ensure that the form and content of the actuarial communication are clear and appropriate to the particular circumstances, *taking into account the intended audience* (emphasis added). Consequently, by taking due care as to who is included as part of the intended audience, the actuary is able to apply informed judgment in arriving at the selected materiality standard. For example, if policyholders are included, then the actuary is able to have due regard of the fact that policyholders in general are likely to be less sophisticated than the actuary's principal, regulators or investors.

APPLYING JUDGMENT ABOUT MATERIALITY

"Judgment about materiality pervades virtually all work and affects the application of nearly all standards" (Canadian Institute of Actuaries Standards, Section 1340, Materiality)

The appropriate degree of rigor in establishing or communicating the selected materiality standard for a particular assignment may differ depending upon the needs, skill, sophistication and experience of the intended audience for the actuary's work. The Appendix at the end of this discussion paper contains numerous references to how the selected materiality standard might conceivably affect the user's decision-making or reasonable expectations.

Materiality tends to be more task-specific than practice-specific. For example, we expect there to be more similarities in applying judgment about materiality to valuation type work among the various practice areas (life, health, pension, and property/casualty) than when comparing such judgment as applied to valuation type work and product/rate development work within the same practice area.

Perhaps understandably, in light of regulatory scrutiny and the sophistication of users of work involving mergers and acquisitions, as well as the advent of ASOP 36 as noted previously, actuaries in the U.S. appear to have more experience in applying judgment about materiality in the context of valuation work (used here to include not only statement reserves and merger/acquisition work but also portfolio transfers) than has been the case when setting rates. Nevertheless, the concepts of materiality are also applicable in product/rate development work.

There currently exists a difference in practice among actuaries with respect to the establishment of single or multiple materiality standards. Some actuaries develop a separate materiality level for data which is generally much smaller than the materiality level for the organization in total. For example, an actuary may choose a $25,000 materiality level for data and a $5 million materiality level for the organization's total policy liabilities. The more common practice, however, is the selection of a single materiality standard.

Returning to the user focus and the generalized description of materiality presented on page 7, unless there are good reasons, an actuary would generally select one materiality standard for a particular actuarial task or assignment, and there would not be separate materiality standards identified for data and the overall actuarial analysis. Although it may be appropriate to identify a separate "tolerance level" as a threshold for accuracy and completeness of data, this concept is separate from the matter of materiality and would not normally be referred to or labeled as a selected materiality standard.

In the normal course of events, an actuary generally would not change the materiality standard significantly from year to year or valuation to valuation. However, as an organization approaches a threshold or some external benchmark, an actuary may well choose to consider changing the approach or the degree of rigor applied when determining materiality. For example, if an insurance company is now close to breaching risk-based capital (RBC) action levels, many actuaries would agree that there are likely to be good grounds for changing the selected standard of materiality.

ACCOUNTING VS. ACTUARIAL MATERIALITY

As noted in the "Defining Materiality" section of this discussion paper, an actuary selects an appropriate standard of materiality based on his or her professional judgment as to the magnitude of an omission, understatement or overstatement that would cause the user to reach a different conclusion or follow a different course of action. An accountant or auditor working for the same entity would presumably base his or her selection of the standard of materiality on similar criteria. Some actuaries would argue that, at least in theory, the level of materiality selected by the actuary would normally be equal to or close to that selected by the accountant or auditor.

As a practical matter, however, accountants and auditors may select a materiality level without first communicating with the actuary. For example, auditors of an insurance company attest to the existence and value of assets on the one hand (large numbers that are usually comparable with reserves, at least in the aggregate) and premium data and expenses on the other (which, by contrast, tend to be relatively smaller numbers, especially at the policy or contract level). It may be that auditors do not always use the same level of materiality when making these two attestations.

Good communication between the actuary and the auditor (for which specific guidance is offered in Section 3 of ASOP No. 21, *Responding to or Assisting Auditors or Examiners in Connection with Financial Statements for All Practice Areas*) is likely to lead to selection of appropriate materiality levels by both actuary and auditor. If such materiality levels were not the same, the good communication that had taken place would facilitate discussion of any differences with the intended audience.

COMMUNICATION AND DISCLOSURE

Throughout this paper, the focus of the selection of a materiality level has been on the impact on the user. To the extent that a user is likely to understand the meaning and importance of the level of materiality selected for the project, it would normally be in the user's interest to be aware of the materiality level selected and used by the actuary. Accordingly, it seems reasonable that the actuary would usually at least consider some disclosure regarding the materiality level within the actuarial work product.

However, this consideration must also take into account the complexity of the concept of materiality, the potential importance of the concept to the user, as well as the sophistication of the user who will be receiving the work product. In some cases, it may be apparent that any discussion of the standard of materiality is likely to give rise to misunderstanding and confusion. In other cases, full disclosure of the level of materiality selected as well as the rationale behind the selection may be appropriate.

At present neither ASOP No. 36 nor any other ASOP requires disclosure of the selected level of materiality. However, the NAIC Instructions, beginning with the 2004 Statements of Actuarial Opinion (property/casualty insurance companies), require the disclosure of the materiality level. The NAIC Instructions state: "The actuary must identify the materiality standard and the basis for establishing this standard. The materiality standard must be disclosed in $US in Exhibit B: Disclosures."

According to the Canadian Institute of Actuaries (CIA) Standards of Practice 1340 – Materiality, "If practical, the actuary would discuss the standard of materiality with the user. Alternatively, the actuary would report the purpose of the work as precisely as possible, so that the user is warned of the risk of using the work for a different purpose with a more rigorous standard of materiality." This approach will mitigate some of the actuary's concerns towards unintended users who would use different standards of materiality for their respective purposes.

In actuarial work other than a NAIC Actuarial Statement of Opinion, as detailed above, it is currently left to the actuary's professional judgment as to whether disclosure of the materiality level is appropriate for the user's understanding of the actuarial work product, and to determine the nature and scope of appropriate disclosure under the circumstances.

APPENDIX: HELPFUL SOURCES FOR USE IN SELECTING MATERIALITY LEVELS

Peter D. Arthur, CA, CIA Open Forum #21: Unresolved Issues in Standards of Practice

> A misstatement or the aggregate of all misstatements in financial statements is considered to be material if, in the light of surrounding circumstances, it is probable that the decision of a person who is relying on the financial statements and who has a reasonable knowledge of the business and economic activities would be changed or influenced by the misstatement or the aggregate of all misstatements.

ASOP No. 5, Incurred Health and Disability Claims

"Material: resulting in an impact, significant to the interested parties, on the affected actuarial incurred claim estimate."

ASOP No. 17, Expert Testimony by Actuaries

"An item is material if it has an impact on the affected actuarial opinion, which is significant to the interested parties."

ASOP No. 36, Statements of Actuarial Opinion regarding Property/Casualty Loss and Loss Adjustment Expense Reserves

Although the ASOP itself applies only to property/casualty work of a particular kind, Section 3.4 of the ASOP contains some useful ideas for action in all practice areas that actuaries may wish to consider when selecting standards of materiality. The section is reproduced here in full.

> Materiality – In evaluating materiality within the context of a reserve opinion, the actuary should consider the purposes and intended uses for which the actuary prepared the statement of actuarial opinion. The actuary should evaluate materiality based on professional judgment, materiality guidelines or standards applicable to the statement of actuarial opinion and the actuary's intended purpose for the statement of actuarial opinion. The actuary should understand which financial values are usually important to the intended uses of the statement of actuarial opinion and how those financial values are likely to be affected by changes in the reserves and future payments for losses and

loss adjustment expenses. For example, materiality might be evaluated in terms of the specified reserve amount for which an opinion is being given. For a statement of actuarial opinion for an insurance company to be used for financial reporting to insurance regulators, materiality might be evaluated in terms of the company's reported statutory surplus. As another example, for a statement of actuarial opinion to be used for an actuarial appraisal of an insurance company, it might be appropriate to evaluate materiality in terms of both the company's net worth and annual net income, since both values are usually important factors in assessing the value of the company.

ASOP No. 41, Actuarial Communications

2.5 Intended Audience—The persons to whom the actuarial communication is directed and with whom the actuary, after discussion with the principal, intends to communicate. Unless otherwise specifically agreed, the principal is always a member of the intended audience. In addition, other persons or organizations, such as regulators, policyholders, plan participants, investors, or others, may be designated by the principal, with consent of the actuary, as members of the intended audience.

2.6 Other User—Any user of an actuarial communication who is not a principal or member of the intended audience.

3.1.2 Form and Content—The actuary should take appropriate steps to ensure that the form and content of the actuarial communication are clear and appropriate to the particular circumstances, taking into account the intended audience. To accomplish these actuarial communication objectives, the actuary should consider whether such actuarial communication should be made in an actuarial report. Factors to consider in making such a determination include the complexity of the actuarial engagement or assignment; the actuary's perception of the significance of the actuarial findings; and relevant communication guidance in other ASOPs. Information included in previous actuarial communications that are available to the intended audience may be incorporated by reference, by the actuary, into an actuarial communication issued under this standard.

3.5.2 No Obligation to Communicate with Other Users—Nothing in this standard creates an obligation for the actuary to communicate with any person other than the intended audience.

Canadian Institute of Actuaries

Paragraphs .02 through .06 of the Canadian Institute of Actuaries Standards, Section 1340 Materiality provide as follows:

> .02 Judgment about materiality pervades virtually all work and affects the application of nearly all standards. The words "materiality" and "material" seldom appear in the standards, but are understood throughout them. For example, the recommendation that approximation is appropriate if it does not affect the result means that it does not **materially** affect the result.
>
> .03 "Material" has its ordinary meaning, but judged from the point of view of a user, having regard for the purpose of the work. Thus, an omission, understatement, or overstatement is material if the actuary expects it materially to affect either the user's decision making or the user's reasonable expectations. Usually, however, the user does not specify a standard of materiality, so the judgment falls to the actuary. That judgment may be difficult for one or more of these reasons:
>
> > The standard of materiality depends on how the user uses the actuary's work, which the actuary may be unable to foresee. If practical, the actuary would discuss the standard of materiality with the user. Alternatively, the actuary would report the purpose of the work as precisely as possible, so that the user is warned of the risk of using the work for a different purpose with a more rigorous standard of materiality.
> >
> > The standard of materiality may vary among users. The actuary would choose the most rigorous standard of materiality among the users.
> >
> > The standard of materiality may vary among uses. For example, the same accounting calculations may be used for a pension plan's financial statements and the financial statements of its participating employer. The actuary would choose the more rigorous standard of materiality between those two uses.

The standard of materiality depends on the user's reasonable expectations, consistent with the purpose of the work. For example, advice on winding-up a pension plan may affect each participant's share of its assets, so there is a conflict between equity and practicality. Similarly for advice on a policyholder dividend scale.

0.4 The standard of materiality also depends on the work and the entity which is the subject of that work. For example:

A given dollar standard of materiality is more rigorous for a large than for a small entity.

The standard of materiality for valuation of an insurer's policy liabilities is usually more rigorous for those in its financial statements than for those in a forecast in dynamic capital adequacy testing.

The standard of materiality for data is more rigorous for determining an individual benefit (such as in a pension plan wind-up) than for a valuation of a group benefits plan (such as a going-concern valuation of a pension plan's liabilities).

The standard of materiality for work involving a threshold, such as a regulatory capital adequacy requirement calculation of an insurer or a statutory minimum or maximum funding level for a pension plan would become more rigorous as the entity approaches that threshold.

0.5 The actuary would not report an immaterial deviation from a particular recommendation or other guidance in the standards except if doing so assists a user to decide if the standard of materiality is appropriate for that user.

0.6 The recommendation applies to both calculation and reporting standards.

Judicial Application of Materiality Standards

The following excerpts have been selected from a sampling of cases in which the courts have defined materiality in the context of financial statements.

S.E.C. v. Price Waterhouse, 797 F.Supp. 1217, 1237 (S.D.N.Y., 1992).

"Materiality is defined in the accounting literature as '[t]he magnitude of an omission or misstatement of accounting information that, in light of surrounding circumstances, makes it probable that the judgment of a reasonable person would have been changed or influenced by the omission or misstatement.' (citation omitted) While the literature reflects that the 5 to 10 percent range relied on by the Commission is 'useful' (citation omitted), that literature also makes clear that there are no generalized standards for determining the materiality of a particular 'judgment item' (citation omitted), because a materiality decision is a qualitative one requiring consideration by an accountant of a wide range of information factors including, *inter alia*, the nature of the item under consideration; whether it arises from a routine or abnormal transaction; the size of the enterprise; and the company's financial condition and trends in profitability. (citation omitted) Moreover, FAS Con 2 explicitly states that '[m]agnitude by itself, without regard to the nature of the item and the circumstances in which the judgment has to be made, will not generally be a sufficient basis for a materiality judgment.'" (citation omitted)

Delta Holdings, Inc. v. National Distillers and Chemical Corp., 945 F.2d 1226, 1242 (C.A.2 (N.Y.), 1991).

"The applicable legal standard regarding the materiality of omitted information is whether 'there is a substantial likelihood that a reasonable shareholder would consider it important' or 'a substantial likelihood that the disclosure . . . would have been viewed by the reasonable investor as having significantly altered the total mix of information made available.'" (citation omitted)

Hudson v. General Dynamics Corp., 118 F.Supp.2d 226, 249 (Conn., 2000).

"This determination [of materiality] is . . . based on whether there is a substantial likelihood that the misrepresentation would mislead a reasonable employee in making an adequately informed decision about if and when to retire. (citation omitted) [There are] a number of factors to consider when determining materiality, including 'how significantly the statement misrepresents the present status of internal deliberations regarding future plan changes; the special relationship of trust and confidence between the plan fiduciary and beneficiary; whether the employee was aware of other information or statements from the company tending to minimize the importance of the misrepresentation or should have been so aware, taking into consideration the broad trust responsibilities owed by the plan administrator to the employee and the employee's reliance on the plan administrator for truthful information.'" (citation omitted)

FASB Statement of Financial Accounting Concepts No. 2, "Qualitative Characteristics of Accounting Information"

FASB Statement No. 2 generally provides that quantitative and qualitative factors should both be considered when determining materiality. It further states that FASB has long emphasized that materiality cannot be reduced to a numeric formula. "The predominant view is that materiality judgments can properly be made only by those who have all the facts. The Board's present position is that no general standards of materiality could be formulated to take into account all the considerations that enter into an experienced human judgment." Additionally, FASB Statement No. 2 provides that "Magnitude by itself, without regard to the nature of the item and the circumstances in which the judgment has to be made, will not generally be a sufficient basis for a materiality judgment."

* * *

The omission or misstatement of an item in a financial report is material if, in the light of surrounding circumstances, the magnitude of the item is such that it is probable that the judgment of a reasonable person relying upon the report would have been changed or influenced by the inclusion or correction of the item.

International Accounting Standard 1, "Presentation of Financial Statements"

"Omissions or misstatements of items are material if they could, individually or collectively, influence the economic decisions of users taken on the basis of the financial statements. Materiality depends on the size and nature of the omission or misstatement judged in the surrounding circumstances. The size or nature of the item, or a combination of both, could be the determining factor."

International Accounting Standards

"Users are assumed to:

— Have a reasonable knowledge of business and economic activities and accounting and a willingness to study the information in the financial statements with reasonable diligence;

— Understand that financial statements are prepared and audited to levels of materiality and that there is a relationship between the level of materiality used and the cost and timing of the audit;

— Recognize the uncertainties in the measurement of amounts based on the use of estimates, judgment and the consideration of future events;

— Make reasonable economic decisions on the basis of the information in the financial statements.

The determination of materiality, therefore, takes into account how users with such characteristics could reasonably be expected to be influenced in making economic decisions.

— When determining materiality in audits of financial statements or other historical financial information, prepared for a special purpose, the auditor considers the needs of specific users in the context of the objective of the engagement.

— Materiality is determined without regard to the degree of inherent uncertainty associated with the measurement of particular items. For example, the fact that the financial statements include very large provisions with a high degree of estimation uncertainty (e.g., provisions for insurance claims in the case of an insurance company, oil rig decommissioning costs in the case of an oil company, or more generally, legal claims against an entity) does not cause the auditor to determine the materiality level for the financial statements to be higher than for financial statements that do not include such inherent estimation uncertainties."

Proposed International Standard on Auditing 320 (Revised)
Materiality in Planning and Performing an Audit

Materiality in the Context of an Audit

5. The auditor's consideration of materiality is a matter of professional judgment, and is affected by the auditor's perception of the financial information needs of users of the financial statements. For the purposes of the audit, the auditor is concerned with misstatements, including omissions, which could reasonably be expected to influence

the economic decisions of users taken on the basis of the financial statements. In this context, it is reasonable for the auditor to assume that users:

(a) Have a reasonable knowledge of business and economic activities and accounting and a willingness to study the information in the financial statements with reasonable diligence;

(b) Understand that financial statements are prepared and audited to levels of materiality;

(c) Recognize the uncertainties inherent in the measurement of amounts based on the use of estimates, judgment and the consideration of future events; and

(d) Make reasonable economic decisions on the basis of the information in the financial statements.

6. Furthermore, the auditor's consideration of materiality is based on the common financial information needs of users as a group; the auditor does not consider the possible effect of misstatements on specific individual users, whose needs may vary widely.

7. Materiality depends on the size and nature of the misstatement judged in the surrounding circumstances. The size or nature of the item, or a combination of both, could be the determining factor.

Use of Benchmarks in Determining Materiality

11. Determining what is material to users of the financial statements requires the exercise of professional judgment. The auditor often applies a percentage to a chosen benchmark as a starting point in determining a materiality level for the financial statements as a whole.

12. When identifying an appropriate benchmark, the auditor has regard to factors such as:

— The elements of the financial statements (e.g., assets, liabilities, equity, income, expenses);

— Whether there are items on which the attention of the users of the particular entity's financial statements tends to be focused (e.g., for the purpose of evaluating financial performance users may tend to focus on profit, revenue or net assets);

— The nature of the entity, where the entity is at in its life cycle, and the industry and economic environment in which the entity operates;

— The size of the entity, nature of its ownership and the way it is financed (e.g., if an entity is financed solely by debt rather than equity, users may put more emphasis on assets, and claims on them, than on the entity's earnings); and

— The relative volatility of the benchmark.

14. Having identified an appropriate benchmark, the auditor identifies relevant financial data to be used in determining materiality. The auditor ordinarily considers prior periods' financial results and financial positions, the period-to-date financial results and financial position, and budgets or forecasts for the current period, taking account of significant changes in the circumstances of the entity (e.g., a significant business acquisition) and relevant changes of conditions in the industry or economic environment in which the entity operates. For example, when the auditor, as a starting point, determines materiality for a particular entity based on a percentage of profit before tax from continuing operations, circumstances that give rise to an exceptional decrease or increase in such profit may lead the auditor to conclude that materiality is more appropriately determined using a normalized profit before tax from continuing operations figure based on past results.

Documentation

26. The auditor should document:

(a) The materiality level for the financial statements as a whole;

(b) The materiality level for a particular class of transactions, account balance or disclosure, if applicable;

(c) The amount (or amounts) determined for purposes of assessing risks of material misstatement and designing further audit procedures;

(d) Any changes made to (a) – (c) as the audit progressed; and

(e) How the amounts in (a) – (d) were determined.

Mary D. Miller, FCAS, MAAA, Actuary Ohio Department of Insurance
"Materiality and the Actuary", Casualty Loss Reserve Seminar, September 2005

Materiality reviewed in relationship to financial values that are important to the intended audience, for example:

— Regulator: statutory surplus; risk based capital; loss, LAE and unearned premium reserves; IRIS tests

— Appraisal: net worth (GAAP); net income; earnings per share

Materiality considerations:

— Single vs. multi-line company
— Net retention
— Single company vs. member of a group
— Access to capital
— Management
— Prior loss reserve runoff
— Financial strength

"Materiality and ASOP No. 36: Considerations for the Practicing Actuary"
CAS Committee on Valuation, Finance, and Investments

"No formula can be developed that will substitute for professional judgment by providing a materiality level for each situation."

Possible quantitative matters that the actuary could consider in the initial phase of determining whether a particular item is material:

— Absolute magnitude of item that represents a correction or a differing result if reviewing the work of others

— Absolute magnitude of item for which data are not available or are incomplete

— Ratio of item to reserves or statutory surplus

— Impact of item on IRIS ratios

— Impact of item on risk-based capital results

— Likelihood or size of potential variation of ultimate actual results from current expectations

— Ratio of item to net income or net worth

— Impact of item on earnings per share

NAIC Financial Examiners Handbook

Planning materiality: starting point is 1% to 5% of surplus.

NAIC Accounting Practices and Procedures Manual

The Codification defines a material omission or misstatement of an item in a statutory financial statement as having a magnitude such that it is probable that the judgment of a reasonable person relying upon the statutory financial statement would be changed or influenced by the inclusion or correction of the item.

— Some items are more important than others and require closer scrutiny. These include items which may put the insurer in danger of breach of covenant or regulatory requirement (such as an RBC trigger), turn a loss into a profit, reverse a downward earning trend, or represent an unusual event.

— The relative size of the judgment item is usually more important than the absolute size. An example for this is a reserve amount that would significantly impact the earnings of a small company but barely impact the earnings of a large company.

— The amount of the deviation of an item that is considered immaterial may increase if the attainable degree of precision decreases.

SEC Staff Accounting Bulletin: No. 99 – Materiality

The relevant portions of this SEC bulletin may be summarized as follows:

— The common practice of using quantitative thresholds as rules of thumb for materiality has no basis in law or accounting literature. Exclusive reliance on certain quantitative benchmarks to assess materiality in preparing financial statements … is inappropriate; misstatements are not immaterial simply because they fall beneath a numerical threshold.

— The use of a percentage as a numerical threshold, such as 5%, may provide the basis for a preliminary assumption regarding materiality. There is no objection to a "rule of thumb" as an initial step in assessing materiality.

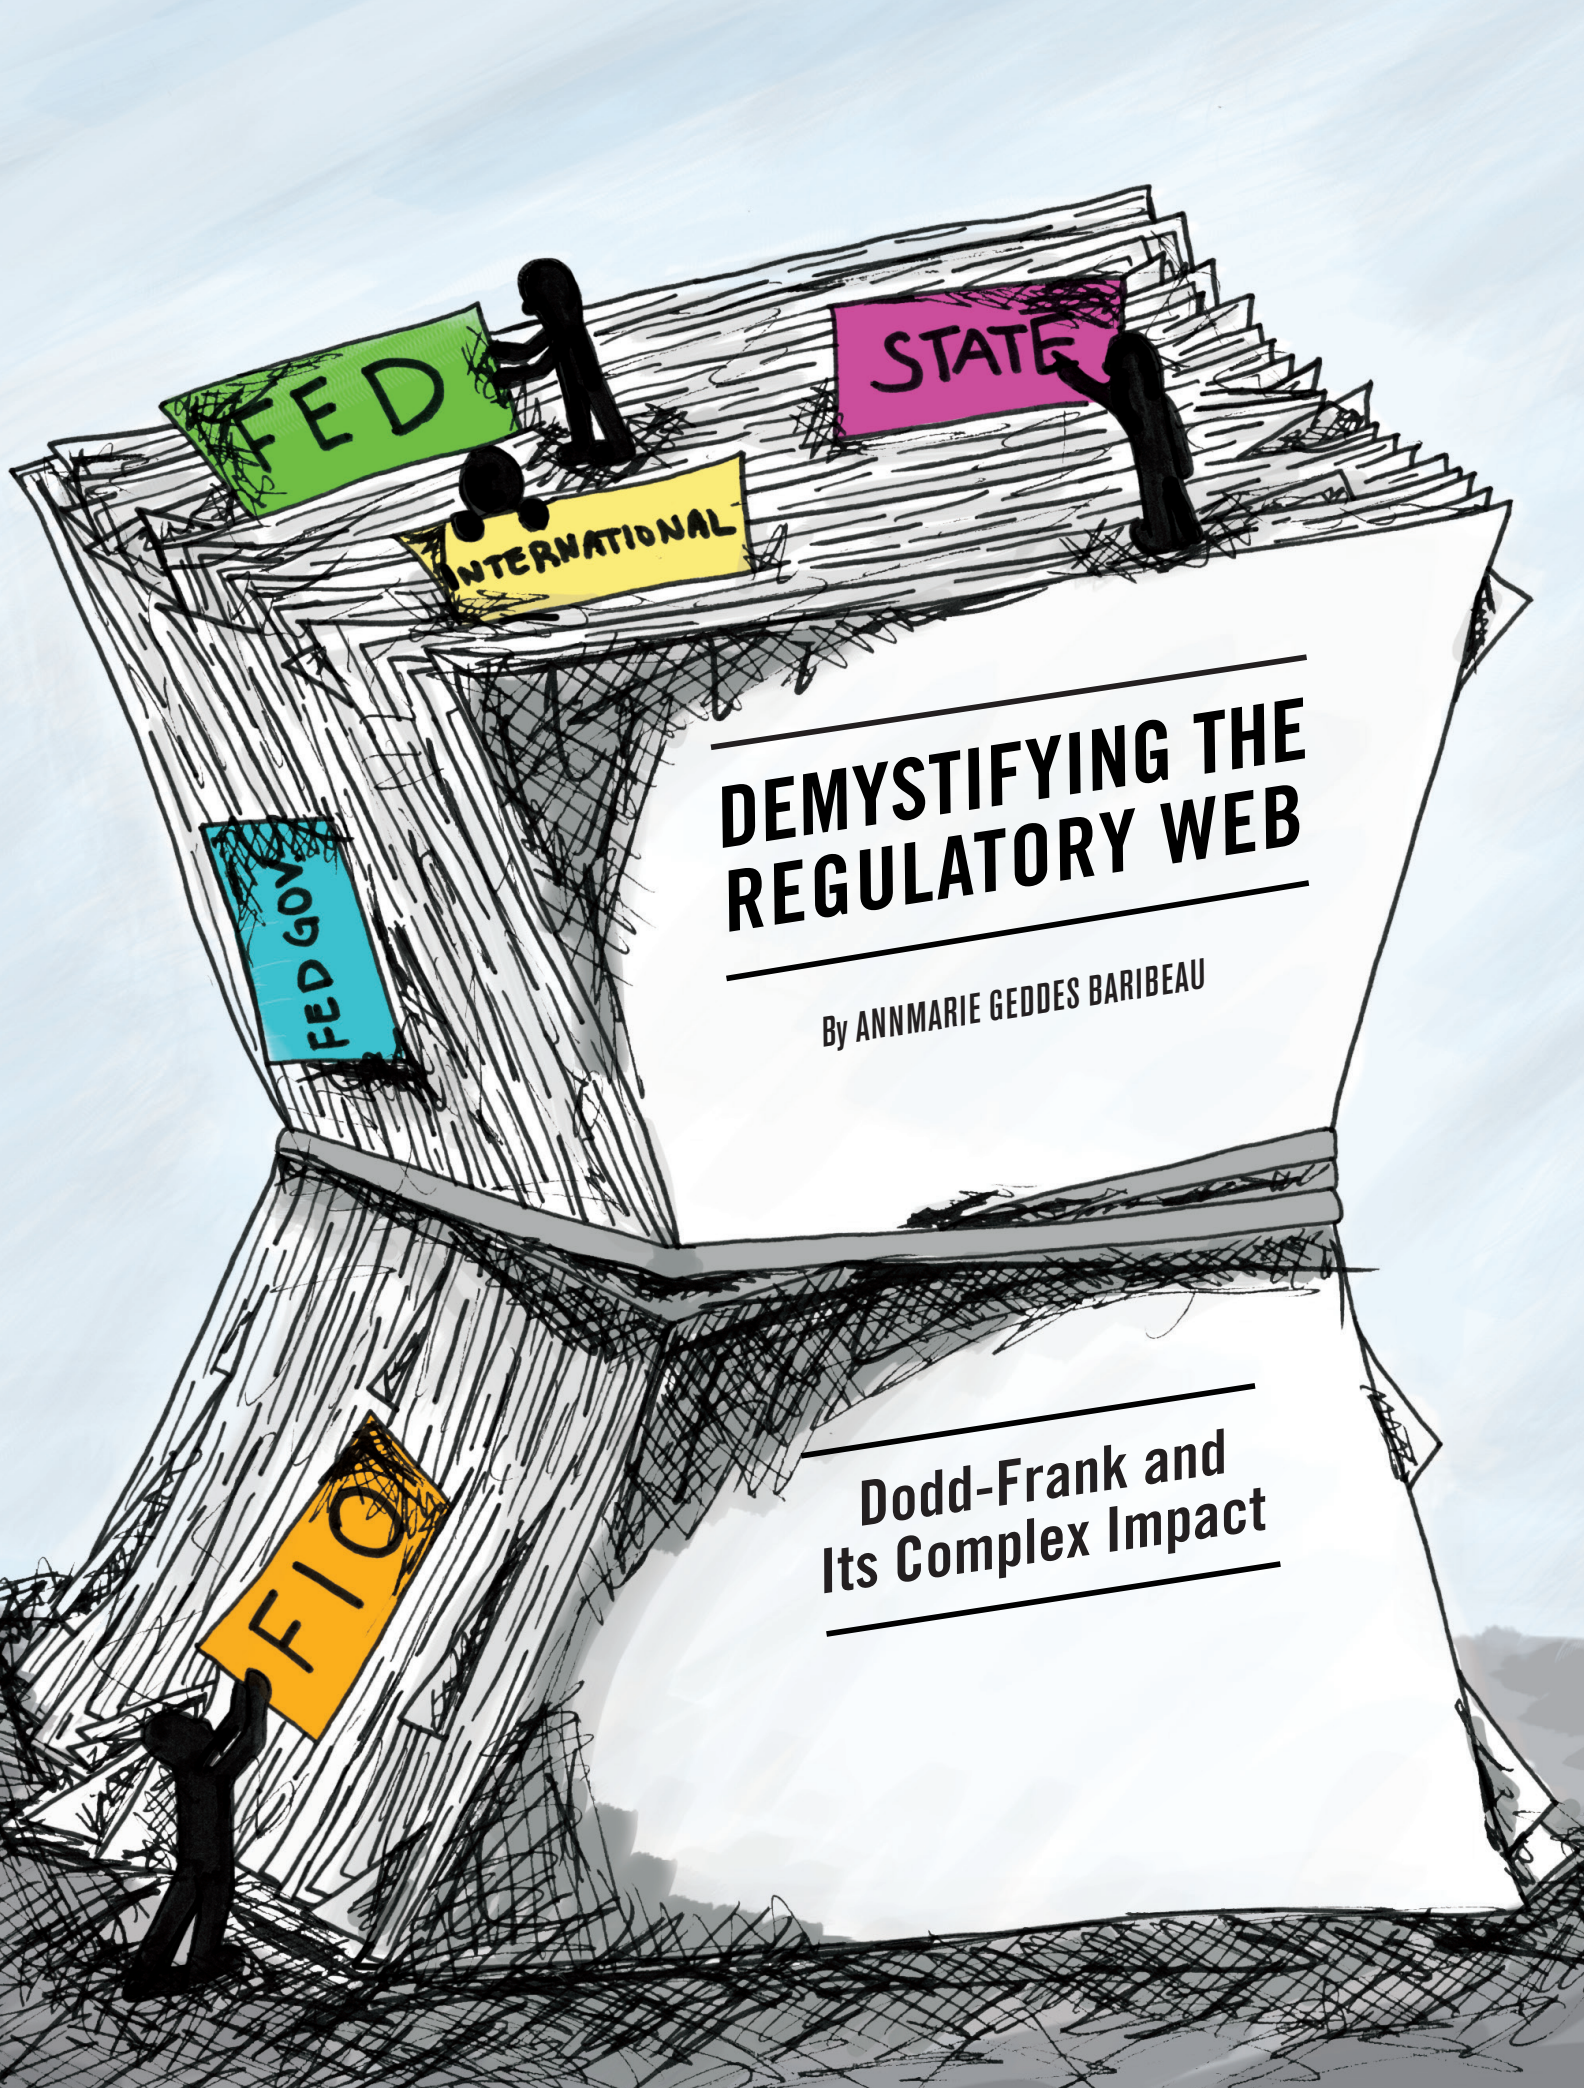
— Both quantitative and qualitative factors should be considered.

— Experienced human judgment is necessary and appropriate.

— An item that is small in absolute magnitude may be important if its inclusion or modification would change someone's conclusion about the basic financial condition of the company.

— Materiality should be considered both separately and in total. An example given considers materiality issues affecting revenues and expenses even though the difference in net income may net out to be small.

A matter is material if there is a substantial likelihood that a reasonable person would consider it important.



DEMYSTIFYING THE REGULATORY WEB

By ANNMARIE GEDDES BARIBEAU

Dodd-Frank and Its Complex Impact

By inserting federal roles between state regulators and international groups, the impact of the Dodd-Frank Act remains unsettling.

Nearly six years ago, President Barack Obama signed the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 into law. As the nation's most expansive federal reach into the traditionally state-regulated insurance industry, Dodd-Frank's impact on property-casualty insurers and the actuaries who serve them continues to unfold.

At first glance, the law sponsored by Sen. Chris Dodd (D-Conn.) and Rep. Barney Frank (D-Mass.) appears to affect a limited number of insurers and their actuaries. There are signs, however, that Dodd-Frank's impact could gradually spread throughout the insurance industry.

The law granted limited regulatory authority to the Federal Reserve System (Fed) and directed the formation of the U.S. Treasury's Federal Insurance Office (FIO) to monitor the industry. By introducing unprecedented insurance federal regulation and policy influence, Dodd-Frank creates a web of ramifications to untangle.

Part of this includes Dodd-Frank authorizing the Fed and the FIO to act on the international insurance policy-making stage. This allows both organizations to influence — and be influenced by— the International Association of Insurance Supervisors (IAIS), where issues were already being largely addressed by state regulators through the National Association of Insurance Commissioners (NAIC).

"Despite its proven track record, the domestic regulatory landscape is being forced into significant changes," stated Rep. Blaine Luetkemeyer (R-Mo.), chairman of the House Financial Services' Housing and Insurance Subcommittee, at the subcommittee's hearing on September 29, 2015, according to an unofficial transcript provided to *Actuarial Review*.

"Today, we see more intrusion in insurance by not only the federal government, but also international financial regulators. Dodd-Frank has allowed that to happen, the integration of the Federal Insurance Office and the powers granted to the Federal Reserve Board of Governors," he noted.

And since the law left many regulatory decisions up to the Fed — an agency that did not historically regulate insurance — rule promulgation for the

Sweeping acts of the U.S. Congress generally occur in response to a significant national problem — and the Dodd-Frank Act is no exception.

insurers it regulates remains a work in progress. Meanwhile, both state regulators and the Fed continue to address similar concerns, such as solvency, on separate tracks with differing approaches, necessitating future harmonization to avoid overlap while both are responding to international pressures.

When the Fed finishes its rules and the IAIS completes its standards, actuaries will be key in addressing the "whole financial element" of these new standards, said David F. Snyder, vice president of international policy for the Property Casualty Insurers Association of America (PCI).

The affected actuaries, said Jim MacGinnitie, senior property-casualty fellow at the American Academy of Actuaries, will likely need to adapt and adjust loss reserving calculations and financial risk management processes.

At the same time, Congress, which monitors the progress of Dodd-Frank and has already passed legislation to adjust it, is considering even more changes.

Genesis

Sweeping acts of the U.S. Congress generally occur in response to a significant national problem — and the Dodd-Frank Act is no exception. "The Dodd-Frank Act was a creature of the 2008 financial crisis," said Robert Hartwig, president of the Insurance Information Institute (III).

At its core, offered John Huff, president of the NAIC and Missouri's insurance commissioner, "The financial crisis was a banking crisis, and the insurance industry generally weathered the storm." So it's unsurprising that Dodd-Frank's inclusion of insurers, and the resulting regulatory burden, remains a point of frustration.

"If we fast forward 10 to 20 years after Dodd-Frank," Hartwig opined, "many of its designers could say the focus on banks was appropriate but will recognize in time that including insurers was not." Instead, he added, "They will probably wish they had included other financial entities such as large hedge funds or other areas where economic risks are building."

Insurers were primarily included in the law, Hartwig said, because the American Insurance Group's (AIG) financial products division, a banking function unrelated to its insurance operations, contributed to the crisis. "AIG is repeatedly used," PCI's Snyder said, "as the main justification for a very broad interpretation of the limited additional authority that was given to the U.S. Treasury's FIO and Fed under Dodd-Frank."

Huff points out that when the financial crisis started, AIG's financial products division was already under federal regulation by the U.S. Treasury's Office of Thrift Supervision (OTS). "The state-regulated insurance subsidiaries were stable and eventually enabled the U.S government to profit on its cash infusion into the company," he added.

Federal Reserve Authority

The United States Constitution's commerce clause gives Congress authority to regulate interstate commerce, which can include insurance. However, for about 150 years, Congress has yielded regulatory authority to the states. With the War Between the States fresh in its memory, the U.S. Supreme Court concluded in 1868 that since insurance was not commerce, Congress did not have the authority to regulate it.

Seventy-six years later, the highest court of the land then recognized insurance as interstate commerce. Nonetheless, the next year Congress passed the McCarran-Ferguson Act of 1945 to preserve states' authority to regulate and tax insurers.

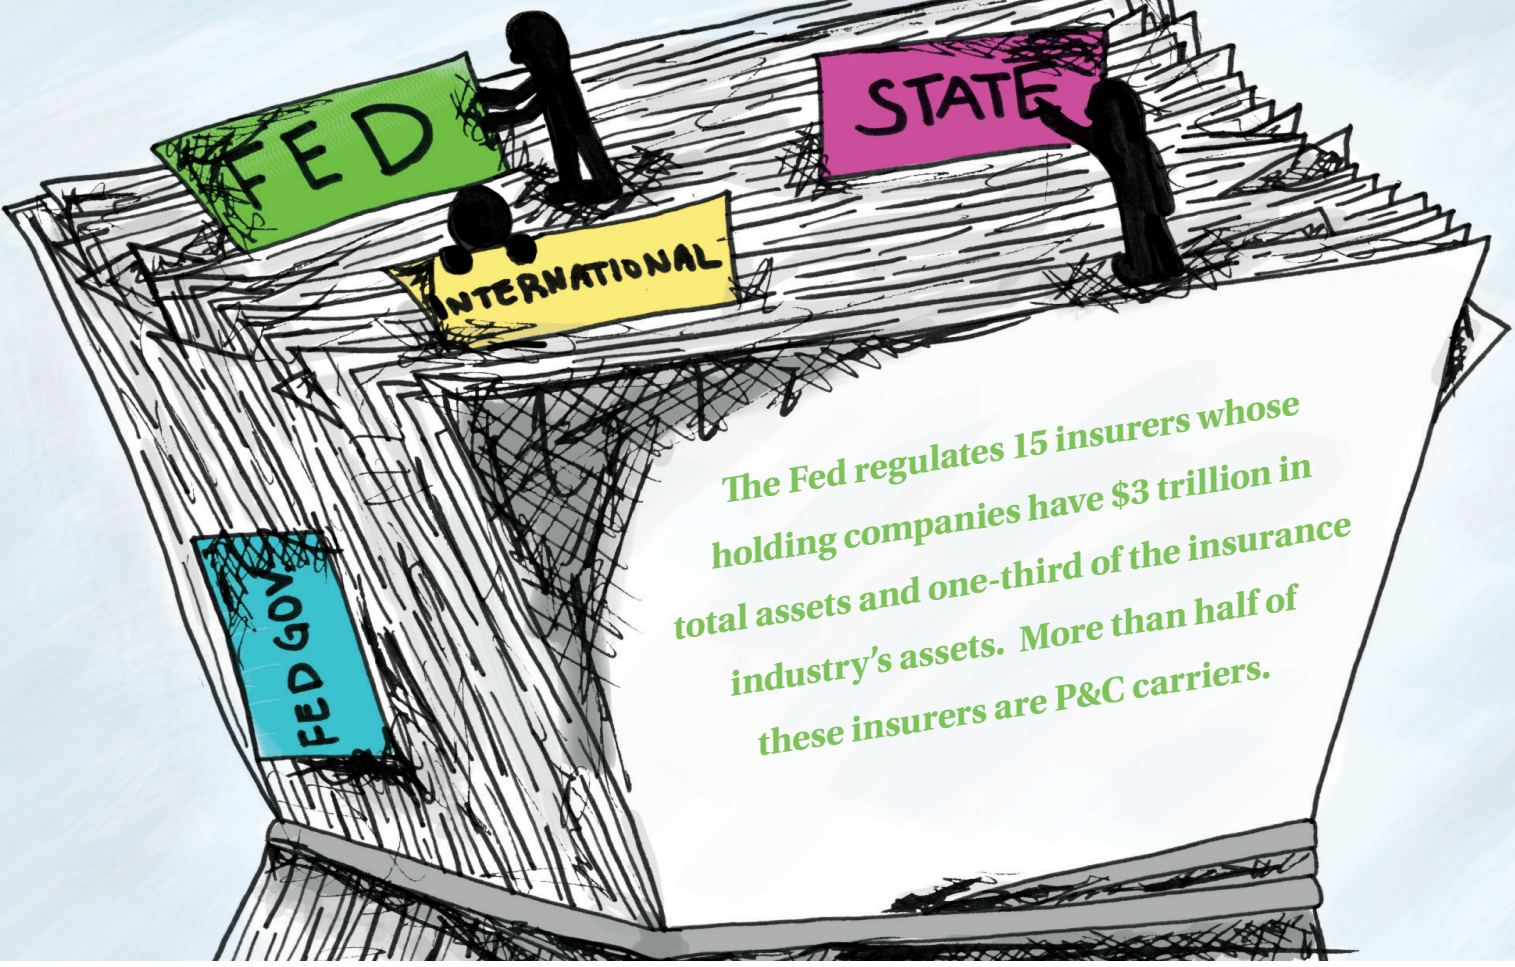
Dodd-Frank's focus on preventing systemic risk in the U.S. economy granted the Fed authority to regulate two types of insurance companies. One group consists of insurers considered to be systemically important financial institutions (SIFIs). The Fed's regulatory responsibility also includes insurance holding companies that have banks or thrifts.

The Financial Stability Oversight Council (FSOC), under the auspices of the U.S. Treasury, assigns a SIFI designation to financial institutions, including insurers, which could cause a national systemic economic disruption if they fail.

Of the three designated insurers, two offer property-casualty insurance —AIG and MetLife — while Prudential is a life insurance company.

The very notion of insurers being designated as SIFIs remains controversial. That's no surprise given the burden of additional regulation, the difference in business models between insurers and banks, and acknowledgement that insurers in general made a minimal contribution to the Great Recession. Further, the process of determining what makes a business a SIFI is "nebulous," Hartwig said. "Neither FSOC nor the Fed have provided a prescription that, if followed, allows insurers to stay off or get off the list," Hartwig maintained.

Roy Woodall, FSOC's independent member with insurance expertise, told the congressional subcommittee last fall



that two insurers (AIG and Prudential) were deemed international SIFIs before FSOC designated them as national SIFIs. "And I really feel like that we've got a situation where the international people have been driving that car," Woodall added.

Woodall also noted in his written testimony that he did not agree with FSOC's decision to designate MetLife and Prudential as SIFIs. MetLife is disputing FSOC's SIFI designation, so that could change.

The Fed also holds regulatory responsibility for insurance holding companies with banks or thrifts. At press time, the Fed regulates 15 insurers whose holding companies have $3 trillion in total assets and one-third of the insurance industry's assets.

More than half of these insurers are P&C carriers. According to a list provided by the Fed, these include State Farm Insurance, Nationwide Mutual Insurance Group, USAA, Auto Club Group, First American Financial Corp., Ohio Farmers Insurance Co., Illinois Farm Bureau and Donegal Insurance Co.

Other insurers, including Northwestern Mutual Life Insurance Co., Prudential Financial, Massachusetts Mutual Financial Group and W.R. Berkley Corp. have either reduced their thrifts to trust banks or divested their thrifts to avoid Fed regulations, according to the 2013 article, "W.R. Berkley Sells Interest in InsurBanc to a Bank He Chairs," at propertycasualty360.com.

The Fed has about 90 full-time equivalent employees supervising these insurers, said Thomas Sullivan, associate director of the Fed's division of banking supervision and regulation, at last September's congressional hearing.

The Fed monitors these insurers through day-to-day supervision to protect consolidated firms' safety and soundness and mitigate financial stability risks, added Sullivan, a former Connecticut state insurance commissioner. Fed supervision, he told the subcommittee, means working with insurers to strengthen their measurement and management of internal controls, corporate governance, and risk identification.

In summary, Fed oversight à la Dodd-Frank means that Fed-regulated insurers must:

- Develop living wills (also known as resolution plans) to be used in the case of bankruptcy.
- Meet liquidity requirements.
- Undergo stress testing.
- Adhere to capital standards.

So far, the Fed has developed standards on living wills and qualitative liquidity requirements, but there is still much work to be done. Quantitative liquidity requirement regulations have not been set. Stress testing will depend on first finishing capital requirement regulations, according to the Fed.

Since the Dodd-Frank Act became law, insurers have been very concerned that they will have to abide by banking-

influenced regulations when their business models are different. The Insurance Capital Standards Clarification Act of 2014, supported by the Fed, answered some of that concern. It removed the Dodd-Frank mandate that Fed-regulated insurers must maintain the same capital standards as banks.

The Fed continues to build its "domestic regulatory capital framework" so it is well tailored to "specific business lines, risk profiles and systemic footprints," Sullivan told the congressional subcommittee.

"The Fed has not yet promulgated the capital standards, and Congress has been after them to move that forward," MacGinnitie said.

During the congressional hearing, Sullivan could not say when domestic capital standards would be ready because the Fed is not being driven by an "artificial timeline." "I don't think this is something we want to hurry or rush along," he said. "I think this is something we want to be very careful and thoughtful and deliberate about."

Of the year 2016, Snyder predicted that it "will be a busy year for developing these standards."

The Fed continues to consider how insurance holding company standards will affect state-based regulation or regulatory initiatives.

While the Fed expresses commitment to working with state insurance commissioners and the NAIC, there is also concern that the Fed is being too sensitive to international interests. "It's imperative that the Fed develop domestic standards first, then export it to the rest of the world," Rep. Luetkemeyer said.

When it comes to understanding the insurance industry, the Fed and FSOC are facing a learning curve. As a new insurance regulator, "The Fed is interested in how the SIFIs, in particular AIG, put their financial statements together," MacGinnitie explained. The Fed also wants to understand the reserving process and how actuarial judgment comes into play, he said.

At the invitation of FSOC's insurance representative, the American Academy of Actuaries has been providing FSOC's insurance industry work group with information about actuaries' role in promoting financial stability and the regulatory capital requirements for U.S. insurers. In December 2015, Academy representatives made two presentations to the work group, one focused on risk-based capital and the U.S. solvency framework, and the other focused on actuarial professionalism and the prominent role that the U.S. actuarial profession plays in ensuring the solvency and stability of domestic financial systems.

Explaining actuarial judgment, and demonstrating that it can be trusted, is perhaps the largest challenge. "It looks like a black box to an outsider, and I think it is fair to say there is

a distrust in black boxes because of the banking experience," MacGinnitie offered.

Since there is a high probability that regulators and insurers regulated by the Fed will want an even playing field, Snyder believes more insurers will see directives increase in the future. "CEO-level executives are understanding this dynamic," Snyder added.

Federal Insurance Office

The FIO serves several functions. To provide insurance information in one place, it assembles insurance data from various organizations including the III and the NAIC. If the FIO desires not-already-collected information, it has the power of subpoena, if necessary, to gather it directly from insurers. "The view was the federal government needed to have its own resource with respect to the insurance industry and previously it had none," Hartwig said.

The agency also monitors the insurance industry in various ways. It identifies insurance activities that could contribute to a broader U.S. financial systemic crisis, develops federal policy regarding nationally or internationally important insurance issues, and consults with state governments on insurance matters. Since its monitoring authority is so broad, Snyder pointed out, the FIO "can monitor almost anything they want and make recommendations."

One specific Dodd-Frank mandate is for the FIO is to monitor the affordability and availability of insurance, with the exception of health care coverage. "My impression is that the net is fairly wide here," MacGinnitie said.

The agency is currently focusing on automobile insurance affordability and availability. It published two requests in the Federal Register to gain industry insight on how to measure affordability and identify appropriate data for this purpose, Snyder said.

Says Hartwig, "The FIO wants to come up with an objective measure, but any such measure will be inherently arbitrary." For example, one approach under consideration is to define auto insurance as affordable if it accounts for two percent or less of a person's income, he added.

Snyder offered that the PCI approach to affordability is that it should be the function of how much a person has to pay for car insurance after essentials such as food and housing are covered. "With this approach, we believe auto insurance is affordable for everyone," he said.

Insurance commissioners, however, are already sensitive to affordability, availability and rating issues, MacGinnitie said. Such issues came up with credit scoring more than a decade ago and now with pricing optimization (see "Pricing Optimization and the Descending Confusion," *AR* September/October 2015.).

Regardless, MacGinnitie believes that the insurance industry will adapt as it did when the U.S. Supreme Court upheld a nontraditional definition of marriage. He expects more public dialogue about this in the future since Insurance Services Office Ltd. data show that auto insurance claim frequency and severity are increasing. This will probably lead to higher prices and perhaps draw more attention to affordability, availability and rating practices.

In the section on underwriting fairness in FIO's 2015 annual report, the office encourages states to reconsider gender as a factor for rating and underwriting, which can also complicate auto insurance applications for transgender individuals. Further, the FIO also encourages states to reconsider the marriage factor in premiums, which might not be fair to unmarried persons.

Another FIO responsibility is to work with the U.S. Trade Representative to negotiate covered agreements with foreign regulators that could alter state law, Snyder stated. For example, he pointed out that the FIO is developing a covered agreement for reinsurers and insurers in the U.S. to ensure that the country's requirements are deemed equivalent to those in the European Union (EU). The goal is to ensure that American companies are treated equally in the market and to address the EU's concerns regarding reinsurance collateral.

"This is the one area where the FIO has regulatory authority and can actually preempt state laws," Snyder emphasized. It is also an example of where the federal government is moving on a parallel track with state insurance regulators towards the same goal.

The NAIC has already been changing relevant provisions of its Credit for Reinsurance Model Regulation, which would reduce insurance collateral for reinsurers with a solid financial statement domiciled in a country with a solid regulatory environment, Snyder said.

At the congressional subcommittee hearing, Huff of the NAIC expressed concern that FIO could "unnecessarily" preempt state laws and insurance commissioners' progress on reinsurance reforms.

"We question whether a covered agreement or any formal

Top Actuarial Concerns from Dodd-Frank

The Dodd-Frank Act will affect actuaries in several ways, according to the SimErgy Consulting report, "Regulatory Risk and North American Insurance Organizations: A Company Perspective." The Casualty Actuarial Society, Canadian Institute of Actuaries and the Society of Actuaries sponsored the report, which was issued in February 2015. In the table below, Jim MacGinnitie, senior property-casualty fellow at the American Academy of Actuaries, identifies some of the most significant effects that Dodd-Frank will have upon P&C actuaries, based on the report.

Excerpt of "Appendix B: U.S. Research Study — Key Regulatory-Related Risks — Ranked by P&C Score"*

Theme	Risk Scenario	Average Likelihood (Over the next three years)†	Average P&C Severity (Loss in P&C Business Value)‡
Dual Regulation	Dual regulation (at state and federal level) results in new accounting and solvency standards emerging that create an inconsistent and non-level playing field in the insurance market.	6.5%	3.1%
Dual Regulation	Insurance industry becomes subject to a federal regulatory body (e.g., Securities and Exchange Commission) in addition to state regulation, resulting in regulations that are overly restrictive and more expensive to comply with.	4.8%	4.2%
Increase in Capital Requirements	Capital requirements (either issued by the International Association of Insurance Supervisors (IAIS), Federal Insurance Office, or other entity) increase by 20 percent.	3.1%	4.9%
Standardization Requirements Drive Commoditization	Federal Insurance Office unexpectedly succeeds in pressuring states to adopt standardized property-casualty forms, rate classifications or rates, commoditizing products and reducing competitive advantages and profit margins.	1.8%	7.8%
Dodd-Frank Regulation of Banks	Dodd-Frank further expands regulations on banks, resulting in significant increase to compliance costs for insurers that have banks within their organizational structure.	9.9%	1.8%

action by the federal government is necessary to resolve equivalence as it is clear that recognition can be achieved through other mechanisms," he said, adding that he expects the FIO to work with state insurance commissioners "to ensure our state regulatory system is not compromised."

International Concerns

Balancing United States insurer and consumer interests with international concerns, which was once funneled purely through state regulators through the NAIC, now has two additional intermediaries.

Dodd-Frank in essence sets up the conditions whereby the Fed and the FIO can be part of the international insurance standard-setting process by participating at the IAIS as the NAIC historically has. Federal representation introduces nuances that can affect how insurance regulations will look for insurers in the United States.

The Fed, FIO and NAIC — called "Team U.S.A." —have different missions and goals, which sometimes causes a collision of regulatory and policy approaches, sources say.

Since the Fed is deeply involved in international banking standards, Snyder sees the need to make sure it does not apply international banking concepts that might not be good for the insurers the Fed regulates.

The FIO has nary a regulatory role, but its impact on national and international regulation continues to grow. While FIO's regulatory power in ensuring U.S. insurers have international equivalence is a very limited de jure role, FIO's expansion in the policy arena is giving the agency a greater de facto power that goes beyond what most people thought the Congress intended in Dodd-Frank, Snyder explained.

The implications signal more than a mere turf battle, but could slowly shift the nation's state regulatory foundation and traditional international role.

Advocates in favor of federal regulation point to greater consistency in domestic and international standards. However, federal processes have not shown themselves to be as transparent as those of state insurance regulators, Snyder emphasized.

For example, the FIO is not adopting the NAIC's traditional transparent and open public approach to regulation, Snyder stressed. This transparency is intended to ensure protection of consumers and insurers. Instead, the FIO voted for closed-door procedures and eliminated observer participation in working groups, he added. "So you have a clash of regulatory culture, the one being closed door and the other being more open," Snyder added.

At the same time, the international community is pressuring the U.S. to grow its regulatory role due to deficiencies it sees in the state-based regulatory approach. "International banking bodies, such as the International Monetary Fund, advocate more centralized authority at the United States, which would give the federal government more regulatory power," Snyder explained.

The Treasury often advocates for more federal insurance regulatory authority by identifying opportunities for it, Snyder said. The news release announcing its 2013 report, "How to Modernize and Improve the System of Insurance Regulation in the United States," said that the report recommends a "hybrid" model for insurance regulation.

If the resulting international standards do not reflect current state-based regulation, Snyder speculated that there could be less product innovation, higher costs and fewer options for consumers. "The European top-down approach to regulation, if adopted here, could force insurers to consolidate, leaving fewer insurance options and ironically, creating larger insurers that could become systemically important," he said.

State regulators face higher accountability because they are elected or appointed by the state governor, Snyder said. "More accountable state regulation did much better," he maintained. Federal regulators are accountable to Congress, he said, but oversight has been challenging.

Conclusion

Assuring solvency is one of the most important roles actuaries play in the insurance industry. Since Dodd-Frank gave federal agencies regulatory and policy influence, actuaries have a greater role to play in educating federal officials. How state and federal regulations — along with international standards —will look is unclear, but property-casualty actuaries should keep up with state, federal and international activity to prepare for the future. ●

October 2012

CAS Study Note

Basic Reinsurance Accounting – Selected Topics

October 2012

The purpose of this study note is to educate actuaries on certain basic reinsurance accounting topics that may be omitted in other syllabus readings. Specifically, this study note provides examples of how ceded reinsurance impacts an insurer's financial statements and key financial metrics.

Ceded Reinsurance Impact on Financial Statements

The book "Reinsurance Principles and Practices" by Connor Harrison lists the following six principal functions of reinsurance.

1. Increase large line capacity
2. Provide catastrophe protection
3. Stabilize loss experience
4. Provide surplus relief
5. Facilitate withdrawal from a market segment
6. Provide underwriting guidance

This paper will give an example of each of these types of reinsurance, and examine the impact to the ceding company on the following:

- Surplus
- Loss reserves
- Unearned Premiums
- Leverage ratios
- Income statement

The financial statements shown in the examples follow the SAP convention of offsetting ceded liabilities against gross liabilities.

1. Increase large line capacity

This example deals with the situation where a company is only willing to expose itself to a certain amount of loss per policy, but portions of its potential market demand greater coverage.

Beginning Assumptions (the "Without" column):

- XYZ insurance company writes homeowners insurance. It is unable or unwilling to write policies for homes with insured values over $500,000 without a suitable reinsurance program.
- XYZ writes $1 million of annual premium for this market, in a steady state with a level premium volume. The loss ratio is 75%. The only expense is commissions, which equal 20% of premium.
- Loss reserves = $750,000 and surplus = $1.5 million. Since XYZ is in a steady state, reserves and surplus are constant throughout the year.
- XYZ holds cash equal to 10% of gross loss reserves, agent balances equal to 10% of premium, and the remainder of its assets in bonds. The bonds and cash earn investment income at a rate of 5%.
- There are no income taxes.

Altered Assumptions (the "With" column):

- XYZ buys a "surplus share" pro rata reinsurance treaty that cedes premiums and losses for higher valued homes, with the ceding percentage for each policy equal to the excess of the home value over $500,000 divided by the total home value. (For example, for a home worth $625,000, the ceded percentage would be 125/625, or 20%.)
- This is the only reinsurance purchased by XYZ.
- The altered assumptions again reflect level premium volume and a steady state, in which XYZ has been writing identical business over a period of years.

- With access to the higher-value market, XYZ writes 40% more business and achieves $1.4 million in gross written premium. However under the treaties it cedes $300,000 of premium.
- The loss ratio remains 75% on both net and ceded business. However reserves increase relative to loss, because claims on more expensive properties take longer to develop.
- The expense ratio remains 20% of net written premium. The reinsurer pays a ceding commission to compensate for commissions on ceded business, so there is no net additional commission on ceded premium.
- Agent balances remain equal to 10% of premium, of which a portion, equal to the percent of premium ceded, is due to the reinsurer.
- We arbitrarily assume only a small increase in surplus, matching the increase in current year income.

Ceded Reserves/Surplus	0%	30%	30%

Analysis of impact (from Exhibit 1)

- Surplus – We assumed no impact on surplus other than earnings on additional business opportunities. In reality, given the additional premium and reserves and reinsurance collectability risk, the ceding company may desire (or be forced to) hold more surplus to support these greater risks. Alternatively, it could decide to reduce volume to retain the same level of surplus relative to risk.
- Loss reserves – Both gross and net loss reserves increase, partly due to increased premium volume and partly due to the nature of new business being pursued, with slower development on larger claims.
- Unearned Premiums – increase, but remain the same in proportion to premium
- Leverage ratios – Net leverage ratios increase slightly because of the change in business model. Gross leverage ratios begin to differ materially from the net leverage ratios, and reinsurance leverage becomes important due to the purchase of reinsurance.
- Income statement – Little changed on a net basis, but over time the riskier book and changing cost of reinsurance may introduce greater volatility.

2. Provide Catastrophe Protection

This example deals with the situation where the company desires to reduce its potential loss from a catastrophic event.

Beginning Assumptions (the "Without" columns):

- ABC insurance company is in the same situation as XYZ insurance company in Exhibit 1, prior to the purchase of reinsurance. Hence, the "without" column in Exhibit 1 also applies to Exhibit 2, unless a catastrophe event occurs.
- If a cat event occurs, ABC incurs an additional $500,000 in loss, of which $50,000 is paid by the end of the year and the remainder is reserved.

Altered Assumptions (the "With" columns):

- ABC buys a catastrophe treaty on January 1st, for 5% of gross premium, that pays for losses from a single event in excess of 10% of premium. This premium is payable at the start of the year. *(Note that this assumption leaves zero ceded unearned at December 31st. Ceded unearned would be greater than zero if the ceded reinsurance policy term had not yet expired.)*
- This is the only reinsurance purchased by ABC.
- If a cat event occurs, ABC incurs an additional $500,000 in loss. This activates the cat treaty and the reinsurer assumes responsibility for the excess of event losses over 10% of premium, or $500,000 minus $100,000 = $400,000. Non-cat loss levels are unaffected by this event.
- Once again only 10% of the cat losses are paid by year-end, with the rest paid the following year. Note that the reinsurer does not begin paying until paid losses exceed 10% of premium, so the entire $400,000 of ceded loss is ceded reserve.
- The cat treaty has a mandatory reinstatement premium provision, with the reinstatement premium due once the cat treaty attachment is reached on a paid basis. This reinstatement premium charge is 2% of gross premium.
- The only surplus change is due to the change in underwriting results.

Example 2

Net Loss Reserves/Surplus		50%	52%	2%	120%	60%	-60%
Ceded Reserves/Surplus		0%	0%	0%	0%	30%	30%

Analysis of impact (from Example 2)

- Surplus – Buying the cat reinsurance decreases surplus if no cat event occurs, due to the cost of reinsurance. But it can substantially mitigate the risk of significant drops in surplus if large cats occur. Note that the cost of the reinsurance in the event of a cat includes both the original premium and the reinstatement premium.
- Loss reserves – Net reserves are not impacted unless a covered cat event occurs. In that case, gross loss reserves can increase significantly for a relatively short period of time (i.e., the length of the cat payout pattern). Net reserves will return to normal levels sooner than gross reserves, as the retained portion of the cat is generally paid first before the ceded portion of the cat.
- Unearned Premiums – Little to no change (depending on the cat reinsurance policy term and accounting date), as cat reinsurance is normally a limited portion of total premium.
- Leverage ratios – If no cat event occurs, the biggest impact may be from reduced surplus in the denominator of many leverage ratios. If a cat does occur, then gross ratios and net ratios are significantly impacted without the reinsurance, while only the gross ratios are significantly impacted with the reinsurance (with the exception of ceded reinsurance leverage ratios). In general, ceded reinsurance leverage (i.e., ceded balances[1] as a percent of surplus) can be significantly impacted in the period after a major cat, prior to the runoff of the resulting cat loss reserves.
- Income statement – Investment income is reduced by purchasing reinsurance. But underwriting income is substantially protected, with the loss limited to the original ceded premium, plus the retention and reinstatement premium if a covered cat occurs. (This assumes that the cat stays within the maximum limit of the cat reinsurance program.)

3. Stabilize loss experience

This example deals with the situation where loss experience may fluctuate from year to year more than management desires. Management desire may in turn be driven by capital provider demands, or management may wish to simplify the capital management process (including the determination of shareholder dividends).

Beginning Assumptions (the "Without" columns):

- DEF insurance company is in the same situation as XYZ insurance company in Exhibit 1, prior to the purchase of reinsurance. The "normal losses without" column reflects a "normal" loss year with a loss ratio of 75%, as per Exhibit 1.
- However, this example also recognizes the possibility that a "high" loss year may occur, with a loss ratio of 125%. If a high loss year occurs, DEF incurs an additional $500,000 in loss, of which $50,000 is paid by the end of the year and the remainder is reserved.

Altered Assumptions (the "With" columns):

- DEF buys an aggregate excess of loss treaty for the entire book on January 1st, for 10% of gross premium, that returns 90% of losses above a loss ratio of 100%. The reinsurance premium is payable at the start of the year. *(Note that this assumption results in zero ceded unearned at December 31st. Ceded unearned would be greater than zero if the ceded reinsurance policy term had not yet expired.)*
- This is the only reinsurance purchased by DEF.
- In the high loss example, DEF incurs an additional $500,000 in loss for a loss ratio of 125%. This activates the aggregate excess treaty and the reinsurer assumes responsibility for 90% of losses above a loss ratio of 100%, or ($1,250,000 minus $1,000,000) * 90% = $225,000.

[1] Ceded balances are those balance sheet values arising from ceded reinsurance. In the above examples, they include ceded loss reserves and ceded unearned premiums. In a real-life example, they would also include reinsurance recoverables from amounts billed but not yet collected.

- Once again only 10% of the additional losses (over and above "normal" losses) are paid by year-end, with the rest paid the following year. Note that the reinsurer does not begin paying until paid losses exceed 100% of premium, so the entire $225,000 of ceded loss is ceded reserve.
- The only surplus change is due to the change in underwriting results.

Example 3

Net Loss Reserves/Surplus		50%	54%	4%	120%	87%	-33%
Ceded Reserves/Surplus		0%	0%	0%	0%	20%	20%

Analysis of impact (from Example 3)

- Surplus – The expected value of surplus is lower after buying reinsurance, but with less period-to-period variation. The reduction is caused by the expected net cost of reinsurance. Note that while the ***expected*** impact of surplus is a reduction, the impact from year to year may vary between reductions and increases as gross losses are lower or higher than expected.
- Loss reserves – Stabilizing loss experience net of reinsurance generally translates into stabilizing net of reinsurance loss reserves. Gross reserves reflect the full volatility of year-to-year results, but net reserves should be smaller and more stable. (They may also be easier to estimate, as the situations that cause loss experience to fluctuate may also cause claim liability estimation to be more difficult.)
- Unearned Premiums – Reduced on a net basis due to the purchase of reinsurance, unless (as in our example) the reinsurance is purchased with a single effective date and the accounting date being used is the reinsurance expiration date.
- Leverage ratios – These ratios on a net basis should be more stable but slightly higher (due to reduced surplus), assuming there is a positive net cost of the reinsurance.
- Income statement – Underwriting results over time would be expected to be lower, due to the net cost of the reinsurance, and investment income would be lower. But the underwriting results from year-to-year should be more stable.

4. Provide surplus relief

This reinsurance deals with the situation where leverage ratios are higher than desired. Reinsurance is therefore purchased with the intent of reducing leverage ratios net of reinsurance.

Beginning Assumptions (the "Without" column):

- XYZ insurance company here is in the same situation as XYZ insurance company in Exhibit 1 prior to the purchase of reinsurance, except that it has fewer bonds and therefore only has $500,000 in surplus.

Altered Assumptions (the "With" column):

- XYZ buys reinsurance with a 50% quota share, in order to reduce its net premium to surplus and net reserves to surplus leverage ratios. This is a straight quota share, with 50% of premiums and losses ceded, with a ceding commission of 20% (consistent with the gross expense ratio).
- This is the only reinsurance purchased by XYZ.
- The altered assumptions once again reflect a steady state with consistent gross and ceded premium from year to year.
- The only surplus change is due to the change in underwriting and investment income during the year.

Example 4				
XYZ Insurance Company				
Impact of Quota Share Treaty				
Balance Sheet	Without	With	Difference	
Assets				
Bonds	1,575	943	(632)	
Cash	75	75	-	
Agents Balances	100	100	-	
Total	1,750	1,118	(632)	
Liabilities				
Loss Reserves				
Gross	750	750	-	
Ceded	0	375	375	
Net	750	375	(375)	
Unearned Premiums				
Gross	500	500	-	
Ceded	0	250	250	
Net	500	250	(250)	
Ceded Agents Balances	0	50	50	
Total	1,250	675	(575)	
Surplus	500	443	(57)	
Income Statement				
Earned Premium				
Gross	1,000	1,000	-	
Ceded	0	500	500	
Net	1,000	500	(500)	
Incurred Losses				
Gross	750	750	-	
Ceded	0	375	375	
Net	750	375	(375)	
Expenses	200	100	(100)	
Underwriting Income	50	25	(25)	
Investment Income	83	51	(32)	
Total Income	133	76	(57)	
Written Premiums				
Gross	1,000	1,000	-	
Ceded	0	500	500	
Net	1,000	500	(500)	
Other Financial Statistics				
Gross WP/Surplus	200%	226%	26%	
Net WP/Surplus	200%	113%	-87%	
Gross Loss Reserves/Surplus	150%	169%	19%	
Net Loss Reserves/Surplus	150%	85%	-65%	
Ceded Reserves/Surplus	0%	141%	141%	

Analysis of impact (from Example 4)

- Surplus – Liabilities decrease because half of the losses and unearned premium are ceded, but assets decrease because of the cost of the reinsurance. The net effect in our example is a small decline in surplus, since the ceded business was profitable. This quota share reinsurance would only increase surplus if the business was being written at a loss.
- Loss reserves – Net reserves are a fixed percentage of gross reserves.
- Unearned Premiums – Net reserves are a fixed percentage of gross reserves.
- Leverage ratios – Net leverage ratios are significantly improved, although ceded reinsurance leverage ratios are significantly increased. Hence, the insurer's solvency becomes more reliant on its reinsurers' solvency. Note that ceding half the gross business does not halve the net leverage ratios, due to the impact of the cession on surplus. While premiums and loss reserves drop in half, surplus does not stay constant. Hence, a cession of more than 50% would be required to obtain a 50% reduction in net premium and reserve ratios to surplus.
- Income statement – Underwriting income is cut in half, and investment income is significantly reduced.

5. Facilitate withdrawal from a market segment

This example deals with the situation where management wants to exit a market, and is not willing to wait until the runoff of existing obligations.

Beginning Assumptions (the "Beginning Balance" and "Without" columns):

- XYZ insurance company here is in the same situation as XYZ insurance company in Exhibit 1 except that it stopped writing new business at the beginning of the current year. The beginning balances come from Exhibit 1, "without" column.
- Written premium for the current year therefore drops to zero. XYZ continues to earn premium, and incur losses, on business written during the prior year.
- The accounting paradigm does not recognize Deferred Acquisition Costs, so XYZ incurs a zero expense ratio on runoff earned premium.
- XYZ earns investment income on the average of beginning and ending cash and bonds.
- All loss reserves as of the beginning of the year (for events occurring in earlier years) are closed and paid at the reserve amount before the end of the year.
- Half of all losses occurring during the year are paid by the end of the year.
- Surplus changes, during the year, only due to underwriting and investment income.

Altered Assumptions (the "With" column):

- XYZ buys prospective reinsurance on January 1st to cede 100% of the remaining unearned premium, and all losses occurring after the beginning of the year. A ceding commission is included to cover the commission portion of the unearned premium, which XYZ paid during the previous year.
- XYZ does not buy retroactive reinsurance. Once again all loss reserves as of the beginning of the year (for events occurring in earlier years) are closed and paid by XYZ at the reserve amount before the end of the year.
- Surplus changes, during the year, only due to underwriting and investment income.

Note: This example assumes withdrawal from all business. These results would need to be combined with results from ongoing businesses to see the combined balance sheet and income statement impact.

Example 5					
XYZ Insurance Company					
Impact of Prospective Reinsurance Treaty					
Balance Sheet	Beginning Balances:	Ending Balances Without:	Ending Balances With:	Difference

Net WP/Surplus		0%	0%	0%
Gross Loss Reserves/Surplus		11%	11%	0%
Net Loss Reserves/Surplus		11%	0%	-11%
Ceded Reserves/Surplus		0%	11%	11%

Analysis of Impact (from Example 5)

- Surplus – Liabilities decline to zero as losses and unearned premium are ceded, but assets decrease because of the cost of the reinsurance. The net effect, once again, is a small decline in surplus, since the ceded business was profitable. However surplus will be less volatile if there are unexpectedly large or small losses during the runoff year.
- Loss reserves – Gross reserves are unchanged, but net reserves disappear, hence exposure to the volatility of net reserve estimates disappears.
- Unearned Premiums – Gross reserves disappear over the year as the business runs off. Net reserves disappear immediately when the unearned premium is ceded.
- Leverage ratios – Net leverage ratios are zero, hence the only remaining insurance risk is reinsurance collectability risk. Hence, surplus that was supporting the runoff business should now be free to support existing or new business, subject to supporting the residual reinsurance collectability risk.
- Income statement – Underwriting results reflect a profit because the ceding commission offsets expenses which were paid the previous year. This profit is slightly smaller than if the business had not been ceded. However the risk in the results is now greatly reduced (and limited to the risk in reinsurance collectability and in investment results).

6. Provide underwriting guidance

This reinsurance function arises in the situation where management wishes to enter a new market, or believes that it must be in one market to support another of its markets, but does not feel comfortable with its expertise in that new market. It therefore heavily reinsures its writings in that new market, relying on the reinsurer's expertise in pricing and underwriting that market correctly.

No numeric example will be provided for this situation. It is conceptually equivalent to Exhibit 1 wherein reinsurance creates new business opportunities for the insurer. The impact on surplus and income will depend on the profitability and volume (after reinsurance cessions) of the new business.

An Overview for P/C Insurers' Audit Committees: Effective Use of Actuarial Loss Reserves Expertise 179

IV. SSAPs 192

1. Introduction

This practice note is not a promulgation of the Actuarial Standards Board, is not an actuarial standard of practice, is not binding upon any actuary and is not a definitive statement as to what constitutes generally accepted practice in the area under discussion. Events occurring subsequent to the publication of this practice note may make the practices described in this practice note irrelevant or obsolete.

This practice note was prepared by the Committee on Property and Liability Financial Reporting (COPLFR) of the Casualty Practice Council of the American Academy of Actuaries (Academy).

1.1 What are practice notes?

The Academy's Guidelines for Developing Practice Notes[1] states:

> *"The purpose of practice notes is to provide information to actuaries on current or emerging practices in which their peers are engaged. They are intended to supplement the available actuarial literature, especially where the practices addressed are subject to evolving technology, recently adopted external requirements, or advances in actuarial science and other applicable disciplines.*
> *...*
> *Practice notes are not interpretations of actuarial standards of practice nor are they meant to be a codification of generally accepted actuarial practice. Actuaries are not bound in any way to comply with practice notes or to conform their work to the practices described in practice notes."*[2]

1.1.1 Discussion

Practice notes provide discussion and illustration on areas of common practice among actuaries. Each practice note focuses on a specific topic or application of practice.

As noted in the Academy's guidelines, practice notes are not intended to be an interpretation of the actuarial standards of practice, nor are practice notes meant to be a codification of generally accepted or appropriate actuarial practice. Actuaries are not in any way bound to comply with practice notes or to conform their work to the practices they describe.

1.2 Purpose of this practice note

1. The purpose of this practice note is to provide information to actuaries on current practices in which their peers are engaged related to signing a Property and Casualty Statement of Actuarial Opinion (SAO) and Actuarial Opinion Summary (AOS) as required by the National Association of Insurance Commissioners (NAIC).

[1] Adopted by the Academy's Board of Directors in September 2006.
[2] Id. See http://www.actuary.org/content/guidelines-developing-practice-notes.

1.2.1 *Discussion*

Each year COPLFR is charged with the task of updating the practice note for SAOs on property and casualty loss reserves. The updates typically include discussion around changes implemented by the NAIC to the SAO Instructions (NAIC SAO Instructions). Significant changes in this year's practice note from last year's version are highlighted in yellow.

FAQ: Are actuaries required to comply with this practice note or follow the illustrations provided herein?

A: No. The practice note provides information to actuaries on current and emerging practices in which their peers are engaged. Actuaries are not bound in any way to comply with practice notes or to conform their work to the practices described in practice notes.

1.2.2 *Terms of construction*

There are certain terms used throughout this practice note that are integral to an informed reading. These include "must", "should," and "may". Although this practice note is not binding on any actuary and does not purport to interpret any actuarial standard of practice (ASOP), rather than paraphrase these definitions, we will quote the definitions as provided in ASOP No. 1, *Introductory Standard of Practice*, section 2:

> "Must/Should—*The words "must" and "should" are used to provide guidance in the ASOPs. "Must" as used in the ASOPs means that the ASB does not anticipate that the actuary will have any reasonable alternative but to follow a particular course of action. In contrast, the word "should" indicates what is normally the appropriate practice for an actuary to follow when rendering actuarial services. Situations may arise where the actuary applies professional judgment and concludes that complying with this practice would be inappropriate, given the nature and purpose of the assignment and the principals'*[3] *needs, or that under the circumstances it would not be reasonable or practical to follow the practice.*
>
> *Failure to follow a course of action denoted by either the term "must" or "should" constitutes a deviation from the guidance of the ASOP. In either event, the actuary is directed to ASOP No. 41,* Actuarial Communications.
>
> *The terms "must" and "should" are generally followed by a verb or phrase denoting action(s), such as "disclose," "document," "consider," or "take into account." For example, the phrase "should consider" is often used to suggest potential courses of action. If, after consideration, in the actuary's professional judgment an action is not appropriate, the action is not required and failure to take this action is not a deviation from the guidance in the standard.*
>
> May—"*May" as used in the ASOPs means that the course of action described is one that would be considered reasonable and appropriate in many circumstances. "May" in ASOPs is often used when providing examples (for example, factors the actuary may consider; methods that may be appropriate). It is not intended to indicate that a course of action is reasonable and appropriate in all circumstances, nor to imply that alternative courses of action are impermissible."*[4]

[3] Principal is defined in the Code of Professional Conduct and ASOP No. 1 as "a client or employer of the actuary".
[4] Actuarial Standards Board, ASOP No. 1, *Introductory Actuarial Standard of Practice*, Section 2.1. See

Additionally, this practice note uses the term "required" when the course of action is required by a particular body (e.g., the NAIC through the Annual Statement Instructions), as specified.

1.3 Scope of practice note

According to the NAIC SAO Instructions,

> *"There is to be included with or attached to Page 1 of the Annual Statement, the statement of a Qualified Actuary, entitled "Statement of Actuarial Opinion" (Actuarial Opinion), setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and required Exhibits, shall be in the format of and contain the information required by this Section of the Annual Statement Instructions Property and Casualty."*[5]

FAQ: Does the scope of this practice note include title insurance opinions?

A: While the NAIC Instructions for Title opinions are included in Appendix I, there is no explicit discussion around title opinions. However, actuaries may look to this practice note for discussion around many topics that are similar.

This practice note is intended to assist actuaries by describing practices that COPLFR believes are commonly employed in issuing SAOs and AOSs on loss and loss adjustment expense (LAE) reserves in compliance with the Property and Casualty Annual Statement Instructions (Annual Statement Instructions) for 2018 issued by the NAIC. Actuaries may also find this information useful in preparing statements of actuarial opinion for other audiences or regulators.

1.3.1 Discussion

Approaches other than the ones described within this practice note may also be in common use. The information contained in this practice note is not binding on any actuary and is not a definitive statement of what constitutes generally accepted or appropriate practice in this area.

http://www.actuarialstandardsboard.org/asops/introductoryactuarialstandardpractice/.

[5] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

Note:

- Information taken from NAIC materials has been reproduced with the NAIC's permission. Unauthorized replication or distribution of NAIC materials is strictly prohibited.

COPLFR appreciates the comments it has received since the issuance of the prior year's practice note and has incorporated a number of suggestions in this update. COPLFR also welcomes any suggested improvements for future updates of this practice note. Suggestions may be sent to the current chairperson of COPLFR through the Academy's casualty policy analyst at *casualty@actuary.org*.

1.4 Overview of resources

The *Code of Professional Conduct* (the Code) requires actuaries to "be familiar with, and keep current with, not only the Code, but also applicable Law and rules of professional conduct for the jurisdictions in which the Actuary renders Actuarial Services."[6]

Appendix I of this practice note provides the NAIC Instructions with respect to the property and casualty SAO and AOS. The NAIC Instructions for Title Insurance SAOs are also included for informational purposes only. No discussion is included.

Individual states may have requirements that modify or supplement the NAIC Annual Statement Instructions. The Appointed Actuary is encouraged to refer to the Academy's 2018 P/C Loss Reserve Law Manual for guidance on these points. The 2018 P/C Loss Reserve Law Manual is available for purchase from the Academy.

Additionally, actuaries are encouraged to carefully read and consider regulatory guidance provided by the NAIC's Actuarial Opinion (C) Working Group (AOWG) of the Casualty Actuarial and Statistical (C) Task Force (CASTF) and included in Appendix II, the Statements of Principles adopted by the Casualty Actuarial Society (CAS)[7], and other resources detailed in Chapter 9 of this practice note. Chapter 9 provides a listing of the most relevant Actuarial Standards of Practice (ASOPs) and Statements of Statutory Accounting Principles (SSAPs) that apply to the material covered by this practice note. It also provides resources to actuaries providing opinions other than those covered by the scope of this practice note. The AOWG Regulatory Guidance pertains to the 2018 SAO and the AOS and supplements the NAIC Annual Statement Instructions. The purpose is to provide timely regulatory guidance and clarity to companies and Appointed Actuaries regarding regulatory expectations with respect to the SAO and AOS. The Regulatory Guidance is not binding.

References to the Regulatory Guidance are included throughout this practice note.

[6] American Academy of Actuaries, Code of Professional Conduct, January 1, 2001, Purpose section, last paragraph.
[7] http://www.casact.org/professionalism/standards/princip/

Definitions

ASB - As explained in ASOP No. 1, "*The Actuarial Standards Board (ASB) promulgates actuarial standards of practice (ASOPs) for use by actuaries when rendering actuarial services in the United States. The ASB is vested by the U.S.-based actuarial organizations[8] with the responsibility for promulgating ASOPs for actuaries rendering actuarial services in the United States. Each of these organizations requires its members, through its Code of Professional Conduct[9] (Code), to satisfy applicable ASOPs when rendering actuarial services in the United States."*[10]

CASTF - According to the NAIC website, the mission of the NAIC CASTF "*is to identify, investigate and develop solutions to actuarial problems and statistical issues in the P/C insurance industry."* The Task Force's goals "*are to maintain the financial health of P/C insurers and to ensure that appropriate data regarding P/C insurance markets are available."*[11]

AOWG – According to the NAIC website, in 2018 the AOWG will: "*Propose revisions to the following, as needed, especially to improve actuarial opinions, actuarial opinion summaries and actuarial reports, as well as the regulatory analysis of these actuarial documents and loss and premium reserves.*

- *Financial Analysis Handbook.*
- *Financial statement instructions.*
- *Regulatory guidance to Appointed Actuaries"*[12]

ASOPs - According to the ASB website, ASOPs "*identify what the actuary should consider, document, and disclose when performing an actuarial assignment"* and "*set standards for appropriate practice for the U.S."*[13]

SSAPs – "*Statements of Statutory Accounting Principles (SSAPs) are published by the NAIC in its Accounting Practices and Procedures Manual. The manual includes more than 100 SSAPs, which serve as the basis for preparing and issuing statutory financial statements for insurance companies in the U.S. in accordance with, or in the absence of, specific statutes or regulations promulgated by individual states."*[14]

FAQ: Are ASOPs binding on members of the U.S.-based actuarial organizations when rendering actuarial services in the U.S.?

A: Yes. According to ASOP No. 1, Section 1: "ASOPs are binding on members of the U.S.-based actuarial organizations when rendering actuarial services in the U.S. While these ASOPs are binding, they are not the only considerations that affect an actuary's work. Other considerations may include legal and regulatory requirements, professional requirements promulgated by employers or actuarial organizations, evolving actuarial practice, and the actuary's own professional judgment informed by the nature of the engagement. The ASOPs provide a basic framework that is intended to accommodate these additional considerations."

1.5 Organization of this practice note

Each chapter in this practice note begins with an opening paragraph describing the contents and includes an excerpt of the actual Instructions pertaining to the chapter. Separate sections within the chapter provide details on the topic, including further quoted instruction, definitions, discussion, and illustrative language. The FAQs reside with the relevant chapter/section for ease of use.

The chapters are organized to facilitate use of the practice note and to align it with the structure of the SAO. Chapter 1 introduces the practice note. It is followed by four chapters (Chapter 2 through Chapter 5) that line up with the four required sections of the SAO: IDENTIFICATION, SCOPE, OPINION, and RELEVANT COMMENTS (sections 3 through 6 of the Instructions). As described in the NAIC Instructions,

> *"The Statement of Actuarial Opinion must consist of an IDENTIFICATION paragraph identifying the Appointed Actuary; a SCOPE paragraph identifying the subjects on which an opinion is to be expressed and describing the scope of the Appointed Actuary's work; an OPINION paragraph expressing his or her opinion with respect to such subjects; and one or more additional RELEVANT COMMENTS paragraphs. These four Sections must be clearly designated."*[15]

Chapter 6 provides additional considerations around the SAO, including filing requirements and considerations when the Appointed Actuary becomes aware of errors in the SAO. Chapter 7 covers the AOS and Chapter 8 covers the Actuarial Report, which is considered to be the culmination of the SAO process. Finally Chapter 9 provides resources for the Appointed Actuary.

The four appendices have been organized to make it easier to locate pertinent information. Appendix I provides the NAIC SAO and AOS Instructions, along with the NAIC Data Testing Requirements. Appendix II provides the 2018 AOWG Regulatory Guidance. Appendix III contains more detailed information about specific topics that may not be common to all SAOs. Appendix IV provides the SSAPs from NAIC's Accounting Practices and Procedures Manual deemed to be particularly applicable to actuaries signing NAIC property and casualty SAOs.

In the Annual Statement Instructions and in this practice note, the term "loss reserves" includes LAE reserves unless specified otherwise. This follows the terminology in the NAIC Instructions.

1.6 Changes from the 2017 practice note

COPLFR has made enhancements to the 2018 practice note based on feedback from users and a thorough review by the committee. These changes were relatively minor, and intended to provide more clarity through illustrative language, improve readability, and fix minor errors. COPLFR also reflected all changes to NAIC SAO and AOS Instructions and considered the updates to AOWG's Regulatory Guidance document. Significant changes in this year's practice note are highlighted in yellow.

[15] *2018 NAIC Annual Statement Instructions Property/Casualty*. Section I.1.2

The 2018 NAIC SAO Instructions include changes regarding Accident & Health (A&H) Long Duration Contracts but otherwise have not had any substantive changes since 2017. Noteworthy changes to the NAIC Instructions for 2018 include:

- A definition has been introduced for A&H Long Duration Contracts as "A&H contracts in which the contract term is greater than or equal to 13 months and contract reserves are required."[16] We note that this is different from the definition of Property and Casualty (P&C) Long Duration Contracts.
- Exhibit B: Disclosures have changed with the addition of Item 13: Net Reserves for A&H Long Duration Contracts.
- The prior term "Long Duration Contracts" was revised to "Property and Casualty (P&C) Long Duration Contracts". There was no change in procedures for these types of contracts. COPLFR understands that this was a clarifying change to make clear the distinction between P&C Long Duration Contracts (i.e., those subject to the three tests of SSAP No. 65) and the new term "A&H Long Duration Contracts."

Regulatory Guidance includes context for the addition of A&H Long Duration Contracts to the Instructions and regulatory expectations of Appointed Actuaries regarding these contracts. There were also other minor edits to the sections for Unearned Premium for P&C Long Duration Contracts and Other Premium Reserve items in the AOWG Regulatory Guidance for 2018. These edits included the revision and addition of clarifying language on the type of commentary regulators expect to see in the opinion regarding these topics.

2. IDENTIFICATION section

This, the IDENTIFICATION chapter, is the first of four chapters (i.e., Chapter 2 through Chapter 5) in this practice note that discuss each of the four required sections of the Statement of Actuarial Opinion: IDENTIFICATION, SCOPE, OPINION, and RELEVANT COMMENTS (sections 3 through 6 of the NAIC SAO Instructions).

The SAO starts with an identification paragraph, which according to the NAIC SAO Instructions should:

> *"…specifically indicate the Appointed Actuary's relationship to the company, qualifications for acting as Appointed Actuary, date of appointment, and specify that the appointment was made by the Board of Directors."*[17]

[16] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[17] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

2.1 Appointment of the Qualified Actuary

According to the NAIC SAO Instructions,

> *"Upon initial engagement, the Qualified Actuary must be appointed by the Board of Directors by December 31 of the calendar year for which the opinion is rendered. The Company shall notify the domiciliary commissioner within five business days of the initial appointment with the following information:*
>
> *a. Name and title (and, in the case of a consulting actuary, the name of the firm).*
>
> *b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).*
>
> *c. A statement that the person meets the requirements of a Qualified Actuary.*
>
> *Once this notification is furnished, no further notice is required with respect to this person unless the Board of Directors takes action to no longer appoint or retain the actuary or the actuary no longer meets the requirements of a Qualified Actuary."*[18]

FAQ: Do actuaries need to be re-appointed each year?

A: NAIC Instructions do not necessarily require the Appointed Actuary to be re-appointed every year.

However, when the appointment is specific to the year-end in question, then reappointment would normally be necessary.

The most recent date of appointment (if there is more than one) may be quoted in the identification paragraph.

The Appointed Actuary should consider obtaining and retaining documentation of his or her appointment, including the date of the appointment, as support for this statement. For this purpose, the Appointed

Actuary may wish to retain materials such as minutes of the Board of Directors' meeting indicating the appointment or written confirmation by a company officer.

The term "Board of Directors" is used broadly throughout the 2018 Instructions and separately defined *"to include the designated Board of Directors, its equivalent, or an appropriate committee directly reporting to the Board of Directors."*[19] For example, an actuary may be appointed by the Audit Committee of the Board of Directors.

2.1.1 *Illustrative language*

In the case where the Appointed Actuary is a consultant, the following may be appropriate:

[18] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[19] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

I, Jane Actuary, am associated with ABC Consulting. I am a member of the American Academy of Actuaries and meet its qualification standards for issuing Statements of Actuarial Opinion included with NAIC Property and Casualty Annual Statements. I am a Fellow of the Casualty Actuarial Society. I was appointed by the Board of Directors of XYZ Insurance Company on November 3, 2018 to render this opinion.

2.1.2 *Definition of a Qualified Actuary*

Paragraph 1A of the NAIC SAO Instructions sets out the requirements for an actuary to be qualified to sign SAOs:

> *"Qualified Actuary" is a person who meets the basic education, experience and continuing education requirements of the Specific Qualifications Standard for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement, as set forth in the* Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States, *promulgated by the American Academy of Actuaries, and is either:*
>
> *(i). A member in good standing of the Casualty Actuarial Society, or*
>
> *(ii). A member in good standing of the American Academy of Actuaries who has been approved as qualified for signing casualty loss reserve opinions by the Casualty Practice Council of the American Academy of Actuaries.*[20]

[20] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

Special Situations:

- NAIC SAO Instructions state that members of the Academy qualifying under paragraph 1A (ii) of the NAIC must attach, each year, a copy of the approval letter by the Casualty Practice Council (CPC) to the SAO.
- As set out in paragraph 3 of the NAIC SAO Instructions, insurance regulatory officials of the domiciliary state may approve individuals who do not meet the definition of Qualified Actuary in paragraph 1A (i) or (ii) to sign SAOs. In these cases, NAIC SAO Instructions state that the company must attach, each year, a letter from that official stating that the individual meets the state's requirements for rendering the SAO.

2.2 Qualifications

The identification paragraph contains the Appointed Actuary's statement that he or she is qualified to sign the SAO. Before taking on or renewing an Appointed Actuary assignment, actuaries are advised to review the applicable qualification standards and ensure compliance.

Actuaries are reminded that the Academy promulgated amended *Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States Including Continuing Education Requirements, effective January 1, 2008 (the "US Qualification Standards")*. This practice note refers to NAIC SAOs as contemplated in Section 3 of the US *Qualification Standards.* The Appointed Actuary must meet the general and specific qualification standards, basic and continuing education (CE) requirements, and other requirements described therein.

The following table summarizes the applicable Qualification Standards.

NAIC SAOs—Overview of Applicable Qualification Standardsverview of Applicable Qualification Standards	
U.S. Qualification Standards – General	• MAAA, FCAS, ACAS, or fully qualified member of another IAA-member organization • Three years of responsible actuarial experience, defined as workthat requires knowledge and skill in solving actuarial problems

(cont.)

NAIC SAOs—Overview of Applicable Qualification Standards

U.S. Qualification Standards – General

- Knowledge of the applicable law through examination or documented professional development
- And either:
  - Have attained highest possible level of membership in an IAA full- member organization and have one year responsible actuarial experience in the relevant area under the review of an actuary qualified to issue the SAO at the time the review took place under standards in effect at that time
  - Have a minimum of three years of responsible actuarial experience in the relevant area under the review of an actuary qualified to issue the SAO at the time the review took place under standards in effect at that time
- 30 hours of "relevant" continuing education (CE)
  - >= 6 organized
  - >=3 professionalism
  - <=3 general business
  - Refer to http://actuary.org/qualstandards/

U.S. Qualification Standards – Specific

In addition to the requirements of the General Qualification Standard:

- Successfully complete relevant examinations administered by the Academy or the CAS on (a) policy forms and coverages, underwriting, and marketing; (b) principles of ratemaking; (c) statutory insurance accounting and expense analysis; (d) premium, loss, and expense reserves; and (e) reinsurance; OR obtain a signed statement from another actuary who is qualified to issue the SAO, NAIC P/C Annual Statement, indicating that the writer is familiar with the actuary's professional history and that the actuary has obtained sufficient alternative education to satisfy the basic education requirement for the specific qualification standard. This statement should be obtained before issuing an SAO.
  - Three years of responsible experience relevant to the subject of the SAO under the review of an actuary qualified to issue the SAO at the time the review took place under standards in effect at that time
  - Obtain 15 CE hours per year related directly to the particular topic
  - Minimum of 6 CE hours of "organized" activities related directly to the particular topic

Refer to http://actuary.org/qualstandards/

NAIC SAOs—Overview of Applicable Qualification Standards	
NAIC	• Meet U.S. Qualification Standards' Specific Qualification Standard for NAIC SAOs • Member in good standing of the CAS, or of the Academy (and approved as qualified by the Academy's Casualty Practice Council (CPC)) • State requirements may vary • Refer to NAIC Annual Statement Instructions and the Academy's 2018 P/C Loss Reserve Law Manual
CAS	• The CAS Continuing Education Policy requires actuaries providing SAOs in the U.S. to comply with the U.S. Qualification Standards • Refer to http://www.casact.org/education/index.cfm?fa=ceinfo

Note:

- The NAIC began an Educational Standards and Assessment Project in March 2018. The outcome of this project could include a change to the NAIC's definition of a Qualified Actuary, among other items, but if so, would not be expected to be implemented until at least the NAIC 2019 Statement of Actuarial Opinion Instructions. Thus, there is no change for 2018 Opinions.
- CAS CE requirements changed for Actuarial Services rendered on or after January 1, 2016, with Alternative Compliance Provisions being eliminated. The applicable requirements from the most relevant recognized organization must be followed – typically the Academy for SAOs – whether the CAS member is a member of that organization or not.
- The Actuary should be prepared to provide evidence of compliance with the relevant continuing education requirements on a timely basis. Several templates, as well as an online tool, are available from the CAS and Academy.
  - The Academy has developed and made available to its members a voluntary U.S. Qualification Standards Attestation Form, a tool which is intended to respond to regulators' concerns about transparency on actuarial qualifications necessary for signing statutory statements of opinion. The form is available to Academy members at http://attest.actuary.org/.
- Certification of compliance with CAS CE requirements for services to be provided in year 2019 is due by December 31, 2018.

2.3 Change in Appointed Actuary

NAIC SAO Instructions require a formal process for changing Appointed Actuaries. The steps are set out in paragraph 1 of the NAIC SAO Instructions. The process involves actions by the company and prior Appointed Actuary and is set into motion by the formal Board of Directors action replacing the Appointed Actuary. NAIC SAO Instructions state that:

1. ***Within five days of the action***, the company must advise the relevant domiciliary insurance department in writing of the change.

2. ***Within 10 days of the notification***, the company must write to the domiciliary Commissioner stating whether in the 24 months preceding the change "*there were any disagreements with the former Appointed Actuary regarding the content of the opinion on matters of the risk of material adverse deviation, required disclosures, scopes, procedure, type of opinion issued, substantive wording of the opinion or data quality. The disagreements required to be reported… include both those resolved to the former Appointed Actuary's satisfaction and those not resolved to the former Appointed Actuary's satisfaction.*"[21]

   The letter should list and describe such disagreements, as well as the nature of the resolution, or that the items were not resolved, as applicable.

   The letter must be accompanied by a response from the former Appointed Actuary addressed to the company "*stating whether the Appointed Actuary agrees with the statements contained in the Insurer's letter and, if not, stating the reasons for which he or she does not agree.*"[22]

   The 2018 AOWG Regulatory Guidance states "*While regulators are interested in material disagreements regarding differences between the former Appointed Actuary's final estimates and the insurer's carried reserves, they do not expect notification on routine discussions that occur during the course of the Appointed Actuary's work.*"[23]

FAQ: Could an actuary be appointed after year-end?

A: Under extraordinary circumstances (e.g., illness of prior Appointed Actuary), the appointment of a new actuary may occur after year-end. Companies would typically communicate with the regulator about the reasons for the late change.

[21] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[22] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[23] 2018 AOWG Regulatory Guidance, page 3 (Appendix II).

Note:

- It may be appropriate to also consider any disagreements related to the AOS, although the Instructions do not state this explicitly.
- Newly Appointed Actuaries would typically obtain and review this correspondence as part of their pre-work.

3. SCOPE section

This, the SCOPE chapter, is the second of four chapters (i.e., Chapter 2 through Chapter 5) in this practice note that discuss each of the four required sections of the Statement of Actuarial Opinion: IDENTIFICATION, SCOPE, OPINION, and RELEVANT COMMENTS (sections 3 through 6 of the NAIC SAO Instructions).

The SCOPE section identifies both the reserve items upon which the Appointed Actuary is providing an opinion and also the basis for the presentation of those reserve items. The SCOPE section also identifies the *"review date."* The *"review date"* is defined in ASOP No. 36 as *"the date (subsequent to the valuation date) through which material information known to the actuary is included in forming the reserve opinion."*[24]

The NAIC SAO Instructions also indicate that the SCOPE should include a paragraph regarding the data relied upon in forming the opinion, including who provided the data and that the Appointed Actuary reconciled the data to Schedule P, Part 1 of the Company's Annual Statement.

Additionally, if the Company participates in intercompany pooling, the Appointed Actuary discloses this in the SCOPE. This disclosure should include a description of the pool, an identification of the lead company, a listing of all companies with their state of domicile and pooling percentages. It should also discuss how the data used in the Appointed Actuary's analysis was reconciled to Schedule P (either on a pooled basis or for each company on its own).

FAQ: Is the Appointed Actuary required to opine on all of the reserve items listed in section 3.1 of this chapter?

A: No. The Appointed Actuary should identify those items that will be included within the scope of the opinion.

3.1 Scope of SAO

The SCOPE section identifies the reserve items upon which the Appointed Actuary is providing an opinion. The reserve items can include:

[24] Actuarial Standards Board, "ASOP No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*," http://www.actuarialstandardsboard.org/asops/statements-actuarial-opinion-regarding- propertycasualty-loss-loss-adjustment-expense-reserves/, December 2010, Section 2.10.

- Loss and LAE reserves;
- Retroactive reinsurance assumed reserves;
- Unearned premium reserves for P&C Long Duration Contracts;
- Unearned premium reserves for extended reporting endorsements, including, but not necessarily limited to those items included in Schedule P Interrogatory No. 1 of the company's Annual Statement; and,
- Other reserve items for which the Appointed Actuary is providing an opinion.

These items, and their corresponding amounts, are listed in Exhibit A: Scope. Exhibit A: Scope and Exhibit B: Disclosures are two exhibits that are required to be attached to the Statement of Actuarial Opinion.

3.1.1 Discussion

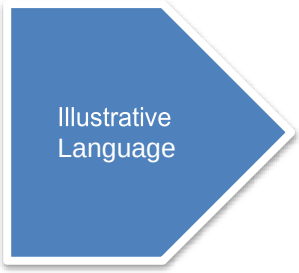
The Appointed Actuary should state that the SCOPE items included in the SAO reflect the Disclosure items (8 through 14) in Exhibit B.

Note:

- If the Appointed Actuary is not opining on certain items in Exhibit A: SCOPE (or a subset of those items), then the Appointed Actuary should clearly state this in the SCOPE section of the SAO. In this case, if the Appointed Actuary believes the excluded items could be material, the SAO would be "Qualified" and noted as such in item 4 of Exhibit B. (For further discussion on Qualified SAOs, please refer to section 4.5 of this practice note.)

3.1.2 Illustrative Language

The following language may be appropriate:



I have examined the actuarial assumptions and methods used in determining the reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 2018. The reserves listed in Exhibit A, where applicable, include provisions for Disclosure items (disclosures 8 through 14) in Exhibit B.

3.2 Stated basis of presentation

The SCOPE of the SAO should identify the basis upon which the reserves are stated. ASOP No. 36 explains that the stated basis of reserve presentation is:

> *"a description of the nature of the reserves, usually found in the financial statement and the associated footnotes and disclosures. The stated basis often depends upon regulatory or accounting requirements. It includes, as appropriate, the following:*
>
> *a. whether reserves are stated as being nominal or discounted for the time value of money and, if discounted, the items discounted (for example, tabular reserves only) and the stated basis for the interest rate (for example, risk-free rate, portfolio rate, or fixed rate of x%);*
>
> *b. whether the reserves are stated to include an explicit risk margin and, if so, the stated basis for the explicit risk margin (for example, stated percentile of distribution, or stated percentage load above expected);*
>
> *c. whether the reserves are gross or net of specified recoverables (for example, deductibles, ceded reinsurance, and salvage and subrogation);*
>
> *d. whether the potential for uncollectible recoverables is considered in the reserves, when recoverables are involved and, if so, the categories of such uncollectible recoverables considered and whether those categories reflect currently known collectibility concerns or potential ultimate collectibility concerns. Possible categories of uncollectibles include those related to disputes and those related to counterparties in financial difficulty (credit default);*
>
> *e. the types of unpaid loss adjustment expenses covered by the reserve (for example, coverage dispute costs, defense costs, and adjusting costs);*
>
> *f. when the opinion is only for a portion of a reserve, the claims exposure to be covered by the opinion (for example, type of loss, line of business, year, and state); and*
>
> *g. any other items that, in the actuary's professional judgment, are needed to describe the reserves sufficiently for the actuary's evaluation of the reserves."*[25]

FAQ: What is an accounting basis?

A: An accounting basis refers to the reporting principles underlying the presentation of the financial report. Two common examples are SAP (Statutory Accounting Principles) and GAAP (Generally Accepted Accounting Principles).

[25] Actuarial Standards Board, "ASOP No. 36, Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves," http://www.actuarialstandardsboard.org/asops/statements-actuarial-opinion-regarding- propertycasualty-loss-loss-adjustment-expense-reserves/, December 2010, section 3.4.

3.2.1 *Illustrative Language*

The following language may be appropriate:

I have reviewed the December 31, 2018 loss and loss adjustment expense reserves recorded under U.S. Statutory Accounting Principles.

3.3 Intercompany pooling

For companies participating in an intercompany pool, the Appointed Actuary is required to include a description of the intercompany pool in the SAO. This could be included in the SCOPE. The following section discusses intercompany pooling and offers information regarding what may be included in this description.

According to the NAIC SAO Instructions,

> *"For each company in the pool, the Appointed Actuary shall include a description of the pool, identification of the lead company and a listing of all companies in the pool, their state of domicile and their respective pooling percentages.*
>
> *Exhibits A and B for each company in the pool should represent the company's share of the pool and should reconcile to the financial statement for that company."*[26]

FAQ: Is there a difference between intercompany pooling and intercompany reinsurance among affiliated carriers?

A: Yes! Please see the "Definition" section (3.3.1) below.

For companies that have a zero percent share and zero net reserves, the information for the lead company in the pool should be provided.

3.3.1 *Definitions*

Intercompany Reinsurance refers to a transaction whereby one company (the reinsurer), for a consideration, agrees to indemnify the other (ceding company) against all or part of the loss that the latter may sustain under the policy or policies that it has issued.

Intercompany Pooling in this context refers to business that is pooled among affiliated insurance companies who are party to a pooling agreement in which the participants receive a fixed and predetermined share of all business written by the pool. Intercompany pooling arrangements involve establishment of a conventional quota share reinsurance agreement under which all the pooled business is ceded to the lead entity and then retroceded back

[26] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

to the pool participants in accordance with their stipulated shares.

In addition to the discussion below, pooling is discussed in Appendix III.2 as well as in the AOWG Regulatory Guidance included as Appendix II. The reader is referred in particular to the AOWG Regulatory Guidance related to pooling arrangements in the Opinion paragraph (section 1C of the NAIC SAO Instructions).

Section 1C of the NAIC SAO Instructions was expanded in 2014 to apply to all companies that operate in an intercompany pooling agreement. Companies participating in intercompany pooling arrangements,

regardless of their participation percentage, are required to include a description of the pool, identification of the lead company, and a listing of all companies in the pool. This listing is to include their state(s) of domicile and their respective pooling percentages in each of the SAOs.

Additionally, regardless of the company's participation percentage in the intercompany pool, each company is required to include in the Statement of Actuarial Opinion Exhibits A and B information reflective of their share. Companies having a zero (0) percent share are required to include relevant comments that relate to the risks of the lead pool member and are required to file Exhibits A and B of the lead company as an addendum to their SAO.

One of the following situations may present itself to the Appointed Actuary:

1. *An intercompany pooling agreement applies, the lead company retains 100 percent of the pooled business, and the other pool participants each retain 0 percent.*
   Schedule P for the lead company will contain the total gross and net reserves for the pool. The gross and net reserves in Schedule P for the other companies will be zero. Section 1C of the NAIC SAO Instructions and section 6 of the NAIC AOS Instructions apply.

2. *An intercompany pooling agreement applies, more than one pool participant retains a non-zero share of the pooled business, and other pool participants each retain 0 percent.*
   Schedule P, for each company that retains a non-zero share of the pooled business, will show its share of the gross and net reserves. The gross and net reserves in Schedule P for the other companies will be zero. Section 1C of the NAIC SAO Instructions and section 6 of the NAIC AOS Instructions apply.

3. *A reinsurance agreement applies, and the company (or companies) cedes 100 percent of its reserves under a quota share reinsurance agreement.*
   Schedule P for the company (or companies) ceding 100 percent of its reserves shows gross reserves but zero net reserves. Paragraph 1C of the NAIC SAO Instructions and paragraph 6 of the NAIC AOS Instructions do not apply.

If it is unclear whether section 1C of the NAIC SAO Instructions applies, refer to the Financial Statement Note entitled "*Intercompany Pooling Arrangements*", read the contract itself, and/or contact the regulator for the company's domiciliary state. The Appointed Actuary may refer to Appendix III.2 of this practice note for more information.

Note:

- Note the distinction between pooling to a 100 percent lead company with no retrocession and ceding 100 percent via a quota share reinsurance agreement. Any proportional reinsurance agreement with affiliates must be approved by the regulator as either an intercompany pooling arrangement or a quota share reinsurance agreement. The financial reporting depends on the approved filing, regardless of how a company views the contract.

3.3.2 *Illustrative Language*

The following language may be appropriate:

The Company is the lead member of an intercompany pooling agreement with its subsidiaries, DEF Insurance Company and GHI Insurance Company. Premiums and losses are allocated to the Company based on its assigned percentage to the total pool, XX%. Analysis of the reserve items identified in Exhibit A has been performed for all pool companies combined and allocated to the pool companies based on their pooling percentages. Any favorable or adverse development will affect pool members in a manner commensurate with their pool participation. The following is a listing of all companies in the pool, their respective pooling percentages, and their state of domicile:

ABC Insurance Company: 80%, New York DEF Insurance Company: 15%, New York GHI Insurance Company: 5%, New York

3.4 Review date

The SCOPE of the SAO also identifies the "review date." This section defines and discusses this topic.

FAQ: Is the "review date" the same date that the Appointed Actuary issues the Opinion?

A: The "review date" is the date through which the Appointed Actuary considers material information in forming the reserve opinion. While it can be the date the Appointed Actuary signs the Opinion, it may in fact precede the signature date.

3.4.1 *Definitions*

Review date is defined in ASOP No. 36 as:

> *"the date (subsequent to the valuation date) through which material information known to the actuary is included in forming the reserve opinion."*[27]

[27] Actuarial Standards Board, "ASOP No. 36, Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves," http://www.actuarialstandardsboard.org/asops/statements-actuarial-opinion-regarding- propertycasualty-loss-loss-

Note "review date" is a specific disclosure required for SAOs. "Information date" is a disclosure required for any Actuarial Communication, as discussed in ASOP No. 41, however, we believe the two terms are conceptually similar. According to ASOP No. 41:

> *"The actuary should communicate to the intended user the date(s) through which data or other information has been considered in developing the findings included in the report."*[28]

3.4.2 Discussion

The 2018 AOWG Regulatory Guidance, which can be found in Appendix II, notes that when the Appointed Actuary is silent regarding the review date, this can indicate either a review date that is the same as the date the SAO is signed or that the Appointed Actuary overlooked this disclosure. In instances in which the Appointed Actuary's review date is the same date that the SAO is signed, regulators suggest actuaries clarify that in the SAO. Such language may include, "*…and reviewed information provided to me through the date of this opinion."*[29][28]

3.4.3 Illustrative Language

The following language may be appropriate:

My review considered information provided to me through ([date] OR [the date of this opinion]).

adjustment-expense-reserves/, December 2010, Section 2.10.

[28] Actuarial Standards Board, "ASOP No. 41, Actuarial Communications, http://www.actuarialstandardsboard.org/asops/actuarial-communications/, December 2010, Section 3.4.5.

[29] 2018 AOWG Regulatory Guidance, page 5 (Appendix II).

3.5 Provider of data relied upon by the Appointed Actuary

The NAIC SAO Instructions require that the SCOPE paragraph include a paragraph such as the following regarding the data used by the Appointed Actuary in forming the opinion:

> *"In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by____ _(officer name and title at the Company). I evaluated that data for reasonableness and consistency. I also reconciled that data to Schedule P, Part 1 of the Company's current Annual Statement. In other respects, my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary."*[30]

FAQ: What if the data is provided by a third party administrator rather than by an officer of the company?

A: According to AOWG Regulatory Guidance, while it is informative to identify the third-- party in the SCOPE, the regulated entity will be ultimately responsible for the data. Regulators expect that a company official will be identified in the SCOPE paragraph.

3.5.1 Discussion

The Appointed Actuary should disclose the title of the officer of the Company responsible for the data used by the Appointed Actuary in his/her analysis, in addition to the name of the officer. One or two officers of the regulated entity will usually be named in the SAO. The Appointed Actuary may also be the person responsible for the data.

3.5.2 Illustrative Language

The following language may be appropriate:

Illustrative Language

In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by_____(officer name and title at the Company).

3.6 Evaluation of data for reasonableness and consistency

The NAIC SAO Instructions require the Appointed Actuary to evaluate the data relied upon in the analysis underlying the SAO. This statement normally means that the Appointed Actuary reviewed the data triangles, etc., used in the course of forming the SAO. During this review, the Appointed Actuary observes whether data points were found to be either outside the range of reasonable possibilities or internally inconsistent to a significant

[30] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

degree (or that appropriate adjustments have been reflected in the Appointed Actuary's analysis).

3.6.1 Discussion

The objective of the evaluation for reasonableness and consistency is to identify significant data errors that would ordinarily be observed by the Appointed Actuary in the course of analyzing the reserves.

Note ASOP No. 23, *Data Quality*, provides guidance on this issue; the Appointed Actuary is to comply with ASOP No. 23 when evaluating data.

For purposes of compliance with the NAIC SAO Instructions, the following discussion is provided:

FAQ: Is the actuary required to attest that no errors exist in the data examined?

A: No.

4. The key question in reviewing a specific, unusual data point is normally whether the data point is so unusual that it may indicate a possible data error of significance to the Appointed Actuary's SAO on the reserves or whether special attention should be taken with unusual but valid data. Data points that could reasonably result from random variations in claim experience or from normal coding errors (e.g., a small downward development in the number of claims reported for a particular accident year and line of business) generally need not be questioned. (Note: The Appointed Actuary may well inquire about the causes of unusual data points for purposes of evaluating the reserves.)

5. Generally, prudent actuaries watch for inconsistencies in the data compilations used directly in the actuarial analysis. For example, if the Appointed Actuary is using a paid loss development method, the Appointed Actuary may choose to investigate significant atypical accelerations or decelerations in the development.

6. If data initially appeared to be unreasonable or inconsistent, but were either explained or adjusted satisfactorily, then the data does comport with a finding of reasonableness and consistency. There may be discussion within the Actuarial Report addressing these circumstances.

Note:

- If the Appointed Actuary identified the data as being unreasonable or inconsistent to a significant degree (relative to the Appointed Actuary's opinion on the reserves), and the apparent data problem was not resolved satisfactorily, some possible alternatives are as follows:
  - Do not rely on the data in question: If, in the Appointed Actuary's judgment, this causes a significant increase in the uncertainty inherent in the Appointed Actuary's opinion on the reserves, then the situation would usually be described in the Statement of Actuarial Opinion and would usually be elaborated upon in the Actuarial Report, or
  - Conclude that an actuarial opinion cannot be formed based on the available data.

3.6.2 Illustrative Language

The following language may be appropriate:

Illustrative Language

I evaluated the data for reasonableness and consistency.

3.7 Reconciliation to Schedule P

The NAIC SAO Instructions require the Appointed Actuary to make a statement regarding the reconciliation of data relied upon in the analysis underlying the opinion to Schedule P of the Company's Annual Statement. This statement is intended to mean the following:

A. Each of the following types of data, if relied upon significantly in forming the actuarial opinion (on a net or a direct plus assumed basis), were reconciled to Schedule P, Parts 1, 1A,..., 1R (referred to collectively as Schedule P below): paid losses, incurred (case basis) losses, paid defense and cost containment expenses, incurred (case basis) defense and cost containment expenses, paid adjusting and other expenses, salvage and subrogation received, and earned premiums.

FAQ: Should the reconciliation be performed at a level of detail and refinement identical to that displayed in the Statutory Annual Statement?

A: Not necessarily. See the discussion below.

B. The reconciliation of paid data consisted of comparing either (a) cumulative paid amounts, or (b) current calendar-year paid amounts obtained from the actuarial data to the analogous data from Schedule P, Part 1; the reconciliation of case basis reserves consisted of comparing the current year-end case basis reserves from the actuarial analysis to Schedule P, Part 1; the comparisons were completed in detail by line of business and year in which losses were incurred, to the extent that such detail was relied upon significantly and is provided in Schedule P.

C. The differences, if any, were deemed by the Appointed Actuary to be either insignificant or explainable by known causes that did not represent errors in the data relied upon by the Appointed Actuary (e.g., the case basis reserves for LAE were based on formulas that differed between the two sources.).

3.7.1 Discussion

The following discussion points are relevant with respect to the Appointed Actuary's statement regarding the reconciliation of data to Schedule P:

1. The Appointed Actuary may use types of data that are not included in the above reconciliation (e.g., numbers of units of exposure, numbers of claims, policy limits distributions, and loss data for older years adjusted to reflect subsequent years' reinsurance retentions). Salvage and subrogation received would normally be reconciled if the losses are reviewed gross of salvage and subrogation and/or a separate analysis is performed for salvage and subrogation. Additionally, the Appointed Actuary may consider reconciling claim counts, if the method of counting claims is consistent between the reserve analysis data and Schedule P (e.g., per claim vs. per occurrence).

2. If data used by the Appointed Actuary are subdivided more finely than that in Schedule P (e.g., lines of business are subdivided, accident quarter detail is used, or the data are subdivided between pools and associations and other business), then the data relied upon can be aggregated to the level shown in Schedule P. Similarly, if the Appointed Actuary chooses to combine some Schedule P lines of business for purposes of the actuarial study, then the Schedule P data can be aggregated as needed for comparison.

3. If the data used by the Appointed Actuary are grouped in such a manner (e.g., by type of policyholder, with each type including subsets of two or more Schedule P lines of business) that those data and the Schedule P data require aggregation before being compared, then the data can be compared after minimal necessary aggregation. Alternatively, more finely detailed data may be compiled that, when aggregated in different ways, reproduce both the data used by the Appointed Actuary and the Schedule P data. A brief comment indicating the inability to compare data directly (i.e., before some aggregation of both the data used by the Appointed Actuary and Schedule P data) and the level at which the comparison was performed may be included in the Statement of Actuarial Opinion and may be elaborated upon in the Actuarial Report.

4. If adjustments were made to the data for purposes of the actuarial analysis (e.g., to put older years on a basis more similar to recent years or for purposes of projecting the recent years), the data before adjustment often can be compared against Schedule P.

5. If, as is common, the adjusting and other loss expense data used by the Appointed Actuary were grouped by payment year, not subdivided by accident year, then it typically would be appropriate for the latest calendar year's payments (not in detail by accident year) to be compared by line of business, allowing variations in line-of-business groupings as discussed above.

6. If any paid or case-incurred loss or LAE data that were relied upon significantly cannot be compared in detail by line of business and year for reasons other than those in notes (2) through (5) above (e.g., if the data used in the actuarial analysis were grouped by policy year), then this may be indicated in the Statement of Actuarial Opinion and may be elaborated upon in the Actuarial Report. If it is not possible to compare the data with Schedule P by year, the data may be compared with Schedule P on an all-years-combined basis. This may be appropriate for calendar-year paid losses, calendar-year defense and cost containment expenses, current year- end case basis loss reserves, and current year-end case basis defense and cost containment expense reserves.

7. If any loss or LAE data corresponding to the prior year's line of Schedule P were relied upon significantly, such data may be compared to Schedule P on an all-years combined basis. This comparison may include calendar-year paid losses, calendar-year paid defense and cost containment expenses, current year-end case basis loss reserves, and current year-end case basis defense and cost containment expense reserves. This may be the case for a discontinued line of business.

8. As with other aspects of the work underlying the Statement of Actuarial Opinion, if the reconciliation was performed by someone other than the Appointed Actuary, the Appointed Actuary may review the methodology used in the reconciliation and its results but need not have personally done or checked the calculations.

9. The Appointed Actuary's analysis may be based primarily on data evaluated earlier than year-end (e.g., Oct. 31). If actual year-end data are not used as the base for projection of the outstanding amounts then, in forming the opinion on year-end reserves, the Appointed Actuary would typically compare the actual year-end data against expected year-end values based on the earlier evaluation. The data source used for the analysis would typically still be reconciled to Schedule P.

10. The Actuarial Report ordinarily contains a description of the comparison performed and of any data that were relied upon significantly but could not be compared against Schedule P.

11. If, after attempting to resolve the differences, significant, unexplained differences remain between the data used by the Appointed Actuary and those shown in Schedule P, the Appointed Actuary may choose to do the following:

a. Confirm that the person(s) responsible for the data used by the Appointed Actuary and the person(s) responsible for the data in Schedule P are aware of the differences. (They ordinarily will have learned of the differences in the course of the Appointed Actuary's efforts to resolve them.)

b. Recommend that the Company inform its outside auditors of the unexplained differences.

c. Discuss the situation in the Statement of Actuarial Opinion and elaborate on it in the Actuarial Report.

3.7.2 Illustrative Language

The following language may be appropriate:

I also reconciled that data to Schedule P – Part 1 of the Company's current Annual Statement.

OR

I also reconciled that data to Schedule P – Part 1 of the Company's current Annual Statement. The data generally reconciled with one exception: The total amount of Company XXX's paid loss differs by $21,000. This difference results from rounding and is not material.

3.8 Data testing requirement

The data testing requirement has been in effect for several years and is specified in the Annual Audited Financial Reports section of the NAIC Annual Statement Instructions. This is included in Appendix I.4 of this practice note. According to this requirement, "through inquiry of the Appointed Actuary, the auditor should obtain an understanding of the data identified by the Appointed Actuary as significant."[31]. The auditor's responsibility is to determine which data elements are to be included in the testing procedures within the scope of the financial statement audit.

Note that a similar data testing paragraph can be found in the NAIC Annual Statement Instructions for title insurance companies.

[31] 2018 NAIC Data Testing Requirement (Appendix I.4)

3.8.1 Discussion[32]

As noted above, the 2018 NAIC SAO Instructions include a data testing paragraph in the Annual Audited Financial Reports section. This statutory guidance is included in Appendix I.4 and referred to as *the data testing requirement* in this document. The NAIC Annual Statement Instructions further address the auditor's review of data used by the Appointed Actuary. For purposes of this discussion, the term *"loss reserves"* is intended to include LAE reserves and any other items within the scope of the statutory Statement of Actuarial Opinion.

The data testing requirement ensures that the auditor will become aware of the data and/or data elements that the Appointed Actuary identifies as being significant.

The term *significant* is not defined within the data testing requirement; the opining actuary should determine a meaning of *significant* that is best suited for the situation that is the subject of the SAO. COPLFR believes that a data item or attribute would normally be considered to be *significant* to an analysis of loss and LAE reserves if, in the Appointed Actuary's professional judgment, the correctness of the data item or attribute in the loss and LAE reserve analysis is likely to have a material effect on the SAO. Examples of a *material effect* might include a change in the type of SAO rendered (reasonable, qualified, redundant, deficient, or no opinion) or the presence or absence of a risk of material (RMAD) adverse deviation. (Note: The ASB has not adopted a specific definition of *significant* as it pertains to this data testing requirement, hence the meaning of *significant* suggested by COPLFR in this paragraph is not binding on any actuary.)

Once the auditor has obtained an understanding of the data identified by the Appointed Actuary as being significant, the auditor will determine the scope of testing procedures for purposes of assessing "whether the data tested is fairly stated in all material respects in relation to the statutory financial statement taken as a whole."[33]

As an accommodation, Appointed Actuaries often provide a letter addressed to company management, with a copy to the company's financial statement auditors, identifying the data that the Appointed Actuary deems significant to his/her analysis of loss and LAE reserves. An example of such letter is included in the illustrative language section below. While there is no requirement to this effect, written communication among the Appointed Actuary, the company's management, and the company's auditor, to be retained for a reasonable time period, may help clarify information and create a documentation trail.

FAQ: What data are in scope vs. out of scope of the data testing requirement?

A: Upon request from the auditor, the Appointed Actuary identifies the data they have deemed significant to the analysis in support of the SAO. However, it is the auditor's responsibility to determine which data elements are to be included in the testing procedures within the scope of the financial statement audit.

In practice, Appointed Actuaries meet with the company's management and its financial statement auditors to

[32] Note that COPLFR generated this section after discussions with the American Institute of Certified Public Accountants (AICPA), the NAIC/AICPA Working Group and the NAIC Casualty Actuarial and Statistical Task Force (CASTF). Actuaries are not normally trained to define or specify audit procedures and therefore look to insurance companies and their auditors as having the ultimate responsibility for determining how to comply with the data testing requirement. Questions about the data testing requirement as it relates to specific companies should be directed to the companies' domiciliary regulators.

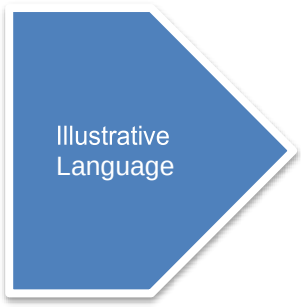
[33] 2018 NAIC Data Testing Requirement (Appendix I.4)

discuss the data in greater depth. Note, ASOP No. 21, *Responding to or Assisting Auditors or Examiners in Connection with Financial Audits, Financial Reviews and Financial Examinations,* provides guidance to actuaries on responding to or assisting auditors in connection with financial statements.

Actuaries may also wish to consult ASOP No. 23, *Data Quality,* regarding the nature and boundaries of the Appointed Actuary's responsibilities regarding data quality.

3.8.2 Illustrative Language

The following provides one possible example of a letter the Appointed Actuary may wish to issue to company management (typically with a copy to the auditor) regarding items significant to the analysis of loss and LAE reserves supporting the SAO. Significant data and attributes will vary depending on the circumstances of a particular assignment and may call for varying approaches to compliance with the NAIC's requirements. There is no requirement that the Appointed Actuary use this letter or any of the specific language or provisions it contains, or to identify the lines of business or attributes used as examples as significant. If the Appointed Actuary chooses to issue such a letter, consideration will be made of the facts and circumstances of a particular company; entirely different language may be used. The Appointed Actuary may wish to consult with legal counsel on the contents of such a letter and/or concerning the specific provisions of the NAIC's data testing requirements.



Dear CFO:

I understand that ABC CPA has been appointed to audit XYZ Insurance Company's financial statements for the year ended December 31, 2018. I understand that the NAIC Annual Statement Instructions direct insurers to require that the auditor subject the data used by the Appointed Actuary to testing procedures. As the Appointed Actuary of XYZ, I am providing this letter to communicate what data and attributes I believe to be significant to my analysis in support of the XYZ Statement of Actuarial Opinion (SAO).

In this letter, a data item or attribute would normally be considered to be "significant" to my analysis of loss reserves if, in my professional judgment, the correctness of the data item or attribute in the loss reserve analysis is likely to have a material effect on the opinion. Examples of "material effect" might include a change in the type of opinion rendered (reasonable, qualified, redundant, deficient, or no opinion) or the presence or absence of a risk of material adverse deviation.

As of the date of this letter, I expect my analysis of loss and loss adjustment expense reserves to be based on the following data:

12. *Direct and Ceded Paid Loss and Defense and Cost Containment Expense (DCC) byreviewed line of business and by accident year, at annual evaluations as of XX/XX/2018. For Workers' Compensation,*

these data are also split to Medical vs. Indemnity. For Commercial Multi-Peril, these data are also split to Property vs. Liability.

13. *Direct and Ceded Case Reserves for Loss by reviewed line of business and by accident year, at annual evaluations as of XX/XX/2018. For Workers' Compensation, this data is also split to Medical vs. Indemnity. For Commercial Multi-Peril, these data are also split to Property vs. Liability.*
14. *Direct and Ceded Earned premium by reviewed line of business by calendar year as of XX/XX/2018.*
15. *Reported Claim Counts by reviewed line of business and by accident year, at annual evaluations as of XX/XX/2018, for the following lines of business: Workers' Compensation and Personal Auto Liability. For Workers' Compensation, these data are also split to Medical vs. Indemnity.*
16. *Direct Paid Adjusting and Other Expense (AOE) by calendar year as of XX/XX/2018. I believe the Workers' Compensation and Commercial Multi-Peril lines of business to be most significant with respect to the SAO.*

The attributes that are significant with respect to the above items are as follows:

a. *For items 1 through 4, the assignment to line of business and accident year.*
b. *For items 1, 3 and 4, the annual amounts of premiums, payments or reported claims.*
c. *For item 2 the amount of reserves at XX/XX/2018.*
d. *For items 1, 2 and 4, the split for Workers' Compensation of Medical vs. Indemnity.*
e. *For items 1, 2 and 4, the split for Commercial Multi-Peril of Property vs. Liability.*

The data used in support of the SAO come to me from the Analyst of XYZ and are generally provided on the 10th workday following the close of the year. Direct AOE is provided by the Controller of XYZ. I have attached an extract of last year's data files, highlighted to show the data fields that I used for last year's review.

The decision to designate the items listed in this letter as "significant" was based upon my professional judgment and my understanding of XYZ's operations at this time as represented to me by XYZ's management. This listing is intended solely for the use of XYZ and its auditors, and should not be used or relied upon by any other party or for any other purpose. This listing does not indicate in any way that all of these items will, in fact, prove to be significant to the Company's reserves or that additional items not specified here will not be identified at some time in the future as having been a significant influence on the Company's reserves. The above list was based on my work for XYZ in prior years, and is subject to change during the course of my review. If I become aware of additional data items that are significant to my review of reserves as of December 31, 2018, I will notify you and, with your concurrence, inform ABC accordingly.

I will rely upon the data identified in this letter when performing my analysis. Any significant discrepancies discovered in the data identified in this letter should be communicated to me by XYZ as soon as possible so that my analysis can be amended accordingly.

I would be happy to meet with you and ABC and answer any questions you may have. Please contact me after you have had a chance to review this letter.

Yours truly,
The Actuary

cc: The Partner, ABC CPA

3.9 Methodology

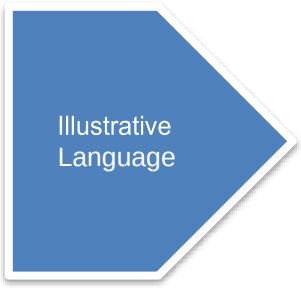
The NAIC SAO Instructions state that the SCOPE paragraph should include a statement regarding the examination of the assumptions and methodology underlying the Company's recorded reserves.

3.9.1 Discussion

Certain states may interpret the NAIC SAO Instructions literally and expect the Appointed Actuary to have examined the Company's methodology for determining its reserves. The Appointed Actuary may need to perform additional work to comply with that state's interpretation, particularly when not an employee of the Company.

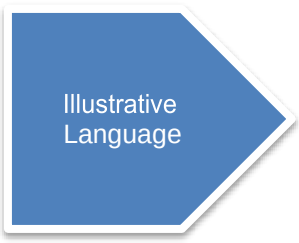
3.9.2 Illustrative Language

If the Appointed Actuary examined the assumptions and methodology underlying the Company's recorded reserves, the following wording is generally appropriate, absent any circumstances that may warrant the use of alternative language:



I have examined the actuarial assumptions and methods used in determining reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 2018, and reviewed information provided to me through XX/XX/2019 …my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary.

If the Appointed Actuary did not review the methods and assumptions used in determining the reserves but rather performed independent tests to evaluate the reserves, wording similar to the following may be appropriate in place of the last sentence shown in the SCOPE paragraph of the NAIC SAO Instructions (above):



I have examined the reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 2018, and reviewed information provided to me through XX/XX/2019…my examination included the use of such actuarial assumptions and methods and such tests of the calculations as I considered necessary.

If there is some segment of the associated reserve amounts for which the Appointed Actuary is not giving an opinion, such qualification may be stated here. This would be a qualified SAO in accordance with ASOP No. 36, which requires the Appointed Actuary to indicate the segment of business and the associated reserve amounts. The Appointed Actuary is referred to section 4.5 for a detailed discussion of what constitutes a qualified SAO.

4. OPINION section

This, the OPINION chapter, is the third of four chapters (i.e., Chapter 2 through Chapter 5) in this practice note that discuss each of the four required sections of the Statement of Actuarial Opinion: IDENTIFICATION, SCOPE, OPINION, and RELEVANT COMMENTS (sections 3 through 6 of the NAIC SAO Instructions).

According to NAIC SAO Instructions,

> *The OPINION paragraph should include a sentence that at least covers the points listed in the following illustration:*
>
> > *"In my opinion, the amounts carried in Exhibit A on account of the items identified:*
> >
> > *A. Meet the requirements of the insurance laws of (state of domicile).*
> >
> > *B. Are computed in accordance with accepted actuarial standards and principles.*
> >
> > *C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements."*
>
> *If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts or Other Loss Reserve items on which the Appointed Actuary is expressing an opinion, the Actuarial Opinion should contain language such as the following:*
>
> > *D. "Make a reasonable provision for the unearned premium reserves for long duration contracts and/or <insert Other Loss Reserve item on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements."*
>
> *If there is any aggregation or combination of items in Exhibit A, the opinion language should clearly identify the combined items.*[34]

Each of these items is discussed in detail in this chapter.

When the reserve estimate is subject to an exceptionally high degree of variability, or when a reasonable fluctuation in reserves can have a material effect on surplus, the Appointed Actuary may choose to discuss this in the SAO. More discussion is in the RELEVANT COMMENTS chapter of this practice note.

[34] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.1 Meet the relevant state laws

Section 5(A) of the NAIC SAO Instructions requires an opinion that the reserves meet the requirements of the insurance laws of the state of domicile.

4.1.1 *Discussion*

The insurance laws of the states are generally interpreted to include statutory accounting requirements. Thus, to comply with insurance law, reserves ordinarily represent management's best estimate.

Insurance laws and regulations take precedence over the actuarial standards and principles at all times.

Management is required to record its best estimate of reserves by line of business and in total in the statutory accounts. The Appointed Actuary may wish to consider that management's obligations in this regard may be different than the Appointed Actuary's. The Appointed Actuary is required in sections 5(B) and 5(C) of the NAIC SAO Instructions to opine on the reasonableness of the reserves in the aggregate.

FAQ: How can I find the relevant state laws?

A: There are several resources that may be used to find relevant state laws. The American Academy of Actuaries' 2018 P/C Loss Reserve Law Manual is one resource (see note below). In addition, state insurance laws are often available on the website of the particular state regulatory authority. One can also contact the applicable state regulator directly to obtain that state's insurance laws. The responsibility to identify all relevant state laws rests with the individual actuary and legal counsel should be consulted where the actuary is unable to identify all relevant state laws.

Note:

- The Academy's 2018 P/C Loss Reserve Law Manual provides a compilation of state regulatory requirements concerning property and casualty loss and LAE reserves. The Law Manual is updated annually and available for purchase from the Academy.

The following language may be appropriate:

In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).

B. Are computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements

4.2 Accepted actuarial standards and principles

The NAIC SAO Instructions state that the OPINION paragraph should include a sentence that the amounts identified in Exhibit A are computed in accordance with accepted actuarial standards and principles.

4.2.1 *Discussion*

As discussed in section 3.9, *Methodology*, the ability to make this statement depends on the Appointed Actuary's role in reviewing the reserves. The Appointed Actuary may instead perform an independent analysis of the reserves.

If a state were to interpret the Instructions literally it might expect the Appointed Actuary to have examined the company's methodology for determining its reserves. The Appointed Actuary would need to perform additional work if required to comply with the relevant state's interpretation.

Note:

- Insurance laws and regulations take precedence over the actuarial standards and principles. The Code of Professional Conduct states, for example: "Laws impose obligations upon an Actuary. Where requirements of Law conflict with the Code, the requirements of Law shall take precedence."

4.2.2 *Illustrative language*

The following wording is generally appropriate in situations where the Appointed Actuary reviewed the assumptions and methods used in setting the recorded reserves, assuming it is factually correct:

In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).

B. Are computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements.

In situations in which the Appointed Actuary performs an independent analysis of the reserves, the opinion statement in 5(B) of the NAIC SAO Instructions may read:

In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).

B. Are consistent with reserves computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements

4.3 Reasonable opinion

There are five possible types of SAOs: Reasonable, Inadequate/deficient, Redundant/excessive, Qualified, or No opinion. The type of SAO must be explicitly identified in item 4 of Exhibit B as follows:

- R if Reasonable
- I if Inadequate or Deficient Provision
- E if Excessive or Redundant Provision
- Q if Qualified, including the situation when part of the OPINION is Qualified
- N if No Opinion

This section of Chapter 4 discusses the reasonable type of SAO. Sections 4.4 through 4.6 discuss the other types of SAOs.

The NAIC SAO Instructions explain the determination of a reasonable SAO as follows:

> *"When the carried reserve amount is within the Appointed Actuary's range of reasonable reserve estimates, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves."*[35]

FAQ: What if the Appointed Actuary concludes that the net loss and LAE reserves and the direct-plus-assumed loss and LAE reserves make reasonable provisions for the unpaid loss and LAE obligations of the company, but amounts booked for certain subsets of the carried reserves do not, in isolation, make reasonable provisions for the associated portions of the company's obligation?

A: The determination of whether to issue a deficient/inadequate opinion is based upon the overall evaluation of the loss and LAE reserves as disclosed in the SCOPE paragraph of the SAO, as discussed in Chapter 3. For this purpose, it may not be relevant whether the actuary believes that each subset of the reserves makes a reasonable provision for the associated obligations, as long as the carried reserve amount is reasonable in the aggregate.
However, the Actuary would still need to assess whether the reserves are stated in accordance with the laws of the state of domicile and accepted actuarial standards and principles.

[35] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.3.1 *Definitions*

ASOP No. 36, section 3.7, states that an actuary should consider a reserve to be reasonable if it is within a range of estimates that could be produced by an unpaid claim estimate analysis that is, in the actuary's professional judgment, consistent with both ASOP No. 43, *Property/Casualty Unpaid Claim Estimates*, and the identified stated basis of reserve presentation.

4.3.2 *Discussion*

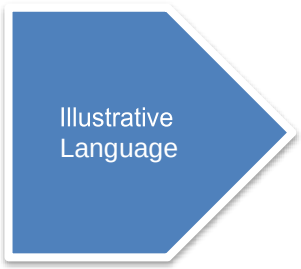
If the Appointed Actuary reaches different conclusions regarding the SCOPE items, e.g., the determination of a reasonable provision for net reserves versus a determination of a redundant provision for gross reserves (direct plus assumed reserves), then the SAO would usually include language that explicitly conveys the intended category of SAO for each of the SCOPE items.

Note:

- If the Appointed Actuary reaches different conclusions regarding net reserves versus gross reserves (direct plus assumed reserves), then item 4 in Exhibit B ordinarily would reflect the SAO category for net reserves. In this situation the Appointed Actuary would be expected to include discussion about both gross and net in the SAO.
- The range of reasonable estimates typically is narrower, perhaps considerably, than the range of possible outcomes of the ultimate settlement value of the reserve.
- A reserve booked outside the bounds of the range of reasonable estimates would not normally make a reasonable provision for all unpaid loss and LAE obligations. The Appointed Actuary will be guided by ASOP No. 36.

4.3.3 *Illustrative language*

The following language may be appropriate:



In my opinion, the amounts carried in Exhibit A on account of the items identified:

B. Meet the requirements of the insurance laws of [state of domicile].
C. Are consistent with reserves computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements.

In situations in which the Appointed Actuary reaches different conclusions regarding the SCOPE items, e.g., the determination of a reasonable provision for net reserves versus a determination of a redundant or deficient provision for gross reserves (direct plus assumed reserves), the opinion statement in 5(C) of the NAIC SAO Instructions may read:

In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of [state of domicile].
B. Are consistent with reserves computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all net unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements, but a deficient [or redundant] provision on a gross of reinsurance basis. The provision for all gross unpaid losses and loss adjustment expenses is $X less than [or greater than] the minimum [or maximum] amount I consider necessary to be within the range of reasonable estimates.

4.4 Inadequate/deficient opinion or excessive/redundant opinion

The NAIC SAO Instructions explain the determination of an inadequate/deficient SAO as follows:

> *"When the carried reserve amount is less than the minimum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the minimum amount that the Appointed Actuary believes is reasonable."*[36]

In addition, the determination of an excessive/redundant SAO is explained in the NAIC SAO Instructions as follows:

> *"When the carried reserve amount is greater than the maximum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the maximum amount that the Appointed Actuary believes is reasonable."*[37]

Further, ASOP No. 36 contains specific disclosure requirements for deficient or inadequate SAOs.

[36] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[37] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.4.1 *Definitions*

To determine whether the reserves make a reasonable provision for all unpaid loss and LAE obligations, the Appointed Actuary can refer to ASOP No. 36.

4.4.2 *Discussion*

ASOP No. 36, section 4.2.b requires disclosure of the minimum amount the Appointed Actuary believes is reasonable, if the actuary determines the reserve amount is deficient or inadequate; section 4.2.c requires disclosure of the maximum amount the Appointed Actuary believes is reasonable, if the actuary determines the reserve amount is redundant or excessive. NAIC SAO Instructions are consistent with these requirements.

Note:

- As noted in section 3.7.1 of ASOP No. 43, Property/Casualty Unpaid Claim Estimates, the reasonableness of an unpaid claim estimate should be determined based on facts known to and circumstances known to or reasonably foreseeable by the Appointed Actuary at the time of the evaluation.
- The minimum amount the Appointed Actuary believes is reasonable is not synonymous with the lowest possible amount. Likewise, the maximum amount the Appointed Actuary believes is reasonable is not synonymous with the highest possible amount.
- If the opinion is that reserves are anything other than "reasonable," the Appointed Actuary may want to reconsider whether the carried amounts being opined on meet the first two points of the OPINION paragraph, namely that they meet the requirements of the insurance laws and are consistent with reserves computed in accordance with accepted actuarial standards and principles.

4.4.3 *Illustrative language*

The following language may be appropriate:

In my opinion, the amounts carried in Exhibit A on account of the items identified:

D. Meet the requirements of the insurance laws of (state of domicile).
E. Are consistent with reserves computed in accordance with accepted actuarial standards and principles.
C. Make an inadequate [or excessive] provision for the unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements. The provision for unpaid losses and loss adjustment expenses is $X less [greater] than the minimum amount I consider necessary to be within the range of reasonable estimates.

4.5 Qualified opinion

The NAIC SAO Instructions explain the determination of a qualified SAO as follows:

> *"When, in the Appointed Actuary's opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated or the Appointed Actuary is unable to render an opinion on those items, the Appointed Actuary should issue a qualified Statement of Actuarial Opinion. The Appointed Actuary should disclose the item (or items) to which the qualification relates, the reason(s) for the qualification and the amounts for such item(s), if disclosed by the Company. Such a qualified opinion should state whether the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, except for the item (or items) to which the qualification relates. The Appointed Actuary is not required to issue a qualified opinion if the Appointed Actuary reasonably believes that the item (or items) in question are not likely to be material."*[38][36]

ASOP No. 36 contains specific disclosure requirements for qualified SAOs.

4.5.1 *Discussion*

According to ASOP No. 36, the Appointed Actuary is to issue a qualified SAO when, in the Appointed Actuary's opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated, or the Appointed Actuary is unable to render an opinion on those items[39]. Examples of situations in which this may occur are as follows:

1. An actuary identifies a portion of the business that may be material to loss reserves, but there is insufficient information with which to perform a quantitative review or draw a conclusion about materiality. The actuary discloses this in the opinion and the supporting report. The opinion is qualified to exclude this portion of the business.

2. An actuary identifies a portion of the business that is material to loss reserves, but there is insufficient information with which to perform a review. The actuary discloses this in the opinion and the supporting report. The opinion is qualified to exclude this portion of the business.

FAQ: How would an opining actuary treat a situation in which there is a portion of reserves for which he or she did not perform an independent analysis? Does this necessarily mean that the opinion is qualified?

A: Often, the phrase "independent analysis" is construed as a quantitative analysis. In addressing this question, it is important to distinguish between "quantitative analysis" and "review." In the course of a review of reserves, actuaries generally use quantitative methods to analyze most reserve segments. However, for certain segments the actuary may, relying on professional judgment, conclude that the reserves for the segment are likely to be too small to be material to the total,
– and a quantitative analysis is not needed. This professional judgment would typically reflect information such as the number of open claims, dollars of total case loss reserves, and types of policies written. The use of such professional judgment does not necessarily require a qualified opinion. We note that the actuary's review process should be well-documented in the Actuarial Report.

[38] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[39] Section 3.11(d) of ASOP No. 36.

3. A portion of the business is deemed to be outside the scope of the actuary's review. For example, a different actuary reviews and opines on reserves for the accident and health line of business. The actuary discloses this in the opinion and supporting report. The opinion is qualified to exclude this portion of the business. If the actuary has information regarding the materiality of the business, it is typically helpful to disclose this information in the opinion.

If the SAO is qualified, the Appointed Actuary is required to explicitly state in the OPINION paragraph that it is a qualified opinion and properly disclose it as such in Exhibit B, item 4. Additionally, the OPINION paragraph should provide the item or items to which the qualification relates, the reasons for the qualification, and the amounts for such items, if disclosed by the entity, that are included in the stated reserve amount. A qualified SAO normally will state whether the stated reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, except for the item, or items, to which the qualification relates.

Actuaries typically are careful to avoid language that may imply the SAO is qualified when in fact it is not. There are a number of situations in which the Appointed Actuary may issue an unqualified opinion even though the actuary did not review all of the reserves. Examples of these situations are as follows:

1. The Appointed Actuary reviews information regarding a portion of the company's business, concludes based on professional judgment that loss reserves for this portion are likely to be immaterial to the overall reserves, and decides not to perform a quantitative analysis of that business. The actuary may or may not disclose this in the opinion. The actuary may wish to address this professional judgment in the report supporting the opinion. In this instance, because loss reserves for that business are deemed immaterial, there is no need to qualify the opinion.

2. The Appointed Actuary reviews a quantitative analysis performed by another regarding a material portion of the company's business, concludes based on professional judgment that the analysis for this portion produces reasonable results, and decides not to perform an independent quantitative analysis of that business. In this situation, according to paragraph 4.2.f of ASOP No. 36, the actuary should disclose (a) whether he/she reviewed the other's underlying analysis and (b) if a review was performed, the extent of the review. In this instance, there is no need to qualify the opinion. Refer to section 4.10 for further details on making use of the work of another.

Note:

- ASOP No. 36, section 4.2.d, requires disclosure of the item(s) to which the qualification(s) relate, the reason(s) for the qualification(s), and the amounts of such item(s), if disclosed by the reporting entity, that are included in the reserve. The 2014 NAIC SAO Instructions were revised to include this requirement as well. Further, ASOP No. 36 states that, if the amounts for such items are not disclosed by the entity, the Appointed Actuary should disclose that the reserve includes unknown amounts for such items.
- A qualified SAO does not carry a negative connotation; it merely identifies a component of reserves not covered by the SAO.
- The company's regulator is likely to follow up with the company to understand the qualification and how the company is satisfied with the adequacy of the reserves related to it.

4.5.2 Illustrative language

The following language may be appropriate:

In my opinion, ***with the qualification that it does not include the [identify the item(s) to which the qualification(s) relate(s)]****, the amounts carried in Exhibit A on account of the items identified:*

F. Meet the requirements of the insurance laws of (state of domicile).
G. Are consistent with reserves computed in accordance with accepted actuarial standards and principles.
H. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements.

The Company's management has informed me that the reserves listed in Exhibit A include $X (x.x%) on a net of reinsurance basis, and $Y (y.y%) on a direct and assumed basis, for [item(s) to which the qualification(s) relate(s)]. I did not include in my review an evaluation of the reserves related to [item(s) to which the qualification(s) relate(s)] because there was not sufficient information available for me to assess the reasonableness of those reserves. Thus, this is a qualified statement of actuarial opinion.

4.6 No opinion

The NAIC SAO Instructions explain the determination of "no opinion" as follows:

> *"The Appointed Actuary's ability to give an opinion is dependent upon data, analyses, assumptions, and related information that are sufficient to support a conclusion. If the Appointed Actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions, or related information, then the Appointed Actuary may issue a statement of no opinion. A statement of no opinion should include a description of the reasons why no opinion could be given."*[40]

ASOP No. 36, Section 3.11(e) states: *"A statement of no opinion should include a description of the reasons no opinion could be given."*

4.6.1 Discussion

In situations in which there is a lack of historical data (e.g., new companies, change in book of business for mature companies, or general lack of data), the Appointed Actuary may find it useful to consider the following:

- Whether there exists adequate data to evaluate the reserves;
- If industry data or another company's data were used, whether there is reason to believe that these data are likely to be reasonably similar to the data patterns of the company for which the Appointed Actuary is rendering an SAO;
- Whether to provide disclosures concerning the data used; and
- Whether to provide disclosures concerning the resulting variability and uncertainty.

4.6.2 Illustrative language

The following language may be appropriate:

The ABC Insurance Co. commenced operations in 20XX. Therefore, the Company has only been in business for Y years and, as a result, does not, in my opinion, have sufficient historical experience upon which to base a reliable actuarial estimate of the loss and loss adjustment expense reserves as of Dec. 31, 20XX. I am not aware of appropriate external data upon which to base an estimate.

[40] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.7 Other Loss Reserve items

The opinion statement in 5(D) of the NAIC SAO Instructions is usually appropriate for the situation in which the Scope includes material Other Loss Reserve items on which the Appointed Actuary is expressing an opinion. These items would be listed separately in Exhibit A, item 6.

4.7.1 Definitions

Other Loss Reserve items may include a specific loss reserve item for which an opinion is required by state regulation. Based on discussion of COPLFR members with AOWG, we understand that some regulators have seen the following included in item 6 of Exhibit A:

- The accrual for Death, Disability, or Retirement provisions in claims-made insurance policies if recorded as a loss reserve rather than Unearned Premium Reserve (UPR);
- The amount of discount for workers' compensation loss reserves;
- Retroactive reinsurance ceded loss and LAE reserves; and
- Contingent liabilities

4.7.2 Discussion

Whether Other Loss Reserve items are included within the scope of the SAO depends on materiality. According to the NAIC SAO Instructions,

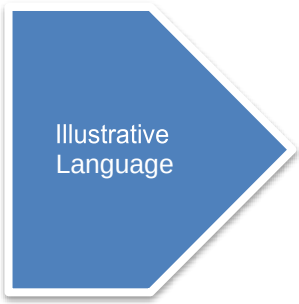
> *If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts or Other Loss Reserve items on which the Appointed Actuary is expressing an Opinion, the Opinion should contain language such as the following:*
>
> *I. "Make a reasonable provision for the unearned premium reserves for P&C Long Duration contracts and/or <insert Other Loss Reserve item on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements."*[41]

If there is any aggregation or combination of items in Exhibit A, NAIC SAO Instructions require the OPINION paragraph to clearly identify the combined items.

[41] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.7.3 Illustrative language

If the SCOPE includes Other Loss Reserve items as a write-in item in the Exhibit A, SCOPE, line 6, the Appointed Actuary may wish to add a statement in the OPINION paragraph, item "D" (or "E," if appropriate), such as:



In my opinion, the amounts carried in Exhibit A on account of the items identified:

D. (or E.) Make a reasonable provision for the <insert Other Loss Reserve item(s) on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements.

4.8 UPR for P&C Long Duration Contracts

The amounts recorded by the company for unearned premium reserves for P&C Long Duration Contracts are identified in Exhibit A: SCOPE, items 7 and 8 on direct plus assumed and ceded bases, respectively. If the company has material amounts for these reserves, then the Actuary should opine on the reasonableness of the balances. Note that these requirements are specific to P&C Long Duration Contracts. Further disclosures specific to A&H Long Duration Contracts that are identified in Exhibit B item 13 are included in the Relevant Comments as discussed in section 5.15, *Accident and Health Long Duration Contracts*.

As discussed in section 4.7, *Other Loss Reserve items*, the opinion statement in 5(D) is usually appropriate when the Appointed Actuary is opining on unearned premium reserves for extended losses and expenses or Other Loss Reserve items, as separately identified in Exhibit A: SCOPE.

There is further discussion on disclosures for UPR for P&C Long Duration Contracts in section 5.14, *Property & Casualty Long Duration Contracts*, of this practice note.

4.8.1 Definitions

P&C Long Duration Contracts for the purposes of the SAO are defined in the NAIC SAO Instructions as:

> *"…contracts (excluding financial guaranty contracts, mortgage guaranty contracts and surety contracts) that fulfill both of the following conditions: (1) the contract term is greater than or equal to thirteen months; and (2) the insurer can neither cancel the contract nor increase the premium during the contract term. These contracts are subject to the three tests of SSAP No. 65-Property and Casualty Contracts of the NAIC Accounting Practices and Procedures Manual"*[42]

[42] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.8.2 Discussion

Unearned premium reserves related to direct and assumed P&C long duration contracts are covered by the section 4 and Exhibit A: SCOPE (items 7 and 8) requirements of the NAIC SAO Instructions. The following specific contract types are excluded: financial guaranty, mortgage guaranty, and surety. While the primary focus of SCOPE items 7 and 8 is extended warranty contracts, companies may write other contracts with durations greater than 13 months with fixed premiums that the insurer cannot cancel, such as residual value contracts or directors' and officers' liability insurance. These may fall within the SCOPE of this section of the NAIC SAO Instructions.

SSAP 65 establishes methodology for determining a minimum level of unearned premium reserves for single or fixed premium policies with coverage periods of 13 months or greater. The accounting rule is found in the NAIC *Accounting Practices and Procedures Manual* and is reprinted in the Academy's 2018 P/C Loss Reserve Law Manual.

Further discussion of this topic can be found in Appendix III.1.

Section 4 and Exhibit A: SCOPE (items 7 and 8) of the NAIC SAO Instructions request disclosure of the unearned premium reserve amounts. The following entries are to be included on Exhibit A: SCOPE:

Premium Reserves:

(7) Reserve for Direct and Assumed Unearned Premium for P&C Long Duration Contracts

(8) Reserve for Net Unearned Premium for P&C Long Duration Contracts

If there is any aggregation or combination of items in Exhibit A, NAIC SAO Instructions require the OPINION paragraph to clearly identify the combined items.

Note:

- For SAOs that cover the contracts described in this section, the Appointed Actuary may choose to edit language throughout the SAO to keep it consistent with the fact that loss, LAE, and unearned premium reserves are included. Some of the places in a SAO where an Appointed Actuary typically uses the phrase "loss and loss adjustment expense" to refer to what is covered in the SAO are in the IDENTIFICATION paragraph, the SCOPE paragraph, the OPINION paragraph, the description of reconciliation issues, and the RELEVANT COMMENTS section. The Appointed Actuary may choose to refer throughout the SAO to the unearned premium reserves by some description such as "the unearned premium reserves related to single or fixed premium policies with coverage periods of 13 months or greater which are non-cancellable and not subject to premium increase (excluding financial guaranty contracts, mortgage guaranty contracts, and surety contracts)" or may define it once along with an abbreviation such as "P&C long duration unearned premium reserves".
- Exhibit A, items 7 and 8 require disclosure of the amount of the reserve for unearned premium for P&C Long Duration Contracts, and the NAIC SAO Instructions further require the Appointed Actuary to include a paragraph (D) regarding the reasonableness of the unearned premium reserve in the OPINION paragraph when these reserves are material. However, regulators have noted that some SAOs include paragraph (D) regardless of materiality. The AOWG expects that actuaries either add paragraph (D) if they can and are indeed expressing an opinion on the reasonableness of this reserve and/or add an explanatory paragraph about theseunearned premium reserves in RELEVANT COMMENTS and state whether the amounts are material or immaterial.

4.8.3 Illustrative language

If the SCOPE of the SAO includes material unearned premium reserves for P&C Long Duration Contracts, the NAIC SAO Instructions require that, the SAO cover the following illustration as item (D) of the OPINION paragraph of the SAO:

Make a reasonable provision for the unearned premium reserves for P&C Long Duration Contracts of the Company under the terms of its contracts and agreements.

4.9 Other Premium Reserve items

If the company has Other Premium Reserve items which the Appointed Actuary has listed separately in Exhibit A, item 9, and are included within the scope of the opinion, then the Actuary should conclude on the reasonableness of these balances if they are material.

The opinion statement in 5(D), as noted in the Instructions, is usually appropriate for this situation.

4.9.1 Definitions

Other Premium Reserve items may include a specific premium reserve item for which an Opinion is required by state regulation, or the accrual for Death, Disability, or Retirement (DDR) provisions if recorded as an unearned premium reserve.

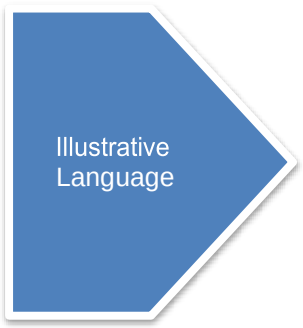
There is further discussion on disclosures for DDR provisions in the RELEVANT COMMENTS section of this practice note (section 5.13, *Extended reporting endorsements*).

4.9.2 Discussion

If there is any aggregation or combination of items in Exhibit A, NAIC Instructions require the opinion language to clearly identify the combined items.

4.9.3 Illustrative language

If the SCOPE includes Other Premium Reserve items as a write-in item in the Exhibit A, SCOPE, line 6, the actuary may wish to add an additional statement in the OPINION paragraph, item “D” (or “E,” if appropriate), such as:



In my opinion, the amounts carried in Exhibit A on account of the items identified:

D. (or E.) Make a reasonable provision for the unearned premium reserves for <insert other premium reserve item(s) on which the Appointed Actuary is expressing an Opinion> under the terms of its contracts and agreements.

4.10 Use of the work of another

According to the NAIC Instructions,

> *If the Appointed Actuary has made use of the analysis of another actuary not within the Appointed Actuary's control (such as for pools and associations, for a subsidiary or for special lines of business) for a material portion of the reserves, the other actuary must be identified by name, credential and affiliation within the OPINION paragraph. If the Appointed Actuary has made use of the work of a non-actuary (such as for modeling) for a material portion of the reserves, that individual must be identified by name and affiliation and a description of the type of analysis performed must be provided.*[43]

4.10.1 Discussion

Section 5 of the Instructions also requires that, if an actuary has used the work of another actuary for a material portion of the reserves, he or she must provide that other actuary's name, credentials and affiliation in the opinion. In 2016 the Instructions were expanded to include the use of the work of a non- actuary, which is consistent with the phraseology in ASOP No. 36.[44]

ASOP No. 36 takes this disclosure requirement several steps further. ASOP No. 36 states that the actuary should make use of another's supporting analyses or opinions only when it is reasonable to do so. According to section 3.7.2 of ASOP No. 36, in determining whether it is reasonable to use the work of another, the Appointed Actuary should consider the following:

a. The amount of the reserves covered by another's analyses or opinions in comparison to the total reserves subject to the actuary's opinion;
b. The nature of the exposures and coverage;
c. The way in which reasonably likely variations in estimates covered by another's analyses or opinions may affect the actuary's opinion on the total reserves subject to the actuary'sopinion; and
d. The credentials of the individual(s) that prepared the analyses oropinions.

[43] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

[44] ASOP No. 36 refers to making use of "another's" work. According to section 3.7 of ASOP No. 36, "The actuary may develop estimates of the unpaid claims for all or a portion of the reserve or make use of another's unpaid claims estimate analysis or opinion for all or a portion of the reserve. For purposes of this section, 'another' refers to one not within the actuary's control."

In situations where the work was done by someone not under the actuary's control, and after considering these items, the actuary determines that it is reasonable to use the work of another without performing any independent analysis, and the actuary uses another's work for a material portion of the reserves, the actuary should disclose (a) whether he/she reviewed the other's analysis and (b) if a review was performed, the extent of the review (see paragraph 4.2.f). Where, in the opinion of the actuary, the analyses or opinions of another need to be modified or expanded, the actuary should perform such analyses as necessary to issue the opinion on the total reserves. Please refer to ASOP No. 36 for additional requirements in this area. If the actuary is unable to determine that it is reasonable to use the work of another, it may be necessary to issue a qualified opinion. Refer to section 4.5 for further details on qualified opinions.

4.10.2 Illustrative Language

If the work of another was used, whether an actuary or not, (such as for pools and associations, for a subsidiary, or for special lines of business) for a material portion of the reserves, the other person must be identified by name and affiliation within the OPINION paragraph. The following provides sample wording that could be included in the OPINION section in the situation where the Appointed Actuary makes use of the work of the actuary for an underwriting pool that the company participates in:

The Company participates in the [name of underwriting pool] ("the Pool"). In forming my opinion, I made use of the analysis and opinion issued by Mr. Joe Actuary, FCAS, MAAA, Chief Actuary for the Pool, regarding reserves held by the Company for the Pool.

This wording would follow items A. through E. of the OPINION.

5. RELEVANT COMMENTS section

This, the RELEVANT COMMENTS chapter, is the last of four chapters (i.e., Chapter 2 through Chapter 5) in this practice note that discuss each of the four required sections of the Statement of Actuarial Opinion: IDENTIFICATION, SCOPE, OPINION, and RELEVANT COMMENTS (sections 3 through 6 of the NAIC SAO Instructions).

According to the NAIC SAO Instructions,

> *"The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address the following topics of regulatory importance.*
>
> *a. Company-Specific Risk Factors…*
> *b. Risk of Material Adverse Deviation….*
> *c. Other Disclosures in Exhibit B…*
> *d. Reinsurance…*
> *e. IRIS Ratios…*
> *f. Methods and Assumptions…"*[45]

In addition, the NAIC SAO Instructions state the comments should describe the significance of the Other Disclosures in Exhibit B:

> *"RELEVANT COMMENT* paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact."[46]

In addition to the disclosures on Exhibit B, COPLFR encourages the Appointed Actuary to be familiar with the disclosure requirements of sections 4.1 and 4.2 of ASOP No. 36, which include the following, among others:

- The intended user(s) of the SAO
- The intended purpose of the SAO
- The stated basis of reserve presentation
- Whether any material assumption or method was prescribed by applicable law

Whether the Appointed Actuary disclaims responsibility for any material assumption or method selected by another party.

[45] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[46] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

The following sections discuss each of the RELEVANT COMMENT paragraphs in further detail.

5.1 Materiality standard

The NAIC SAO Instructions require the Appointed Actuary to include RELEVANT COMMENT paragraphs that specifically address material adverse deviation. These paragraphs would contain the following:

- A description of the major factors or particular conditions underlying the significant risks or uncertainties that the Appointed Actuary considers relevant to the statutory entity;
- The amount of adverse deviation in U.S. dollars that the Appointed Actuary judges to be material with respect to the SAO (i.e., materiality standard disclosed as item 5 in Exhibit B) and an explanation of how that amount was determined; and
- An explicit statement of whether the Appointed Actuary reasonably believes that there are significant risks or uncertainties that could result in material adverse deviation.

In this section, 5.1, we discuss the materiality standard. In section 5.2 we discuss company specific risk factors. Section 5.3 rounds out the discussion, addressing the determination of Risk of Material Adverse Deviation.

5.1.1 Definitions

Materiality: The Appointed Actuary may refer to section 3.6 of ASOP No. 36, which pertains to materiality.

5.1.2 Discussion

According to the NAIC SAO Instructions,

> *"The Appointed Actuary must identify the materiality standard and the basis for establishing this standard. The materiality standard must also be disclosed in U.S. dollars in Exhibit B: Disclosures."*[47]

Examples of considerations in the choice of a materiality standard are:

- Percentage of surplus
- Percentage of reserves
- The amount of adverse deviation that would cause surplus to

FAQ: If a company is a 0% pool participant, what is the company's materiality standard?

A: According to the NAIC Instructions, a 0% pool participant should enter a materiality standard of zero dollars for Question 5 on Exhibit B of the SAO. Furthermore, the response to Question 6 of Exhibit B regarding whether there are significant risks that could result in material adverse deviation should be "not applicable".

[47] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

fall below minimum capital requirements

- The amount of adverse deviation that would cause Risk-Based Capital (RBC) to fall to the next action level
- Multiples of net retained risk
- Reinsurance considerations, such as levels of ceded reserves compared to surplus or concerns about solvency or collectibility of reinsurance
- The upper limit of a company's reinsurance protection on reserve development, if any

Other bases for establishing the standard may be acceptable as well.

Note:

- No matter how the materiality standard is determined, ASOP No. 36, section 3.2 requires the Appointed Actuary to consider the purpose and intended uses for which the Appointed Actuary prepares the SAO.

5.1.3 Illustrative language

The following provide examples of appropriate language; note however that there are additional possibilities for the choice of the materiality standard (examples of which are provided above):

My Materiality Standard for purposes of addressing the risk of material adverse deviation of the Company's reserves for unpaid losses and loss adjustment expenses has been established as xx% of the Company's net loss and LAE reserves, or $X million.

OR

My Materiality Standard for purposes of addressing the risk of material adverse deviation of the Company's reserves for unpaid losses and loss adjustment expenses has been established as yy% of the Company's policyholders surplus, or $Y million.

OR

My Materiality Standard for purposes of addressing the risk of material adverse deviation of the Company's reserves for unpaid losses and loss adjustment expenses has been established as $Y million. This represents the reduction in surplus that would result in additional action based on the NAIC RBC formula. A reduction in surplus of $Y would result in the Company moving into the [state which RBC level, e.g., Company] Action Level.

5.2 Company-specific risk factors

According to the NAIC SAO Instructions:

> *"The Appointed Actuary should include an explanatory paragraph to describe the major factors, combination of factors or particular conditions underlying the risks and uncertainties the Appointed Actuary considers relevant. The explanatory paragraph should not include general, broad statements about risks and uncertainties due to economic changes, judicial decisions, regulatory actions, political or social forces, etc., nor is the Appointed Actuary required to include an exhaustive list of all potential sources of risks and uncertainties."*[48]

In this section we will discuss required commentary on major factors or particular conditions underlying the significant risks or uncertainties that the Appointed Actuary considers relevant to the statutory entity.

5.2.1 Discussion

The 2018 NAIC SAO Instructions require the Appointed Actuary to comment on the risks and other factors considered, even when no risk of material adverse deviation is judged to exist. COPLFR has prepared a list of

[48] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

possible risk factors; these are not meant to be all-inclusive and certainly are not meant to apply to every company. For example, one would not expect to see discussion of the risk of A&E losses for a personal lines company. The list below is meant to provide some suggestions for the types of risk factors and underlying loss exposures for which comment may be appropriate:

- A&E losses
- Other emerging mass torts
- Construction defects
- Catastrophic weather events
- Exposure related to mortgage defaults
- Exposure to cyber liability
- High excess layers
- Impact of soft market conditions
- Large deductible workers' compensation claims
- Medical professional liability legislative issues
- New products or new markets
- Rapid growth in one or more lines of business or segments
- Lack of data or unexpected and unexplained changes in data
- Operational changes that are not objectively quantified
- Sudden unexplained changes in frequency or severity of reported data for a line of business or segment
- Changes in adequacy of known case reserves

The NAIC SAO Instructions direct the Appointed Actuary to address the potential that a combination of factors or particular conditions that the Appointed Actuary considers relevant could develop, increasing the entity's risk of material adverse deviation. The list below is meant to provide some suggestions for the types of combinations of risk factors and conditions about which comment may be appropriate:

- Rapid growth during a soft market in a line of business in which the company has limited historical experience
- Risk of adverse medical inflation on a large book of excess workers' compensation business
- Risk of increased sustained unemployment, along with reductions in home prices on a mortgage insurance book of business
- Significant shifts upward in policy limits and attachment points sold, along with a reduction in reinsurance protection purchased

Note:

- The Appointed Actuary may refer to section 4.2.e of ASOP No. 36, which pertains to Significant Risks and Uncertainties, for further guidance about the explanatory paragraph.

5.2.2 Illustrative language

The following language may be appropriate. Note that the 2018 AOWG Regulatory Guidance requires this section of the SAO to go beyond the mention of general risk factors, such as the first three sentences of the following illustrative language. Including only these first three sentences would not satisfy the regulatory requirement around risk factors; the subsequent sentences would be necessary:

Actuarial estimates of property and casualty loss and loss adjustment expense reserves are inherently uncertain because they are dependent on future contingent events. Also, these reserve estimates are generally derived from analyses of historical data, and future events or conditions may differ from the past. The actual amount necessary to settle the unpaid claims may therefore be significantly different from the reserve amounts listed in Exhibit A.

The following provides major factors and/or particular conditions underlying the risks and uncertainties that I consider relevant to the Company's estimates of unpaid losses and loss adjustment expenses at December 31, 2018:

1. _____
2. _____
3. _____

5.3 Risk of Material Adverse Deviation

The NAIC SAO Instructions require the Appointed Actuary to explicitly state whether he or she reasonably believes that there are significant risks or uncertainties that could result in material adverse deviation. This determination is also disclosed in item 6 of Exhibit B. The previous two sections on materiality standard and major risk factors aid the Appointed Actuary in reaching this conclusion.

5.3.1 *Discussion*

> ***FAQ: What percentage of SAOs conclude an RMAD exists?***
>
> *A: Approximately one-third of SAOs reach this conclusion.*

The NAIC Financial Analysis Handbook provides a Bright Line Indicator Test in regards to the Risk of Material Adverse Deviation for those companies subject to RBC reporting requirements. If the Appointed Actuary does not address material adverse deviation, yet ten percent (10%) of the company's net loss and LAE reserves is greater than the difference between the Total Adjusted Capital and the Company Action Level capital, then comments from the Appointed Actuary should be pursued by the Financial Analyst. In situations where the test is triggered, the Appointed Actuary may consider disclosing why he/she does not feel there is a RMAD, if that is the conclusion. The Appointed Actuary may also wish to consider this test in the selection of the materiality standard.

The Five Year Historical Data Exhibit of the Annual Statement is a convenient source for these RBC values. Total Adjusted Capital and Authorized Control Level Risk Based Capital are shown on this Annual Statement exhibit:

Company Action Level Capital = 2 * Authorized Control Level Risk Based Capital

In addition, the 2018 AOWG Regulatory Guidance includes the following:

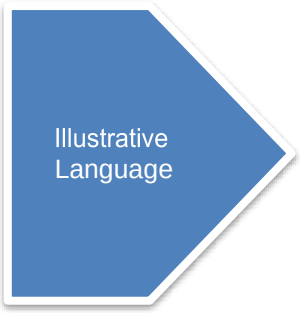
"*When deciding whether RMAD exists, the Appointed Actuary should consider the materiality standard in relation to the range of reasonable estimates and the carried reserves. For example, RMAD should likely exist when the sum of the materiality standard plus the carried reserves is within the range of reasonable estimates. Regardless, the Appointed Actuary should support the conclusion of whether RMAD exists."*[49]

The Appointed Actuary may consider including a discussion of steps the company has taken to mitigate the risk factors discussed in the explanatory paragraph.

5.3.2 *Illustrative language*

Because of the nature of the NAIC's request regarding discussion of the risk of material adverse deviation, each individual situation will call for its own wording. However the following provides illustrative wording in a situation where there is a RMAD:

[49] 2018 AOWG Regulatory Guidance, page 7 (Appendix II).



I believe there are significant risks and uncertainties associated with the Company's net loss and loss adjustment expense reserves that could result in material adverse deviation. I have identified those risk factors as_____, ___, and___. These risk factors are described in greater detail in the preceding paragraph and in the report supporting this opinion. The absence of other risk factors from this commentary is not meant to imply that additional factors cannot be identified in the future as having had a significant influence on the Company's reserves.

There may be situations where mitigating factors reduce or eliminate the risk of material adverse deviation. An example of illustrative language for a situation where retroactive reinsurance is a mitigating factor is as follows:

It should be noted, however, that the company has entered into a retroactive reinsurance contract which would serve to eliminate the impact of any adverse deviation in loss and LAE reserves on the company's statutory surplus if recoverables from that contract were considered as a reduction in net loss and LAE reserves.

Relevant comments on retroactive reinsurance are discussed in section 5.8 below.

The following provides illustrative wording in a situation where there is no RMAD:

In my analysis I considered [the aforementioned risk factors and] the implications of uncertainty in estimates of unpaid losses and loss adjustment expenses in determining a range of reasonable unpaid claim estimates. I have also observed that the difference between the high end of my range of reasonable unpaid claim estimate and the Company's carried reserve for losses and loss adjustment expense is less than my materiality standard. I further considered whether there are significant risks and uncertainties that could result in material adverse deviation. In light of the materiality considerations within this analysis, and after considering the potential risks and uncertainties that could bear on the Company's reserve development, I concluded that those risks and uncertainties would not reasonably be expected to result in material adverse deviation in the Company's carried reserves for unpaid losses and loss adjustment expenses.

5.4 Anticipated salvage and subrogation

In item 8 of Exhibit B, the Appointed Actuary is required to disclose the amount of anticipated net salvage and subrogation included as a reduction to loss reserves as reported in Schedule P. The Appointed Actuary is expected to comment on this disclosure within the RELEVANT COMMENTS section of the SAO. This section provides discussion and illustrative wording around this disclosure item.

5.4.1 Discussion

SAOs are expected to be prepared on the same basis with regard to anticipated salvage and subrogation as the disclosed basis for the carried loss reserves.

The NAIC SAO Instructions require the Appointed Actuary to state whether reserves are stated net or gross of future salvage and subrogation. The amount of anticipated salvage and subrogation, if any,is disclosed in Schedule P, Part 1.

The Appointed Actuary is reminded that states' regulations may differ in the required treatment of anticipated salvage and subrogation recoveries.

Note:

- The amount of anticipated salvage and subrogation reported in item 8 of Exhibit B should reconcile to Schedule P, Part 1, column 23. Column 23 is a memorandum column (i.e., it is not used to calculate other columns).

The Appointed Actuary may choose to use wording similar to the following:

The Company's reserves listed in Exhibit A are established net of anticipated salvage and subrogation. Anticipated salvage and subrogation disclosed in item 8 of Exhibit B is X% of the Company's policyholders surplus.

OR

The Company's reserves listed in Exhibit A are established gross of anticipated salvage and subrogation.

OR

The Company does not explicitly provide for anticipated salvage and subrogation, although cedant data, and ultimate liabilities derived from that data, include an implicit provision for anticipated salvage and subrogation.

5.5 Discounting

In item 9 of Exhibit B, the Appointed Actuary is required to disclose the amount of non-tabular (item 9.1) and tabular (item 9.2) discount included as a reduction to loss and LAE reserves as reported in Schedule P. The Appointed Actuary is expected to comment on this disclosure within the RELEVANT COMMENTS section of the SAO. This section provides discussion and illustrative wording around this disclosure item.

5.5.1 Definition

According to SSAP 65, paragraph 11, tabular reserves are indemnity reserves that are calculated using discounts determined with reference to actuarial tables which incorporate interest and contingencies such as mortality, remarriage, inflation, or recovery from disability applied to a reasonably determinable payment stream. Tabular reserves shall not include medical loss reserves or LAE reserves.

5.5.2 Discussion

SAOs are expected to be prepared on the same basis with regard to discounting as the disclosed basis for the carried loss reserves.

The amount of discount is required by the NAIC SAO Instructions to be disclosed separately for tabular and non-tabular reserves. The amount of non-tabular discount, if any, is disclosed in Schedule P, Part 1 and in the Notes to the Financial Statements.

If the Appointed Actuary is providing an SAO for discounted loss and LAE reserves, the Appointed Actuary can find guidance in ASOP No. 36 and ASOP No. 20, *Discounting of Property/Casualty Unpaid Claim Estimates*. The insurance laws of the state of domicile will provide information on whether discounting is allowed. Further, inquiry can be made about whether the state insurance regulator has allowed the company to discount reserves by authorizing a permitted practice.

Note:

- If discounting causes a reconciling difference between the reserves listed in Exhibit A and the AOS, an explanation of this difference should be disclosed in the AOS. Exhibit A, item 4 is comprised of Schedule P Part 1, columns 17, 19, and 21 which are gross of non-tabular discounting. If the direct and assumed reserves in the AOS are net of discounting, this may create a reconciling difference.
- Schedule P, Part 2 is gross of all discounting, including tabular discounts.

The Appointed Actuary may choose to use wording similar to the following:

The Company discounts its liabilities for certain workers' compensation claims and certain other liability claims related to annuity obligations from Structured Settlements. Note 32 contains details for the amounts disclosed in item 9. The amount of discount is X% of the Company's net loss and LAE reserves and Y% of the Company's policyholders surplus.

OR

The Company does not discount its reserves listed in Exhibit A for the time value of money.

5.6 Voluntary and/or involuntary underwriting pools and associations

In item 10 of Exhibit B, the Appointed Actuary is required to disclose the amount of net reserves for losses and expenses for the company's share of voluntary and involuntary underwriting pools and associations' unpaid losses and expenses that are included in reserves shown on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines. The Appointed Actuary is expected to comment on this disclosure within the RELEVANT COMMENTS section of the SAO. This section provides discussion and illustrative wording around this disclosure item.

FAQ: What if I didn't review another's work supporting the reserve balance for an underwriting pool? Does this mean that my opinion should be qualified?

A: No, not if the pool reserves are immaterial. Section 4.10 provides further details on making use of the work of another.

5.6.1 Discussion

Some key considerations for the SAO for a company that participates in voluntary and/or involuntary underwriting pools and associations are:

1. Are pool reserves material?

2. Does the company book what the pool reports with no independent analysis, perform independent actuarial analysis and in some instances adjust the pool's reported reserves, make use of the pool Appointed Actuary's SAO, or some combination of the above?

3. If there is a lag in the booking of pool losses, does the company accrue for this or not? Are premiums treated similarly? Are these items material?

4. How does your ceded reinsurance program treat business that comes in from these pools?

Appendix III.3 contains further guidance, including commentary from the CASTF regarding SAOs for pools and associations.

The Appointed Actuary is reminded that unless the SAO is qualified, the Appointed Actuary is generally responsible for opining on the reasonableness of the loss and LAE reserves in aggregate and may therefore consider clearly stating his/her level of review of and use of others' SAOs for any material reserves related to pools, and/or explaining their immateriality.

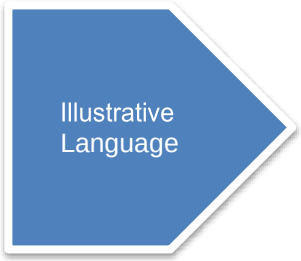
Note:

- The amount disclosed in item 10 of Exhibit B represents the reserve for the company's net participation in the pool, net of reinsurance purchased by the pool.

5.6.2 Illustrative language

The Appointed Actuary may choose to use wording similar to the following:

Situation1: Material reserves; adjustment for booking lag



The Company participates in a number of voluntary and involuntary pooling arrangements. The booked reserves and earned premiums for some pools reflect losses incurred and premiums earned by the pools through various dates prior to year-end. Company practice is to record the loss and loss adjustment expense reserves reported to it by the pools with accrual for any reporting lag.

Situation 2: Material reserves; independent review of significant pools or use of pool SAO; balance of non-reviewed reserves immaterial; adjustment for lag

The Company participates in a number of voluntary and involuntary pooling arrangements. Company practice is to review the reserves for the larger pools, which account for $ABC of pool reserves, independently. Based on this review, the Company has increased the reserves reported by these pools by_____percent. The Company has made use of actuarial opinions prepared by (insert name and affiliation of opining actuary) for other pools, which account for $DEF of pool reserves. I have reviewed the analysis underlying these actuarial opinions and have concluded that the analysis is reasonable. I have not performed an independent analysis for these pools. The remaining non- reviewed pool reserve ($JKL) is immaterial. Aggregate reserves held for all pools are $XYZ. Company practice is to accrue for the reporting lag for these pools.

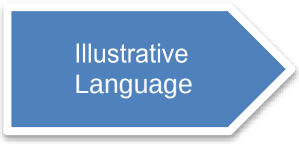
As a reminder, when the Appointed Actuary makes use of the work of another for a material portion

of reserves, this needs to be disclosed in the OPINION paragraph.

Situation 3: Immaterial pool exposure

The Company participates in a small number of voluntary and involuntary pools. Company practice is to record the loss and loss adjustment expense reserves reported to it by the pools. Reserve exposure with respect to pools is considered immaterial.

Situation 4: No adjustment for booking lag



Company practice is to record the loss and loss adjustment expense reserves reported to it by the pools. Any adjustment to these reserves for reporting lag is considered immaterial.

5.7 A&E liabilities

In item 11 of Exhibit B, the Appointed Actuary is required to disclose the amount of net reserves for losses and LAE that the company carries for asbestos (item 11.1) and environmental (item 11.2) liabilities included on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines.

> *"RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact."*[50]

This section provides discussion and illustrative wording around this particular disclosure item.

Note this section addresses only the required discussion of A&E liabilities and no other possible masstort exposures. However, while not directly applicable, the ideas presented within this Section 5.7 may also be useful for disclosure of other possible mass torts when relevant to the disclosure of major riskfactors.

[50] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

5.7.1 Definition

Asbestos exposures – *"any loss or potential loss (including both first party and third party claims) related directly or indirectly to the manufacture, distribution, installation, use, and abatement of asbestos-containing material, excluding policies specifically written to cover these exposures."*[51]

Environmental exposures – *"any loss or potential loss, including third party claims, related directly or indirectly to the remediation of a site arising from past operations or waste disposal. Examples of environmental exposures include but are not limited to chemical waste, hazardous waste treatment, storage and disposal facilities, industrial waste disposal facilities, landfills, superfund sites, toxic waste pits, and underground storage tanks."*[52]

For the purposes of what is disclosed in Exhibit B, A&E exposures *"should exclude amounts related to contracts specifically written to cover asbestos and environmental exposures. Contracts specifically written to cover these exposures include Environmental Impairment Liability (post 1986), Asbestos Abatement, Pollution Legal Liability, Contractor's Pollution Liability, Consultant's Environmental Liability, and Pollution and Remediation Legal Liability."*[53]

FAQ: Do all asbestos & environmental (A&E) claim liabilities of an insurer get reported in the A&E Note in the statutory annual statement?

A: Not necessarily. The statutory Note does not include liabilities from policies clearly designed to cover A&E, such as asbestos abatement policies and many claims-made pollution policies.

5.7.2 Discussion

While mass torts in general have significant uncertainties associated with claim liability estimation, asbestos liabilities and the environmental liabilities associated with hazardous waste sites have been especially problematic. Over the years mass torts arising from these sources have resulted in material levels of adverse development for the industry, hence the special attention they have received in the SAO and in both statutory and GAAP disclosures.

Traditional actuarial methods (i.e., squaring triangles and other accident year development approaches) are typically not applied to the estimation of these liabilities. This is because such claims often attach multiple accident/policy years, and because new claim filings continue to arise for several decades after the policies were issued. Various methodologies have been developed over the years to address these situations, yet the resulting indications have historically still been subject to significant uncertainty and risk of adverse deviation.

In most cases, one of the following situations will present itself to the Appointed Actuary:

1. The company has not provided any coverage that could reasonably be expected to produce material levels of asbestos and/or environmental liability claims activity.

[51] SSAP 65, paragraph 41 (Appendix IV).
[52] SSAP 65, paragraph 41 (Appendix IV).
[53] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

2. The company has provided coverage that can reasonably be expected to produce materiallevels of asbestos and/or environmental liability claims activity that may rise to the level of a RMAD or combined with other risks significantly contribute to the determination of a RMAD.

3. The company has provided coverage that can reasonably be expected to produce material levels of asbestos and/or environmental claims activity, but it is believed unlikely to rise to the level of a RMAD alone or in combination with other risks of the company.

Note that knowledge of any A&E claims (other than those immediately denied due to asbestos or environmental exclusions) may create such uncertainty regarding ultimate liability for this category that further investigation may be warranted. Such investigation may benefit from study of prior A&E disclosures in the statutory statement Notes, as well as required disclosure in SEC filings (10-K, 10-Q). (These GAAP disclosures are required where the A&E exposures are material for companies filing SEC statements. Note, however, that SEC filings are generally done only on a consolidated basis for groups, and not by legal entity, hence the SEC disclosure may pertain to companies within the group other than the one being opined upon.)

Generally, companies writing no commercial liability coverage, whether on a primary, excess, or assumed basis, would be candidates for the first situation above. Companies that have written commercial liability coverage in the past without sufficient exclusions would normally be candidates for the second and third situations.

The third situation could arise in a variety of situations, such as

- A predominately personal lines company that historically wrote only a small amount of commercial liability on a direct or assumed basis whereby there exists material but limitedlevels of exposure relative to the materiality criteria for a RMAD

- A company that has retroactive ceded reinsurance protection such that its gross exposureis sufficiently ceded and, on a net basis, is unlikely to rise to the level of a RMAD[54]

- A company that has already reserved up to policy limits on all such policies

In rare cases the Appointed Actuary might make a determination that these exposures were not reasonably estimable. This will usually result in a qualified SAO under ASOP No. 36 if the items are likely to be material. There is no requirement to issue a qualified opinion if the Appointed Actuary reasonably believes the items to be immaterial.

The Appointed Actuary may believe that a reasonable estimate of this liability can be made, but that the

[54] Note that a contract accounted for as retroactive reinsurance will have no impact on the loss reserves reported in Schedule P, per SSAP 62R, paragraph 29 (Appendix IV). Instead, the reserves assumed or ceded for contracts under retroactive reinsurance accounting are reported in write-in lines of the annual statement. Surplus is impacted by such contracts, but not loss reserve schedules of the annual statement. For more discussion of this topic, see Section 5.8 and Appendix III.4.

booked reserve for this liability is not reasonable, and this results in an inadequate *overall* reserve. The decision to issue a deficient/inadequate SAO is typically based upon *overall* reserve adequacy, not just reserve adequacy for this or any other isolated reserve segment. Note the company is required to disclose A&E reserves in the Notes to the Financial Statements.

The Appointed Actuary may want to comment on the following issues:

1. Whether there appears to be a material exposure
2. The aggregate dollar amount of reserves held for this exposure
3. Significant variability and uncertainties inherent in the estimate of these liabilities

Additionally, the Appointed Actuary may choose to comment on some of the following related items (assuming that the Appointed Actuary finds the liability to be material and reasonably estimable):

- The difficulties attendant in providing an actuarial estimate of these liabilities
- Whether these liabilities are being handled by a dedicated experienced claim/legal unit
- Any other factors the Appointed Actuary may have considered in forming his or her SAO

FAQ: The Company whose reserves I'm opining on has bought a retroactive cover that assumes all asbestos losses. Do I still have to discuss A&E in my opinion?

A: Retroactive reinsurance accounting does not impact booked loss reserves on either a gross or net basis. But the benefit from such cover does show up in surplus. Hence you may still have to discuss the impact on a gross basis, and the impact on net reserves.

5.7.3 Illustrative language

Illustrative Language

The following language may be appropriate:

The Appointed Actuary may consider using wording similar to the following:

Situation 1: No material A&E exposure

I have reviewed the Company's exposure to asbestos and environmental claims. In my opinion, the chance of material liability is remote, since reported claim activity levels are minimal [or, that there have been no claims reported in the annual statement A&E Note], and the Company has never written commercial liability coverages on a primary, excess, or assumed basis.

Situation 2: Material A&E exposure, possible or likely RMAD

I have reviewed the Company's exposure to asbestos and environmental claims, and I have concluded that this exposure is material. The Company currently holds $XYZ million of reserves for losses and loss adjustment expenses for asbestos and environmental claims. Estimation of liabilities for these claims is unusually difficult due to the extreme latency of claim activity, issues related to allocation of claim costs (including defense costs) across policy years and insurers, and the potential for coverage disputes with insureds and other insurers (regarding allocation of such costs). Therefore, any estimation of these liabilities is subject to significantly greater than normal variation and uncertainty.

An Appointed Actuary that uses language such as above may want to pay particular attention to A&E in the RMAD evaluation. If the Appointed Actuary in this circumstance concludes that the A&E uncertainty creates or significantly contributes to a RMAD, then the above language may be appropriate to include in the discussion of risk factors and the RMAD, rather than in the RELEVANT COMMENTS section, including the following addition to the above illustration.

In my opinion, this uncertainty in asbestos and environmental claim liabilities rises to the level of a risk of material adverse deviation, given my materiality standard of $XXX.

If this is included in the RMAD section, then the RELEVANT COMMENTS section might include the following wording:

I have reviewed the Company's exposure to asbestos and environmental claims, and concluded that this exposure creates a significant risk of material adverse deviation. Please see the above RMAD discussion for more details.

Situation 3: Material exposure but RMAD unlikely due to a mitigating factor or relative size

I have reviewed the Company's exposure to asbestos and environmental claims, and I have concluded that this exposure is material. The Company currently holds $XYZ million of reserves for losses and loss adjustment expenses for asbestos and environmental claims. Estimation of liabilities for these claims is unusually difficult due to the extreme latency of claim activity, issues related to allocation of claim costs (including defense costs) across policy years and insurers, and the potential for coverage disputes with insured and other insurers (regarding allocation of such costs). Therefore, any estimation of these liabilities is subject to significantly greater than normal variation and uncertainty.

Although this uncertainty in asbestos and environmental claim liabilities rises to the level of a risk of material adverse deviation, given my material standard of $XXX, it should be noted that the Company has a retroactive reinsurance contract with {Name of Reinsurer}. This retroactive reinsurance agreement would limit the impact of any adverse deviation in loss and loss adjustment expense reserves on the Company's statutory surplus. Therefore, if considered on the basis of surplus impact and not reserve impact, then I do not believe that this asbestos and environmental risk could result in material adverse deviation.

Note that the first paragraph of Situation 3 is the same as the first paragraph in Situation 2, however the conclusion regarding RMAD differs.

The last paragraph of Situation 3 is for the situation where the RMAD is mitigated. The following is an illustrative paragraph for the situation where RMAD is unlikely due to relative size:

Despite the uncertainty associated with asbestos and environmental claim liabilities, my opinion is that it is unlikely to rise to the level of a risk of material adverse deviation due to the limited number of policies with this exposure (and the potential loss on those policies) relative to my materiality standard of $XXX.

Note that where material A&E exposure exists for a company that files with the SEC, the Appointed Actuary may want to evaluate their final wording for consistency with pertinent GAAP disclosures.

5.8 Retroactive reinsurance

According to the NAIC SAO Instructions,

> *RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance.*[55]

This section discusses retroactive reinsurance, while section 5.9 covers financial reinsurance and section 5.10 covers reinsurance collectibility. Note the requirement to discuss retroactive reinsurance only pertains to those treaties following retroactive reinsurance accounting, not those following prospective reinsurance accounting. This issue is discussed more in the definitions section below.

5.8.1 Definitions

According to the NAIC SAO Instructions:

> *Retroactive reinsurance refers to agreements referenced in SSAP No. 62R, Property and Casualty Reinsurance, of the NAIC* Accounting Practices and Procedures Manual.[56]

FAQ: Is all reinsurance entered into after policy expiration accounted for as retroactive reinsurance?

A: No. SSAP 62R makes exceptions for certain retroactive reinsurance contracts between affiliates, such as those undertaken to reconfigure a quota share reinsurance pool within a group.

The SAO requirement regarding retroactive reinsurance applies only to contracts given retroactive reinsurance accounting treatment. Per SSAP 62R, retroactive reinsurance accounting does not apply to all retroactive reinsurance contracts. SSAP 62R paragraph 31 lists the types of retroactive reinsurance contracts that qualify for prospective reinsurance accounting treatment. A common example of a retroactive reinsurance
contract that qualifies for prospective reinsurance accounting treatment is an intercompany reinsurance agreement among companies 100% owned by a common parent (provided certain other criteria are met). See Appendix III.4 for more discussion of these exceptions.

5.8.2 Discussion

Comment on this item is always required by the NAIC SAO Instructions.

[55] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[56] SSAP No. 62R (Appendix IV).

The Instructions require that any write-in retroactive reinsurance assumed reserves that are reported on the Annual Statement balance sheet also be listed in the SAO's Exhibit A: SCOPE. Retroactive reinsurance assumed reserves (and retroactive reinsurance ceded reserves) are reported as a write-in line of the balance sheet and are not included in any loss reserve schedules of the annual statement such as Schedule P or the Underwriting & Investment Exhibit. Even though retroactive reinsurance ceded reserves are not specifically reported in Exhibit A, they are subject to the discussion requirement in the RELEVANT COMMENT section of the NAIC SAO Instructions.

Annual Statement General Interrogatories, Part 2, No. 7 and No. 9, which disclose certain aspects of the company's use of ceded reinsurance, will ordinarily provide the Appointed Actuary with necessary information. Any positive response to Interrogatory No. 9.1 or 9.2 will require the company to file a reinsurance summary supplement. In addition, the CEO and CFO must provide a reinsurance attestation with the Annual Statement, which may contain additional valuable information about the company's ceded reinsurance contracts.

FAQ: Can I find disclosure of retroactive reinsurance in GAAP statements?

A: Not necessarily. GAAP treats retroactive reinsurance differently from statutory accounting, as GAAP does allow a deduction for net loss reserves for retroactive reinsurance that contains sufficient risk transfer.

For accounting purposes, the company is required to determine whether a particular contract constitutes retroactive reinsurance (e.g., loss portfolio transfer). If the company accounted for any contract as retroactive reinsurance, it may be appropriate for the Appointed Actuary to give it similar treatment in evaluating the reserves. It may also be appropriate for the Appointed Actuary to indicate in the SAO whether any contract was accounted for in this way and, if so, whether the Appointed Actuary's evaluation of the reserves is consistent with that treatment.

The Appointed Actuary may choose to be familiar with the important aspects of the reinsurance coverage but can rely on summaries of the reinsurance coverage prepared by others, rather than reading and evaluating each contract. However, if the Appointed Actuary is aware of a determination that he or she believes to be clearly incorrect, the Appointed Actuary ordinarily would indicate this in the SAO and describe his or her treatment of the contract(s) in question and the impact of this adjustment on the Appointed Actuary's SAO.

It typically is not necessary to identify specific reinsurers or contracts in this comment.

Note:

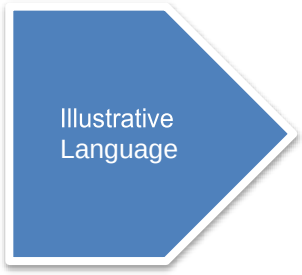
- Retroactive reinsurance is a contra-liability for the ceding company and a liability for the assuming company. Exhibit A: SCOPE items 1, 2, 3, and 4 typically are not reduced by the retroactive reinsurance reserve ceded and thus are gross of retroactive reinsurance. Exhibit A: SCOPE items 1, 2, 3, and 4 generally exclude retroactive reinsurance assumed, as such assumed reserves are recorded on a write-in line on Page 3 of the Annual Statement. The Page 3 write-in item reserve, "Retroactive Reinsurance Reserve Assumed" is disclosed in item 5 of Exhibit A: Scope and included in the Appointed Actuary's SAO.

- Just like prospective reinsurance contracts, it is possible for cessions under retroactive reinsurance contracts to be overstated. The Appointed Actuary may want to be aware of this possibility if consideration is made of the ceded retroactive reinsurance in a supporting analysis.

5.8.3 Illustrative language

The Appointed Actuary may choose to use wording similar to one of the following examples.

If there are no contracts of these types:



Based on discussions with Company management (or [identify other appropriate sources]) and its description of the Company's ceded (and/or assumed) reinsurance, I am not aware of any reinsurance contract (having a material effect on the loss or loss adjustment expense reserves) that either has been or should have been accounted for as retroactive reinsurance.

If a similar conclusion occurs with regard to financial reinsurance (discussed in the next section), the Appointed Actuary may want to combine the two conclusions by adding the words "*or financial reinsurance"* to the above illustration.

If a contract was appropriately accounted for as retroactive reinsurance:

One ceded reinsurance contract was accounted for by the Company as retroactive reinsurance. As a result, my evaluation of the net reserves was performed on a gross basis with regard to that contract. Based on discussions with Company management [or identify appropriate sources] and its description of the Company's ceded (and/or assumed) reinsurance, I am not aware of any other reinsurance contract (having a material effect on the loss or loss adjustment expense reserves) that either has been or should have been accounted for as retroactive reinsurance.

If a contract was appropriately accounted for as retroactive reinsurance, and the materiality standard used was based solely on surplus impact (and the risk of a RMAD impact on surplus was materially affected by this retroactive reinsurance and this was considered in the RMAD assessment):

A ceded reinsurance contract was accounted for by the Company as retroactive reinsurance, covering [describe the ceded losses] up to a limit of [limit], with [remaining amount] remaining. My evaluation of the net reserves was performed on a gross basis with regard to that contract, but given that the basis of my materiality standard was surplus, my evaluation as to whether a RMAD exists did consider the impact of this contract.

The above illustrative language implies that this ceded retroactive contract would also be mentioned in the earlier RMAD discussion.

5.9 Financial reinsurance

According to the NAIC SAO Instructions,

> *"RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance."*[57]

This section discusses financial reinsurance, while section 5.8 covers retroactive reinsurance and section 5.10 covers reinsurance collectibility.

5.9.1 Definitions

According to the NAIC SAO Instructions:

> *"Financial reinsurance refers to contracts referenced in SSAP No. 62R in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance."*[58]

5.9.2 Discussion

Comment on this item is always required by the NAIC SAO Instructions.

[57] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[58] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

For accounting purposes, the company is required to determine whether a particular contract constitutes financial reinsurance. If the company accounted for any contract as financial reinsurance, it may be appropriate for the Appointed Actuary to give it similar treatment in evaluating the reserves. It may also be appropriate for the Appointed Actuary to indicate in the SAO whether any contract was accounted for in this way and, if so, whether the Appointed Actuary's evaluation of the reserves is consistent with that treatment.

Reinsurance contracts that constitute financial reinsurance are required to be accounted for using deposit accounting, per SSAP 62R, and are disclosed in Note 23G "Reinsurance Accounted for as a Deposit."[59]

If the Appointed Actuary is reviewing contracts accounted for as financial reinsurance, the Appointed Actuary may want to review more than just the loss and loss adjustment expense portion of that contract. That is because the risk transfer requirements provide for analysis of the entire contract, including possible loss sensitive features such as sliding scale commissions that may negate any risk transfer occurring from just the loss provisions of the contract.

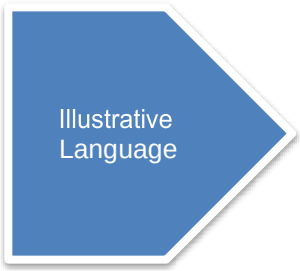
The determination of whether a particular contract is financial reinsurance is sometimes a matter of judgment, and, customarily, that judgment is made by the company's accounting experts (but likely with substantial assistance from actuaries, as many insurers rely on actuaries to perform the technical risk transfer analysis). The scope of the SAO does not include an evaluation of risk transfer or an assessment of the appropriateness of the accounting treatment of the reinsurance contracts of a company.

Note:

- The NAIC has previously investigated certain "Risk Limiting" reinsurance contracts due to concerns that the level of risk transfer is not clear as a result of certain loss sensitive features. If the Appointed Actuary does perform an analysis of such contracts, the Appointed Actuary may want to investigate any loss sharing features (such as sliding scale commissions) in the analysis.

5.9.3 Illustrative language

The Appointed Actuary may choose to use wording similar to one of the following examples. If there are no contracts accounted for as financial reinsurance:



Based on discussions with Company management {or [identify other appropriate sources]} and its description of the Company's ceded {and/or assumed} reinsurance, I am not aware of any reinsurance contract {having a material effect on the loss or loss adjustment expense reserves} that either has been or should have been accounted for as financial reinsurance.

[59] SSAP No. 62R, paragraph 35 (Appendix IV).

If the Appointed Actuary has a similar conclusion with regard to retroactive reinsurance, the Appointed Actuary may want to combine the two discussions. (See the section 5.8.3 for an illustration of how this might be done.)

If a contract was appropriately accounted for as financial reinsurance:

One ceded reinsurance contract was accounted for by the Company as financial reinsurance. As a result, my evaluation of the net reserves was performed on a gross basis with regard to that contract. Based on discussions with Company management {or identify appropriate sources} and its description of the Company's ceded {and/or assumed} reinsurance, I am not aware of any other reinsurance contract {having a material effect on the loss or loss adjustment expense reserves} that either has been or should have been accounted for as financial reinsurance.

5.10 Uncollectible reinsurance

As noted in the previous section, the RELEVANT COMMENTS section of the SAO should comment on reinsurance collectibility.

According to the NAIC SAO Instructions,

> *"The Appointed Actuary's comments on reinsurance collectability should address any uncertainty associated with including potentially-uncollectable amounts in the estimate of ceded reserves. Before commenting on reinsurance collectability, the Appointed Actuary should solicit information from management on any actual collectability problems, review ratings given to reinsurers by a recognized rating service, and examine Schedule F for the current year for indications of regulatory action or reinsurance recoverable on paid losses over ninety (90) days past due. The comment should also reflect any other information the Appointed Actuary has received from management or that is publicly available about the capability or willingness of reinsurers to pay claims. The Appointed Actuary's comments do not imply an opinion on the financial condition of any reinsurer."*[60]

[60] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

5.10.1 Discussion

Ceded reinsurance recoverable balances are shown in several places in the annual statement:

- Schedule F, Part 3 lists all ceded reinsurance recoverable balances in one place. These balances include amounts billed but unpaid (labelled "paid loss" in Schedule F[61]), ceded case reserves, ceded incurred but not reported (IBNR) reserves, ceded unearned premiums and even ceded contingent commissions. (Presumably the last two items are not relevant to the SAO as they are not "loss" items.)
- Page 2 (Assets) contains ceded recoverable amounts on paid losses.
- Page 3 (Liabilities) includes ceded case reserves and ceded IBNR reserves in the net loss reserves shown.
- The Underwriting & Investment Exhibit and Schedule P show ceded case reserves and IBNR reserves, although these may be on a pool basis in Schedule P.
- Note 23 of the statutory annual statement also includes discussion of various reinsurance topics, including Note 23D Uncollectible Reinsurance).

Collectibility of ceded unpaid loss and LAE (and ceded billed but uncollected loss and LAE when material) will generally have an effect of the future development of reserves as well as surplus. The NAIC requires commentary on reinsurance collectibility.

The Appointed Actuary may choose to discuss the materiality of amounts ceded to troubled reinsurers (e.g., those in liquidation or rehabilitation) if the overall amount is material. The Appointed Actuary may also choose to discuss the materiality of major ceded reinsurance concentrations, either concentrations to a single reinsurer or pertaining to a single (or a select few) event(s).

This discussion may be aided by investigation into GAAP disclosures of ceded reinsurance concentration (for SEC filers), or by analysis of ceded reinsurance write-offs found in Note 23.D. In addition, Schedule F, Part 3 provides detail on the amount of reinsurance recoverable by reinsurer (where the total recoverable from the reinsurer is over $100,000). Beginning with year-end 2015 the confidential RBC filing will also include a summarization of the Schedule F, Part 3 ceded balances by reinsurer credit rating.

FAQ: Don't I only have to look at the collectibility of ceded loss reserves and not ceded paid?

A: Not necessarily. Reinsurance collectibility issues include the collectibility of amounts billed to reinsurers but not yet collected. These billed but uncollected balances are included in Schedule F-Part 3, Column 16, and can also be found on Page 2, Line 16. If those billed amounts are not collected then the original ceded paid entry is reversed, which could impact reported loss development.

If any issues are raised by the above considerations, the Appointed Actuary may choose to provide some discussion as to amounts already set up to cover this risk (e.g., uncollectible reinsurance reserve, Schedule F

[61] When an insurer bills its reinsurer under a ceded reinsurance contract for a paid loss, this is recorded under statutory and US GAAP accounting as a ceded paid amount when billed, even if it hasn't been collected yet. Statutory accounting also requires the ceded paid entry to be reversed if the bill is ultimately written off as uncollectible, which results in an increase in paid and incurred losses unless offset by a reserve change at the time of the write-off.

penalty). The Appointed Actuary would also normally consider the effects of any existing collateral. If the amounts already set up are deemed by the Appointed Actuary to be inadequate, the Appointed Actuary may choose to indicate how the shortfall is being treated in the SAO. For example, is the shortage in these amounts being added to the otherwise indicated liabilities? Is the reserve being evaluated net of the indicated and held amounts for reinsurance uncollectibility?

At various times, publicly available information materially affects the perceived value of ceded reinsurance. The NAIC SAO Instructions provide that the Appointed Actuary's comments should also reflect any such information. For example, the Appointed Actuary would ordinarily comment on large cessions to a company recently placed under regulatory control, if the Appointed Actuary has knowledge of such cessions.

In some cases, other parties may already perform the above analysis. When the Appointed Actuary is relying on other parties for the reinsurance collectibility analysis, the Appointed Actuary may consider to so state and to discuss the qualifications of these parties.

Section 3.4 of ASOP No. 36 contains other provisions relating to other disclosures about uncollectible recoverables.

The Appointed Actuary would generally consider whether potential uncollectible cessions create risksand uncertainties to be disclosed and contribute to risk of material adverse deviation. Whether such a situation leads to a qualified opinion should also be considered.

Note:

- Reinsurance uncollectibility can be caused by both inability to pay (sometimes called credit default risk) and unwillingness to pay (dispute risk). It can also be caused by overly aggressive estimates of ceded loss potential or by overly aggressive billing of the reinsurer by the cedant.
- In some situations, it may be very unclear what the proper ceded amounts should be under a contract.

5.10.2 Illustrative language

The Appointed Actuary may choose to use wording similar to one of the following examples.

Situation 1: Immaterial ceded reinsurance levels

Use of ceded reinsurance is minimal, resulting in an immaterial risk of reinsurance uncollectibility relative to loss and loss adjustment expense reserves and surplus. (In addition, the Company's ceded billed but uncollected balances are not material.)

Situation 2: Material amounts of ceded reinsurance, with none to troubled reinsurers

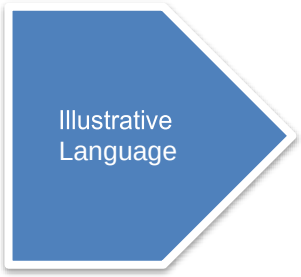
Ceded loss reserves are all with residual market pools, with companies rated XX or better by A.M. Best Co. (or its substantive equivalent), or fully collateralized. Past uncollectibility levels and current amounts in dispute have been reviewed and found to be immaterial relative to surplus. My opinion on the loss and loss adjustment expense reserves net of ceded reinsurance assumes that all ceded reinsurance is valid and collectible.

Note that even if reinsurance is with strong reinsurers, it is possible that reinsurance credits are overstated. If such credits were overstated in the past, an analysis of past uncollectible levels or of amounts currently in dispute could discover such an overstatement.

Situation 3: Potentially inadequate reserves for collectibility problems

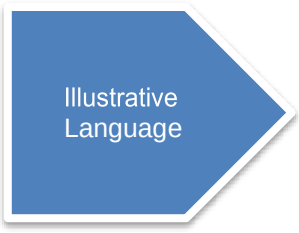
According to the Company's Schedule F disclosures, the Company cedes $XX million of loss and LAE reserves to currently insolvent reinsurers. Provisions for uncollectible reinsurance account for $YY million of this amount. In forming my opinion of the net reserves, I have recognized this $YY million as uncollectible.

Situation 4: Miscellaneous – Public information



The Company has a high portion of its reinsurance recoverable with the XYZ Corporation, whose financial difficulties have been publicized. I have reviewed the Company's exposure to this reinsurer, the ability to offset recoveries with amounts payable, and the Company's reserves for uncollectible reinsurance and found… {Note: The Appointed Actuary could go on to discuss a need to adjust the indicated net reserves, or state that the situation has been adequately addressed.}

Situation 5: Miscellaneous – Public information – material ceded reserves



The Company has a large ceded reserve with regard to {event X}, with a public dispute with its reinsurers with regard to that cession. The inability of the Company to collect on that cession would be material to its {surplus and/or reserves}. My analysis assumes that such cession will {be collectible, uncollectible, partially collectible, etc.}.

5.11 IRIS Ratios

According to the NAIC SAO Instructions,

> *"If the Company's reserves will create exceptional values under the NAIC IRIS Tests for One-Year Reserve Development to Policyholders' Surplus, Two-Year Reserve Development to Policyholders' Surplus or Estimated Current Reserve Deficiency to Policyholders' Surplus, the Appointed Actuary must include RELEVANT COMMENT on the factors that led to the unusual value(s)."*[62]

5.11.1 Definitions

IRIS Test 11 One-Year Reserve Development to Surplus measures the development of net loss and LAE reserves over the past calendar year, relative to prior year surplus. The usual range for the ratio includes results less than 20 percent.

IRIS Test 12 Two-Year Reserve Development to Surplus measures the development of net loss and LAE reserves over the past two calendar years, relative to surplus at the end of the second prior year. The usual range for the ratio includes results less than 20 percent.

IRIS Test 13 Estimated Current Reserve Deficiency to Surplus takes the net outstanding loss and LAE reserves for the most recent prior two calendar years relative to the calendar year earned premium for those years and adds to the reserves the development that has emerged over that period (one-year development for the first prior calendar year; two-year development for the second prior calendar year). The average of the resulting two "adjusted" loss reserve ratios is applied to earned premium for the most recent calendar year to determine what the outstanding loss reserve should be according to this estimate. The difference between this reserve estimate and the recorded loss and LAE reserve is related to current year surplus. A calculated deficiency in recorded loss and LAE reserves of 25 percent or more is deemed to be unusual.

[62] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

A link to the NAIC Insurance Regulatory Information System (IRIS) Ratios Manual is below. This manual contains calculation details along with annual statement source references for all of the IRIS Ratios.

http://www.naic.org/documents/prod_serv_fin_receivership_uir_zb.pdf

5.11.2 Discussion

The Appointed Actuary is required to provide commentary on the factors underlying exceptional values calculated under the NAIC IRIS Tests for One-Year Reserve Development to Surplus, Two-Year Reserve Development to Surplus, and Estimated Current Reserve Deficiency to Surplus. If one or more of these tests' calculations result in exceptional value(s), the Appointed Actuary must include a RELEVANT COMMENT paragraph to explain in detail the primary reasons for the exceptional value(s). The Appointed Actuary may want to consider potential responses in the AOS section E for consistency with commentary in the SAO on IRIS test exceptional values.

An explanatory paragraph is not required unless the calculations of the IRIS tests create exceptional values. However, even when there are no exceptional values, the Appointed Actuary may want to include wording indicating that he/she reviewed the calculations of the IRIS tests and noted no exceptional values.

Note:

- Part E of Paragraph 5 of the AOS addresses persistent adverse development. The NAIC AOS Instructions are included as Appendix I.2.

5.11.3 Illustrative language

The Appointed Actuary may choose to use wording similar to one of the following examples, to the extent they apply:

During the past year, the Company strengthened net reserves for prior accident years by $100,000,000. Most of the increase was for asbestos and environmental claims included in the prior year row. This extraordinary loss reserve strengthening caused exceptional values for the NAIC IRIS Tests regarding One-Year Reserve Development to Surplus, Two-Year Reserve Development to Surplus, and/or Estimated Current Reserve Deficiency to Surplus.

or

During the past year, the Company booked significant amounts of additional premiums in long-tail lines from various loss-sensitive programs. These additional premiums caused an exceptional value for the IRIS test regarding Estimated Current Reserve Deficiency to Surplus. These lines have also shown some non-substantial upward reserve development.

When the IRIS test calculations produce no exceptional values, the Appointed Actuary may still choose to include an explanatory paragraph, with wording similar to the following:

I have examined the NAIC IRIS tests for One-Year Reserve Development to Surplus, Two-Year Reserve Development to Surplus, and Estimated Current Reserve Deficiency to Surplus, and no exceptional values were observed.

5.12 Changes in methods and assumptions

According to the NAIC SAO Instructions,

> *"If there has been any significant change in the actuarial assumptions and/or methods from those previously employed, that change should be described in a RELEVANT COMMENT paragraph. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this."*[63]

5.12.1 Discussion

The NAIC requirement is similar to that in ASOP No. 36, section 4.2.a required disclosure of changes in the Appointed Actuary's assumptions, procedures, or methods from those employed in the most recent prior opinion prepared in accordance with ASOP No. 36 if the Appointed Actuary believes that such changes are likely to have a material effect on the Appointed Actuary's estimate(s) of liabilities for which reserves the Appointed Actuary is opining. The Appointed Actuary is obliged to comment only onchanges that are, in the Appointed Actuary's professional judgment, material to the actuary's unpaid claim estimate.

Pursuant to ASOP No. 36, section 3.8, neither the use of assumptions, procedures, or methods for new reserve segments that differ from those used previously, nor periodic updating of experience data, factors, or weights constitute a change in assumptions, procedures, or methods for this disclosure.

According to the NAIC SAO Instructions, when an Appointed Actuary is changing assumptions and/or methods from the prior year, and the impact of the change is not known, the Appointed Actuary should disclose the change. It is advisable in most instances to describe
briefly the change itself and the reason for it.

[63] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

If there is a change in Appointed Actuary, the new Appointed Actuary is not expected to calculate the year-end unpaid claim estimates using a predecessor's methodology. Given each actuary's varying comfort level with different techniques, and the use of custom reserve review packages by various reserve practitioners, it is impractical to expect an Appointed Actuary to always copy a predecessor's methodology. However, the new Appointed Actuary may choose to become familiar with his or her predecessor's basic methodology and conclusions. If the changes in assumptions, procedures or methods are likely to have a material impact on unpaid claim estimates, the new Appointed Actuary may choose to note the difference(s) in the SAO.

FAQ: I changed the methods and assumptions from the prior year; do I need to disclose the changes?

A: Per the Instructions and ASOP No. 36, if the effect of the change is material, then you should disclose the change; if the effect of the change is not material, disclosure can be made at your discretion.

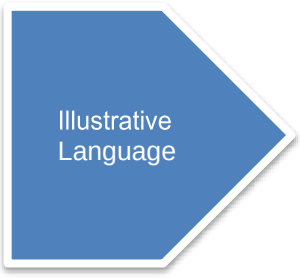
If the newly Appointed Actuary is able to review the prior opining actuary's work, section 3.8 of ASOP No. 36 states that the actuary should determine whether the current assumptions, procedures, or methods differ from those employed in providing the most recent prior opinion. In the event that the current assumptions, procedures, or methods differ from those of the prior opinion, then the actuary should consider whether the changes are likely to have had a material effect on the actuary's unpaid claim estimate.

ASOP No. 36 requires disclosure of instances in which the Appointed Actuary is not able to review the prior Appointed Actuary's work. In this event, according to section 4.2.a, the Appointed Actuary should disclose that the prior assumptions, procedures, and methods are unknown.

5.12.2 Illustrative language

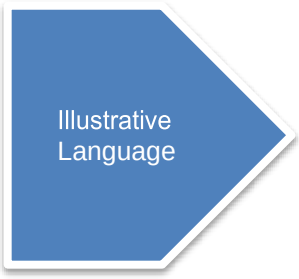
The Appointed Actuary may choose to use wording similar to one of the following examples.

Situation 1: Material change due to distortions affecting old method



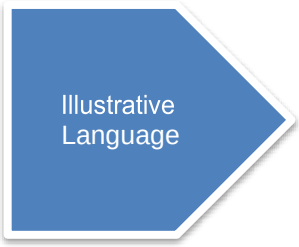
A material change in actuarial methods was made in the analysis supporting this opinion. The change entailed using a reported loss development procedure in place of the paid loss development procedure used last year. This change was necessitated by the implementation of a new claim payment system, distorting the paid data but leaving unchanged the case incurred.

Situation 2: Change made, materiality unknown



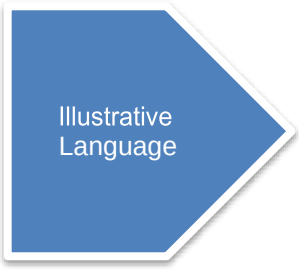
A change in actuarial methods was made in the supporting reserve analysis (versus the prior year). The materiality of this change could not be determined. The change, developing auto liability losses with bodily injury and property damage combined rather than separated, was necessitated due to the implementation of a new claim system. The new system did not contain the data in the same detail as was available last year.

Situation 3: Not possible to quantify impact of changes from the prior Appointed Actuary



The Appointed Actuary has changed from the prior year. A comparison of my estimates to the prior Appointed Actuary's estimates is not possible because [explain why: for example, the analysis done by the prior Appointed Actuary was performed using a different aggregation of the data]. Therefore, I am unable to determine whether there has been a material change in actuarial assumptions or methodology.

Situation 4: Not able to review the work of the prior Appointed Actuary



The Appointed Actuary has changed from the prior year. I was not able to review the work of the prior Appointed Actuary. Therefore, the prior assumptions, procedures, and methods are unknown and I am unable to determine whether there has been a material change in actuarial assumptions or methodology.

5.13 Extended reporting endorsements

In item 12 of Exhibit B, the Appointed Actuary is required to disclose the total claims-made extended loss and expense reserve (greater than or equal to Schedule P interrogatories) that the company carries as a loss reserve (item 12.1) and/or unearned premium reserve (item 12.2).

"*RELEVANT COMMENT paragraphs should describe the significance of each of the remaining*

Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact."[64]

This section provides discussion and illustrative wording around this particular disclosure item.

5.13.1 Definitions

Extended Reporting Endorsements – "*Endorsements to claims-made policies covering insured events reported after the termination of a claims-made contract but subject to the same retroactive dates where applicable."*[65]

There are essentially two types of extended reporting endorsements, those that extend reporting of claims-made policies for a defined period, such as one or two years, and those that extend reporting for an indefinite period.

Where extended reporting endorsements provide coverage for only a fixed reporting period, the premium is earned over that period, with an unearned premium reserve recorded for the unexpired portion of the premium. Associated losses are recorded as reported, with incurred but not reported (IBNR) loss recorded in the loss reserves as the coverage is provided. Where the endorsements provide coverage for an indefinite reporting period, premium is fully earned and the liability associated with associated IBNR claims is recognized immediately.[66]

Additionally, certain claims-made policies include provisions such as Death, Disability, or Retirement (DDR) provisions. DDR provisions generally extend reporting under a claims-made policy for an indefinite period, at no additional cost, in the event that the insured dies, becomes disabled or retires during the policy period. Because coverage is extended at no additional charge, a portion of the claims-made premium should be recorded as a policy reserve for liability stemming from this coverage provision. This is an example of what is being requested in Exhibit B, item 12. According to SSAP No. 65,

the amount of the reserve should be adequate to pay for all future claims arising from these coverage features, after recognition of future premiums to be paid by current insureds for these benefits…When anticipated losses, loss adjustment expenses, and maintenance costs anticipated to be reported during the extended reporting period exceed the recorded unearned premium reserve for a claims-made policy, a premium deficiency reserve shall be recognized in accordance with SSAP No. 53 – Property Casualty Contracts – Premiums.[67]

5.13.2 Discussion

The scope of the Appointed Actuary's SAO includes the total claims-made extended loss and expense reserves

[64] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[65] SSAP 65, paragraph 3c (Appendix IV).
[66] SSAP 65, paragraph 7 (Appendix IV).
[67] SSAP 65, paragraphs 8 and 9 (Appendix IV).

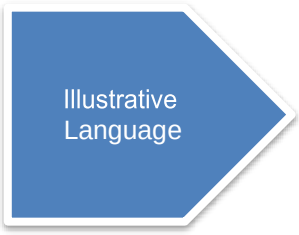
reported in Exhibit B, item 12. While these provisions are often found in Medical Professional Liability policies, the Appointed Actuary is reminded that the RELEVANT COMMENT paragraphs, as well as the corresponding entries in Exhibit A and Exhibit B, item 12 should include all of the company's extended loss and expense reserves, not just the Medical Professional Liability portion of these reserves reported in the Schedule P Interrogatory #1. Where values are reported for that interrogatory, the Appointed Actuary may want to confirm that the value reported in Exhibit B, Disclosure 12 is at least as high as those interrogatory values.

Note:

- Some Directors & Officers Liability (D&O) policies may also have similar provisions that cover suits against past directors and officers after they leave the company (albeit possibly only for a limited time after the claims-made policy expiration).
- Schedule P Interrogatory #1 asks for the amount of the DDR reserve that is reported as an unearned premium reserve (per SSAP No. 65) separately from the amount reported as loss or LAE reserve, if any. This is consistent with the NAIC SAO reporting requirement of Other Premium Reserve items in Exhibit A, item 9, and Other Loss Reserve items in Exhibit A, item6.
- References to "activated tail" and "paid tail" relate to "triggered" or "issued" reporting endorsements, and, therefore, any related loss reserves are not considered to be "extended loss and expense reserves."

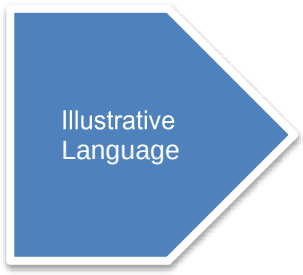
5.13.3 Illustrative language

If there are contracts of this type with material levels of reserves, the Appointed Actuary may choose to use wording similar to the following:



The Company writes extended loss and expense contracts on claims- made professional liability policies, which provide extended reporting coverage in the event of death, disability, or retirement at no additional premium charge. The Company's accrual for this liability is included in its unearned premium reserves and is shown in item 9 on Exhibit A.

Alternatively, if the material accrual for these contracts is recorded as loss reserves, the Appointed Actuary may choose to use wording similar to the following:



The Company writes extended loss and expense contracts on claims- made professional liability policies, which provide extended reporting coverage in the event of death, disability, or retirement at no additional premium charge. The Company's accrual for this liability is included in its loss and loss adjustment expense reserves and is shown in item 6 on Exhibit A.

5.14 Property and Casualty (P&C) Long Duration Contracts

This section addresses the situation of material levels of P&C Long Duration Unearned Premium Reserves subject to special reporting rules in SSAP 65, and the required SAO comment on such reserves. Note there are requirements for Accident and Health (A&H) Long Duration Contracts which are discussed in section 5.15.

> *If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts … the Actuarial Opinion should cover the following illustration:*[68]

This means that if lines 7 and/or 8 of Exhibit A of the SAO include material levels of unearned premium reserves for P&C Long Duration Contracts, the NAIC expects the Appointed Actuary to opine on the level of such P&C Long Duration Unearned Premium Reserves.

5.14.1 Definitions

Special rules for calculating unearned premium "*shall apply to all direct and assumed contracts … excluding financial guaranty contracts, mortgage guaranty contracts, and surety contracts, that fulfill both of the following conditions:*

> a. *The policy or contract is greater than or equal to 13 months; and*
>
> b. *The reporting entity can neither cancel the contract, nor increase the premium during the policy or contract term."*[69]

FAQ: Are all policies of duration over 12 months considered P&C Long Duration for the purposes of this requirement?

A: No. SSAP 65 specifies certain criteria for the policies that are subject to this requirement. Surety policies are explicitly excluded from this requirement. Policies that are cancellable under certain conditions may also be exempted, such as a D&O policy that can be cancelled upon a major change in the insured (such as a major acquisition).

5.14.2 Discussion

Note that "long duration" in this section refers only to those policies subject to the special unearned premium rules alluded to in the above definitions ("These contracts are subject to the three tests of SSAP No.

[68] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[69] SSAP 65, paragraph 23 (Appendix IV).

65 – *Property and Casualty Contracts* of the NAIC *Accounting Practices and Procedures Manual*"[70]). More details on these special rules are provided in Appendix III.1.

The company for which the SAO is being written may be in any of these three situations:

1. The company does not write P&C Long Duration Contracts.

2. The unearned premium reserve for P&C Long Duration Contracts is immaterial in relation to the aggregate of the loss, LAE, and P&C Long Duration unearned premium reserves.

3. The P&C Long Duration unearned premium reserve is material in relation to the aggregate of the loss, LAE, and P&C Long Duration unearned premium reserves.

If the Appointed Actuary is unsure which of these conditions apply, he/she may analyze the disclosure of unearned premium for policies over 12 months in the Underwriting & Expense Exhibit, Part 1A, column 2. Note that that column may include both amounts subject to the SSAP 65 requirements and amounts that are exempted from those requirements; hence material values in that column may require further analysis to determine whether the SSAP 65 requirements apply.

5.14.3 Illustrative language

Situation 1: The Company does not write P&C Long Duration Contracts (of the type specified in SSAP 65 for the special unearned premium reserve calculation).

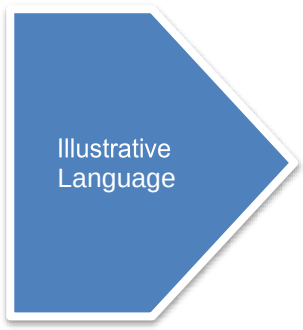
When the company does not write P&C Long Duration Contracts, the Appointed Actuary may choose to use the SAO format that makes no allusion to the P&C Long Duration unearned premium reserves in the SCOPE or OPINION sections. A brief disclosure in the RELEVANT COMMENTS section of the SAO may be worded along the following lines:

The Company does not write policies or contracts related to single or fixed premium policies with coverage periods of 13 months or greater that are non-cancellable and not subject to premium increase (excluding financial guaranty contracts, mortgage guaranty contracts, and surety contracts).

Situation 2: The unearned premium reserve for P&C Long Duration Contracts is immaterial in relation to the aggregate of the loss, LAE, and P&C Long Duration unearned premium reserves. When the company writes an amount of P&C Long Duration Contracts that develop an unearned premium reserve that is immaterial when combined with the loss and LAE reserves, the Appointed Actuary would be prudent to include the

[70] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

amounts in Exhibit A: SCOPE (items 7 and 8) but need not include item (D) in the OPINION paragraph. A brief disclosure in the RELEVANT COMMENTS section of the SAO may be worded along the following lines:



Total net unearned premium for the Company as recorded on the Liabilities, Surplus and Other Funds page, Unearned premiums line of the Annual Statement is $_____. The unearned premium for P&C Long Duration Contracts subject to the SSAP 65 unearned premium reserve "three tests", to which this opinion applies, is_____, representing _percent of the total net unearned premium for the Company. This component of the unearned premium is not material to the Company when combined with the loss and loss adjustment expense reserves. I therefore relied on the Company for its representation of the reasonableness of the unearned premium reserves.

Situation 3: The unearned premium reserve for P&C Long Duration Contracts is material in relation to the aggregate of the loss, LAE, and P&C Long Duration unearned premium reserves. When the P&C Long Duration contract unearned premium reserve is material, the Appointed Actuary would likely include the amounts in Exhibit A: SCOPE (items 7 and 8) and also include item (D) in the OPINION paragraph. The Appointed Actuary may choose to apply language similar to the language described in section 4.9.3 and may choose to include further discussion in the RELEVANT COMMENTS section.

5.15 Accident and Health Long Duration Contracts

In item 13 of Exhibit B, the Appointed Actuary is required to disclose the net reserves for Accident and Health ("A&H") Long Duration contracts. Specifically items for losses, loss adjustment expense reserves, unearned premium reserves, and each write-in item need to be listed.

A&H Long Duration contracts are defined in the SAO instructions to be:

> *"A&H contracts in which the contract term is greater than or equal to 13 months and contract reserves are required. See Schedule H instructions for a description of categories of contract reserves as well as policy features that give rise to contract reserves. Two specific examples of contracts that typically require contract reserves are long-term care and disability income insurance.*

The Schedule H instructions state:

> *"Companies must carry a reserve for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services."*

As with other items listed in this section of Exhibit B, the SAO instructions require some discussion of any non-zero amounts in item 13:

> *"RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in*

combination when commenting on a material impact."[71]
For most property-casualty companies with A&H Long Duration contracts, these relevant comments would be all that is required from the opining actuary.

The Appointed Actuary is not required to opine on the reasonableness of these reserves in isolation. The 2018 AOWG Regulatory Guidance states:

"The Appointed Actuary is not asked to opine on the reasonableness of the reserves associated with A&H Long Duration Contracts except to the extent that the reserves are included within the amounts reported on Exhibit A of the Actuarial Opinion."[72]

However, for companies with over 10,000 inforce lives covered by long-term care (LTC) contracts as of the valuation date, the Appointed Actuary is required to perform an additional asset adequacy analysis for those contracts per Actuarial Guideline LI ("AG 51"). Per the SAO instructions, *"[t]he Actuarial Report and workpapers summarizing the results, assumptions and testing procedures for the asset adequacy testing of LTC business must be in compliance with AG 51 requirements*". It is COPLFR's understanding that only a small number of property-casualty companies are currently subject to these requirements.

5.15.1 Illustrative language

If there are contracts of this type with material levels of reserves, the Appointed Actuary may choose to use wording similar to the following:

The Company writes A&H Long Duration Contracts where the contract term is greater than or equal to 13 months and contract reserves are required. The Company's accrual for this liability is shown in item 13 on Exhibit B.

5.16 Other Items

Item 14 of Exhibit B provides a place for disclosure of "Other items on which the Appointed Actuary is providing relevant comment…"

> *"RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact"*

This means that if item 14 of Exhibit B of the SAO includes a non-zero value (or values), then the SAO should

[71] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1)
[72] 2018 AOWG Regulatory Guidance, page 10 (Appendix II).

include RELEVANT COMMENT paragraph(s) with discussion of the item(s) individually and within context of the other disclosure items in Exhibit B.

5.16.1 Discussion

Item 14 of Exhibit B serves as a "catch-all" for other items the Appointed Actuary is discussing in RELEVANT COMMENTS section of the SAO, that are not otherwise already disclosed within Exhibit B. While the majority of SAOs do not contain anything under item 14, if the Appointed Actuary believes it is appropriate to disclose an item within the RELEVANT COMMENTS section it should also be disclosed, along with the source of the figure, in Exhibit B.

The listing of potential risk factors in section 5.2.1 of this document may provide some instances of items that could be disclosed within item 14 of Exhibit B.

5.16.2 Illustrative language

Situation 1: The Company's reserves include an explicit risk margin and are discounted. The Appointed Actuary discusses each of these items individually and combined in RELEVANT COMMENT paragraphs and uses item 14 of Exhibit B to identify the amount of risk margin.

The Company has represented that the carried reserves include an explicit risk margin. The amount of risk margin as of December 31, 2018 is $x.x million on a net of reinsurance basis and is shown as item 14 on Exhibit B. The amount of discount is X% of the Company's net loss and LAE reserves and Y% of the Company's policyholders surplus.

The combined effect of the Company's discount and risk margin is to decrease the carried net loss and loss adjustment expense reserve by $y.y million (or approximately z.z%) if compared to the implied undiscounted reserve with no risk margin.

Situation 2: The Company's reserves are stated net of policyholder deductibles, and the Appointed Actuary has identified the collectibility of such as a company specific risk factor.

The Company's carried net loss and loss adjustment expense reserve is stated net of outstanding policyholder deductibles. The amount of outstanding policyholder deductibles is $x.x million, shown as item 14 on Exhibit B, and represents X% of the Company's net loss and LAE reserves and Y% of the Company's policyholders surplus. Due to the significance of this amount, I have identified the collectibility and/or timing of reimbursement as a company specific risk factor.

6. Additional considerations

In this chapter we discuss the additional details regarding the format of the SAO and actions that are required when an error in the SAO has been uncovered.

6.1 Formatting requirements

There are specific requirements in terms of the format of the signature of the Appointed Actuary, the presentation of Exhibits A and B, and the technical specifications of the electronic format of Exhibits A and B. Each of these is discussed in detail in the following sections.

6.1.1 *Signature of the Appointed Actuary*

The SAO concludes with the dated signature of the Appointed Actuary. The NAIC SAO Instructions are quite clear in terms of the presentation of the Appointed Actuary's signature.

> *The signature and date should appear in the following format:*
>
> _____
> *Signature of Appointed Actuary*
> *Printed name of Appointed Actuary*
> *Employer's name*
> *Address of Appointed Actuary Telephone number of Appointed Actuary Email address of Appointed Actuary Date opinion was rendered*[73]

FAQ: Is an original signature required?

A: This depends on the requirements of each state. Suggested resources for these requirements include the 2018 P/C Loss Reserve Law Manual and state statutes, regulations and bulletins. Knowledge of and compliance with legal and regulatory requirements rests with the individual actuary. Legal counsel should be consulted where the actuary is unable to identify all relevant legal requirements.

6.1.2 *Presentation of Exhibit A*

Exhibit A should follow the same format outlined in the NAIC SAO Instructions. Every item in Exhibit A will typically contain a value, even if the company's value for an individual item is $0. Write-in lines should be inserted into Exhibit A if applicable. Also, if the Appointed Actuary

FAQ: What types of reserves may be included in Exhibit A, items 6 and 9?

A: If an actuary opines on a particular reserve segment that is not included in items 1-4 or 7-8, e.g., DDR, this may be handled in item 6 and/or 9.

[73] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

is including a value, or multiple values if needed, in items 6 and/or 9, then the SAO is expected to include an explanation in the RELEVANT COMMENTS of why that value or values are being included in the Exhibit A disclosure.

6.1.3 Presentation of Exhibit B

Exhibit B should follow the same format outlined in the NAIC SAO Instructions with no items deleted and write-in lines included if applicable.

According to NAIC SAO Instructions,

> *Exhibit B should be completed for Net dollar amounts included in the SCOPE. If an answer would be different for Direct and Assumed amounts, identify and discuss the difference within RELEVANT COMMENTS.*[70]

The information obtained in Exhibit B items 1 through 4 and 6 is normally disclosed elsewhere in the SAO. It has been added to Exhibit B in order to facilitate the capture of certain information in the company's electronic data filing.

According to AOWG Regulatory Guidance, the regulator expects the response to Exhibit B item 4 to reflect the SAO on net reserves. Therefore, if the Appointed Actuary reaches different conclusions regarding net reserves versus gross reserves (direct plus assumed reserves), then item 4 should reflect the SAO category for net reserves.

Regulators expect the answer to Exhibit B item 6 to be consistent with the disclosure in the RELEVANT COMMENTS of the SAO of whether there are significant risks or uncertainties that could result in material adverse deviation. The response *"Not Applicable"* for item 6 is intended to only be used in the situation of a company with 0 percent participation under an intercompany pooling agreement in which the lead company retains 100 percent of the pooled reserves.

In addition, as directed by section 1C of the NAIC SAO Instructions, Exhibits A and B for each company in the pool should represent the company's share of the pool and reflect values specific to the individual company. If a company is a 0 percent pool participant, then Exhibits A and B of the lead company should be attached as an addendum to the SAO of the 0 percent company.

Exhibit B item 10 is a disclosure of the sum of voluntary and involuntary participation in underwriting pools and associations. A zero entry would be unusual for workers' compensation or automobile insurers. The Appointed Actuary may choose to show the voluntary and involuntary participation separately in the body of the SAO. Note: Refer to section 5.6 of this practice note for more information on the specifics of underwriting pools and

associations.

Exhibit B Item 13 is a new disclosure item in the 2018 SAO. For property-casualty insurers with over 10,000 in-force lives from long-term care (LTC) contracts, there are additional requirements for the opining actuary. (See Chapter 5 of this practice note for further discussion).

For all other property-casualty insurers with no LTC coverage—or fewer than 10,000 insured lives for LTC—there are no additional requirements for the opinion, except for the item 13 disclosure. Actuaries for insureds with any volume of A&H Long Duration Contracts are required to complete this item 13 disclosure. Normally any active life reserves on these A&H Long Duration Contracts would be included in item 13.

Exhibit B would typically contain information and amounts for all of items 1 through 14, even if the company's value for an individual item is $0. Also, if the Appointed Actuary is including a non-zero value or values in item 14, then the SAO would normally include, within a RELEVANT COMMENT paragraph, an explanation of why each value is being included in the Exhibit B disclosure.

6.1.4 *Technical specifications of filing (i.e., data capture format of Exhibits A & B)*

According to the NAIC SAO Instructions,

> *"Data in Exhibits A and B are to be filed in both print and data capture format."*[74]

In addition to filing the Annual Statement, the company is required to file certain information reported in the Annual Statement in electronic format. The information reported in Exhibit A: SCOPE and Exhibit B: DISCLOSURES of the SAO will be included in the company's electronic filing. This underscores the importance of preparing Exhibits A and B in the exact format shown in the NAIC SAO Instructions.

Note:

- For companies participating in an intercompany pool with a zero percent (0%) share, Exhibits A and B of the lead company must be attached as an addendum to the company's SAO.

6.2 Errors in SAOs

The NAIC SAO Instructions and the AOWG Regulatory Guidance include information on reissuing SAOs when the Appointed Actuary determines that the SAO submitted to the domiciliary Commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually

[74] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

incorrect. This includes instruction on timing, format, and content of the revised submission.

6.2.1 Definitions

According to the NAIC SAO Instructions,

> *"The Actuarial Opinion shall be considered to be in error if the Actuarial Opinion would have not been issued or would have been materially altered had the correct data or other information been used. The Actuarial Opinion shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected."*[75]

6.2.2 Discussion

NAIC SAO Instructions specify a formal process when an SAO is considered to be in error. The process involves notifications to the Board, as well as the domiciliary commissioner, as described below:

1. According to NAIC SAO Instructions, the insurer "*shall require its Appointed Actuary to notify its Board of Directors or its audit committee in writing within five (5) business days after any determination by the Appointed Actuary that the Actuarial Opinion submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect*"[76] and meets the definition above.

   The Appointed Actuary should include a summary of the finding of the error and an amended SAO.

2. Within five (5) business days of receipt from the Appointed Actuary, the company is required to forward a copy of the amended SAO to the domiciliary commissioner, with notification to the Appointed Actuary of doing so.

   If the Appointed Actuary does not receive such

FAQ: What if the actuary cannot determine what, if any, changes are needed to the SAO within the required timeline?

A: *The actuary and insurer should perform the necessary procedures to determine the impact of the SAO as soon as reasonably practical. If the insurer does not provide the necessary data and/or support within ten (10) business days, the actuary should notify the domiciliary Commissioners that the original SAO should no longer be relied upon.*

[75] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[76] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

notification, the Appointed Actuary is required to notify the domiciliary Commissioner within the next five (5) business days that an amended actuarial opinion has been finalized.

3. According to the NAIC SAO Instructions, "*if the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the Actuarial Opinion, the Appointed Actuary and the company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.*"[77]

There are other situations in which the SAO may need to be revised and reissued. An example of such a situation is a request from a regulator for expanded wording in the SAO. In these situations, the Appointed Actuary may wish to discuss the timing/format/content of the revised SAO with the regulator in consultation and conjunction with the company to which the SAO relates.

Note:

- If an error is discovered between the issuance of the SAO and December 31 of that year, the domiciliary commissioner must be notified.
- According to the NAIC SAO Instructions, "No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs."[†]

[†] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

[77] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

7. Actuarial Opinion Summary

The AOS is identified by the NAIC as a supplemental filing, separate from the Annual Statement and the SAO. NAIC Instructions for preparation of the AOS are provided separately from the SAO Instructions to emphasize the supplemental nature of the AOS filing.

Of particular importance is that the AOS is a confidential document. As stated in the NAIC AOS Instructions,

> *The AOS contains significant proprietary information. It is expected that the AOS be held confidential; it is not intended for public inspection. The AOS should not be filed with the NAIC and should be kept separate from any copy of the Statement of Actuarial Opinion (Actuarial Opinion) in order to maintain confidentiality of the AOS. The AOS can contain a statement that refers to the Actuarial Opinion and the date of that opinion.*[78]

The AOWG Guidance repeats this information and adds

> *The AOS is a confidential document and should be clearly labeled and identified prominently as such.*

We expect by the actuary will transmit the AOS to the Company department responsible for filing this document by e-mail (with the AOS as an attachment) or by delivery of a hard copy with an attached cover letter or by some similar means. Based on the AOWG Guidance, Appointed Actuaries commonly repeat these instructions in the transmittal e-mail or the cover letter:

f. This attached document should not be filed with the NAIC;
g. This attached document should be filed with the domiciliary state's regulator; and
h. This attached document should not be filed with any other state's regulators, unless specifically requested by the regulators.

The following provides discussion and illustrative language for consideration when issuing an AOS.

FAQ: I have completed the Statement of Actuarial Opinion and Actuarial Opinion Summary at the same time and provided them to the Company. Does the Company file them with its domiciliary state insurance department together?

A: No, the SAO and AOS should be filed separately. The AOS is not included with the Company's Annual Statement and other documents that are filed with the NAIC due to its confidential nature. The CASTF Regulatory Guidance advises that, in order to avoid confusion, the Appointed Actuary should provide the AOS to company personnel separately from the SAO.

7.1 Filing the AOS

This section provides discussion around the filing requirements of the AOS. According to the NAIC AOS Instructions,

> *For all Companies that are required by their domiciliary state to submit a confidential document entitled Actuarial Opinion Summary (AOS),*

[78] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

such document shall be filed with the domiciliary state by March 15 (or by a later date otherwise specified by the domiciliary state). This AOS shall be submitted to a non-domiciliary state within fifteen days of request, but no earlier than March 15, provided that the requesting state can demonstrate, through the existence of law or some similar means, that it is able to preserve the confidentiality of the document.

7.1.1 Discussion

The AOS is to be filed with the company's domiciliary state insurance department separately from the Annual Statement and the SAO. The AOS generally must be filed by March 15, unless the state's insurance department has specified a different date. The Appointed Actuary may want to refer to the Academy's *2018 P/C Loss Reserve Law Manual* to find the state-specific due date. A non- domiciliary state may also request the AOS, but only if that state can demonstrate its ability to preserve the confidentiality of the AOS, in accordance with item 1 of the NAIC AOS Instructions provided in Appendix I.2.

Note:

- The AOS is not included with the company's Annual Statement and other documents filed directly with the NAIC.
- The AOS is filed separately from the SAO, but the wording of the AOS may make reference to the SAO.
- The Appointed Actuary is not required to submit a copy of the SAO with the AOS, since that SAO will have been submitted along with the company's Annual Statement.
- The AOS should be consistent with applicable Actuarial Standards of Practice (ASOPs) and the CAS Statements of Principles.
- Exemptions for filing the SAO apply equally to the filing requirements of the AOS.

7.1.2 Illustrative language

Because it is sent separately from the SAO, the Appointed Actuary may wish to consider including some basic information along with the AOS. Sample wording is presented below:

Date: March 13, 2019 Actuarial Opinion Summary
Company: *THE Insurance Company*
NAIC#: *####*
Appointed Actuary: *Janet Actuary*

I have signed the Company's Statement of Actuarial Opinion on Feb. 23, 2019. These two documents are closely linked; the Actuarial Opinion Summary is an extension of the Statement of Actuarial Opinion.
Therefore, all limitations, caveats, and reliances in the Statement of Actuarial Opinion should also be applied to the Actuarial Opinion Summary. Moreover, it is my understanding that, consistent with the Annual Statement Instructions, the Actuarial Opinion Summary will be kept confidential by state regulators and is not intended for public inspection, subject to applicable law.

7.2 Content of the AOS

The principal content of the AOS is provided in five items, A through E. The first four items provide figures pertaining to the Appointed Actuary's unpaid claim estimates on both a point and range basis when calculated, the company's carried reserve, and differences between them on both a net and gross of reinsurance basis. In item E the Appointed Actuary is required to state whether the company has experienced one-year adverse development in excess of five percent of the respective prior year-end's policyholders' surplus in three or more of the past five years, and if so, provide explanation for the adverse experience.

This section provides discussion and illustrative language around the content of the AOS, with illustrative language for item E. Following this section are sample AOSs containing illustrations of items A through E (section 7.3).

7.2.1 Definitions

Section 3.7 of ASOP No. 36 states "*The actuary should consider a reserve to be reasonable if it is within a range of estimates that could be produced by an unpaid claim analysis that is, in the actuary's professional judgment, consistent with both ASOP No. 43, Property/Casualty Unpaid Claim Estimates, and the identified stated basis of reserve presentation."*[79]

7.2.2 Discussion

The AOS requires the Appointed Actuary to disclose, on a gross and net basis, the Appointed Actuary's point estimate and/or the Appointed Actuary's range, and compare this to the carried reserves.

[79] Actuarial Standard of Practice No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*, http://www.actuarialstandardsboard.org/asops/statements-actuarial-opinion-regarding-propertycasualty-loss-loss-adjustment-expense-reserves/, effective May 1, 2011, Section 3.7.

Items 5 (A) through 5 (D) in the NAIC AOS Instructions clarify that there is no requirement to produce both a range and a point estimate. However, the reserve estimates presented in the AOS must follow the Appointed Actuary's analysis (i.e., if the Appointed Actuary prepares both a point estimate and a range in the analysis, then both the point estimate and the range must be disclosed in the AOS).

If the Appointed Actuary produces a range of estimates for a portion of total liabilities and a pointestimate for the remaining liabilities, then the AOS should include both. The Appointed Actuary should show how the point estimate and the range combine to form the Appointed Actuary's SAO, which can be categorized as reasonable, deficient, redundant, qualified, or no opinion. The AOS Exhibit should be consistent with the type of opinion provided in the SAO.

If one-year development has been adverse by at least five percent of the respective prior year's surplus in at least three of the last five calendar years, the AOS also requires explicit discussion of reserve elements and/or management decisions to which such adverse development can be attributed. Each year's one- year development, on a net basis, is compared to the prior period's surplus, and a ratio is developed. The one-year development test is the same calculation as that which underlies the IRIS Ratio regarding One- Year Reserve Development to Surplus. The calculation of the company's one-year reserve development to surplus for each of the prior five years is disclosed in the five-year historical exhibit of the company's Annual Statement.

Note:

- NAIC AOS Instructions *state "the net and gross reserve values reported by the Appointed Actuary in the AOS should reconcile to the corresponding values reported in the Insurer's Annual Statement, the Appointed Actuary's Actuarial Opinion, and the Actuarial Report. Ifnot, the Appointed Actuary shall provide an explanation of the difference."*[†]
- The Appointed Actuary may want to consider potential responses in the AOS section Efor consistency with commentary in the SAO on IRIS test exceptional values.
- NAIC SAO Instructions indicate that the Actuarial Report should include detailed descriptions and calculations that support the point estimate and/or range of estimates.

[†] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

7.2.3 Illustrative language

If, for example, reserve strengthening for A&E was one of the causes for one-year development to exceed five percent of the respective prior year's surplus in at least three of the last five calendar years, then the Appointed Actuary would usually consider language like the following in item E of the AOS. This language would be in addition to explanations of any other causes of adverse development for those years:

The company's one-year development exceeded 5 percent of surplus in three of the five most recent years. During this period the Company was evaluating its asbestos exposures using a ground up evaluation. These evaluations included input from claims, legal, and actuarial personnel. These evaluations resulted in several increases in the Company's net asbestos liabilities, which in turn resulted in the adverse one-year developments in those three prior years.

NAIC AOS Instructions require "*an explicit description of the reserve elements or management's decisions which were the major contributors,*"[80] which may be more detailed than comments in the RELEVANT COMMENTS section of the SAO. Recall, for example, the illustrative language provided in the RELEVANT COMMENTS section pertaining to exceptional values for IRIS Ratios (section 5.11) was as follows:

> *During the past year, the Company strengthened net reserves for prior accident years by $100,000,000. Most of the increase was for asbestos and environmental claims for prior accident years. This extraordinary loss reserve strengthening caused exceptional values for the NAIC IRIS Tests regarding One-Year Reserve Development to Surplus, Two- Year Reserve Development to Surplus, and/or Estimated Current Reserve Deficiency to Surplus.*

If one-year development has been adverse by at least five percent of the respective prior year's surplus in at least three of the last five calendar years, but the Appointed Actuary has not issued the SAO in each of those five years, the Appointed Actuary may wish to begin the required commentary with language such as the following:

The Company had one-year adverse development in excess of five percent of the prior year-end's policyholders' surplus in three or more of the last five calendar years. I became the Appointed Actuary on [date] and have issued the Statement of Actuarial Opinion on the Company's loss and loss adjustment expense reserves, beginning with year-end [year]. The Company's management has represented to me that the one-year adverse developments in prior years were due to . . .

OR

The Company had one-year adverse development in excess of five percent of the prior year-end's policyholders' surplus in three or more of the last five calendar years. I became the Appointed Actuary on [date] and have issued the Statement of Actuarial Opinion on the Company's loss and loss adjustment expense reserves, beginning with year-end [year]. I have reviewed the Actuarial Reports for the years prior to my appointment, and I have determined that the one-year adverse developments in prior years were due to . . .

If fewer than three years fail the test, then the Appointed Actuary is not required to comment but may wish to include a sentence such as the following for clarity:

[80] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

The calculations of one-year development of the Company's reserves yielded results in excess of five percent of prior year-end's policyholders' surplus in only one of the last five years.

7.3 Sample formats of the AOS

Sample formats for the AOS are provided below. These sample formats are intended to be illustrative only, and they may not apply in every situation. The Appointed Actuary is not required to adopt them.

SAMPLE FORMAT FOR THE AOS
[Name] Insurance Company December 31, 2018

Sample # 1: If the Appointed Actuary provides a range without a point estimate:

		Net Reserves			Gross Reserves		
		Low	Point	High	Low	Point	High
A	Actuary's range of estimates	9,000		11,000	10,000		12,000
B	Actuary's point estimate		NA			NA	
C	Company carried reserves		10,000			11,000	
D	Difference between company carried and actuary's estimate	1,000		(1,000)	1,000		(1,000)

Sample # 2: If the Appointed Actuary provides a point estimate without a range:

		Net Reserves			Gross Reserves		
		Low	Point	High	Low	Point	High
A	Actuary's range of estimates	NA		NA	NA		NA
B	Actuary's point estimate		10,500			11,600	
C	Company carried reserves		10,000			11,000	
D	Difference between company carried and actuary's estimate		(500)			(600)	

Sample # 3: If the Appointed Actuary provides both a range and a point estimate:

		Net Reserves			Gross Reserves		
		Low	Point	High	Low	Point	High
A	Actuary's range of estimates	9,000		11,000	10,000		12,000
B	Actuary's point estimate		10,500			11,600	
C	Company carried reserves		10,000			11,000	
D	Difference between company carried and actuary's estimate	1,000	(500)	(1,000)	1,000	(600)	(1,000)

Sample # 4: If the Appointed Actuary provides a qualified opinion – point estimate without a range:

		Net Reserves			Gross Reserves		
		Low	Point	High	Low	Point	High
A	Actuary's range of estimates	NA		NA	NA		NA
B	Actuary's point estimate		9,500			10,000	
C1	Company carried reserves - TOTAL		10,000			11,000	
C2	Company carried reserves - portion excluded by opinion		1,000			1,600	
C3	Company carried reserves covered by opinion		9,000			9,400	
D	Difference between company carried and actuary's estimate (C3-B)		(500)			(600)	

Following items A through D in each of the above samples would be item E. The following provides an illustration of item E for the situation where the Company has not experienced one-year adverse development by more than five percent of surplus in three or more of the last five calendar years:

E. *The Company has not had one-year adverse development, as measured by Schedule P, Part 2 Summary, in excess of five percent of the prior year-end's policyholders' surplus in three or more of the last five calendar years.*

NAIC AOS instructions indicate that the Appointed Actuary is required to sign and date the Actuarial Opinion Summary. The Appointed Actuary may choose to use a signature similar to the signature line of the Actuarial Opinion. A sample format is shown below.

- Signature of Appointed Actuary
- Printed name of Appointed Actuary
- Employer's name
- Address of Appointed Actuary
- Telephone number of Appointed Actuary
- Email address of Appointed Actuary
- Date AOS was rendered

The following are examples of illustrative wording that may be included within the AOS to note that the information provided is expected to be kept confidential. See important note below to assist in determining the

appropriate language for each situation.

This Actuarial Opinion Summary was prepared solely for the Company for filing with regulatory agencies and is not intended for any other purpose. Furthermore, it is my understanding that, consistent with the Annual Statement Supplemental Filing Instructions, the information provided in this Actuarial Opinion Summary will be kept confidential by those regulatory agencies and will not be made available for public inspection, subject to applicable law.

OR

This Actuarial Opinion Summary was prepared solely for the Company for filing with regulatory agencies and is not intended for any other purpose. Furthermore, it contains information that is a trade secret and therefore, if disclosed, would cause substantial injury to ABC Insurance Company's competitive position. Therefore, I request that this Summary and information contained therein be maintained confidential and I request an exception from disclosure under the Freedom of Insurance Act/Laws of your state.

Note:

- Because the confidentiality laws differ from state to state, Appointed Actuaries are encouraged to reference the Academy's 2018 P/C Loss Reserve Law Manual to assist them in identifying differences among the states. Knowledge of and compliance with legal and regulatory requirements rests with the individual actuary. Legal counsel should be consulted where the actuary is unable to identify all relevant legal requirements.

7.4 AOS for pooled companies

According to the NAIC AOS Instructions,

> *The AOS for a pooled Company … shall include a statement that the Company is a xx% pool participant. For a non-0% Company, the information provided for paragraph 5 should be numbers after the Company's share of the pool has been applied; specifically, the point or range comparison should be for each statutory Company and should not be for the pool in total. For any 0% pool participant, the information provided for paragraph 5 should be that of the lead company.*[81]

[81] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

7.4.1 Discussion

Paragraph 6 of the NAIC AOS Instructions requires the AOS to include the participation percentage for companies participating in an intercompany pooling agreement, as discussed in paragraph 1C of the NAIC SAO Instructions. For those companies whose participation percentage is zero, the information provided in paragraph 5 of the AOS should be that of the lead company.

For those companies whose pooling is other than 0%, AOWG Regulatory Guidance (Appendix II) encourages actuaries to display both the consolidated pool amounts in addition to the statutory entity's amounts. This can be accomplished with two separate tables.

7.4.2 Illustrative language

The following language may be appropriate when a company is a 0% pool participant in an intercompany pooling arrangement:

XYZ Insurance Company is a member of an intercompany pooling arrangement, with zero percent participation. The lead company is ABC Insurance Company with an XX% share of the consolidated pool amount. The following information is that of the lead company, ABC Insurance Company.

7.5 Errors in the AOS

If an amended SAO is required that impacts AOS results, filing an amended AOS is also necessary. The 2018 AOWG Regulatory Guidance, included as Appendix II, discusses regulatory expectations in cases where an error is discovered by the Appointed Actuary, the company, or the regulator.

7.5.1 Definitions

According to the NAIC AOS Instructions,

> *"The AOS shall be considered to be in error if the AOS would have not been issued or would have been materially altered had the correct data or other information been used. The AOS shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected."*[82]

[82] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

7.5.2 Discussion

When an AOS is in error, as defined above, AOWG Regulatory Guidance indicates the revised Summary should

- be submitted to the regulator
- clearly state that it is an amended document
- contain or accompany an explanation for the revision and
- include the date of the revision.

NAIC AOS Instructions added the following language to expand the requirements in the case where an AOS is considered to be in error:

> *"The Insurer required to furnish an AOS shall require its Appointed Actuary to notify its Board of Directors in writing within five (5) business days after any determination by the Appointed Actuary that the AOS submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect…Notification shall be required when discovery is made between the issuance of the AOS and Dec. 31 of that year. Notification should include a summary of such findings.*
>
> *If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the AOS, the Appointed Actuary and the Company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.*
>
> *An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the amended AOS to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the letter and amended AOS submitted to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that an amended AOS has been finalized."*[83]

Note:

- According to the NAIC AOS Instructions, "No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs."[†]

[†] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

[83] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

8. Actuarial Report

This chapter provides discussion related to the Actuarial Report and underlying actuarial work papers supporting an SAO. The NAIC Instructions include specific requirements for the technical component of the Actuarial Report and various disclosures, as discussed within this chapter. These requirements are in addition to following documentation and disclosure requirements of ASOP No. 41, *Actuarial Communications*, in particular section 3.2:

> *An actuarial report may comprise one or several documents. The report may be in several different formats (such as formal documents produced on word processing, presentation or publishing software, e-mail, paper, or web sites). Where an actuarial report for a specific intended user comprises multiple documents, the actuary should communicate which documents comprise the report.*
>
> *In the actuarial report, the actuary should state the actuarial findings, and identify the methods, procedures, assumptions, and data used by the actuary with sufficient clarity that another actuary qualified in the same practice area could make an objective appraisal of the reasonableness of the actuary's work as presented in the actuarial report.*[84]

8.1 Actuarial Report requirements per the NAIC SAO Instructions

According to the NAIC Instructions,

> *The Actuarial Opinion must include assurance that an Actuarial Report and underlying actuarial work papers supporting the Actuarial Opinion will be maintained at the Company and available for regulatory examination for seven (7) years. The Actuarial Report contains significant proprietary information. It is expected that the Actuarial Report be held confidential and not be intended for public inspection….*
>
> *The technical component must show the analysis from the basic data (e.g., loss triangles) to the conclusions.*[85]

The Instructions go on to include a discussion on long-term care and A&H Long Duration Contracts as well as provide a list of six bulleted items Actuarial Reports must also include. The long-term care and A&H Long Duration Contracts are discussed in section 8.2, while the six bulleted items in the Instructions correspond to sections 8.3 to 8.8 of this chapter, respectively.

[84] Actuarial Standards Board, ASOP No. 41, *Actuarial Communications*, http://www.actuarialstandardsboard.org/asops/actuarial-communications/ December 2010, section 3.2.
[85] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

8.1.1 Definitions

According to the NAIC Instructions,

> *"Actuarial Report" means a document or other presentation, prepared as a formal means of conveying to the state regulatory authority and the Board of Directors the Appointed Actuary's professional conclusions and recommendations, of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the Appointed Actuary's opinion or findings and of documenting the analysis underlying the opinion.*[86]

8.1.2 Discussion

The requirements for the Actuarial Report per the Instructions are much more specific than those contained in ASOP No. 41. The NAIC Instructions require the Actuarial Report show the analysis from the basic data to the conclusions, and contain six additional listed items (these are discussed in more detail in sections 8.2 through 8.7). Additionally, the NAIC Instructions require that the reconciliation papers in section 3.7.1 (*Reconciliation to Schedule P, Discussion*) become a part of the report.

FAQ: What is the due date of the Actuarial Report supporting an SAO?

A: According to NAIC Instructions, Actuarial Reports "…must be available by May 1 of the year following the year- end for which the Opinion was rendered or within two (2) weeks after a request from an individual state commissioner." However, requirements may vary by state. For example, Colorado requires the Actuarial Report to be issued within 30 days of the Actuarial Opinion if the carried reserves are less than the Appointed Actuary's best estimate (Statute Title 10, 3-1-3 § 6).

The Appointed Actuary is encouraged to refer to the Academy's 2018 P/C Loss Reserve Law Manual and relevant statutes for specific guidance.

The definition of the Actuarial Report in paragraph 7 of the Instructions includes a company's Board of Directors as part of the intended audience to be consistent with paragraph 1, which states that the Actuarial Report should be made available to the Board. This clarification is not intended to change the content of the Actuarial Report as described in paragraph 7. The Appointed Actuary may still elect to present findings to the board in any suitable manner (for example, an oral report or executive summary). In this event, the full Actuarial Report as defined in paragraph 7 must still be made available to the board upon request. The NAIC Instructions further state that the minutes of the Board of Directors' meeting should indicate that a presentation was made. The Instructions further state that the minutes should identify the form of presentation (e.g., webinar, in-person, written) in the minutes.

The Appointed Actuary usually includes within the Actuarial Report commentary on all material items covered in the SAO, including some detail on how the materiality threshold was chosen and commentary on what items were considered in choosing the threshold. In addition, regulators further expect the Actuarial Report to address the risk factors identified in the SAO, with descriptions of alternate outcomes that could result in

[86] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

adverse development in excess of the materiality threshold.

According to the NAIC Instructions for year-end 2018 the Actuarial Report should conclude with the signature of the Appointed Actuary and the date when the Actuarial Report was finalized in a format consistent with what is required on the SAO.

Signature of Appointed Actuary
Printed name of Appointed Actuary
Employer's name
Address of Appointed Actuary
Telephone
Number of Appointed Actuary Email
Address of Appointed Actuary
Date report was issued

The 2018 AOWG Regulatory Guidance supplements the NAIC P&C Instructions with regulatory expectations on Actuarial Reports.

Note:

- The Appointed Actuary would typically consider the requirements of the NAIC Instructions and ASOP No. 41 when developing the Actuarial Report, as well as guidance provided by the AOWG (see 2018 AOWG Regulatory Guidance).
- The Actuarial Report and the AOS show company carried reserves along with the Appointed Actuary's estimate(s). Exhibit A of the SAO and the company's Annual Statement show the company carried reserves. Reconciliation of the net and gross reserve figures among these various related documents is expected to be a straightforward process. Exceptions should be noted and explained in the Actuarial Report.

8.2 Long-Term Care and A&H Long Duration Contracts

The Instructions reference Actuarial Guideline LI related to certain long-term care contracts:

> *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) in the NAIC Accounting Practices and Procedures Manual requires a company to perform a stand-alone asset adequacy analysis for its in force long-term care (LTC) contracts with over 10,000 in force lives as of the valuation date. The Actuarial Report and workpapers summarizing the results, assumptions and testing procedures for the asset adequacy testing of LTC business must be in compliance with AG 51 requirements. When referring to AG 51, the term "Actuarial Memorandum" is synonymous with Actuarial*

Report and workpapers. [87]

In addition, the Instructions include the following requirement of Actuarial Reports:

> *The Actuarial Report should contain disclosure of all reserve amounts associated with A&H Long Duration Contracts reported by the Company; the reserve amounts in the Actuarial Report should tie to the Annual Statement.* [88]

8.3 Description of Appointed Actuary's relationship to the company

The Instructions include the following requirement of Actuarial Reports:

> *A description of the Appointed Actuary's relationship to the Company, with clear presentation of the Actuary's role in advising the Board and/or management regarding the carried reserves. The Actuarial Report should identify how and when the Appointed Actuary presents the analysis to the Board and, where applicable, to the officer(s) of the Company responsible for determining the carried reserves.* [89]

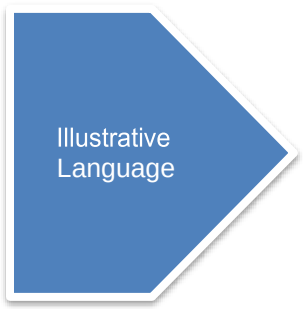
8.3.1 Discussion

The Appointed Actuary is required to include in the Actuarial Report a clear description of the Appointed Actuary's role in advising the board and/or management regarding the carried reserves, including a disclosure of how and when the actuarial analysis is presented to the board and/or management.

8.3.2 Illustrative language

The following sample wording is provided to illustrate the level of detail and nature of information intended to be included in the Report to fulfil each element of this requirement. Please note that these examples are not meant to represent all potential situations.

The Appointed Actuary's relationship to the company:



- *I am the Chief Actuary of the Company.*
- *[Alternative] I am an independent consultant to the Company.*
- *[Alternative] I am an independent consultant retained by the insurance department.*

[87] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[88] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[89] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

The Appointed Actuary's role in advising the board and/or management:

- *I provide input to management and the board of directors in the reserve setting process.*
- *[Addition] I establish a range of reasonable reserve estimates and understand that Company management selects the carried reserves based on my range of reasonable reserve estimates.*
- *[Alternative or Addition] My role is to evaluate the reasonableness of the carried reserves. I do not explicitly advise management or the board of directors in the reserve setting process.*

How and when the Appointed Actuary presents the analysis to the board:

- *The Appointed Actuary is required to present to the Board of Directors on ABC's carried reserves. This report constitutes this presentation, and the minutes of ABC's Board of Directors should indicate that the report was made available to the Board.*
- *[Alternative] A summary of the findings of my analysis was/will be presented to the Board of Directors on (Date).*

8.4 Exhibit comparing Appointed Actuary's conclusions to carried amounts in Annual Statement

The Instructions include the following requirement of Actuarial Reports:

> *"An exhibit that ties to the Annual Statement and compares the Appointed Actuary's conclusions to the carried amounts consistent with the segmentation of exposure or liability groupings used in the analysis. The Appointed Actuary's conclusions include the Appointed Actuary's point estimate(s), range(s) of reasonable estimates or both."*[90]

8.4.1 Discussion

The Instructions require the Actuarial Report to include an exhibit that ties to the Annual Statement and compares the Appointed Actuary's conclusions to the carried amounts. This exhibit is to be consistent with the

[90] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

segmentation used in the Appointed Actuary's analysis, and conclusions must include the Appointed Actuary's point estimate(s), range(s) of reasonable estimates, or both.

Further, AOWG guidance includes additional commentary based on the regulator's interpretation of the requirement:

> *"The Actuarial Opinion Summary already provides this information at the highest level of aggregation; this information should still be presented in the Actuarial Report…* [The Actuarial Report is] *intended to capture the comparisons at a more detailed level consistent with how the reserves were analyzed, to the extent these comparisons are possible."*[91]

8.4.2 Illustrative language

An exhibit similar to the below may be appropriate:

Analysis Segment	Actuary Estimated *(1)*	Actuarial Report Exhibit *(2)*	Company Carried *(3)*	Source of Company Carried *(4)*	Difference *(5) = (3) - (1)*
Homeowners	$XX,XXX	Exhibit B	$YY,YYY	Schedule P, Part 1A	$ZZ,ZZZ
Private Passenger Auto	XXX,XXX	Exhibit C	YYY,YYY	Schedule P, Part 1B	ZZZ,ZZZ
All Other LOB - State A	X,XXX	Exhibit D	Y,YYY	Company workpaper	Z,ZZZ
All Other LOB - All Other States	X,XXX	Exhibit E	Y,YYY	Company workpaper	Z,ZZZ
Total	$XXX,XXX	Exhibit A	$YYY,YYY	AS, Page 3	$ZZZ,ZZZ

8.5 Reconciling and mapping data in the Actuarial Report to Schedule P

The Instructions include the following requirement of Actuarial Reports:

> *"An exhibit that reconciles and maps the data used by the Appointed Actuary, consistent with the segmentation of exposure or liability groupings used in the Appointed Actuary's analysis, to the Annual Statement Schedule P line of business reporting. An explanation should be provided for any material differences."*[92] [90]

8.5.1 Discussion

The Schedule P reconciliation is intended to be consistent with the segmentation used in the Appointed Actuary's analysis.

[91] 2018 AOWG Regulatory Guidance, page 6 (Appendix II).
[92] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

The 2018 AOWG Regulatory Guidance provides extended commentary on the topic, which the Appointed Actuary may wish to consider. The Guidance notes that regulators expect the Schedule P reconciliation to include at least a mapping of the data groupings used in the analysis to Schedule P lines of business, along with detailed reconciliation of the data at the lowest possible/practical level of segmentation. The data should be compared after minimal necessary aggregation between the analysis and/or Schedule P lines of business. The AOWG Regulatory Guidance goes on to state that, if the reconciliation cannot be performed, the reasons should be noted in the Report.

According to AOWG Regulatory Guidance, all data elements material to the analysis should be included in the reconciliation:

> *"The Appointed Actuary should reconcile all data material to the analysis, including claim counts and earned premium if appropriate.*[93]*"*

There are the nuances that the Appointed Actuary may decide to take into consideration with respect to the Schedule P reconciliation. For example,

- The 2018 AOWG Regulatory Guidance specifies a number of circumstances such as "mergers, acquisitions, changes in claim systems, and the use of underwriting year data in the analysis"[94] that present challenges to Appointed Actuaries, and "encourages Appointed Actuaries to disclose reconciliation issues in the Actuarial Report."[95]

- The 2018 AOWG guidance also encourages Appointed Actuaries to consider whether a calendar year reconciliation of total paid losses (all accident years combined) "provides sufficient assurance of the integrity of the data used in the analysis…"[96]

- COPLFR further recognizes there may be issues in the way in which claims are counted (e.g., per claim versus per occurrence, the availability of assumed claim counts, etc.) and notes that there is no requirement to audit the claim counts presented in Schedule P.

The NAIC Instructions are explicit that material differences arising from the Schedule P reconciliation must be explained by the Appointed Actuary.

[93] 2018 AOWG Regulatory Guidance, page 8 (Appendix II).
[94] 2018 AOWG Regulatory Guidance, page 7 (Appendix II).
[95] 2018 AOWG Regulatory Guidance, page 7 (Appendix II).
[96] 2018 AOWG Regulatory Guidance, page 8 (Appendix II).

Note:

- The mapping between analysis segments and Schedule P lines of business may also be used for the comparison of Actuary's conclusions to the carried amounts as discussed in section 8.3.
- AOWG Regulatory Guidance highlights the relationship between the reconciliation performed by the Appointed Actuary, which generally entails the reconciliation of the actuarial data to that shown in Schedule P, and that performed by the independent auditors, focused on the consistency between Schedule P and the data in the company's claims system.

For further discussion, please see Chapter 3 and the AOWG Regulatory Guidance.

8.6 Exhibit and discussion on change in Appointed Actuary's estimates

In addition to comparing estimates and reconciling data to the company's Annual Statement, the Instructions also include a requirement to compare the Actuary's estimates to the prior Actuarial Report:

> *An exhibit or appendix showing the change in the Appointed Actuary's estimates from the prior Actuarial Report, including extended discussion of factors underlying any material changes. The exhibit or appendix should illustrate the changes on a net basis, but should also include the changes on a gross basis, if relevant. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.*[97]

FAQ: My analysis of the Company includes interim reserve evaluations in addition to the analysis supporting the SAO. What should be included in the exhibit showing the change in actuary's estimates?

A: While a comparison to interim analysis estimates may be instructive, the requirement is for the change in estimates and relevant discussion be relative to the Actuarial Report that supported the prior SAO.

8.6.1 Discussion

The Instructions require the Appointed Actuary to include in the Actuarial Report an exhibit that summarizes changes in the Appointed Actuary's estimates from the prior analysis, with extended discussion of significant factors underlying the changes. These requirements seem to be intended to apply to the change in the Appointed Actuary's prior period estimates since the previous Actuarial Report. This exhibit or appendix is to show the change in the Appointed Actuary's estimates, not the company's.

The requirement was clarified in the year-end 2016 NAIC Instructions to include illustration of the changes on a net basis, and on a gross basis if relevant.

NAIC SAO Instructions require discussion of significant changes. The level of detail used to describe the significant factors underlying material changes in estimates is left to the discretion of the Appointed Actuary. The AOWG

[97] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

Regulatory Guidance suggests that an explanation be provided for any significant fluctuations in estimates among accident years or segments, or possibly in even more granular detail. Further, the amount of change that constitutes a significant amount is left to the Appointed Actuary's judgment. *"Significant"* in this context would typically be lower than the materiality standard used in consideration of the risk of material adverse deviation in the SAO.

To meet the requirements of this part of the Instructions, and in accordance with the spirit in which COPLFR believes these Instructions are intended, the Appointed Actuary may wish to consider including the following in the Actuarial Report (gross and net of reinsurance):

1) Exhibit(s) and discussion related to significant changes in point estimates from the prior Actuarial Report (if a point estimate is included in the Actuarial Report), categorized by reviewed segment, accident year, and in total.

   Exhibit(s) and discussion related to significant changes in the range of estimates from the prior year (if a range is included in the Actuarial Report), if meaningful and practical, including discussion of any significant expansion or contraction of the range relative to the prior Actuarial Report.

When there is a change in Appointed Actuary, the new Appointed Actuary is encouraged to discuss material changes in estimates in the Report, to the extent that it is reasonably possible to do so. If no such comparison is practical or meaningful, the Appointed Actuary should make a disclosure consistent with that reported in the SAO.

Note:

- If the Appointed Actuary estimated ultimate amounts (losses and/or LAE) in the previous Actuarial Report, then, in this Actuarial Report, the change in estimates would be calculated as the change in estimated ultimate amounts, for prior periods. If the Appointed Actuary estimated reserves directly in the previous Actuarial Report (e.g., because of the specific methodology used or because a complete history of paid losses was not available), then the change in estimates would be calculated as the incremental paid amounts plus the change in the estimated unpaid amounts between Actuarial Reports, again for prior periods.

8.7 Extended comments on risks and uncertainties

The Instructions also include a requirement for the Actuary to expand on certain items that are included in the SAO:

Extended comments on trends that indicate the presence or absence of risks and uncertainties

that could result in material adverse deviation.[98]

8.7.1 Discussion

As noted in the Instructions, the Actuarial Report is expected to be held confidential and not intended for public inspection. Thus, the extended comments about risks and uncertainties may include details that may not be in the public domain. At a minimum, the Actuarial Report should support the Actuary's conclusion about whether RMAD exists and this often will require more detail than is included in the SAO.

Extended comments could include additional discussion on the major factors discussed in the SAO and how they are (or are not) applicable to the company, how the risk factors could lead to adverse deviation in excess of the materiality threshold (a sensitivity analysis for example), or any other commentary or analyses that the Actuary believes would be helpful to the company and/or the Regulator in support of the conclusion about the existence of RMADs.

FAQ: Is this still a requirement if the Opinion states there are not significant risks that could result in material adverse deviation?

A: Yes. Section 4.1.3d of ASOP 41 states that the actuary should disclose "any cautions about risks and uncertainty" in any actuarial report, unless the actuary determines it is inappropriate to do so. In addition, the 2018 NAIC Instructions state that a discussion of risk factors is to be included in the SAO even when the actuary concludes there is no material risk of adverse deviation, and this requirement would similarly extend to the Actuarial Report.

Note:

- Despite the Instructions requiring "Extended comments on trends that indicate the presence or absence of risks and uncertainties that could result in material adverse deviation,"[†] the Appointed Actuary may wish to comment on sources of risk and uncertainty that are not trends, such as significant, one-time events.

[†] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

8.8 Extended comments on unusual values for IRIS Ratio 11, 12, and/or 13

The Instructions also include a requirement for the Actuary to include additional discussion in the Actuarial Report if the company triggers an unusual result on one of the reserve-based IRIS Ratios:

Extended comments on factors that led to unusual IRIS ratios for One-Year Reserve Development to Policyholders' Surplus, Two-Year Reserve Development to Policyholders' Surplus, or Estimated Current Reserve Deficiency to Policyholders' Surplus, and how these factors were addressed in prior and current analyses. [99]

[98] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[99] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

8.8.1 Discussion

As noted in the *Instructions*, the Actuarial Report is expected to be held confidential and not intended for public inspection. Thus, the extended comments may include detail such as operational details or information on specific claims that may not be appropriate for the SAO document, which rests in the public domain. The Actuary may wish to further provide sensitivity analyses and/or exhibits supporting the expanded discussion on this topic.

9. Resources

This chapter provides a listing of the ASOPs and SSAPs that apply to the material covered by this practice note. It also provides resources to actuaries providing opinions other than those covered by the scope of this practice note.

9.1 Applicable ASOPs

> *ASOPs are binding on members of the U.S.-based actuarial organizations when rendering actuarial services in the U.S. While these ASOPs are binding, they are not the only considerations that affect an actuary's work. Other considerations may include legal and regulatory requirements, professional requirements promulgated by employers or actuarial organizations, evolving actuarial practice, and the actuary's own professional judgment informed by the nature of the engagement. The ASOPs provide a basic framework that is intended to accommodate these additional considerations.*[100]

According to the ASB, the ASOPs "*identify what the actuary should consider, document, and disclose when performing an actuarial assignment.*"[101]

While all ASOPs are binding, per a COPLFR review the following appear to be particularly relevant to actuaries signing NAIC property and casualty SAOs:

- ASOP No.1, *Introductory Actuarial Standard of Practice*
- ASOP No. 20, *Discounting of Property/Casualty Unpaid Claim Estimates*
- ASOP No. 21, *Responding to or Assisting Auditors or Examiners in Connection with Financial Audits, Financial Reviews, and Financial Examinations*
- ASOP No. 23, *Data Quality*
- ASOP No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*
- ASOP No. 38, *Using Models Outside the Actuary's Area of Expertise (Property and Casualty)*
- ASOP No. 41, *Actuarial Communications*
- ASOP No 43, *Property/Casualty Unpaid Claim Estimates*

The above can be found at the ASB website: http://www.actuarialstandardsboard.org/

[100] Actuarial Standards Board, ASOP No. 1, *Introductory Actuarial Standard of Practice*, http://www.actuarialstandardsboard.org/asops/introductoryactuarialstandardpractice/, Section 1.
[101] Ibid.

9.2 Applicable SSAPs

According to the NAIC,

> **The Statutory Accounting Principles (E) Working Group is responsible for developing and adopting substantive, nonsubstantive and interpretation revisions to the NAIC Accounting Practices and Procedures Manual (AP&P Manual). The AP&P Manual provides the basis for insurers to prepare financial statements for financial regulation purposes. Substantive statutory accounting revisions introduce original or modified accounting principles. SSAPs are considered the highest authority (Level 1) in the statutory accounting hierarchy.**[102]

There are over 100 SSAPs and they are published in the NAIC's *Accounting Practices and Procedures Manual,* available for sale from the NAIC at:

https://www.naic.org/prod_serv_publications_for_sale.htm#app_manual.

COPLFR has received permission to reproduce SSAPs particularly applicable to actuaries signing NAIC property and casualty SAOs per a COPLFR review. We have included these in Appendix IV of this practice note.

These SSAPs are as follows:

SSAP 5R: *Liabilities, Contingencies and Impairment of Assets*

SSAP 9: *Subsequent Events*

SSAP 29: *Prepaid Expenses*

SSAP 53: *Property Casualty Contracts - Premiums*

SSAP 55: *Unpaid Claims, Losses and Loss Adjustment Expenses*

SSAP 57: *Title Insurance*

SSAP 58: *Mortgage Guaranty Insurance*

SSAP 62R: *Property and Casualty Reinsurance*

SSAP 63: *Underwriting Pools and Associations Including Intercompany Pools*

SSAP 65: *Property and Casualty Contracts*

SSAP 66: *Retrospectively Rated Contracts*

The NAIC adopted codification of statutory accounting principles effective January 1, 2001 to serve as a common set of principles for individual states to follow. The SSAPs promote consistency and ease regulatory burden. However, individual state regulation is still permissible, and individual states may have specific statutes or regulations that supersede SSAPs. The NAIC publishes a summary of state differences available free of charge online at https://www.naic.org/prod_serv/SPD-OPS-18.pdf.

Note that the SSAPs are subject to change every year and have seen numerous changes since they were

[102] http://www.naic.org/cmte_e_app_sapwg.htm

originally issued in 2001.

9.3 Available resources for opinions not covered by this practice note

As noted in the Introduction to this document,

> This practice note is intended to assist actuaries by describing practices that COPLFR believes are commonly employed in issuing SAOs and AOSs on loss and loss adjustment expense (LAE) reserves in compliance with the Property and Casualty Annual Statement Instructions (Annual Statement Instructions) for 2018 issued by the NAIC. Actuaries may also find this information useful in preparing statements of actuarial opinion for other audiences or regulators.

While property and casualty actuaries may also find the information contained in this practice note useful in preparing statements of actuarial opinion for other audiences or regulators (other than in accordance with the NAIC SAO Instructions), there are other resources available. Generally, actuaries will look to the regulatory authority for specific requirements pertaining to the type of opinion being prepared. These requirements are often found on the website of the regulatory authority. The Academy's *2018 P/C Loss Reserve Law Manual* may also provide guidance on these points. Some examples include:

Type of opinion	Regulatory authority	Website
Bermuda opinion of the Loss Reserve Specialist	Bermuda Monetary Authority	http://www.bma.bm/SitePages/Home.aspx
Cayman captive Statement of Actuarial Opinion	Cayman Islands Monetary Authority	http://www.cimoney.com.ky/
Hawaii captive Statement of Actuarial Opinion	State of Hawai'i Insurance Division, Department of Commerce & Consumer Affairs	http://cca.hawaii.gov/captive/
Vermont captive Statement of Actuarial Opinion	Vermont Department of Financial Regulation	http://www.dfr.vermont.gov/captives/annual-filing-instructions-vermont-domestic-captives

The Appointed Actuary may wish to contact the regulatory authority directly to obtain the specific opinion requirements.

APPENDICES

I. 2018 NAIC Instructions

This appendix to the practice note provides the 2018 NAIC Instructions with respect to the property and casualty SAO (Appendix I.1) and AOS (Appendix I.2). The NAIC Instructions for Title Insurance SAOs (Appendix I.3) are also included for informational purposes only. Appendix 1.4 provides the 2018 NAIC Annual Statement Instructions section on Annual Audited Financial Reports, including auditor data testing requirements. No discussion is included.

I.1 2018 NAIC Property and Casualty SAO Instructions

ACTUARIAL OPINION

1. There is to be included with or attached to Page 1 of the Annual Statement the statement of a Qualified Actuary, entitled "Statement of Actuarial Opinion" (Actuarial Opinion), setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and required Exhibits, shall be in the format of and contain the information required by this section of the *Annual Statement Instructions – Property and Casualty*.

   Upon initial engagement, the Qualified Actuary must be appointed by the Board of Directors by Dec. 31 of the calendar year for which the opinion is rendered. The Company shall notify the domiciliary commissioner within five business days of the initial appointment with the following information:

   a. Name and title (and, in the case of a consulting actuary, the name of the firm).
   b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).
   c. A statement that the person meets the requirements of a Qualified Actuary.

   Once this notification is furnished, no further notice is required with respect to this person unless the Board of Directors takes action to no longer appoint or retain the actuary or the actuary no longer meets the requirements of a Qualified Actuary.

   If an actuary who was the Appointed Actuary for the immediately preceding filed Actuarial Opinion is replaced by an action of the Board of Directors, the Insurer shall within five (5) business days notify the Insurance Department of the state of domicile of this event. The Insurer shall also furnish the domiciliary commissioner with a separate letter within ten (10) business days of the above notification stating whether in the twenty-four (24) months preceding such event there were any disagreements with the former Appointed Actuary regarding the content of the opinion on matters of the risk of material adverse deviation, required disclosures, scope, procedures, type of opinion issued, substantive wording of the opinion or data quality. The disagreements required to be reported in response to this paragraph include both those resolved to the former Appointed Actuary's satisfaction and those not resolved to the former Appointed Actuary's satisfaction. The letter should include a description of the disagreement and the nature of its resolution (or that it was not resolved). Within this same ten (10) business days, the Insurer shall in writing also request such former Appointed Actuary to furnish a letter addressed to the Insurer stating whether the Appointed Actuary agrees with the statements contained in the Insurer's letter and, if not, stating the reasons for which he or she does not agree. The former Appointed Actuary shall provide a written response to the insurer within ten (10) business days of such request, and the Insurer shall furnish

such responsive letter from the former Appointed Actuary to the domiciliary commissioner together with its own responses.

The Appointed Actuary must report to the Board of Directors each year on the items within the scope of the Actuarial Opinion. The Actuarial Opinion and the Actuarial Report must be made available to the Board of Directors. The minutes of the Board of Directors should indicate that the Appointed Actuary has presented such information to the Board of Directors and identify the manner of presentation (e.g., webinar, in-person presentation, written). A separate Actuarial Opinion is required for each company filing an Annual Statement. When there is an affiliated company pooling arrangement, one Actuarial Report for the aggregate pool is sufficient, but there must be addendums to the Actuarial Report to cover non-pooled reserves for individual companies.

The Actuarial Opinion and the supporting Actuarial Report and workpapers should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including, but not limited to, ASOP No. 23, ASOP No. 36, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board, and Statements of Principles adopted by the Casualty Actuarial Society.

1A. Definitions

"Appointed Actuary" for purposes of these instructions is a Qualified Actuary appointed by the Board of Directors in accordance with Section 1 of these instructions.

"Board of Directors" for purposes of these instructions can include the designated Board of Directors, its equivalent or an appropriate committee directly reporting to the Board of Directors.

"Qualified Actuary" is a person who meets the basic education, experience and continuing education requirements of the Specific Qualification Standard for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement, as set forth in the *Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States*, promulgated by the American Academy of Actuaries, and is either:

(i) A member in good standing of the Casualty Actuarial Society; or

(ii) A member in good standing of the American Academy of Actuaries who has been approved as qualified for signing casualty loss reserve opinions by the Casualty Practice Council of the American Academy of Actuaries.

"Insurer" or "Company" means an insurer or reinsurer authorized to write property and/or casualty insurance under the laws of any state and who files on the Property and Casualty Blank.

"Actuarial Report" means a document or other presentation prepared as a formal means of conveying to the state regulatory authority and the Board of Directors the Appointed Actuary's professional conclusions and recommendations of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the Appointed Actuary's opinion or findings, and of documenting the analysis underlying the opinion. The required content of the Actuarial Report is further described in paragraph 7. (Note that the inclusion of the Board of Directors as part of the intended audience for the Actuarial Report does not change the content of the Actuarial Report as described in paragraph 7. The Appointed Actuary should present findings to the Board of Directors in a manner deemed suitable for such audience.)

"Property and Casualty (P&C) Long Duration Contracts" refers to contracts (excluding financial guaranty contracts, mortgage guaranty contracts and surety contracts) that fulfill both of the following conditions: (1) the contract term is greater than or equal to 13 months; and (2) the insurer can neither cancel the

contract nor increase the premium during the contract term. These contracts are subject to the three tests of *SSAP No. 65—Property and Casualty Contracts* of the NAIC *Accounting Practices and Procedures Manual*.

"Accident and Health (A&H) Long Duration Contracts" refers to A&H contracts in which the contract term is greater than or equal to 13 months and contract reserves are required. See Schedule H instructions for a description of categories of contract reserves, as well as policy features that give rise to contract reserves. Two specific examples of contracts that typically require contract reserves are long-term care and disability income insurance.

1B. Exemptions

An insurer who intends to file for one of the exemptions under this Section must submit a letter of intent to its domiciliary commissioner no later than December 1 of the calendar year for which the exemption is to be claimed. The commissioner may deny the exemption prior to December 31 of the same year if he or she deems the exemption inappropriate.

A copy of the approved exemption must be filed with the Annual Statement in all jurisdictions in which the company is authorized.

Exemption for Small Companies

An insurer that has less than $1,000,000 total direct plus assumed written premiums during a calendar year, and less than $1,000,000 total direct plus assumed loss and loss adjustment expense reserves at year-end, in lieu of the Actuarial Opinion required for the calendar year, may submit an affidavit under oath of an officer of the insurer that specifies the amounts of direct plus assumed written premiums and direct plus assumed loss and loss adjustment reserves.

Exemption for Insurers under Supervision or Conservatorship

Unless ordered by the domiciliary commissioner, an insurer that is under supervision or conservatorship pursuant to statutory provision is exempt from the filing requirements contained herein.

Exemption for Nature of Business

An insurer otherwise subject to the requirement and not eligible for an exemption as enumerated above may apply to its domiciliary commissioner for an exemption based on the nature of business written.

Financial Hardship Exemption

An insurer otherwise subject to this requirement and not eligible for an exemption as enumerated above may apply to the commissioner for a financial hardship exemption. Financial hardship is presumed to exist if the projected reasonable cost of the Actuarial Opinion would exceed the lesser of:

(i) One percent (1%) of the insurer's capital and surplus reflected in the insurer's latest quarterly statement for the calendar year for which the exemption is sought; or

(ii) Three percent (3%) of the insurer's direct plus assumed premiums written during the calendar year for which the exemption is sought as projected from the insurer's latest quarterly statements filed with its domiciliary commissioner.

1C. Reporting Requirements for Pooled Companies

For each company in the pool, the Appointed Actuary shall include a description of the pool, identification of the lead company and a listing of all companies in the pool, their state of domicile and their respective pooling percentages.

Exhibits A and B for each company in the pool should represent the company's share of the pool and should reconcile to the financial statement for that company.

The following paragraph applies to companies that have a 0% share of the pool (no reported Schedule P data). The company shall submit an Actuarial Opinion that reads similar to that provided for the lead company. For example, the IRIS ratio and risk of material adverse deviation discussions, and other relevant comments shall relate to the risks of the lead company in the pool. The Exhibit B responses to question 5 should be $0 and to question 6 should be "not applicable." Exhibits A and B of the lead company should be attached as an addendum to the PDF file and/or hard copy being filed (but would not be reported by the 0% companies in their data capture).

2. The Actuarial Opinion must consist of an IDENTIFICATION paragraph identifying the Appointed Actuary; a SCOPE paragraph identifying the subjects on which an opinion is to be expressed and describing the scope of the Appointed Actuary's work; an OPINION paragraph expressing his or her opinion with respect to such subjects; and one or more additional RELEVANT COMMENTS paragraphs. These four sections must be clearly designated.

3. The IDENTIFICATION paragraph should indicate the Appointed Actuary's relationship to the Company, qualifications for acting as Appointed Actuary and date of appointment, and specify that the appointment was made by the Board of Directors.

A member of the American Academy of Actuaries qualifying under paragraph 1A(ii) must attach, each year, a copy of the approval letter from the Academy.

These Instructions require that a Qualified Actuary prepare the Actuarial Opinion. Nevertheless, if a person who does not meet the definition of a Qualified Actuary has been approved by the insurance regulatory official of the domiciliary state, the Company must attach, each year, a letter from that official stating that the individual meets the state's requirements for rendering the Actuarial Opinion.

4. The SCOPE paragraph should contain a sentence such as the following:

"I have examined the actuarial assumptions and methods used in determining reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 20__, and reviewed information provided to me through XXX date."

Exhibit A should list those items and amounts with respect to which the Appointed Actuary is expressing an opinion.

The Appointed Actuary should state that the items in the SCOPE, on which he or she is expressing an opinion, reflect Disclosure items 8 through 13.2 in Exhibit B.

The SCOPE paragraph should include a paragraph such as the following regarding the data used by the Appointed Actuary in forming the opinion:

"In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by _____ (officer name and title at the Company). I evaluated that data for reasonableness and consistency. I also reconciled that data to Schedule P, Part 1 of the Company's current Annual Statement.

In other respects, my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary."

5. The OPINION paragraph should include a sentence that at least covers the points listed in the following illustration:
"In my opinion, the amounts carried in Exhibit A on account of the items identified:

   A. Meet the requirements of the insurance laws of (state of domicile).

   B. Are computed in accordance with accepted actuarial standards and principles.

   C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements."

If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts or Other Loss Reserve items on which the Appointed Actuary is expressing an opinion, the Actuarial Opinion should contain language such as the following:

   D. Make a reasonable provision for the unearned premium reserves for P&C Long Duration Contracts and/or <insert Other Loss Reserve item on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements.

If there is any aggregation or combination of items in Exhibit A, the opinion language should clearly identify the combined items.

Insurance laws and regulations shall at all times take precedence over the actuarial standards and principles.

If the Appointed Actuary has made use of the analysis of another actuary not within the Appointed Actuary's control (such as for pools and associations, for a subsidiary or for special lines of business) for a material portion of the reserves, the other actuary must be identified by name, credential and affiliation within the OPINION paragraph. If the Appointed Actuary has made use of the work of a non-actuary (such as for modeling) for a material portion of the reserves, that individual must be identified by name and affiliation and a description of the type of analysis performed must be provided.

A Statement of Actuarial Opinion should be made in accordance with one of the following sections (1 through 5). The Appointed Actuary must explicitly identify in Exhibit B which type applies.

1. Determination of Reasonable Provision. When the carried reserve amount is within the Appointed Actuary's range of reasonable reserve estimates, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves.

2. Determination of Deficient or Inadequate Provision. When the carried reserve amount is less than the minimum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the minimum amount that the Appointed Actuary believes is reasonable.

3. Determination of Redundant or Excessive Provision. When the carried reserve amount is greater than the maximum amount that the Appointed Actuary believes is reasonable, the Appointed

Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the maximum amount that the Appointed Actuary believes is reasonable.

4. Qualified Opinion. When, in the Appointed Actuary's opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated or the Appointed Actuary is unable to render an opinion on those items, the Appointed Actuary should issue a qualified Statement of Actuarial Opinion. The Appointed Actuary should disclose the item (or items) to which the qualification relates, the reason(s) for the qualification and the amounts for such item(s), if disclosed by the Company. Such a qualified opinion should state whether the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, *except for* the item (or items) to which the qualification relates. The Appointed Actuary is not required to issue a qualified opinion if the Appointed Actuary reasonably believes that the item (or items) in question are not likely to be material.

5. No Opinion. The Appointed Actuary's ability to give an opinion is dependent upon data, analyses, assumptions, and related information that are sufficient to support a conclusion. If the Appointed Actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions, or related information, then the Appointed Actuary may issue a statement of no opinion. A statement of no opinion should include a description of the reasons why no opinion could be given.

6. The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address the following topics of regulatory importance.

A. Company-Specific Risk Factors

The Appointed Actuary should include an explanatory paragraph to describe the major factors, combination of factors or particular conditions underlying the risks and uncertainties the Appointed Actuary considers relevant. The explanatory paragraph should not include general, broad statements about risks and uncertainties due to economic changes, judicial decisions, regulatory actions, political or social forces, etc., nor is the Appointed Actuary required to include an exhaustive list of all potential sources of risks and uncertainties.

B. Risk of Material Adverse Deviation

The Appointed Actuary must provide specific RELEVANT COMMENT paragraphs to address the risk of material adverse deviation. The Appointed Actuary must identify the materiality standard and the basis for establishing this standard. The materiality standard must also be disclosed in U.S. dollars in Exhibit B: Disclosures. The Appointed Actuary should explicitly state whether or not he or she reasonably believes that there are significant risks and uncertainties that could result in material adverse deviation. This determination is also to be disclosed in Exhibit B.

C. Other Disclosures in Exhibit B

RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact.

D. Reinsurance

RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance.

The Appointed Actuary's comments on reinsurance collectability should address any uncertainty associated with including potentially-uncollectable amounts in the estimate of ceded reserves. Before commenting on reinsurance collectability, the Appointed Actuary should solicit information from management on any actual collectability problems, review ratings given to reinsurers by a recognized rating service, and examine Schedule F for the current year for indications of regulatory action or reinsurance recoverable on paid losses over ninety (90) days past due. The comment should also reflect any other information the Appointed Actuary has received from management or that is publicly available about the capability or willingness of reinsurers to pay claims. The Appointed Actuary's comments do not imply an opinion on the financial condition of any reinsurer.

Retroactive reinsurance refers to agreements referenced in *SSAP No. 62R—Property and Casualty Reinsurance* of the NAIC *Accounting Practices and Procedures Manual*.

Financial reinsurance refers to contracts referenced in SSAP No. 62R in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance.

E. IRIS Ratios

If the Company's reserves will create exceptional values under the NAIC IRIS Tests for One-Year Reserve Development to Policyholders' Surplus, Two-Year Reserve Development to Policyholders' Surplus or Estimated Current Reserve Deficiency to Policyholders' Surplus, the Appointed Actuary must include RELEVANT COMMENT on the factors that led to the unusual value(s).

F. Methods and Assumptions

If there has been any significant change in the actuarial assumptions and/or methods from those previously employed, that change should be described in a RELEVANT COMMENT paragraph. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

7. The Actuarial Opinion must include assurance that an Actuarial Report and underlying actuarial workpapers supporting the Actuarial Opinion will be maintained at the Company and available for regulatory examination for seven (7) years. The Actuarial Report contains significant proprietary information. It is expected that the Actuarial Report be held confidential and not be intended for public inspection. The Actuarial Report must be available by May 1 of the year following the year-end for which the Actuarial Opinion was rendered or within two (2) weeks after a request from an individual state commissioner.

The Actuarial Report should be consistent with the documentation and disclosure requirements of ASOP No. 41, Actuarial Communications. The Actuarial Report must contain both narrative and technical components. The narrative component should provide sufficient detail to clearly explain to Company management, the Board of Directors, the regulator or other authority the findings, recommendations and conclusions, as well as their significance. The technical component should provide sufficient documentation and disclosure for another actuary practicing in the same field to evaluate the work. This technical component must show the analysis from the basic data (e.g., loss triangles) to the conclusions.

Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) in the NAIC *Accounting Practices and Procedures Manual* requires a company with over 10,000 in force lives covered by long-term care (LTC) insurance contracts as of the valuation date to perform a stand-alone asset adequacy analysis for its in force long-term care (LTC) contracts. The Actuarial Report and workpapers summarizing the results, assumptions and testing procedures for the asset adequacy testing of LTC business must be in compliance with AG 51 requirements. When referring to AG 51, the term "Actuarial Memorandum" is synonymous with Actuarial Report and workpapers.

The Actuarial Report should contain disclosure of all reserve amounts associated with A&H Long Duration Contracts reported by the Company; the reserve amounts in the Actuarial Report should tie to the Annual Statement.

The Actuarial Report must also include:

A. A description of the Appointed Actuary's relationship to the Company, with clear presentation of the Appointed Actuary's role in advising the Board of Directors and/or management regarding the carried reserves. The Actuarial Report should identify how and when the Appointed Actuary presents the analysis to the Board of Directors and, where applicable, to the officer(s) of the Company responsible for determining the carried reserves.

B. An exhibit that ties to the Annual Statement and compares the Appointed Actuary's conclusions to the carried amounts consistent with the segmentation of exposure or liability groupings used in the analysis. The Appointed Actuary's conclusions include the Appointed Actuary's point estimate(s), range(s) of reasonable estimates or both.

C. An exhibit that reconciles and maps the data used by the Appointed Actuary, consistent with the segmentation of exposure or liability groupings used in the Appointed Actuary's analysis, to the Annual Statement Schedule P line of business reporting. An explanation should be provided for any material differences.

D. An exhibit or appendix showing the change in the Appointed Actuary's estimates from the prior Actuarial Report, including extended discussion of factors underlying any material changes. The exhibit or appendix should illustrate the changes on a net basis, but should also include the changes on a gross basis, if relevant. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

E. Extended comments on trends that indicate the presence or absence of risks and uncertainties that could result in material adverse deviation.

F. Extended comments on factors that led to unusual IRIS ratios for One-Year Reserve Development to Policyholders' Surplus, Two-Year Reserve Development to Policyholders' Surplus or Estimated Current Reserve Deficiency to Policyholders' Surplus, and how these factors were addressed in prior and current analyses.

8. Both the Actuarial Opinion and the Actuarial Report should conclude with the signature of the Appointed Actuary responsible for providing the Actuarial Opinion and the respective dates when the Actuarial Opinion was rendered and the Actuarial Report finalized. The signature and date should appear in the following format:

_____
Signature of Appointed Actuary
Printed name of Appointed Actuary

Employer's name
Address of Appointed Actuary
Telephone number of Appointed Actuary
Email address of Appointed Actuary
Date opinion was rendered

9. The Insurer required to furnish an Actuarial Opinion shall require its Appointed Actuary to notify its Board of Directors or its audit committee in writing within five (5) business days after any determination by the Appointed Actuary that the Actuarial Opinion submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect. The Actuarial Opinion shall be considered to be in error if the Actuarial Opinion would have not been issued or would have been materially altered had the correct data or other information been used. The Actuarial Opinion shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected. Notification is required when discovery is made between the issuance of the Actuarial Opinion and Dec. 31 of that year. Notification should include a summary of such findings.

   If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the Actuarial Opinion, the Appointed Actuary and the Company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.

   An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the amended Actuarial Opinion to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the letter and amended Actuarial Opinion submitted to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that an amended Actuarial Opinion has been finalized.

   No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs.

10. Data in Exhibits A and B are to be filed in both print and data capture format.

Exhibit A: SCOPE
DATA TO BE FILED IN BOTH PRINT AND DATA CAPTURE FORMATS

Loss and Loss Adjustment Expense Reserves:	Amount
1. Unpaid Losses (Liabilities, Surplus and Other Funds page, Col 1, Line 1)	$ _____
2. Unpaid Loss Adjustment Expenses (Liabilities, Surplus and Other Funds page, Col 1, Line 3)	$ _____
3. Unpaid Losses – Direct and Assumed (Should equal Schedule P, Part 1, Summary, Totals from Cols. 13 and 15, Line 12 * 1000)	$ _____
4. Unpaid Loss Adjustment Expenses – Direct and Assumed (Should equal Schedule P, Part 1, Summary, Totals from Cols. 17, 19 and 21, Line 12 * 1000)	$ _____

5. The Page 3 write-in item reserve, "Retroactive Reinsurance Reserve Assumed" $ _____
6. Other Loss Reserve items on which the Appointed Actuary is expressing an Opinion (list separately, adding additional lines as needed) $ _____

Premium Reserves:

7. Reserve for Direct and Assumed Unearned Premiums for P&C Long Duration Contracts $ _____
8. Reserve for Net Unearned Premiums for P&C Long Duration Contracts $ _____
9. Other Premium Reserve items on which the Appointed Actuary is expressing an Opinion (list separately, adding additional lines as needed) $ _____

Exhibit B: DISCLOSURES

DATA TO BE FILED IN BOTH PRINT AND DATA CAPTURE FORMATS

NOTE: Exhibit B should be completed for Net dollar amounts included in the SCOPE. If an answer would be different for Direct and Assumed amounts, identify and discuss the difference within RELEVANT COMMENTS.

1. Name of the Appointed Actuary Last _____ First _____ Mid _____

2. The Appointed Actuary's relationship to the Company
   Enter E or C based upon the following:
   - E if an Employee of the Company or Group
   - C if a Consultant _____

3. The Appointed Actuary has the following designation (indicated by the letter code):
   - F if a Fellow of the Casualty Actuarial Society (FCAS)
   - A if an Associate of the Casualty Actuarial Society (ACAS)
   - M if not a member of the Casualty Actuarial Society, but a Member of the American Academy of Actuaries (MAAA) approved by the Casualty Practice Council, as documented with the attached approval letter.
   - O for Other _____

4. Type of Opinion, as identified in the OPINION paragraph. Enter R, I, E, Q, or N based upon the following:
   - R if Reasonable
   - I if Inadequate or Deficient Provision
   - E if Excessive or Redundant Provision
   - Q if Qualified. Use Q when part of the OPINION is Qualified.
   - N if No Opinion _____

5. Materiality Standard expressed in U.S. dollars (used to Answer Question #6) $ _____

6. Are there significant risks that could result in Material Adverse Deviation? Yes [ ] No [ ] Not Applicable [ ]
7. Statutory Surplus (Liabilities, Surplus and Other Funds page, Col 1, Line 37) $ _____
8. Anticipated net salvage and subrogation included as a reduction to loss reserves as reported in Schedule P (should equal Part 1 Summary, Col 23, Line 12 * 1000) $ _____
9. Discount included as a reduction to loss reserves and loss adjustment expense reserves as reported in Schedule P
   - 9.1 Nontabular Discount [Notes, Line 32B23, (Amounts 1, 2, 3 & 4)], Electronic Filing Cols 1, 2, 3, & 4 $ _____
   - 9.2 Tabular Discount [Notes, Line 32A23, (Amounts 1 & 2)], Electronic Filing Col 1 & 2 $ _____
10. The net reserves for losses and loss adjustment expenses for the Company's share of voluntary and involuntary underwriting pools' and associations' unpaid losses and loss adjustment expenses that are included in reserves shown on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines $ _____
11. The net reserves for losses and loss adjustment expenses that the Company carries for the following liabilities included on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines *
    - 11.1 Asbestos, as disclosed in the Notes to Financial Statements (Notes, Line 33A03D, ending net asbestos reserves for current year) Electronic Filing Col 5 $ _____
    - 11.2 Environmental, as disclosed in the Notes to Financial Statements (Notes, Line 33D03D, ending net environmental reserves for current year), Electronic Filing Col 5 $ _____
12. The total claims made extended loss and loss adjustment expense, and unearned premium reserves (Greater than or equal to Schedule P Interrogatories)
    - 12.1 Amount reported as loss and loss adjustment expense reserves $ _____
    - 12.2 Amount reported as unearned premium reserves $ _____
13. The net reserves for the A&H Long Duration Contracts that the Company carries on the following lines on the Liabilities, Surplus and Other Funds page:
    - 13.1 Losses $ _____
    - 13.2 Loss Adjustment Expenses $ _____
    - 13.3 Unearned Premium $ _____
    - 13.4 Write-In (list separately, adding additional lines as needed, and identify (e.g., "Premium Deficiency Reserves", "Contract Reserves other than Premium Deficiency Reserves" or "AG 51 Reserves")) $ _____

14. Other items on which the Appointed Actuary is providing relevant comment (list separately, adding additional lines as needed) $ _____
_____

* The reserves disclosed in item 11 above, should exclude amounts relating to contracts specifically written to cover asbestos and environmental exposures. Contracts specifically written to cover these exposures include Environmental Impairment Liability (post 1986), Asbestos Abatement, Pollution Legal Liability, Contractor's Pollution Liability, Consultant's Environmental Liability, and Pollution and Remediation Legal Liability.

1.2 2018 NAIC Property and Casualty AOS Instructions

ACTUARIAL OPINION SUMMARY SUPPLEMENT

1. For all Companies that are required by their domiciliary state to submit a confidential document entitled Actuarial Opinion Summary (AOS), such document shall be filed with the domiciliary state by March 15 (or by a later date otherwise specified by the domiciliary state). This AOS shall be submitted to a non-domiciliary state within 15 days of request, but no earlier than March 15, provided that the requesting state can demonstrate, through the existence of law or some similar means, that it is able to preserve the confidentiality of the document.

2. The AOS should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including but not limited to ASOP No. 23, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board, and Statements of Principles adopted by the Casualty Actuarial Society.

3. Exemptions for filing the AOS are the same as those for filing the Statement of Actuarial Opinion.

4. The AOS contains significant proprietary information. It is expected that the AOS be held confidential; it is not intended for public inspection. The AOS should not be filed with the NAIC and should be kept separate from any copy of the Statement of Actuarial Opinion (Actuarial Opinion) in order to maintain confidentiality of the AOS. The AOS can contain a statement that refers to the Actuarial Opinion and the date of that opinion.

5. The AOS should be signed and dated by the Appointed Actuary who signed the Actuarial Opinion and shall include at least the following:

    A. The Appointed Actuary's range of reasonable estimates for loss and loss adjustment expense reserves, net and gross of reinsurance, when calculated;

    B. The Appointed Actuary's point estimates for loss and loss adjustment expense reserves, net and gross of reinsurance, when calculated;

    C. The Company's carried loss and loss adjustment expense reserves, net and gross of reinsurance;

    D. The difference between the Company's carried reserves and the Appointed Actuary's estimates calculated in A and B, net and gross of reinsurance; and

E. Where there has been one-year adverse development in excess of 5% of the prior year-end's policyholders' surplus as measured by Schedule P, Part 2 Summary in three (3) or more of the past five (5) calendar years, an explicit description of the reserve elements or management decisions that were the major contributors.

6. The AOS for a pooled Company (as referenced in paragraph 1C of the instructions for the Actuarial Opinion) shall include a statement that the Company is a xx% pool participant. For a non-0% Company, the information provided for paragraph 5 should be numbers after the Company's share of the pool has been applied; specifically, the point or range comparison should be for each statutory Company and should not be for the pool in total. For any 0% pool participant, the information provided for paragraph 5 should be that of the lead company.

7. The net and gross reserve values reported by the Appointed Actuary in the AOS should reconcile to the corresponding values reported in the Insurer's Annual Statement, the Appointed Actuary's Actuarial Opinion and the Actuarial Report. If not, the Appointed Actuary shall provide an explanation of the difference.

8. The Insurer required to furnish an AOS shall require its Appointed Actuary to notify its Board of Directors in writing within five (5) business days after any determination by the Appointed Actuary that the AOS submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect. The AOS shall be considered to be in error if the AOS would have not been issued or would have been materially altered had the correct data or other information been used. The AOS shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected. Notification shall be required when discovery is made between the issuance of the AOS and Dec. 31 of that year. Notification should include a summary of such findings.

   If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the AOS, the Appointed Actuary and the Company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.

   An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the amended AOS to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the letter and amended AOS submitted to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that an amended AOS has been finalized.

9. No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs.

1.3 2018 NAIC Title SAO Instructions

ACTUARIAL OPINION

1. There is to be included with or attached to Page 1 of the Annual Statement, the statement of a Qualified Actuary, entitled "Statement of Actuarial Opinion" (Actuarial Opinion) setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and **required** exhibits, shall be in the format of and contain the information required by this section of the *Annual Statement Instructions – Title*.

   The Qualified Actuary must be appointed by the Board of Directors or its equivalent, or by a committee of the Board, by December 31 of the calendar year for which the opinion is rendered. Upon initial appointment (or "retention"), the Company shall notify the domiciliary commissioner within five business days of the appointment with the following information:

   a. Name and title (and, in the case of a consulting actuary, the name of the firm).
   b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).
   c. A statement that the person meets the requirements of a Qualified Actuary.

   Once this notification is furnished, no further notice is required with respect to this person unless the actuary ceases to be appointed or retained or ceases to meet the requirements of a Qualified Actuary.

   If an actuary who was the Appointed Actuary for the immediately preceding filed Actuarial Opinion is replaced by an action of the Board of Directors, the Insurer shall within five (5) business days notify the Insurance Department of the state of domicile of this event. The Insurer shall also furnish the domiciliary commissioner with a separate letter within ten (10) business days of the above notification stating whether in the twenty-four (24) months preceding such event there were any disagreements with the former Appointed Actuary regarding the content of the opinion on matters of the risk of material adverse deviation, required disclosures, scope, procedures, type of opinion issued, substantive wording of the opinion or data quality. The disagreements required to be reported in response to this paragraph include both those resolved to the former actuary's satisfaction and those not resolved to the former actuary's satisfaction. The letter should include a description of the disagreements and the nature of its resolution (or that it was not resolved). The Insurer shall also request in writing such former actuary to furnish a letter addressed to the Insurer stating whether the actuary agrees with the statements contained in Insurer's letter and, if not, stating the reasons for which he or she does not agree; and the Insurer shall furnish such responsive letter from the former actuary to the domiciliary commissioner together with its own.

   The Appointed Actuary must report to the Board of Directors or the Audit Committee each year on the items within the scope of the Actuarial Opinion. The Actuarial Opinion and the Actuarial Report must be made available to the Board of Directors. The minutes of the Board of Directors should indicate that the Appointed Actuary has presented such information to the Board of Directors or the Audit Committee and that the Actuarial Opinion and the Actuarial Report were made available. A separate Actuarial Opinion is required for each company filing an Annual Statement. When there is an affiliated company pooling arrangement, one Actuarial Report for the aggregate pool is sufficient, but there must be addendums to the Actuarial Report to cover non-pooled reserves for individual companies.

   The Actuarial Opinion and the supporting Actuarial Report and workpapers, should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including but not limited to ASOP No. 23, ASOP No. 36, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board, and Statements of Principles adopted by the Casualty Actuarial Society.

1A. Definitions

"Qualified Actuary" is a person who is either:

(i) A member in good standing of the Casualty Actuarial Society; or

(ii) A member in good standing of the American Academy of Actuaries who has been approved as qualified for signing casualty loss reserve opinions by the Casualty Practice Council of the American Academy of Actuaries.

"Insurer" or "Company" means a reporting entity authorized to write title insurance under the laws of any state and who files on the Title Blank.

"Actuarial Report" means a document or other presentation, prepared as a formal means of conveying to the state regulatory authority and the Board of Directors, or its equivalent, the actuary's professional conclusions and recommendations, of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the actuary's opinion or findings and of documenting the analysis underlying the opinion. The expected content of the Actuarial Report is further described in paragraph 7. (Note that the inclusion of the Board of Directors as part of the intended audience for the Actuarial Report does not change the content of the Actuarial Report as described in paragraph 7. The Appointed Actuary should present findings to the Board of Directors in a manner deemed suitable for such audience.)

1B. Exemptions

An insurer who intends to file for one of the exemptions under this section must submit a letter of intent to its domiciliary commissioner no later than December 1 of the calendar year for which the exemption is to be claimed. The commissioner may deny the exemption prior to December 31 of the same year if the exemption is deemed inappropriate.

A copy of the approved exemption must be filed with the Annual Statement in all jurisdictions in which the company is authorized.

Exemption for Small Companies

An insurer that has less than $1,000,000 total direct plus assumed written premiums during a calendar year, and less than $1,000,000 total direct plus assumed loss and loss adjustment expense reserves at year-end, in lieu of the Actuarial Opinion required for the calendar year, may submit an affidavit under oath of an officer of the insurer that specifies the amounts of direct plus assumed written premiums and direct plus assumed loss and loss adjustment reserves.

Exemption for Insurers under Supervision or Conservatorship

Unless ordered by the domiciliary commissioner, an insurer that is under supervision or conservatorship pursuant to statutory provision is exempt from the filing requirements contained herein.

Exemption for Nature of Business

An insurer otherwise subject to the requirement and not eligible for an exemption as enumerated above may apply to its domiciliary commissioner for an exemption based on the nature of business written.

Financial Hardship Exemption

An insurer otherwise subject to this requirement and not eligible for an exemption as enumerated above may apply to the commissioner for a financial hardship exemption.

Financial hardship is presumed to exist if the projected reasonable cost of the opinion would exceed the lesser of:

(i) One percent (1%) of the insurer's capital and surplus reflected in the insurer's latest quarterly statement for the calendar year for which the exemption is sought; or

(ii) Three percent (3%) of the insurer's direct plus assumed premiums written during the calendar year for which the exemption is sought as projected from the insurer's latest quarterly statements filed with its domiciliary commissioner.

2. The Statement of Actuarial Opinion must consist of an IDENTIFICATION paragraph identifying the Appointed Actuary; a SCOPE paragraph identifying the subjects on which an opinion is to be expressed and describing the scope of the actuary's work; an OPINION paragraph expressing his or her opinion with respect to such subjects and one or more additional RELEVANT COMMENTS paragraphs. These four sections must be clearly designated.

3. The IDENTIFICATION paragraph should indicate the Appointed Actuary's relationship to the Company, qualifications for acting as Appointed Actuary, and date of appointment, and specify that the appointment was made by the Board of Directors (or its equivalent) or by a committee of the Board.

A member of the American Academy of Actuaries qualifying under paragraph 1A(ii) must attach, each year, a copy of the approval letter from the Academy.

These instructions require that a Qualified Actuary prepare the Actuarial Opinion. If a person who does not meet the definition of a Qualified Actuary has been approved by the insurance regulatory official of the domiciliary state, the Company must attach, each year, a letter from that official stating that the individual meets the state's requirements for rendering the Actuarial Opinion.

4. The SCOPE paragraph should contain a sentence such as the following:

> "I have examined the actuarial assumptions and methods used in determining reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 20__, and reviewed information provided to me through XXX date."

Exhibit A should list those items and amounts with respect to which the Appointed Actuary is expressing an opinion.

The Appointed Actuary should state that the items in the SCOPE paragraph, on which he or she is expressing an opinion, reflect the Disclosure items (8 through 14) in Exhibit B.

The SCOPE paragraph should include a paragraph such as the following regarding the data used by the Appointed Actuary in forming the opinion:

> "In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by _____ (name, affiliation and relation to Company). I evaluated that data for reasonableness and consistency. I also reconciled that data to Schedule P, Parts 1 and 2 of the Company's current Annual Statement. In other respects, my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary."

5. The OPINION paragraph should include a sentence that at least covers the points listed in the following illustration:

"In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).

B. Are computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements."

If there is any aggregation or combination of items in Exhibit A, the opinion language should clearly identify the combined items.

Insurance laws and regulations shall at all times take precedence over the actuarial standards and principles.

If the actuary has made use of the work of another actuary (such as for pools and associations, for a subsidiary or for special lines of business) for a material portion of the reserves, the other actuary must be identified by name and affiliation within the OPINION paragraph.

A Statement of Actuarial Opinion should be made in accordance with one of the following sections (a through e). The actuary must explicitly identify in Exhibit B which type applies.

a. Determination of Reasonable Provision. When the carried reserve amount is within the actuary's range of reasonable reserve estimates, the actuary should issue a Statement of Actuarial Opinion that the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves.

b. Determination of Deficient or Inadequate Provision. When the carried reserve amount is less than the minimum amount that the actuary believes is reasonable, the actuary should issue a statement of actuarial opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the actuary should disclose the minimum amount that the actuary believes is reasonable.

c. Determination of Redundant or Excessive Provision. When the carried reserve amount is greater than the maximum amount that the actuary believes is reasonable, the actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the actuary should disclose the maximum amount that the actuary believes is reasonable.

d. Qualified Opinion. When, in the actuary's opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated or the actuary is unable to render an opinion on those items, the actuary should issue a qualified Statement of Actuarial Opinion. The actuary should disclose the item (or items) to which the qualification relates, the reasons for the qualification, and the amounts for such item(s), if disclosed by the Company. Such a qualified opinion should state whether the stated reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, *except for* the item (or items) to which the qualification relates. The actuary is not required to issue a qualified opinion if the actuary reasonably believes that the item (or items) in question are not likely to be material.

e. No Opinion. The actuary's ability to give an opinion is dependent upon data, analyses, assumptions, and related information that are sufficient to support a conclusion. If the actuary cannot reach a

conclusion due to deficiencies or limitations in the data, analyses, assumptions, or related information, then the actuary may issue a statement of no opinion. A statement of no opinion should include a description of the reasons why no opinion could be given.

6. The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address the following topics of regulatory importance.

   a. Risk of Material Adverse Deviation.

      The Appointed Actuary must provide specific RELEVANT COMMENT paragraphs to address the risk of material adverse deviation. The Appointed Actuary must identify the materiality standard and the basis for establishing this standard with respect to the relevant characteristics of the Company. The materiality standard must also be disclosed in U.S. dollars in Exhibit B: Disclosures. The Appointed Actuary should include an explanatory paragraph to describe the major factors, combination of factors or particular conditions underlying the risks and uncertainties the actuary considers relevant. The explanatory paragraph should not include general, broad statements about risks and uncertainties due to economic changes, judicial decisions, regulatory actions, political or social forces, etc., nor is the Appointed Actuary required to include an exhaustive list of all potential sources of risks and uncertainties. The Appointed Actuary should explicitly state whether or not he or she reasonably believes that there are significant risks and uncertainties that could result in material adverse deviation. This determination is also to be disclosed in Exhibit B.

   b. Other Disclosures in Exhibit B

      RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact.

      If the Company's reserves will cause the ratio of One-Year or Two-Year Known Claims Reserve Development (shown in Schedule P, Part 3) to the respective prior year's Policyholders' Surplus to be greater than 20%, the Appointed Actuary must include RELEVANT COMMENT on the factors that led to the exceptional reserve development.

   c. Reinsurance

      RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance .

      The Appointed Actuary's comments on reinsurance collectability should address any uncertainty associated with including potentially-uncollectable amounts in the estimate of ceded reserves. Before commenting on reinsurance collectability, the Appointed Actuary should solicit information from management on any actual collectability problems, review ratings given to reinsurers by a recognized rating service, and examine Schedule F for the current year for indications of regulatory action or reinsurance recoverable on paid losses over ninety (90) days past due. The comment should also reflect any other information the actuary has received from management or that is publicly available about the capability or willingness of reinsurers to pay claims. The Appointed Actuary's comments do not imply an opinion on the financial condition of any reinsurer.

      Retroactive reinsurance refers to agreements referenced in *SSAP No. 62R—Property and Casualty Reinsurance* of the *Accounting Practices and Procedures Manual*.

Financial reinsurance refers to contracts referenced in *SSAP No. 62R—Property and Casualty Reinsurance*, paragraph 35, of the *Accounting Practices and Procedures Manual* in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance.

d. Reserve Development

If the Company's reserves will cause the ratio of One-Year or Two-Year Reserve Development (shown in Schedule P, Part 2) to the respective prior year's Policyholders' Surplus to be greater than 20%, the Appointed actuary must include RELEVANT COMMENT on the factors that led to the exceptional reserve development.

e. Methods and Assumptions

If there has been any significant change in the actuarial assumptions and/or methods from those previously employed, that change should be described in a RELEVANT COMMENT paragraph. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

7. The Actuarial Opinion must include assurance that an Actuarial Report and underlying actuarial workpapers supporting the Actuarial Opinion will be maintained at the Company and available for examination for seven years. The Actuarial Report contains significant proprietary information. It is expected that the Actuarial Report be held confidential and not be intended for public inspection. The Actuarial Report must be available by May 1 of the year following the year-end for which the Opinion was rendered or within two (2) weeks after a request from an individual state commissioner.

The Actuarial Report should be consistent with the documentation and disclosure requirements of ASOP No. 41, Actuarial Communications. The Actuarial Report must contain both narrative and technical components. The narrative component should provide sufficient detail to clearly explain to company management, the Board of Directors, the regulator, or other authority the findings, recommendations and conclusions, as well as their significance. The technical component should provide sufficient documentation and disclosure for another actuary practicing in the same field to evaluate the work. This technical component must show the analysis from the basic data (e.g., loss triangles) to the conclusions.

The Actuarial Report must also include:

- A description of the Appointed Actuary's relationship to the Company, with clear presentation of the Appointed Actuary's role in advising the Board and/or management regarding the carried reserves. The Actuarial Report should identify how and when the Appointed Actuary presents the analysis to the Board and, where applicable, to the officer(s) of the Company responsible for determining the carried reserves.

- An exhibit that ties to the Annual Statement and compares the Appointed Actuary's conclusions to the carried amounts consistent with the segmentation of exposure or liability groupings used in the analysis. The Appointed Actuary's conclusions include the Appointed Actuary's point estimate(s), range(s) of reasonable estimates or both.

- An exhibit that reconciles and maps the data used by the Appointed Actuary, consistent with the segmentation of exposure or liability groupings used in the Appointed Actuary's analysis, to the Annual Statement Schedule P.

- An exhibit or appendix showing the change in the Appointed Actuary's estimates from the prior Actuarial Report, including extended discussion of factors underlying any material changes. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

- Extended comments on trends that indicate the presence or absence of risks and uncertainties that could result in material adverse deviation.

- Extended comments on factors that led to exceptional reserve development, as defined in 6C and 6D, and how these factors were addressed in prior and current analyses.

8. The statement should conclude with the signature of the Appointed Actuary responsible for providing the Actuarial Opinion and the date when the Opinion was rendered. The signature and date should appear in the following format:

_____
Signature of Appointed Actuary
Printed name of Appointed actuary
Employer's name
Address of Appointed Actuary
Telephone number of Appointed Actuary
Email address of Appointed Actuary
Date opinion was rendered

9. The Insurer required to furnish an Actuarial Opinion shall require its Appointed Actuary to notify its Board of Directors or its audit committee in writing within five (5) business days after any determination by the Appointed Actuary that the Opinion submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect. The Opinion shall be considered to be in error if the Opinion would have not been issued or would have been materially altered had the correct data or other information been used. The Opinion shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected.

Notification shall be required for any such determination made between the issuance of the Actuarial Opinion and the balance sheet date for which the next Actuarial Opinion will be issued. The notification should include a summary of such findings and an amended Actuarial Opinion.

An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the summary and the amended Actuarial Opinion to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the summary and amended Actuarial Opinion being furnished to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that the submitted Actuarial Opinion should no longer be relied upon or such other notification recommended by the actuary's attorney.

If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the Actuarial Opinion, the actuary and the Company should undertake as quickly as is reasonably practical those procedures necessary for the Appointed Actuary to make the determination discussed above. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the actuary should proceed with the notification discussed above.

No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs.

10. Data in Exhibit A and Exhibit B are to be filed in both print and data capture format.

STATEMENT OF ACTUARIAL OPINION

Exhibit A: SCOPE
DATA TO BE FILED IN BOTH PRINT AND DATA CAPTURE FORMAT

LOSS AND LOSS ADJUSTMENT EXPENSE RESERVES:		Amount
1. Unpaid Losses and Loss Adjustment Expenses (Schedule P, Part 1, Total Column 24 or 34 if discounting is allowable under state law)	$	_____
2. Unpaid Losses and Loss Adjustment Expenses - Direct and Assumed (Should equal Schedule P, Part 1, Summary, Totals from Columns 17, 18, 20, 21, and 23, Line 12 x 1000)	$	_____
3. Other items on which the Appointed Actuary is expressing an Opinion (list separately, adding additional lines as needed)	$	_____

Exhibit B: DISCLOSURES
DATA TO BE FILED IN BOTH PRINT AND DATA CAPTURE FORMAT

NOTE: Exhibit B should be completed for Net dollar amounts included in the SCOPE. If an answer would be different for Direct and Assumed amounts, identify and discuss the difference within RELEVANT COMMENTS.

	Last	First	Middle
1. Name of the Appointed Actuary	_____	_____	_____

2. The Appointed Actuary's relationship to the Company.

   Enter E or C based upon the following:

   E - If an Employee of the Company or Group _____

   C - If a Consultant _____

3. The Appointed Actuary has the following designation (indicated by the letter code):

   F - If a Fellow of the Casualty Actuarial Society (FCAS)

   A - If an Associate of the Casualty Actuarial Society (ACAS)

   M - If not a member of the Casualty Actuarial Society, but a Member of the American Academy of Actuaries (MAAA) approved by the Casualty Practice Council, as documented with the attached approval letter. _____

   O - For Other _____

4. Type of Opinion, as identified in the OPINION paragraph. Enter R, I, E, Q, or N based upon the following:

   R - If Reasonable

   I - If Inadequate or Deficient Provision

   E - If Excessive or Redundant Provision

   Q - If Qualified (use Q when part of the OPINION is Qualified)

   N - If No Opinion

   _____
   _____
   _____
   _____

5. Materiality Standard expressed in U.S. dollars (used to answer question #6) $ _____

6. Are there significant risks that could result in Material Adverse Deviation?

   _____
   _____
   _____
   _____

7. Statutory Surplus (Liabilities, Surplus, and Other Funds Page, Line 32) $ _____

8. Known claims reserve (Liabilities, Surplus, and Other Funds Page, Line 1) $ _____

9. Statutory premium reserve (Liabilities, Surplus, and Other Funds Page, Line 2) $ _____

10. Aggregate of other reserves required by law (Liabilities, Surplus, and Other Funds Page, Line 3) $ _____

11. Supplemental reserve (Liabilities, Surplus, and Other Funds Page, Line 4) $ _____

12. Anticipated net salvage and subrogation included as a reduction to loss reserves as reported in Schedule P $ _____

13. Discount included as a reduction to loss reserves and loss adjustment expense reserves as reported in Schedule P $ _____

14. Other items on which the Appointed Actuary is providing relevant comment (list separately, adding additional lines as needed) $ _____

1.4 2018 NAIC Data Testing Requirement

ANNUAL AUDITED FINANCIAL REPORTS

All states have a statute or regulation that requires an annual audit of their insurance companies by an independent certified public accountant based on the NAIC *Annual Financial Reporting Model Regulation (#205)*. For guidance regarding this model, see Appendix G of the NAIC *Accounting Practices and Procedures Manual*.

The reporting entity shall require the independent certified public accountant to subject the current Schedule P – Part 1 (excluding those amounts related to bulk and IBNR reserves and claim counts) to the auditing procedures applied in the audit of the current statutory financial statements to determine whether Schedule P – Part 1 is fairly stated in all material respects in relation to the basic statutory financial statements taken as a whole. It is expected that the auditing procedures applied by the independent CPA to the claim loss and loss adjustment expense data from which Schedule P – Part 1 is prepared would be applied to activity that occurred in the current calendar year (e.g., tests of payments on claims for all accident years that were paid during the current calendar year). [Refer to American Institute of Certified Public Accountants Statement of Position 92-8.]

The reporting entity shall also require the independent certified public accountant to subject the data used by the appointed actuary to testing procedures. The auditor is required to determine what historical data and methods have been used by management in developing the loss reserve estimate and whether the auditor will rely on the same data or other statistical data in evaluating the reasonableness of the loss reserve estimate. After identifying the relevant data, the auditor should obtain an understanding of the controls related to the completeness, accuracy, and classification of loss data and perform testing as the auditor deems appropriate. Through inquiry of the Appointed Actuary, the auditor should obtain an understanding of the data identified by the Appointed Actuary as significant. It is recognized that there will be instances when data identified by the Appointed Actuary as significant to his or her reserve projections would not otherwise have been tested as part of the audit, and separate testing would be required. Unless, otherwise agreed among the Appointed Actuary, management and the auditor, the scope of the work performed by the auditor in testing the claims data in the course of the audit would be sufficient to determine whether the data tested is fairly stated in all material respects in relation to the statutory financial statement taken as a whole. The auditing procedures should be applied to the claim loss and defense and cost containment expense data used by the Appointed Actuary and would be applied to activity that occurred in the current calendar year (e.g., tests of payments on claims paid during the current calendar year).

II. 2018 AOWG Regulatory Guidance

This appendix to the practice note provides the 2018 AOWG Regulatory Guidance for the Property/Casualty Statement of Actuarial Opinion and Actuarial Opinion Summary

REGULATORY GUIDANCE on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2018

Prepared by the NAIC Actuarial Opinion (C) Working Group
of the Casualty Actuarial and Statistical (C) Task Force

The NAIC Actuarial Opinion (C) Working Group (Working Group) of the Casualty Actuarial and Statistical (C) Task Force believes that the Statement of Actuarial Opinion (Actuarial Opinion), Actuarial Opinion Summary (AOS), and Actuarial Report are valuable tools in serving the regulatory mission of protecting consumers. This Regulatory Guidance document supplements the NAIC *Annual Statement Instructions – Property/Casualty* (*Instructions*) in an effort to provide clarity and timely guidance to companies and Appointed Actuaries regarding regulatory expectations on the Actuarial Opinion, AOS, and Actuarial Report.

An Appointed Actuary has a responsibility to know and understand both the *Instructions* and the expectations of state insurance regulators. One expectation of regulators clearly presented in the *Instructions* is that the Actuarial Opinion, AOS, and supporting Actuarial Report and workpapers be consistent with relevant Actuarial Standards of Practice (ASOPs).

There are changes to the *Instructions* for 2018. The 2018 *Instructions*:

- Include a new definition for "Accident & Health (A&H) Long Duration Contracts" in order to draw a distinction between these contracts and the Property and Casualty (P&C) Long Duration Contracts whose unearned premium reserves are reported on Exhibit A, Items 7 and 8,
- Add a reference to SSAP No. 65 in the definition of P&C Long Duration Contracts,
- Include a new disclosure item on Exhibit B for net reserves associated with A&H Long Duration Contracts,
- State that the Actuarial Report should disclose all reserve amounts associated with A&H Long Duration Contracts, and
- State that the Actuarial Report and workpapers summarizing the asset adequacy testing of long-term care contracts must be in compliance with *Actuarial Guideline LI – The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51) of the *Accounting Practices and Procedures Manual*.

I. General comments

A. Reconciliation between documents

If there are any differences between the values reported in the Actuarial Opinion, AOS, Actuarial Report, and Annual Statement, the Working Group expects Appointed Actuaries to include an explanation for these differences in the appropriate document (Actuarial Opinion, AOS, or Actuarial Report). The use of a robust peer review process by the Appointed Actuary should reduce reporting errors and non-reconciling items.

One situation in which a legitimate difference might arise is in the case of non-tabular discounting: The direct and assumed loss reserves on line 3 of the Actuarial Opinion's Exhibit A come from Schedule P, Part 1, which is gross of non-tabular discounting, while the Actuarial Report and AOS might present the direct and assumed loss reserves on a net of discounting basis.

B. Role of illustrative language in the *Instructions*

While the *Instructions* provide some illustrative language, the Working Group encourages Appointed Actuaries to use whatever language they believe is appropriate to clearly convey their opinion and the basis for that opinion. In forming their opinion, Appointed Actuaries should consider company-specific characteristics such as intercompany pooling arrangements; recent mergers or acquisitions; and significant changes in operations, product mix, or reinsurance arrangements.

C. Replacement of an Appointed Actuary

The *Instructions* require two letters when the Board replaces an Appointed Actuary: one addressed from the insurer to the domiciliary commissioner, and one addressed from the former Appointed Actuary to the insurer. The insurer must provide both of these letters to the domiciliary commissioner.

The detailed steps are as follows:

1. Within 5 business days, the insurer shall notify its domiciliary insurance department that the former Appointed Actuary has been replaced.
2. Within 10 business days of the notification in step 1, the insurer shall provide the domiciliary commissioner with a letter stating whether in the 24 months preceding the replacement, there were disagreements with the former Appointed Actuary. The *Instructions* describe the types of disagreements required to be reported in the letter.
3. Within the same 10 business days referred to in step 2, the insurer shall, in writing, request that its former Appointed Actuary provide a letter addressed to the insurer stating whether the former Appointed Actuary agrees with the statements contained in the insurer's letter referenced in step 2.
4. Within 10 business days of the request from the insurer described in step 3, the former Appointed Actuary shall provide a written response to the insurer.
5. The insurer shall provide the letter described in step 2 and the response from the former Appointed Actuary described in step 4 to the domiciliary commissioner.

Regarding the disagreements referenced in step 2 above, regulators understand that there may be disagreements between the Appointed Actuary and the insurer during the course of the Appointed Actuary's analysis that are resolved by the time the Appointed Actuary concludes the analysis. For instance, the Appointed Actuary's analysis may go through several iterations, and an insurer's comments on the Appointed Actuary's draft Actuarial Report may prompt the Appointed Actuary to make changes to the report. While regulators are interested in material disagreements regarding differences between the former Appointed Actuary's final estimates and the insurer's carried reserves, they do not expect notification on routine discussions that occur during the course of the Appointed Actuary's work.

D. Reporting to the Board of Directors

The Appointed Actuary is required to report to the insurer's Board every year, and the *Instructions* were amended in 2016 to require the Board's minutes to specify the manner in which the Appointed Actuary presented the required information. This may be done in a form of the Appointed Actuary's choosing, including, but not limited to, an executive summary or PowerPoint presentation. The Working Group strongly encourages the Appointed Actuary to present his or her analysis in person so that the risks and uncertainties that underlie the exposures and the significance of the Appointed Actuary's findings can be adequately conveyed and discussed. Regardless of how the Appointed Actuary presents his or her conclusions, the Actuarial Report must be made available to the Board.

Management is limited to reporting single values on lines 1 and 3 of the Liabilities, Surplus, and Other Funds page of the balance sheet. However, actuarial estimates are uncertain by nature, and point estimates do not convey the variability in the projections. Therefore, the Board should be made aware of the Appointed Actuary's opinion regarding the risk of material adverse deviation, the sources of risk, and what amount of adverse deviation the Appointed Actuary judges to be material.

E. Requirements for pooled companies

Effective with the 2014 *Instructions*, requirements for companies that participate in intercompany pools are as follows:

For all intercompany pooling members:

- Text of the Actuarial Opinion should include the following:
  - Description of the pool
  - Identification of the lead company
  - A listing of all companies in the pool, their state of domicile, and their respective pooling percentages
- Exhibits A and B should represent the company's share of the pool and should reconcile to the financial statement for that company

For intercompany pooling members with a 0% share of the pooled reserves:

- Text of the Actuarial Opinion should be similar to that of the lead company
- Exhibits A and B should reflect the 0% company's values
  - Response to Exhibit B, Item 5 (materiality standard) should be $0
  - Response to Exhibit B, Item 6 (risk of material adverse deviation) should be "not applicable"
- Exhibits A and B of the lead company should be filed with the 0% company's Actuarial Opinion
- Information in the AOS should be that of the lead company

Note the distinction between pooling with a 100% lead company with no retrocession and ceding 100% via a quota share reinsurance agreement. The regulator must approve these affiliate agreements as either an intercompany pooling arrangement or a quota share reinsurance agreement. The proper financial reporting is dependent on the approved filings, regardless of how company management regards its operating platform.

For intercompany pooling members with a greater than 0% share of the pooled reserves, regulators encourage the Appointed Actuary to display values in the AOS on a pooled (or consolidated) basis in addition to the statutory entity basis. This can be accomplished by displaying two tables of information.

F. Explanation of adverse development

1. Comments on unusual Insurance Regulatory Information System (IRIS) ratios in the Actuarial Opinion

The Appointed Actuary is required to provide comments in the Actuarial Opinion on factors that led to unusual values for IRIS ratios 11, 12, or 13. The Working Group considers it insufficient to attribute unusual reserve development to "reserve strengthening" or "adverse development" and expects the Appointed Actuary to provide insight into the company-specific factors which caused the unusual value. Detailed documentation should be included in the Actuarial Report to support statements provided in the Actuarial Opinion.

2. Comments on persistent adverse development in the AOS

The Appointed Actuary is required to comment on persistent adverse development in the AOS. Comments can reflect common questions that regulators have, such as:

- Is development concentrated in one or two exposure segments, or is it broad across all segments?
- How does development in the carried reserve compare to the change in the Appointed Actuary's estimate?
- Is development related to specific and identifiable situations that are unique to the company?
- Does the development or the reasons for development differ depending on the individual calendar or accident years?

G. Revisions

When a material error in the Actuarial Opinion or AOS is discovered by the Appointed Actuary, the company, the regulator, or any other party, regulators expect to receive a revised Actuarial Opinion or AOS.

Regardless of the reason for the change or refiling, the company should submit the revised Actuarial Opinion in hard copy to its domiciliary state and electronically to the NAIC. The company should submit the revised AOS in hard copy to the domiciliary state but should not submit the document to the NAIC.

A revised Actuarial Opinion or AOS should clearly state that it is an amended document, contain or accompany an explanation for the revision, and include the date of revision.

II. Comments on Actuarial Opinion and Actuarial Report

A. Review date

The illustrative language for the Scope paragraph includes "… and reviewed information provided to me through XXX date." This is intended to capture the ASOP No. 36 requirement to disclose the date through which material information known to the Appointed Actuary is included in forming the reserve opinion (the review date), if it differs from the date the Actuarial Opinion is signed. When the Appointed Actuary is silent regarding the review date, this can indicate either that the review date is the same as the date the Actuarial Opinion is signed or that the Appointed Actuary overlooked this disclosure requirement. When the Appointed Actuary's review date is the same as the date the Actuarial Opinion is signed, regulators suggest the Appointed Actuary clarify this in the Actuarial Opinion by including a phrase such as "… and reviewed information provided to me through the date of this opinion."

B. Making use of another's work

If the Appointed Actuary makes use of the work of another not within the Appointed Actuary's control for a material portion of the reserves, the *Instructions* say that the Appointed Actuary must provide the following information in the Actuarial Opinion:

- The person's name;
- The person's affiliation;
- The person's credential(s), if the person is an actuary; and
- A description of the type of analysis performed, if the person is not an actuary.

Furthermore, Section 4.2.f of ASOP No. 36 says that the actuary should disclose whether he or she reviewed the other's underlying analysis and, if so, the extent of the review. Though this is not mentioned in the ASOP, the Working Group encourages the Appointed Actuary to consider discussing his or her conclusions from the review.

Section 3.7.2 of ASOP No. 36 describes items the actuary should consider when determining whether it is reasonable to make use of the work of another. One of these items is the amount of the reserves covered by the other's analyses or opinions in comparison to the total reserves subject to the actuary's opinion. The Working Group encourages the Appointed Actuary to disclose these items in the Actuarial Opinion by providing the dollar amount of the reserves covered by the other's analyses or opinions and the percentage of the total reserves subject to the Appointed Actuary's opinion that these other reserves represent.

C. Points A and B of the Opinion paragraph when opinion type is other than reasonable

Regulators encourage Appointed Actuaries to think about their responses to point A (meet the requirements of the insurance laws of the state) and point B (computed in accordance with accepted actuarial standards and principles) of the Opinion paragraph when they issue an Actuarial Opinion of a type other than "Reasonable."

D. Conclusions on a net versus a direct and assumed basis

Unless the Appointed Actuary states otherwise, regulators will assume that the Appointed Actuary's conclusion on the type of opinion rendered, provided in points C and D of the Opinion paragraph, applies to both the net and the direct and assumed reserves. If the Appointed Actuary reaches different conclusions on the net versus the direct and assumed reserves, the Appointed Actuary should include narrative comments to describe the differences and clearly convey a complete opinion. The response to Exhibit B, Item 4 should reflect the Appointed Actuary's opinion on the net reserves.

Similarly, the materiality standard in Exhibit B, Item 5 and the RMAD conclusion in Exhibit B, Item 6 should pertain to the net reserves. If the Appointed Actuary reaches a different conclusion on the risk of material adverse deviation in the net versus the direct and assumed reserves, the Appointed Actuary should include a Relevant Comments paragraph to address the differences. Regulators understand that a net versus a direct and assumed RMAD will have different meanings and, potentially, different materiality standards.

E. Unearned premium for P&C Long Duration Contracts

Exhibit A, Items 7 and 8 require disclosure of the unearned premium reserve for P&C Long Duration Contracts. The *Instructions* require the Appointed Actuary to include a point D in the Opinion paragraph regarding the reasonableness of the unearned premium reserve when these reserves are material.

The Working Group expects that the Appointed Actuary will include documentation in the Actuarial Report to support a conclusion on reasonableness whenever point D is included in the Actuarial Opinion. This documentation may include the three tests of SSAP No. 65 or other methods deemed appropriate by the Appointed Actuary to support his or her conclusion.

Regulators see many opinions where dollar amounts are included in Exhibit A, Items 7 and 8; some opinions include a Relevant Comments paragraph discussing these amounts and some do not. Regulators would prefer at a minimum that Appointed Actuaries include some discussion in Relevant Comments on these amounts including an explicit statement as to whether these amounts are material or immaterial.

F. Other premium reserve items

With regard to "Other Premium Reserve Items" in Exhibit A, Item 9, the Appointed Actuary should include an explanatory paragraph about these premium reserves in Relevant Comments and state whether the amounts are material or immaterial. If the amounts are material, and the Appointed Actuary states the amounts are reasonable in an Opinion paragraph, regulators would expect the actuarial documentation to support this conclusion in the Actuarial Report.

Typical items regulators see listed as "Other Premium Reserve Items" are Medical Professional Liability Death, Disability & Retirement (DD&R) unearned premium reserves (UPR) and Other Liability Claims DD&R UPR. Depending on the nature of these exposures, these items may be also listed on Exhibit B, Line 12.2 as claims made extended UPR.

G. The importance of Relevant Comments paragraphs

The Working Group considers the Relevant Comments paragraphs to be the most valuable information in the Actuarial Opinion. Relevant Comments help the regulator interpret the Actuarial Opinion and understand the Appointed Actuary's reasoning and judgment. In addition to the required Relevant Comments, the Appointed Actuary should consider providing information on other material items such as reinsurance with affiliates, mergers or acquisitions, other premium reserves, and catastrophe risk.

H. Risk of Material Adverse Deviation

The Relevant Comments paragraphs on the Risk of Material Adverse Deviation (RMAD) are particularly useful to regulators. The first two RMAD comments below respond to questions that Appointed Actuaries have posed to regulators. The second two stem from regulators' reviews of Actuarial Opinions.

1. No company-specific risk factors – The Appointed Actuary is asked to discuss company-specific risk factors regardless of the RMAD conclusion. If the Appointed Actuary does not believe that there are any company-specific risk factors, the Appointed Actuary should state that.

2. Mitigating factors – Regulators generally expect Appointed Actuaries to comment on significant company-specific risk factors that exist prior to the company's application of controls or use of mitigation techniques. The company's risk management behaviors may, however, affect the Appointed Actuary's RMAD conclusion.

3. Consideration of carried reserves, materiality standard, and reserve range when making RMAD conclusion – When deciding whether RMAD exists, the Appointed Actuary should consider the materiality standard in relation to the range of reasonable estimates and the carried reserves. For example, RMAD should likely exist when the sum of the materiality standard plus the carried reserves is within the range of reasonable estimates. Regardless, the Appointed Actuary should support the conclusion of whether RMAD exists.

4. Materiality standards for intercompany pool members – With the exception of intercompany pooling members that retain a 0% share, each statutory entity is required to have a separate Actuarial Opinion with its own materiality standard. Where there are no unusual circumstances to consider, it may be acceptable to determine a standard for the entire pool and assign each member its proportionate share of the total. It

is not appropriate to use the entire amount of the materiality threshold for the pool as the standard for each individual pool member.

I. Regulators' use of the Actuarial Report

Regulators should be able to rely on the Actuarial Report as an alternative to developing their own independent estimates. A well-prepared and well-documented Actuarial Report that complies with ASOP No. 41 can provide a foundation for efficient reserve evaluation during a statutory financial examination. This expedites the examination process and may provide cost savings to the company.

1. Schedule P reconciliation

The Working Group acknowledges that myriad circumstances (such as mergers, acquisitions, changes in claim systems, and the use of underwriting year data in the analysis) may make it difficult for the Appointed Actuary to reconcile the analysis data to Schedule P. The Working Group encourages Appointed Actuaries to disclose reconciliation issues in the Actuarial Report. If the data cannot be reconciled, the Appointed Actuary should document the reasons.

The Working Group believes that:

- A summary reconciliation that combines all years and all lines is an insufficient demonstration of data integrity. A reconciliation should include enough detail to reflect the segmentation of exposures used in the reserve analysis, the accident years of loss activity and the methods used by the Appointed Actuary.
- The Appointed Actuary should map the data groupings used in the analysis to Schedule P lines of business and should provide detailed reconciliations of the data at the finest level of segmentation that is possible and practical. The Working Group recognizes that the Appointed Actuary chooses the data segmentation for the analysis and that there is often not a direct correspondence between analysis segments and Schedule P lines of business.
- The Appointed Actuary should reconcile all data material to the analysis, including claim counts and earned premium if appropriate.

The Working Group draws a distinction between two types of data checks:

- The Schedule P reconciliation performed by the Appointed Actuary. The purpose of this exercise is to show the user of the Actuarial Report that the data significant to the Appointed Actuary's analysis ties to the data in Schedule P.
- Annual testing performed by independent CPAs to verify the completeness and accuracy of the data in Schedule P or the analysis data provided by the company to the Appointed Actuary.

One key difference is that independent CPAs generally apply auditing procedures to loss and loss adjustment expense activity that occurred in the current calendar year (for example, tests of payments on claims for all accident years that were paid during the current calendar year). Projection methodologies used by Appointed Actuaries, on the other hand, often use cumulative loss and loss adjustment expense data, which may render insufficient a testing of activity during the current calendar year alone.

Along similar lines, regulators encourage Appointed Actuaries to consider whether a reconciliation of incremental payments during the most recent calendar year for all accident/report years combined provides sufficient assurance of the integrity of the data used in the analysis, given that development factors are generally applied to cumulative paid losses by accident/report year.

2. Change in estimates

The Working Group expects the Appointed Actuary to discuss any significant change in the Appointed Actuary's total estimates from the prior Actuarial Report. However, an explanation should also be included for any significant fluctuations within accident years or segments. When preparing the change-in-estimates exhibits, the Appointed Actuary should choose a level of granularity that provides meaningful comparisons between the prior and current year's results.

3. Narrative

The narrative section of the Actuarial Report should clearly convey the significance of the Appointed Actuary's findings and conclusions, the uncertainty in the estimates, and any differences between the Appointed Actuary's estimates and the carried reserves.

4. Support for assumptions

Appointed Actuaries should support their assumptions. The use of phrases like "actuarial judgment," either in the narrative comments or in exhibit footnotes, is not sufficient. A descriptive rationale is needed.

The selection of expected loss ratios could often benefit from expanded documentation. When making their selection, Appointed Actuaries should consider incorporating rate changes, frequency and severity trends, and other adjustments needed to on-level the historical information. Historical loss ratio indications have little value if items such as rate actions, tort reform, schedule rating adjustments, or program revisions have materially affected premium adequacy.

5. Support for roll forward analyses

The Working Group recognizes that the majority of the analysis supporting an Actuarial Opinion may be done with data received prior to year-end and "rolled forward" to year-end. By reviewing the Actuarial Report, the regulator should be able to clearly identify why the Appointed Actuary made changes in the ultimate loss selections and how those changes were incorporated into the final estimates. A summary of final selections without supporting documentation is not sufficient.

J. Exhibits A and B

1. "Data capture format"

The term "data capture format" in Exhibits A and B of the *Instructions* refers to an electronic submission of the data in a format usable for computer queries. This process allows for the population of an NAIC database that contains qualitative information and financial data. Appointed Actuaries should assist the company in accurately completing the electronic submission.

2. Scope of Exhibit B, Item 12

Exhibit B, Item 12 requests information on extended loss and unearned premium reserves for all property/casualty lines of business, not just medical professional liability. The Schedule P Interrogatories referenced in the parenthetical only address reserves associated with yet-to-be-issued extended reporting endorsements offered in the case of death, disability, or retirement of an individual insured under a medical professional liability claims-made policy.

3. Exhibit B, Item 13

Exhibit B, Item 13 is a newly-added disclosure item that requests information on reserves associated with "A&H Long Duration Contracts," now defined in the 2018 *Instructions* as "A&H contracts in which the

contract term is greater than or equal to 13 months and contract reserves are required."
This disclosure item was added for several reasons:

- **A desire by regulators to gain a greater understanding of property and casualty insurers' exposure to A&H Long Duration Contracts.**
  - This guidance does not specify how P&C insurers should report the liabilities associated with A&H Long Duration Contracts on the annual statement. Through work performed on financial examinations, regulators have found that P&C insurers may include the liabilities in various line items of the Liabilities, Surplus and Other Funds page. SSAP No. 54R provides accounting guidance for insurers.
  - Regardless of where the amounts are reported on the annual statement, the materiality of the amounts, and whether the insurer is subject to AG 51, the Appointed Actuary should disclose the amounts associated with A&H Long Duration Contracts on Exhibit B, Item 13. The Appointed Actuary should provide commentary in a Relevant Comments paragraph in accordance with paragraph 6.C of the *Instructions*, which did not change for 2018. The Appointed Actuary should also disclose all reserve amounts associated with A&H Long Duration Contracts in the Actuarial Report.
- **The adoption of AG 51 in 2017.** On August 9, 2017, the NAIC's Executive (EX) Committee and Plenary adopted AG 51 requiring stand-alone asset adequacy analysis of long-term care (LTC) business. The effective date of AG 51 is December 31, 2017, and it applies to companies with over 10,000 inforce lives covered by LTC insurance contracts as of the valuation date. The 2018 *Instructions* state that the Actuarial Report and workpapers summarizing the asset adequacy testing of LTC business must be in compliance with AG 51 requirements.
- **Recent adverse reserve development in LTC business.** Regulators expect Appointed Actuaries to disclose company-specific risk factors in the Actuarial Opinion. Given the recent adverse experience for LTC business, Appointed Actuaries should consider whether exposure to A&H Long Duration Contracts poses a risk factor for the company.

The Appointed Actuary is not asked to opine on the reasonableness of the reserves associated with A&H Long Duration Contracts except to the extent that the reserves are included within the amounts reported on Exhibit A of the Actuarial Opinion. For example, Exhibit B, Item 13.1 asks the Appointed Actuary to disclose the reserves for A&H Long Duration Contracts that the company carries on the Losses line of the Liabilities, Surplus and Other Funds page. The Appointed Actuary is not asked to opine on the reasonableness of the reserves disclosed on Exhibit B, Item 13.1 in isolation, but these reserves are a subset of the amount included on Exhibit A, Item 1, and Exhibit A lists amounts with respect to which the Appointed Actuary is expressing an opinion.
A&H Long Duration Contracts are distinct from P&C Long Duration Contracts. There were no changes to the opinion requirements in 2018 regarding P&C Long Duration Contracts, but the Working Group added a reference to SSAP No. 65 in the definition of "P&C Long Duration Contracts" to clarify the difference between "A&H Long Duration Contracts" and "P&C Long Duration Contracts." The newly-added mention of SSAP No. 65 in the *Instructions* is not intended to change the Appointed Actuary's treatment of P&C Long Duration Contracts in the Actuarial Opinion or the underlying analysis, but insurers and Appointed Actuaries may refer to SSAP No. 65, paragraphs 21 through 33 for a description of the three tests, a description of the types of P&C contracts to which the tests apply, guidance on the minimum required reserves, and instructions on the Actuarial Opinion and Actuarial Report.

III. Comments on AOS

A. Confidentiality

The AOS is a confidential document and should be clearly labeled and identified prominently as such. The AOS is not submitted to the NAIC. The Working Group advises the Appointed Actuary to provide the AOS to

company personnel separately from the Actuarial Opinion and to avoid attaching the related Actuarial Opinion to the AOS.

B. Different requirements by state

Not all states have enacted the NAIC Property and Casualty Actuarial Opinion Model Law (#745), which requires the AOS to be filed. Nevertheless, the Working Group recommends that the Appointed Actuary prepare the AOS regardless of the domiciliary state's requirements, so that the AOS will be ready for submission should a foreign state – having the appropriate confidentiality safeguards – request it.

Most states provide the Annual Statement contact person with a checklist that addresses filing requirements. The Working Group advises the Appointed Actuary to work with the company to determine the requirements for its domiciliary state.

C. Format

The purpose of the AOS is to show a comparison between the company's carried reserves and the Appointed Actuary's estimates. Because the AOS is a synopsis of the conclusions drawn in the Actuarial Report, the content of the AOS should reflect the analysis performed by the Appointed Actuary. Therefore, all of the Appointed Actuary's calculated estimates, including actuarial central estimates and ranges, are to be presented in the AOS consistent with estimates presented in the Actuarial Report.

The American Academy of Actuaries' Committee on Property and Liability Financial Reporting provides illustrative examples in its annual practice note "Statements of Actuarial Opinion on Property and Casualty Loss Reserves" that show how the Appointed Actuary might choose to display the required information. These examples present the numerical data in an easy-to-read table format.

IV. AG 51

Included with permission, the following is the content of AG 51:

Actuarial Guideline LI
THE APPLICATION OF ASSET ADEQUACY TESTING TO LONG-TERM CARE INSURANCE RESERVES

Background

The *Health Insurance Reserves Model Regulation (#010)* and the *NAIC Valuation Manual (VM-25)* contain requirements for the calculation of long-term care insurance (LTC) reserves. Regulators have observed a lack of uniform practice in the implementation of tests of reserve adequacy and reasonableness of LTC reserves. The reserve adequacy testing required by Model #10 and VM-25 does not provide regulators comfort as to the reserve adequacy of companies with material blocks of LTC business. As such, regulators must rely upon asset adequacy analysis required by the *NAIC Valuation Manual* (*VM-30*) to evaluate the solvency position of companies with sizable blocks of LTC business. This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for the asset adequacy testing applied to a company's LTC block of contracts. In particular, this Guideline:

(1) Specifies that the appropriate form of asset adequacy analysis may be in the form of a gross premium valuation or in a more robust form, such as cash-flow testing, with Actuarial Standards of Practice providing guidance in this area;

(2) Clarifies the type of adequacy testing methods that must be used for aggregation with other blocks of business to be allowed for asset adequacy analysis purposes;

(3) Requires a uniform approach to supporting acceptable assumptions regarding future LTC premium rate increases;

(4) Provides requirements for documentation of assumptions associated with all key LTC risks; and

(5) Provides requirements for documentation of standalone LTC asset adequacy testing results.

Note: It is anticipated that the requirements contained in this Guideline will be incorporated into the *NAIC Valuation Manual* (VM-30) at a future date, effective for a future valuation year. This Guideline will cease to apply to annual statutory financial statements at the time the corresponding VM-30 requirements become effective.

1. **Effective Date**

This Guideline shall be effective for reserves reported with the December 31, 2017, and subsequent annual statutory financial statements.

2. **Authority**

Pursuant to Section 1, paragraph 3, of *VM-30* of the *NAIC Valuation Manual*, the commissioner shall have the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items.

3. **Scope**

This Guideline shall apply to a company with over 10,000 inforce lives covered by long-term care insurance contracts as of the valuation date. All long-term care insurance contracts, whether directly written or assumed through reinsurance are included. Accelerated death benefit products or other combination products where the substantial risk of the product is associated with life insurance or an annuity are not subject to this Guideline.

4. **Asset Adequacy Analysis of LTC Business**

A. As stated in Actuarial Standard of Practice (ASOP) No. 22, multiple asset adequacy analysis methods, including cash-flow testing and gross premium valuation, are available to actuaries for this analysis.

The method of analysis used for LTC shall conform with ASOP No. 22 in recognition of the typical significant asset and liability-related risks associated with LTC.

B. Asset adequacy analysis specific to all inforce LTC business, and without consideration of results for other block of business within the company, must be performed for valuations associated with the December 31, 2017, and subsequent annual statutory financial statements. The analysis shall comply with applicable Actuarial Standards of Practice, including standards regarding identification of key risks. Material assumptions associated with the LTC business shall be determined testing moderately adverse deviations in actuarial assumptions.

C. When determining whether additional reserves are necessary:

1. A reserve deficiency in the LTC block may be aggregated with sufficiencies in the company's other blocks of business for the purposes of developing an actuarial opinion, if

cash-flow testing is used for both the LTC business and for all significant blocks of non-LTC business within a company. If a reserve deficiency in the LTC block is not offset with sufficiencies in the company's other blocks of business, then additional reserves shall be established as required by section 2.C.2. of *VM-30*.

2. If cash-flow testing is not used for testing of the LTC business, then a reserve deficiency revealed from another method, e.g., a gross premium valuation, utilized for purposes of asset adequacy analysis of the LTC block under this Guideline shall not be offset with sufficiencies in the company's other blocks of business. The additional reserves under this Guideline shall be established based only upon the adequacy of the reserves in the LTC block.

D. When determining the effect of investment returns or the time value of money:

1. In the case where cash-flow testing is used, the company must allocate investment income to the LTC block of business consistently with the way investment income generated by the General Account is managed. If, however, a segment of the General Account is used to manage the investment risk for LTC business, the investment income generated by assets from that segment should be appropriately represented within the asset adequacy analysis.

2. In the case where a gross premium valuation method is used or asset cash flows are not explicitly modeled, the discount rate used by the actuary must reflect consideration of the yield on current assets held to support the liability as well as future yields on assets purchased with future premium income and reinvestments or anticipated divesture of existing assets.

E. The analysis shall only anticipate premium rate increases based upon a rate increase plan that is documented, is supported by and has been approved by management, is highly likely to be undertaken, and contains rate increase requests and timelines by jurisdiction. The assumptions used in the analysis should reflect a reasonable estimate of regulatory approved amounts and implementation timelines.

5. **Documentation Required**

The documentation requirements below are to be incorporated as a separate section of the appointed actuary's Actuarial Memorandum required by the *VM-30* or in a special Actuarial Memorandum containing LTC-specific information and shall be submitted to the commissioner of the company's state of domicile. The separate section of the companywide Actuarial Memorandum or the special Actuarial Memorandum shall be available to other state insurance commissioners in which the company is licensed upon request to the company. The confidentiality provisions regarding the Actuarial Memorandum contained in *VM-30* are applicable to the separate section of the Actuarial Memorandum and to the special Memorandum.

A. Results of the asset adequacy analysis of the LTC business shall be reported and documented in the separate section of the Actuarial Memorandum or the special Memorandum, as appropriate.

B. Assumptions on mortality shall be documented to state the reference standard valuation table, if applicable, and explicitly cite adjustments, select factors, and mortality improvement factors, where applicable. If a reference standard valuation table is not used in setting the mortality assumption, then a table of rates and comparison of the applied rates to rates from an unmodified standard mortality table for sample issue ages shall be provided. A summary of experience or other actuarial support of assumptions used shall be documented.

C. Assumptions on voluntary lapse shall be documented in table format by duration band and by other factors such as gender, marital status, with versus without inflation rider, and length of benefit period impacting the lapse assumption, where applicable. A summary of experience or other support of assumptions shall be documented.

D. Assumptions on morbidity shall be documented and actuarial support of the assumption shall be provided. If an outside source is used as the basis for morbidity assumptions, then the rationale for the applicability of that source and any adjustments to the factors from that source shall be documented.

E. Assumptions on investment returns and interest rates shall be documented. If a simplified approach is applied, such as implicit reflection of projected investment returns through the use of discount rates in a gross premium valuation as contemplated in Section 4.D.2., then justification shall be provided.

F. Any rate increases already approved shall be documented by jurisdiction with approved implementation timelines. Assumptions on future rate increases shall be documented by policy form or policy grouping. Such documentation should adequately describe the way in which future rate increase assumptions are developed. Unless the appointed actuary has operational responsibility for carrying out the rate increase plan specified in Section 4.E., the Memorandum shall contain a signed and dated reliance statement from the person with operational responsibility for carrying out such actions that the rate increase plan(s) provided to the appointed actuary appropriately reflects management's plan.

G. Documentation of any other material assumptions shall be provided.

H. Documentation shall be provided for assumptions that have significantly changed from the prior year's analysis.

REGULATORY GUIDANCE
on the Property and Casualty Actuarial Opinion Summary for the Year 2016
Prepared by the NAIC Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force

The NAIC Actuarial Opinion (C) Working Group (AOWG) of the Casualty Actuarial and Statistical (C) Task Force believes that the Actuarial Opinion Summary (AOS) is a valuable tool in serving the regulatory mission of protecting consumers. This Regulatory Guidance document supplements the NAIC *Annual Statement Instructions – Property/Casualty* (*Instructions*) in an effort to provide clarity and timely guidance to Appointed Actuaries regarding regulatory expectations on the AOS.

There are two key additions to the AOS requirements in the 2016 *Instructions*:

- Paragraph 7 requires the Appointed Actuary to explain the discrepancies if any of the values reported in the AOS do not reconcile to the values reported in the Statement of Actuarial Opinion (Actuarial Opinion) Exhibits or the Annual Statement. One situation in which a difference between the Actuarial Opinion and the AOS might arise is in the case of non-tabular discounting: The direct and assumed loss reserves on line 3 of Exhibit A come from Schedule P, Part 1, which is gross of non-tabular discounting, while the AOS might present the direct and assumed loss reserves on a net of discounting basis.
- The *Instructions* were previously silent on required actions when the AOS is determined to be in error. Paragraph 8 of the 2016 *Instructions* states that similar requirements apply to the AOS as to the Actuarial Opinion in such a situation.

Form

The AOS is intended to be a **confidential** document separate from the Actuarial Opinion. The AOWG advises the Appointed Actuary to provide the AOS to company personnel separately from the Actuarial Opinion. The AOS should be clearly labeled and identified prominently as a confidential document.

The AOWG advises that, in order to avoid confusion, the Appointed Actuary not attach the related Actuarial Opinion to the AOS.

Not all states have enacted the NAIC *Property and Casualty Actuarial Opinion Model Law* (#745), which requires the AOS to be filed. Nevertheless, the AOWG recommends that the Appointed Actuary prepare the AOS regardless of the domiciliary state's requirements, so that the AOS will be ready for submission should a foreign state—having the appropriate confidentiality safeguards—request it. Most states provide the Annual Statement contact person with a checklist that addresses filing requirements. The AOWG advises the Appointed Actuary to work with the company in determining the requirements for each state.

The AOS is **not** submitted to the NAIC.

Substance

The entire substance of the AOS rests in paragraph 5. The American Academy of Actuaries' Property and Casualty Practice Note, *Statements of Actuarial Opinion on Property and Casualty Loss Reserves*, provides straightforward examples that show how the Appointed Actuary might choose to display the information required in Parts A–D of this paragraph.

Because the AOS is a synopsis of the conclusions drawn in the Actuarial Report, the content of the AOS should

reflect the analysis performed by the Appointed Actuary. Therefore, all of the Appointed Actuary's calculated estimates, including actuarial central estimates and ranges, are to be presented in the AOS consistent with estimates presented in the Actuarial Report.

Regulators expect that point or range estimates reported in the AOS be clearly supported and documented in the Actuarial Report. Without clarity, the documentation fails to meet Actuarial Standards of Practice and the expectation that another actuary can evaluate the work.

Part E of paragraph 5 of the *Instructions* addresses persistent adverse development. The Appointed Actuary is in a unique position to be able to comment on the nature of this development. This section requires the Appointed Actuary to do so. Comments can reflect common questions that regulators have, such as:

- Is development concentrated in one or two exposure segments, or is it broad across allsegments?
- How does development in the carried reserve compare to the change in the Appointed Actuary'sestimate?
- Is development related to specific and identifiable situations that are unique to thecompany?
- Does the development or the reasons for development differ depending on the individual calendar or accident years?

Paragraph 6 is relevant to all pooling situations as defined in paragraph 1C of the *Instructions* for the Actuarial Opinion. For non-0% companies, regulators expect that carried values reported in the AOS can be reconciled to values reported in the Annual Statement and the Actuarial Opinion, and that actuarial estimates can be reconciled to the Actuarial Report. For 0% pooled companies, the information in the AOS should be that of the lead company.

Regulators encourage the Appointed Actuary to display values on the pooled (or consolidated) basis in addition to the statutory entity basis. This can be accomplished by displaying two tables of information.

Adopted by the Actuarial Opinion (C) Working Group – Aug. 18, 2016.
Adopted by the Casualty Actuarial and Statistical (C) Task Force – Aug. 27, 2016.

III. Special interest topics

This appendix to the practice note contains more detailed information about specific topics that may not be common to all SAOs.

III.1 Unearned premium for P&C Long Duration Contracts

This section discusses the special rules that apply to the unearned premium reserve calculation for P&C long duration contracts.

According to the NAIC SAO Instructions,

> *"If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts or Other Loss Reserve items on which the Appointed Actuary is expressing an opinion, the Actuarial Opinion should contain language such as the following:*
>
> *D. Make a reasonable provision for the unearned premium reserves for P&C long duration contracts and/or <insert Other Loss Reserve item on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements."*[103]

The Appointed Actuary should opine on the unearned premium reserves for P&C long duration contracts if the amount of those reserves are material.

III.1.1 Definitions

According to the NAIC SAO Instructions,

> *"Property and Casualty (P&C) Long Duration Contracts" refers to contracts (excluding financial guaranty contracts, mortgage guaranty contracts and surety contracts) that fulfill both of the following conditions: (1) the contract term is greater than or equal to thirteen months; and (2) the insurer can neither cancel the contract nor increase the premium during the contract term. These contracts are subject to the three tests of SSAP No. 65-Property and Casualty Contracts of the NAIC Accounting Practices and Procedures Manual"*[104]

[103] *22018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[104] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

III.1.2 Discussion

For policies that meet the criteria provided in the above definition, SSAP 65 contains special rules for the calculation of the unearned premium reserves. These rules are found in SSAP 65, paragraphs 24-33, and consist of three UPR "tests" or steps. While not definitive, SSAP 65 does say that "*this guidance is primarily focused on home warranty and mechanical breakdown policies*".[105]

Given the complexity involved, the actuary may want to confirm whether certain policies meet the criteria for performing these calculations. In particular, the actuary may want to confirm that the policies in question do not have cancellation or repricing provisions that would exempt them from this calculation.

The three tests are essentially:

Test 1: The amount subject to refund to the contract holders as of the reporting date.

Test 2: The gross premium times the percentage of expected total gross losses and expenses under the contract that have yet to be incurred during the unexpired term of the contracts.

Test 3: "*[T]he projected future gross losses and expenses to be incurred during the unexpired term of the contracts [after specified adjustments], reduced by the present value of future guaranteed gross premiums, if any.*"[106] This is very similar to a premium deficiency calculation.

These tests are applied to the three most recent policy years individually, with the highest of the three values recorded for each of those policy years. For all earlier policy years, all Test 1 results are aggregated, all Test 2 results are aggregated, and all Test 3 results are aggregated, with the largest of those aggregated results being the amount booked for those earlier years on a combined basis.

The adjustments made for Test 3 are to reflect future investment income, but with several limitations. Only investment income related to future incurred losses is considered, not investment income on already incurred losses. The time period for the calculation of the investment income is from the valuation date to the date of incurred losses on the current unexpired portion of a policy, not to the date that those future losses are paid. The interest rate used for this calculation is capped based on the company's portfolio and on 5-year Treasury Bonds. An additional cap exists to the extent that this test implies more invested assets than a company actually holds.

For tests 2 and 3, the projected losses may be reduced for expected salvage and subrogation, but not for anticipated deductible recoveries unless the recoveries are properly secured. According to SSAP No. 65, "*Projected salvage and subrogation (net of associated expenses) shall be established based onreporting entity experience, if credible; otherwise, based on industry experience.*"[107] SSAP No. 65 goes on further to say, "*The actuarial report shall include a description of the manner in which the adequacy of the amount of security for*

[105] SSAP No. 65, paragraph 21 (Appendix IV).
[106] SSAP No. 65, paragraph 29 (Appendix IV).
[107] SSAP No. 65, paragraph 26 (Appendix IV).

deductibles and self-insured retentions is determined."[108]

The impact of ceded reinsurance is allowed to be reflected in the calculation of the net unearned premium reserves.

We refer the reader of this practice note to SSAP No. 65 for further details underlying the three Tests.

III.2 Intercompany pooling

It is a common practice for affiliated companies within an insurance group to pool business through an intercompany pooling agreement. Typically, one company in the pool assumes business from the other companies in the pool and then cedes the combined business (including its own business) back to the other companies, according to the percentage of their participation in the pool. This has a number of advantages, including simplified preparation of Annual Statements for the affiliated companies.

The NAIC Annual Statement Instructions for Schedule P require that direct plus assumed and ceded business be reported on a pooled basis. For companies within a group that pool all of their business, after external reinsurance, Schedule P is therefore identical for each company on a gross, ceded, and net basis, except that each company's Schedule P reflects its participation percentage. For a comprehensive example of how this works, the actuary may refer to the NAIC Instructions for Schedule P.

Since Schedule P gross and ceded premiums and losses reflect intercompany pooling transactions, gross and ceded premiums and losses for a pooled company are different in Schedule P as compared to the Underwriting and Investment Exhibits of the Annual Statement. For these companies, ceded reserves in Schedule P are also different from ceded reserves in Schedule F.

The Instructions provide that any retroactive change in intercompany pooling requires a restatement of Schedule P to reflect the current pooling agreement. A retroactive change in intercompany pooling among companies 100 percent owned by a common parent, which results in no gain in surplus, is not accounted for as retroactive reinsurance (see SSAP No. 63 and the *NAIC Accounting Practices and Procedures Manual*).

There are a number of impacts from intercompany pooling on reserve analyses and actuarial opinions. This section provides a discussion of these impacts in the order the impacts are addressed in the NAIC SAO Instructions.

III.2.1 Definitions

"Intercompany Pooling" in this context refers to business which is pooled among affiliated insurance companies who are party to a pooling agreement in which the participants receive a fixed and predetermined share of all business written by the pool. Intercompany pooling arrangements involve establishment of a conventional quota share reinsurance agreement under which all the pooled business is ceded to the lead entity and then retroceded back to the pool participants in accordance with their stipulated shares.

[108] SSAP No. 65, paragraph 33 (Appendix IV).

III.2.2 Discussion: Identification and disclosure of the pooling arrangement

Section 1C of the NAIC SAO Instructions was expanded in 2014 to apply to all companies that operate in an intercompany pooling agreement. Regardless of their participation percentage, companies participating in intercompany pooling arrangements are required to include a description of the pool, identification of the lead company, and a listing of all companies in the pool, their state(s) of domicile, and their respective pooling percentages in each of the SAOs.

If the composition of the pool, or a company's share of the pool, changed materially during the current year, the actuary may wish to comment on this by describing the change.

III.2.3 Discussion: Reserve analyses for pooled companies

For business that is part of a pooling agreement, the NAIC permits reserve analyses to be performed on a pooled basis, both gross and net of reinsurance. The following provides illustrative language that the actuary may wish to include in the SCOPE section of the SAO. We note that the first illustration is the same as that provided in section 3.3.2 of the practice note, repeated here for convenience.

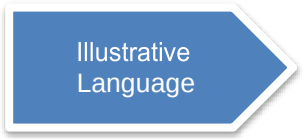
The Company is the lead member of an intercompany pooling agreement with its subsidiaries, DEF Insurance Company and GHI Insurance Company. Premiums and losses are allocated to the Company based on its assigned percentage to the total pool, XX%. Analysis of the reserve items identified in Exhibit A has been performed for all pool companies combined and allocated to the pool companies based on their pooling percentages. Any favorable or adverse development will affect pool members in a manner commensurate with their pool participation. The following is a listing of all companies in the pool, their respective pooling percentages, and their state of domicile: ….

OR

The Company is part of an intercompany pooling agreement with other affiliates of [name of group]. Premiums and losses are allocated to the Company based on its assigned percentage of the total pool. Analysis of the reserve items identified in Exhibit A has been performed for all pool companies combined and allocated to the pool companies based on their pooling percentages. The following is a listing of all companies in the pool, their respective pooling percentages, their state(s) of domicile, and an identification of the lead company: ….

III.2.3 Discussion: Reconciliation to Schedule P for pooled companies

If all business in the affiliated companies is part of the pooling agreement, the reconciliation of data to Schedule P, Part 1 can also be performed on a pooled basis. The actuary may wish to comment on this along the following lines when discussing reconciliation:



I also reconciled that data to a composite Schedule P – Part 1, comprising the total intercompany pool to which the Company belongs.

III.2.4 Discussion: Compilation of Exhibits A and B for pooled companies

Additionally, regardless of the company's participation percentage in the intercompany pool, each company is required to include Exhibits A and B reflecting its share. Companies having a zero percent share are required to include relevant comments that relate to the risks of the lead pool member and are required to file Exhibits A and B of the lead as an addendum to their SAOs.

III.2.5 Discussion: Actuarial Opinion Summary

The AOS Instructions pertaining to companies participating in intercompany pooling require the Appointed Actuary to state the company's intercompany pooling percentage.

In cases of intercompany pooling, the actuary often performs his or her analysis and draws his or her conclusions on the basis of total reserves. This information is usually described within the opinion. According to the AOS Instructions, for non-zero percent companies, the information provided for paragraph 5 of the AOS should be numbers after the company's share of the pool has been applied; specifically, the point or range comparison should be for each statutory company and should not be for the pool in total. However, for those companies whose participation percentage is zero, the information provided for paragraph 5 should be that of the lead company.

Note:

- Intercompany pooling agreements may create substantial cessions on Schedule F between members of the pool.
- A change in pooling percentage can cause a company to fail IRIS Tests, particularly the Estimated Current Reserve Deficiency to Surplus.

III.3 NAIC Guidance for Actuarial Opinions for Pools and Associations

The Casualty Actuarial and Statistical Task Force (CASTF) of the NAIC has provided guidance for a required SAO for Pools and Associations. This guidance document is reproduced for the convenience of the reader. Note that this document was last updated by the CASTF in September 2010 and, therefore, does not reflect the changes made by the NAIC in the 2018 Statement of Actuarial Opinion Instructions.

September 2010

NAIC Guidance for Actuarial Opinions for Pools and Associations

Prepared by the Casualty Actuarial & Statistical Task Force

A "Statement of Actuarial Opinion" (SAO) for Pools and Associations should be written in accordance with the NAIC Annual Statement Instructions Property and Casualty. The Casualty Actuarial & Statistical Task Force (CASTF) of the NAIC provides the following guidance to aid in writing a SAO for Pools and Associations. Note that the Actuarial Opinion Summary (AOS) does not apply to Pools and Associations.

The numbering in the following guidance corresponds to the numbering in the NAIC Annual Statement Instructions Property and Casualty.

1. The Board of Directors of the pool shall appoint a Qualified Actuary to write the SAO for the pool. The SAO shall be forwarded by the pool administrator to each pool member by January 31st of the succeeding year or as otherwise agreed by voluntary pool members.

1.A. Definitions

Pool member means an insurer authorized to write property and/or casualty insurance under the laws of any state, unless otherwise defined in state law, and includes but is not limited to fire and marine companies, general casualty companies, local mutual aid societies, statewide mutual assessment companies, mutual insurance companies other than farm mutual insurance companies and county mutual insurance companies, Lloyd's plans, reciprocal and interinsurance exchanges, captive insurance companies, risk retention groups, stipulated premium insurance companies, and nonprofit legal services corporations.

4. SCOPE Paragraph

The net reserves included in the SCOPE paragraph are net of reinsurance, other than cessions used to distribute the losses to pool members.

The SCOPE paragraph should indicate the accounting basis on which the entity isproviding its financial information, the valuation date of data used in support of the opinion, and whether this data has been adjusted to reflect expected values as of December 31 of the calendar year for which the SAO is provided. Alternatively, if data reported by the entity is on a lagged basis, the number of months by which data is lagged should be noted.

Exhibit A should be modified to provide only those items relevant to Pools and Associations.

6. RELEVANT COMMENTS paragraphs

The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address issues such as collectibility of assessments, the mechanism for recovering any pool deficits, or the nature of member's liability as part of the pool.

b. Other Disclosures in Exhibit B

Exhibit B should be modified to provide only those items relevant to Pools and Associations.

d. IRIS Ratios

In lieu of comments about IRIS ratios, if the entity's current reserves indicate adverse development of greater than 20% on reserve valuations established at the same date one year and/or two years prior, the actuary must include RELEVANT COMMENT on the factors that led to the unusual value(s) along with explanation.

Exhibits

The exhibits required in the NAIC Annual Statement Instructions Property and Casualty should be modified to provide only those items relevant to Pools and Associations. The CASTF provides the following altered exhibits for reference.

Exhibit A: SCOPE

Loss Reserves:	Amount
1. Reserve for Unpaid Losses	$ _____
2. Reserve for Unpaid Loss Adjustment Expenses	$ _____
3. Reserve for Unpaid Losses – Direct and Assumed	$ _____
4. Reserve for Unpaid Loss Adjustment Expenses – Direct and Assumed	$_____
5. The Page 3 write-in item reserve, "Retroactive Reinsurance Reserve Assumed"	$ XXX
6. Other Loss Reserve items on which the Appointed Actuary is Expressing an Opinion (list separately)	$ _____

Premium Reserves:

7. Reserve for Direct and Assumed Unearned Premiums for Long Duration Contracts
8. Reserve for Net Unearned Premiums for Long Duration Contracts

9. Other Premium Reserve items on which the Appointed Actuary is expressing an Opinion (list separately) $ _____

Exhibit B: DISCLOSURES

1. Name of the Appointed Actuary Last_____First_____Mid _____

2. The Appointed Actuary's Relationship to the entity Enter E or C based upon the following:

E if an Employee
C if a Consultant

_____

3. The Appointed Actuary is a Qualified Actuary based upon what qualification? Enter F, A, M, or O based upon the following:

F if a Fellow of the Casualty Actuarial Society (FCAS)
A if an Associate of the Casualty Actuarial Society (ACAS)
M if not a member of the Casualty Actuarial Society, but a Member of the American Academy of Actuaries (MAAA) approved by the Casualty Practice Council, as documented with the attached approval letter.
O for Other

_____

4. Type of Opinion, as identified in the OPINION paragraph. Enter R, I, E, Q, or N based upon the following:

R if Reasonable
I if Inadequate or Deficient Provision
E if Excessive or Redundant Provision
Q if Qualified. Use Q when part of the OPINION is Qualified.
N if No Opinion

_____

5. Materiality Standard expressed in US dollars (Used to Answer Question #6)

$ _____

6. Is there a Significant Risk of Material Adverse Deviation?
Yes [ ] No [ ] Not Applicable [ ]

7. Statutory Surplus $ _____

8. Anticipated net salvage and subrogation included as a reduction to loss reserves

$ _____

9. Discount included as a reduction to loss reserves and loss expense reserves
9.1 Nontabular Discount $ _____

9.2 Tabular Discount $ _____

10. The net reserves for losses and expenses for the company's share of voluntary and involuntary underwriting pools' and associations' unpaid losses and expenses $ XXX

11. The net reserves for losses and loss adjustment expenses that the company carries for the following liabilities*

11.1	Asbestos, as disclosed in the Notes to Financial Statements	$ XXX
11.2	Environmental, as disclosed in the Notes to Financial Statements	$ XXX

12. The total claims made extended loss and expense reserve

12.1	Amount reported as loss reserves	$ XXX
12.2	Amount reported as unearned premium reserves	$ XXX

13. Other items on which the Appointed Actuary is providing Relevant Comment (list separately)

$ _____

* The reserves disclosed in item 11 above, should exclude amounts relating to contracts specifically written to cover asbestos and environmental exposures. Contracts specifically written to cover these exposures include Environmental Impairment Liability (post 1986), Asbestos Abatement, Pollution Legal Liability, Contractor's Pollution Liability, Consultant's Environmental Liability, and Pollution and Remediation Legal Liability.

III. 4 Retroactive and financial reinsurance

This section provides additional detail on the topics of retroactive and financial reinsurance, beyond that discussed in sections 5.8 and 5.9 of the practice note.

According to the NAIC SAO Instructions,

> "*RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance."*[109]

The reference to retroactive reinsurance relates to contracts subject to retroactive reinsurance accounting, not to retroactive reinsurance contracts subject to prospective reinsurance accounting.

III.4. 1 Definitions

"*Retroactive reinsurance refers to agreements referenced in SSAP No. 62R, Property and Casualty Reinsurance, of*

[109] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

the NAIC Accounting Practices and Procedures Manual."[110]

For the purpose of the SAO this definition refers to retroactive reinsurance contracts subject to retroactive reinsurance accounting. Some retroactive reinsurance contracts instead are subject to prospective reinsurance accounting. Paragraph 31 of SSAP 62R lists those retroactive contracts subject to prospective reinsurance accounting:

- *Structured settlement annuities:* These are accounted for as reinsurance for GAAP purposes but as paid losses with contingent liabilities for statutory accounting purposes. See SSAP 65, paragraphs 17 through 19 for more information.
- *Novations*
- *The termination of, or reduction in participation in, reinsurance treaties entered into in the ordinary course of business*
- *Intercompany reinsurance agreements, and any amendments thereto, among companies 100% owned by a common parent or ultimate controlling person provided there is no gain in surplus as a result of the transaction*
- *Certain runoff agreements*: These are described in detail in paragraphs 80 through 83 of SSAP 62R.

"Financial reinsurance refers to contracts referenced in SSAP No. 62R [of the NAIC Accounting Practices and Procedures Manual] in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance."[111]

III.4.2 Discussion: Retroactive Reinsurance

Retroactive reinsurance contracts discussed herein are only those subject to retroactive reinsurance accounting treatment.

Retroactive reinsurance contracts do not affect the losses reported in Schedule P or the Underwriting & Expense Exhibits, but they do affect the surplus of the parties involved. The loss reserves (ceded and assumed) for such contracts are reported separately as write-in liabilities (or contra-liabilities) on the balance sheet. For the ceding company, any surplus gain from the retroactive reinsurance is recorded as "special surplus" until (and to the extent that) it reflects actual reinsurance recoveries above reinsurance considerations paid. These "special surplus" amounts are recognized for RBC and other similar solvency evaluation purposes, but may not be available for dividend and similar purposes.

Since the contracts do not impact the loss schedules of the annual statement the financial impact of these contracts may not be readily apparent, requiring the use of different data sources or different reconciliation approaches. The contracts also will not impact reported loss development (and hence the risk of adverse loss development) that may be reported in Schedule P – Part 2, but do impact statutory surplus. As such, the actuary may want to evaluate and set the RMAD criteria in recognition of this situation. A RMAD focusing on changes to

[110] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[111] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

surplus will reflect the risk and impact of retroactive reinsurance, while one focusing on the risk to Schedule P reserves will not be impacted by retroactive reinsurance.

Note that retroactive reinsurance contracts have to pass risk transfer to qualify for reinsurance accounting treatment (prospective or retroactive). Contracts that don't meet risk transfer requirements will be accounted for as deposits.

An actuary that has access to both statutory and GAAP financial statements may benefit from knowing how GAAP accounting for such contracts differs from the statutory accounting. GAAP loss reserves will include the impact of retroactive reinsurance contracts, but any surplus gain that results will be amortized over time. Hence GAAP loss reserve disclosures will benefit from these contracts, but GAAP equity will have any benefit deferred.

III.1.2 Discussion: Financial Reinsurance

Financial reinsurance contracts are contracts that do not transfer sufficient risk so as to qualify for reinsurance accounting treatment. These contracts could be prospective or retroactive in nature (i.e., they could cover only claims incurred in the future, claims incurred in the past, or some combination of the two). The one constant is that these contracts are accounted for as deposits, with no impact on loss reserves and (normally) minimal impact on surplus.

These contracts were the subject of various investigations by both state insurance regulators and the SEC in the past due to the potential for such contracts to distort financial statements if not recorded as deposits. If recorded as deposits then these contracts should not impact the actuarial opinion analysis. If incorrectly

reported then these contracts may understate the risk associated with the company's balance sheet.

The risk transfer analysis to determine if reinsurance or deposit accounting applies is discussed in SSAP 62R. It says that determining whether risk transfer exists "*requires a complete understanding of that contract and other contracts or agreements between the ceding entity and related reinsurers. A complete understanding includes an evaluation of all contractual features….*"[112] These include cancellation provisions, loss-sensitive features and investment income potential, not just undiscounted losses that may result from that contract.

FAQ: This requirement violates the economics of these situations. Our company has paid another organization to assume these costs. Why should we now set up an additional liability?

A: Statutory Accounting is often more conservative than GAAP accounting, and is often more conservative than the economic fundamentals of a situation would indicate. Regulators have taken a conservative approach to pre-paid loss adjustment expenses.

III.5 Pre-paid Loss Adjustment Expense

Third-party administrators (TPAs) often provide loss adjustment services on a fixed price basis to their insurance company customers. For example, a TPA may agree to handle all claims from Accident Year 20XX arising from a specific line of business or from a specific program -- for a fee of X% of the line's 20XX earned premium. These agreements often are "cradle to grave", providing for loss adjustment services into the future until all claims covered by the agreement are closed.

SSAP 55, Paragraph 5 of the AP&P Manual states:

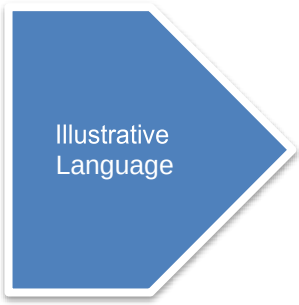
[112] SSAP No. 62R, paragraph 12 (Appendix IV).

"The liability for unpaid loss adjustment expenses shall be established regardless of any payments made to third-party administrators, management companies or other entities…"[113]

Thus, statutory accounting requires the Company to include a full reserve for these loss adjustment expenses, regardless of any amounts which have been pre-paid.

III.5.1 Illustrative language

Comments on pre-paid loss adjustment expenses may be included in the SAO when this item is material. In addition, regulators may expect an appropriate discussion of this topic in the Actuarial Report.



The Company has an agreement with {name of TPA} to adjust all claims from the 20XX accident year from the {name of program or line of business}, until all of these claims have been closed. A pre-payment for these services has been made by the Company to {name of TPA}.

Regardless of this pre-payment, the Company has established the liability for unpaid loss adjustment expenses and included this balance in the loss adjustment expenses reserves included in Exhibit A.

III. 6 Guidance for Audit Committee Members of P/C Insurers

The following document was first published by COPLFR in 2007 and was updated in 2014 to assist practicing actuaries in communicating with a company's board of directors or audit committee concerning uncertainties in the process of estimating unpaid loss and loss adjustment expense claims liabilities. In response to regulatory concerns about the need for more frequent and direct communication between the Appointed Actuary and the company's board of directors, we reproduce the updated 2014 document here for the convenience of the reader. COPLFR hopes this document will serve as a reference for the Appointed Actuary when assembling materials for a presentation to a board or audit committee.

A PUBLIC POLICY OVERVIEW

This document[1] is intended to provide members of boards of directors and audit committees of property/casualty insurance companies with a more complete understanding of the information and assistance that actuarial professionals can provide as such board/committee members perform their financial reporting oversight roles.

Summary

The reliability of financial statements for property/casualty insurance companies depends significantly on the accuracy of the recorded liabilities for unpaid claims, commonly referred to as "loss reserves." Unlike most balance-sheet liabilities common to other industries, the loss reserves of a property/casualty insurer are only estimates, not fixed known amounts. These estimates are based on the work of actuaries.

Loss reserve estimates are often subject to significant uncertainties. At times, property/casualty insurers have announced significant loss reserve increases for reasons that include but are not limited to: high growth in new business lines (where the company did not have preexisting experience), the impact of major court cases, unanticipated increases in loss trends (such as sustained higher trends in medical costs and utilization), asbestos litigation, and construction defect claims. For some companies, such loss reserve increases are large enough to impair their financial condition; for others, reported profitability is affected. Significant loss reserve decreases can also occur, e.g., due to declining auto claim frequency during a recession.

Property/casualty insurance companies' boards of directors and audit committees have a fiduciary responsibility and regulators' expectation for overseeing the financial reporting process. Since loss reserves are crucial to property/casualty insurers' financial statements, audit committees and boards of directors are advised to have direct discussions with their actuarial professionals to obtain a better understanding of the loss reserve estimation process and the policies related to that process. These discussions, via both periodic presentations and special workshops, help to increase boards of directors and audit committee members' appreciation for the uncertainty inherent in loss reserve estimates.

This document begins with a background on loss reserves and the roles of actuaries in setting them, followed by a discussion of oversight function considerations related to those reserves.

[1] The considerations contained herein are based on broad generalizations and are not intended to describe or establish actuarial standards of practice or requirements. The information presented is intended to reflect a large percentage of property/casualty insurers. Within the property/casualty insurance industry, there is wide diversity of actuarial practice. Each company and each situation must be evaluated on the basis of its own circumstances.

This document is offered primarily for members of audit committees and boards of directors of property/casualty insurers subject to regulation by the members of the National Association of Insurance Commissioners (NAIC). While most of the considerations apply as well to other insurance entities, including non-U.S. insurance companies, captive insurance companies, corporate self-insurers, etc., some of the references contained herein are specific to the NAIC's requirements regarding the recording of loss reserves in insurers' financial statements.

Appendix A Property/Casualty Insurance Loss Reserves

A property/casualty insurance policy is a promise to pay claims related to covered, or insured, events. Usually, covered events take place during the time the policy is in effect (e.g., auto accident, injury, or loss of property as a result of a loss covered under the terms of the policy). In some cases, the insurance company is not presented with a claim or demand for payment by the insured or a third party until years after the covered event has occurred. It can take many years for a claim, once made, to be investigated and settled.

When these claims are eventually settled, the insurance company must have the resources to pay the claim in accordance with the policy provisions. Therefore, until all claims are resolved and the related amounts are paid, insurance accounting rules require the insurer to establish a "loss reserve" as a liability on the company's balance sheet. (These loss reserves include a provision for loss adjustment expenses[2] (LAE) or settlement costs.) The loss reserve is based on the company management's best estimate of the amounts that will be paid in the future for losses and loss adjustment expenses related to claims arising from past events (i.e., events on or prior to the accounting "as of" date) pursuant to policies sold, whether or not all claims have been reported at that time.

The duration and the uncertainty of the claims-settlement process necessitate that loss reserves be based on estimates. A property/casualty insurer's loss reserves are typically the company's largest balance-sheet liability by a wide margin and its greatest source of financial statement uncertainty. Loss reserves can be difficult to estimate, and the amounts ultimately paid may be far less than, or greater than, amounts previously estimated.

A conclusion that prior years' loss reserves need to be revised, based on current facts and circumstances, affects both the company's reported surplus and its income during the period in which that conclusion is reached. As such, changes in loss reserve estimates have consequences both for the financial condition of the company and for its perceived ongoing operating profitability. It is therefore important that loss reserves be set as accurately as possible.

Role of Actuaries in the Reserving Process

Actuaries typically play an integral role in the loss-reserving process. The actuarial role is generally provided by one or more of the following sources:

- *Internal Actuaries* – Many insurance companies employ actuaries to aid in setting loss reserves. Typically an internal actuary provides periodic analyses of loss reserves and assist management in understanding underlying claim trends, the judgments and assumptions used in the analyses, and any material risk factors that might affect the loss reserves. The internal actuary may also lead presentations regarding estimated loss reserves to boards of directors and audit committees.

[2] LAE are discussed in greater detail in Actuarial Standard of Practice No. 43, *Property/Casualty Unpaid Claim Estimates*, promulgated by the Actuarial Standards Board (ASB), which can be found at http://www.actuarialstandardsboard.org/pdf/asops/asop043_159.pdf.

- *Audit Firms* – Often, insurance companies' external audit firms will assign actuaries to their engagement teams. The audit firms' actuaries evaluate the reasonableness of the recorded amounts. To assist them in this evaluation, they may develop an alternative point estimate and/or "range of reasonable estimates"[3] of the loss reserves. This range is usually much narrower than a range of possible outcomes, and it is intended to provide an independent view of whether the recorded loss reserve amounts are reasonable in light of the available information.

- *Consulting Actuaries* – Consulting actuaries may be engaged to take on the actuarial role in setting loss reserves (as described in the *Internal Actuaries* discussion above). Some companies also engage third-party actuarial consultants to perform independent analyses of the loss reserves. Such analyses can encompass the entire claim population or can be limited to some unusual or especially difficult to estimate portion of the exposures. The detailed analyses performed by consulting actuaries often include independent methodologies, judgments, and assumptions.

The boards of directors of all U.S.-domiciled insurers are also required to appoint a qualified actuary, or "appointed actuary," to render an opinion on the recorded loss reserves for the regulatory (or "statutory") year-end financial statements. This opinion is based on specifications described by the National Association of Insurance Commissioners (NAIC), and is contained in a formal, public document called the *Statement of Actuarial Opinion* (SAO).[4] The SAO is an important tool used by insurance regulators to assess insurer solvency. In addition to the actuarial opinion on the reasonableness of the recorded loss reserves, the SAO contains informative disclosures regarding the factors affecting the variability of the loss reserves and the appointed actuary's view as to whether there is a risk of "material adverse deviation[5]" from the recorded estimate.

Oversight Function Considerations – Loss Reserve Estimates

The following are some of the major considerations for those providing an oversight function on recorded loss reserves.

- Unavoidable use of judgment – input from multiple disciplines
- How actuarial estimates are considered
- Extensive public (and private) disclosure
- Loss reserve variability and uncertainty
- Data quality and the impact on loss reserve uncertainty
- Context of the reserves
- Ceded reinsurance
- Governance (control) structure underlying loss reserves

---

[3] The term "range of reasonable estimates" is defined and described later in the section labeled "Loss Reserve Variability and Uncertainty." The term is also discussed in a 2008 Academy paper, "P/C Actuarial Communication on Reserves Ranges and Variability of Unpaid Claim Estimates," available at http://www.actuary.org/files/range_septo8.4.pdf/range_septo8.4.pdf.

[4] In the United States, the SAO is prepared at the legal entity level, i.e., for each individual insurance company within a group rather than for the consolidated group of companies. (See the NAIC's Regulatory Guidance for Annual Statement Instructions for Property/Casualty Actuarial Opinions, available at http://www.naic.org/committees_c_catf.htm

[5] The SAO instructions require the appointed actuary to disclose their materiality standard"

Appendix B Unavoidable Use of Judgment – Input from Multiple Disciplines

As mentioned above, loss reserves are only estimates of the ultimate amounts payable and are not known with certainty. The amounts that will eventually be paid will be the result of numerous investigations, settlement negotiations, jury trials, court decisions, (possibly) contract interpretations, and other items not knowable with certainty in advance. Hence the use of judgment in the estimation process is inevitable.

The basis for these estimates is "past experience adjusted for current trends, and any other factors that would modify past experience."[6] This estimation process is often led by actuaries and requires the input of others from multiple disciplines. Those providing input typically include the claims department, legal counsel, underwriting, and relevant business units, with the final decision on the estimate to book being the responsibility of company management.
That said, actuarial input is vital to management's process, as the actuarial estimates typically consider and incorporate input from all involved disciplines.

Members of audit committees and boards of directors benefit from understanding the significant judgments and assumptions incorporated into the loss reserve estimates that are made by management and by the actuary. The significance of this understanding can extend beyond loss reserves, as the findings or observations that inform those judgments may also provide valuable input to decisions regarding pricing or marketing plans.

How Actuarial Estimates Are Considered

Actuarial estimates are not necessarily adopted by management as the booked loss reserves, as company management may record an amount that differs from the actuary's estimate. In such cases, members of audit committees and boards of directors should understand the differences between the actuarial and management estimates. In particular, members of audit committees and boards of directors may request management to provide clarity through answers to the following questions:

- Does management's process typically result in differences between the actuary's estimates and the recorded amounts, and, if so, why?
- How do management's estimates compare to a range of estimates that may be developed by the actuary?
- Has due diligence been performed to identify the potential impact, if any, on the loss reserve estimates of any significant recent changes in the company's operations (e.g., claims, underwriting, reinsurance)?
- If such changes exist, what adjustments or other considerations are made (by management and/or the actuary) to reflect the potential impact of the changes on the estimates of loss reserves?

Extensive Public (and Private) Disclosure

The loss reserves recorded by a U.S. property/casualty insurer are subject to extensive public and private disclosure, allowing many parties to view and potentially form their own view of the insurer's estimates.

[6] 2014 NAIC Accounting Practices & Procedures Manual – Statement of Statutory Accounting Practices (SSAP) No. 55, paragraph 10.

The Securities and Exchange Commission (SEC) requires each publicly-traded U.S. property/casualty insurance company to include a loss reserve development table as part of its annual Form 10-K filing. This table provides a comparison of the company's consolidated loss reserves (claim liabilities) recorded at each of the past 10 year-ends to updated estimates, including the most recent estimate, of those same liabilities. Additional (largely) qualitative disclosures are also required regarding loss reserves and related risk factors. These disclosures include information on the reasonably likely variation in the insurer's loss reserves and the effect of that variation on the financial condition of the company. The disclosures also contain explanation of the source of any recent changes in prior loss reserve estimates. In addition to the disclosures within the SEC filings, many public companies issue press releases and hold investor conference calls that incorporate information related to loss reserves.

For U.S. property/casualty insurers, a summary of similar loss development information is provided in Schedule P, Part 2 – Summary (Schedule P) of the NAIC Statutory Annual Statement, which is filed by each individual insurance company for regulatory purposes. Schedule P shows the annual development of ultimate losses and *Defense and Cost Containment loss adjustment expense* (DCC LAE) for each of the past 10 coverage years (often referred to as "accident years").

Both the SEC disclosures and the NAIC Schedule P filings provide 10 years of history showing the accuracy of management's loss reserve decisions over time. These schedules are used by analysts and other users[7] to assess the reliability of a company's current reserving practices and the accuracy of the balance sheet estimates relative to those of its competitors.

Members of audit committees and boards of directors can request the company actuary to provide the following information with regard to these disclosures:

- The specific reasons for past years' revisions to loss reserve estimates, including the lines of business, programs, and years affected.
- A comparison to industry trends for the same coverages during the same period.
- A comparison to the reserve activity of the company's closest competitors for the same coverages during the same period.

Besides the public SAO mentioned above, in which the appointed actuary is required by state law or regulation[8], to opine on the reasonableness of recorded loss reserves, the appointed actuary is also required to provide a private disclosure (the Actuarial Opinion Summary, or AOS) to insurance regulators every year. The private report discloses the actuary's estimate or range of estimates relative to management's recorded loss reserve estimates, and, where applicable, the causes of recent significant adverse reserve development. The appointed actuary documents the analysis underlying the SAO and AOS in the detailed Actuarial Report[9], which is made available to the insurance regulator upon request. The board or audit committee may wish to receive its own copy every year of the SAO and AOS (a relatively short document).

[7] The list of other users includes the Internal Revenue Service (IRS). The Schedule P filings are the basis for the loss reserve tax deduction under current tax losses, with the IRS and tax courts also making use of actuarial analyses in evaluating the reasonableness of these deductions. See *Acuity v. IRS* tax court decision, "T.C. Memo. 2013-209."

[8] Theses state laws or regulations are based on an NAIC model law on the topic of P&C insurer loss reserve opinions by appointed actuaries.

[9] The Actuarial Report is required and defined by the SAO instructions, and its purpose is to document the SAO findings.

Appendix C Loss Reserve Variability and Uncertainty

The management of a U.S. P/C insurer is required to include an analysis of variability and uncertainty in the loss reserve estimation process.[10] Actuaries are uniquely qualified to provide insights into the potential for this variability and uncertainty.

Estimating loss reserves involves predicting future loss payments based on historical and current information and knowledge, as well as judgment about future conditions. Actuaries typically employ several methods to estimate loss reserves in a given situation and may consider multiple reasonable assumptions regarding future conditions when applying the methods. The actuary may develop a "range of reasonable estimates"[11] of loss reserves based on various combinations of these methods and assumptions. This range is typically developed by the Appointed Actuary to assist in creating an opinion on the reasonableness of the recorded loss reserves. The range of reasonable estimates is not a broad range of potential outcomes; rather, it is a narrower range of estimates that the actuary considers to be appropriate for the carried reserve.

While the range of reasonable estimates may encompass multiple reasonable assumptions about future conditions, it typically will not include the possibility of sudden shifts in the statutory, judicial, and economic-reserving environments, nor will it include major unexpected changes in company operations. Nevertheless, such shifts can and do occur.

As part of the actuarial opinion, the actuary reports on events and circumstances that pose a significant risk to the company and that would result in a material adverse deviation from the carried reserves. Such events and circumstances could be systemic to the company's segment of the insurance industry or particular to the company. Historic examples of systemic events and circumstances include changes in the legal environment that led to significant asbestos and environmental losses long after policies had expired or the rapid unexpected inflation that led to mispricing and initial under-reserving in workers' compensation in the late 1990s. Systemic changes can be positive as well: medical professional liability lines, in addition to experiencing rapid increases, have also seen rapid decreases in claims costs (neither of which were reflected in the initial reserves). Examples of significant internal risks include mispricing of a block of business or, for smaller companies, even the emergence of more than the expected number of large losses. For some companies, particularly very large personal lines carriers, the risk of material adverse deviation in the carried reserves might be remote, while other companies could be subject to reserve deviation risk so great that the difference between the high and low ends of the actuary's range of reasonable estimates is material.

Members of audit committees and boards of directors should seek to understand the significant risks that threaten reserve development outside of the current range of estimates, both in terms of their potential magnitude and the actuary's estimation of the likelihood of such events. Strong oversight should include frank discussions of such risks among the parties responsible for estimating and recording the loss reserves with the audit committee or board of directors.

---

[10] 2014 NAIC Accounting Practices & Procedures Manual, SSAP No. 55, paragraph 12: "Management … shall include an analysis of the amount of variability in the estimate".

[11] As pointed out in footnote 3, this term is also discussed in http://www.actuary.org/files/range_septo8.4.pdf/range_septo8.4.pdf.

Appendix D Data Quality and the Impact on Loss Reserve Uncertainty

The actuarial analysis process is highly dependent upon data quality, which is often determined by each company's systems and processes for collecting, storing, and making available its historical data relative to losses, exposures, and premiums. Due to the evolving data processing environment, some companies have a blend of historical systems that provide the data used by the reserving actuary. In addition, for companies that have undergone a series of mergers in the past, the systems of each of the legacy companies may not be fully integrated.

The level of controls and granularity of the information around these systems can lead to concerns about the quality of the data used by the actuary or may hamper the efficiency of certain levels of detailed review. Limitations posed by less than perfect data may introduce new uncertainties to the estimation process.

Even in the absence of these legacy system issues, data quality problems at a company can impact the reliability of the actuary's projections. For this reason, the actuary is required to review the data for reasonableness and consistency[12].

The actuary will have a view related to the degree of uncertainty that any data issues add to the process. The audit committee should consider making inquiries if this is a concern for a particular company.

Context of the Reserves

Loss reserving issues and variability can vary drastically across product lines and companies within the insurance industry. Hence, members of audit committees and boards of directors will benefit in their oversight function from being aware of the context underlying the reserve estimates, including the company's areas of concentration, recent industry trends in those areas, and material developments within the company that might affect the estimation process. Knowing this context can help them ask more probing questions of management and the appointed actuary regarding the recorded loss reserve and associated risks.

Information they may want to obtain from senior management and/or the appointed actuary could include:

- The breakdown of the company's loss reserves by coverage or product line.
- Recent industry trends in those product lines (with regard to profitability, underwriting, claims, and reserving issues).
- Whether there have been any recent changes in the company's experience in those lines vis-à-vis profitability, claim handling, or reserve development.
- Major risk factors in the reserving for those lines.
- Whether competitors are experiencing the same risk factors, recent changes, etc., that the company has seen.
- The causes of recent changes in reserve estimates (favorable or unfavorable).
- Whether competitors have cited similar causes.
- Questions about the reserves raised by major outside stakeholders, including regulators, rating agencies, and, where relevant, investors or investment analysts.

[12] This is a requirement of both Actuarial Standard of Practice No. 23 – Data Quality, as well as the SAO instructions.

The feedback received should be consistent with (or at least not contradictory to) information available from publicly available sources, such as trade publications, competitor SEC filings, and investor analyst reports.

Ceded Reinsurance

Much of the focus on recorded loss reserves is on a net of reinsurance basis, or those reserves after the impact of reinsurance cessions. However, those loss reserves that are expected to be ceded under reinsurance agreements are also estimates. The reasonableness of both the estimated cessions, and, perhaps more importantly, the collectability of such cessions, are matters for board/audit committee oversight, as overstatement of ceded reinsurance or failure to collect such cessions has caused adverse impacts to financial statements and has even caused insurer insolvencies in the past.

The Statement of Actuarial Opinion requires the opining actuary to have a separate view on both gross loss reserves (i.e., before the impact of such cessions), and net loss reserves. As such, the board/audit committee should expect the appointed actuary to be conversant in this area. Issues that the audit committee might consider querying include:

- Possible concentrations by reinsurer
- Financial strength ratings of current reinsurers
- The policy regarding required financial strength for possible future reinsurers
- Reliability/variability of the ceded reserve estimates underlying the recorded reserves

Governance (Control) Structure Underlying Loss Reserves

Any material balance sheet estimate needs to have a strong governance process and system of controls supporting it, and the loss reserve estimate is no exception. The following are some of the typical controls, both internal and external, that exist for loss reserve estimates. The board/audit committee member might want to be familiar with the extent to which these controls exist or are followed for the insurance company.

Internal Controls

- *Segregation of duties.* While input from those responsible for pricing or developing business (e.g., underwriters, pricing actuaries) is often very useful to the loss reserving process, objectivity typically improves when different people perform the primary reserving and pricing roles. The perspectives provided by the pricing and reserving functions are often different, with the pricing function focusing on the profitability of current and future business. By contrast, the reserving function focuses on the potential outcomes connected with business written in the past (sometimes even in markets that the company has since left). As such, the reserving function acts to some extent as an early warning test or report card on past pricing and/or underwriting performance. This creates a potential conflict of interest when the same people perform both functions. Where resources do not allow separate staffing of these two functions, audit committee members should be aware of the potential conflict of interest that arises from the same people performing both functions.

- *Use of reserve committees*. Some insurance companies have reserve committees or an equivalent oversight management group, often organized at one or more management segment level(s) (e.g., legal entity, line of business, region). The committee might include the segment's executive management, the segment's internal reserving actuary or actuarial consultant, and heads of key operating functions (e.g., claims, underwriting, marketing).

  Having a reserve committee does not ensure objectivity, and members of audit committees and boards of directors may wish to inquire further to determine its effectiveness. The extent to which a reserve committee improves objectivity is partly a function of the quality and efforts of the reserve committee members. Members of audit committees and boards of directors should learn the identities and qualifications of reserve committee members. The audit committee and board of directors may find value in meeting separately with the lead actuary to obtain the actuary's view of the reserve committee's effectiveness and may also find value in obtaining certain summary information from the reserve committee meetings on a regular basis.

- *Internal audit*. Larger insurance companies typically have an internal audit function that includes in its scope the loss reserve process. This internal audit function can include testing of data quality used in the loss reserve analysis and monitoring any in- house reserving actuaries' compliance with professional practice standards.

- *Actuarial peer review*. Many actuarial firms and in-house actuarial departments have implemented peer review programs to provide an additional set of eyes on professional work product.

- *Report from the Appointed Actuary*. Each statutory insurer's appointed actuary is legally required to report to the board or audit committee each year on the items within the scope of the actuary's loss reserve opinion. Many of these are in-person, allowing for immediate response to questions the board/audit committee may have.

External Controls

- *External Audit*. As loss reserve estimates have a material impact on earnings and technical solvency, external auditors of public companies typically include a review of these estimates in every reporting cycle (although more attention may be paid to this issue at year-end than for interim periods). Many insurers' boards/audit committees include discussions with their external auditors on a regular basis in their agendas.
- *Attestations.* Through its Model Audit rule, the NAIC requires larger insurers to provide an attestation regarding the operating effectiveness of its control structure. This control structure will include controls related to the loss reserving process. For public companies, the Sarbanes-Oxley Act of 2002 requires not only internal attestations, but an attestation by the independent auditors related to controls. An audit committee or board may seek reports related to how well the controls are operating and request specific information related to the controls on actuarial processes in particular.
- *Financial Examinations by Insurance Regulators.* State insurance laws require each insurer to undergo a financial exam by the state at least once every three to five years. A review of previously-recorded loss reserves is a key part of this exam, with that review performed by either insurance departments or external actuarial consultants working on behalf of the insurance departments. As part of these exams, the state's examiners inquire about the oversight of the board and audit committees into the loss reserving process, indicating that the expectations of the regulators includes a strong awareness and involvement in oversight of the loss reserves.

- *Replacement of Appointed Actuary.* Whenever an appointed actuary is replaced, the NAIC requires both the company and the outgoing appointed actuary to provide letters to the domiciliary state regulator discussing any disagreements over loss and LAE reserves during the last 24 months. These disagreement letters are not public information, but audit committees benefit from review of these letters whenever an appointed actuary is replaced.

Executive Session with Actuaries

Members of boards of directors or audit committees should consider meeting in executive session with the appointed actuary and potentially other actuaries significantly involved during the reporting process. Including the audit firm actuary in the audit committee's executive session with the audit firm is also beneficial. Such executive sessions are particularly of value where management may have exercised undue influence on the reserve estimation process. While such undue influence is uncommon, its potential is a key focus of regulators, as it has been a factor in a number of past insolvencies. Possible signs of undue management influence that could be identified during executive session include (in increasing order of severity):

- The actuary is not provided with comprehensive information on emerging problem areas (e.g., newer coverages with adverse experience).
- Information is provided late to the actuary, leaving inadequate time for analysis.
- The actuary is denied access to certain individuals at the company.
- Management makes clear to the actuary that his/her continued employment is contingent upon agreement with management's reserve estimates.
- The opining actuary is replaced, and the new actuary immediately agrees with management's position.

* * * * * * * * *

Loss reserves are a major part of an insurer's reported balance sheet, subject to public (and private) disclosure and review, and, by their nature, require the use of judgment. As such, oversight of such reserves is a material part of the board or audit committee's responsibility. Actuarial input in this oversight process is inevitable and invaluable. This issue brief attempts to aid in audit committees' and boards of directors' understanding of the issues and resources related to this important oversight function.

Liabilities, Contingencies and Impairments of Assets

SCOPE OF STATEMENT

1. This statement defines and establishes statutory accounting principles for liabilities, contingencies and impairments of assets.

SUMMARY CONCLUSION

Liabilities

2. A liability is defined as certain or probable[1] future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable[1] future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

Joint and Several Liabilities

5. Joint and several liability arrangements for which the total obligation amount under the arrangement is fixed[2] at the reporting dates shall be measured and reported as the sum of:

a. The amount the reporting entity agreed to pay on the basis of the agreements among its co-obligors, and

b. Any additional amount the reporting entity expects to pay on behalf of its co-obligors. When an amount within management's estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be the additional amount included in the measurement of the obligation. If no amount within the range is a better estimate than any other amount, then the midpoint shall be used.

[1] *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

[2] Examples of items within the scope of this guidance include debt arrangements, other contractual obligations, and settled judicial litigation and judicial rulings. Loss contingencies, guarantees, pension and other postretirement benefit obligations and taxes are excluded from this guidance and shall be accounted for under the statutory accounting provisions specific to those topics.

Loss Contingencies or Impairments of Assets

6. For purposes of implementing the statutory accounting principles of loss contingency or impairment of an asset described below, the following additional definitions shall apply:

a. Probable—The future event or events are likely to occur;

b. Reasonably Possible—The chance of the future event or events occurring is more than remote but less than probable;

c. Remote—The chance of the future event or events occurring is slight.

7. A loss contingency or impairment of an asset is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible loss to an enterprise that will ultimately be resolved when one or more future event(s) occur or fail to occur (e.g., collection of receivables).

8. An estimated loss from a loss contingency or the impairment of an asset shall be recorded by a charge to operations if both of the following conditions are met:

a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and

b. The amount of loss can be reasonably estimated.

9. This accounting shall be followed even though the application of other prescribed statutory accounting principles or valuation criteria may not require, or does not address, the recording of a particular liability or impairment of an asset (e.g., a known impairment of a bond even though the VOS manual has not recognized the impairment).

10. Additionally, in instances where a judgment, assessment or fine has been rendered against a reporting entity, there is a presumption that the criteria in paragraph 8.a. and 8.b. have been met. A judgment is considered "rendered" when a court enters a verdict, notwithstanding the entity's ability to file post-trial motions and to appeal. The amount of the liability shall include the anticipated settlement amount, legal costs, insurance recoveries and other related amounts and shall take into account factors such as the nature of the litigation, progress of the case, opinions of legal counsel, and management's intended response to the litigation, claim, or assessment.

11. When the condition in paragraph 8.a. is met with respect to a particular loss contingency, and the reasonable estimate of the loss is a range, which meets the condition in paragraph 8.b., an amount shall be accrued for the loss. When an amount within management's estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be accrued. When, in management's opinion, no amount within management's estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of management's estimate in the range shall be accrued. For purposes of this paragraph, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be used.

12. The use of the midpoint in a range will be applicable only in the rare instance where there is a continuous range of possible values, and no amount within that range is any more probable than any other. This guidance is not applicable when there are several point estimates which have been determined

as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine their best estimate of the liability.

Tax Contingencies

13. As directed by SSAP No. 101, tax loss contingencies (including related interest and penalties) for current and all prior years, shall be computed in accordance with this SSAP, with the following modifications:

a. The term "probable" as used in this standard shall be replaced by the term "more likely than not (a likelihood of more than 50 percent)" for federal and foreign income tax loss contingencies only.

b. For purposes of the determination of a federal and foreign income tax loss contingency, it shall be presumed that the reporting entity will be examined by the relevant taxing authority that has full knowledge of all relevant information.

c. If the estimated tax loss contingency is greater than 50 percent of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100 percent of the original tax benefit recognized.

As noted in SSAP No. 101, state taxes (including premium, income and franchise taxes) shall also be computed in accordance with this SSAP. These items (as detailed in SSAP No. 101) are not impacted by the modifications detailed in paragraphs 13.a.-13.c.

Gain Contingencies

14. A gain is defined as an increase in surplus which results from peripheral or incidental transactions of a reporting entity and from all other transactions and other events and circumstances affecting the reporting entity except those that result from revenues or investments by owners. If, on or before the balance sheet date, (a) the transaction or event has been fully completed, and (b) the amount of the gain is determinable, then the transaction or event is considered a gain, and is recognized in the financial statements. The definition of a gain excludes increases in surplus that result from activities that constitute a reporting entity's ongoing major or central operations or activities. Because investment activities are central to an insurer's operations, increases in surplus that result from such investment activities are excluded from the definition of gains. Revenues are inflows or other enhancements of assets of a reporting entity or settlements of its liabilities (or a combination of both) from providing products, rendering services, or other activities that constitute the reporting entity's ongoing major or central operations. Investments by owners include any type of capital infused into the surplus of the reporting entity.

15. A gain contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (as defined in the preceding paragraph) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur (e.g., a plaintiff has filed suit for damages associated with an event occurring prior to the balance sheet, but the outcome of the suit is not known as of the balance sheet date). Gain contingencies shall not be recognized in a reporting entity's financial statements. However, if subsequent to the balance sheet date but prior to the issuance of the financial statements, the gain contingency is realized, the gain shall be disclosed in the notes to financial statements and the unissued financial statements should not be adjusted to record the gain. A gain is generally considered realizable when noncash resources or rights are readily convertible to known amounts of cash or claims to cash.

Guarantees

16. A guarantee contract is a contract that contingently requires the guarantor to make payments (either in cash, financial instruments, other assets, shares of its stock, or provision of services) to the guaranteed party based on changes in the underlying that is related to an asset, a liability, or an equity security of the guaranteed party. Commercial letters of credit and loan commitments, by definition, are not considered guarantee contracts. Also excluded from the definition are indemnifications or guarantees of an entity's own performance, subordination arrangements or a noncontingent forward contract. This definition could include contingent forward contracts if the characteristics of this paragraph are met.

17. The following guarantee contracts are not subject to the guidance in paragraphs 20-25 and paragraphs 29-32:

a. Guarantees already excluded from the scope of SSAP No. 5R;

b. Guarantee contracts accounted for as contingent rent;

c. Insurance contract guarantees, including guarantees embedded in deposit-type contracts;

d. Contracts that provide for payments that constitute a vendor rebate by the guarantor based on either the sales revenue or the number of units sold by the guaranteed party;

e. A guarantee or indemnification whose existence prevents the guarantor from being able to either account for a transaction as the sale of an asset that is related to the guarantee's underlying or recognize in earnings the profit from that sale transaction;

f. Registration payment arrangements; and

g. A guarantee that is accounted for as a credit derivative instrument at fair value under SSAP No. 86, as described in paragraph ~~56~~57.e. of SSAP No. 86.

18. The following types of guarantees are exempted from the initial liability recognition in paragraphs 20-25, but are subject to the disclosure requirements in paragraphs 29-32:

a. Guarantee that is accounted for as a derivative instrument, other than credit derivatives within SSAP No. 86;

b. Guarantee for which the underlying is related to the performance of nonfinancial assets that are owned by the guaranteed party, including product warranties;

c. Guarantee issued in a business combination that represents contingent consideration;

d. Guarantee in which the guarantor's obligation would be reported as an equity item;

e. Guarantee by an original lessee that has become secondarily liable under a new lease that relieved the original lessee from being the primary obligator;

f. Guarantees (as defined in paragraph 16) made to/or on behalf of directly or indirectly wholly-owned insurance or non-insurance subsidiaries[3]; and

[3] The exclusion for wholly-owned subsidiaries includes guarantees from a parent to, or on behalf of, a direct wholly-owned insurance or non-insurance subsidiary as well as guarantees made from a parent to, or on behalf of, an indirect wholly-owned insurance or non-insurance subsidiary. The "wholly-owned" exclusion in paragraph 18.f. does not include guarantees issued from one subsidiary to another subsidiary, regardless if both subsidiaries are wholly-owned (directly or indirectly) by a parent company.

g. Intercompany and related party guarantees that are considered "unlimited" (e.g., typically in response to a rating agency's requirement to provide a commitment to support).

19. With the exception of the provision for guarantees made to/or on behalf of a wholly-owned subsidiaries in paragraph 18.f. and "unlimited" guarantees in 18.g., this guidance does not exclude guarantees issued as intercompany transactions or between related parties from the initial liability recognition requirement. Thus, unless the guarantee is provided on behalf of a wholly-owned subsidiary or considered "unlimited," guarantees issued between the following parties are subject to the initial recognition and disclosure requirements:

a. Guarantee issued either between parents and their subsidiaries or between corporations under common control;

b. A parent's guarantee of its subsidiary's debt to a third party; and

c. A subsidiary's guarantee of the debt owed to a third party by either its parent or another subsidiary of that parent.

20. At the inception of a guarantee, the guarantor shall recognize in its statement of financial position a liability for that guarantee. Except as indicated in paragraph 22, the objective of the initial measurement of the liability is the fair value[4] of the guarantee at its inception.

21. The issuance of a guarantee obligates the guarantor (the issuer) in two respects: (a) the guarantor undertakes an obligation to stand ready to perform over the term of the guarantee in the event that the specified triggering events or conditions occur (the noncontingent aspect) and (b) the guarantor undertakes a contingent obligation to make future payments if those triggering events or conditions occur (the contingent aspect). Because the issuance of a guarantee imposes a noncontingent obligation to stand ready to perform in the event that the specified triggering event occurs, the provisions of paragraph 8 should not be interpreted as prohibiting the guarantor from initially recognizing a liability for that guarantee even though it is not probable that payments will be required under that guarantee.

22. In the event that, at the inception of the guarantee, the guarantor is required to recognize a liability under paragraph 8 for the related contingent loss, the liability to be initially recognized for that guarantee shall be the greater of (a) the amount the satisfies the fair value objective as discussed in paragraph 20 or (b) the contingent liability amount required to be recognized at inception of the guarantee by paragraph 8. For many guarantors, it would be unusual for the contingent liability under (b) to exceed the amount that satisfies the fair value objective at the inception of the guarantee.

23. The offsetting entry pursuant to the liability recognition at the inception of the guarantee depends on the circumstances in which the guarantee was issued. Examples include:

a. If the guarantee was issued in a standalone transaction for a premium, the offsetting entry would the consideration received.

b. If the guarantee was issued in conjunction with the sale of assets, a product, or a business, the overall proceeds would be allocated between the consideration being remitted to the guarantor for issuing the guarantee and the proceeds from that sale. That allocation would affect the calculation of the gain or loss on the sale transaction.

[4] As practical expedients, when a guarantee is issued in a standalone arm's-length transaction, the liability recognized at the inception of the guarantee should be the premium received or receivable by the guarantor. When a guarantee is issued as part of a transaction with multiple elements, the liability recognized at the inception of the guarantee should be an estimate of the guarantee's fair value. In that circumstance, guarantors should consider what premium would be required by the guarantor to issue the same guarantee in a standalone arm's-length transaction.

c. If a residual value guarantee were provided by a lessee-guarantor when entering into an operating lease, the offsetting entry would be reflected as prepaid rent, which would be nonadmitted under SSAP No. 29.

d. If a guarantee were issued to an unrelated or related party for no consideration on a standalone basis, the offsetting entry would be to expense.

24. Except for the measurement and recognition of continued guarantee obligations after the settlement of a contingent guarantee liability described in paragraph 25, this standard does not describe in detail how the guarantor's liability for its obligations under the guarantee would be measured subsequent to initial recognition. The liability that the guarantor initially recognized in accordance with paragraph 20 would typically be reduced (as a credit to income) as the guarantor is released from risk under the guarantee. Depending on the nature of the guarantee, the guarantor's release from risk has typically been recognized over the term of the guarantee (a) only upon either expiration or settlement of the guarantee, (b) by a systematic and rational amortization method, or (c) as the fair value of the guarantee changes (for example, guarantees accounted for as derivatives). The reduction of liability does not encompass the recognition and subsequent adjustment of the contingent liability recognized under paragraph 8 related to the contingent loss for the guarantee. If the guarantor is required to subsequently recognize a contingent liability for the guarantee, the guarantor shall eliminate any remaining noncontingent liability for that guarantee and recognize a contingent liability in accordance with paragraph 8.

25. After recognition and settlement of a contingent guarantee liability in accordance with paragraph 8, a guarantor shall assess whether remaining potential obligations exist under the guarantee agreement. If the guarantor still has potential obligations under the guarantee contract, the guarantor shall recognize the remaining noncontingent guarantee that represents the current fair value of the potential obligation remaining under the guarantee agreement. This noncontingent guarantee liability shall be released in accordance with paragraph 24.

Disclosures

26. Disclose the following information for each joint and several liability arrangements accounted for under paragraph 5. If co-obligors are related parties, disclosure requirements in *SSAP No. 25—Affiliates and Other Related Parties* also apply.

a. The nature of the arrangement including: 1) how the liability arose, 2) the relationship with co-obligors, and 3) the terms and conditions of the arrangements.

b. The total outstanding amount under the arrangement, which shall not be reduced by the effect of any amounts that may be recoverable from other entities.

c. The carrying amount, if any, of the entity's liability and the carrying amount of a receivable recognized, if any.

d. The nature of any recourse provisions that would enable recovery from other entities of the amounts paid, including any limitations on the amounts that might be recovered.

e. In the period the liability is initially recognized and measured or in a period the measurement changes significantly: 1) the corresponding entry, and 2) where the entry was recorded in the financial statements.

27. If a loss contingency or impairment of an asset is not recorded because only one of the conditions in paragraph 8.a. or 8.b. is met, or if exposure to a loss exists in excess of the amount accrued pursuant to the provisions described above, disclosure of the loss contingency or impairment of the asset shall be made in the financial statements when there is at least a reasonable possibility that a loss or an additional

loss may have been incurred. The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made. (Disclosures for tax contingencies as identified in paragraph 13 shall be completed as instructed within SSAP No. 101.)

28. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable.

29. Certain loss contingencies, the common characteristic of each being a guarantee, shall be disclosed in financial statements even though the possibility of loss may be remote. Examples include (a) guarantees of indebtedness of others, and (b) guarantees to repurchase receivables (or, in some cases, to repurchase related properties) that have been sold or otherwise assigned. The disclosure of those loss contingencies, and others that in substance have the same characteristics, shall be applied to statutory financial statements. The disclosure shall include the nature and amount of the guarantee. Consideration shall be given to disclosing, if estimable, the value of any recovery that could be expected to result, such as from the guarantor's right to proceed against an outside party.

30. A guarantor shall disclose the following information about each guarantee, or each group or similar guarantees (except product warranties addressed in paragraph 32), even if the likelihood of the guarantor's having to make any payments under the guarantee is remote. In addition, the nature of the relationship to the beneficiary of the guarantee or undertaking (affiliated or unaffiliated) shall also be disclosed:

a. The nature of the guarantee, including the approximate term of the guarantee, how the guarantee arose, and the events and circumstances that would require the guarantor to perform under the guarantee, the ultimate impact to the financial statements (specific financial statement line item) after the settlement of the contract guarantee if action under the guarantee was required (e.g., increase to the investment, dividends to stockholder, etc) and the current status (that is, as of the date of the statement of financial position) of the payment/performance risk of the guarantee. For example, the current status of the payment/performance risk of a credit-risk-related guarantee could be based on either recently issued external credit ratings or current internal groupings used by the guarantor to manage its risk. An entity that uses internal groupings shall disclose how those groupings are determined and used for managing risk.

b. The potential amount of future payments (undiscounted) the guarantor could be required to make under the guarantee. That maximum potential amount of future payments shall not be reduced by the effect of any amounts that may possibly be recovered under recourse or collateralization provisions in the guarantee (which are addressed under (d) below). If the terms of the guarantee provide for no limitation to the maximum potential future payments under the guarantee, that fact shall be disclosed. If the guarantor is unable to develop an estimate of the maximum potential amount of future payments under its guarantee, the guarantor shall disclose the reasons why it cannot estimate the maximum potential amount.

c. The current carrying amount of the liability, if any, for the guarantor's obligations under the guarantee (including the amount, if any, recognized under paragraph 8), regardless of whether the guarantee is freestanding or embedded in another contract.

d. The nature of (1) any recourse provisions that would enable the guarantor to recover from third parties any of the amounts paid under the guarantee and (2) any assets held either as collateral or by third parties that, upon the occurrence of any triggering event or condition

under the guarantee, the guarantor can obtain and liquidate to recover all or a portion of the amounts paid under the guarantee. The guarantor shall indicate, if estimable, the approximate extent to which the proceeds from liquidation of those assets would be expected to cover the maximum potential amount of future payments under the guarantee.

31. An aggregate compilation of guarantee obligations shall include the maximum potential of future payments of all guarantees (undiscounted), the current liability (contingent and noncontingent) reported in the financial statements, and the ultimate financial statement impact based on maximum potential payments (undiscounted) if performance under those guarantees had been triggered.

32. As product warranties are excluded from the initial recognition and initial measurement requirements for guarantees, a guarantor is not required to disclose the maximum potential amount of future payments. Instead the guarantor is required to disclose for product warranties the following information:

a. The guarantor's accounting policy and methodology used in determining its liability for product warranties (Including any liability associated with extended warranties).

b. A tabular reconciliation of the changes in the guarantor's aggregate product warranty liability for the reporting period. That reconciliation should present the beginning balance of the aggregate product warranty liability, the aggregate reductions in that liability for payments made (in cash or in kind) under the warranty, the aggregate changes in the liability for accruals related to product warranties issued during the reporting period, the aggregate changes in the liability for accruals related to preexisting warranties (including adjustments related to changes in estimates), and the ending balance of the aggregate product warranty liability.

33. The financial statements shall contain adequate disclosure about the nature of any gain contingency. However, care should be exercised to avoid misleading implications as to the likelihood of realization.

34. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

35. This statement adopts *FASB Statement No. 5, Accounting for Contingencies* (FAS 5), *FASB Statement 114, Accounting by Creditors for Impairment of a Loan* only as it amends in part FAS 5 and paragraphs 35 and 36 of *FASB Statement of Financial Accounting Concepts No. 6—Elements of Financial Statements. FASB Interpretation No. 14, Reasonable Estimation of the Amount of a Loss, An Interpretation of FASB Statement No. 5* (FIN No. 14) is adopted with the modification to accrue the loss amount as the midpoint of the range rather than the minimum as discussed in paragraph 3 of FIN No. 14. This statement adopts with modification *ASU 2013-04, Obligations Resulting from Joint and Several Liability Arrangements for Which the Total Amount of the Obligation is Fixed at the Reporting Date* with the same statutory modification adopted for FIN 14.

36. This statement adopts with modification *FASB Interpretation No. 45: Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others, an interpretation of FASB Statements No. 5, 57, and 107 and rescission of FASB Interpretation No. 34* (FIN 45), *FASB Interpretation No. 45-3, Application of FASB Interpretation No. 45 to Minimum Revenue Guarantees Grated to a Business or Owner* (FSP FIN 45-3)*, and FASB Staff Position FAS 133-1 and FIN 45-4, Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No. 45* (FSP FAS 133-1 and FIN 45-4). Statutory Modifications to FIN 45 include initial liability recognition for guarantees issued as part of intercompany or related party

transactions, assessment and recognition of non-contingent guarantee obligations after recognition and settlement of a contingent obligation and revise the GAAP guidance to reflect statutory accounting terms and restrictions. Under this statement, intercompany and related party guarantees (including guarantees between parents and subsidiaries) should have an initial liability recognition unless the guarantee is considered "unlimited" or is made to/or on behalf of a wholly-owned subsidiary. (An example of an intercompany "unlimited" guarantee would be a guarantee issued in response to a rating agency's requirement to provide a commitment to support.) In instances in which an "unlimited" guarantee exists or a guarantee has been made to/or on behalf of a wholly-owned subsidiary, this statement requires disclosure, pursuant to the disclosure requirements adopted from FIN 45. The adoption of FIN 45 superseded the previously adopted guidance *in FASB Interpretation No. 34, Disclosure of Indirect Guarantees of Indebtedness of Others, An interpretation of FASB Statement No. 5.* This statement also adopts Accounting Principles Board Opinion No. 12, Omnibus Opinion—1967, paragraphs 2 and 3 with the modification that AVR, IMR and Schedule F Penalty shall be shown gross. Appropriation of retained earnings discussed in paragraph 15 of FAS 5 is addressed in *SSAP No. 72—Surplus and Quasi-Reorganizations.*

37. This statement adopts with modification the guidance in paragraphs 7-11 of *FSP EITF 00-19-2, Accounting for Registration Payment Arrangements*. This guidance specifies that the contingent obligation to make future payments or otherwise transfer consideration under a registration payment arrangement, whether issued as a separate agreement or included as a provision for a financial instrument, other agreement, should be separately recognized and measured in accordance with *FAS 5, Accounting for Contingencies*. The guidance in FSP EITF 00-19-2 is modified as follows:

a. Registration payment arrangements meet the definition of a loss contingency in accordance with paragraph 7.

b. Financial instruments shall be accounted for in accordance with the statutory accounting principles for that specific asset type. Registration payment arrangement obligations shall be separate from the measurement and recognition of financial instruments subject to such arrangements.

c. Transition revisions resulting from application of this guidance shall be accounted for as a change in accounting principle pursuant to *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). In accordance with SSAP No. 3, the cumulative effect of changes in accounting principles shall be reported as adjustments to unassigned funds in the period of change in the accounting principles.

Effective Date and Transition

38. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

39. The guidance in paragraph 10 related to when a judgment is considered rendered was originally contained in *INT 04-05: Clarification of SSAP No. 5R Guidance on when a Judgment is Deemed Rendered* and was effective September 12, 2004. The guidance for guarantees included within paragraphs 16-25 and 30-32 shall be applicable to all guarantees issued or outstanding as of December 31, 2011. Thereafter, disclosure of all guarantees shall be annually reported, with interim reporting required for new guarantees issued, and/or existing guarantees when significant changes are made. Guidance in paragraph 37 was previously reflected within *INT 08-06: FSP EITF 00-19-2, Accounting for Registration Payment Arrangements* and was effective September 22, 2008.

Subsequent Events

SCOPE OF STATEMENT

1. This statement defines subsequent events and establishes the criteria for recording such events in the financial statements and/or disclosing them in the notes to the financial statements. The conclusions in this statement apply to both quarterly and annual statement filings.

SUMMARY CONCLUSION

Key Terms

2. Subsequent events shall be defined as events or transactions that occur subsequent to the balance sheet date, but before the issuance of the statutory financial statements and before the date the audited financial statements are issued, or available to be issued. The issuance of the statutory financial statements includes not only the submission of the Quarterly and Annual Statement but also the issuance of the audit opinion by the reporting entity's certified public accountant.

3. Material subsequent events shall be considered either:

   a. Type I – Recognized Subsequent Events: Events or transactions that provide additional evidence with respect to conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements;

   b. Type II – Nonrecognized Subsequent Events: Events or transactions that provide evidence with respect to conditions that did not exist at the balance sheet date but arose after that date.

4. **Financial statements are issued:** Financial statements are considered issued when they are widely distributed to shareholders and other financial statement users for general use and reliance in a form and format that complies with SAP.

5. **Financial statements are available to be issued:** Financial statements are considered available to be issued when they are complete in a form and format that complies with SAP and all approvals necessary for issuance have been obtained, for example, from management, the board of directors, and/or significant shareholders. The process involved in creating and distributing the financial statements will vary depending on an entity's management and corporate governance structure as well as statutory and regulatory requirements. An entity that has a current expectation of widely distributing its financial statements to its shareholders and other financial statement users shall evaluate subsequent events through the date that the financial statements are issued. All other entities shall evaluate subsequent events through the date that the financial statements are available to be issued.

Recognition Guidance

6. An entity shall recognize in the financial statements the effects of all material Type I subsequent events that provide additional evidence about conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements. Any changes in estimates resulting from the use of such evidence shall be recorded in the financial statements unless specifically prohibited, (e.g., subsequent collection of agents balances over 90 days due when determining nonadmitted agents balances as prohibited by *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*).

7. For material Type I subsequent events, the nature and the amount of the adjustment shall be disclosed in the notes to the financial statements only if necessary to keep the financial statements from being misleading.

8. Material Type II subsequent events shall not be recorded in the financial statements, but shall be disclosed in the notes to the financial statements. For such events, an entity shall disclose the nature of the event and an estimate of its financial effect, or a statement that such an estimate cannot be made.

9. An entity also shall consider supplementing the historical financial statements with pro forma financial data. Occasionally, a nonrecognized subsequent event may be so significant that disclosure can best be made by means of pro forma financial data. Such data shall give effect to the event as if it had occurred on the balance sheet date. In some situations, an entity also shall consider presenting pro forma statements. If an event is of such a nature that pro forma disclosures are necessary to keep the financial statements from being misleading, disclosure of supplemental pro forma financial data shall be made including the impact on net income, surplus, total assets, and total liabilities giving effect to the event as if it had occurred on the date of the balance sheet.

10. Identifying events that require adjustment of the financial statements under the criteria stated in the conclusion calls for the management of the entity to exercise judgment and accumulate knowledge of the facts and circumstances surrounding the event. For example, a loss on an uncollectible agent's balance as a result of an agent's deteriorating financial condition leading to bankruptcy subsequent to the balance sheet date would be indicative of conditions existing at the balance sheet date, thereby requiring the recording of such event to the financial statements before their issuance. On the other hand, a similar loss resulting from an agent's major casualty loss such as a fire or flood subsequent to the balance sheet date would not be indicative of conditions existing at the balance sheet date and recording of the event to the financial statements would not be appropriate. However, this is a Type II subsequent event which would require disclosure in the notes to the financial statements.

11. The following are examples of Type I recognized subsequent events:

a. If the events that gave rise to litigation had taken place before the balance sheet date and that litigation is settled, after the balance sheet date but before the financial statements are issued or are available to be issued, for an amount different from the liability recorded in the accounts, then the settlement amount should be considered in estimating the amount of liability recognized in the financial statements at the balance sheet date.

b. Subsequent events affecting the realization of assets, such as receivables and inventories or the settlement of estimated liabilities, should be recognized in the financial statements when those events represent the culmination of conditions that existed over a relatively long period of time. For example, a loss on an uncollectible trade account receivable as a result of a customer's deteriorating financial condition leading to bankruptcy after the balance sheet date but before the financial statements are issued or are available to be issued ordinarily will be indicative of conditions existing at the balance sheet date. Thus, the effects of the customer's bankruptcy filing shall be considered in determining the amount of uncollectible trade accounts receivable recognized in the financial statements at the balance sheet date.

12. The following are examples of Type II nonrecognized subsequent events:

a. Sale of a bond or capital stock issued after the balance sheet date but before financial statements are issued or are available to be issued

b. A business combination that occurs after the balance sheet date but before financial statements are issued or are available to be issued

c. Settlement of litigation when the event giving rise to the claim took place after the balance sheet date but before financial statements are issued or are available to be issued

d. Loss of plant or inventories as a result of fire or natural disaster that occurred after the balance sheet date but before financial statements are issued or are available to be issued

e. Losses on receivables resulting from conditions (such as a customer's major casualty) arising after the balance sheet date but before financial statements are issued or are available to be issued

f. Changes in the fair value of assets or liabilities (financial or nonfinancial) or foreign exchange rates after the balance sheet date but before financial statements are issued or are available to be issued

g. Entering into significant commitments or contingent liabilities, for example, by issuing significant guarantees after the balance sheet date but before financial statements are issued or are available to be issued

Disclosures

13. In addition to the disclosure of subsequent events as required throughout this statement, for annual and interim reporting periods, reporting entities shall disclose the dates through which subsequent events have been evaluated for statutory reporting and for audited financial statements along with the dates the statutory reporting statements and the audited financial statements were issued, or available to be issued. In the audited financial statements, reporting entities shall specifically identify subsequent events identified after the date subsequent events were reviewed for statutory reporting.

14. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

15. The above guidance was originally adopted to be consistent with the AICPA *Statement on Auditing Standards No. 1*, Section 560, *Subsequent Events*. In 2009, *FASB Statement No. 165, Subsequent Events* (FAS 165), was adopted for statutory accounting. The adoption of this guidance should not result in significant changes in the subsequent events that an entity reports, through either recognition or disclosure, in its financial statements. FAS 165 introduced the concept of available to be issued and requires additional disclosures on the dates for which an entity evaluated subsequent events as well as the date the financial statements were issued, or available to be issued. Guidance within ASU 2010-09 (modifications to Subtopic 855-10 in the FASB Codification) has been rejected for statutory accounting.

Effective Date and Transition

16. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Changes adopted as a result of FAS 165, are effective for years ending on and after December 31, 2009.

Prepaid Expenses

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the accounting for prepaid expenses. This statement does not address accounting for deferred policy acquisition costs and other underwriting expenses, income taxes, and guaranty fund assessments. This statement does not address nonrefundable advance payments for goods or services received for use in future research and development activities, which are addressed in *SSAP No. 17—Preoperating and Research and Development Costs.*

SUMMARY CONCLUSION

2. A prepaid expense is an amount which has been paid in advance of receiving future economic benefits anticipated by the payment. Prepaid expenses generally meet the definition of assets in *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4). Such expenditures also meet the criteria defining nonadmitted assets as specified in SSAP No. 4, (i.e., the assets are not readily available to satisfy policyholder obligations). Prepaid expenses shall be reported as nonadmitted assets and charged against unassigned funds (surplus). They shall be amortized against net income as the estimated economic benefit expires.

3. In accordance with the reporting entity's written capitalization policy, prepaid expenses less than a predefined threshold shall be expensed when purchased. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Disclosures

4. The financial statements shall disclose if the written capitalization policy and the resultant predefined thresholds changed from the prior period and the reason(s) for such change.

Relevant Literature

5. This statement rejects *AICPA Practice Bulletin No. 13, Direct-Response Advertising and Probable Future Benefits, AICPA Statement of Position 93-7, Reporting on Advertising Costs* and *FASB Emerging Issues Task Force No. 88-23, Lump-Sum Payments under Union Contracts*.

Effective Date and Transition

6. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Guidance reflected in paragraphs 3 and 4, incorporated from SSAP No. 87, was originally effective for years beginning on and after January 1, 2004.

Property Casualty Contracts—Premiums

SCOPE OF STATEMENT

1. This statement establishes general statutory accounting principles for the recording and recognition of premium revenue for property and casualty contracts as defined in *SSAP No. 50—Classifications of Insurance or Managed Care Contracts* (SSAP No. 50).

2. Specific statutory requirements for certain property and casualty premiums are addressed in the following statements: (a) *SSAP No. 57—Title Insurance*, (b) *SSAP No. 58—Mortgage Guaranty Insurance,* (c) SSAP *No. 60—Financial Guaranty Insurance,* (d) *SSAP No. 62R—Property and Casualty Reinsurance,* (e) *SSAP No. 65—Property and Casualty Contracts,* and (f) *SSAP No. 66—Retrospectively Rated Contracts and Contracts*.

SUMMARY CONCLUSION

3. Except as provided for in paragraph 4, written premium is defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract based on the expectation of risk, policy benefits, and expenses associated with the coverage provided by the terms of the insurance contract. Frequently, insurance contracts are subject to audit by the reporting entity and the amount of premium charged is subject to adjustment based on the actual exposure. Premium adjustments are discussed in paragraphs 10-13 of this statement.

4. For workers' compensation contracts, which have a premium that may periodically vary based upon changes in the activities of the insured, written premiums may be recorded on an installment basis to match the billing to the policyholder. Under this type of arrangement, the premium is determined and billed according to the frequency stated in the contract, and written premium is recorded on the basis of that frequency.

5. Premiums for prepaid legal expense plans shall be recognized as income on the gross basis (amount charged to the policyholder or subscriber exclusive of copayments or other charges) when due from policyholders or subscribers, but no earlier than the effective date of coverage, under the terms of the contract. Due and uncollected premiums shall follow the guidance in *SSAP No.6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers* (SSAP No. 6), to determine the admissibility of premiums and related receivables.

6. Written premiums for all other contracts shall be recorded as of the effective date of the contract. Upon recording written premium, a liability, the unearned premium reserve, shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired. Flat fee service charges on installment premiums[1] (fees charged to policyholders who pay premiums on an installment basis rather than in full at inception of contract) are reported in the Other Income section of the Underwriting and Investment Exhibit as Finance and Service Charges. Flat fee service charges on installment premiums, which do not meet the requirements outlined in footnote 1 (e.g., policy may be cancelled for non-payment of fee or fee is refundable), shall be recorded as written premium on the effective date of the contract and subject to the unearned premium guidelines included in paragraph 8.

[1] If the policyholder elects to pay an installment rather than the full amount or the full remaining balance, the policyholder is traditionally charged a flat fee service charge on the subsequent billing cycle(s). The amount charged is primarily intended to compensate the insurer for the additional administrative costs associated with processing more frequent billings and has no relationship to the amount of insurance coverage provided, the period of coverage, or the lost investment income associated with receiving the premium over a period of time rather than in a lump sum. As described, there is no underwriting risk associated with this service charge. If a policyholder does not pay the service charge, the policy is not cancelled (unlike non-payment of premium), but instead the policy is converted back to an annual pay plan. If a policyholder cancels coverage, the premium is returned but the service charge is not, as the service charge is not a part of premium. Clarification of finance and service charges as other income should not be construed as having any bearing on whether such charges are subject to premium taxation, which remains an issue of state law and regulation.

7. The exposure to insurance risk for most property and casualty insurance contracts does not vary significantly during the contract period. Therefore, premiums from those types of contracts shall be recognized in the statement of income, as earned premium, using either the daily pro-rata or monthly pro-rata methods as described in paragraph 8. Certain statements provide for different methods of recognizing premium in the statement of operations for specific types of contracts. For contracts not separately identified in specific statements where the reporting entity can demonstrate the period of risk differs significantly from the contract period, premiums shall be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided.

8. One of the following methods shall be used for computation of the unearned premium reserve:

a. Daily pro rata method—Calculate the unearned premium on each policy—At the end of each period, the calculation is made on each item of premium to ascertain the unexpired portion and to arrive at the aggregate unearned premium reserve;

b. Monthly pro rata method—This method assumes that, on average, the same amount of business is written each day of any month so that the mean will be the middle of the month. For example, one-year premiums written during the first three months of the year have, at the end of the year, the following unearned fractions: January-1/24; February-3/24; March-5/24.

9. Additional premiums charged to policyholders for endorsements and changes in coverage under the contract shall be recorded on the effective date of the endorsement and accounted for in a manner consistent with the methods discussed in paragraphs 4-8. This is done so that, at any point in time, a liability is accrued for unearned premium related to the unexpired portion of the policy endorsement.

Earned but Unbilled Premium

10. Adjustments to the premium charged for changes in the level of exposure to insurance risk (e.g., audit premiums on workers' compensation policies) are generally determined based upon audits conducted after the policy has expired. Reporting entities shall estimate audit premiums, the amount generally referred to as earned but unbilled (EBUB) premium, and shall record the amounts as an adjustment to premium, either through written premium or as an adjustment to earned premium. The estimate for EBUB may be determined using actuarially or statistically supported aggregate calculations using historical company unearned premium data, or per policy calculations.

11. EBUB shall be adjusted upon completion of the audit and the adjustment shall be recognized as revenue immediately. Upon completion of an audit that results in a return of premiums to the policyholder, earned premiums shall be reduced.

12. Reporting entities shall establish all of the requisite liabilities associated with the asset such as commissions and premium taxes. These liabilities shall be determined based on when premium is earned, not collected[2].

13. Ten percent of EBUB in excess of collateral specifically held and identifiable on a per policy basis shall be reported as a nonadmitted asset. To the extent that amounts in excess of the 10% are not anticipated to be collected, they shall be written off against operations in the period the determination is made.

[2] If an entity feels comfortable enough in their ability to collect the premium that an asset is recorded, they should also book the associated liabilities. Once an estimate of the premium has been made and the entity feels certain that it will be collected, it should also book the liabilities that will be due when they receive the cash. If the premiums were unearned and the policyholder had the ability to cancel, the definition of a liability has not been met.

Earned but Uncollected Premium

14. Reporting entities may utilize a voluntary procedure whereby policies are not cancelled for non-payment of the premium until after an extended cancellation period (example 30 days), as opposed to the shorter statutory cancellation period. There are other instances when a reporting entity provides coverage for periods when the payment has not been received. Prior to the cancellation of the policy the reporting entity acknowledges it is "at risk" and subject to "actual exposure" for a valid claim despite the fact that the reporting entity may not have received payment of the premium for this exposure. Reporting entities shall record earned but uncollected premium as direct and assumed written premium since the reporting entity is "at risk" and subject to "actual exposure" for the extended period of time when the policy is still in force and effective, whether or not the reporting entity collects a premium for this time period. Earned but uncollected premium would be charged to expenses **"**net gain or (loss) from agents or premium balances charged off" when it is determined to be uncollectible.

Advance Premiums

15. Advance premiums result when the policies have been processed, and the premium has been paid prior to the effective date. These advance premiums are reported as a liability in the statutory financial statement and not considered income until due. Such amounts are not included in written premium or the unearned premium reserve.

Premium Deposits on Perpetual Fire Deposits

16. Premium deposits on perpetual fire insurance risks should be charged as a liability to the extent of at least 90% of the gross amount of such deposit.

Premium Deficiency Reserve

17. When the anticipated losses, loss adjustment expenses, commissions and other acquisition costs, and maintenance costs exceed the recorded unearned premium reserve, and any future installment premiums on existing policies, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency, with a corresponding charge to operations. Commission and other acquisition costs need not be considered in the premium deficiency analysis to the extent they have previously been expensed. For purposes of determining if a premium deficiency exists, insurance contracts shall be grouped in a manner consistent with how policies are marketed, serviced and measured. A liability shall be recognized for each grouping where a premium deficiency is indicated. Deficiencies shall not be offset by anticipated profits in other policy groupings.

18. If a premium deficiency reserve is established in accordance with paragraph 17, disclose the amount of that reserve. If a reporting entity utilizes anticipated investment income as a factor in the premium deficiency calculation, the reporting entity's disclosures shall include a statement that anticipated investment income was utilized; however, the dollar amount need not be included. Reporting entities need to disclose by statement only that anticipated investment income was utilized in the calculation of premium deficiency reserves whether a reserve is recorded or not (i.e., the use of anticipated investment income mitigated the need for recording a premium deficiency reserve).

Disclosures

19. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

a. Name and address of managing general agent or third party administrator;

b. Federal Employer Identification Number;

c. Whether such person holds an exclusive contract;

d. Types of business written;

e. Type of authority granted (i.e., underwriting, claims payment, etc.); and

f. Total premium written.

20. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

21. This statement rejects *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*.

Effective Date and Transition

22. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The guidance in paragraph 5 was originally contained within *INT 01-23: Prepaid Legal Insurance Premium Recognition* and was effective June 11, 2001. The guidance reflected in paragraph 12, incorporated from *INT 02-11: Recognition of Amounts Related to Earned but Unbilled Premium*, was effective September 10, 2002. The guidance reflected in paragraph 14, incorporated from *INT 05-06: Earned but Uncollected Premium*, was effective December 3, 2005. The guidance in paragraph 18 incorporated from *INT 99-23: Disclosure of Premium Deficiency Reserves* was effective December 6, 1999.

Unpaid Claims, Losses, and Loss Adjustment Expenses

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for recording liabilities for unpaid claims and claim adjustment expenses for life insurance contracts and accident and health contracts and unpaid losses and loss adjustment expenses for property and casualty insurance contracts. This guidance applies equally to those entities with direct and reinsurance-assumed obligations. This statement applies to all insurance contracts as defined in *SSAP No. 50—Classifications of Insurance or Managed Care Contracts* (SSAP No. 50).

2. This statement does not address policy reserves for life and accident and health policies. These reserves are addressed in *SSAP No. 51R—Life Contracts* (SSAP No. 51R), *SSAP No. 52—Deposit-Type Contracts* (SSAP No. 52), *SSAP No. 54R—Individual and Group Accident and Health Contracts* (SSAP No. 54R), and *SSAP No. 59—Credit Life and Accident and Health Insurance Contracts* (SSAP No. 59).

3. This statement does not address liabilities for punitive damages. These liabilities shall be recorded in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R).

SUMMARY CONCLUSION

4. Claims, losses, and loss/claim adjustment expenses shall be recognized as expenses when a covered or insured event occurs. In most instances, the covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. For claims-made type policies, the covered or insured event is the reporting to the entity of the incident that gives rise to a claim. Claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event, and in order to recognize the expense of a covered or insured event that has occurred, it is necessary to establish a liability. Liabilities shall be established for any unpaid claims and unpaid losses (loss reserves), unpaid loss/claim adjustment expenses (loss/claim adjustment expense reserves) and incurred costs, with a corresponding charge to income. Claims related extra contractual obligations losses and bad-faith losses shall be included in losses. See individual business types for the accounting treatment for adjustment expenses related to extra contractual obligations and bad-faith lawsuits.

5. The liability for unpaid LAE shall be established regardless of any payments made to third-party administrators, management companies or other entities except for capitated payments under managed care contracts. The liability for claims adjustment expenses on non-capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments made to third-party administrators, etc. The liability for claims adjustment expenses on capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments to third parties with the exception that the liability is established net of capitated payments to providers.

Property/Casualty

6. The following are types of future costs relating to property and casualty contracts, as defined in SSAP No. 50, which shall be considered in determining the liabilities for unpaid losses and loss adjustment expenses:

   a. Reported Losses: Expected payments for losses relating to insured events that have occurred and have been reported to, but not paid by, the reporting entity as of the statement date;

b. Incurred But Not Reported Losses (IBNR): Expected payments for losses relating to insured events that have occurred but have not been reported to the reporting entity as of the statement date. As a practical matter, IBNR may include losses that have been reported to the reporting entity but have not yet been entered to the claims system or bulk provisions. Bulk provisions are reserves included with other IBNR reserves to reflect deficiencies in known case reserves;

c. Loss Adjustment Expenses: Expected payments for costs to be incurred in connection with the adjustment and recording of losses defined in paragraphs 6.a. and 6.b. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage. Loss adjustment expenses can be classified into two broad categories: Defense and Cost Containment (DCC) and Adjusting and Other (AO):

i. DCC include defense[1], litigation, and medical cost containment expenses, whether internal or external. DCC include, but are not limited to, the following items:

(a) Surveillance expenses;

(b) Fixed amounts for medical cost containment expenses;

(c) Litigation management expenses;

(d) Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by accident year;

(e) Fees or salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in defense of a claim, and fees or salaries for rehabilitation nurses, if such cost is not included in losses;

(f) Attorney fees incurred owing to a duty to defend, even when other coverage does not exist; and

(g) The cost of engaging experts;

ii. AO are those expenses other than DCC as defined in (i) above assigned to the expense group "Loss Adjustment Expense". AO include, but are not limited to, the following items:

(a) Fees and expenses of adjusters and settling agents;

(b) Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by calendar year;

(c) Attorney fees incurred in the determination of coverage, including litigation between the reporting entity and the policyholder;

[1] Legal defense costs incurred under the definition of covered damages or losses as the only insured peril would be accounted for as losses, while legal defense costs incurred under a duty to defend would be accounted for as Defense and Cost Containment (DCC). For policies where legal costs are the only insured peril, the insurer would record the legal costs that reimburse the policyholder as loss and, to the extent the insurer participated in the defense, would record its legal costs as DCC. This is not intended to change the classifications of legal expenses for existing long tailed lines of liability coverage, such as medical malpractice and workers' compensation insurance.

(d) Fees and salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in the capacity of an adjuster; and

(e) Adjustment expenses arising from claims related lawsuits such as extra contractual obligations and bad faith lawsuits.

Life, Accident and Health

7. The following future costs relating to life and accident and health indemnity contracts, as defined in SSAP No. 50, shall be considered in determining the liability for unpaid claims and claim adjustment expenses:

a. Accident and Health Claim Reserves: Reserves for claims that involve a continuing loss. This reserve is a measure of the future benefits or amounts not yet due as of the statement date which are expected to arise under claims which have been incurred as of the statement date. This shall include the amount of claim payments that are not yet due such as those amounts commonly referred to as disabled life reserves for accident and health claims. The methodology used to establish claim reserves is discussed in SSAP No. 54R.

b. Claim Liabilities for Life/Accident and Health Contracts:

i. Due and Unpaid Claims: Claims for which payments are due as of the statement date;

ii. Resisted Claims in Course of Settlement: Liability for claims that are in dispute and are unresolved on the statement date. The liability either may be the full amount of the submitted claim or a percentage of the claim based on the reporting entity's past experience with similar resisted claims;

iii. Other Claims in the Course of Settlement: Liability for claims that have been reported but the reporting entity has not received all of the required information or processing has not otherwise been completed as of the statement date;

iv. Incurred But Not Reported Claims: Liability for which a covered event has occurred (such as death, accident, or illness) but has not been reported to the reporting entity as of the statement date.

c. Claim Adjustment Expenses for Accident and Health Reporting Entities are those costs expected to be incurred in connection with the adjustment and recording of accident and health claims defined in paragraphs 7.a. and 7.b. Certain claim adjustment expenses reduce the number or cost of health services thereby resulting in lower premiums or lower premium increases. These claim adjustment expenses shall be classified as cost containment expenses.

d. Claim Adjustment Expenses for Life Reporting Entities: Costs expected to be incurred (including legal and investigation) in connection with the adjustment and recording of life claims defined in paragraph 7.b. This would include adjustment expenses arising from claims-related lawsuits such as extra contractual obligations and bad-faith lawsuits.

Managed Care

8. The following costs relating to managed care contracts as defined in SSAP No. 50 shall be considered in determining the claims unpaid and claims adjustment expenses:

a. Claims unpaid for Managed Care Reporting Entities:

i. Unpaid amounts for costs incurred in providing care to a subscriber, member or policyholder including inpatient claims, physician claims, referral claims, other medical claims, resisted claims in the course of settlement and other claims in the course of settlement;

ii. Incurred But Not Reported Claims: Liability for which a covered event has occurred (such as an accident, illness or other service) but has not been reported to the reporting entity as of the statement date;

iii. Additional unpaid medical costs resulting from failed contractors under capitation contracts and provision for losses incurred by contractors deemed to be related parties for which it is probable that the reporting entity will be required to provide funding;

b. Claim Adjustment Expenses for Managed Care Reporting Entities are those costs expected to be incurred in connection with the adjustment and recording of managed care claims defined in paragraph 8.a. Certain claim adjustment expenses reduce the number or cost of health services thereby resulting in lower premiums or lower premium increases. These claim adjustment expenses shall be classified as cost containment expenses.

c. Liabilities for percentage withholds ("withholds") from payments made to contracted providers;

d. Liabilities for accrued medical incentives under contractual arrangements with providers and other risk-sharing arrangements whereby the health entity agrees to share savings with contracted providers.

Managed Care and Accident and Health

9. Claim adjustment expenses for accident and health contracts and managed care contracts (identified in paragraphs 7.c. and 8.b.), including legal expenses, can be subdivided into cost containment expenses and other claim adjustment expenses:

a. Cost containment expenses: Expenses that actually serve to reduce the number of health services provided or the cost of such services. The following are examples of items that shall be considered "cost containment expenses" only if they result in reduced levels of costs or services:

i. Case management activities;

ii. Utilization review;

iii. Detection and prevention of payment for fraudulent requests for reimbursement;

iv. Network access fees to Preferred Provider Organizations and other network-based health plans (including prescription drug networks), and allocated internal salaries and related costs associated with network development and/or provider contracting;

v. Consumer education solely relating to health improvement and relying on the direct involvement of health personnel (this would include smoking cessation and disease management programs, and other programs that involve hands on medical education); and

vi. Expenses for internal and external appeals processes.

b. Other claim adjustment expenses: Claim adjustment expenses as defined in paragraph 7.c. or 8.b. that are not cost containment expenses. Examples of other claim adjustment expenses are:

i. Estimating the amounts of losses and disbursing loss payments;

ii. Maintaining records, general clerical, and secretarial;

iii. Office maintenance, occupancy costs, utilities, and computer maintenance;

iv. Supervisory and executive duties; and

v. Supplies and postage.

vi. This would include adjustment expenses arising from claims-related lawsuits such as extra contractual obligations and bad-faith lawsuits.

General

10. The liability for claim reserves and claim liabilities, unpaid losses, and loss/claim adjustment expenses shall be based upon the estimated ultimate cost of settling the claims (including the effects of inflation and other societal and economic factors), using past experience adjusted for current trends, and any other factors that would modify past experience. These liabilities shall not be discounted unless authorized for specific types of claims by specific SSAPs, including SSAP No. 54R and *SSAP No. 65—Property and Casualty Contracts*.

11. Various analytical techniques can be used to estimate the liability for IBNR claims, future development on reported losses/claims, and loss/claim adjustment expenses. These techniques generally consist of statistical analysis of historical experience and are commonly referred to as loss reserve projections. The estimation process is generally performed by line of business, grouping contracts with like characteristics and policy provisions. The decision to use a particular projection method and the results obtained from that method shall be evaluated by considering the inherent assumptions underlying the method and the appropriateness of those assumptions to the circumstances. No single projection method is inherently better than any other in all circumstances. The results of more than one method should be considered.

12. For each line of business and for all lines of business in the aggregate, management shall record its best estimate of its liabilities for unpaid claims, unpaid losses, and loss/claim adjustment expenses. Because the ultimate settlement of claims (including IBNR for death claims and accident and health claims) is subject to future events, no single claim or loss and loss/claim adjustment expense reserve can be considered accurate with certainty. Management's analysis of the reasonableness of claim or loss and loss/claim adjustment expense reserve estimates shall include an analysis of the amount of variability in the estimate. If, for a particular line of business, management develops its estimate considering a range of claim or loss and loss/claim adjustment expense reserve estimates bounded by a high and a low estimate, management's best estimate of the liability within that range shall be recorded. The high and low ends of the range shall not correspond to an absolute best-and-worst case scenario of ultimate settlements because such estimates may be the result of unlikely assumptions. Management's range shall be realistic and,

therefore, shall not include the set of all possible outcomes but only those outcomes that are considered reasonable. Management shall also follow the concept of conservatism included in the Preamble when determining estimates for claims reserves. However, there is not a specific requirement to include a provision for adverse deviation in claims.

13. In the rare instances when, for a particular line of business, after considering the relative probability of the points within management's estimated range, it is determined that no point within management's estimate of the range is a better estimate than any other point, the midpoint within management's estimate of the range shall be accrued. It is anticipated that using the midpoint in a range will be applicable only when there is a continuous range of possible values, and no amount within that range is any more probable than any other. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued. This guidance is not applicable when there are several point estimates which have been determined as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine its best estimate of the liability.

14. If a reporting entity chooses to anticipate salvage and subrogation recoverables (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), the recoverables shall be estimated in a manner consistent with paragraphs 10-12 of this statement. Estimated salvage and subrogation recoveries (net of associated expenses) shall be deducted from the liability for unpaid claims or losses. If a reporting entity chooses to anticipate coordination of benefits (COB) recoverables of Individual and Group Accident and Health Contracts, the recoverables shall be estimated in a manner consistent with paragraphs 10-12 of this statement and shall be deducted from the liability for unpaid claims or losses. A separate receivable shall not be established for these recoverables. In addition, all of these recoverables are also subject to the impairment guidelines established in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R) and an entity shall not reduce its reserves for any recoverables deemed to be impaired. Salvage and subrogation recoveries received (net of associated expenses) are reported as a reduction to paid losses/claims. Coordination of benefits (COB) recoveries received of Individual and Group Accident and Health Contracts (net of associated expenses) are reported as a reduction to paid claims.

15. Changes in estimates of the liabilities for unpaid claims or losses and loss/claim adjustment expenses resulting from the continuous review process, including the consideration of differences between estimated and actual payments, shall be considered a change in estimate and shall be recorded in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). SSAP No. 3 requires changes in estimates to be included in the statement of operations in the period the change becomes known. This guidance also applies to the period subsequent to the March 1 filing deadline for annual financial statements through the filing deadline of June 1 for audited annual financial statements.

Disclosures

16. The financial statements shall include the following disclosures for each year full financial statements are presented. The disclosure requirement in paragraph 16.d. is also applicable to the interim financial statements if there is a material change from the amounts reported in the annual filing. Life and annuity contracts are not subject to this disclosure requirement.

a. The balance in the liabilities for unpaid claims and unpaid losses and loss/claim adjustment expense reserves at the beginning and end of each year presented;

b. Incurred claims, losses, and loss/claim adjustment expenses with separate disclosures of the provision for insured or covered events of the current year and increases or decreases in the provision for insured or covered events of prior years;

c. Payments of claims, losses, and loss/claim adjustment expenses with separate disclosures of payments of losses and loss/claim adjustment expenses attributable to insured or covered events of the current year and insured or covered events of prior years;

d. The reasons for the change in the provision for incurred claims, losses, and loss/claim adjustment expenses attributable to insured or covered events of prior years. The disclosure should indicate whether additional premiums or return premiums have been accrued as a result of the prior-year effects. (For Title reporting entities, "provision" refers to the known claims reserve included in Line 1 of the Liabilities page, and "prior years" refers to prior report years);

e. Information about significant changes in methodologies and assumptions used in calculating the liability for unpaid claims and claim adjustment expenses, including reasons for the change and the effects on the financial statements for the most recent reporting period presented;

~~e.~~ f. A summary of management's policies and methodologies for estimating the liabilities for losses and loss/claim adjustment expenses, including discussion of claims for toxic waste cleanup, asbestos-related illnesses, or other environmental remediation exposures;

~~f.~~ g. Disclosure of the amount paid and reserved for losses and loss/claim adjustment expenses for asbestos and/or environmental claims, on a direct, assumed and net of reinsurance basis (the reserves required to be disclosed in this section shall exclude amounts relating to policies specifically written to cover asbestos and environmental exposures). Each company should report only its share of a group amount (after applying its respective pooling percentage) if the company is a member of an intercompany pooling agreement; and

~~g.~~ h. Estimates of anticipated salvage and subrogation (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), deducted from the liability for unpaid claims or losses.

17. All reporting entity types are required to disclose the dollar amount of any claims/losses related to extra contractual obligation lawsuits or bad faith lawsuits paid during the reporting period on a direct basis. The number of such claims paid shall be disclosed in a note.

18. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

19. Although FASB *Statement No. 60, Accounting and Reporting by Insurance Enterprises* (FAS 60), is rejected in SSAP No. 50, this statement is consistent with the guidance provided for the recognition of claim costs in FAS 60 with the exception of the statutory requirement to accrue the midpoint of a range of loss or loss adjustment expense reserve estimates when no point within management's continuous range of reasonably possible estimates is determined to be a better estimate than any other point.

20. This statement also rejects *AICPA Statement of Position 92-4, Auditing Insurance Entities' Loss Reserves* and *ASU 2015-09, Disclosures about Short-Duration Contracts.* Although the disclosures in ASU 2015-09 are similar to existing statutory accounting disclosures on claims development, the U.S. GAAP disclosures would reflect consolidated information, with potential for different aggregations than what is used for a legal entity basis under statutory accounting. As such, ASU 2015-09 is rejected for statutory accounting, and reporting entities shall follow the established statutory accounting disclosures.

21. Guidance in paragraphs 7.c., 8.b. and 9 was incorporated from SSAP No. 85. SSAP No. 85 was issued in 2002 to amend SSAP No. 55 and provide clarification regarding what costs should be classified as claim adjustment expenses on accident and health contracts. In August 2011, SSAP No. 85 was nullified and the guidance was incorporated into this SSAP. *Issue Paper No. 116—Claim Adjustment Expenses, Amendments to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* provides historical reference on the original guidance included in SSAP No. 55 as well as the revisions originally reflected in SSAP No. 85.

Effective Date and Transition

22. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. Guidance reflected in paragraphs 7.c., 8.b. and 9, incorporated from SSAP No. 85, is effective for years ending on and after December 31, 2003. The guidance incorporated into paragraphs 1, 3, 6.c.ii., 7.d. and 9.b.vi. was originally included in *INT 03-17: Classification of Liabilities from Extra Contractual Obligation Lawsuits*, and was initially effective March 10, 2004. The guidance in paragraph 5 was previously included in *INT 02-21: Accounting for Prepaid Loss Adjustment Expenses and Claim Adjustment Expenses* effective for reporting periods ending on or after December 31, 2002, for all contracts except for capitated managed care contracts and December 31, 2006, for capitated managed care contracts. The guidance in paragraph 12 related to conservatism and adverse deviation was originally contained in *INT 01-28: Margin for Adverse Deviation in Claim Reserve* and was effective October 16, 2001. The guidance in paragraph 14 related to coordination of benefits was originally contained within *INT 00-31: Application of SSAP No. 55 Paragraph 12 to Health Entities* and was effective December 4, 2000. The guidance reflected in footnote 1, incorporated from *INT 06-14: Reporting of Litigation Costs Incurred for Lines of Business in which Legal Expenses Are the Only Insured Peril*, was effective June 2, 2007.

Title Insurance

SCOPE OF STATEMENT

1. Title insurance insures that the policyholder has title to the property on the subject real estate as of the date of policy issuance, subject to exceptions and exclusions in the policy. When issued, a title policy has a one-time premium and reserves are established by the title insurance company. Title insurance differs from other lines of property and casualty insurance because its basic goal is risk elimination.

2. This statement establishes statutory accounting principles for title insurance and addresses areas where title insurance accounting differs from other lines of insurance. To the extent a topic is not covered by this statement, title insurance accounting shall comply with statutory accounting guidance for other lines of property and casualty insurance.

SUMMARY CONCLUSION

General

3. Title insurers perform many services in connection with the transfer of real estate; however, their principal function involves insuring, guaranteeing, or indemnifying owners of real property or the holders of liens or encumbrances thereon against loss or damage due to defective titles, liens, or encumbrances or, in most states, the unmarketability of the title.

4. In addition to insuring against defective records or examination of those records, an insurer insures against "non-record defects" such as:

a. Forgeries;

b. Fraud;

c. Confusion of name in change of title;

d. Incompetence (minors or persons of unsound mind);

e. Mistakes in public records;

f. Undisclosed or missing heirs;

g. Instruments executed under a fabricated or expired power of attorney;

h. Deeds delivered after death of grantor or grantee or without the consent of the grantor;

i. Deeds by persons supposedly single but actually married;

j. Wills not probated;

k. Liens against property (e.g., mechanics liens and tax liens);

l. Falsified records.

5. Before a title insurance policy is issued, the title insurer, or its agent, must search and examine public records concerning the ownership, liens, and encumbrances on the subject real estate together with information relating to persons having an interest in the real property as well as maps and other records to determine that title to the property is insurable, or defects can be overcome.

Premium Revenue and Loss Reserve Recognition

6. A variety of services are generally provided (either by the title insurance underwriter, its agent, or others) in connection with the transfer of title to real estate. Title insurance premiums frequently are determined in the rate-making process based on the bundle of services provided, including some or all of title search and examination and closing or escrow fees. By statute or custom, certain states exclude a combination of title search, examination and closing or escrow fees from the rate-making process for title insurance premiums. Premiums shall be recorded at the date of policy issuance, on a gross premium basis, consistent with the rate-making method used. The premium related to a title insurance policy is due upon the effective date of the insurance and is not refundable. The term of a title insurance policy is indefinite because the policyholder is insured for as long as he or his heirs or devisees have an interest in the property.

7. Amounts paid to or retained by agents shall be reported as an expense.

8. A liability shall be established for all known unpaid claims and loss adjustment expenses (known claims reserve) with a corresponding charge to income. The known claim reserve is further detailed in the Title Annual Statement Operations and Investment Exhibit on Unpaid Losses and Loss Adjustment Expenses. The known claims reserve should be the estimated costs to settle reported claims based upon the most current information available to the company as of the balance sheet date. This amount cannot be less than the aggregate of the individual case reserves.

9. Premium revenue shall be deferred to the extent necessary to maintain a Statutory or Unearned Premium Reserve (SPR or UPR) determined in accordance with the reserve section of Appendix A-628.

10. If the actuarially determined liability (the sum of the known claims reserve, IBNR claims reserve, and loss adjustment expense reserve) exceeds the sum of the known claims reserve and SPR or UPR, a supplemental reserve shall be established that is equal to the difference between these sums. This calculation is explicitly detailed in the Title Annual Statement Operations and Investment Exhibit for Unpaid Losses and Loss Adjustment Expenses.

11. The actuarially determined liability for the sum of known claims reserve required in paragraph 8 and the IBNR claims and loss adjustment expenses required in paragraph 10 of this statement shall be determined consistently with the guidance detailed in *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* and consistent with paragraph 13 of this statement.

12. Assets acquired in settlement of claims (e.g., mortgages and real estate) shall be accounted for consistent with the guidance related to the asset acquired. For example, an impaired loan shall be accounted for in accordance with *SSAP No. 37—Mortgage Loans*, and real estate acquired in foreclosure shall be accounted for in accordance with *SSAP No. 40R—Real Estate Investments*.

Salvage and Subrogation

13. Salvage and subrogation shall be reflected as follows:

a. Paid losses shall be reported net of realized, but not anticipated, salvage and subrogation. Case basis loss and loss adjustment expense reserves shall not be reduced for anticipated salvage and subrogation, nor shall an asset be established;

b. Paid salvage and subrogation is not realized until a salvage asset or an actual payment pursuant to a subrogation right is in the direct control of the insurer and admissible as an asset for statutory reporting purposes in its own right;

c. Salvage assets and payments pursuant to a subrogation right shall be recorded at current fair value. Current fair value of real estate shall be established through an appraisal conducted by a qualified independent appraiser;

d. If a salvage asset is sold or revalued by the insurer within twelve months of realization for an amount less than the value at which it was originally placed on the books of the insurer, then the loss on disposition shall be treated as a decrease in paid salvage (same effect as an addition to the paid loss) on the corresponding claim. After twelve months, such salvage revaluation will be treated as a loss on disposition or change in value of an asset, and shall not be deducted from the salvage on the corresponding claim;

e. If a salvage asset is sold or revalued by the insurer within twelve months of realization for an amount greater than the value at which it was originally placed on the books of the insurer, then the gain on disposition shall be treated as an increase in paid salvage (same effect as a deduction to the paid loss) on the corresponding claim. After twelve months, such salvage revaluation shall be treated as a gain on disposition or change in value of an asset and shall not be added to the salvage on the corresponding claim;

f. In completing Schedule P and Part 3B, IBNR reserves may make an actuarially determined provision for the expected value of future salvage and subrogation on open claims and IBNR claims.

Reinsurance

14. Although by their nature, title claims relate to errors or omissions that occurred prior to the inception of the reinsurance agreement, title reinsurance contracts shall be accounted for as prospective reinsurance agreements if they meet all of the other criteria established in *SSAP No. 62R—Property and Casualty Reinsurance*.

Allocation of Expenses

15. This statement establishes uniform allocation rules to classify title insurance expenses within prescribed principal groupings. It is necessary to allocate those expenses which may contain characteristics of more than one classification, which this statement will refer to as allocable expenses.

16. Allocable expenses for title insurance companies shall be classified into the following categories on the expense section of the Operations and Investment Exhibit of the annual statement.

a. Title and Escrow Operating Expenses—Title and escrow operating expenses consist of all expenses incurred in relation to engaging in the business of title insurance, including costs associated with the following: (i) issuing or offering to issue a title insurance policy; (ii) soliciting or negotiating the issuance of a title insurance policy; (iii) guaranteeing, warranting or otherwise insuring the correctness of title searches affecting title to real property; (iv) handling of escrows, settlements or closings; (v) executing title insurance policies, effecting contracts of reinsurance, and abstracting, searching or examining titles. Also included are specifically identifiable and allocated expenses relating to the following activities; (i) supervision and training of employees and agents; (ii) operating costs for branch offices or agencies; (iii) underwriting activities; (iv) receiving and paying of premiums and commissions; (v) maintaining general and detailed records; (vi) data processing, advertising, and publicity, clerical, secretarial, office maintenance, supervisory, and executive duties; (vii) postage and delivery; and (viii) all other functions reasonably associated with the business of title insurance. Title and escrow operating expenses do not include losses, loss adjustment expenses (allocated or unallocated), expense of other operations, or investment expenses. The expenses include only amounts

incurred directly by the insurer and do not include expenses incurred by any agents (regardless of ownership interest).

b. Title and Escrow Operating Expenses are further broken down in the annual statement by the distribution network that gives rise to the expense incurrence. Accordingly, expenses are specifically identified or allocated (in accordance with reasonable allocation procedures consistently applied) to either Direct Operations, Non-affiliated Agency Operations, or Affiliated Agency Operations.

c. Unallocated Loss Adjustment Expenses (ULAE)—ULAE are those indirect costs incurred by a title insurer, typically internal to the company, which are necessary to process claims or manage the claims settlement function and which are not incurred on a claim-specific basis. ULAE shall include all costs of outside parties involved in claims adjusting services, but shall not include any costs incurred by agents in settlement of title or other claims.

d. Investment Expenses—Investment expenses are those expenses incurred in the investing of funds and the pursuit of investment income, including specifically identifiable and allocated expenses related to such activities as: (i) initiating or handling orders and recommendations for investments; (ii) research, pricing, appraising, and valuing; (iii) disbursing funds and collecting income; (iv) safekeeping of securities and valuable papers; (v) maintaining general and detailed records; (vi) data processing; (vii) general clerical, secretarial, office maintenance, supervisory, and executive duties; (viii) supplies, postage, and the like; and (ix) all other functions reasonably attributable to the investment of funds. Real estate expenses and real estate taxes are attributable to the Investment Expenses group.

e. Other Operations—The amounts shown for this category represent the allocable expenses incurred by the company in operations other than title and escrow, unallocated loss adjustment, or investment activities.

17. Allocation to the above categories should be based on a method that yields the most accurate results. Specific identification of an expense with an activity that is represented by one of the categories above will generally be the most accurate method. Where specific identification is not feasible, allocation of expenses should be based upon pertinent factors or ratios such as studies of employee activities, salary ratios, or similar analyses.

18. Many companies operate within a group where personnel and facilities are shared. Shared expenses, including expenses under the terms of a management contract, shall be apportioned to the companies incurring the expense as if the expense had been paid solely by the incurring company. The apportionment shall be completed based upon specific identification to the company incurring the expense. Where specific identification is not feasible, apportionment shall be based upon pertinent factors or ratios. Any basis adopted to apportion expenses shall be that which yields the most accurate results and may result from special studies of employee activities, salary ratios, premium ratios or similar analyses. Expenses that relate solely to the operations of an insurance company, such as personnel costs associated with the adjusting and paying of claims, must be borne solely by the insurance company and are not to be apportioned to other companies within a group. Pertinent factors in making this determination shall include which entity has the ultimate obligation to pay the expense. Apportioned expenses are subject to presentation and allocation as provided in paragraphs 16 and 17.

Title Plant

19. Title plants are an integrated and indexed collection of title records consisting of documents, maps, surveys, or entries affecting title to real property or any interest in or encumbrance on the property,

which have been filed or recorded in the jurisdiction for which the title plant is established or maintained. They are tangible assets unique to the title insurance industry and are the principal productive asset used to generate title insurance revenue and to mitigate the risk of claims. Title plant shall be reported as an admitted asset, subject to the following valuation restrictions:

a. Costs incurred to construct a title plant, including the costs incurred to obtain, organize, and summarize historical information in an efficient and useful manner, shall be capitalized until the title plant can be used by the company to conduct title searches and issue title insurance policies. The capitalized costs shall be directly related to, and properly identified with, the activities necessary to construct the title plant;

b. Purchased title plants, including a purchased undivided interest in a title plant, shall be recorded at cost at the date of acquisition. For a title plant acquired separately, cost shall be measured by the fair value of the consideration given. For title plant acquired as part of a group of assets, cost shall be measured by the fair value of the consideration given and then cost shall be allocated to the title plant based on its fair value in relation to the total fair value of the group of assets acquired. For title plants acquired as part of a purchase of assets or in a business combination, cost shall be determined in accordance with *SSAP No. 68—Business Combinations and Goodwill*;

c. A backplant, i.e., a title plant that antedates the period of time covered by the existing title plant may be purchased or constructed. Costs to construct a backplant must be properly identifiable to qualify for capitalization;

d. Costs incurred after a title plant is operational to (i) convert the information from one storage and retrieval system to another, or (ii) modify or modernize the storage and retrieval system shall not be capitalized;

e. Costs incurred to maintain a title plant shall be expensed as incurred;

f. Costs incurred to perform title searches shall be expensed as incurred;

g. An investment in a title plant or plants in an amount equal to the actual cost shall be allowed as an admitted asset for title insurers. The aggregate carrying value of an investment in a title plant or plants shall not exceed the lesser of 20% of admitted assets or forty percent (40%) of surplus to policyholders, both as required to be shown on the statutory balance sheet of the insurer for its most recently filed statement with the domiciliary state commissioner; if the amount of the investment exceeds the above limits, the excess amount shall be recorded as a nonadmitted asset.

20. Certain circumstances may indicate that the value of the title plant may be impaired and, thus, the carrying value of the asset may not be recoverable. If there is an indication of possible impairment of value, the title plant shall be evaluated for impairment and recorded in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*. The following are examples of circumstances that may indicate impairment:

a. Effects of obsolescence, demand, and other economic factors;

b. A significant change in legal requirements or statutory practices in the jurisdiction for which the title plant is established and maintained;

c. A current period operating or cash flow loss combined with a history of such losses or projections that indicate continued losses associated with the revenue produced by the title plant;

d. Failure to maintain the title plant on a current basis and/or lack of appropriate maintenance to keep the title plant up to date; or,

e. Abandonment of a title plant.

21. A properly maintained title plant has an indeterminate life and does not diminish in value with the passage of time, and accordingly, shall not be depreciated.

22. A title insurer may (a) sell its title plant and relinquish all rights to its future use, (b) sell an undivided ownership interest in its title plant, or (c) sell a copy of its title plant or the right to use it. Accounting and presentation for each type of sale noted shall be as follows:

a. When a title insurer sells its title plant and relinquishes all rights to its future use, consideration received shall be presented as a separate component of revenue net of the carrying value of the title plant sold;

b. When a title insurer sells an undivided ownership interest in its title plant, consideration received shall be presented as a separate component of revenue net of the pro rata portion of the carrying value of the title plant;

c. When a title insurer sells a copy of its title plant or the right to use it, consideration received shall be presented as a separate component of revenue and the carrying value of the title plant shall not be reduced.

Disclosures

23. The financial statements shall disclose the following for each period presented:

a. The amount of the known claims reserve, SPR/UPR, and the supplemental reserve;

b. Whether the insurer uses discounting in the calculation of its supplemental reserve, the method and rate used to determine the discount, and the amount of such discount.

24. Any material individual component of the reported expense categories shall be presented either on the face of the Summary of Operations or within the footnotes or related exhibits to the financial statements.

25. Refer to the Preamble for further discussion regarding disclosure requirements.

Mortgage Guaranty Insurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for mortgage guaranty insurance and addresses areas where mortgage guaranty insurance accounting differs from other lines of insurance. To the extent a topic is not covered by this statement and Appendix A-630, mortgage guaranty insurance accounting shall comply with statutory accounting guidance for other lines of property and casualty insurance.

2. Mortgage guaranty insurance protects a lender against loss of all or a portion of the principal amount of a mortgage loan upon default of the mortgagor. Mortgage guaranty insurance differs from other types of property and casualty insurance in that coverage is long-term, and in most cases premiums are level and paid monthly. Most states require issuers of mortgage guaranty contracts to be monoline insurers and impose limitations on the aggregate amount of risk insured based on geographic territories. Additionally, states may require mortgage guaranty insurers to reinsure with only selected reinsurers.

SUMMARY CONCLUSION

General

3. Mortgage guaranty insurance is provided on residential loans (one to four family residences, including condominiums and townhouses). Coverage can range from as little as 5% on pool insurance to as much as 100% of the outstanding loan amount on individual policies. Most policies cover 10% to 30% of the loan amount and are written on first mortgage loans where the loan amount is a high percentage (generally 80% to 95%) of the value of the mortgaged property.

4. Lenders obtain mortgage guaranty insurance to facilitate sales of mortgage loans in secondary markets. It also enables lenders to make a greater number of high ratio (above 80%) loans and allows them to diversify their portfolio of loans.

5. Mortgage guaranty insurers market directly to mortgage lenders. Individual mortgage loans or pools of mortgage loans are insured under individual insurance certificates or policies; each loan, however, is separately underwritten.

6. Mortgage guaranty insurance companies generally offer the following premium payment plans: (a) monthly premiums, (b) a single premium which provides coverage for periods ranging from three to 15 years, (c) nonlevel annual premiums, and (d) level annual premiums. All policies are renewable at the discretion of the lender. The mortgage guaranty insurer does not have an option to cancel or nonrenew the policy, except for fraud or nonpayment of the premium.

7. Premiums are based upon: (a) the percentage of insurance coverage provided, (b) the ratio of the insured mortgage loan to the property value or sales price, and (c) the term and/or premium payment method selected by the lender. Premiums are quoted as a percentage of the total mortgage loan insured and increase as insurance coverage and loan-to-value ratio increases.

8. If a default occurs, the mortgage guaranty insurer generally requires the lender to foreclose and tender merchantable title to the mortgaged property in order to make a claim. The insurer may then, at its option: (a) purchase the property for the lender's cost (generally the entire remaining principal loan balance plus accumulated interest and allowable expenses), (b) pay the percentage of the lender's cost specified by the policy, or (c) arrange for the lender to sell the property and reimburse the lender for any loss up to an agreed amount. Under settlement option (a), the insurer intends to resell the property with the expectation of reducing the amount of loss which would have resulted if option (b) had been elected.

Insured Risk

9. The nature of the insured risk is influenced by certain factors which set mortgage guaranty insurance apart from other types of insurance. These factors are addressed in paragraphs 10-12.

Exposure Period

10. The exposure period is significantly longer for mortgage insurance than for most other property and casualty insurance products. The exposure period can run for the term of the mortgage; however, the average policy life is seven years. The policy is terminated when the mortgage obligation is satisfied or the lender elects to cancel or not renew the policy. In contrast to mortgage guaranty insurance, most property and casualty products need not be renewed by the insurer at the expiration of the policy. Mortgage insurance is renewable at the option of the insured at the renewal rate quoted when the policy commitment was issued.

Losses

11. Losses are affected by the following factors specific to mortgage guaranty insurance:

a. The insured peril—the default of a borrower arises from the credit risk associated with mortgage loans. The frequency of loss is strongly influenced by economic conditions. The likelihood of individual default is further increased if the property has deteriorated since a borrower in financial difficulty will be less able to sell the property at a price sufficient to discharge the mortgage;

b. Mortgage insurance losses can be divided into three categories:

i. Normal losses associated with regular business cycles, interruptions in the borrower's earning power, and errors made in evaluating the borrower's willingness or ability to meet mortgage obligations;

ii. Defaults caused by adverse local economic conditions;

iii. Widespread defaults caused by a severe depression in the U.S. economy.

Loss Incidence

12. Losses are incurred over the exposure period which runs for the term of the mortgage. However, loss incidence peaks in the earlier years. When a loan has been delinquent two to four months, the policy requires the lender to notify the insurer. The lender generally agrees to institute foreclosure proceedings six to nine months from the date of delinquency. Foreclosure can require an additional 18 months which means a considerable delay between the delinquency and the presentation of the claim. Without adverse economic conditions, most delinquencies do not result in a loss payment. Once a claim is presented, payment normally is made within one or two months and ultimate loss costs can be known relatively quickly.

Pool Insurance

13. Mortgage guaranty insurance may be provided on pools of mortgage loans. Typically, pool insurance supports mortgage-backed securities or group sales. Unlike other pool or group products, each loan is individually underwritten.

14. Pool insurance may be provided on loans that are already insured by primary insurance, in which case the pool insurance provides an additional level of coverage, or it may be provided on loans without primary insurance (usually loans with loan-to-value ratios below 80%). Generally, pool insurance

provides 100% coverage and includes a stop-loss limit of liability which may range from 5% to 20% of the initial aggregate principal balance. Because of regulatory requirements in some states, pool insurance usually uses participating reinsurance arrangements to limit the exposure of any one mortgage insurer of a pool of loans to 25% of each mortgage insured.

15. Pool insurance policies are not cancelable by the insurer except for nonpayment of premium. These policies may be written on mortgage pools having terms of up to 30 years. However, the average policy life is 8 to 12 years.

16. Upon default, the insurer has the same options as with individual insured mortgage loans. However, pool insurance loss payments are reduced by settlements under primary insurance and subject to the stop-loss limit.

17. Three kinds of mortgage-backed securities which use pool insurance are:

a. Mortgage-backed bonds—Issued by banks, savings and loan associations and other mortgage lenders as a general obligation of the issuing institution. These bonds are collateralized by a pool of mortgages and have a stated rate of return and maturity date;

b. Mortgage revenue bonds—Issued by state and local housing authorities to support housing affordability for targeted income groups;

c. Mortgage pass-through certificates—Issued by banks, savings and loan associations, mortgage bankers, and others providing an undivided interest in a pool of mortgages with principal and interest payment passed to the certificate holder as received.

Premium Revenue Recognition

18. Written premium shall be recorded in accordance with *SSAP No. 53—Property Casualty Contracts—Premiums*. Premium revenue shall be earned as follows:

a. For monthly premium plans, revenues shall be earned in the month to which they relate;

b. For annual premium plans, revenues shall be earned on a pro rata basis over the applicable year;

c. For single premium plans, revenues shall be earned over the policy life in relation to the expiration of risk;

d. Additional first year premiums or initial renewal premiums on nonlevel policies shall be deferred and amortized to income over the anticipated premium paying period of the policy in relation to the expiration of risk.

Unpaid Losses and Loss Adjustment Expense Recognition

19. Unpaid losses and loss adjustment expenses shall be recognized in accordance with *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (SSAP No. 55). For mortgage guaranty insurance contracts, the default shall be considered the incident that gives rise to a claim as discussed in SSAP No. 55. If a claim is ultimately presented, the date of default shall be considered the loss incurred date.

20. The process for estimating the liability shall include projections for losses that have been reported as well as those that have been incurred but not reported. The estimates shall be made based on historical data, trends, economic factors, and other statistical information including paid claims, reported losses, insurance in force statistics, and risk statistics.

21. Real estate and mortgages are acquired by mortgage guaranty insurers to mitigate losses. These assets shall be shown on the balance sheet at the lower of cost or net realizable value, net of encumbrances. Gains or losses from the holding or disposition of these assets shall be recorded as a component of losses incurred. Rental income or holding expenses shall be included in loss adjustment expenses.

Contingency Reserve

22. In addition to the unearned premium reserve, mortgage guaranty insurers shall maintain a liability referred to as a statutory contingency reserve. The purpose of this reserve is to protect policyholders against loss during periods of extreme economic contraction. The annual addition to the liability shall equal 50% of the earned premium from mortgage guaranty insurance contracts and shall be maintained for ten years regardless of the coverage period for which premiums were paid. With commissioner approval, when required by statute, the contingency reserve may be released in any year in which actual incurred losses exceed 35% of the corresponding earned premiums. Any such reductions shall be made on a first-in, first-out basis. Changes in the reserve shall be recorded directly to unassigned funds (surplus).

Premium Deficiency Reserve

23. When the anticipated losses, loss adjustment expenses, commissions and other acquisition costs, and maintenance costs exceed the recorded unearned premium reserve, contingency reserve, and the estimated future renewal premium on existing policies, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency with a corresponding charge to operations. Commissions and other acquisition costs need not be considered in the premium deficiency analysis to the extent they have been expensed. If an insurer utilizes anticipated investment income as a factor in the premium deficiency calculation, disclosure of such shall be made in the financial statements.

U.S. Mortgage Guaranty Tax and Loss Bonds

24. To obtain a current federal income tax benefit derived from annual additions to the statutory contingency reserve (for tax purposes, the mortgage guaranty account), mortgage guaranty insurers must purchase tax and loss bonds to the extent of the tax benefits. These bonds are noninterest bearing obligations of the U.S. Treasury and mature 10 years after issue. The usual purpose of tax and loss bonds is to satisfy taxes that will be due in 10 years when the tax benefit is reversed; however, the bonds may be redeemed earlier in the event of excess underwriting losses. These bonds are reported as admitted assets allowing mortgage insurers to conserve capital. In accordance with *SSAP No. 101—Income Taxes*, temporary differences (as defined in that statement) do not include amounts attributable to the statutory contingency reserve to the extent that "tax and loss" bonds have been purchased.

Contingency Reserve (for Tax Purposes, the Mortgage Guaranty Account)

25. Under IRS Code Section 832(e), mortgage guaranty insurers are permitted to deduct the annual addition to the contingency reserve from gross income. The tax deduction is generally an amount equal to (a) 50% of earned premium, or (b) taxable income as computed prior to this special deduction if less than 50% of earned premium. Annual deductions not utilized for tax purposes during the current period may be carried forward for eight years on a basis similar to net operating losses. The amount deducted must be restored to gross income after ten years; however, it may be restored to gross income at an earlier date in the event of a taxable net operating loss.

26. The tax deduction is permitted only if special U.S. Mortgage Guaranty Tax and Loss Bonds are purchased in an amount equal to the tax benefit derived from the deduction. Upon redemption the tax and loss bonds can be used to satisfy the additional tax liability that arises when the deduction is restored to income.

Disclosures

27. Mortgage guaranty insurers shall make all disclosures required by other statements within the *Accounting Practices and Procedures Manual*, including but not limited to the requirements of SSAP No. 55, and *SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures*.

28. Refer to the Preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

29. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Property and Casualty Reinsurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for property and casualty reinsurance. A wide range of methods for structuring reinsurance arrangements can be employed depending on the requirements of individual companies. This statement deals with the more commonly employed methods.

SUMMARY CONCLUSION

General

2. Reinsurance is the assumption by an insurer of all or part of a risk undertaken originally by another insurer. The transaction whereby a reinsurer cedes all or part of the reinsurance it has assumed to another reinsurer is known as a retrocession.

3. Reinsurance has many beneficial purposes. Among them are that it enables an insurance entity to (a) expand its capacity, (b) share large risks with other insurers, (c) spread the risk of potential catastrophes and stabilize its underwriting results, (d) finance expanding volume by sharing the financial burden of reserves, (e) withdraw from a line or class of business, and (f) reduce its net liability to amounts appropriate to its financial resources.

4. Reinsurance agreements are generally classified as treaty or facultative. Treaty reinsurance refers to an arrangement involving a class or type of business written, while facultative reinsurance involves individual risks offered and accepted.

5. Reinsurance coverage can be pro rata (i.e., proportional reinsurance) where the reinsurer shares a pro rata portion of the losses and premium of the ceding entity or excess of loss (i.e., non-proportional) where the reinsurer, subject to a specified limit, indemnifies the ceding entity against the amount of loss in excess of a specified retention. Most reinsurance agreements fall into one of the following categories:

a. Treaty Reinsurance Contracts—Pro Rata:

   i. Quota Share Reinsurance—The ceding entity is indemnified against a fixed percentage of loss on each risk covered in the agreement;

   ii. Surplus Share Reinsurance—The ceding entity establishes a retention or "line" on the risks to be covered and cedes a fraction or a multiple of that line on each policy subject to a specified maximum cession;

b. Treaty Reinsurance Contracts—Excess of Loss:

   i. Excess Per Risk Reinsurance—The ceding entity is indemnified, subject to a specified limit, against the amount of loss in excess of a specified retention with respect to each risk covered by a treaty;

   ii. Aggregate Excess of Loss Reinsurance—The ceding entity is indemnified against the amount by which the ceding entity's net retained losses incurred during a specific period exceed either a predetermined dollar amount or a percentage of the entity's subject premiums for the specific period subject to a specified limit;

c. Treaty Reinsurance Contracts—Catastrophe: The ceding entity is indemnified, subject to a specified limit, against the amount of loss in excess of a specified retention with respect to an accumulation of losses resulting from a catastrophic event or series of events;

d. Facultative Reinsurance Contracts—Pro Rata: The ceding entity is indemnified for a specified percentage of losses and loss expenses arising under a specific insurance policy in exchange for that percentage of the policy's premium;

e. Facultative Reinsurance Contracts—Excess of Loss: The ceding entity is indemnified, subject to a specified limit, for losses in excess of its retention with respect to a particular risk.

Characteristics of Reinsurance Agreements

6. Common contract provisions that may affect accounting practices include:

a. Reporting responsibility of the ceding entity—Details required and time schedules shall be established;

b. Payment terms—Time schedules, currencies intended, and the rights of the parties to withhold funds shall be established;

c. Payment of premium taxes—Customarily the responsibility of the ceding entity, a recital of nonliability of the reinsurer may be found;

d. Termination—May be on a cut-off or run-off basis. A cut-off provision stipulates that the reinsurer shall not be liable for loss as a result of occurrences taking place after the date of termination. A run-off provision stipulates that the reinsurer shall remain liable for loss under reinsured policies in force at the date of termination as a result of occurrences taking place after the date of termination until such time as the policies expire or are canceled; and

e. Insolvency clause—Provides for the survival of the reinsurer's obligations in the event of insolvency of the ceding entity, without diminution because of the insolvency.

7. Reinsurance contracts shall not permit entry of an order of rehabilitation or liquidation to constitute an anticipatory breach by the reporting entity, nor grounds for retroactive revocation or retroactive cancellation of any contracts of the reporting entity.

Required Terms for Reinsurance Agreements

8. In addition to credit for reinsurance requirements applicable to reinsurance transactions generally, no credit or deduction from liabilities shall be allowed by the ceding entity for reinsurance recoverable where the agreement was entered into after the effective date of these requirements (see paragraphs 108 and 109) unless each of the following conditions is satisfied:

a. The agreement must contain an acceptable insolvency clause;

b. Recoveries due the ceding entity must be available without delay for payment of losses and claim obligations incurred under the agreement, in a manner consistent with orderly payment of incurred policy obligations by the ceding entity;

c. The agreement shall constitute the entire contract between the parties and must provide no guarantee of profit, directly or indirectly, from the reinsurer to the ceding entity or from the ceding entity to the reinsurer;

d. The agreement must provide for reports of premiums and losses, and payment of losses, no less frequently than on a quarterly basis, unless there is no activity during the period.

The report of premiums and losses shall set forth the ceding entity's total loss and loss expense reserves on the policy obligations subject to the agreement, so that the respective obligations of the ceding entity and reinsurer will be recorded and reported on a basis consistent with this statement;

e. The agreement must include a proper reinsurance intermediary clause, if applicable, which stipulates that the credit risk for the intermediary is carried by the assuming insurance entity;

f. With respect to reinsurance contracts involving a certified reinsurer, the agreement must include a proper funding clause, which requires the certified reinsurer to provide and maintain security in an amount sufficient to avoid the imposition of any financial statement penalty on the ceding insurance entity for reinsurance ceded to the certified reinsurer. However, this does not preclude negotiation for higher contractual collateral amounts; and

g. With respect to retroactive reinsurance agreements, the following additional conditions apply:

i. The consideration to be paid by the ceding entity for the retroactive reinsurance must be a sum certain stated in the agreement;

ii. Direct or indirect compensation to the ceding entity or reinsurer is prohibited;

iii. Any provision for subsequent adjustment on the basis of actual experience in regard to policy obligations transferred, or on the basis of any other formula, is prohibited in connection with a retroactive reinsurance transaction, except that provision may be made for the ceding entity's participation in the reinsurer's ultimate profit, if any, under the agreement;

iv. A retroactive reinsurance agreement shall not be canceled or rescinded without the approval of the commissioner of the domiciliary state of the ceding entity.

Reinsurance Agreements with Multiple Cedents

9. Reinsurance agreements with multiple cedents require allocation agreements. The allocation agreement can be part of the reinsurance agreement or a separate agreement. If the agreement has multiple cedents:

a. The allocation must be in writing and

b. The terms of the allocation agreement must be fair and equitable.

Reinsurance Contracts Must Include Transfer of Risk

10. The essential ingredient of a reinsurance contract is the transfer of risk. The essential element of every true reinsurance agreement is the undertaking by the reinsurer to indemnify the ceding entity, i.e., reinsured entity, not only in form but in fact, against loss or liability by reason of the original insurance. Unless the agreement contains this essential element of risk transfer, no credit shall be recorded.(INT 02-22)

11. Insurance risk involves uncertainties about both (a) the ultimate amount of net cash flows from premiums, commissions, claims, and claims settlement expenses (underwriting risk) and (b) the timing of the receipt and payment of those cash flows (timing risk). Actual or imputed investment returns are not an

element of insurance risk. Insurance risk is fortuitous—the possibility of adverse events occurring is outside the control of the insured.

12. Determining whether an agreement with a reinsurer provides indemnification against loss or liability (transfer of risk) relating to insurance risk requires a complete understanding of that contract and other contracts or agreements between the ceding entity and related reinsurers. A complete understanding includes an evaluation of all contractual features that (a) limit the amount of insurance risk to which the reinsurer is subject (e.g., experience refunds, cancellation provisions, adjustable features, or additions of profitable lines of business to the reinsurance contract) or (b) delay the timely reimbursement of claims by the reinsurer (e.g., payment schedules or accumulating retentions from multiple years).

13. Indemnification of the ceding entity against loss or liability relating to insurance risk in reinsurance requires both of the following:

a. The reinsurer assumes significant insurance risk under the reinsured portions of the underlying insurance agreements; and

b. It is reasonably possible that the reinsurer may realize a significant loss from the transaction.

14. A reinsurer shall not have assumed significant insurance risk under the reinsured contracts if the probability of a significant variation in either the amount or timing of payments by the reinsurer is remote. Implicit in this condition is the requirement that both the amount and timing of the reinsurer's payments depend on and directly vary with the amount and timing of claims settled by the ceding entity. Contractual provisions that delay timely reimbursement to the ceding entity prevent this condition from being met.

15. The ceding entity's evaluation of whether it is reasonably possible for a reinsurer to realize a significant loss from the transaction shall be based on the present value of all cash flows between the ceding and assuming companies under reasonably possible outcomes, without regard to how the individual cash flows are described or characterized. An outcome is reasonably possible if its probability is more than remote. The same interest rate shall be used to compute the present value of cash flows for each reasonably possible outcome tested. A constant interest rate shall be used in determining those present values because the possibility of investment income varying from expectations is not an element of insurance risk. Judgment is required to identify a reasonable and appropriate interest rate.

16. Significance of loss shall be evaluated by comparing the present value of all cash flows, determined as described in paragraph 15, with the present value of the amounts paid or deemed to have been paid to the reinsurer. If, based on this comparison, the reinsurer is not exposed to the reasonable possibility of significant loss, the ceding entity shall be considered indemnified against loss or liability relating to insurance risk only if substantially all of the insurance risk relating to the reinsured portions of the underlying insurance agreements has been assumed by the reinsurer. In this narrow circumstance, the reinsurer's economic position is virtually equivalent to having written the insurance contract directly. This condition is met only if insignificant insurance risk is retained by the ceding entity on the retained portions of the underlying insurance contracts, so that the reinsurer's exposure to loss is essentially the same as the reporting entity's.

17. Payment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer's payment to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being

met. Therefore, any feature that may affect the timing of the reinsurer's reimbursement to the ceding entity shall be closely scrutinized.

Accounting for Reinsurance

18. Reinsurance recoverables shall be recognized in a manner consistent with the liabilities (including estimated amounts for claims incurred but not reported) relating to the underlying reinsured contracts. Assumptions used in estimating reinsurance recoverables shall be consistent with those used in estimating the related liabilities. Certain assets and liabilities are created by entities when they engage in reinsurance contracts. Reinsurance assets meet the definition of assets as defined by *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted to the extent they conform to the requirements of this statement.

19. Accounting for members of a reinsurance pool shall follow the accounting for the pool member which issued the underlying policy.(INT 03-02) Specific accounting rules for underwriting pools and associations are addressed in *SSAP No. 63—Underwriting Pools* (SSAP No. 63).

20. Reinsurance recoverable on loss payments is an admitted asset. Notwithstanding the fact that reinsurance recoverables on paid losses may meet the criteria for offsetting under the provisions of *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64), reinsurance recoverables on paid losses shall be reported as an asset without any available offset. Unauthorized reinsurance and reinsurance ceded to certified reinsurers is included in this asset and reflected separately as a liability to the extent required. Penalty for overdue authorized reinsurance shall be reflected as a liability.

21. Funds held or deposited with reinsured companies, whether premiums withheld as security for unearned premium and outstanding loss reserves or advances for loss payments, are admitted assets provided they do not exceed the liabilities they secure and provided the reinsured is solvent. Those funds which are in excess of the liabilities, and any funds held by an insolvent reinsured shall be nonadmitted.

22. Prospective reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for losses that may be incurred as a result of future insurable events covered under contracts subject to the reinsurance. Retroactive reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for liabilities incurred as a result of past insurable events covered under contracts subject to the reinsurance. A reinsurance agreement may include both prospective and retroactive reinsurance provisions.

23. The distinction between prospective and retroactive reinsurance agreements is based on whether the agreement reinsures future or past insured events covered by the underlying insurance policies. For example, in occurrence-based insurance, the insured event is the occurrence of a loss covered by the insurance contract. In claims-made insurance, the insured event is the reporting to the insurer, within the period specified by the policy, of a claim for a loss covered by the insurance agreement. A claims-made reinsurance contract that reinsures claims asserted to the reinsurer in a future period as a result of insured events that occurred prior to entering into the reinsurance agreement is a retroactive agreement. (However, a reinsurance agreement that reinsures claims reported to an insurer that are covered under currently effective claims-made insurance policies is a prospective reinsurance agreement.)

24. It is not uncommon for a reinsurance arrangement to be initiated before the beginning of a policy period but not finalized until after the policy period begins. Whether there was agreement in principle at the beginning of the policy period and, therefore, the agreement is substantively prospective shall be determined based on the facts and circumstances. However, except as respects business assumed by a U.S. reinsurer from ceding companies domiciled outside the U.S. and not affiliated with such reinsurer, or business assumed by a U.S. reinsurer where either the lead reinsurer or a majority of the capacity on the agreement is domiciled outside the U.S. and is not affiliated with such reinsurer, if an agreement entered into, renewed or amended on or after January 1, 1994 has not been finalized, reduced to a written form and signed by the parties within nine months after the commencement of the policy period covered by the

reinsurance arrangement, then the arrangement is presumed to be retroactive and shall be accounted for as a retroactive reinsurance agreement. This presumption shall not apply to: (a) facultative reinsurance contracts, nor to (b) reinsurance agreements with more than one reinsurer which are signed by the lead reinsurer (i.e., the reinsurer setting the terms of the agreement for the reinsurers) within nine months after the commencement of the policy period covered by the reinsurance agreement, nor to (c) reinsurance agreements with more than one reinsurer (whether signed by the lead reinsurer or not) which were entered into, renewed or amended on or before December 31, 1996, (and which were not renewed or amended after that date) if reinsurers representing more than 50% of the capacity on the agreement have signed cover notes, placement slips or similar documents describing the essential terms of coverage and exclusions within nine months after the commencement of the policy period covered by the reinsurance arrangement. Also exempt from this presumption are reinsurance agreements where one of the parties is in conservation, rehabilitation, receivership or liquidation proceedings.

25. Prospective and retroactive provisions included within a single agreement shall be accounted for separately. If separate accounting for prospective and retroactive provisions included within a single agreement is impracticable, the agreement shall be accounted for as a retroactive agreement provided the conditions for reinsurance accounting are met.

Accounting for Prospective Reinsurance Agreements

26. Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of written and earned premiums by the ceding entity and shall be earned over the remaining contract period in proportion to the amount of reinsurance protection provided or, if applicable, until the reinsurer's maximum liability under the agreement has been exhausted. If the amounts paid are subject to adjustment and can be reasonably estimated, the basis for amortization shall be the estimated ultimate amount to be paid. Reinstatement premium, if any, shall be earned over the period from the reinstatement of the limit to the expiration of the agreement.

27. Changes in amounts of estimated reinsurance recoverables shall be recognized as a reduction of gross losses and loss expenses incurred in the current period statement of income. Reinsurance recoverables on paid losses shall be reported as an asset, reinsurance recoverables on loss and loss adjustment expense payments, in the balance sheet. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be netted against the liability for gross losses and loss adjustment expenses.

Accounting for Retroactive Reinsurance Agreements

28. Certain reinsurance agreements which transfer both components of insurance risk cover liabilities which occurred prior to the effective date of the agreement. Due to potential abuses involving the creation of surplus to policyholders and the distortion of underwriting results, special accounting treatment for these agreements is warranted.

29. All retroactive reinsurance agreements entered into, renewed or amended on or after January 1, 1994 (including subsequent development of such transactions) shall be accounted for and reported in the following manner:

a. The ceding entity shall record, without recognition of the retroactive reinsurance, loss and loss expense reserves on a gross basis on the balance sheet and in all schedules and exhibits;

b. The assuming entity shall exclude the retroactive reinsurance from loss and loss expense reserves and from all schedules and exhibits;

c. The ceding entity and the assuming entity shall report by write-in item on the balance sheet, the total amount of all retroactive reinsurance, identified as retroactive reinsurance reserve ceded or assumed, recorded as a contra-liability by the ceding entity and as a liability by the assuming entity;

d. The ceding entity shall, by write-in item on the balance sheet, restrict surplus resulting from any retroactive reinsurance as a special surplus fund, designated as special surplus from retroactive reinsurance account;

e. The surplus gain from any retroactive reinsurance shall not be classified as unassigned funds (surplus) until the actual retroactive reinsurance recovered exceeds the consideration paid;

f. The special surplus from retroactive reinsurance account for each respective retroactive reinsurance agreement shall be reduced at the time the ceding entity begins to recover funds from the assuming entity in amounts exceeding the consideration paid by the ceding entity under such agreement, or adjusted as provided in paragraph 29.j.;

g. For each agreement, the reduction in the special surplus from retroactive reinsurance account shall be limited to the lesser of (i) the actual amount recovered in excess of consideration paid or (ii) the initial surplus gain resulting from the respective retroactive reinsurance agreement. Any remaining balance in the special surplus from retroactive reinsurance account derived from any such agreement shall be returned to unassigned funds (surplus) upon elimination of all policy obligations subject to the retroactive reinsurance agreement;

h. The ceding entity shall report the initial gain arising from a retroactive reinsurance transaction (i.e., the difference between the consideration paid to the reinsurer and the total reserves ceded to the reinsurer) as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Gain and included under Other Income;

i. The assuming entity shall report the initial loss arising from a retroactive reinsurance transaction, as defined in the preceding paragraph 29.g., as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Loss and included under Other Income;

j. Any subsequent increase or reduction in the total reserves ceded under a retroactive reinsurance agreement shall be reported in the manner described in the preceding paragraphs 29.h. and 29.i., in order to recognize the gain or loss arising from such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry on the balance sheet shall be adjusted, upward or downward, to reflect such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry shall be equal to or less than the total ceded reserves under all retroactive reinsurance agreements in-force as of the date of the financial statement. Special surplus arising from a retroactive reinsurance transaction shall be considered to be earned surplus (i.e., transferred to unassigned funds (surplus)) only when cash recoveries from the assuming entity exceed the consideration paid by the ceding entity as respects such retroactive reinsurance transaction; and

k. The consideration paid for a retroactive reinsurance agreement shall be reported as a decrease in ledger assets by the ceding entity and as an increase in ledger assets by the assuming entity.

(For an illustration of ceding entity accounting entries see Question 33 in Exhibit A.)

30. Portfolio reinsurance is the transfer of an insurer's entire liability for in force policies or outstanding losses, or both, of a segment of the insurer's business. Loss portfolio transactions are to be accounted for as retroactive reinsurance.

31. The accounting principles for retroactive reinsurance agreements in paragraph 29 shall not apply to the following types of agreements (which shall be accounted for as prospective reinsurance agreements unless otherwise provided in this statement):

a. Structured settlement annuities for individual claims purchased to implement settlements of policy obligations;

b. Novations, (i.e., (i) transactions in which the original direct insurer's obligations are completely extinguished, resulting in no further exposure to loss arising on the business novated or (ii) transactions in which the original assuming entity's obligations are completely extinguished) resulting in no further exposure to loss arising on the business novated, provided that (1) the parties to the transaction are not affiliates (or if affiliates, that the transaction has the prior approval of the domiciliary regulators of the parties) and (2) the accounting for the original reinsurance agreement will not be altered from retroactive to prospective;

c. The termination of, or reduction in participation in, reinsurance treaties entered into in the ordinary course of business;

d. Intercompany reinsurance agreements, and any amendments thereto, among companies 100% owned by a common parent or ultimate controlling person provided there is no gain in surplus as a result of the transaction; or

e. Reinsurance/retrocession agreements that meet the criteria of property/casualty run-off agreements described in paragraphs 81-84.

32. Retroactive reinsurance agreements resulting in surplus gain to the ceding entity (with or without risk transfer) entered into between affiliates or between insurers under common control (as those terms are defined in Appendix A-440) shall be reported as follows:

a. The consideration paid by the ceding entity shall be recorded as a deposit and reported as a nonadmitted asset; and

b. No deduction shall be made from loss and loss adjustment expense reserves on the ceding entity's balance sheet, schedules, and exhibits.

33. The accounting and reporting provisions applicable to retroactive reinsurance apply to all transactions transferring liabilities in connection with a court-ordered rehabilitation, liquidation, or receivership. The requirement to include stipulated contract provisions in the reinsurance agreements shall not apply to these transactions, with written approval of the ceding entity's domiciliary commissioner.

34. Novations meeting the requirements of paragraph 31.b. shall be accounted for as prospective reinsurance agreements. The original direct insurer, or the original assuming insurer, shall report amounts paid as a reduction of written and earned premiums, and unearned premiums to the extent that premiums have not been earned. Novated balances (e.g., loss and loss adjustment expense reserves) shall be written off through the accounts, exhibits, and schedules in which they were originally recorded. The assuming insurer shall report amounts received as written and earned premiums, and obligations assumed as incurred losses in the statement of income.

Deposit Accounting

35. To the extent that a reinsurance agreement does not, despite its form, transfer both components of insurance risk, all or part of the agreement shall be accounted for and reported as deposits in the following manner:

a. At the outset of the reinsurance agreement, the net consideration paid by the ceding entity (premiums less commissions or other allowances) shall be recorded as a deposit by the ceding company and as a liability by the assuming entity. The deposit shall be reported as an admitted asset by the ceding company if (i) the assuming company is licensed, accredited or otherwise qualified in the ceding company's state of domicile as described in Appendix A-785 or (ii) there are funds held by or on behalf of the ceding company which meet the requirements of paragraph 18 of Appendix A-785;

b. At subsequent reporting dates, the amount of the deposit/liability shall be adjusted by calculating the effective yield on the deposit agreement to reflect actual payments to date (receipts and disbursements shall be recorded through the deposit/liability accounts) and expected future payments (as discussed below), with a corresponding credit or charge to interest income or interest expense;

c. The calculation of the effective yield shall use the estimated amount and timing of cash flows. If a change in the actual or estimated timing or amount of cash flows occurs, the effective yield shall be recalculated to reflect the revised actual or estimated cash flows. The deposit shall be adjusted to the amount that would have existed at the reporting date had the new effective yield been applied since the inception of the reinsurance agreement. Changes in the carrying amount of the deposit asset/liability resulting from changes in the effective yield shall be recorded as interest income or interest expense;

d. It shall be assumed that any cash transactions for the settlement of losses will reduce the asset/liability accounts by the amount of the cash transferred. When the remaining losses are revalued upward, an increase in the deposit liability shall be recorded as interest expense – by the assuming company. Conversely, the ceding company shall increase its deposit (asset) with an offsetting credit to interest income; and increase its outstanding loss liability with an offsetting charge to incurred losses;

e. No deduction shall be made from the loss and loss adjustment expense reserves on the ceding company's Statement of Financial Position, schedules, and exhibits;

f. The assuming company shall record net consideration to be returned to the ceding company as a liability.

(For an illustration of the provisions of paragraph 35, see Exhibit C)

Assumed Reinsurance

36. Reinsurance premiums receivable at the end of the accounting period are combined with direct business receivables and reported as agents' balances or uncollected premiums. Where the ceding entity withholds premium funds pursuant to the terms of the reinsurance agreement, such assets shall be shown by the assuming entity as funds held by or deposited with reinsured companies. Reporting entities shall record any interest earned or receivable on the funds withheld as a component of aggregate write-ins for miscellaneous income.

37. If the assuming entity receives reinsurance premium prior to the effective date of the reinsurance contract, consistent with *SSAP No. 53—Property Casualty Contracts-Premiums*, paragraph 15, advance premiums shall be reported as a liability in the statutory financial statement and not considered income until the effective date of the coverage. Such amounts are not included in written premium or the unearned premium reserve. If the assuming entity receives reinsurance premium after the effective date of the reinsurance contract but prior to the due date, the amount received shall be reported as a reduction of the asset for deferred but not yet due (earned but unbilled premiums).

38. Reinsurance premiums more than 90 days overdue shall be nonadmitted except (a) to the extent the assuming entity maintains unearned premium and loss reserves as to the ceding entity, under principles of offset accounting as discussed in SSAP No. 64, or (b) where the ceding entity is licensed and in good standing in assuming entity's state of domicile. Reinsurance premiums are due pursuant to the original contract terms (as the agreement stood on the date of execution). In the absence of a specific contract date, reinsurance premiums will be deemed due thirty (30) days after the date on which (i) notice or demand of premium due is provided to the ceding entity or (ii) the assuming entity books the premium (see *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*).

39. A lag will develop between the time of the entry of the underlying policy transaction on the books of the ceding entity and the transmittal of information and entry on the books of the assuming entity. Assuming companies shall estimate unreported premiums and related costs to the extent necessary to prevent material distortions in the loss development contained in the assuming entity's annual statement schedules where calendar year premiums are compared to accident year losses.

40. Proportional reinsurance (i.e., first dollar pro rata reinsurance) premiums shall be allocated to the appropriate annual statement lines of business in the Underwriting and Investment exhibits. Non-proportional assumed reinsurance premiums shall be classified as reinsurance under the appropriate subcategories.

41. Assumed retroactive reinsurance premiums shall be excluded from all schedules and exhibits as addressed in paragraph 29.

42. Amounts payable by reinsurers on losses shall be classified as unpaid losses. Assumed reinsurance payable on paid losses shall be classified as a separate liability item on the balance sheet. IBNR losses on assumed reinsurance business shall be netted with ceded losses on the balance sheet and listed separately by annual statement line of business in the Underwriting and Investment exhibits.

Ceded Reinsurance

43. Ceded reinsurance premiums payable (net of ceding commission) shall be classified as a liability. Consistent with SSAP No. 64, ceded reinsurance premiums payable may be deducted from amounts due from the reinsurer, such as amounts due on assumed reinsurance, when a legal right of offset exists.

44. With regard to reinsurance premium paid prior to the effective date of the contract, the ceding entity shall reflect the prepaid item as a write-in admitted asset and it should not be recognized in the income statement until the effective date of the coverage. Such amounts are not included in ceded written premiums or ceded unearned premium but should be subject to impairment analysis. With regard to reinsurance premium paid by ceding entity after the reinsurance contract is in effect but prior to the due date, the ceding entity shall treat this item as a reduction to the liability for ceded reinsurance premiums payable. That liability reflects not only premiums unpaid but also amounts booked but deferred and not yet due.

45. Amounts withheld by the ceding entity that would otherwise be payable under the reinsurance agreement shall be reported as funds held by entity under reinsurance treaties. Reporting entities shall

record any interest due or payable on the amounts withheld as a component of aggregate write-ins for miscellaneous income.

46. Ceded reinsurance transactions shall be classified in the annual statement line of business which relates to the direct or assumed transactions creating the cession or retrocession.

47. Ceded retroactive reinsurance premiums shall be excluded from all schedules and exhibits as addressed in paragraph 29.

48. Reinsurance accounting shall not be allowed for modeled trigger securitizations. Modeled trigger securitization transactions do not result in the kind of indemnification (in form and in fact) required by this SSAP, and are therefore not eligible for reinsurance accounting. Modeled trigger transactions should be evaluated as securitization transactions rather than as reinsurance transactions and should receive the accounting treatment recommended for securitization transactions.

Adjustable Features/Retrospective Rating

49. Reinsurance treaties may provide for adjustment of commission, premium, or amount of coverage, based on loss experience. The accounting for common examples is outlined in the following paragraphs:

Commission Adjustments

50. An accrual shall be maintained for the following adjustable features based upon the experience recorded for the accounting period:

a. Contingent or Straight Profit—The reinsurer returns to the ceding entity a stipulated percentage of the profit produced by the business assumed from the ceding entity. Profit may be calculated for any specified period of time, but the calculation is often based on an average over a period of years; and

b. Sliding Scale—A provisional rate of commission is paid over the course of the agreement, with a final adjustment based on the experience of the business ceded under the agreement.

Premium Adjustments

51. If the reinsurance agreement incorporates an obligation on the part of the ceding entity to pay additional premium to the assuming entity based upon loss experience under the agreement, a liability in the amount of such additional premium shall be recognized by the ceding entity during the accounting period in which the loss event(s) giving rise to the obligation to pay such additional premium occur(s). The assuming entity shall recognize an asset in a consistent manner. If the reinsurance agreement incorporates an obligation on the part of the assuming entity to refund to the ceding entity any portion of the consideration received by the assuming entity based upon loss experience under the agreement, an asset in the amount of any such refund shall be recognized by the ceding entity during the accounting period in which the loss event(s) giving rise to the obligation to make such refund occur(s). The initial provisional or deposit premium is recalculated retrospectively, based on loss experience under the agreement during a specified period of time; the calculation is often based on an average over a period of years. The assuming entity shall recognize a liability in a consistent manner.

Adjustments in the Amount of Coverage

52. The amount of coverage available for future periods is adjusted, upward or downward, based on loss experience under the agreement during a specified period of time. If the reinsurance agreement

incorporates a provision under which the reinsurance coverage afforded to the ceding entity may be increased or reduced based upon loss experience under the agreement, an asset or a liability shall be recognized by the ceding entity in an amount equal to that percentage of the consideration received by the assuming entity which the increase or reduction in coverage represents of the amount of coverage originally afforded. The asset or liability shall be recognized during the accounting period in which the loss event(s) (or absence thereof) giving rise to the increase or decrease in reinsurance coverage occur(s), and shall be amortized over all accounting periods for which the increased or reduced coverage is applicable. The term "consideration" shall mean, for this purpose, the annualized deposit premium for the period used as the basis for calculating the adjustment in the amount of coverage to be afforded thereafter under the agreement.

Impairment

53. Include as a nonadmitted asset, amounts accrued for premium adjustments on retrospectively rated reinsurance agreements with respect to which all uncollected balances due from the ceding company have been classified as nonadmitted.

Commissions

54. Commissions payable on reinsurance assumed business shall be included as an offset to Agents' Balances or Uncollected Premiums. Commissions receivable on reinsurance ceded business shall be included as an offset to Ceded Reinsurance Balances Payable.

55. If the ceding commission paid under a reinsurance agreement exceeds the anticipated acquisition cost of the business ceded, the ceding entity shall establish a liability, equal to the difference between the anticipated acquisition cost and the reinsurance commissions received, to be amortized pro rata over the effective period of the reinsurance agreement in proportion to the amount of coverage provided under the reinsurance contract.

Unauthorized Reinsurance

56. If the assuming reinsurer is not authorized, otherwise approved or certified to do business in the ceding entity's domiciliary state, the assumed reinsurance is considered to be unauthorized. A provision is established to offset credit taken in various balance sheet accounts for reinsurance ceded to unauthorized reinsurers. Credit for reinsurance with unauthorized reinsurers shall be permitted to the extent the ceding entity holds collateral in accordance with Appendix A-785. If the assuming reinsurer is not licensed or is not an authorized reinsurer in the domiciliary state of the ceding entity or if the reinsurance does not meet required standards, the ceding entity must set up a provision for reinsurance liability in accordance with the NAIC Annual Statement Instructions for Property and Casualty Insurance Companies Schedule F.

57. The provision defined in paragraph 56 shall never be less than zero for any particular reinsurer. The change in liability for unauthorized reinsurance is a direct charge or credit to surplus.

Reinsurance Ceded to a Certified Reinsurer

58. The term certified reinsurer shall have the same meaning as set forth in the Appendix A-785.

59. Credit for reinsurance ceded to a certified reinsurer is permitted if security is held by or on behalf of the ceding entity in accordance with the certified reinsurer's rating assigned by the domestic state of the ceding insurance entity, and in accordance with Appendix A-785 of this manual. However, nothing in this guidance would prohibit the parties to a reinsurance agreement from agreeing to provisions establishing security requirements that exceed the minimum security requirements established for certified reinsurers.

60. An upgrade in a certified reinsurer's assigned rating applies on a prospective basis, i.e., the revised collateral requirement applies only to contracts entered into or renewed on or after the effective date of the new rating (see A-785). A downgrade in a certified reinsurer's rating applies on a retroactive basis, i.e., the revised collateral requirement applies to all reinsurance obligations incurred by the assuming insurer under its certified reinsurer status. Notwithstanding a change in a certified reinsurer's rating or revocation of its certification, a reporting entity that has ceded reinsurance to such certified reinsurer is allowed a three (3)-month grace period before recording a provision for reinsurance due to collateral deficiency associated with such rating downgrade and increased collateral requirement for all reinsurance ceded to such assuming insurer under its certified reinsurer status, unless the reinsurance is found by the commissioner of the reporting entity's domestic state to be at high risk of uncollectibility.

61. A provision is established by the ceding entity to offset credit taken in various balance sheet accounts for reinsurance ceded to a certified reinsurer in an amount proportionate to any deficiency in the amount of acceptable security that is provided by the certified reinsurer as compared to the amount of security that is required to be provided in accordance with the certified reinsurer's rating. The calculation of the provision for a collateral shortfall is separate from the calculation of the provision for overdue reinsurance ceded to certified reinsurers and shall be calculated in accordance with the NAIC Annual Statement Instructions for Property and Casualty Insurance Companies.

62. The provision defined in paragraph 61 shall never be less than zero for any particular certified reinsurer. The change in liability for reinsurance with certified reinsurers is a direct charge or credit to surplus.

Funds Held Under Reinsurance Treaties

63. This liability is established for funds deposited by or contractually withheld from reinsurers or reinsurers.

Provision for Reinsurance

64. The NAIC Annual Statement Instructions for Property and Casualty Companies for Schedule F—Provision for Overdue Reinsurance, provide for a minimum reserve for uncollectible reinsurance with an additional reserve required if an entity's experience indicates that a higher amount should be provided. The minimum reserve Provision for Reinsurance is recorded as a liability and the change between years is recorded as a gain or loss directly to unassigned funds (surplus). Any reserve over the minimum amount shall be recorded on the statement of income by reversing the accounts previously utilized to establish the reinsurance recoverable.

65. The provision for reinsurance is calculated separately for unauthorized, authorized and certified reinsurers. An authorized reinsurer is licensed, accredited or approved by the ceding entity's state of domicile; a certified reinsurer is certified by the ceding entity's state of domicile; an unauthorized reinsurer is not so licensed, accredited, approved or certified.

Asbestos and Pollution Contracts – Counterparty Reporting Exception

66. Upon approval by the domiciliary regulator(s) of the ceding entity (either the original direct insurer in the case of a reinsurance agreement or the original assuming reinsurer in the case of a retrocession agreement), an exception may be allowed with respect to a retroactive reinsurance agreement providing substantially duplicate coverage as prior reinsurance agreements on asbestos and/or pollution exposures, including reinsurance provided through an affiliated reinsurer that retrocedes to the retroactive reinsurance counterparty. Under this exception, a reporting entity may aggregate reinsurers into one line item in Schedule F reflecting the counterparty under the retroactive agreement for the purposes of determining the Provision for Reinsurance regarding overdue amounts paid by the retroactive

counterparty (both authorized and unauthorized). This exception would allow the Provision for Reinsurance to be reduced by reflecting that amounts have been recovered by the reporting entity under the duplicate coverage provided by the retroactive contract, and that inuring balances from the original contract(s) are payable to the retroactive counterparty. In addition, such approval would also permit the substitution of the retroactive counterparty for authorized original reinsurers without overdue balances for purposes of reporting on the primary section of the annual statement Schedule F. An agreement must meet all of the requirements in paragraphs 66.a. through 66.e. in order to be considered for this exception.

a. The underlying agreement clearly indicates the credit risk associated with the collection of the reporting entity's inuring reinsurance recoverables and losses related to the credit risk will be covered by the retroactive reinsurance counterparty.

b. The retroactive reinsurance agreement must transfer significant risk of loss.

c. The assuming retroactive reinsurance counterparty must have a financial strength rating from at least two nationally recognized statistical rating organizations (NRSRO), the lowest of which is higher than or equal to the NRSRO ratings of the underlying third-party reinsurers.

d. The transaction is limited to reinsurance recoverables attributable to asbestos, and/or pollution.

e. The recoverables from the inuring reinsurers remain subject to credit analysis and contingent liability analysis.

67. With the approval of the reporting entity's domestic state commissioner pursuant to the applicable state credit for reinsurance law regarding the use of other forms of collateral acceptable to the commissioner, the reporting entity shall present the amount of other approved security related to the retroactive reinsurance agreement as an "Other Allowed Offset Item" with respect to the uncollateralized amounts recoverable from unauthorized reinsurers for paid and unpaid losses and loss adjustment expenses under the original reinsurance contracts. Amounts approved as "Other Allowed Offset Items" shall be reflected as amounts recoverable from the retroactive counterparty and aggregated reporting described in paragraph 66 shall also be applied for unpaid losses and loss adjustment expenses under the original reinsurance contracts. The security applied as an "Other Allowed Offset Item" shall also be reflected in the designated sub-schedule and disclosed as a prescribed or permitted practice. (See Appendix D illustration in this statement.)

68. The reporting entity will continue to detail the reporting of original reinsurers that were aggregated for one line reporting per paragraph 66 as provided in the annual statement instructions. The aggregation reporting in schedule F applies only to the extent that inuring balances currently receivable under original reinsurance contracts are also payable to the retroactive reinsurance counterparty, and additionally to reinsurance recoverable on unpaid losses if the domestic state commissioner has approved amounts related to the retroactive reinsurance contract as any other form of security acceptable under the applicable provisions of the state's credit for reinsurance law. This guidance is not intended to otherwise change the application of retroactive accounting guidance for the retroactive portions of the contract that are not duplicative of the original reinsurance. Other than measurement of the provision for reinsurance and presentation in Schedule F, the retroactive contracts should continue to follow guidance applicable to retroactive accounting and reporting.

Syndicated Letters of Credit

69. With a Syndicated Letter of Credit (Syndicated LC), the reinsurer enters into an agreement with a group of banks (the "Issuing Banks") and an agent bank (the "Agent"). Each Issuing Bank and the Agent is an NAIC-approved bank and a "qualified bank". This agreement requires the Agent to issue, on behalf

of the each of the Issuing Banks, letters of credit in favor of the ceding insurer. The credit is issued (as an administrative matter) only through the Agent's letter of credit department. Each issuing bank signs the Syndicated LC through the Agent, as its attorney-in-fact. Syndicated LCs are consistent with A-785, in that the Syndicated LC is the legal equivalent of multiple letters of credit separately issued by each of the issuing banks. Reporting entities shall take a reduction in the liability on account of reinsurance recoverables secured by the Syndicated LC if all of the following conditions are met:

a. All listed banks on the letter of credit are qualified and meet the criteria of the NAIC SVO approved bank listing;

b. Banks are severally and not jointly liable; and

c. Specific percentages for each assuming bank are listed in the letter of credit.

Disputed Items

70. Occasionally a reinsurer will question whether an individual claim is covered under a reinsurance agreement or may even attempt to nullify an entire agreement. A ceding entity, depending upon the individual facts, may or may not choose to continue to take credit for such disputed balances. A ceding entity shall take no credit whatsoever for reinsurance recoverables in dispute with an affiliate.

71. Items in dispute are those claims with respect to which the ceding entity has received formal written communication from the reinsurer denying the validity of coverage.

Uncollectible Reinsurance

72. Uncollectible reinsurance balances shall be written off through the accounts, exhibits, and schedules in which they were originally recorded.

Commutations

73. A commutation of a reinsurance agreement, or any portion thereof, is a transaction which results in the complete and final settlement and discharge of all, or the commuted portion thereof, present and future obligations between the parties arising out of the reinsurance agreement.

74. In commutation agreements, an agreed upon amount determined by the parties is paid by the reinsurer to the ceding entity. The ceding entity immediately eliminates the reinsurance recoverable recorded against the ultimate loss reserve and records the cash received as a negative paid loss. Any net gain or loss shall be reported in underwriting income in the statement of income.

75. The reinsurer eliminates a loss reserve carried at ultimate cost for a cash payout calculated at present value. Any net gain or loss shall be reported in underwriting income in the statement of income.

76. Commuted balances shall be written off through the accounts, exhibits, and schedules in which they were originally recorded.

National Flood Insurance Program

77. The National Flood Insurance Program was created by the Federal Emergency Management Agency (FEMA) and is designed to involve private insurers in a write-your-own (WYO) flood insurance program financially backed by FEMA at no risk to the insurer. To become a participating WYO entity, the entity signs a document with the Federal Insurance Administration (FIA) of the Federal Emergency Management Agency known as the Financial Assistance/Subsidy Arrangement.

78. Premium rates are set by FEMA. The WYO participating companies write the flood insurance coverage qualifying for the program on their own policies, perform their own underwriting, premium collections, claim payments, administration, and premium tax payments for policies written under the program.

79. Monthly accountings are made to FIA and participants draw upon FEMA letters of credit for deficiencies of losses, loss expenses, and administrative expenses in excess of premiums, subject to certain percentage limitations on expenses.

80. Policies written by the reporting entity under the National Flood Insurance Program are considered insurance policies issued by the reporting entity, with reinsurance ceded to FEMA. (Such policies are not considered uninsured plans under *SSAP No. 47—Uninsured Plans* (SSAP No. 47.) Balances due from or to FEMA shall be reported as ceded reinsurance balances receivable or payable. The commission and fee allowances received from FEMA shall be reported consistent with reinsurance ceding commission.

Accounting for the Transfer of Property and Casualty Run-Off Agreements

81. Property and casualty run-off agreements are reinsurance or retrocession agreements that are intended to transfer essentially all of the risks and benefits of a specific line of business or market segment that is no longer actively marketed by the transferring insurer or reinsurer. A property and casualty run-off agreement is not a novation as the transferring insurer or reinsurer remains primarily liable to the policyholder or ceding entity under the original contracts of insurance or reinsurance. Reinsurance agreements between affiliates or between insurers under common control (as those terms are defined in Appendix A-440) are not eligible for the exception for property and casualty run-off agreements in paragraph 31.e.

Criteria

82. The accounting treatment for property and casualty run-off agreements must be approved by the domiciliary regulators of the transferring entity (either the original direct insurer in the case of a reinsurance agreement or the original assuming reinsurer in the case of a retrocession agreement) and the assuming entity. If the transferring entity and assuming entity are domiciled in the same state, then the regulator of the state where the majority of the transferred liabilities is located shall be asked to approve the accounting treatment. In determining whether to approve an agreement for this accounting treatment, the regulators shall require the following:

a. Assuming Entity Properly Licensed – The entity assuming the run-off agreement must have the appropriate authority or license to write the business being assumed.

b. Limits and Coverages – The reinsurance or retrocession agreement shall provide the same limits and coverages that were afforded in the original insurance or reinsurance agreement.

c. Non-recourse – The reinsurance or retrocession agreement shall not contain any adjustable features or profit share or retrospective rating, and there shall be no recourse (other than normal representations and warranties that would be associated with a purchase and sale agreement) directly or indirectly against the transferring entity.

d. Risk Transfer – The reinsurance or retrocession agreement must meet the requirements of risk transfer as described in this statement.

e. Financial Strength of Reinsurer – The assuming reinsurer shall have a financial strength rating from at least two independent rating agencies (from NAIC credit rating providers

(CRP)) which is equal to or greater than the current ratings of the transferring entity. The lowest financial strength rating received from an NAIC acceptable rating organization rating agency will be used to compare the financial strength ratings of the transferring and assuming entities.

f. Assessments – The assuming reinsurer or retrocessionaire (if required in the original reinsurance contract) shall be financially responsible for any and all assessments, including guaranty fund assessments, that are assessed against the transferring entity related to the insurance business being assumed.

g. Applicable Only to "Run-off" Business – The reinsurance or retrocession agreement shall only cover liabilities relating to a line(s) of business or specific market segments no longer actively marketed by the transferring entity.

h. Non-cancelable Reinsurance – The reinsurance or retrocession agreement shall provide that the reinsurance or retrocessional coverage provided by the proposed agreement cannot be cancelable by either party for any reason. (However, this provision will not override standard contracts law and principles and will not prevent any remedies, including rescission or termination that might be available for breach, misrepresentation, etc.)

Statutory Schedules and Exhibits

83. At the inception of the transaction, the transferring entity shall record the consideration paid to the assuming entity as a paid loss. If the consideration paid by the transferring entity is less than the loss reserves transferred, the difference shall be recorded by the ceding entity as a decrease in losses incurred. The assuming entity shall record the consideration received as a negative paid loss. In addition, the transferring entity shall record an increase to ceded reinsurance recoverable for the amount of the transferred reserve. Journal entries illustrating these transactions, including situations in which the transaction includes an unearned premium reserve, are included in Exhibit B of this Statement.

84. The assuming entity will report the business in the same line of business as reported by the original insurer or reinsurer. The assuming entity will report the business at the same level of detail using the appropriate statutory schedules and exhibits.

Disclosures

85. Unsecured Reinsurance Recoverables:

a. If the entity has with any individual reinsurers, authorized, unauthorized, or certified an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses, and unearned premium, that exceeds 3% of the entity's policyholder surplus, list each individual reinsurer and the unsecured aggregate recoverable pertaining to that reinsurer; and

b. If the individual reinsurer is part of a group, list the individual reinsurers, each of its related group members having reinsurance with the reporting entity, and the total unsecured aggregate recoverables for the entire group.

86. Reinsurance Recoverables in Dispute—Reinsurance recoverable on paid and unpaid (including IBNR) losses in dispute by reason of notification, arbitration or litigation shall be identified if the amounts in dispute from any entity (and/or affiliate) exceed 5% of the ceding entity's policyholders surplus or if the aggregate of all disputed items exceeds 10% of the ceding entity's policyholders surplus. Notification means a formal written communication from a reinsurer denying the validity of coverage.

87. Uncollectible Reinsurance—Describe uncollectible reinsurance written off during the year reported in the following annual statement classifications, including the name(s) of the reinsurer(s):

a. Losses incurred;

b. Loss adjustment expenses incurred;

c. Premiums earned; and

d. Other.

88. Commutation of Ceded Reinsurance—Describe commutation of ceded reinsurance during the year reported in the following annual statement classifications, including the name(s) of the reinsurer(s):

a. Losses incurred;

b. Loss adjustment expenses incurred;

c. Premiums earned; and

d. Other.

89. Retroactive Reinsurance—The table illustrated in the NAIC Annual Statement Instructions for Property and Casualty Companies under Retroactive Reinsurance in the Notes to Financial Statements section shall be completed for all retroactive reinsurance agreements that transfer liabilities for losses that have already occurred and that will generate special surplus transactions. The insurer (assuming or ceding) shall assign a unique number to each retroactive reinsurance agreement and shall utilize this number for as long as the agreement exists. Transactions utilizing deposit accounting shall not be reported in this note.

90. Reinsurance Assumed and Ceded—The tables illustrated in the NAIC Annual Statement Instructions for Property and Casualty Companies under "Reinsurance Assumed and Ceded in the Notes to Financial Statements" section shall be completed as follows:

a. The financial statements shall disclose the maximum amount of return commission which would have been due reinsurers if all reinsurance were canceled with the return of the unearned premium reserve; and

b. The financial statements shall disclose the accrual of additional or return commission, predicated on loss experience or on any other form of profit sharing arrangements as a result of existing contractual arrangements.

91. A specific interrogatory requires information on reinsurance of risk accompanied by an agreement to release the reinsurer from liability, in whole or in part, from any loss that may occur on the risk or portion thereof.

92. Disclosures for paragraphs 93-98 represent annual statement interrogatories, which are required to be included with the annual audit report beginning with audit reports on financial statements as of and for the period ended December 31, 2006. The disclosures required within paragraphs 93-98 shall be included in accompanying supplemental schedules of the annual audit report beginning in year-end 2006. These disclosures shall be limited to reinsurance contracts entered into, renewed or amended on or after January 1, 1994. This limitation applies to the annual audit report only and does not apply to the statutory annual statement interrogatories and the reinsurance summary supplemental filing.

93. Disclose if any risks are reinsured under a quota share reinsurance contract with any other entity that includes a provision that would limit the reinsurer's losses below the stated quota share percentage (e.g. a deductible, a loss ratio corridor, a loss cap, an aggregate limit or any similar provisions)? If yes, indicate the number of reinsurance contracts containing such provisions and if the amount of reinsurance credit taken reflects the reduction in quota share coverage caused by any applicable limiting provision(s).

94. Disclose if the reporting entity ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates) for which during the period covered by the statement: (i) it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders; (ii) it accounted for that contract as reinsurance and not as a deposit; and (iii) the contract(s) contain one or more of the following features or other features that would have similar results:

a. A contract term longer than two years and the contract is noncancellable by the reporting entity during the contract term;

b. A limited or conditional cancellation provision under which cancellation triggers an obligation by the reporting entity, or an affiliate of the reporting entity, to enter into a new reinsurance contract with the reinsurer, or an affiliate of the reinsurer;

c. Aggregate stop loss reinsurance coverage;

d. A unilateral right by either party (or both parties) to commute the reinsurance contract, whether conditional or not, except for such provisions which are only triggered by a decline in the credit status of the other party;

e. A provision permitting reporting of losses, or payment of losses, less frequently than on a quarterly basis (unless there is no activity during the period); or

f. Payment schedule, accumulating retentions from multiple years or any features inherently designed to delay timing of the reimbursement to the ceding entity.

95. Disclose if the reporting entity during the period covered by the statement ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates) for which during the period covered by the statement it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders; excluding cessions to approved pooling arrangements or to captive insurance companies that are directly or indirectly controlling, controlled by, or under common control with (i) one or more unaffiliated policyholders of the reporting entity, or (ii) an association of which one or more unaffiliated policyholders of the reporting entity is a member, where:

a. The written premium ceded to the reinsurer by the reporting entity or its affiliates represents fifty percent (50%) or more of the entire direct and assumed premium written by the reinsurer based on its most recently available financial statement; or

b. Twenty–five percent (25%) or more of the written premium ceded to the reinsurer has been retroceded back to the reporting entity or its affiliates in separate reinsurance contract.

96. If affirmative disclosure is required for paragraph 94 or 95, provide the following information:

a. A summary of the reinsurance contract terms and indicate whether it applies to the contracts meeting paragraph 94 or 95;

b. A brief discussion of management's principal objectives in entering into the reinsurance contract including the economic purpose to be achieved; and

c. The aggregate financial statement impact gross of all such ceded reinsurance contracts on the balance sheet and statement of income.

97. Except for transactions meeting the requirements of paragraph 31, disclose if the reporting entity ceded any risk under any reinsurance contract (or multiple contracts with the same reinsurer or its affiliates) during the period covered by the financial statement, and either:

a. Accounted for that contract as reinsurance (either prospective or retroactive) under statutory accounting principles (SAP) and as a deposit under generally accepted accounting principles (GAAP); or

b. Accounted for that contract as reinsurance under GAAP and as a deposit under SAP.

98. If affirmative disclosure is required for paragraph 97, explain in a supplemental filing why the contract(s) is treated differently for GAAP and SAP.

99. Disclosures for the Transfer of Property and Casualty Run-off Agreements

a. Disclose if the reporting entity has entered into any agreements which have been approved by their domiciliary regulator and have qualified pursuant to paragraph 31.e. (also see paragraphs 81-84).

b. If affirmative, provide a description of the agreement and the amount of consideration paid and liabilities transferred.

100. The financial statements shall disclose the following with respect to reinsurance agreements which qualify for reinsurer aggregation in accordance with paragraphs 66-68:

a. A description of the significant terms of the reinsurance agreement, including established limits and collateral, and

b. The amount of unexhausted limit as of the reporting date.

c. To the extent that the domestic state insurance department approves the use of the retroactive contract as an acceptable form of security related to the original reinsurers under the applicable provisions of the state’s credit for reinsurance law, the use of such discretion shall be disclosed in the annual statement Note 1 as a prescribed or permitted practice. In addition, Note 1 shall disclose as part of the total impact on the provision for reinsurance the impact on the overdue aspects of the calculation if the reporting entity also receives commissioner approval pursuant to paragraph 66 related to overdue paid amounts (both authorized and unauthorized).

101. The financial statements shall disclose the following with respect to reinsurance agreements that have been accounted for as deposits:

a. A description of the reinsurance agreements.

b. Any adjustment of the amounts initially recognized for expected recoveries. The individual components of the adjustment (e.g., interest accrual, change due to a change in estimated or actual cash flow) shall be disclosed separately.

102. The financial statements shall disclose the impact on any reporting period in which a certified reinsurer's rating has been downgraded or its certified reinsurer status is subject to revocation and additional collateral has not been received as of the filing date. The disclosure should include the following:

a. Name of certified reinsurer downgraded or subject to revocation of certified reinsurer status and relationship to the reporting entity;

b. Date of downgrade or revocation and jurisdiction of action;

c. Collateral percentage requirements pre and post downgrade or revocation;

d. Net ceded recoverable subject to collateral;

e. As of the end of the current quarter, the estimated impact of the collateral deficiency to the reporting entity as a result of the assuming entity's downgrade or revocation of certified reinsurer status. (At year-end the actual impact of the collateral deficiency on the provision for reinsurance shall be disclosed.)

103. U.S. domiciled reinsurers are eligible for certified reinsurer status. If the reporting entity is a certified reinsurer, the financial statements shall disclose the impact on any reporting period in which its certified reinsurer rating is downgraded or status as a certified reinsurer is subject to revocation. Such disclosure shall include information similar to paragraphs 102.b., 102.c. and 102.d. and the expectation of its certified reinsurer's ability to meet the increased requirements.

104. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

105. This statement adopts with modification *FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113) and FASB *Emerging Issues Task Force No. 93-6, Accounting for Multiple-Year Retrospectively Rated Contracts by Ceding and Assuming Enterprises* for the following:

a. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be reported as a contra-liability netted against the liability for gross losses and loss adjustment expenses;

b. Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of unearned premiums;

c. The gain created by a retroactive reinsurance agreement because the amount paid to the reinsurer is less than the gross liabilities for losses and loss adjustment expenses ceded to the reinsurer is reported in the statement of income as a write-in gain in other income by the ceding entity and a write-in loss by the assuming entity. The gain created by a

retroactive reinsurance agreement is restricted as a special surplus account until the actual retroactive reinsurance recovered is in excess of the consideration paid;

d. This statement requires that a liability (provision for reinsurance) be established through a provision reducing unassigned funds (surplus) for unsecured reinsurance recoverables from unauthorized or certified reinsurers and for certain overdue balances due from authorized reinsurers;

e. Some reinsurance agreements contain adjustable features that provide for adjustment of commission, premium or amount of coverage, based on loss experience. This statement requires that the asset or liability arising from the adjustable feature be computed based on experience to date under the agreement, and the impact of early termination may only be considered at the time the agreement has actually been terminated;

f. Structured settlements are addressed in *SSAP No. 65—Property and Casualty Contracts*. Statutory accounting and FAS 113 are consistent in accounting for structured settlement annuities where the reporting entity is the owner and payee and where the claimant is the payee and the reporting entity has been released from its obligation. FAS 113 distinguishes structured settlement annuities where the claimant is the payee and a legally enforceable release from the reporting entity's liability is obtained from those where the claimant is the payee but the reporting entity has not been released from its obligation. GAAP requires the deferral of any gain resulting from the purchase of a structured settlement annuity where the reporting entity has not been released from its obligation; and

g. This statement requires that reinsurance recoverables on unpaid losses and loss adjustment expenses be presented as a contra-liability. Requirements for offsetting and netting are addressed in SSAP No. 64.

106. This statement adopts American Institute of Certified Public Accountants (AICPA*) Statement of Position 98-7, Deposit Accounting: Accounting for Insurance and Reinsurance Contracts That Do Not Transfer Insurance Risk* (SOP 98-7) paragraphs 10-12 and 19 (subsection b only). This statement rejects AICPA SOP 98-7 paragraphs 13-17 and 19 (subsections a and c).

107. This statement rejects AICPA *Statement of Position No. 92-5, Accounting for Foreign Property and Liability Reinsurance*. This statement incorporates Appendix A-785 as applicable.

Effective Date and Transition

108. This statement shall apply to:

a. Reinsurance agreements entered into, renewed, or amended on or after January 1, 1994. An amendment is any revision or adjustment of contractual terms. The payment of premiums or reimbursement of losses recoverable under the agreement shall not constitute an amendment; and

b. Reinsurance agreements in force on January 1, 1995, which cover losses occurring or claims made on or after that date on policies reinsured under such agreements.

109. The guidance shall not apply to:

a. Reinsurance agreements which cover only losses occurring or claims made before January 1, 1994, and which were entered into before January 1, 1994, and were not subsequently renewed or amended; and

b. Reinsurance agreements that expired before and were not renewed or amended after January 1, 1995.

110. The guidance in paragraphs 49-53 shall be effective for all accounting periods beginning on or after January 1, 1996, and shall apply to reinsurance agreements entered into, renewed or amended on or after January 1, 1994.

111. This statement, including the guidance in paragraph 35 incorporated from SSAP No. 75, is effective for years beginning January 1, 2001. Changes resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

a. Revisions to paragraph 31.e., related to paragraphs 81-84, and disclosures in paragraph 99 documented in *Issue Paper No. 137—Transfer of Property and Casualty Reinsurance Run-off Agreements* are effective for contracts entered on or after January 1, 2010.

b. The guidance in paragraphs 35, 101 and 106 was previously included within *SSAP No. 75—Reinsurance Deposit Accounting—An Amendment to SSAP No. 62R, Property and Casualty Reinsurance* (SSAP No. 75) and was also effective for years beginning January. 1, 2001. In 2011, the guidance from SSAP No. 75 was incorporated within this statement, with SSAP No. 75 nullified. The original guidance included in this statement for deposit accounting, as well as the original guidance adopted in SSAP No. 75, are retained for historical purposes in Issue Paper No. 104. The guidance in paragraph 48 was originally contained within *INT 02-06: Indemnification in Modeled Trigger Transactions* and was effective June 9, 2002. The guidance in paragraph 69 was originally contained within *INT 02-09: A-785 and Syndicated Letters of Credit* and was effective September 12, 2004.

c. The guidance related to certified reinsurers is applicable only to cedants domiciled in states that have enacted/promulgated the new collateral framework and only for their cessions to reinsurers certified under that domestic law/rule. The requirements applicable to contracts with certified reinsurers shall be effective for all reporting periods beginning on or after December 31, 2012.

112. The guidance in paragraphs 66-68 and 100 which allowed retroactive reinsurance exceptions for asbestos and pollution contracts was effective for all accounting periods beginning on or after January 1, 2014, for paid losses. This guidance was revised to also allow for unpaid losses effective for reporting periods ending on and after December 31, 2015.

CLASSIFYING REINSURANCE CONTRACTS

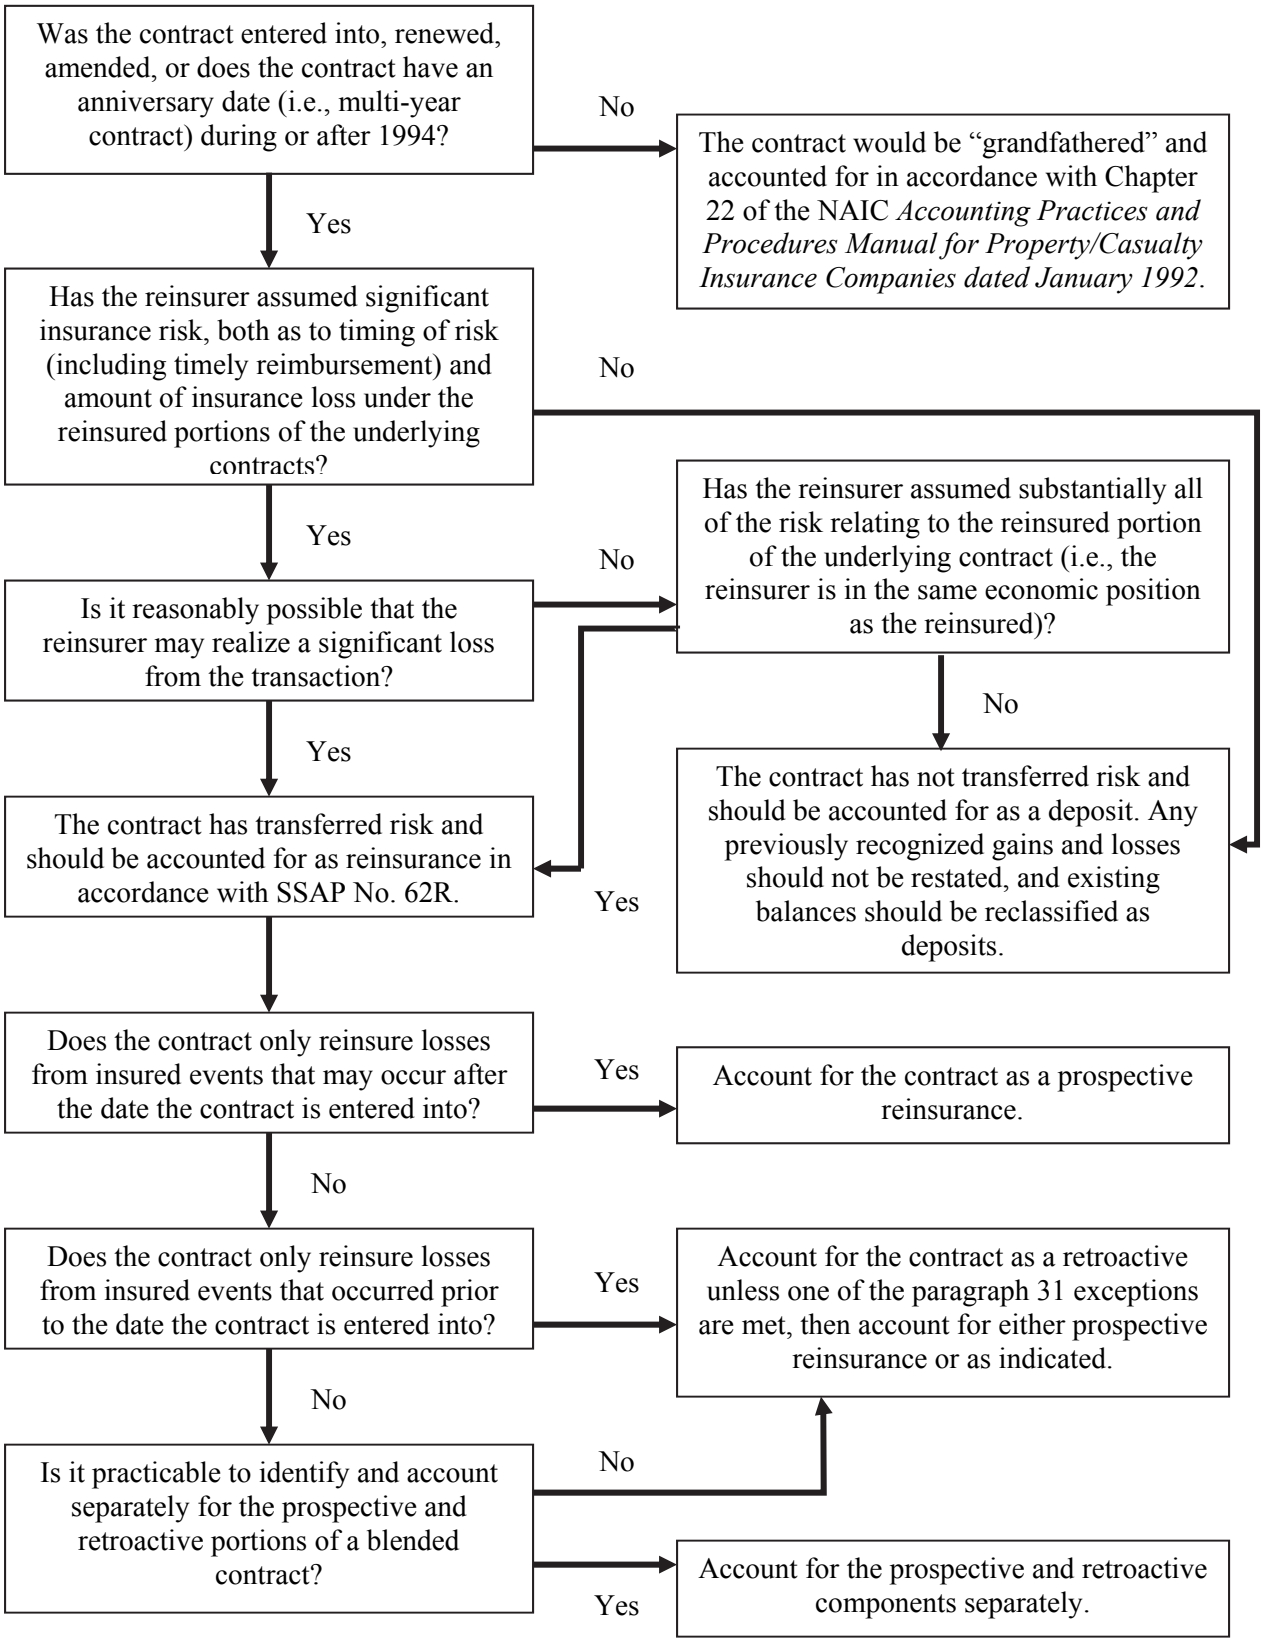

EXHIBIT A – IMPLEMENTATION QUESTIONS AND ANSWERS

Applicability

1. Q: The accounting practices in SSAP No. 62R specify the accounting and reporting for reinsurance contracts. What contracts are considered reinsurance contracts for purposes of applying these accounting practices?

   A: Any transaction that indemnifies an insurer against loss or liability relating to insurance risk shall be accounted for in accordance with the accounting practices included in SSAP No. 62R. Therefore, all contracts, including contracts that may not be structured or described as reinsurance, shall be accounted for as reinsurance when those conditions are met.

2. Q: The provisions of this statement will apply to (a) reinsurance contracts entered into, renewed or amended on or after January 1, 1994, and (b) any other reinsurance contracts that are in force on January 1, 1995 and cover insurable events on the underlying insurance policies that occur on or after that date. What contracts would be exempt from the new accounting rules included in SSAP No. 62R?

   A: The only exempt contracts are:

      1) Purely retroactive reinsurance contracts that cover only insured events occurring before January 1, 1994, provided those contracts were entered into before that date and are not subsequently amended and

      2) Contracts that expired before January 1, 1995 and are not amended after that date.

3. Q: This statement is to be applied to contracts which are amended on or after January 1, 1994. What if the change in terms is not significant, or the terms changed have no financial effect on the contract?

   A: In general, the term amendment should be viewed broadly to include all but the most trivial changes. Examples of amendments include, but are not limited to, replacing one assuming entity with another (including an affiliated entity), or modifying the contract's limit, coverage, premiums, commissions, or experience-related adjustable features. No distinction is made between financial and non-financial terms.

4. Q: Must the accounting provisions of SSAP No. 62R be applied to an *otherwise exempt* contract if the ceding entity pays additional premiums under the contract on or after January 1, 1994?

   A: The answer depends on why the additional premiums are paid. If the additional premiums are the result of a renegotiation, adjustment, or extension of terms, the contract is subject to the accounting provisions of SSAP No. 62R. However, additional premiums paid without renegotiation, adjustment, or extension of terms would not make an otherwise exempt contract subject to those provisions.

5. Q: Prospective and retroactive portions of a reinsurance contract are allowed to be accounted for separately, if practicable. Can the retroactive portion of an existing contract be segregated and, therefore, exempted with other retroactive contracts covering insured events occurring prior to January 1, 1994?

   A: No. The transition provisions apply to an entire contract, which is either subject to or exempt from the revised provisions of SSAP No. 62R. A ceding entity may bifurcate a contract already subject to the new accounting rules in SSAP No. 62R and then account for both the prospective and retroactive portions in accordance with the new accounting standard.

Risk Transfer

6. Q: Do the new risk transfer provisions apply to existing contracts?

   A: Yes, the new risk transfer provisions apply to some existing contracts. SSAP No. 62R applies in its entirety only to existing contracts which were renewed or amended on or after January 1, 1994, or which cover losses occurring or claims made after that date. Therefore, those contracts must be evaluated to determine whether they transfer risk and qualify for reinsurance accounting. For accounting periods commencing on or after January 1, 1995, balances relating to such contracts which do not transfer insurance risk shall be reclassified as deposits and shall be accounted for and reported in the manner described under the caption Reinsurance Contracts Must Include Transfer of Risk.

   SSAP No. 62R does not apply to existing contracts which were entered into before, and were not renewed or amended on or after, January 1, 1994, and which cover only losses occurring or claims made before that date, nor to contracts which expired before, and were not renewed or amended on or after, January 1, 1995. Those contracts will continue to be accounted for in the manner provided by SSAP No. 62R before these revisions.

7. Q: How does the effective date affect the assessment of whether a significant loss to the reinsurer was reasonably possible?

   A: The risk transfer assessment is made at contract inception, based on facts and circumstances known at the time. Because that point in time has passed for existing contracts, some have suggested that the risk transfer provisions be applied as of the effective date. However, that approach to the risk transfer assessment would violate the requirement to consider all cash flows from the contract. Therefore, the test must be applied from contract inception, considering the effect of any subsequent contract amendments. Careful evaluation and considered judgment will be required to determine whether a significant loss to the reinsurer was reasonably possible at inception.

8. Q: Should risk transfer be reassessed if contractual terms are subsequently amended?

   A: Yes. When contractual terms are amended, risk transfer should be reassessed. For example, a contract that upon inception met the conditions for reinsurance accounting could later be amended so that it no longer meets those conditions. The contract should then be reclassified and accounted for as a deposit.

9. Q: How should the risk transfer assessment be made when a contract has been amended?

   A: No particular method is prescribed for assessing risk transfer in light of a contract amendment. Whether an amended contract in substance transfers risk must be determined considering all of the facts and circumstances in light of the risk transfer requirements. Judgment also will be required to determine whether an amendment in effect creates a new contract.

10. Q: For purposes of evaluating whether a contract with a reinsurer transfers risk, what constitutes a contract?

    A: A contract is not defined, but is essentially a question of substance. It may be difficult in some circumstances to determine the boundaries of a contract. For example, the profit-sharing provisions of one contract may refer to experience on other contracts and, therefore, raise the question of whether, in substance, one contract rather than several contracts exist.

    The inconsistency that could result from varying interpretations of the term *contract* is limited by requiring that features of the contract or other contracts or agreements that directly or indirectly

compensate the reinsurer or related reinsurers for losses be considered in evaluating whether a particular contract transfers risk. Therefore, if agreements with the reinsurer or related reinsurers, in the aggregate, do not transfer risk, the individual contracts that make up those agreements also would not be considered to transfer risk, regardless of how they are structured.

11. Q: If the assessment of risk transfer changes after the initial assessment at contract inception, how should the ceding entity account for the change?

    A: The status of a contract should be determinable at inception and, absent amendment, subsequent changes should be very rare. If the risk of significant loss was not deemed reasonably possible at inception, and a significant loss subsequently occurred, the initial assessment was not necessarily wrong, because remote events do occur. Likewise, once a reasonable possibility of significant loss has been established, such loss need not occur in order to maintain the contract's status as reinsurance.

12. Q: SSAP No. 62R requires that reasonably possible outcomes be evaluated to determine the reinsurer's exposure to significant loss. What factors should be considered in determining whether a scenario being evaluated is reasonably possible?

    A: The term *reasonably possible* means that the probability is more than remote. The test is applied to a particular scenario, not to the individual assumptions used in the scenario. Therefore, a scenario is not reasonably possible unless the likelihood of the entire set of assumptions used in the scenario occurring together is reasonably possible.

13. Q: In determining the amount of the reinsurer's loss under reasonably possible outcomes, may cash flows directly related to the contract other than those between the ceding and assuming companies, such as taxes and operating expenses of the reinsurer, be considered in the calculation?

    A: No. The evaluation is based on the present value of all cash flows *between the ceding and assuming enterprises* under reasonably possible outcomes and, therefore, precludes considering other expenses of the reinsurer in the calculation.

14. Q: In evaluating the significance of a reasonably possible loss, should the reasonably possible loss be compared to gross or net premiums?

    A: Gross premiums should be used.

15. Q: How does a commutation clause affect the period of time over which cash flows are evaluated for reasonable possibility of significant loss to the reinsurer?

    A: All cash flows are to be assessed under reasonably possible outcomes. Therefore, unless commutation is expected in the scenario being evaluated, it should not be assumed in the calculation. Further, the assumptions used in a scenario must be internally consistent and economically rational in order for that scenario's outcome to be considered reasonably possible.

16. Q: What interest rate should be used in each evaluated scenario to make the present value calculation?

    A: A reasonable and appropriate rate is required, which generally would reflect the expected timing of payments to the reinsurer and the duration over which those cash flows are expected to be invested by the reinsurer.

17. Q: SSAP No. 62R refers to payment schedules and accumulating retentions from multiple years as features that delay timely reimbursement of claims. Does the presence of those features generally prevent a contract from meeting the conditions for reinsurance accounting?

    A: Yes. Payment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer's payments to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Therefore, any feature that may affect the timing of the reinsurer's reimbursement to the ceding entity should be closely scrutinized.

18. Q: What if a contract contains a feature such as a payment schedule or accumulating retention but could still result in the reasonable possibility of significant loss to the reinsurer?

    A: Both of the following conditions are required for reinsurance accounting:

    a. Transfer of significant risk arising from uncertainties about both (i) the ultimate amount of net cash flows from premiums, commission, claims, and claim settlement expenses paid under a contract (underwriting risk) and (ii) the timing of the receipt and payment of those cash flows (timing risk); and

    b. Reasonable possibility of significant loss to the reinsurer.

    Because both condition (a) and condition (b) must be met, failure to transfer significant timing and underwriting risk is not overcome by the possibility of significant loss to the reinsurer.

19. Q: Is it permissible to evaluate timely reimbursement on a present value basis?

    A: No. The word timely is used in the ordinary temporal sense to refer to the length of time between payment of the underlying reinsured claims and reimbursement by the reinsurer.

    While the test for reasonable possibility of significant loss to the reinsurer provides for a present value-based assessment of the economic characteristics of the reinsurance contract, the concept of timely reimbursement relates to the transfer of insurance risk (condition a. above), not the reasonable possibility of significant loss (condition b. above). Accordingly, timely reimbursement should be evaluated based solely on the length of time between payment of the underlying reinsured losses and reimbursement by the reinsurer.

20. Q: Are there any circumstances under which the conditions for risk transfer need not be met?

    A: Yes. An extremely narrow and limited exemption is provided for contracts that reinsure either an individual risk or an underlying book of business that is inherently profitable. When substantially all of the insurance risk relating to the reinsured portions of the underlying insurance contracts has been assumed by the reinsurer, the contract meets the conditions for reinsurance accounting. To qualify under this exception, no more than trivial insurance risk on the reinsured portions of the underlying insurance contracts may be retained by the ceding entity. The reinsurer's economic position must be virtually equivalent to having written the relevant portions of the reinsured contracts directly.

21. Q: In determining whether a reinsurance contract qualifies under the exception referred to in the preceding question, how should the economic position of the reinsurer be assessed in relation to that of the ceding entity?

A: The assessment should be made by comparing the net cash flows of the reinsurer under the reinsurance contract with the net cash flows of ceding entity on the reinsured portions of the underlying insurance contracts. This may be relatively easy for reinsurance of individual risks or for unlimited-risk quota-share reinsurance, because the premiums and losses on these types of reinsurance generally are the same as the premiums and losses on the reinsured portions of the underlying insurance policies.

In other types of reinsurance, determining the reinsurer's net cash flows relative to the insurer is likely to be substantially more difficult. For example, it generally would be difficult to demonstrate that the ceding entity's premiums and losses for a particular layer of insurance are the same as the reinsurer's premiums and losses related to that layer. If the economic position of the reinsurer relative to the insurer cannot be determined, the contract would not qualify under the exception.

Accounting Provisions

22. Q: An existing contract that was accounted for as reinsurance no longer qualifies for reinsurance accounting under the new accounting rules included in SSAP No. 62R. How should the ceding and assuming companies account for the contract in future periods?

A: Because the statement of income cannot be restated, previously recognized gains and losses are not revised. If the contract was entered into before, and not renewed or amended on or after, January 1, 1994 and covers only losses occurring or claims made before that date, or the contract expired before January 1, 1995 and was not renewed or amended on or after that date, it would continue to be accounted for in the manner provided before these revisions.

For accounting periods commencing on or after January 1, 1995, existing balances relating to contracts which do not transfer insurance risk and which were entered into on or after January 1, 1994 (covering losses occurring or claims made after that date) would be reclassified as deposits.

Premium payments to a reinsurer would be recorded as deposits. Likewise, losses recoverable from a reinsurer would not be recognized as receivables. Rather, any reimbursement for losses would be accounted for upon receipt as a refund of a deposit.

23. Q: What is the definition of past insurable events that governs whether reinsurance coverage is prospective or retroactive? For example, could a reinsurance contract that covers losses from asbestos and pollution claims on occurrence-based insurance policies effective during previous periods be considered prospective if the reinsurance coverage is triggered by a court interpretation that a loss is covered within the terms of the underlying insurance policies?

A: The distinction between prospective and retroactive reinsurance is based on whether a contract reinsures future or past insured events covered by the underlying reinsurance contracts. In the example above, the insured event is the occurrence of loss within the coverage of the underlying insurance contracts, not the finding of a court. Therefore, the fact that the asbestos exposure or pollution is covered under insurance policies effective during prior periods makes the reinsurance coverage in this example retroactive.

24. Q: Would the answer to the above question change if the reinsurance were written on a claims-made basis?

A: No. The form of the reinsurance—whether claims-made or occurrence-based—does not determine whether the reinsurance is prospective or retroactive. A claims-made reinsurance contract that reinsures claims asserted to the reinsurer in a future period as a result of insured events that occurred prior to entering into the reinsurance contract is a retroactive contract.

25. Q: What is the effect of adjustments to future premiums or coverage in determining whether reinsurance is prospective or retroactive?

    A: Adjustments to future premiums or coverage may affect the accounting for a reinsurance contract. Whenever an adjustment results in a reinsurer providing new or additional coverage for past insurable events, that coverage is retroactive. For example, if subsequent years' premiums under a multiple accident year contract create additional coverage for previous accident years, the additional coverage is retroactive, even if the original coverage provided in the contract for those accident years was prospective. Likewise, if current losses under a multiple-year contract eliminate coverage in future periods, some or all of the premiums to be paid in those future periods should be charged to the current period.

26. Q: A reinsurance contract is entered into after the contract's effective date. Is the coverage between the contract's effective date and the date the contract was entered into prospective or retroactive?

    A: The portion of the contract related to the period of time between the effective date of the contract and the date the contract was entered into is retroactive because it covers insured events that occurred prior to entering into the reinsurance contract.

27. Q: How is the date the reinsurance contract was entered into determined?

    A: It is not uncommon for a reinsurance arrangement to be initiated before the beginning of a policy period but not finalized until after the policy period begins. Whether there was agreement in principle at the beginning of the policy period and, therefore, the contract is substantively prospective must be determined based on the facts and circumstances. For example, a contract may be considered to have been substantively entered into even though regulatory approval of that contract has not taken place.

    The absence of agreement on significant terms, or the intention to establish or amend those terms at a later date based on experience or other factors, generally indicates that the parties to the contract have not entered into a reinsurance contact, but rather have agreed to enter into a reinsurance contract at a future date. If contractual provisions under a contract substantively entered into at a future date covered insurable events prior to that date, that coverage is retroactive.

    In any event, SSAP No. 62R provides that if a contract (except facultative contracts and contracts signed by the lead reinsurer and certain cover notes or similar documents signed by reinsurers representing more than 50% of the capacity on the contract) has not been finalized, reduced to written form and signed by the parties within 9 months after its effective date, it is presumed to be retroactive.

28. Q: Are contracts to reinsure calendar-year incurred losses considered blended contracts that have both prospective and retroactive elements?

    A: Yes. Most reinsurance contracts covering calendar-year incurred losses combine coverage for insured events that occurred prior to entering into the reinsurance contract with coverage for future insured events and, therefore, include both prospective and retroactive elements.

    In any event, SSAP No. 62R provides that if a contract (except facultative contracts, contracts signed by the lead reinsurer and certain cover notes or similar documents signed by reinsurers representing more than 50% of the capacity on the contract) has not been finalized, reduced to written form and signed by the parties within 9 months after its effective date it is presumed retroactive.

29. Q: When the prospective and retroactive portions of a contract are being accounted for separately, how should premiums be allocated to each portion of the contract?

    A: No specific method for allocating the reinsurance premiums to the risks covered by the prospective and retroactive portions of a contract is required. However, separate accounting for the prospective and retroactive portions of a contract may take place only when an allocation is practicable.

    Practicability requires a reasonable basis for allocating the reinsurance premiums to the risks covered by the prospective and retroactive portions of the contract, considering all amounts paid or deemed to have been paid regardless of the timing of payment. If a reasonable basis for allocating the premiums between the prospective and retroactive coverage does not exist, the entire contract must be accounted for as a retroactive contract.

30. Q: A retroactive reinsurance contract contains a cut-through provision that provides the ceding entity's policyholders and claimants with the right to recover their claims directly from the reinsurer. May the ceding entity immediately recognize earned surplus associated with this type of contract?

    A: No. SSAP No. 62R states that earned surplus may not be recognized "until the actual retroactive reinsurance recovered exceeds the consideration paid."

31. Q: A ceding entity enters into a retroactive reinsurance agreement that gives rise to segregated surplus. If the reinsurer prepays its obligation under the contract, may the ceding entity recognize earned surplus at the time the prepayment is received?

    A: Segregated surplus arising from retroactive reinsurance transactions is earned as actual liabilities that have been transferred are recovered or terminated. Therefore, earned surplus is based on when the reinsurer settles its obligations to the ceding entity, and it may be appropriate to recognize earned surplus at the time the prepayment is received.

    However, all of the facts and circumstances must be considered to determine whether the ceding entity has substantively recovered the liabilities transferred to the reinsurer. For example, if the ceding entity agrees to compensate the reinsurer for the prepayment, such as by crediting the reinsurer with investment income on prepaid amounts or balances held, the ceding entity has not, in substance, recovered its transferred liabilities but rather has received a deposit from the reinsurer that should be accounted for accordingly.

32. Q: If the ceding entity does not expect to receive any recoveries because the reinsurer has agreed to reimburse claimants under the reinsured contracts directly, would the ceding entity be considered to have recovered or terminated its transferred liabilities?

    A: No. In the example given, the reinsurer is substantively acting as disbursing agent for the ceding entity. Therefore, the ceding entity cannot be said to have recovered amounts due from the reinsurer before payment is made to the claimant.

33. Q: What accounting entries would a ceding entity make to report a retroactive reinsurance contract?

    A: Accounting Entries for a Ceding Entity to Report a Retroactive Reinsurance Contract:

Entry 1		
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)	10,000	
Retroactive Reinsurance Gain (I/S)		2,000
Cash		8,000

To record initial portfolio transfer see items #3 and #8. The ceding entity must establish the segregated surplus per item #4.

Entry 1A		
Retro. Reins. Gain	2,000	
Profit/Loss Account		2,000

To close gain from retroactive transaction.

Entry 1B		
Profit/Loss Account	2,000	
Special Surplus from Retro. Reins.		2,000

To close profit from retroactive reinsurance to special surplus.

Entry 2		
Cash	2,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		2,000

To record recovery of paid losses from the reinsurer. Outstanding ceded reserves after this recovery equals $8,000, and special surplus from retroactive reinsurance account equals $2,000; therefore, segregated surplus account is not changed per item #10.

Entry 3		
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)	3,000	
Retroactive Reinsurance Gain (I/S)		3,000

To record subsequent revision of the initial reserves ceded per item #10. The segregated surplus account is increased to $5,000 as a result of this upward development.

Entry 3A		
Retro. Reinsurance Gain	3,000	
Profit/Loss Account		3,000

To close profit from retroactive reinsurance.

Entry 3B		
Profit/Loss (I/S)	3,000	
Special Surplus from Retro. Reins.		3,000

To close profit and loss account to special surplus. (Retroactive reinsurance reserves ceded or assumed account balance equals $11,000. Special Surplus from retroactive reinsurance balance equals $5,000.)

Entry 4		
Cash	4,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		4,000

To record recovery of paid losses from the reinsurer. Outstanding ceded reserves after this recovery equals $7,000, therefore segregated surplus account is not changed per item #10.

Entry 5		
Cash	3,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		3,000

To record recovery of paid losses from reinsurer. Outstanding ceded reserves after recovery equals $4,000, therefore the following entry is needed per items #6 and #10.

Entry 5A		
Special Surplus—Retro. Reins.	1,000	
Unassigned Funds		1,000

Retroactive Reinsurance reserves ceded or assumed after this entry equals $4,000.

Entry 6		
Retroactive Reinsurance Loss (I/S)	1,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		1,000

To record subsequent revision of the initial reserves ceded per item #10. The segregated surplus account is decreased as a result of this downward development to $3,000. The following entry is needed per items #6 and #10.

Entry 6A		
Profit/Loss Account	1,000	
Retro. Reins. Loss		1,000

To close loss to profit and loss account.

Entry 6B		
Special Surplus from Retro. Reins.	1,000	
Profit/Loss Account		1,000

To close profit and loss account to special surplus. (Remaining balance of retroactive reinsurance reserve ceded or assumed account equals $3,000.) (Special surplus from retro. reins. account balance equals $3,000.)

Entry 7		
Cash	2,500	
Retroactive Reinsurance Gain (I/S)	500	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		3,000

Entry 7A		
Profit and Loss Account	500	
Retro. Reins. Gain		500

To close other income to profit and loss account.

Entry 7B		
Special Surplus from Retro. Reins.	500	
Profit/Loss Account		500

To close profit and loss account to special surplus. (Remaining balance of special surplus from retro. reins. account equals $2,500.) (Remaining balance of retroactive reinsurance reserve ceded or assumed account -0-.)

Entry 7C		
Special Surplus from Retro. Reins.	2,500	
Unassigned Funds		2,500

To close remaining special surplus account to unassigned surplus.

34. Q: How should the parties account for an adverse loss development reinsurance contract where, as of the statement date, the attachment level of the contract exceeds the ceding company's current case and IBNR reserves for the covered accident years (i.e. no surplus gain and no reinsurance recoverable as of the statement date), and the ceding company transferred cash to the reinsurer at the inception of the contract?

A: An adverse loss development reinsurance contract covering prior accident years meets the definition of "retroactive reinsurance" set forth in paragraph 22 of SSAP No. 62R:

> ….reinsurance in which a reinsurer agrees to reimburse a ceding entity for liabilities incurred as a result of past insurable events covered under contracts subject to the reinsurance….

Paragraph 29.k. of SSAP No. 62R specifically provides that the consideration paid for a retroactive reinsurance contract is to be recorded as a decrease in ledger assets by the ceding entity and an increase in ledger assets by the assuming entity.

Question 33 illustrates the accounting entries for retroactive reinsurance contracts.

If the retroactive reinsurance contract transfers both components of insurance risk then, pursuant to paragraph 29 of SSAP No. 62R, the ceding company would record the consideration paid as a decrease in ledger assets, recognize an expense for the reinsurance ceded through Other Income or Loss accounts as a write-in item identified as "Retroactive Reinsurance Ceded", and record the recoverable from the reinsurer as a contra liability.

No contra liability is established until and unless (and then only to the extent that) the ceding company establishes reserves which exceed the attachment point.

For the contract described, at inception no contra liability is recorded to offset current liability for the business ceded, since the ceded retroactive reinsurance premium relates to coverage in excess of the current liabilities recorded by the ceding company.

Once the ceding company's recorded liabilities exceed the attachment point of the adverse loss development reinsurance contract and triggers reinsurance recoverable from the reinsurer, a contra liability is established by the ceding company for the amount of the reinsurance recoverable. Any surplus resulting from the retroactive reinsurance is carried as a write-in item on the balance sheet designated as "Special Surplus from Retroactive Reinsurance Account." The surplus gain may not be classified as unassigned funds (surplus) until the actual retroactive reinsurance recovered exceeds the consideration paid.

If any portion of a retroactive reinsurance contract does not transfer insurance risk, then the portion which does not transfer risk is accounted for as a deposit pursuant to paragraph 35. The deposit is reported as an admitted asset of the ceding company if the reinsurer is licensed, accredited, certified or otherwise qualified in the ceding company's state of domicile as described

in Appendix A-785, or if there are funds held by or on behalf of the ceding company as described in that appendix. Receipts and disbursements under the contract are recorded through the deposit/liability accounts. Amounts received in excess of the deposit made are recognized as a gain in the Other Income or Loss account.

Accounting entries for a ceding entity to report a retroactive reinsurance contract at the inception of which the cedent's reserves are lower than the attachment point of the reinsurance coverage:

Assume the company pays $16m to purchase adverse development coverage of $50m, above an attachment point.

Entry 1: Payment of Retrospective Reinsurance Premium

Retrospective Reinsurance Expense*	$16m	
Cash		$16m

The company pays $16m premium for the retrospective reinsurance contract.
*This is an Other Expense item, it does not flow through Schedule F or Schedule P.

Entry 2: Adverse Development Reaches the Attachment Point

Losses Incurred	$25m	
Gross Loss Reserve		$25m
Recoverable on Retro Reinsurance Contract**	$25m	
Other Income*		$9m
Contra – Retro Reinsurance Expense*		$16m
Surplus***	$9m	
Segregated Surplus***		$9m

The company incurs $25m development on reserves related to the contract.
*These are Other Income/Expense items do not flow through Schedule F or Schedule P.
**A contra-liability write-in item, not netted against loss reserves.
***Surplus is segregated in the amount of [$25m - $16m = $9m] recoverables less consideration paid.

Entry 3: Cash is Recovered on Paid Losses

Cash	$20m	
Recoverable on Retrospective Reinsurance Contract		$20m
Segregated Surplus	$4m	
Surplus		$4m

The company recovers $20m cash from reinsurer on this retro contract. Segregated Surplus decreases in the amount of [$20m - $16m = $4m] (decreases for amount recovered in excess of consideration paid).

35. Q: How should a ceding company account for payment of the premium for a retroactive reinsurance contract by the ceding company's parent company or some other person not a party to the reinsurance contract (for example, adverse loss development reinsurance contracts purchased by the parent company in the context of the purchase or sale of the ceding company)?

A: If the reinsurance premium is not paid directly by the ceding company but is instead paid on behalf of the ceding company by the ceding company's parent company or some other entity not a party to the reinsurance contract, then the ceding company should (1) record an increase in gross paid in and contributed surplus in the amount of the reinsurance premium to reflect the contribution to surplus by the parent or third party payor, and (2) record an expense in the amount of the reinsurance premium and account for the contract as provided in Questions 33 and 34.

EXHIBIT B – P&C RUNOFF REINSURANCE TRANSACTIONS

The following provides illustrative journal entries for P&C Runoff Reinsurance Transactions.

Example 1: Transfer of existing block of runoff business **with no residual UPR** on books of Transferor

Cedent/Transferor		**DR**	**CR**
Day 1 – Cedent transfers 50,000 in reserves for 50,000			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	50,000	
Cash	Asset ↓		50,000
Losses Paid (U/W Part 2 & Sch. P)	I/S ↓	50,000	
Change in Reserves - Incurred Losses (U&I Part 2)	I/S ↑		50,000
Unlike novation, gross reserves stay on books of transferor			
Day 360 – Negative Development on Transferred Business - 3,000			
Reinsurance Recoverable on Unpaid Losses (Sch. F)	Contra Liab ↑	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserve			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	53,000	
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↓		53,000
Reinsurer/ Transferee			
Day 1 – Cedent transfers 50,000 in reserves for 50,000			
Cash	Asset ↑	50,000	
Reported Losses on Reins. Assumed (U&I Part 2A & Sch. P)	Liab ↑		50,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S ↓	50,000	
Losses Paid or Incurred (negative) (U&I Part 2 & Sch. P)	I/S ↑		50,000
Day 360 – Negative Development on Transferred Business - 3,000:			
Change in Reserves – Incurred Losses (U&I Part 2)	I/S↓	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	53,000	
Cash	Asset ↓		53,000

Comments:
Since the Transferor is ceding incurred losses neither party should have premium impacted. To do that would distort many financial ratios.

Example 2: Transfer of existing block of runoff business **with some residual UPR** of 10,000 on books of Transferor (this should be less common).

Cedent/Transferor		**DR**	**CR**
Day 1 – Cedent transfers 50k in reserves & 10k UPR for 60,000			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	50,000	
Unearned Premium Reserve (U&I Part 1 & 1A)	Liab ↓	10,000	
Cash	Asset ↓		60,000
Ceded Premium Written (U&I Part 1B)	I/S ↓	10,000	
Losses Paid (U&I Part 2 & Sch. P)	I/S ↓	50,000	
Change in Reserves - Incurred Losses (U&I Part 2)	I/S ↑		50,000
Change in UPR (U&I Part 1 & 1A)	I/S ↑		10,000
Unlike novation, gross reserves stay on books of transferor			
Day 180 – Premium is Fully Earned (Assumes 80% Loss Ratio)			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	8,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		8,000
To mirror the increase in unpaid losses by the transferee			
Day 360 – Negative Development on Transferred Business - 3,000:			
Reinsurance Recoverable on Unpaid Losses (Sch. F)	Contra Liab ↑	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserves (50+8+3)			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	61,000	
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↓		61,000

Reinsurer/Transferee			
Day 1 – Cedent transfers 50k in reserves & 10k UPR for 60,000			
Cash	Asset ↑	60,000	
Reported Losses on Reins. Assumed (U&I Part 2A & Sch. P)	Liab ↑		50,000
Unearned Premium Reserve (U&I Part 1 & 1A)	Liab ↑		10,000
Assumed Premium Written (U&I Part 1B)	I/S ↑		10,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S ↓	50,000	
Change in UPR (U&I Part 1 & 1A)	I/S ↓	10,000	
Losses Paid or Incurred (negative) (U&I Part 2 & Sch. P)	I/S ↑		50,000
Day 180 – Premium is Fully Earned (Assumes 80% Loss Ratio)			
Unearned Premium Reserve (U&I Part 1 & 1A)	Liab ↓	10,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		8,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S↓	8,000	
Change in UPR (U&I Part 1 & 1A)	I/S ↑		10,000
To record the increase in unpaid losses by the transferee			
Day 360 – Negative Development on Transferred Business -3,000:			
Change In Reserves – Incurred Losses (U&I Part 2)	I/S↓	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserves (50+8+3)			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	61,000	
Cash	Asset ↓		61,000

Comments:
In this second example, the portion of the runoff business that has an UPR associated with it is essentially booked as prospective reinsurance. Other elements of the example are the same except that we assumed an 80% loss ratio on the unearned portion of the business.

EXHIBIT C – ILLUSTRATION OF A REINSURANCE CONTRACT THAT IS ACCOUNTED FOR AS A DEPOSIT USING THE INTEREST METHOD

Assumptions:

Premium = $1,000 (assumes no commissions or allowances)
Coverage Period = 1 year
Initial expected recoveries = $225 per year (at end of year) for five years
Initial Implicit rate = 4 percent*

*present value of $225 per year for five years at 4 percent = $1,000

At the end of Year 2, the timing of anticipated recoveries under the reinsurance contract changes. A reevaluation of the implicit interest rate produces a rate of 3.63 percent and an asset of $640 at the end of the year.

Description	Interest Income	Cash Recoveries	Deposit Balance
Initial payment			$1,000
Year 1 (4%)	$ 40		$1,040
End of Year 1		$ (225)	$ 815
Year 2 (4%)	$ 33		$ 848
End of Year 2		$ (200)	$ 648
Yield Adjustment	$ (8)		$ 640
Year 3 (3.63%)	$ 23		$ 663
End of Year 3		$ (175)	$ 488
Year 4 (3.63%)	$ 18		$ 506
End of Year 4		$ (175)	$ 331
Year 5 (3.63%)	$ 12		$ 343
End of Year 5		$ (175)	$ 168
Year 6 (3.63%)	$ 7		$ 175
End of Year 6		$ (175)	$ 0

At the inception of the contract, the ceding insurer records a deposit asset of $ 1,000 and the assuming company, a $1,000 deposit liability. The asset is admitted providing the conditions for credit for reinsurance are met.

At subsequent reporting dates, the deposit asset is adjusted by calculating the effective yield on the reinsurance agreement to reflect actual payments to date and expected future payments with a corresponding credit to interest income by the ceding company and interest expense by the assuming company.

At the end of year two, it is determined that the expected cash flows will differ from previous estimates, resulting in a lower effective yield on the deposit asset. The deposit asset is adjusted to the amount that would have existed at the reporting date had the new effective yield been applied from the inception of the reinsurance agreement. The adjustment is charged to interest income, i.e., as a reduction of interest income. Interest income during the remaining term of the agreement is reduced accordingly (i.e., the yield is reduced from 4.0% to 3.63%).

EXHIBIT D – ILLUSTRATION OF ASBESTOS AND POLLUTION COUNTERPARTY REPORTING EXCEPTION

SCHEDULE F – PART 3

Underwriting Pools

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for underwriting pools and associations.

SUMMARY CONCLUSION

2. Underwriting pools and associations can be categorized as follows: (a) involuntary, (b) voluntary, and (c) intercompany.

3. Involuntary pools represent a mechanism employed by states to provide insurance coverage to those with higher than average probability of loss who otherwise would be excluded from obtaining coverage. Reporting entities are generally required to participate in the underwriting results, including premiums, losses, expenses, and other operations of involuntary pools, based on their proportionate share of similar business written in the state. Involuntary plans are also referred to as residual market plans, involuntary risk pools, and mandatory pools.

4. Voluntary pools are similar to involuntary pools except they are not state mandated and a reporting entity participates in the pool voluntarily. In addition, voluntary pools are not limited to the provision of insurance coverage to those with higher than average probability of loss, but often are used to provide greater capacity for risks with exceptionally high levels of insurable values (e.g., aircraft, nuclear power plants, refineries, and offshore drilling platforms).

5. Intercompany pooling relates to business which is pooled among affiliated entities who are party to a pooling arrangement.(INT 03-02)

6. Participation in a pool may be on a joint and several basis, i.e., in addition to a proportional share of losses and expenses incurred by the pool, participants will be responsible for their share of any otherwise unrecoverable obligations of other pool participants. In certain instances, one or more entities may be designated as servicing carriers for purposes of policy issuance, claims handling, and general administration of the pooled business, while in other cases a pool manager or administrator performs all of these functions and simply bills pool participants for their respective shares of all losses and expenses incurred by the pool. In either case, liabilities arising from pooled business are generally incurred on a basis similar to those associated with non-pooled business, and should therefore be treated in a manner consistent with the guidelines set forth in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R).

7. Intercompany pooling arrangements involve establishment of a conventional quota share reinsurance agreement under which all of the pooled business is ceded to the lead entity and then retroceded back to the pool participants in accordance with their stipulated shares. Arrangements whereby there is one lead company that retains 100% of the pooled business and all or some of the affiliated companies have a 0% net share of the pool may qualify as intercompany pooling. In these arrangements, only the policy issuing entity has direct liability to its policyholders or claimants; other pool participants are liable as reinsurers for their share of the issuing entity's obligations. Although participants may use different assumptions (e.g., discount rates) in recording transactions, the timing of recording transactions shall be consistently applied by all participants.

8. Underwriting results relating to voluntary and involuntary pools shall be accounted for on a gross basis whereby the participant's portion of premiums, losses, expenses, and other operations of the pools are recorded separately in the financial statements rather than netted against each other. Premiums and losses shall be recorded as direct, assumed, and/or ceded as applicable. If the reporting entity is a direct writer of the business, premiums shall be recorded as directly written and accounted for in the same

manner as other business which is directly written by the entity. To the extent that premium is ceded to a pool, premiums and losses shall be recorded in the same manner as any other reinsurance arrangement. A reporting entity who is a member of a pool shall record its participation in the pool as assumed business as in any other reinsurance arrangement.

9. Underwriting results relating to intercompany pools shall be accounted for and reported as described in paragraph 8. While it is acceptable that intercompany pooling transactions be settled through intercompany arrangements and accounts, intercompany pooling transactions shall be reported on a gross basis in the appropriate reinsurance accounts consistent with other direct, assumed and ceded business.

10. Equity interests in, or deposits receivable from, a pool represent cash advances to provide funding for operations of the pool. These are admitted assets and shall be recorded separately from receivables and payables related to a pool's underwriting results. Receivables and payables related to underwriting results shall be accounted for in accordance with the guidance in paragraphs 6-8. If it is probable that these receivables are uncollectible, any uncollectible amounts shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible but is not written off, disclosure requirements outlined in SSAP No. 5R shall be followed.

Disclosures

11. If a reporting entity is part of a group of affiliated entities which utilizes a pooling arrangement under which the pool participants cede substantially all of their direct and assumed business to the pool, the financial statements shall include:

a. A description of the basic terms of the arrangement and the related accounting;

b. Identification of the lead entity and of all affiliated entities participating in the intercompany pool (include NAIC Company Codes) and indication of their respective percentage shares of the pooled business;

c. Description of the lines and types of business subject to the pooling agreement;

d. Description of cessions to non-affiliated reinsurers of business subject to the pooling agreement, and indication of whether such cessions were prior to or subsequent to the cession of pooled business from the affiliated pool members to the lead entity;

e. Identification of all pool members which are parties to reinsurance agreements with non-affiliated reinsurers covering business subject to the pooling agreement and which have a contractual right of direct recovery from the non-affiliated reinsurer per the terms of such reinsurance agreements;

f. Explanation of any discrepancies between entries regarding pooled business on the assumed and ceded reinsurance schedules of the lead entity and corresponding entries on the assumed and ceded reinsurance schedules of other pool participants;

g. Description of intercompany sharing, if other than in accordance with the pool participation percentage, of the Provision for Overdue Reinsurance (Schedule F, Part 8) and the write–off of uncollectible reinsurance;

h. Amounts due to/from the lead entity and all affiliated entities participating in the intercompany pool as of the balance sheet date.

12. Refer to the Preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

13. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Property and Casualty Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for property and casualty insurance contracts. Topics not covered by this statement shall comply with the more general statutory accounting guidance.

2. Topics specific to title insurance, mortgage guaranty insurance, and financial guaranty insurance are not within the scope of this statement. These topics are addressed in *SSAP No. 57—Title Insurance*, *SSAP No. 58—Mortgage Guaranty Insurance*, and *SSAP No. 60—Financial Guaranty Insurance*.

SUMMARY CONCLUSION

3. Property and casualty insurance contracts can be written to cover insured events on the following reporting bases:

a. Occurrence—These policies cover insured events that occur within the effective dates of the policy regardless of when they are reported to the reporting entity. Liabilities for losses on these policies shall be recorded when the insured event occurs;

b. Claims-made—These policies cover insured events that are reported (as defined in the policy) within the effective dates of the policy, subject to retroactive dates when applicable. Liabilities for losses on these policies shall be recorded when the event is reported to the reporting entity; and

c. Extended reporting—Endorsements to claims-made policies covering insured events reported after the termination of a claims-made contract but subject to the same retroactive dates where applicable. See paragraphs 7 and 8 for guidance for when premium shall be earned and losses shall be recorded.

Claims-Made Policies

4. Normally, when claims-made coverage is obtained, existing coverage is being replaced. The existing coverage may have been a claims-made policy or an occurrence policy. In either case, in an effort to reduce premium costs, the insured may request that the claims-made coverage cover only claims reported within the effective dates of the policy that occur after a specified date. This specified date is referred to as the retroactive date of the claims-made policy and eliminates duplicate coverage when converting from occurrence coverage to claims-made coverage.

5. The liability for an insured event shall be determined in accordance with *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (SSAP No. 55).

6. Extended reporting endorsements, commonly referred to as tail coverage, allow extended reporting of insured events after the termination of a claims-made contract. Extended reporting endorsements modify the exposure period of the underlying contract and can be for a defined period (e.g., six months, one year, five years) or can be for an indefinite period.

7. When a reporting entity issues an extended reporting endorsement or contract and the preceding claims-made policy terminates, the reporting entity assumes liability for unreported claims and expense. This extended reporting coverage can be issued for an indefinite period or a fixed period. For indefinite reporting periods, premium shall be fully earned and loss and expense liability associated with unreported claims shall be recognized immediately. For coverage for a fixed period, premium shall be earned over the term of the fixed period, the reporting entity shall establish an unearned premium reserve for the unexpired portion of the premium and shall record losses as reported.

8. Some claims-made policies provide extended reporting coverage at no additional charge in the event of death, disability, or retirement of a natural person insured. In such instance, a policy reserve is required to assure that premiums are not earned prematurely. The amount of the reserve should be adequate to pay for all future claims arising from these coverage features, after recognition of future premiums to be paid by current insureds for these benefits. The reserve, entitled "extended reporting endorsement policy reserve" shall be classified as a component part of the unearned premium reserve considered to run more than one year from the date of the policy.

9. When the anticipated losses, loss adjustment expenses, and maintenance costs anticipated to be reported during the extended reporting period exceed the recorded unearned premium reserve for a claims-made policy, a premium deficiency reserve shall be recognized in accordance with *SSAP No. 53—Property Casualty Contracts—Premiums*.

Discounting

10. With the exception of fixed and reasonably determinable payments such as those emanating from workers' compensation tabular indemnity reserves and long-term disability claims, property and casualty loss reserves shall not be discounted. No loss adjustment expense reserves shall be discounted.

11. Tabular reserves are indemnity reserves that are calculated using discounts determined with reference to actuarial tables which incorporate interest and contingencies such as mortality, remarriage, inflation, or recovery from disability applied to a reasonably determinable payment stream. Tabular reserves shall not include medical loss reserves or loss adjustment expense reserves.

12. Due to several instances in which states have prescribed or permitted practices to allow discounting on a non-tabular basis, recommended guidelines for discounting non-tabular unpaid loss and LAE are provided within Exhibit A. If a state has a prescribed or permitted practice allowing the use of discounts, or if discounting is utilized in accordance with this SSAP, financial statement disclosures are required in accordance with paragraphs 13-16.

13. In accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3), a change in the discount rate used in discounting loss reserves shall be accounted for as a change in estimate. SSAP No. 3 requires changes in estimates to be included in the statement of income in the period the change becomes known.

14. The financial statements shall disclose whether or not any of the liabilities for unpaid losses or unpaid loss adjustment expenses are discounted, including liabilities for workers' compensation. The following disclosures, for each line of business, shall be made separately:

a. Table(s) used;

b. Rate(s) used;

c. The amount of discounted liability reported in the financial statement; ~~and~~

d. The amount of tabular discount, by the line of business and reserve category (i.e., case and Incurred But Not Reported (IBNR));

e. The amount of interest accretion recognized in the statement of income; and

f. The line item(s) in the statement of income in which the interest accretion is classified.

15. If the rate(s) used to discount prior accident years' liabilities have changed from the previous financial statement or if there have been changes in other key discount assumptions such as payout patterns, the financial statements shall disclose:

a. Amount of discounted current liabilities at current rate(s) and assumption(s) (exclude the current accident year);

b. Amount of discounted current liabilities at previous rate(s) and assumption(s) (exclude the current accident year);

c. Change in discounted liability due to change in interest rate(s) and assumption(s); and

d. Amount of non-tabular discount, by line of business and reserve category (i.e., case, defense and cost containment, adjusting and other).

16. Refer to the Preamble for further discussion regarding disclosure requirements.

Structured Settlements

17. Structured settlements are periodic fixed payments to a claimant for a determinable period, or for life, for the settlement of a claim. Frequently a reporting entity will purchase an annuity to fund the future payments. Reporting entities may purchase an annuity in which the entity is the owner and payee, or an annuity in which the claimant is the payee. When annuities are purchased to fund periodic fixed payments, they shall be accounted for as follows:

a. When the reporting entity is the owner and payee, no reduction shall be made to loss reserves. The annuity shall be recorded at its present value and reported as an other-than-invested asset. Income from the annuities shall be recorded as miscellaneous income. The present value of the annuity and the related amortization schedule shall be obtained from the issuing life insurance company at the time the annuity is purchased; and

b. When the claimant is the payee, loss reserves shall be reduced to the extent that the annuity provides for funding of future payments. The cost of the annuities shall be recorded as paid losses.

18. Statutory accounting and Generally Accepted Accounting Principles (GAAP) are consistent for the accounting of structured settlement annuities where the reporting entity is the owner and payee, and where the claimant is the owner and payee and the reporting entity has been released from its obligation. GAAP distinguishes structured settlement annuities where the owner is the claimant and a legally enforceable release from the reporting entity's liability is obtained from those where the claimant is the owner and payee but the reporting entity has not been released from its obligation. GAAP requires the deferral of any gain resulting from the purchase of a structured settlement annuity where the claimant is the owner and payee yet the reporting entity has not been released from its obligation. Statutory accounting treats these settlements as completed transactions and considers the earnings process complete, thereby allowing for immediate gain recognition.

19. The following information regarding structured settlements shall be disclosed in the financial statements:

a. The amount of reserves no longer carried by the reporting entity because it has purchased annuities with the claimant as payee, and the extent to which the reporting entity is contingently liable for such amounts should the issuers of the annuities fail to perform under the terms of the annuities; and

b. The name, location, and aggregate statement value of annuities due from any life insurer to the extent that the aggregate value of those annuities equal or exceed 1% of policyholders' surplus. This disclosure shall only include those annuities for which the reporting entity has not obtained a release of liability from the claimant as a result of the purchase of an annuity. The reporting entity shall also disclose whether the life insurers are licensed in the reporting entity's state of domicile.

20. Refer to the Preamble for further discussion regarding disclosure requirements.

Policies with Coverage Periods Equal to or in Excess of Thirteen Months

21. Some property and casualty insurance contracts are written for coverage periods that equal or exceed thirteen months. These contracts may be single premium or fixed premium policies, and generally are not subject to cancellation or premium modification by the reporting entity. The most common policies with such coverage periods are home warranty and mechanical breakdown policies. Accordingly, this guidance is primarily focused on home warranty and mechanical breakdown policies and does not apply to multiple-year contracts comprised of single-year policies, each of which have separate premiums and annual aggregate deductibles.

22. Revenues are generally not received in proportion to the level of exposure or period of exposure. In order to recognize the economic results of the contract over the contract period, a liability shall be established for the estimated future policy benefits while taking into account estimated future premiums to be received. Unearned premiums shall be recorded in accordance with paragraphs 23-33 of this statement.

23. Paragraphs 24-33 shall apply to all direct and assumed contracts or policies ("contracts"), excluding financial guaranty contracts, mortgage guaranty contracts, and surety contracts, that fulfill both of the following conditions:

a. The policy or contract term is greater than or equal to 13 months; and

b. The reporting entity can neither cancel the contract, nor increase the premium during the policy or contract term.

24. At any reporting date prior to the expiration of the contracts, the reporting entity is required to establish an adequate unearned premium reserve, to be reported as the unearned premium reserve. For each of the three most recent policy years, the gross (i.e., direct plus assumed) unearned premium reserve shall be no less than the largest result of the three tests described in paragraphs 27-29. For years prior to the three most recent policy years, the gross unearned premium reserve shall be no less than the larger of the aggregate result of Test 1 or the aggregate result of Test 2 or the aggregate result of Test 3 taken over all of those policy years.

25. Any reserve credit applicable for reinsurance ceded shall be appropriately reflected in the financial statements with the resulting net unearned premium reserve being established by the reporting entity.

26. The projected losses and expenses may be reduced for expected salvage and subrogation recoveries, but may not be reduced for anticipated deductible recoveries, unless the deductibles are secured by a letter of credit (LOC) or like security. Projected salvage and subrogation recoveries (net of associated expenses) shall be established based on reporting entity experience, if credible; otherwise, based on industry experience.

27. Test 1 is management's best estimate of the amounts refundable to the contractholders at the reporting date.

28. Test 2 is the gross premium multiplied by the ratio of paragraph 28.a. to paragraph 28.b.:

a. Projected future gross losses and expenses to be incurred during the unexpired term of the contracts; and

b. Projected total gross losses and expenses under the contracts.

29. Test 3 is the projected future gross losses and expenses to be incurred during the unexpired term of the contracts as adjusted below, reduced by the present value of the future guaranteed gross premiums, if any.

a. A provision for investment income is permitted in the unearned premium reserve only with respect to the projected future losses and expenses used to determine the unearned premium reserve, and not with respect to incurred but unpaid losses and expenses;

b. A provision for investment income on projected future losses and expenses may be calculated to the expected date the loss or expense is incurred, not from the expected date of payment;

c. The rate of interest used to calculate the provision for investment income shall be reviewed and changed as necessary at each reporting date and shall not exceed the lesser of the following two standards:

i. The reporting entity's future net yield to maturity on statutory invested assets as shown in Schedule D, less a 1.5% actuarial provision for adverse deviations; or

ii. The current yield to maturity on a United States Treasury debt instrument maturing in five (5) years as of the reporting date.

d. The reporting entity's statutory invested assets shall be reduced by the loss and loss adjustment expense reserves on unpaid losses and expenses to calculate "available invested assets." If the available invested assets are less than the result of Test 3, as calculated above, an "invested asset shortfall" exists. In this event, the Test 3 reserve shall be recalculated with the provision for investment income based on the restricted amount of available invested assets.

30. For the purposes of Tests 2 and 3 above, "expenses" shall include all incurred and anticipated expenses related to the issuance and maintenance of the policy, including loss adjustment expenses, policy issuance and maintenance expenses, commissions, and premium taxes.

31. The projected future losses and expenses are to be re-estimated for each reporting date, and the most recent estimate of these projected losses and expenses is to be used in these Tests. If a range is selected and no single point in the range is identified as being the most likely, then the midpoint of management's estimate of the range shall be used. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued.

32. The reporting entity shall provide an Actuarial Opinion and Report in conformity with the NAIC *Annual Statement Instructions for Property and Casualty Insurers*. Exhibit A of the actuarial opinion shall include the following three items:the Reserve for Direct and Assumed Unearned Premiums, the Reserve for Net Unearned Premiums (as reported on Page 3), and any other premium reserve items on which an opinion is being expressed. If any of these three items are material, the material item(s) must also be covered in the opinion and relevant comments paragraphs of the actuarial opinion.

33. The actuarial report shall include a description of the manner in which the adequacy of the amount of security for deductibles and self-insured retentions is determined. The actuarial report need not assess the credit-worthiness of the specific securities (e.g. LOC's), but the actuarial opinion must report collectibility problems if known to the actuary.

High Deductible Policies

34. Certain policies, particularly workers' compensation coverage, are available under high deductible plans. High deductible plans differ from self insurance coupled with an excess of loss policy because state laws generally require the reporting entity to fund the deductible and to periodically review the financial viability of the insured and make an assessment of the suitability of the deductible plan to the insured.

35. The liability for loss reserves shall be determined in accordance with SSAP No. 55. Because the risk of loss is present from the inception date, the reporting entity shall reserve losses throughout the policy period, not over the period after the deductible has been reached. Reserves for claims arising under high deductible plans shall be established net of the deductible, however, no reserve credit shall be permitted for any claim where any amount due from the insured has been determined to be uncollectible.

36. If the policy form requires the reporting entity to fund all claims including those under the deductible limit, the reporting entity is subject to credit risk, not underwriting risk. Reimbursement of the deductible shall be accrued and recorded as a reduction of paid losses simultaneously with the recording of the paid loss by the reporting entity.

37. If the reporting entity does not hold specific collateral for the policy, amounts accrued for reimbursement of the deductible shall be billed in accordance with the provisions of the policy or the contractual agreement and shall be aged according to the contractual due date. In the absence of a contractual due date, billing date shall be utilized for the aging requirement. Deductible recoverables that are greater than ninety days old shall be nonadmitted. However, if the reporting entity holds specific collateral for the high deductible policy, ten percent of deductible recoverable in excess of collateral specifically held and identifiable on a per policy basis, shall be reported as a nonadmitted asset in lieu of applying the aging requirement; however, to the extent that amounts in excess of the 10% are not anticipated to be collected they shall also be nonadmitted. The collateral requirements of this paragraph may be satisfied when an insured provides one collateral instrument to secure amounts owed under multiple policies, provided that the reporting entity has the contractual right to apply the collateral to the high deductible policy. Collateral obtained at a group level that is not supported by an existing pooling agreement requires a written allocation agreement among all collateral beneficiaries. The terms of such agreement must be fair and equitable. Documentation supporting any allocation of collateral among reporting entities must be maintained to allow proper calculation of the nonadmitted amounts and prohibit double counting of collateral.

38. The financial statements shall disclose the following related to high deductible policies:

a. Gross (of high deductible) amount of loss reserves, unpaid by line of business.

b. ~~t~~The amount of reserve credit that has been recorded for high deductibles on unpaid claims and the amounts that have been billed and are recoverable on paid claims, by line of business and the total of these two numbers.

c. Related to the amounts that have been billed and are recoverable on paid claims,

i. paid recoverable amounts that are over 90 days overdue, and

ii. the amounts nonadmitted (per paragraph 37).

d. Total collateral pledged to the reporting entity related to deductible and paid recoverables:

i. the amount of collateral on balance sheet, and

ii. the amount of collateral off balance sheet.

e. The total amount of unsecured high deductible amounts related to unpaid claims and for paid recoverables and the total percentage that is unsecured.

f. Highest ten unsecured high deductible amounts by counterparty ranking. Note that the counterparty does not have to be named, just amount by counterparty 1, counterparty 2, etc. For this purpose, a group of entities under common control shall be regarded as a single customer.

39. Unsecured High Deductible Recoverables: If the individual obligor is part of a group under the same management or control, such as a professional employer organization (PEO), list the individual obligors, each of its related group members, and the total unsecured aggregate recoverables on high deductible policies for the entire group, which are greater than 1% of capital and surplus. For this purpose, a group of entities under common control shall be regarded as a single customer.

40. Refer to the Preamble for further discussion regarding disclosure requirements.

Asbestos and Environmental Exposures

41. Asbestos exposures are defined as any loss or potential loss (including both first party and third party claims) related directly or indirectly to the manufacture, distribution, installation, use, and abatement of asbestos-containing material, excluding policies specifically written to cover these exposures. Environmental exposures are defined as any loss or potential loss, including third party claims, related directly or indirectly to the remediation of a site arising from past operations or waste disposal. Examples of environmental exposures include but are not limited to chemical waste, hazardous waste treatment, storage and disposal facilities, industrial waste disposal facilities, landfills, superfund sites, toxic waste pits, and underground storage tanks.

42. Reporting entities that are potentially exposed to asbestos and/or environmental claims shall record reserves consistently with SSAP No. 55.

43. The financial statements shall disclose the following if the reporting entity is potentially exposed to asbestos and/or environmental claims:

a. The reserving methodology for both case and IBNR reserves;

b. The amount paid and reserved for losses and loss adjustment expenses for asbestos and/or environmental claims, on a direct, assumed and net of reinsurance basis. Each company should report only its share of a group amount (after applying its respective pooling percentage) if the company is a member of an intercompany pooling agreement;

c. Description of the lines of business written for which there is potential exposure of a liability due to asbestos and/or environmental claims, and the nature of the exposure(s);

d. The following for each of the five most current calendar years[1] on both a gross and net of reinsurance basis, separately for asbestos and environmental losses (including coverage dispute costs):

Beginning reserves	$_____
Incurred losses and loss adjustment expenses	_____
Calendar year payments for losses and loss adjustment expenses	_____
Ending reserves	$_____

44. Refer to the Preamble for further discussion regarding disclosure requirements.

Excess Statutory Reserve

45. This statement eliminates the requirement to record excess statutory reserves. Excess statutory reserves do not meet the definition of a liability established in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.*

Policyholder Dividends

46. Dividends to policyholders immediately become liabilities of the reporting entity when they are declared by the board of directors and shall be recorded as a liability. Incurred policyholder dividends are reported in the statement of income.

47. The financial statements shall disclose the terms of dividend restrictions, if any. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

48. Structured settlements are addressed in *FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113). FAS 113 is addressed in *SSAP No. 62R—Property and Casualty Reinsurance*. This statement rejects the AICPA *Audit and Accounting Guide—Audits of Property and Liability Insurance Companies.*

Effective Date and Transition

49. This statement is effective for years beginning January 1, 2001. To the extent that the requirements of paragraphs 23-33 produce a higher reserve than the reporting entity would have established through the use of their previous methodology, the reporting entity may phase in the additional reserve over a period not to exceed three years. Such a phase in period shall only be permitted if the reporting entity is able to demonstrate that it would not be operating in a hazardous financial condition and that there is not adverse risk to its insureds. The phase in shall be at least 60% of the difference between the reserve required by this statement and the reserve determined by the previous methodology during the first year, 80% in the second year, and 100% in the third year. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. The guidance in the footnote of paragraph 43.d. was originally contained

[1] The requirement for five years of data is only applicable to the annual statement blank. The audited statutory financial report is only required to report two years. Additionally, the audited statutory financial statement shall include items not included in the notes to the annual statement blank where the blank's schedules and exhibits satisfy disclosure requirements that are not included in the audited statutory financial statement (i.e., Since the audited financial statements do not include Schedule P, all of the SSAP No. 55 disclosures shall be included in the audited notes to financial statements).

within *INT 02-10: Statutory Audit Report Notes and the Reporting Requirements Related to Discosures Containing Multiple Year Information* and was effective June 9, 2002.

EXHIBIT A – GUIDELINES FOR STATES WHO PRESCRIBE OR PERMIT DISCOUNTING ON A NON-TABULAR BASIS

As discussed in paragraph 10 of this statement, with the exception of fixed and reasonably determinable payments such as those emanating from workers' compensation tabular indemnity reserves and long-term disability claims, property and casualty loss reserves shall not be discounted. However, one of the most common prescribed or permitted state practices is to allow discounting of unpaid losses and unpaid loss adjustment expenses on a non-tabular basis. The recommendations in this exhibit are not requirements and therefore should only be viewed as a recommendation to those states that prescribe or permit non-tabular discounting.

Recommended Prescribed or Permitted Practice Guidelines

The state of XYZ office will permit [insert domestic companies if prescribed or insert insurance company name if prescribed] to discount its December 20XX unpaid loss (i.e., reported losses and incurred but not reported losses) and unpaid loss adjustment expense (LAE) reserves on an non-tabular basis subject to the following conditions:

1. The unpaid loss and LAE reserves shall be determined in accordance with *Actuarial Standard of Practice No. 20, Discounting of Property and Casualty Loss and Loss Adjustment Expense* (and as agreed to by an actuary) but in no event shall the rate used exceed the lesser of the following two standards:

   a. If the reporting entity's statutory invested assets are at least equal to the total of all policyholder reserves, the reporting entity's net rate of return on statutory invested assets, less 1.5%, otherwise, the reporting entity's average net portfolio yield rate less 1.5% as indicated by dividing the net investment income earned by the average of the reporting entity's current and prior year total assets; or

   b. The current yield to maturity on a United States Treasury debt instrument with maturities consistent with the expected payout of the liabilities.

2. Disclosure of the [insert either prescribed or permitted practice] in compliance with the requirements of the NAIC *Accounting Practices and Procedures Manual* and the *NAIC Annual Statement Instructions – Property and Casualty*, including but not limited to:

   Note 1 – Summary of Significant Accounting Policies

   A. Disclosure of permitted practice

      a. Disclose that the reporting entity employs a prescribed or permitted accounting practice that departs from the *Accounting Practices and Procedures Manual*; and

      b. Disclose the monetary effect on net income and statutory surplus of using the practice of discounting on a non-tabular basis rather than the NAIC statutory accounting practice of discounting fixed and reasonably determinable payments such as those emanating from workers' compensation tabular indemnity reserves and long-term disability claims.

   Note 32 – Discounting of Liabilities for Unpaid Losses or Unpaid Loss Adjustment Expenses
   XX. Non-tabular discounting

      a. Disclosure of whether the reporting entity is applying non-tabular discounting based upon a state prescribed or permitted practice. If permitted, provide further

disclosure as to the date domiciliary state issued permitted practice and the expiration date of such practice;

b. Rate(s) used and the basis for the rate(s) used;

c. Amount of non-tabular discount disclosed by line of business and reserve category (i.e., unpaid loss, incurred but not reported, defense and cost containment expense, and adjusting and other expense); and

d. The amount of non-tabular discount reported in the statement.

Non-tabular discounting illustration:

	(1) Case	(2) IBNR	(3) Defense & Cost Containment Expense	(4) Adjusting & Other Expense
1. Homeowners/Farmowners				
2. Private Passenger Auto Liability/Medical				
3. Commercial Auto/Truck Liability/Medical				
4. Workers' Compensation				
5. Commercial Multiple Peril				
6. Medical Malpractice – Occurrence				
7. Medical Malpractice – Claims-Made				
8. Special Liability				
9. Other Liability – Occurrence				
10. Other Liability – Claims-Made				
11. Special Property				
12. Auto Physical Damage				
13. Fidelity, Surety				
14. Other (including Credit, Accident & Health)				
15. International				
16. Reinsurance Nonproportional Assumed Property				
17. Reinsurance Nonproportional Assumed Liability				
18. Reinsurance Nonproportional Assumed Financial Lines				
19. Products Liability – Occurrence				
20. Products Liability – Claims-Made				
21. Financial Guaranty/Mortgage Guaranty				
22. Total				

The rates used to discount Medical Malpractice unpaid losses at December 31, 20X2 have changed from the rates used at December 31, 20X1. At December 31, 20X2, the amount of discounted Medical Malpractice unpaid losses, excluding the current accident year, is $_____. Had these unpaid losses been discounted at the rates used at December 31, 20X1 the amount of discounted liabilities would be $_____. The reduction in the discounted liability due to the change in rates is $_____.

This illustration neither regulates, permits, nor prohibits the practice of discounting liabilities for unpaid losses or unpaid loss adjustment expenses.

Retrospectively Rated Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for retrospectively rated contracts. This statement applies to property and casualty contracts, life insurance contracts, and accident and health contracts.

2. Retrospective reinsurance contracts are not within the scope of this statement. They are addressed in *SSAP No. 62R—Property and Casualty Reinsurance* (SSAP No. 62R).

SUMMARY CONCLUSION

3. A retrospectively rated contract is one which has the final policy premium calculated based on the loss experience of the insured during the term of the policy (including loss development after the term of the policy) and the stipulated formula set forth in the policy or a formula required by law. The periodic adjustments may involve either the payment of return premium to the insured or payment of an additional premium by the insured, or both, depending on experience. Retrospective rating features are common in certain property and casualty contracts, group life, and group accident and health contracts. Some contracts have retrospective features required by law. Contracts with retrospective rating features are referred to as loss sensitive contracts.

4. Amounts due from insureds and amounts due to insureds under retrospectively rated contracts meet the definitions of assets and liabilities as set forth in *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets* (SSAP No. 5R), respectively. Amounts due from insureds and amounts due to insureds under retrospectively rated contracts are admitted assets to the extent they conform to the requirements of this statement.

5. Initial premiums shall be recognized in accordance with *SSAP No. 51R—Life Contracts, SSAP No. 53—Property Casualty Contracts—Premiums,* and *SSAP No. 54R—Individual and Group Accident and Health Contracts*.

6. Specific funds received by the prescription drug plan sponsor from either the Medicare Part D enrollee or the government as payment for standard coverage that will be subject to retrospective premium adjustments should be accounted for under this statement. These funds include 'Direct Subsidy', 'Low Income Subsidy (premium portion)', 'Beneficiary Premium (standard coverage portion)', 'Part D Payment Demonstration' and 'Risk Corridor Payment Adjustment'. The funds noted above have a final policy amount that is calculated based on the loss experience of the insured during the term of the policy, therefore should be treated as such. Refer to *INT 05-05: Accounting for Revenues Under Medicare Part D Coverage* for additional information and definitions of terms specifically related to Medicare Part D business.

7. Because policy periods do not always correspond to reporting periods and because an insured's loss experience may not be known with certainty until sometime after the policy period expires, retrospective premium adjustments shall be estimated based on the experience to date using one of the following methods:

a. Property and Casualty Contracts:

i. Use of actuarially accepted methods in accordance with filed and approved retrospective rating plans. This includes but is not limited to the application of historical ratios of retrospective rated developments to earned standard premium to develop a ratio which is then applied to those policies for which no retrospective calculation has been recorded or for which no modification to the

recorded calculation is needed. This method results in the calculation of one amount which is either a net asset or a net liability;

ii. Reviewing each individual retrospectively rated risk, comparing known loss development (including IBNR) with that anticipated in the policy contract to arrive at the best estimate of return or additional premium earned at that point in time. This method results in the calculation of an asset or a liability for each risk. The total of all receivables shall be recorded as an asset and the total of all return premiums shall be recorded as a liability.

b. Life and Accident & Health Contracts: Reporting entities offering group coverage have extensive underwriting procedures and complex individually negotiated benefits and contracts. Due to cost and reporting deadlines, these factors make it difficult to establish an exact valuation of retrospective premium adjustments. The method used to estimate the liability shall be reasonable based on the reporting entity's procedures and consistent among reporting periods. Common methods include a mathematical approach using a complex algorithm of the reporting entity's underwriting rules and experience rating practices, and an aggregate or group approach.

8. Assumptions used in estimating retrospective premium adjustments shall be consistent with the assumptions made in recording other assets and liabilities necessary to reflect the underwriting results of the reporting entity such as claim and loss reserves (including IBNR) and contingent commissions. Contingent commissions and other related expenses shall be adjusted in the same period the additional or return retrospective premiums are recorded.

9. Retrospective premium adjustments are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium. Additional retrospective premiums and return retrospective premiums shall be recorded as follows:

a. Property and Casualty Reporting Entities:

i. Accrued additional retrospective premiums shall be recorded as a receivable with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed;

ii. Accrued return retrospective premiums shall be recorded as part of the change in unearned premium (detailed in the underwriting and investment exhibit) liability with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed;

iii. Ceded retrospective premium balances payable shall be recorded as liabilities, consistent with SSAP No. 62R. Ceded retrospective premiums recoverable shall be recorded as an asset. Consistent with *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64), ceded retrospective premium balances payable may be deducted from ceded retrospective premiums recoverable when a legal right of setoff exists.

b. Life and Accident and Health Reporting Entities:

i. Accrued additional retrospective premiums shall be recorded as an asset, accrued retrospective premiums, with a corresponding entry to premiums;

ii. Accrued return retrospective premiums shall be recorded as a liability, provision for experience rating refunds, with a corresponding entry to premiums.

c. Managed Care/Accident and Health Reporting Entities

i. Accrued additional retrospective premiums shall be recorded as an asset, accrued retrospective premiums with a corresponding entry to premiums;

ii. Accrued return retrospective premiums shall be recorded as a liability, as part of Accident and Health Reserves (reserve for rate credits or experience rating refunds), with a corresponding entry to premiums.

10. The amount of accrued estimated retrospective premiums to be recorded as a nonadmitted asset for property and casualty insurers shall be determined as follows:

a. 100% of the amount recoverable from any person for whom any agents' balances or uncollected premiums are classified as nonadmitted, and item (b), plus item (c) or (d) below. Once an insurer has elected either (c) or (d) below, a change from one to the other requires approval from the insurer's domiciliary state and such change must be disclosed in the financial statements.

b. Retrospective premium adjustments shall be determined and billed or refunded in accordance with the policy provisions or contract provisions. If accrued additional retrospective premiums are not billed in accordance with the policy provisions or contract provisions, the accrual shall be nonadmitted.

c. 10% of any accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss adjustment expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (types of acceptable collateral vary from state to state) or by financial guaranty coverage issued by an insurer having an "A" or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit as described in Appendix A-785. Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to applying collateral by account. If the insurer is unable to allocate amounts by account, no credit may be taken for collateral.

d. An amount calculated using the factors below for accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (types of acceptable collateral vary from state to state) or by financial guaranty coverage issued by an insurer having an "A" or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit as described in Appendix A-785.

Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to categorizing by Quality Rating.

Insured's Current Quality Rating*	Insured's Corporate Debt Equivalent to (S&P/Moody's)**	Percentage of Retro Premium to be Nonadmitted***
1	AAA, AA, A/Aaa, Aa, A	1%
2	BBB/Baa	2%
3	BB/Ba	5%
4	B/B	10%
5	CCC, CC, C/Caa, Ca	20%
6	CI, D/C, or insured in default on debt service payments, or insured's debt service payments are jeopardized upon filing of a bankruptcy petition	100%

* The Percentage of Retro Premium to be Nonadmitted is based upon the Insured's Current Quality Rating (i.e., if an insured's quality rating drops, the percentage relating to the lower quality rating is used in calculating the amount to be nonadmitted and vice versa).

** Insureds that do not have a debt rating issued by a publicly recognized rating agency are required to be rated by the NAIC's Securities Valuation Office (SVO).

*** In the event the insured has no debt rating (either from a publicly recognized rating agency or from the SVO) the insured's quality rating will be considered category 5 for purposes of this calculation (i.e., a factor of 20% shall be applied), unless the insurer is aware of conditions of the insured that would warrant a category 6 classification (i.e., a factor of 100%).

11. Once accrued retrospective premium is billed, the due date is governed by *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*. Life and accident and health reporting entities shall nonadmit any accrued retrospective premium that is more than 90 days due. If a reporting entity has issued more than one policy to the same insured, retrospective balances shall be netted in accordance with SSAP No. 64.

12. If, in accordance with SSAP No. 5R, it is probable that the additional retrospective premium is uncollectible, any uncollectible additional retrospective premium shall be written off against operations in the period the determination is made. If it is reasonably possible a portion of the balance in excess of the nonadmitted portion determined in accordance with paragraph 10 is not anticipated to be collected, the disclosure requirements outlined in SSAP No. 5R shall be made.

Disclosures

13. The financial statements shall disclose the method used by the reporting entity to estimate retrospective premium adjustments. The amount of net premiums written that are subject to retrospective rating features, as well as the corresponding percentage to total net premiums written, shall be disclosed. In addition, disclose whether accrued retrospective premiums are recorded through written premium or as an adjustment to earned premium.

14. The financial statements shall disclose the calculation of nonadmitted retrospective premium. If a reporting entity chooses treatment described in paragraph 10.c. or 10.d., the appropriate exhibit must be

included in the notes to financial statements in the Annual Statement. Once a reporting entity has elected either 10.c. or 10.d., a change from one to the other requires approval from the reporting entity's domiciliary state and such change must be disclosed in the financial statements.

15. The financial statements shall disclose the following amounts for medical loss ratio rebates required pursuant to the Public Health Service Act for the current reporting period year-to-date and prior reporting period year: incurred rebates, amounts paid and unpaid liabilities segregated into the following categories: individual, small group employer, large group employer and other. In addition, the impact of reinsurance assumed, ceded and net on the total medical loss ratio rebate shall be disclosed.

16. Refer to the Preamble for further discussion of the disclosure requirements.

Relevant Literature

17. This statement rejects *FASB Emerging Issues Task Force No. 93-14, Accounting for Multiple Year Retrospectively Rated Insurance Contracts* (EITF 93-14) since it applies only to multiple-year retrospectively rated contracts. The statutory principles outlined in the conclusion above are consistent with the guidance provided for accounting and retrospectively rated contracts in *FASB Statement No. 60, Accounting and Reporting by Insurance Companies* (FAS 60) and EITF 93-14, with the exception of the requirement to record certain amounts as nonadmitted. Although FAS 60 is rejected in *SSAP No. 50—Classifications of Insurance or Managed Care Contracts* and EITF 93-14 is rejected in this statement, it is considered appropriate that the accounting for retrospectively rated contracts be consistent with those provisions of both FAS 60 and EITF 93-14 as they are consistent with the Statement of Concepts.

Effective Date and Transition

18. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

RATING AGENCIES

(S. Feldblum, 3 Oct 2011)

INTRODUCTION

Rating agencies provide two types of ratings: credit ratings for corporate, municipal, and government bonds and financial strength ratings for life and property-casualty insurers. Credit ratings for bonds are the primary work for Standard and Poor's, Moody's, and Fitch; insurance ratings are primary for A. M. Best's. This syllabus reading focuses on insurance ratings, though it provides background information for credit ratings as well.

Bond ratings make securities markets more efficient by reducing information costs for investors and creditors. Securities underwriters and bond buyers expect issuers of bonds to obtain ratings from one or more agencies. A poor initial rating raises the yield needed to sell the bond, and a ratings downgrade may lower a bond's market value.[1] If the debt is held by a bank (not publicly issued), the debt may be recalled if its rating falls below investment grade status. The firm issuing the debt may be forced to sell assets or cease operations.

Similarly, financial strength ratings make insurance markets more efficient by reducing information costs for agents and policyholders. These ratings are particularly important for insurers, assessing their ability to meet their claims obligations. Reinsurers may need investment grade ratings to retain consumers; independent agents use ratings to place policies with higher rated insurers. Ratings have entered even into regulatory and legal arenas. The Securities and Exchange Commission designated Moody's, S&P, and Fitch as *Nationally Recognized Statistical Rating Organizations* who can provide ratings for certain securities regulations; other agencies have since been added. The NAIC Statement of Actuarial Opinion requires the Appointed Actuary to consider the ratings of reinsurers when evaluating uncollectible reinsurance recoverables. Some Canadian courts require A ratings for insurers writing life annuities to fund structured settlements.[2] Some insurance departments require an insurer to have an A- or better rating to write surety business. Statutory accounting values bonds with ratings of BB (Ba) or lower at market value, not amortized value. Risk-based capital (RBC) bond charges depend on the bond class, which is based on ratings by Moody's and S&P.

Recent downgrades of highly rated debt, such as triple-A rated mortgage-backed securities in 2008-2009, and failures of some highly rated firms (Enron, Worldcom, AIG) have evoked criticism of rating agencies. A 2006 law now requires extensive disclosure of rating agencies methods, to help investors and creditors understand how agencies determine the ratings. The oligopolistic nature of the rating agency industry and the (perhaps) greater efficiency of free markets in determining bond yields has provoked questions about the use of ratings.

STRUCTURE OF THIS READING

This reading is geared to candidates for the CAS exams. It focuses on financial strength ratings of property-casualty insurers, with background information about bond ratings in other industries. It presents alternative views on disputed issues, such as the structure of the rating agency market: do the agencies make insurance markets more efficient by providing information that is hard to obtain or do they mimic public information?

Section 1 explains how rating agencies help policyholders and agents by assessing the financial strength of insurers and their ability to pay claims years in the future. (Bond ratings affect coupon rates and issue prices; they are not the same as financial strength ratings.) Rating agencies can influence the capital structure, reinsurance arrangements, and business volume of their insurer clients.

Section 2 explains the ratings process: review of public data by ratings analysts, interactive meetings where insurers' managers portray themselves in favorable hues while providing hard data for the analyst's report, and decisions by the ratings committee. Rating agencies balance objective, quantitative data that is consistent across insurers and qualitative information that reflects unique attributes. The agencies combine research by ratings analysts with the experience of ratings committees.

Section 3 explains why ratings are vital for many property-casualty insurers: professional valuations of financial strength are efficient, many outside parties rely on the ratings, and few insurers are still unrated. High ratings are important requirements for reinsurance, surety, structured settlements, Homeowners, and some specialty lines. Many parties to insurance transactions, such as banks providing mortgages, property owners hiring building contractors, courts directing structured settlements, and clients of foreign reinsurers demand products from highly rated insurers.

Section 4 describes the meetings of ratings analysts with the insurer's senior managers. The topics discussed focus on qualitative information not available from public data: corporate form (holding companies, affiliates), capital structure (debt-to-equity ratios); information flow between executives and line personnel; strategic objectives (growth vs profitability; standard vs niche markets); financial goals (risk adjusted return on capital, economic value added); recent acquisitions and divestitures (business synergies; cost savings; integration of corporate cultures); competitive strategies for underwriting, pricing, and distribution systems (strengths and weaknesses vs peers; unique attributes of insurers); reinsurance arrangements and catastrophe exposures.

Section 5 examines salient attributes of rating agency capital standards: risk measures, stochastic models, and principles-based systems. Capital standards provide benchmarks for rating analysts and objective measures for insurers. They differentiate the agencies' methods, providing actuarial validation for the ratings and marketing tools to attract clients. They use up-to-date financial modeling: expected policyholder deficit and statistical distributions for risk measures, economic scenario generators for asset liability management, and discounted cash flow modes for reserving risk. Rating agency capital standards are now widely used for economic value added and return on risk adjusted capital, replacing the leverage ratios used previously.

Appendix A distinguishes financial strength ratings for insurers from debt ratings. A. M. Best's has the longest experience with insurer financial strength ratings; S&P, Moody's, and Fitch provide most debt ratings.

Appendix B covers the history and growth of the rating agencies. The advent of non-investment grade bonds in the late 1970's, the increase in sovereign debt since the early 1980's, and SEC rules led to rapid growth of the rating agencies in the past 30 years.

Appendix C reviews public perceptions of rating agencies: impartial judges of credit worthiness whose analysis of financial strength move markets or an oligopoly protected by barriers to entry paid by the firms they rate.

Appendix D provides exercises to help readers grasp the themes of this reading. The exercises give examples of the statements in the text of the reading.

SECTION 1: RATING AGENCIES PROVIDE MATERIAL BENEFITS TO INSURANCE POLICYHOLDERS

Policyholders depend on the financial strength of insurers to fulfill long-term promises, but lack the expertise, resources, and time to examine insurers themselves. Rating agencies hire financial analysts, actuaries, and economists to assess the financial strength of insurers. Interactive meetings with senior insurance managers give them propriety information about operating strategy and competitive advantages. The willingness of insurers to pay for ratings and of agents and investors to base business decisions on these ratings testify to the public acceptance of the ratings. Firms pay handsomely to keep high ratings.[3] Insurers may spend $1 million a year (or more) on ratings, consisting of fees to rating agencies and internal costs to prepare for rating agency meetings.[4]

Some recent studies suggest that rating agencies do not respond as quickly as the bond and stock markets. Market traders immediately assess a firm's financial strength, whereas rating agency analysts may not respond for months. New information about a firm's operating performance leads to quick changes in stock values. In contrast, agency downgrades are slower; agencies prefer to wait until they verify their information.[5]

Illustration: An insurer with a $200 million market value has $800 million of bonds with average durations of six and a half years. If interest rates rise 200 basis points, the insurer's market value declines $100 million.

Investors bid down the insurer's stock price, but rating agencies may not downgrade the insurer for half a year. An insurer's investment portfolio is detailed in its Annual Statement, which is updated annually. The rating agency does not evaluate the insurer as quickly as investors do, and it may wait to downgrade the insurer to see if interest rates turn down.[6]

Section 2: Ratings Process Combines Quantitative Data with Qualitative Valuations

Insurers are rated for their claims-paying ability, often to meet requirements of agents, banks, consumers, and courts. Unrated insurers can be at a disadvantage: independent agents hesitate to use them and some banks do not issue mortgages without property coverage from a rated insurer. Over 90% of insurers are rated by A. M. Best's or another agency, and Best's surveys are widely reviewed in the insurance industry. Insurers who do not pay for interactive ratings may receive public ratings, with less control over the information reviewed by the agencies and greater chance of errors.[7]

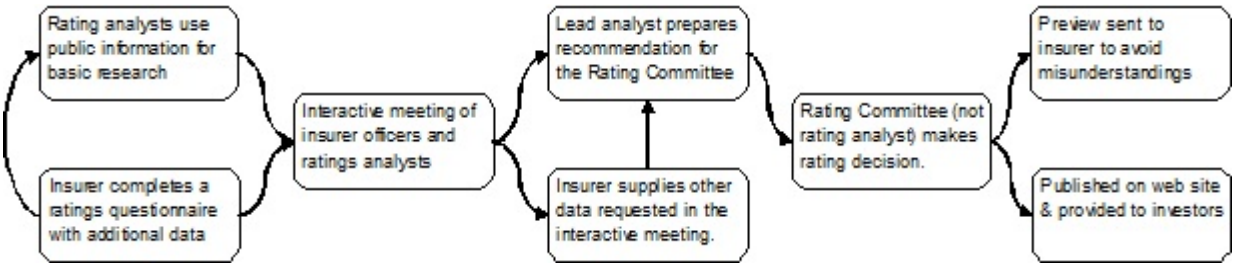
The ratings process is intrusive, time-consuming, and expensive. Ratings analysts meet with insurer officers responsible for underwriting, reserving, reinsurance, financial reporting, investments, risk management, and the insurer's major lines of business. The insurer's business strategy and internal management are clues to its resilience against adverse scenarios. The agencies focus on the quality of an insurer's managers and business strategy, They do not judge if a particular underwriting or investment decision was wise, as random fluctuations and market movements distort observed results. They focus on the insurer's managers: their knowledge of industry trends, their experience with adverse scenarios, and their handling of current problems.

Insurers decide the substance of their presentations, and they select the information they provide to agencies. Rating analysts may question the insurer's views, but they generally avoid specifying the data they want. They evaluate the integrity of their clients: deceptive, misleading, or incomplete information may lead to poor ratings.

An interactive rating has five steps:

1. Background research by the ratings analyst and submission of proprietary data by the insurer.
2. Interactive meetings between ratings analysts and senior managers of the insurer.
3. Preparation of ratings proposal by lead analyst and submission of additional data by the insurer.
4. Decision by the ratings committee after presentation by the lead analyst.
5. Publication of rating on public web sites and provision of analysis to fee-paying subscribers.

Background to an interactive rating



1. Public ratings rely on public data only, with no input from the insurer; interactive ratings rely also on proprietary data and meetings with the insurer's senior managers. If an insurer pays for an interactive rating one year but does not want an interactive rating the next year, the agency may issue a public rating based on published financial statements, SEC filings, earnings reports, and similar data. An insurer expecting a downgrade may refuse an interactive rating, but the agency may proceed with a public rating to inform investors (and other audiences) that the previous rating is no longer valid.[8]

Most insurers have financial strength interactive ratings, often from two or more agencies. An insurer already rated by A. M. Best's may request another rating from S&P, Moody's, or Fitch, for several reasons. The insurer may want to issue debt through a holding company and seeks a rating from an agency with more experience in debt ratings; it may be publicly traded and wants a rating from an agency better known to investors; it may be dissatisfied with its current rating and believes the second rating will be higher.

The insurer prepares a presentation for the interactive meeting consistent with the agency's outline.

The rating agency assigns an analytical team to conduct basic research, using data from the insurer's Annual Statements and GAAP reports of recent years: reserve estimates from Schedule P, reinsurance recoverables from Schedule F, investment portfolio from the asset schedules. The analysis is *not* shared with the insurer; it serves as a check on the insurer's forthrightness and integrity and is used where the insurer's submitted data are absent or dubious.

Public data are rarely sufficient for ratings analyses. For example, reinsurance data do not show attachment points and limits of in-force treaties; investment schedules have scant data on derivative securities; reserving schedules do not show the segmented data that insurers use for their estimates. Rating agencies ask insurers to disclose underwriting, reserving, investment, and operating performance along with supporting data.

Rating agency analysts generally specialize by industry.[9] The rating team has a lead analyst familiar with the lines of business written by the insurer and one or more specialists. For example, if the insurer writes property exposures in Gulf Coast states, an analyst with expertise in windstorm models may join the team. If the insurer writes long-tailed lines of business, one analyst may be an actuary to prepare reserve analyses.

The rating agency requests certain presentations at the interactive meeting. Some are generic, such as business strategy and risk concentration guidelines, with a focus on information flow: how results are reported to executives and how directives are passed down to underwriters. Other topics are specific to insurers writing certain lines, such as how asbestos claims are handled or what reinsurance is used to control windstorm exposures. The insurer decides on the content of the presentation and may add additional topics.

For an initial meeting, rating agencies ask insurers to provide extensive background material. Some agencies provide checklists, to ensure complete information. The common types of requested information are

- Statutory Annual Statements and GAAP financial statements for past five years.
  - Quarterly financial statements for the past year, if available.
- History of the company focusing on major events, such as mergers, acquisitions, and expansions.
  - Biographies of senior executives with their insurance industry experience.
- Investment strategy, policy, and guidelines, and
  - How the investment committee of the Board of Directors reviews investment department activities.
- Organizational charts covering corporate structure and senior manager reporting relations.
  - Capital structure showing debt issues by holding companies and affiliates.
- Product descriptions and business strategy for each line.

The substance of the qualitative information varies greatly. Business strategy by line may be a paragraph for one insurer and a report for another. Rating agencies evaluate how insurers respond to the requests for information: does the insurer honestly compare its performance with that of its peers or does it provide summary figures that are already publicly available?

The interactive meeting is like an intricate dance: the rating agency seeks the insurer's knowledge of its risks and potential liabilities, and the insurer seeks the agency's view of its financial strength. The agency reviews Schedule P figures but wants also the insurer's reserve estimates, especially for exposures that are hard to estimate from publicly available data. During the interactive meeting, it compares the insurer's estimates with its own valuations from public data. The public data are used to evaluate the integrity of the insurer. If the

insurer's workers' compensation reserve estimates agree with Schedule P figures, the rating agency is more likely to trust its asbestos and pollution reserve estimates.

For example, the rating agency adjusts reserves in long-tailed lines for adequacy and discounts them at a conservative discount rate. But reserve adequacy, investment yields, and loss payment patterns differ among insurers, so the rating agency wants the insurer's analyses of reserve adequacy and discounting methods.

If the insurer has long-term debt through a holding company, goodwill, or substantial deferred tax assets, the rating agency computes net income after debt payments and taxes and re-states leverage ratios as a function of tangible equity capital.

An insurer should not withhold potentially damaging data that the analyst does not request. An insurer who strengthens year-end reserves after assuring a rating agency that its reserves are adequate loses credibility and worsens the agency's reputation with investors. The agency may place the insurer on a ratings watch until its next meeting, and it is less likely to trust the insurer's future reserve estimates. For insurers who need ratings each year, it is almost always better to inform agencies of likely problems before they become evident.

Illustration: Rating agencies use industry ratios of asbestos loss reserves to annual loss payments in recent years. If an insurer presents exhibits with low ratios that are not supported by data, the exhibits may not be presented to the rating committee. Some insurers tell rating analysts that the analysis is confidential and can not be shared. The analyst will not demand more information. But the analyst gives the rating committee a conservative (worst-case) estimate from industry figures, rather than the insurer's figure. The estimate reserve is usually greater than the insurer's own figures.

An insurer's officers are reluctant to disclose weaknesses, and their lack of candor may harm the rating. Undisclosed credit problems that lead to future write-offs ruin the insurer's credibility and may contribute to ratings downgrades. Informing rating agencies of expected write-offs of receivables before they occur may keep a good rating. Rating agencies who learn of adverse developments from the trade press after the management meetings often downgrade the offending firm.

Some insurers use a dry run with a ratings advisor. Financial underwriters such as Morgan Stanley serve as ratings advisors for firms issuing new debt, and actuarial consulting firms perform a similar role for insurers. The advisor takes the place of the rating agency, meets with the insurer's senior managers, and tells them its impression of their presentation. The insurer's managers may learn that their reticence harms the agency's view of their integrity, and that they must supply hard data to support a high rating.

A rating committee decides the rating; the rating analyst presents the insurer's data to the committee.

To promote consistency, the actual rating decision is made by a ratings committee, not an individual analyst. Rating analysts have different views on financial strength and rating factors. The lead analyst prepares a rating proposal for the committee, but the rating decision comes from the committee.

The rating committee has no permanent members; it is formed anew for each case from senior members of the agency. The insurer does not know its members, to avoid improper inducements. The ratings analyst is an intermediary, summarizing public data and proprietary information from interactive meetings into a report to the committee. The analyst may prepare an initial rating that is reviewed by the committee. Analysts are flexible in meetings with insurers, letting insurers volunteer information instead of eliciting data by intrusive cross-examinations. Some insurers mistakenly think that an analyst's acceptance of an unsupported assertion is a positive sign. But the rating committee relies on hard data. Experienced insurers provide the analyst with convincing data supporting their story.

Agencies generally use a top-down approach, starting with economic and industry forecasts and proceeding to the insurer's position among its peers. The committee evaluates underwriting cycles by line of business and

then the insurer's own performance, risks, and management quality. The industry evaluation is made by senior officers of the rating agency, bringing more consistency into the ratings.

The rating analyst is the insurer's advocate, and the insurer makes certain that he or she has the necessary supporting data. Knowledgeable insurers provide the rating agency analyst with the data needed for the report to the rating committee. The interactive meeting between the insurer and the analyst is the preparation for rating meeting between the analyst and the committee. Tangential material, such as slide presentations that are not backed by hard data, are not presented to the committee. Analysts collect data and information about the insurer to present to the rating committee. Analysts who receive inconsistent or incomplete data may present the information to the rating committee in a less favorable manner.

Ratings and outlooks

The committee decides on ratings by majority vote, though opinions of senior officers of the agency are often followed. But agencies hesitate to change ratings too quickly. Erroneous downgrades anger clients, who pay the agency's fees; erroneous upgrades ruin the agency's reputation with investors and agents.

Agencies delay down-grades by repeating the current rating with a negative outlook for several months. They reduce the rating only if the insurer can not raise capital or otherwise assuage the committee's concerns.

Initial ratings may be private or public; subsequent ratings are generally public. The rating agency informs the insurer of the committee's decision. If the insurer requested an initial rating and the agency has not previously rated the insurer, the insurer either agrees to a press release or requests that the rating be kept private. Decisions of the committee are appealed only if the insurer believes a material error was made and provides data correcting the error.

If the agency has previously rated the insurer, the rating is posted on the agency's web site and released to the press. Initially, rating agencies required subscriptions to their ratings and charged subscribers for the rating information. But information travels fast in efficient capital markets and most users need only summary figures (such as the letter rating). Rating agencies now freely provide basic information, such as the letter rating, and require subscriptions for more detailed assessments of insurers' solvency.

Section 3: Ratings Are Essential for Many Property-casualty Insurers

Almost all insurers are rated, compared to a small percentage of firms in other industries; some large insurers have ratings from two or more agencies, despite their high cost. Other firms need ratings if they issue debt securities or are publicly traded. Most insurers have no debt and are not publicly traded, yet almost all are rated, for three reasons: (i) agents are wary of unrated insurers, since they might be financially distressed, (ii) third-parties rely on outside assessments of insurer solvency, and (iii) rating agencies are efficient at assessing financial strength.

Unrated insurers: In other industries, most firms with no debt have no ratings. But almost all insurers are rated, except for new firms. It is less expensive to pay for a rating than to demonstrate financial strength individually to others.[10]

Reliance by consumers and third parties: Independent agents use ratings to select insurers, and insurers use ratings to select reinsurers. Agents might be sued for providing insurance from a financially weak insurer. Reinsurance officers at primary insurers must evaluate the ability of reinsurers to pay obligations years in the future. They rely on commercial ratings, and an unrated reinsurer might not even be considered.[11]

Efficiency: Evaluating financial solidity requires expertise and extensive data. Most agents, underwriters, and even some regulators do not have the time, experience, or resources of the rating agencies to thoroughly research the financial condition of all insurers.[12]

High ratings are important for certain lines of business.

Financial ratings are particularly important for reinsurance, surety, structured settlements, homeowners, and some specialty lines. Insurers with low ratings are not able to compete in certain markets. Rating agencies assess financial risk efficiently and reduce costs when safety is essential. Third parties who rely on insurance coverage often demand that the insurer obtain a rating, as the paragraphs below describe.

Reinsurance is a global market, and many reinsurers are not licensed in the United States. Excess-of-loss coverage is long-tailed, and reinsurers are exposed to catastrophe and other large claim risks that are hard to foresee. Primary insurers need to assess the financial strength of reinsurers to balance premium vs credit risk. Strongly capitalized reinsurers may charge higher prices; some reinsurers provide letters of credit or other collateral to secure their obligations, but the security is expensive; weakly capitalized reinsurers may charge low premiums. A primary insurer can use the reinsurer's rating as one tool to assess the financial strength of the reinsurer. Small reinsurers with A ratings can compete with larger peers. A large reinsurer that is downgraded below investment grade may not be able to renew its treaties.

Illustration: Scor Re was the ninth largest global reinsurer in 2001. After large losses in 2001-2002, its net worth declined 70%, and its rating dropped to BBB– by the end of 2003, below the A– level normally expected of large reinsurers. It could not renew treaties with primary insurers outside its home country, and it left several reinsurance markets.[13]

Some reinsurance treaties explicitly link ratings and security. A treaty with a downgrade clause may specify that if the reinsurer fails to maintain an certain rating, such as A- or better, it must deposit funds covering its obligations or provide letters of credit as security. The downgrade clause benefits both parties: the reinsurer avoids the costs of collateral as long as it maintains its rating, and the primary insurer gets collateral to cover reinsurance recoveries if the reinsurer cannot meet its obligations.

Insurance often provides security to a third party. For example, a *surety* ensures that a construction firm will complete a project. Many sureties are specialized firms, exposed to high surety losses in recessions. Principles may require construction firms to obtain surety contracts from A rated companies. The cost of examining the surety's finances and risks are incurred by the rating agency, not by each principal. The rating also reduces the surety's costs. Instead of reducing prices or advertising heavily to persuade principals of its financial stability, it provides its rating.

Banks require property insurance to issue mortgages, often requiring that they be listed in the policy as payees up to the amount of the mortgage. As a lien-holder, the bank receives the insurance payment if the property is destroyed. The banks can not independently verify the financial strength of the insurer, so they rely on commercial ratings.

Personal property is subject to natural catastrophes. An insurer with excessive risk (high concentration of exposures in coastal areas with inadequate reinsurance arrangements) may become insolvent after a hurricane and unable to pay claims to banks providing mortgages. It is too expensive for banks to assess the solidity of each insurer. Instead, banks may require Homeowners coverage on mortgaged properties from insurers with investment grade ratings, relying on rating agency's risk evaluation.

Structured settlements indemnify accident victims by periodic payments, often funded by life annuities. These settlements are particularly important for young children or persons incapable of handling large sums of money. The casualty insurer paying the structured settlements may buy a life annuity from a life insurer to fund the payments. To ensure that claimants receive secure funding, some Canadian courts require structured settlements from A rated insurers, and plaintiff attorneys often make similar demands in the U.S. Courts and attorneys can not independently judge the financial strength of insurers, and they rely on commercial ratings.

SECTION 4: THE INTERACTIVE MEETING WITH THE INSURER'S SENIOR MANAGERS

The rating agency sets the agenda for the interactive meeting, with the insurer providing the substance. The rating agency expects to meet with senior managers for investments, underwriting, finance, actuarial, and reinsurance, as well as with the chief risk officer. Organizational, management, and capital structures, operating characteristics, business objectives, financial goals, reinsurance arrangements, and competitive strategy are major elements of interactive meetings. An insurer with much debt issued by a holding company can expect extensive analysis of its capital structure and associated risks, and a stand-alone monoline medical malpractice insurer can expect a focus on its reinsurance arrangements.

Interactive Meetings Focus on Qualitative Issues Not Available from Public Data.

Quantitative data, such as operating income, combined ratios, and investment yields, are not always ideal predictors. Underwriting cycles, asset volatility, and catastrophes affect past performance but may not affect an insurer's future returns. Rating agencies stress qualitative aspects of insurers' strengths and weaknesses, such as business strategy and management expertise.

Many qualitative attributes, such as exclusive sales forces, high name recognition, and reputations for honest claim settlement are expensive to develop and have uncertain benefits. Rating agencies judge the costs vs potential rewards of developing qualitative attributes. For example, acquisitions and mergers have uncertain benefits and high costs; they may lead to a ratings upgrade by one agency and a downgrade by another. In 2010, after multi-billion dollar investment losses and a government bail-out, AIG sold parts of its international operations to Prudential (a British life insurer) and Metropolitan Life (a New York life insurer) at prices favorable to the buyers. Most analysts viewed the acquisitions positively for Prudential and MetLife, who replaced AIG as global leaders. But Moody's changed its outlook on MelLife to negative after the deal, issuing a press report that the acquisition may not produce the anticipated synergies.

Qualitative attributes must be objective and measurable.

Underwriting expertise is critical for insurance operations, but rating agencies can not easily judge underwriting expertise. Quality of claims service is subjective; rare is the insurer that does not say its quality is best. Brand names may lead to greater consumer persistency and high renewal rates. But brands are more important for industries with high profit differentiation. Many consumers view insurance as the same from all firms. Brand loyalty may lead to high renewal rates but not to better new business. Economies of scale may reduce costs from larger volume of business. Insurers serving small niche markets may have lower ratings, unless they show long-term higher profits from greater underwriting expertise. But large insurers must show measurable effects of size to improve their ratings.

Organizational structure: Does the insurer have subsidiaries or affiliates; is it owned by a holding company? Are subsidiaries and affiliates used for pricing (different rates by legal entity), are they intended for operations in specific states or countries, or were they formed to handle discontinued business (asbestos, pollution)? An outline of the insurer's organizational structure can be gleaned from public documents, but the reasons for the different entities is not shown. Rating agencies are especially concerned about off-balance sheet liabilities for debts of affiliates. They first evaluate each legal entity, and then raise or lower the rating for benefits or liabilities of the corporate group. For example, a U.S. insurer that has a Japanese subsidiary and guarantees its liabilities to satisfy Japanese regulators faces risks that a domestic-only company does not have.

Capital structure: Many insurers are financed by equity only; others have complex capital structures. Topics discussed in rating meetings include: Is the insurer owned by a holding company that has issued debt? Is the debt guaranteed by the insurer's assets? Has the insurer or holding company issued hybrid securities, with debt characteristics but treated as equity in statutory accounting? Has the insurer secured loans by affiliates or subsidiaries? Have subsidiaries gone bankrupt without being bailed out by parents? What is the coupon rate on the holding company debt? How much of statutory capital is intangible (goodwill, deferred tax assets)?

The relevant financial ratios depend on the capital structure. Agencies examine net income after taxes, debt, and lease charges. The debt may be issued by a holding company, an affiliate, or a subsidiary, and it may not be evident on the insurer's own financial statements. If the insurer has intangible capital, as is often true after an acquisition, the rating agency computes its ratio of debt to tangible capital to ascertain its financial leverage.

Management structure: How long have senior managers worked in the insurance industry? Are business lines and branch offices relatively independent, or do home office managers control major underwriting decisions? Are line operations separate from staff operations, or do business units operate as small insurers with internal staff support? For example, does personal auto have its own actuarial, finance, and claims staff?

No one structure is necessarily better than others. Rating agencies focus on how quickly senior managers learn of emerging risks. For example, accelerating medical inflation may cause persistent losses in several lines of business. Separate management for each line may help underwriting flexibility, but senior managers must be able to assess overall enterprise risks.

Strategic objectives: Insurers have different objectives and business strategies. Some insurers seek continued growth, even at the expense of short term losses; others seek stable profits even at the cost of lower market share. Rating agencies ask: Does the insurer follow market prices through hard and soft markets? Does the insurer seek niche markets? Does it have a strong brand name? Does it stress low cost for its products?

Size and efficiency are important, and rating agencies evaluate market share, competitors, and government licensing as an exclusive distributor. Efficiency may increase market share, which leads to further benefits. In the United States, low acquisition costs and independent pricing by personal lines direct writers led to their dominance of personal auto and homeowners, economies of scale, and further cost reductions.

Market share growth from lower prices is a two-edged sword. Rating agencies are wary of rapid growth that is not justified by other insurer attributes. Interactive meetings are essential for judging qualitative attributes, since the rating agency relies on the insurer to interpret the observed data. Rapid market share growth is good if it reflects superior products and bad if it reflects underpricing. The insurer must demonstrate that its growth rests on successful business strategies and validate them by actual performance. An apparent advantage with poor operating results means the insurer can not convert favorable attributes into market growth or profits.

Agencies focus on coherence of strategies and insurers' ability to attain them. Insurers with costly distribution system might focus on niche markets with alternative distribution systems for target consumers, not on price competition for generic products. Insurers accepting low returns to gain market share should be able to demonstrate the long-term rationale for this strategy and their ability to withstand short-term losses.

Financial goals: Insurers and rating agencies use a variety of performance measures. Financial statements show statutory and GAAP earnings, and many insurers compute some type of economic income. Rating agencies ask: Does the insurer target return on statutory surplus, GAAP equity, or invested capital? What financial measures are used for performance measurement and manager bonuses? How closely have actual returns matched target returns in past years? How do the target returns compare with industry averages? How does the insurer estimate economic income? Does it use economic value added (EVA) or risk adjusted return on capital measures (RAROC)?

Acquisitions: Profitable insurers have the money for good acquisitions, which lead to further profits. Some large insurers achieved their dominance by fleets of inter-related companies built from sensible acquisitions. But acquisitions can be as harmful as they are helpful. Fewer than a third of corporate acquisitions increase the market value of the combined entity. Acquisitions may cause downgrades if the agency doubts the insurer can absorb the new firm into its culture or if expected synergies offset costs. An acquisition may fail to produce the expected benefits, and rating agencies look closely at complex corporate transactions.

Insurers may discuss potential acquisitions with rating agencies to avoid actions that may spark a downgrade. After the acquisition, they provide data showing expense reductions, division of responsibilities, and smooth transition of the new managers into the parent firm.

Rating agencies closely examine acquisitions that strain the resources of the parent. They ask: How well have past acquisitions been integrated? Does the insurer contemplate further acquisitions? Even good acquisitions prompt rating reviews, since anticipated synergies often dissipate before they are realized.

Diversification may reduce insolvency risks, but it must be balanced against core competencies.

Diversification smooths income and reduces solvency risk, but may reflect a straying from core competencies. Geographic spread of risk is essential for catastrophe perils, such as hurricanes for homeowners or terrorist attacks of office buildings for workers' compensation. If the insurer has underwriting expertise in each region, the geographic spread of risk reflects better agent placement. Single state insurers rarely receive the highest ratings, unless they are exceedingly well capitalized or are part of a larger insurance fleet.

Diversification by product is reasonable only if it is done for underwriting purposes. Insurers, like other firms, focus on core strengths where they have underwriting expertise and cost advantages. Expansion to new lines is risky: high costs of new business, lack of expertise, and costs of new distribution systems. Rating agencies examine insurers with much new business to judge if synergies with existing business justify the expansion.

Some rating agencies emphasize core competencies more than diversification. Insurers with well-structured exclusive agency or direct marketing systems need not use other distribution channels. Multiple distribution channels sometimes cannibalize each other, with growth in one channel coming from declines in others.

The ideal qualitative attributes are product innovations that are not easily copied.

Good qualitative attributes differentiate an insurer and are not easily copied. In other industries, successful firms may have patents and trade secrets. In food industries (soft drinks, chocolates), firms may even avoid patents to keep their formulas secret. Brand names and patents do not always reflect objective differences. For example, consumers of beer and cigarettes are loyal to particular brands even if they can not distinguish the brand in blind tests.

Insurance policies, class plans, and rates are public information that are easily copied and cannot be patented. For example, medical payments coverage in personal auto, homeowners, and general liability provide first aid treatment to accident victims and have high appeal. They cost little because of their low limits and may even reduce costs by preventing bodily injury claims. But the coverages are now offered by all insurers. Rating agencies may not view coverage innovations as a persisting qualitative attribute.

Class plans are best if they are not easily copied. Generalized linear models gave some insurers long-term advantages because their peer companies did not have the actuarial and statistical expertise to replicate the plans. More refined class variables, such as more age distinctions in personal auto, are easily copied and have less long-term value. The first insurer to use a new class variable, such as credit rating in personal auto, may build a profitable block of preferred business. High market share with strong policyholder loyalty (many renewals) may lead to long-term profits.

New product designs, such as package policies (homeowners and small businessowners), high deductible liability coverages, claims-made professional liability; and various specialty coverages, give the first insurers several years of high profits. Low cost generic products with high returns on capital, such as personal auto policies with discounts for good credit scores, and differentiated products with premium pricing, such as high deductible policies in states with large workers' compensation residual markets, were ideal product innovations. Their success lead eventually to copying by others, but they provided strong competitive advantages for the insurers who first sold them. But policy forms are filed with states, publicly known, and not patented. Many new product designs have little effect on long-term profits.

Optimal operating (underwriting) characteristics depend on the insurer's lines and business strategy

Rating agencies stress balance sheet strength (including loss reserve adequacy) and operating performance. They emphasize balance sheet strength for writers of short-tailed lines of business with high catastrophe risk. They emphasize stability of annual earnings for writers of long-tailed lines with high reserving risk.

Underwriting is the core of insurance operations. The pricing and underwriting standards that underlie an insurer's strategy are not easily quantified. The insurer's task is to persuade the rating agency that competitive strengths will persist and weaknesses will be corrected.

Rating agencies judge insurers against their peers and set objective criteria for consistent evaluations. All insurers say they underwrite carefully and provide excellent service; these assertions carry little weight. Rating agencies evaluate the coherence of the insurer's strategy. Products geared to specific markets with profitable risk-adjusted returns on capital indicate a sustainable business strategy.

Rating agencies have financial ratios for each insurer: combined ratios, investment yields, and pre-tax net income. Interactive meetings allow rating analysts to evaluate the underwriting and pricing characteristics that provide competitive advantages to the insurer. The paragraphs below summarize the operating issues normally covered in the interactive meetings.

Lines of business: What competitive advantages does the insurer have in its major lines of business? How do niche markets (earthquake insurance, substandard auto, surety, excess layers) fit with the major lines? Does the insurer sell package policies to select policyholders?

Pricing: Rating agencies evaluate pricing strategy, not specific techniques: does the insurer target high or low quality insureds? Insurers targeting high quality insureds may reduce the price based on conservative underwriting and focus on high persistency for long-term profits. Insurers targeting low quality insureds may increase the price to cover higher than average losses and focus on underwriting standards that weed out bad risks. In many lines, high cost insureds have higher risk but higher margins. Low cost insureds have low risk but low margins.

Underwriting controls: In long-tailed lines of business, pricing and underwriting errors may compound over many years. Rating agencies want to know what feedback line underwriters get. For long-tailed lines, how quickly do they learn their policy year results? For lines with catastrophe exposure, do they know their contributions to tail value at risk before catastrophe events occur?

Insurance losses are often settled years after policies are written, and underwriting managers may not have good measures of profitability. Actuarial bulk reserves, excess-of-loss reinsurance costs, and costs of holding capital must be allocated to underwriting offices so that line managers can estimate ultimate results.

Illustration: An umbrella underwriting unit often has favorable policy year combined ratios on direct business, since losses emerge slowly and may not be recognized for years. Rating agencies judge whether bulk reserve estimates, reinsurance costs, and the costs of holding additional capital for umbrella policies are provided to the manager of the umbrella underwriting unit and used to assess the return on capital.

Long-term strategy: Rating agencies stress the strategic considerations affecting long-term profits. How does the insurer expect to outperform its peers? What are the insurer's strengths and weaknesses? How well does the insurer know the strategy of its peers? Does the insurer target niche markets, or does it compete on cost for all insureds?

The rating agencies use a multi-stage analysis: industry, line, and insurer. They evaluate first the prospects for the property-casualty insurance industry based on expected investment yields and underwriting returns. Bursting of a housing bubble and widening credit spreads in 2007-2008 led agencies to downgrade insurers with exposure to mortgage-backed securities and corporate bonds (much of the industry).

Rating agencies evaluate prospects for each line of business based on its likely growth, current capitalization, and insurers' negotiating power with their consumers and suppliers. For example, workers' compensation for manufacturing firms faces declining revenue as workplace hazards decrease. Insurers that served traditional manufacturing firms face severe contraction unless they have feasible strategies for alternative markets. The third stage focuses on the individual insurer, evaluating its competitive advantages relative to its peers.

Distribution systems: Supplying products to consumers is expensive: insurance acquisition costs may be 20% or more of premium. Efficient systems reduce costs and improve marketing control, but they require high up-front investment, such as subsidies to exclusive agents in their early years, discounts for insurance coverage sold through banks, discounts for insurance sold through voluntary associations, advertising campaigns to establish brand names, direct response insurance sales to avoid agency costs, and participation in internet web sites. Initial expenses lower current profits but may improve the insurer's future profits.

Rating agencies stress control, cost, and consumer access. Does the insurer control its distribution system (exclusive agents, direct marketing) or does it work through independent agents and brokers? Are its costs lower or higher than those of its peers? What are the conversion ratios (new policy sales over quotations) and renewal ratios by line? Does the distribution system reach the target market?

Control: Exclusive agents give insurers control over their consumers: they better select markets and classes and retain insureds. The agent is an employee of the insurer, and the insurer own the rights to renewals. The insurer decides the marketing strategy and targets consumers. It can price higher without fear that agents will switch consumes to competitors; it can price lower to gain market share and retain the renewals.

In contrast, independent agents own their renewals and can switch policies to competing insurers. They avoid insurers in financial distress, lest they be responsible for policyholder losses. An unexpected loss from stock market declines, the effect of a hurricane on the insurer's capital, or adverse reserve development may result in a ratings downgrade, leading agents to switch policies to higher rated peers. The lower business volume and a perception of financial weakness may also encourage agents to avoid the insurer.

Rating agencies consider the control that *direct writers* have over their business. A direct writer can more easily change its mix of high vs low cost homes or urban vs rural autos to meet perceived risks. Quantitative data may not show poor performance in the current year, but lack of control over consumers may hurt future results. The following paragraphs describe how rating agencies balance attributes of distribution systems.

Cost: Independent agents have high costs. Exclusive agency forces are expensive at first, requiring multi-year subsidies for new agents to set up offices, but they have high retentions at low cost in subsequent years. Independent agency insurers rarely adopt exclusive agency systems, lest their current agents switch business to competitors. Exclusive agencies reduce costs for long-persisting lines (personal auto, homeowners, small commercial) by their low renewal commissions. Similarly, direct marketing has low variable costs and works well for insurers who dominate markets, but it may have high fixed costs (advertising) and low response rates.

Consumer access: Internet sales are low cost, but they may not provide access to preferred consumers. Visitors to insurance web sites are often high cost insureds unhappy with their current premiums. The insurer lacks screening by the sales agent. Direct marketing through voluntary associations gives access to preferred consumers, but the response rate is low, causing a risk of adverse selection. Some direct marketing systems allow little selection of insureds. Many insurers have been burned by TV sales that led to adverse selection.

Direct marketing distribution systems do not promote brand loyalty, since the insurer or agent has no personal contact with consumers. TV marketing stresses low prices, which may limit profits. Voluntary associations may switch an entire block of business to a competitor with lower rates.

Growth: Growth is a result of past profit and a harbinger of future profit. Successful insurers grow, and growing insurers achieve market power. But growth must be judged critically. Is the insurer growing faster or slower

than its peers? Does its growth vary with the underwriting cycle? Does growth stem from lower premiums or better underwriting? In what lines does the insurer expect to grow? Where does it expect to shrink?

Rating agencies are especially concerned about insurers who can not easily shift away from low return blocks of business. An insurer with an exclusive agency force in a state that has suppressed rates below adequate levels may feel that it can not reduce its premium volume because of commitments to its agents. Nimbler insurers forecast expected profits for different states and lines and adjust their marketing accordingly.

Insurers speak of profitable growth; rating agencies judge if the growth is indeed profitable. Almost all insurers say they do not follow markets blindly, cutting rates as underwriting cycles turn down simply to retain market share. Rating agencies assess if business strategies seem likely to succeed. For example, a rating agency may question an insurer that says it writes only profitable business and reduces sales in soft markets but has a direct writing sales force that is compensated primarily as a percentage of new business.

Technology: Insurance is a technology driven industry. Insurance policies have changed little, but pricing and underwriting have changed over time as new technology has allowed better analysis of data. Rating agencies judge if an insurer's technology is up-to-date. Does the insurer provide relational databases to pricing and accounting personnel? Does the insurer use current pricing, reserving, underwriting, and ERM tools?

Generalized linear models (pricing), stochastic reserving tools, credit scoring (underwriting), and economic capital models are current actuarial tools viewed favorably by rating agencies. These actuarial tools take several years to implement, and they have tremendous effects on selecting and valuing good business.

Regulatory interaction: Insurance is highly regulated. Quick approval of policy forms, premium rates, and class plans from regulators gives insurers competitive advantages over their peers. Rating agencies check if the insurer lobbies in state and federal arenas or relies on trade organizations. Does the insurer have rate filings and class plans approved by state insurance departments, or does it rely on bureau filings and class plans?

Claims handling: Insurers' cash outflow depends on their claims handling. Some insurers settle claims quickly to avoid litigation expenses; others fight dubious claims to avoid future claims. Asbestos claims show the merits of both strategies. Settling a class-action suit quickly is less risky and usually costs less than allowing the suit to proceed to trial. But quick settlements prompt more claims.

Rating agencies ask: Does the insurer promote cost-saving claims handling programs: back-to-work programs in workers' compensation, structured settlements in products liability, quicker claim payments in personal auto? What percentage of claims are litigated? How does the insurer's claims settlement practices compare with those of its peers?

Expense management: Well-managed insurers keep expenses reasonable; left unchecked, expenses rise quickly. Rating agencies examine if the insurer's expenses are higher or lower than average. Does the insurer monitor expenses in sufficient detail to identify and correct poor performance?

High expense ratios impair competitiveness and form a drag on earnings. Insurers with high expenses may lose business to more efficient competitors. By comparing the operating practices of peer companies, rating agencies try to identify inefficient insurers.

Current reinsurance arrangements vs reinsurance recoverables on past exposures

Rating agencies focus on the insurer's reinsurance arrangements vs its catastrophe and large loss exposures. After Hurricane Andrew in 1992, several Florida Homeowners insurers became insolvent because their direct losses exceeded the limits of cat covers.

Coverage: Rating agencies examine the insurer's current reinsurance program and recent changes in treaty limits, attachment points, and lines of business covered. They ask insurers for details of catastrophe covers

and corporate excess-of-loss treaties. Reinsurers are often excellent judges of a reinsured's financial strength, and their underwriting and pricing actions may signal potential risks. Higher attachment points or a greater coreinsurance percentage may indicate a reinsurer's concern that risk quality is poor. (It may also indicate the primary insurer's belief that less coverage is needed or the reinsurance is too expensive, so this Information must be examined carefully.) Changes in reinsurance pricing may reflect past results. Increasing reinsurance rates that do not match reinsurance underwriting cycles may indicate the reinsurer's belief that the reinsured is financially distressed. Reinsurers have better knowledge of the primary insurer's underwriting portfolio than the rating agencies has, so relying on reinsurers' pricing decisions is often useful.

Catastrophe modeling: To evaluate insurers with high property exposure in catastrophe-prone areas, rating agencies may compare the insurer's gross catastrophe modeling with its catastrophe covers. Catastrophe models generally provide the gross loss at various percentiles of the loss distribution, such as a 1 in 250 year event (the 99.6 percentile). An insurer may have a stated ERM goal of "no more than a 10% loss of surplus" except for a 1 in 250 year event. The rating agency would compare the attachment point and cover of the catastrophe treaty with the insurer's surplus and its modeling of catastrophes.

Risk transfer: Not all reinsurance transfers risk. Financial reinsurance, funds withheld treaties, and treaties with offshore reinsurers are potential warning signs to rating agencies. Some arrangements circumvent the strictures of statutory accounting; others hide solvency problems.

SECTION 5: RATING AGENCY CAPITAL REQUIREMENTS

Since the late 1990's, rating agencies have been publishing capital requirements for each rating. Insurers set policy prices, limit business expansion, avoid high-risk policies, sell blocks of business, or structure reinsurance to meet these capital requirements. Pricing actuaries once used premium to surplus or reserves to surplus leverage ratios for discounted cash flow (NPV and IRR) pricing models. Now they are more likely to use the required capital for their desired rating from Best's, S&P, Moody's, or Fitch.

Rating agency capital standards began as adaptations of the NAIC RBC requirements. The agencies modified the RBC formula to include other risks, such as interest rate risk, catastrophe risk, or asbestos and pollution loss reserves. They changed the RBC risk measure from the worst case year to value at risk, tail value at risk, or expected policyholder deficit. Moody's and Fitch use stochastic economic capital models.

Capital standards are salient differences among the rating agencies. The agencies all use data from Annual Statements, SEC filings, analyst meetings, and earnings reports, and they discuss similar management issues in their interactive meetings with insurers. But their capital formulas differ greatly, and they stress the accuracy and flexibility of their models to attract clients. Each rating agency chose a different means of competing for clients by producing a better capital adequacy formula.

Rating agencies examine quantitative measures of balance sheet strength and operating performance and qualitative analyses of management quality, operating strategy, competitive advantages, and ERM practices. Agencies say that qualitative items are important: how ERM is used to mitigate risks and whether competitive advantages are sustainable. But judging qualitative items is not easy. Insurers provide idyllic pictures of ERM practices and competitive strategy at interactive meetings, and agency evaluations are subjective.

Rating agencies strive for consistency: clients of similar financial strength should be rated similarly. Standard insurance financial ratios (quantitative data) do not capture qualitative items that affect long-term profitability, but a stress on qualitative issues may cause inconsistencies: the analyst for one insurer may give credit for some qualities that another analyst does not.[14] To ensure consistency, agencies relate ratings to economic capital measures and issue ratings by committees independent of the ratings analyst.

To be consistent, analysts' ratings should have the same meaning. If two analysts each recommend 30 "A-" ratings one year, the number of defaults should be similar. But an A- rating has a negligible default probability, so differences among analysts are hard to validate. Rating agencies therefore use quantitative measures to ensure consistency. Analysts should have similar capital ratios among their A- clients. Rating agencies publish the expected capital ratios for each rating, though qualitative factors influence the final rating. Analysts begin with the capital adequacy measure and adjust for management quality, ERM, and competitive advantages.

To succeed, rating agencies must distinguish weak vs strong insurers: identify stable insurers who are under-rated by other agencies (gaining clients who will pay for the rating) and identify weak insurers who are over-rated by other agencies (strengthening a reputation for accurate ratings). All agencies have the same data (accounting statements and presentations by clients), use similar methods (quantitative ratios of balance sheet strength and operating performance), and produce the same product. Ratings are easily understood by investors, but they are perhaps less accurate than a perfectly competitive market might provide.

The capital models of the four major agencies differ. A more accurate model helps an agency attract insurers who might be mis-rated by generic models. Inaccurate capital models may damage an agency's reputation or lower its market share. A rating agency with high capital standards and low ratings may lose clients. A rating agency with low standards and high ratings may lose investors' trust in its objectivity or financial expertise.

Best's adopted underwriting risk estimates, expected policyholder deficit risk measure, and interest rate risk from the American Academy of Actuaries task force on risk-based capital. By building on the work on casualty actuaries involved in RBC systems, it had the first sophisticated capital model among the rating agencies.

Moody's and Fitch developed stochastic capital models, since fixed formulas could not accurately assess the risks of most insurers. They used actuarial studies of risk variances and dependencies, aligning their models with papers of the CAS. But persuading clients that proprietary models estimate required capital is difficult.

Many insurers have their own economic capital models. The European Union Solvency II directives advocate principles-based RBC solvency monitoring, and Standard and Poor's proposes partial weight for internal company models. But assessing the quality of insurers' internal models has proved difficult.

This section focuses on the distinctive attributes of rating agency models:

- A. M. Best's use of the *expected policyholder deficit* to calibrate risk.
- Moody's and Fitch's use of *stochastic cash flows* to model economic capital.
- Standard and Poor's emphasis on *principles-based* models and ERM practices.

BEST'S CAPITAL ADEQUACY RATIO

Best's BCAR (Best's Capital Adequacy Ratio) retains the RBC structure of independent risk categories with a covariance adjustment. RBC has six risk categories (fixed-income securities, equities, credit, reserves, written premium, and off-balance sheet risks). BCAR adds interest rate risk (which the NAIC did not include in its property-casualty formula) and risks not easily quantified from accounting statements: asbestos/pollution exposures and catastrophe risks.

The NAIC uses a worse case year measure to calibrate reserving and new business risks that is influenced by underwriting cycles in certain years: a different experience period gives different risk charges. The RBC charges are not consistent across risks. Asset risks reflect the pre-1990 MSVR (mandatory statutory valuation reserve) for life insurers, and credit risks are chosen subjectively. Instead of the worst case year and MSVR, BCAR uses an expected policyholder deficit (EPD) risk measure. BCAR uses a 1% EPD ratio for all sources of risk. In financial terms, the charge for each risk is the amount of capital such that the cost of a put option offsetting the risk is 1% of policyholder reserves. In conventional insurance terms:

- The *EPD* is the pure premium for unlimited aggregate excess-of-loss reinsurance.

- The *EPD ratio* is the EPD divided by the market value of held reserves.

Illustration: Insurer ABC's general liability reserves have a market value of $V, but they may develop adversely or favorably. ABC buys an aggregate excess-of-loss reinsurance treaty that pays the adverse development above $Z. The pure premium for the treaty is $P.

- The EPD ratio is $P / $V, and the required capital is $Z.
- As $Z (the attachment point) increases, the EPD and the EPD ratio decrease.
- Best's chooses $Z so that the EPD ratio is 1%.

The same 1% EPD ratio is used for all risks: capital losses on stocks, bond defaults, bond losses from interest rate movements, uncollectible reinsurance recoverables, reserve development, and new business losses. For each risk, the capital charge $Z is set so that aggregate excess-of-loss reinsurance covering losses above an attachment point $Z has a pure premium equal to 1% of reserves. The EPD depends on the volatility and size of the risk. For example, equities have more volatility than bonds, so they have a higher EPD and capital charge. But insurers hold less equities than bonds, so the marginal effect of equities on overall required capital may be less than that of bonds.

RBC looks at default risk on bonds and other fixed-income securities. Default risk on bonds held by P/C insurers (mostly Treasuries, investment grade corporate bonds, and municipal bonds) is slight. The major risk for insurers stems from interest rates rising above market expectations, leading to market value losses on fixed-income securities. Using average industry figures, Best's finds that a 120 basis point rise in interest rates gives a 1% EPD ratio. It stresses each insurer's asset portfolio with a 120 basis point interest rate rise.

RBC placed high weight on reserving risk, as befits a regulatory model. Regulators are most concerned that insurer pay their loss obligations to existing claimants. Distressed insurers often post deficient reserves. The NAIC viewed reserving risk as its highest priority.

BCAR uses an analysis of reserve volatility similar to one done by the American Academy of Actuaries in 1993-94 to estimate reserving risk and new business risk. Its analysis indicates that the RBC written premium risk charges should be raised relative to the reserving risk charges so that both have a 1% EPD.

Economic capital models can be bottom-up or top-down. A bottom-up approach determines capital charges for each risk and line of business and combines them with diversification factors. A top-down approach determines overall capital requirements from a multivariate distribution of all risks and allocates the required capital back to risk and line of business.

Best's uses loss distributions for each risk and line of business, giving separate capital charges by risk and line. To most accurately determine the required capital for the insurer, one should use a multivariate loss distribution for all risks and lines. Multivariate distributions of this sort are extremely difficult to gauge, so BCAR uses the covariance adjustment and the loss and premium concentration factors in the RBC formula. The net required capital for all risk categories combined is

$$\sqrt{(B_1)^2 + (B_2)^2 + (B_3)^2 + (B_4)^2 + (B_5)^2 + (B_6)^2} + (B_7)$$

B7 is off-balance sheet risks; B1-B6 are bond, equity, interest rate, credit, reserves, and new business risks.

The expected policyholder deficit procedure requires little capital for low volatility risks, and the square root rule further reduces the marginal capital of small risk categories. If equities and loss reserves are equally volatile, and equities are one tenth as large as loss reserves, the marginal effect of the equities capital charge is one tenth that of loss reserves.

Equities and loss reserves have the same absolute capital charge before the covariance adjustment, but loss reserves has ten times as great a marginal capital charge.

In the RBC formula, almost all marginal capital charges stem from reserving and written premium risks, with little capital stemming from fixed income and equities risks. Best's partly corrects this problem with higher asset risk charges, but overall capital is still heavily weighted toward underwriting risks.

The financial crisis of 2008-09 has led the rating agencies, including Best's, to reconsider the weighting of capital charges by risk. In particular, hurricanes, earthquakes, equities, and financial derivatives caused large losses for insurers since RBC was first implemented. Reserves for major lines have had little adverse development, but asbestos reserves have led to enormous losses. Reinsurance recoverables have not led to serious problems. The rating agencies re-estimate parameters of their capital models as new data emerge.

STOCHASTIC CASH FLOW CAPITAL MODELS

Moody's and Fitch use stochastic cash flow models to assess capital requirements.

- The models form distributions of each risk and simulate repeatedly from them.
- Cash flows are projected until all current liabilities are settled.
- Required capital is set by a value at risk or tail value at risk measure.

The cash flow models provide full investment income offsets to full value loss reserves.

RBC, Best's, and Standard and Poor's use investment income offsets to reserving and written premium risks. The rating agencies use conservative discount rates and loss payment patterns to avoid over-stating the fair value of the insurer. RBC and Best's use 5% discount rates; Standard and Poor's uses a lower discount rate, based on current yields.

The fair value discount rates used by RBC, Best's, and Standard and Poor's range from 3% to 5%. They may be substantially less than the insurer's investment yield when interest rates are high. The stochastic models use the insurer's investment yield for the cash flow simulations.

Stochastic cash flow models examine the accumulated cash flows of assets vs insurance liabilities. Asset returns are based on interest rate generators and random walk simulations of equity returns. The interest rates and simulations are arbitrage free: that is, the mean return is the market forward rate, which is generally higher than current short term rates.

Illustration: The term structure of interest rates is 5% for one year, 6% for two years, and 7% for three years. These are risk-free spot rates: \$1 invested now yields \$1.05 in one year, $\$1 \times 1.06^2 = \$1.12$ in two years, and $\$1 \times 1.07^3 = \$1.23$ in three years. The implied interest rate from 2 to 3 years is \$1.23 / \$1.12 – 1 = 9%.

Cash flow simulation models are of two forms, depending on the treatment of negative cash balances at intermediate dates. The strict version requires the insurer to liquidate assets if no other cash is available. The more liberal version assumes the insurer borrows funds at short-term rates to satisfy sudden cash needs.

The rating agency stochastic models use either value at risk (VaR) or tail value at risk (TVaR) measures. A 99% VaR is the capital needed to remain solvent at the 99^{th} percentile of the aggregate loss distribution. A 99% TVaR is the average capital needed to remain solvent in the 1% worst scenarios.

Illustration: A rating agency runs 50,000 simulations of an insurer's aggregate losses from all risk sources. It sorts the results from worst to best outcome. In the 500^{th} worst outcome, the insurer loses \$250 million. The average of the 500 worst outcomes is a loss of \$600 million. The 99% value at risk is \$250 million, and the 99% tail value at risk is \$600 million.

Fitch and Moody's use interest rate generators to compute interest rate risk. Moody's uses 60,000 simulations, each of which has a path of short duration and long duration interest rates. As the insurer sells bonds to pay loss obligations, scenarios with rising rates show market value losses.

The simulations provide the asset liability management analyses once done by matching durations of bonds and loss reserves. The simulations are more informative, since they encompass movements of both short- and long-term interest rates, sector spreads, credit spreads, and loss cost trends. But the simulations are harder to evaluate or replicate. The interest rate risk charge depends on the mean reversion and volatility parameters in the interest rate generator. The stochastic model often seems like a black box to insurers.

Principles-based systems

Standard and Poor's chose not to form its own stochastic economic capital model. It has an accounting model based on the NAIC's RBC formula, but with no financial risk measure or covariance adjustment. It does not use actuarial or financial models for underwriting and asset risks, and it has no diversification adjustment or actuarial risk measure. Instead, it focused on evaluating insurers' enterprise risk management systems and internal capital models. It bases capital requirements on a weighted average of its own formula and the client's economic capital model.

Standard and Poor's reasons that well-managed insurers evaluate their capital needs more accurately than a rating agency can. Insurers examine distributions of reserve development using extensive data bases and sophisticated reserving methods. They can assess value at risk, tail value at risk, and expected policyholder deficit better than a rating agency can using public data.[15]

Appendix A: Financial Strength Ratings vs Bond Ratings

Credit quality and financial strength are continuous variables. Markets rate on continuous scales. For example, the spread of a corporate bond above Treasuries may be anywhere from 100 basis points to 300 basis points. In theory, insurers might be rated on a scale of 0 to 100. But people can not make such fine distinctions. It would be hard to distinguish a rating of 82 vs a rating of 83.

Instead, the rating agencies use letter scales (introduced by Fitch). The highest rating is A++ (or AAA) and the lowest rating is F, meaning the insurer is in liquidation. The scales of the major agencies are similar, though not identical. This section shows the scale used by A. M. Best's; the web sites of the other agencies show their letter grades.

Best's divides insurers between *secure* (likely to meet their insurance obligations) and *vulnerable* (may not meet their obligations in adverse scenarios). Secure insurers are grouped into three categories (*superior*, *excellent*, and *good*) with two levels in each. Vulnerable insurers are grouped into seven categories ranging from *fair* to *in liquidation* with ten levels (in total). The last entry, a suspended rating, might occur after a major event, such as a hurricane or earthquake, whose effects on the insurer are great but still uncertain.

Secure		*Vulnerable*	
Excellent	A++, A+	*Fair*	B, B-
Good	A, A-	*Marginal*	C++, C+
Fair	B++, B+	*Weak*	C, C-
		Poor	D
		Under Supervision	E
		In Liquidation	F

Rating Suspended	S

A. M. Best's issues also credit ratings: either investment grade or non-investment grade. A credit rating refers to the likelihood of payments on the debt securities. A short maturity bond backed by a mortgage on the insurer's property is likely to meet its coupon and principal payments, even if the insurer has a doubtful ability to pay long-term claims obligations.

Investment grade		*Non-Investment grade*	
Exceptional	aaa	*Speculative*	bb+, bb, bb-
Very strong	aa+, aa, aa-	*Very speculative*	b+, b, b-
Strong	a+, a, a-	*Extremely speculative*	ccc+, ccc, ccc-, cc, c
Adequate	bbb+, bbb, bbb-	*In default*	d

A. M. Best's also rates short-term debt, such as commercial paper, with a simpler set of letter grades.

Appendix B: History and Growth of the Rating Agencies

Credit ratings provide information to help investors determine whether issuers of debt will be able to meet their obligations. Rating agencies provide objective analyses and independent assessments of companies and countries that issue debt. Increasingly diverse debt securities and complex multi-national firms issuing them requires investors to understand the risks of many countries and asset types. Most creditors do not have the requisite expertise, and the influence of the major rating agencies has burgeoned.

The three major U.S. rating agencies began in the late 19th century to aid investors in corporate securities. Poor's *History of Railroads and Canals in the United States* (1860) first analyzed company financial strength. Standard Statistics, formed in 1906, published corporate bond, sovereign debt and municipal bond ratings. It merged with Poor's in 1941 and was acquired by McGraw-Hill in 1966. Standard and Poor's also produces stock indices such as the S&P 500, which are used for derivatives trading and as stock market indicators.

John Moody began publishing manuals providing statistics and information about stocks and bonds of various industries in 1900. Moody's Investors Service, begun in 1914, rated government bonds. By the 1970's Moody's was rating all corporate and sovereign debt. Fitch began in 1913 with stock and bond manuals of financial statistics. Fitch introduced the letter ratings of bonds now used by all agencies: AAA for highest grade through D for default. It merged with several competitors (IBCA, Duff & Phelps, Algorithmics) to form a diversified advisor for enterprise risk management and data services.

A. M. Best's was founded in 1899, issuing reports and financial strength ratings about life and property-casualty insurers. A. M. Best's rates 95% of insurers by premium volume.[16] It publishes voluminous reports each year assessing all life and property-casualty insurers. It has provided claims paying ratings since 1906 and credit ratings since 1999. Its monthly trade magazine, *Best's Review*, keeps it well known among insurance industry personnel. Its comprehensive surveys of insurers, monthly trade magazines with both articles and ratings, and low costs gave it a *de facto* monopoly on insurance ratings until the 1990's. Almost all insurers still take Best's ratings, though large insurers often have ratings from other agencies as well.

S&P, Moody's, and Fitch began as credit rating agencies; Best's began by rating insurers' overall financial strength (claims-paying ability). All rating agencies have since become full-service raters, though Best's still services only insurers and some other financial institutions, and the other agencies differ in their market shares by country and type of debt (corporate vs sovereign).

Before 1970, investors (not bond issuers) paid for publications of ratings agencies. But information spreads rapidly in efficient capital markets. Rating agencies realized that good ratings reduce the cost of debt and they could charge bond issuers for this value. Similarly, insurers pay for their own financial strength ratings.

In the 1970's, the Securities and Exchange Commission (SEC) imposed capital and liquidity requirements on securities owned by banks and other financial institutions. The major rating agencies were designated nationally-recognized statistical ratings organizations (NRSRO) by the SEC, and financial institutions could satisfy their capital requirements by investing in securities with favorable ratings by an NRSRO.

The advent of non-investment grade bonds in the late 1970's, the increase in sovereign debt since the early 1980's, requirements for ratings, and SEC approvals of the major agencies led to extraordinary growth of the rating agencies. In 1940-1970, only 0.1% of corporate debt defaulted. The debt was all investment grade and the U.S. economy grew steadily. Creditors did not require ratings to provide capital. By 2010, much corporate debt is below investment grade and world sovereign debt is enormous. Some countries (Argentina, Russia) and large firms have defaulted on their debt, and ratings are now essential to secure new loans.

Despite calls for reform of the rating agency market, both investors and debt issuers generally support the current structure. Debt has become an important part of corporate and sovereign activity, and rating agencies assess its quality.

The rating agency market has grown enormously over the past 30 years, for several reasons: High yield bonds have enabled even weaker firms to issue debt; government borrowing has increased enormously with little concern for repayment ability, leading to vast debt by poorly rated entities; more complex indentures require expert evaluation of bond risks. Fifty years ago, most new corporate debt was investment grade, and ratings were not essential. Now bond issues range from triple A to B-, and without a rating, the bond can not be sold. Fifty years ago, ratings were sought by publicly traded U.S. firms; European firms used bank loans, and they were evaluated by the banks. Now firms throughout the world issue debt. Sovereign entities, including weak states with no histories of debt repayment, finance budget deficits by publicly held debt. Ratings are essential for estimating default probabilities, since fiscal statements of some countries are not well-supervised.

Ratings are paid by firms being rated, not by investors using the rating, leading to potential conflicts of interest. A rating agency that downgrades its clients may lose their business. The failure of rating agencies to identify risks leading to the insolvency or government bailout of several banks and insurers are cited as evidence that they do not properly assess risk and financial strength. About 93% of AAA-rated subprime-mortgage-backed securities issued in 2006 fell below investment grade by 2010 (New York Times, April 25, 2010). The rating agencies received millions of dollars for these ratings from the issuing firms.

Despite the market growth, the same rating agencies have dominated the industry for the past century. The leading U.S. agencies rate firms and sovereign entities worldwide. Some people say more competition would reduce rating agency costs and lead to better risk assessments. The lack of product diversification and the ease of rating are conducive to a competitive market. But rating agencies may be natural monopolies, similar to municipal utilities of the mid-20th century. It is not clear that small agencies could survive in this market. Large agencies have strong reputations, helping them attract clients and forming powerful barriers to entry.

Potential conflicts of interest by rating agencies and the failure to foresee some insolvencies raise questions about the efficiency of rating agencies. Standard and Poor's, Moody's, and Fitch rate firms, states, and sovereign entities throughout the world.[17] Most large firms no longer operate in a single country, and non-insurance debt ratings entail analysis of global operations. The three U.S. agencies dominate the ratings market for multi-national firms.[18]

Entry into the rating agency market is hard. Ratings have little value unless they are widely accepted. A group of financial analysts might produce excellent ratings, but no client would pay to be rated until the agency is

established, giving established agencies strong advantages. Agencies' greatest asset are their reputations for accurate valuations and integrity. Firms already rated by Moody's and S&P don't want to pay for a third rating and don't want to give up either of their current ratings. New agencies with no reputations can not persuade investors that their ratings are accurate. Market leaders have remained since inception.[19]

Most corporate debt receives similar ratings from the agencies. The agencies' ratings are calibrated to the same levels: an A rating from S&P has similar meaning as an A rating from Moody's.[20] Rating agencies use the same data and provide similar services: public accounting statements and voluntary disclosures by their clients.[21] Ratings conform to market information: a client with a rising stock price will get a favorable rating from any agency. By law, rating agencies must disclose their ratings methods, as they now do on web sites. Academic studies find few differences in ratings techniques among the agencies. Innovations by one agency are copied by the others.

National regulation affects the rating agency market. The Basel II agreement allows banks to use ratings from approved rating agencies to calculate reserve requirements. The U.S. Securities and Exchange Commission permits investment banks to use credit ratings from Nationally Recognized Statistical Rating Organizations (NRSRO's) for creditworthiness regulations. Until 2007, Moody's, S&P, and Fitch were NRSRO's, along with three specialized agencies. Present law treats all rating agencies equally, but the three large agencies already dominate the market.

Appendix C: Efficiency and benefits of rating agencies

Until recently, rating agencies were seen as judges of credit worthiness whose analysis of bond issues or of firms' financial strength move markets. Some recent insolvencies of well-rated firms and some ratings down-grades on sovereign debt have led to public debate about the efficiency and benefits of rating agencies.

The 2002 Enron insolvency and the government bail-out of AIG in 2009 illustrate the different perspectives. Credit rating agencies do not always downgrade companies promptly. Enron had investment grade ratings until four days before it went bankrupt, though agencies may have known already of the company's problems.[22] In 2007, AIG was the largest commercial insurer in the world, with operations in scores of countries and over $100 billion of assets. It had triple A ratings from all agencies until it suddenly went bankrupt from excessive financial risk in 2008 and was bailed out by the U.S. government. Some people question whether agencies knew about the risks and failed to inform the public or were oblivious to billion dollar risks that destroyed firms.

Empirical studies indicate that bond yields rise as credit quality falls before the rating agencies downgrade the bonds. Markets composed of investors with no access to private firm information may be more efficient than agency analysts meeting with corporate management and reviewing proprietary documents. The value of credit ratings to investors and bondholders is unclear.[23]

Losses on subprime mortgages in 2007-08 highlight the doubts about rating agencies. In an April 2010 column in the New York Times, Paul Krugman pointed out that 93% subprime mortgage-backed securities rated triple A in 2006 fell below investment grade by 2010.[24]

Agencies rank risk; they do not guarantee solvency.

Hindsight ratings are easy and infallible. Insolvent insurers reveal inadequate reserves, speculative investment strategies, poor reinsurance arrangements, or weak underwriting standards. After each insolvency, one hears: *Why didn't the rating agencies uncover the problems?*

Insurers continually assume risks. They underwrite policyholders to screen out poor business and pool risks to quantify expected losses, but they do not eliminate the risks. Economic returns require firms to take risks: even well-managed insurers earning reasonable returns face significant risks.

Rating agencies base their evaluations on limited information. Insurers may not disclose proprietary data that might lower their ratings, unless they expect the data to become public. An A rating means that the probability of ruin is acceptably low, not that the insurer can not fail. A rating agency with no insolvencies among its A rated clients is performing well if it has the same likelihood of giving an A rating as other agencies. If it avoids A ratings for all but the most secure insurers, it is not providing useful information to users of the ratings.

Ratings corresponding to the relative risk of insurers. Rating agencies rank insurers by their probability of ruin; they do not vouch for an insurer's solidity. An A rating may mean a 1% chance of insolvency over the next three years, not a guarantee of solvency.

Rating analysts seek recommendations that match ultimate committee actions. An analyst who is consistently above or below the committee actions learns to adjust the recommendations to the committee's standards.

Rating agencies seek fair treatment of clients and strong reputations with investors.

Rating agencies have two objectives: impeccable reputations for assessing debt quality and financial strength, and equitable treatment of clients. When sovereign states are financially troubled, agencies are criticized in public forums whichever action they take. If they downgrade the country, they are criticized for contributing to its ills; if they don't downgrade the country, they are criticized for misleading the public. Financial ratings of insurers present the same dilemma: no ratings philosophy satisfies all critics.

Both extremes – no high ratings unless default is impossible and no downgrades unless default is certain – are poor business strategy. Giving high ratings only if the client is immune from risk doesn't serve investors, regulators, or the public.

Rating agencies hesitate to reduce ratings too quickly. An insurer may slip below its current rating because of serious operational problems, and the agency must re-assess the insurer before it slips further, or because of temporary problems, and the insurer may curtail its writings or reinsure parts of its portfolio. Sometimes the slippage reflects a new rating analyst or new members of the rating committee with different perspectives. A rating agency that downgrades insurers only to reverse the decisions later loses the goodwill of its clients, who may switch to competing agencies with more stable ratings. Slow ratings changes reflect business strategy, not poor assessments of risk.

Agencies use ratings outlooks and watch lists to avoid erroneous rating changes. A watch list means a rating change may soon occur, but the reasons are still vague. Agencies may place insurers on watch lists after large acquisitions; the rating may rise if greater market share leads to more profitable business and it may fall if the acquisition costs exceed the realized benefits. Outlooks reflect the agency's expectations. Ostensibly, a negative outlook means that trends in the insurer's operations or its environment may lead to a downgrade. In practice, a negative outlook may mean the insurer has fallen to a lower rating level, but the agency delays action for several months to verify the lower rating or to give the insurer time to correct the risks. An evaluation of ratings efficiency must consider outlooks, watches, and the potential harm of precipitous ratings changes.

Patterns of rating changes are examined by serial correlations. If agencies react promptly to new information, and downgrades occur as soon as the insurer falls below a given solvency threshold, then downgrades should be followed more often by upgrades than by a second downgrade. If rating agencies wait to issue downgrades until the insurer is well below a threshold, rating changes may be positively serially correlated.

Illustration: Agencies use sophisticated quantitative and qualitative scores that are weighted and mapped to letter ratings. For simplicity, suppose financial strength is ranked from 0 to 100, with 96-100 being AAA, 91-95 being AA, 86-90 being A, and so forth. Insurers move stochastically along the scale: an insurer rated 87 in 20X1 might be 85 or 89 in 20X2. If rating agencies downgraded insurers as soon as they crossed a threshold, then insurers downgraded from AA to A in 20X2 have ratings of 89 or 90. It is more likely that they rise above 90 in 20X3 than that they fall below 86. Letter rating changes should have negative serial correlations.

But if agencies do not downgrade insurers until they cross the mid-point of the rating level, an AA-rated insurer is not downgraded until it falls below 88. Insurers downgraded to A in 20X2 have average ratings of 86 or 87. It is more likely that they fall below 86 in 20X3 than that they rise above 90. Letter rating changes should have positive serial correlations. In some cases, the agency gives the insurer a negative outlook without changing the letter rating. An insurer that has dropped to 87 or 88 may retain its AA rating with a negative outlook. In contrast, capital markets (bonds for debt ratings; common stock for financial strength ratings) respond rapidly to new information.

Observed serial correlations are positive, indicating that the agencies change ratings only when the upgrade or downgrade is certain, long after bond markets change credit spreads. Good business practice explains the lag: agencies want to avoid excessive rating changes for firms on the boundary between rating categories.

Agencies' lack of proprietary data is another reason for their slow response. Markets respond to hunches and gut feelings. If investors even suspect that a firm has problems, it stock price drops and its debt yield rises. Agencies can not act without supporting evidence. The AIG case shows this clearly. Even senior managers did not know the magnitude of the risks. AIG is a highly secretive firm, and rating agencies knew no more than other outsiders. Agencies rely on the integrity of their clients: they are analysts assessing risks, not detectives.

APPENDIX D: RATING AGENCIES EXERCISES

The exercises below may help students understand the reading. However, these exercises are not necessarily representative of possible exam questions.

Exercise 1.1: Insurer XYZ writes Homeowners coverage. Insurer ABC writes life annuities funding structured settlements for accident victims, many of whom are minors. A judge has ruled that an insurer needs an A rating from a nationally recognized rating agency to fund structured settlements.

A. Why are ratings important for Homeowners insurers?
B. Why are ratings important for writers of life annuities funding structured settlements?
C. For which insurer is operating performance most important and for which is balance sheet strength most important?

Part A: Banks providing mortgages generally require Homeowners on the property. Sometimes the bank is the payee if the home is destroyed by a covered peril, up to the amount of the remaining mortgage. If the insurer is insolvent, the insurance protection does not safeguard the bank. A hurricane or other catastrophe may bankrupt a weakly capitalized insurer, so banks may require coverage by a well-rated insurer.

Part B: A minor receiving a structured settlement receives payments by the insurer for many years (perhaps a lifetime), but does not choose the insurer funding the structured settlement. A weakly capitalized insurer may become insolvent during the term of the structured settlement, which may extend for the life of the minor. A high rating safeguards the interests of the minor.

Part C: Balance sheet strength is more important for the Homeowners insurer. The bank is concerned that the insurer can indemnify the homeowner for the damage this year, not that the insurer will stay around for many further years. Operating performance is more important for the writer of life annuities funding structured settlements, since the insurer must stay around for many years.

Exercise 1.2: The ratings meeting is like a poker game at which neither side exposes its cards.

A. Why does the rating agency not disclose its impressions from publicly available data?
B. Why might the insurer's failure to disclose adverse information lead to a downgrade?
C. How does the ratings process affect the insurer's decision about what data to disclose?

Part A: The rating agency wants the insurer to believe it has better information than it actually has. Publicly available data are sparse; the rating agency often lacks information about critical parts of the insurer, such as its asbestos and environmental exposures. By not disclosing what data they already have, rating agencies force insurers to supply proprietary data for all parts of the company.

Part B: Management integrity is an important rating criterion. Rating agencies rely on proprietary data supplied by insurers. If the insurer is dishonest on one topic, the agency fears it is dishonest on others, and it may lower the rating.

Part C: The lead analyst gives a ratings proposal in a presentation to the ratings committee, supported by the data received from the insurer. The insurer has no opportunity to provide more data to the ratings committee, so it makes sure the lead analyst has all the data that might be requested by the committee.

Exercise 1.3: An insurer has a 2:1 premium to surplus ratio and 4:1 reserves to surplus ratio. How do each of the following affect a rating agency's view of the leverage ratios? For each item, explain why a rating agency might look favorably or unfavorably on the asset or liability. Specifically, how does the asset or liability affect the insurer's claims paying ability in adverse scenarios?

A. Goodwill from a recent acquisition.
B. Deferred tax assets.
C. Surplus relief from quota share reinsurance.
D. Holding company debt that appears as equity in the insurer's Annual Statement.
E. Catastrophe bonds.

Part A: Goodwill is an asset on both statutory and GAAP balance sheets, reflecting the excess of the price paid for a subsidiary over its book value. Many acquisitions do not provide returns that justify their costs. (Half to two thirds of acquisitions turn out to have negative net present values.) Rating agencies view acquisitions critically: unless the promised benefits are likely to be realized, a large acquisition may lead to a negative outlook for the insurer. Goodwill may be excluded from surplus to evaluate the leverage ratios.

Part B: Deferred tax assets assume a going-concern with future taxable income that can be offset. Adverse scenarios leading to financial distress often eliminate taxable income, reducing the value of the deferred tax assets. Rating agencies may give little value to DTAs. The deferred tax asset may be excluded from surplus to evaluate the leverage ratios.

Part C: NAIC financial exams and IRIS tests may not give full value to surplus relief. Surplus relief offsets the surplus strain in statutory accounting. GAAP and fair value accounting do not penalize insurers for surplus strain. Rating agencies consider economic values of insurers, not just statutory values, so they have no reason to exclude surplus relief when computing leverage ratios.

Part D: Holding company debt appears as equity on the insurer's books, but it is a fixed charge paid from the insurer's income. Rating agencies evaluate the full debt of the insurer, whether it is issued through a holding company or an affiliate. Rating agencies may compute leverage ratios to equity only.

Part E: Catastrophe bonds can offset major losses. The potential value of the bond is an off-balance sheet asset. Rating agencies may add part of the bond payment to surplus when evaluating leverage ratios for catastrophes.

Exercise 1.4: Rating agency XYZ gives 40% of its client A- ratings or better, and their probability of ruin over the next five years is 4%. Rating agency ABC give A- ratings or better to 20% of its clients, who have a 2% probability of ruin over the next five years.

A. Is ABC better or worse at rating insurers than XYZ?
B. What is a possible effect of ABC's rating philosophy on its market share?

Part A: Neither rating agency is better or worse at rating. The quality of a rating depends on its consistency. The ratings given by different analysts on the same agency should be the same, but different agencies often have different meanings for a rating.

Part B: ABC gives fewer high ratings. Insurers who would receive an A- rating from XYZ and a lower rating from ABC are likely to choose XYZ. As a result, agencies tend to have similar ratings. But the ratings are not identical; some agencies give consistently higher or lower ratings than others.

Exercise 1.5: Firms in other industries seek ratings if they issue debt or are publicly traded. Most insurers have no debt and are not publicly traded, yet almost all insurers are rated. Many insurers have ratings from two or more agencies, despite the high cost of ratings.

A. Why are ratings so prevalent in the insurance industry?
B. Which insurers most need ratings?

Part A: Other firms sell products or services. Consumer can evaluate the products in stores and read reviews by previous buyers on internet web sites or consumer magazines. Insurers sell promises, whose worth is not known for many years. Most consumers can not themselves evaluate insurers; even insurance agents and banks providing mortgages can not always identify high risk insurers.

Part B: Insurers providing coverage that benefit third parties, such as banks providing mortgages, suretieswho guarantee completion of a construction project, or writers of life annuities supporting structured settlements, pay for ratings to assure others that they can fulfill their promises. Sophisticated consumers (large commercial policyholders and primary insurers for reinsurance) also seek insurers with good ratings.

Exercise 1.6: Tens of thousands of firms throughout the world need ratings each year. Most of these firms are rated by one of the three major U.S. rating agencies.

A. Why is the ratings industry dominated by three firms?
B. Why might three firms (instead of 30) create a more efficient ratings process?

Exercise 1.7: Whether ratings affect bond yields or bond yield changes precede rating changes is unclear.

A. Why might one presume that ratings affect bond yields?
B. Why might one presume that bond yield changes precede rating changes?

Exercise 1.8: The ratings process

A. What are the roles of the ratings analyst and the ratings committee?
B. What information does the rating agency seek to obtain from interactive meetings?

Exercise 1.9: ABC, an East Coast reinsurer, is preparing an offer to acquire XYZ, a West Coast reinsurer. It expects costs savings from the acquisition, and it offers a substantial premium over XYZ's market price.

A. How might a rating agency view the acquisition?
B. What qualitative items might the rating agency be most concerned about?
C. Why might ABC discuss the acquisition with its rating agencies beforehand?

Exercise 1.10: Rating agencies seek performance measures that are consistent among insurers. You are choosing between pre-tax and after-tax earnings as the measure of operating performance.

A. Why might pre-tax earnings be more consistent among insurers?
B. Why might after-tax earnings be more consistent among insurers?

C. How might one adjust pre-tax earnings to make them more consistent?
D. How might one adjust after-tax earnings to make them more consistent?

Exercise 1.11: Quality of earnings

A. What is meant by quality of earnings?
B. What attributes affect quality of earnings?

Exercise 1.12: ABC writes personal auto in 20 U.S. states. XYZ writes property excess-of-loss treaties for catastrophe risks of windstorms and earth movement. Both insurers have a 6% return on sales.

A. Which insurer has the higher return on capital?
B. How might the quality of earnings differ for these two insurers?

Exercise 1.13: A personal auto insurer targets retirement communities in the U.S. sun-belt. Many of its insureds are wealthy, but they drive less after moving to these communities. It is well-capitalized, with a 60% loss ratio, a 90% persistency rate, and a return on surplus over 20% for the past five years. Rating agencies have kept the insurer at a B+ rating, citing risks of a single line of business subject to underwriting cycles and a small niche market that may be threatened by peers. The insurer is seeking to diversify. Explain the costs and benefits of each of the following.

A. Expand into Homeowners coverage, with a package policy for personal auto insureds.
B. Expand into standard and sub-standard auto risks, with discounts for children of current policyholders.
C. Expand into Medicare supplement policies for residents of the retirement communities.
D. Expand into medical malpractice coverage for physicians serving the retirement communities.

ENDNOTES

[1] Corporate charters of some pension funds and similar institutional investors specify investments in bonds rated *investment grade* (BBB) or higher. Non-investment grade bonds (rated BB or lower) have higher default-adjusted yields (= the yield net of expected losses from defaults), indicating lower demand for these bonds..

[2] Plaintiffs’ attorneys often demand an A- or higher rating for the insurer providing the annuity that funds the structured settlement.

[3] The predictive accuracy of ratings is less relevant than their acceptance by investors. Even if an agency’s decision is contested by other analysts, the agency’s decision retains its effect on coupon rates if bondholders respect the decision.

[4] Insurers’ indirect costs to secure high ratings include reinsurance to transfer risks, non-renewal of policies to reduce business volume, and internal ERM models to demonstrate a commitment to effective risk management. An insurer may cede a large portion of its property writings to reduce catastrophe risk in rating agency capital models, giving up expected profits for a higher rating. Some critics suggest that rating agencies hint of potential downgrades to induce insurers to pay for interactive ratings. For example, an insurer with A-ratings from two agencies may pay for interactive ratings from only one. The other agency informs the insurer that it may reduce its rating to B+, but that evidence of good corporate governance would keep the A- rating. The insurer may pay for an interactive rating to demonstrate its corporate governance and keep its A- rating.

[5] See Koresh [2003], Kliger and Sarig [2000], Langohr and Langohr [2009], and Levich, Majnoni, and Reinhart [2002].

[6] Critiques of rating agency activities are reviewed later in this reading.

[7] Firms in other industries can keep their finances private; insurers provide extensive public information in statutory Annual Statements. Most insurers find it more efficient to pay for interactive ratings, with a chance to influence agency decisions, than to risk a public rating.

[8] Insurers may choose initially not to be rated by a particular agency, but they rarely cease being rated by the agency for fear of a downgrade in a public rating.

[9] Analysts for insurance company ratings may work entirely with insurers, so they have enough experience to assess their clients’ qualities.

[10] State regressions examine the financial condition of all licensed insurers every three to five years. These financial examinations are more expensive and intrusive than rating agency valuations, and insurers seek to minimize the cost. Whereas a rating agency sees only data voluntarily provided by the client, state regulators often request records that the insurer might not wish to expose. Rating agencies spend two or three weeks analyzing the client; a state financial examination lasts months. State regulators do not require a commercial rating, but an unrated insurer may receive a more thorough exam.

[11] The importance of commercial ratings is clear from advertisements in trade publications. Both insurers and reinsurer emphasize their ratings in ads geared to agents or primary insurers.

[12] Actuaries once used models to evaluate the financial strength of reinsurers. But the effort and expertise needed to build the models, and the uncertainty in models based on public information alone, cause most primary insurers to rely on the commercial ratings.

[13] Most insurers that did not renew Scor Re treaties probably based their decisions on the rating downgrade.

[14] Agencies are sensitive to criticisms that ratings are influenced by the desire tor retain profitable clients.

[15] The impetus for principles-based solvency monitoring systems stems from the European Union's Solvency II directives, which the NAIC is now also evaluating. Standard and Poor's presumes that insurers will develop economic capital models to satisfy the new regulatory regimes, and they can assess an insurer's financial strength from its ERM models.

[16] The remaining 5% are mostly small or young insurers who do not meet Best's size or age criteria.

[17] S&P and Moody's have 80% of the U.S. rating agency market; together with Fitch, they have about 90%.

[18] Other rating agencies operate in foreign countries. Many foreign insurers operating in a single country are rated by country specific rating agencies.

[19] Suppose an insurer is rated A- by S&P and Best's. A new agency approaches the insurer offering a more sophisticated rating system. If the new agency gives more favorable ratings, it won't affect investors and agents who rely on the rating agencies they are familiar with. If the new agency gives less favorable ratings, it won't attract clients. The rating agency industry may already be saturated.

[20] Insurance ratings by A. M. Best's are somewhat higher (on average) than those from the other agencies, but the differences are slight.

[21] Rating agencies do little proprietary financial research. It is less expensive to use published research by leading academics than to hire private researchers. The best analysts prefer work at universities where they publish freely than at private firms that own all their work.

[22] See Amy Borrus, "The Credit-Raters: How They Work and How They Might Work Better," *Business Week*, April 8, 2002, and Edward Wyatt, "Credit Agencies Waited Months to Voice Doubt About Enron," Georgetown University, February 8, 2002).

[23] D. Kliger and O. Sarig (2000), The Information Value of Bond Ratings, *Journal of Finance*, December: 2879-2902; Koresh Galil (2003). The quality of corporate credit rating: An empirical investigation. *EFMA* 2003 Helsinki Meetings. European Financial Management Association.

[24] Krugman infers that rating agencies are corrupt. He infers that the agencies began as market researchers, selling assessments of corporate debt to investors. Eventually they morphed into something quite different: companies that were hired by the people selling debt to give that debt a seal of approval. Few economists agree with this analysis; this reading presents the interpretations without supporting any of them.

Statutory Surplus:
Computation, Pricing, and Valuation

prepared by
S. Feldblum

(Fifth Edition: June 2003)

Casualty Actuarial Society Exam 7 Study Note

Statutory Surplus:
Computation, Pricing, and Valuation

The development of financial pricing models for insurance products and the advent of risk-based capital requirements have led to an increasing focus on capital. This study note explains the differences between statutory surplus and invested capital and the implications for actuarial pricing and valuations.

When insurance products were priced to a 5% underwriting profit margin, some states mandated that investment income be considered, often by simple *investment income offset* procedures that reduced the underwriting profit margin for the investment income earned on policyholder supplied funds.[1] These procedures did not consider capital or surplus.

Insurers are now using *return on capital* models, for pricing and performance measurement. The pricing models vary in their definitions of *capital*, whether statutory surplus, GAAP equity, economic surplus, or invested capital. Similarly, actuarial valuations may use GAAP earnings, statutory earnings, or cash flows. The valuation results differ sharply, and proper valuation relies on an accurate assessment of the capital supporting insurance operations.

The idiosyncracies of statutory accounting complicate the relation between statutory surplus and invested capital. For example, the statutory income statement shows *net income* earned during the current year. One might suppose that last year's surplus plus this year's net income should equal this year's surplus, but there are half a dozen other adjustments, such as the *change in non-admitted assets* or the *change in the provision for reinsurance*, which are *direct charges or credits* to surplus. In contrast, the surplus figure on the balance sheet is total assets minus total liabilities, with no adjustment for *direct charges or credits to surplus*. The sign of the income statement adjustments is also confusing, since an increase in non-admitted assets causes a decrease in policyholders' surplus. Some readers wonder: "Why should an increase in assets, of whatever sort, lead to a decrease in the worth of the company?"

This study note traces the computation of statutory surplus, along with the difference from GAAP equity; contrasts statutory surplus (and GAAP equity) with invested capital; and adds the capital in the policyholder reserves with the capital required by statutory regulations to determine the capital supporting the insurance policy.[2]

Balance Sheets and Income Statements

Surplus has two definitions. The balance sheet definition says *surplus = assets – liabilities*. The income statement definition says *surplus = last year's surplus + current year's income*.

If all balance sheet transactions also flowed through the income statement, and if all income

statement transactions had corresponding effects on statutory assets and liabilities, the two definitions of surplus would be equivalent, and no adjustments would be needed.

Illustration: Suppose an insurer begins the year with $2,000 in surplus and $2,000 in cash, and it writes a policy for a $1,000 premium on January 1. An insurer normally hold marketable securities, not cash; we use cash in this illustration to avoid the accounting entries for investment income. The insurer incurs expenses of $250 and losses of $600 during the year.

Statutory accounting is on an accrual basis, not a cash basis. It makes no difference whether the premium has been collected or is still owed the company (so long as the receivable is admitted) and no difference whether the losses are paid or held as reserves. Let us suppose the premium is collected on January 1, expenses are paid during the year, $200 of losses are paid by December 31, and $400 of losses remain in reserves.

During the year, the cash account increases by the $1,000 premium and decreases by the $250 of expenses and the $200 of paid losses, for a net increase of $550. At the end of the year, the cash account has the original $2,000 plus the year's increase of $550, for a total of $2,550. Liabilities, which were $0 at the beginning of the year, increase by the $400 case reserves. Surplus at year end is $2,150, or the $2,550 of assets minus the $400 of liabilities.

From an income statement perspective, premium earned is a revenue, and losses incurred and underwriting expenses are expenditures.[3] Net income = revenues minus expenditures = $1,000 – $600 – $250 = $150 is the addition to surplus during the year.

At the year end, income statement surplus has increased by $150 (revenues – expenditures). Balance sheet surplus of $2,150 equals total assets ($2,550) minus total liabilities ($400).

Activity	*Accounting Entry*	*Account*	*Debit*	*Credit*
	Cash	Asset	$2,000	
	Policyholders'	Surplus		$2,000
Write Policy	Cash	Asset	$1,000	
	Unearned Premium	Liability		$1,000
Incur Expenses	Expenses incurred	Expenditure	$250	
	Cash	Asset		$250
Incur Losses	Losses Incurred	Expenditure	$600	
	Cash	Asset		$200
	Loss Reserve	Liability		$400
Non-Ledger	Unearned Premium	Liability	$1,000	
	Premiums Earned	Revenue		$1,000

In the accounting presentation above, ledger transactions are entered onto an accounting ledger; year end adjustments are non-ledger items.

The balance sheet and income statement definitions of surplus are not the same if some balance sheet transactions do not flow through the income statement. Nonadmitted assets and statutory liabilities affect the balance sheet; the income statement does not differentiate between admitted and non-admitted assets, it is not affected by statutory liabilities.

NON-ADMITTED ASSETS

If $100 of premium remains uncollected and more than 90 days pas t due on December 31, it is not admitted. The income statement entries remain earned premium ($1,000), incurred losses ($600), and expenses ($250), for a net income of $150. The income statement surplus, before any adjustments, would be last year's surplus of $2,000 plus the net income of $150.

The balance sheet recognizes only the admitted portion of assets. The premium collected of $900 increases cash by $900. The remaining $100 of earned premium appears as *premiums and agents' balances in course of collection* (page 2, line 10.1). Since it is overdue, it appears in column 2, *Assets Not Admitted*, and it does not enter into balance sheet surplus. The balance sheet calculation of policyholders' surplus is as follows:

At the beginning of the year, *cash on hand or on deposit* is $2,000. We add to the cash account the collected premium of $900 and subtract expenses paid of $250 and losses paid of $200 to *get cash on hand or on deposit* of $2,450 at the end of the year. The $100 of uncollected premium more than 90 days past due is not admitted and does not appear in the *net admitted assets* column of the statutory balance sheet. The liability side of the balance sheet shows the case reserve of $400 and surplus of $2,450 – $400 = $2,050.

THE ASSET EXHIBIT

To reconcile income statement surplus with balance sheet surplus, we adjust income statement surplus for transactions and statutory accounts that do not *flow through the income statement.* Exhibit 1, "Analysis of Non-Admitted Assets and Related Items" (page 13 of the Annual Statement) shows the *change in nonadmitted assets during the year*, which is the needed adjustment to the income statement surplus.

Why do we want the *change* in non-admitted assets instead of the non-admitted asset itself? And why does an *increase* in non-admitted assets lead to a *decrease* in surplus?

Consider again the illustration above. Earned premium during the year is $1,000. But the $1200 of premium receivable at year end is not admitted, since it is more than 90 days past due. The *increase* in non-admitted assets during the year, from $0 to $100, really means a

decrease in the admitted portion of the assets.

Do not think of this as a fixed admitted asset to which is tacked on a non-admitted asset. Rather, conceive of the *total* asset as a *fixed* amount, so an *increase* in the non-admitted portion is a *decrease* in the admitted portion. The earned premium on the income statement is an increase in total assets. If total assets increase during the statement year by $1,000, and non-admitted assets increase by $100, then admitted assets increase by only $900.

The income statement shows revenues, which correspond to the increase in *total* assets. *Subtracting* the increase in non-admitted assets gives the increase in admitted assets. The increase in non-admitted assets is a direct charge to policyholders' surplus.

The Statutory Balance Sheet

The statutory balance sheet uses four columns to reconcile with the income statement.

- Column 1: (Total) assets
- Column 2: Assets not admitted
- Column 3: Net admitted assets (Columns 1 – 2)
- Column 4: Net admitted assets (prior year)

Agents' balances are in column 1. The portion more than 90 days past due is recorded in column 2 and the difference is the net admitted asset in column 3. The change in the non-admitted asset appears in Exhibit 1, Analysis of Non-Admitted Assets and Related Items:

- Column 1: Non-admitted assets at the end of the current year
- Column 2: Non-admitted assets at the end of the previous year
- Column 3: Change for year (increase) or decrease, or column 2 – Column 1.

A positive entry in column 3 means a *decrease* in non-admitted assets, and a negative entry in column 3 means an *increase* in non-admitted assets.

Surplus Adjustments

An increase in non-admitted assets, given fixed total assets, is a decrease in net admitted assets; the negative entry in column 3 of Exhibit 1 is carried to page 4 and reduces surplus. A decrease in non-admitted assets is an increase in net admitted assets; the positive figure in column 3 of Exhibit 1 increases surplus on page 4.

The non-admitted assets in Exhibit 1 include only the assets on lines 10-17 and 19-21 of the balance sheet plus certain other assets: (i) bills receivable, past due, taken for premium, (ii) furniture and equipment, and (iii) loans on personal security. Exhibit 1 does not include the non-admitted portions of financial assets (lines 1-9 of the balance sheet), or the *excess of*

book over market (or amortized) values. The *change* in the excess of book over market from one year to the next is the unrealized capital gain or loss. The *net unrealized capital gains or losses* are shown as a separate adjustment to surplus page 4.

OFFICE FURNITURE

We show several examples of entries peculiar to statutory accounting. Insurers have two statutory accounting options for non-admitted assets.

- Method 1: Write off the non-admitted asset as an expense in the income statement.
- Method 2: Use GAAP entries for the balance sheet and the income statement, but classify the asset an non-admitted with a direct charge to surplus.

Suppose an insurer buys office furniture on December 31, 20X4, with a useful life of 10 years for $100,000; the insurer uses straight line depreciation. The 20X4 GAAP entries are:

- Credit cash by $100,000 (cash paid to purchase furniture).
- Debit an office furniture asset by $100,000.

Both entries are on the balance sheet, and there is no effect on GAAP equity. These are ledger entries; the purchase of the furniture is shown on the accountant's ledger.

For statutory financial statements, the Method 1 accounting entries are

- Credit cash by $100,000 (cash paid to purchase furniture).
- Debit general expenses (income statement) by $100,000.

The entries are on different financial statements, and statutory surplus declines by $100,000.

The Method 2 accounting transactions are

- Credit cash by $100,000 (cash paid to purchase furniture).
- Debit an office furniture asset by $100,000.
- Enter $100,000 in the non-admitted column for the office furniture asset.
- The non-admitted assets increase from $0 before the purchase of the furniture to $100,000 after the purchase of the furniture. The change in non-admitted assets of +$100,000 is a direct charge to surplus.

The year-end 20X5 GAAP non-ledger entries are

- Credit the office furniture asset by $10,000 to reflect depreciation.
- Debit depreciation expense (income statement) by $10,000.

For statutory accounting, if Method 1 is used for the initial purchase, there are no accounting transactions in subsequent years; the full $100,000 was an expense in 20X4. The Method 2 accounting transactions are

- Credit the office furniture asset by $10,000 to reflect depreciation.
- Debit depreciation expense by $10,000.

The non-admitted office furniture declines from $100,000 to $90,000. The –$10,000 change in non-admitted assets is a credit to surplus, offsetting the debit from the income statement.

GAAP depreciates the office furniture by $10,000 each year to match revenue and expenses. Statutory Method 1 says that the office furniture has little or no realizable value. It can not be used to pay claims, so its entire value is written off when it is purchased.

Method 1 requires two sets of books: one for GAAP and one for statutory accounting. This complicates the accounting, and it may lead to errors. Method 2 uses GAAP books only, but it non-admits certain assets. The income statement entries are the same as for GAAP statements; any changes needed are made by direct charges and credits to surplus.

ACCRUED RETROSPECTIVE PREMIUMS

Accrued retrospective premiums are taken from the Underwriting and Investment Exhibit, "Recapitulation of All Premiums," page 8, Part 2A, column 5, line 33, "accrued retrospective premiums based on experience," and entered on page 2, line 10.3, column 1. The non-admitted portion (usually 10% of the unsecured portion) is entered in column 2 and the difference is entered in column 3.

STATUTORY LIABILITIES: PROVISION FOR REINSURANCE

Any transaction that affects the balance sheet but not the income statement is a direct charge or credit to surplus. For instance, an increase in the Schedule F provision for reinsurance does not flow through the income statement but it increases liabilities on the balance sheet, thereby decreasing balance sheet surplus. The increase (decrease) in the provision for reinsurance from the previous year to the current year is a direct charge (credit) to surplus.

Illustration: Suppose an insurer has a 50% pro-rata reinsurance treaty with an authorized reinsurer. A loss occurs on March 1 and a direct case reserve of $200,000 is posted. On June 1, the loss is paid for $300,000. At year end, the reinsurance recovery has not been collected and it is more than 90 days past due. The financial statement entries are

March 1: Debit incurred losses $200,000 (direct loss, income statement)
Credit incurred losses $100,000 (reinsurance recoverable, income statement)
Credit case reserve $200,000 (direct loss, balance sheet)

Debit case reserve $100,000 (reinsurance recoverable, balance sheet)

June 1: Debit incurred losses $100,000 (direct loss, income statement)
Credit incurred losses $50,000 (reinsurance recoverable, income statement)
Debit case reserve $200,000 (direct loss, balance sheet)
Credit case reserve $100,000 (reinsurance recoverable, balance sheet)
Credit cash $300,000 (direct loss, balance sheet)
Debit reinsurance recoverable $150,000 (balance sheet)

Dec 31: Credit provision for reinsurance $30,000 (balance sheet)
Change in provision for reinsurance $30,000 (direct charge to surplus)

UNREALIZED CAPITAL GAINS

Unrealized capital gains are direct credits to surplus. Suppose that on December 31, 20X4, an insurer has $100 million of assets, $60 million of liabilities, and surplus of $40 million. The assets are 80% bonds and 20% common stock. In 20X5, the stocks increase in value to $30 million. The federal income tax rate is 35%. The 20X5 financial statement entries are

- Debit stocks $10 million (balance sheet)
- Credit deferred tax liability $3.5 million (balance sheet)
- Unrealized capital gains of $10 million (direct credit to surplus)
- Change in deferred tax liability of $3.5 million (direct charge to surplus)

AUDIT PREMIUMS

We show the accounting entries for a $10,000 policy written on October 1, 20X3, with an estimated audit premium of $2,000. The estimated earned premium for the full policy term is $12,000, of which the 20X3 portion is $3,000. Estimates of audit premiums may be included as written premium or as a separate adjustment to earned premium. The accounting entries on 12/31/20X3 are either

- written premium of $12,000 and an UEPR of $9,000 or
- written premium of $10,000 and an UEPR of $7,000.

DEFERRED POLICY ACQUISITION COST AND PREMIUM DEFICIENCY RESERVE

Suppose an insurer writes a block of policies with written premium of $100 on July 1, 20X4. Acquisition costs are $20 million and expected losses are $80 million; investment income covers other expenses. GAAP recognizes the premium and the expenses over the term of the policy by setting up both an unearned premium reserve and a DPAC (deferred policy acquisition cost) asset and amortizing them over the policy term. On December 31, the remaining UEPR is $50 million and the remaining DPAC is $10 million, for a net reserve of

$40 million. We show the GAAP and statutory accounting entries for two scenarios:

If by December 31, 20X4, incurred losses are $45 million, and the insurer expects another $45 million of incurred losses in the next six months, the DPAC is reduced to $5 million, and expenses are debited by $5 million on the income statement. Statutory has no DPAC, so no accounting entries are needed

If by December 31, 20X4, incurred losses are $65 million, and the insurer expects another $45 million of incurred losses in the next six months, the DPAC is reduced to zero, and a premium deficiency reserve of $15 million is set up on both GAAP and statutory statements.

INTEREST DUE AND ACCRUED

Suppose an insurer buys $100 million of investment grade 6% coupon bonds on March 1, 20X4, and classifies them as available for sale (FAS 115). By December 31, 20X4, interest rates have declined and the market value of the bonds is $102 million. In 20X5, the issuer fails to pay the August 31 coupon, and the bonds are downgraded to class 4. On December 31, 20X5, the market value of the bonds is $90 million; the August 31 coupon is still not paid, but the company expects to collect it next month. We show the accounting entries.

20X4: The cash received of $3 million and the accrued interest of $2 million are revenues (credits) on the income statement and debits to cash and to interest receivable on the balance sheet. On the GAAP balance sheet, the bonds are marked to market ($102 million). The $2 million increase is a direct credit to equity; it does not flow through the income statement. On the statutory balance sheet, the bonds remain at (amortized) cost of $100 million.

20X5: The cash received on February 28 of $3 million and the accrued interest of –$2 million are revenues on the income statement and debits to cash and interest receivable on the balance sheet. By year-end, the bond has been downgraded to Class 4, and it is shown at market value on both GAAP and statutory financial statements. GAAP shows a $12 million charge to equity, and statutory accounting shows a $10 million charge to surplus.

GAAP shows $3 million as interest receivable and $2 million as interest due and accrued; the full $5 million flows through the income statement. Statutory accounting does not admit any of the interest, since the payments is more than 90 days past due. Method 1 shows no balance sheet or income statement entries. Method 2 shows the same entries as GAAP and then classifies the assets as non-admitted and have a $5 million direct charge to surplus.

REAL ESTATE

On December 31, 20X4, an insurer buys a shopping mall for $50 million as a real estate investment. Rental income is $8 million a year, and depreciation is $2 million a year for 25 years. On December 31, 20X5, the market value of the mall has increased to $53 million. In

20X6, a competing shopping mall opens 4 miles away, and by December 31, 20X6, the market value of the insurer's shopping mall is $43 million.

- *2004:* Cash is credited $50 million and investment real estate is debited $50 million; there is no change in surplus.
- *2005:* Rental income flows through the income statement at investment income ($8 million credit) and cash is debited $8 million. Depreciation expense is debited $2 million (income statement), and investment real estate is credited &2 million. No entry is made for the increase in market value.
- *2006:* The rental income and depreciation entries are the same as for 2005. The book value of the real estate is $46 million, of which $3 million is not admitted (excess of book over market value), and there is a $3 million direct charge to surplus.

STOCKHOLDER DIVIDENDS AND CAPITAL CONTRIBUTIONS

An insurer begins the year with $100 of 8% coupon bonds maturing on December 31 in five years. The tax rate is 35%, and taxes are paid when cash is received. The insurer remits the after-tax investment income to its shareholders. On December 31, the insurer sells an additional one million shares of common stock, with a par value of $1 per share and a sale price of $1.50 per share. We show the accounting entries.

On June 30, the insurer receives $4 million of bond interest: $4 million × 35% = $1.4 million is paid to the Treasury and $2.6 million are shareholder dividends; the same transactions occur on December 31. The accounting entries on each date are

- Debit cash $4 million (balance sheet)
- Credit investment income $4 million (income statement)
- Credit cash $1.4 million (balance sheet)
- Debit tax liability $1.4 million (income statement)
- Credit cash $2.6 million (balance sheet)
- Shareholder dividend $2.6 million (direct charge to surplus)

The accounting entries for the common stock issue are

- Debit cash $1.5 million (balance sheet)
- Credit common capital stock $1 million for par value of common stock (balance sheet)
- Credit paid-in and contributed surplus $0.5 million for excess of sale price over par value (balance sheet)
- Direct credits to surplus: $1 million for capital paid in and $0.5 million for surplus paid in.

Statutory Surplus, GAAP Equity, and Capital Invested

A misconception that is sometimes heard in actuarial circles runs as follows: For statutory accounting purposes, we must understand the computation of statutory surplus. In some states, we might need surplus amounts for rate filings as well. For actuarial pricing of insurance products, however, we may dispense with statutory numbers. We seek a return on the economic capital needed to support the insurance operations. We determine this capital by actuarial techniques such as probabilities of ruin or expected policyholder deficits.

Many years ago, actuaries priced products to achieve a pre-set underwriting profit margin, such as 5% for most lines or 2.5% for workers' compensation. This pricing technique did not allow a comparison of insurance profitability with profitability in other industries. An early attempt by Arthur D. Little to examine insurance profitability looked at the return on assets (ROA), or the income during the year divided by the assets held by the insurance company.

The return on assets supposedly shows how efficiently insurers are using their assets to produce insurance policies, just as the ROA for an auto manufacturer shows how efficiently it uses its assets to produce automobiles. But insurers do not use their assets to produce insurance policies. An insurer might invest its money in the bonds issued by an automobile manufacturer; the assets represented by these bonds are used to manufacture automobiles, not automobile insurance policies.

Some financial analysts apply return on equity measures to insurance, looking at the ratio of GAAP income to GAAP equity. Ferrari [1967] examines the calendar year profitability of the insurance industry. Pricing actuaries, concerned with prospective ratemaking, look at *benchmark equity* or *benchmark surplus*: the equity or surplus needed to support the insurance operations, not the equity or surplus currently held by the company or by the industry.

In other industries, the return on equity is a proxy for the return on invested capital. For property-casualty insurance, GAAP equity is not the same as invested capital. Invested capital is statutory surplus plus the capital embedded in gross unearned premium reserve and full value loss reserves. The invested capital implied by statutory surplus is the crux of financial pricing and valuation.

Double Taxation

The valuation of an insurance company requires an adjustment for the cost of holding capital. The cost of holding capital is at least the cost of double taxation (Myers and Cohn [1987]) and perhaps as high as the difference between the cost of equity capital and the after-tax investment yield (Atkinson and Dallas [2000]).[4]

Suppose investors must contribute $100 million to support the writing of insurance policies, and this capital is invested in 10% coupon taxable bonds. If they invest the capital themselves,

the investors pay personal income taxes on the $10 million return. If the insurer makes the same investment, it pays $3.5 million of corporate income taxes and remits the remaining investment income to the investors, who pay personal income taxes on this dividend. The cost of double taxation is the difference in the taxes incurred between direct and indirect investment of capital.[5]

- The taxes paid on direct investment of capital = *investment yield × personal tax rate.*
- The taxes paid on investment of capital through an insurance company = *investment yield × [corporate tax rate + (1 – corporate tax rate) × personal tax rate]*
- The difference between these two is *investment yield × [corporate tax rate + (1 – corporate tax rate) × personal tax rate – personal tax rate] = investment yield × corporate tax rate × (1 – personal tax rate)*

If the investment yield is 10%, the corporate tax rate is 35%, and the average personal tax rate is 30%, the cost of holding capital is *10% × [35% + (1 – 35%) × 30% – 30%] = 10% × 35% × (1 – 30%) = 2.45%.* The investors pay an additional 2.45% of the yield on their capital to the taxing authorities. This is the *after-tax* loss to the investors. The loss before personal income taxes is the investment yield × the corporate tax rate or 10% × 35% = 3.5%. To induce investors to fund the insurance operations, the 3.5% of lost yield must be paid by the policyholders, not the investors.[6]

If the policyholders paid this money directly to the investors, this would be the full cost of holding capital. But there are no direct transactions between policyholders and investors. The policyholders pay this money as part of the policy premium, and the insurer remits the money to the investors. This introduces another layer of tax, since the policy premium is pre-tax and the compensation to the investors is post-tax. The needed margin in the policy premium, as a percentage of the investment yield on investor supplied capital, is

investment yield × corporate tax rate / (1 – corporate tax rate) = investment yield × 35% / (1 – 35%) = investment yield × 53.85%[7]

The double taxation affects invested capital, whereas the money paid by policyholders is a margin on premium. The needed margin is *capital × investment yield × 53.85% / premium.* If the premium is paid at policy inception and the taxes are paid (on average) at mid-year, the needed margin is *capital × investment yield × 53.85% / [premium×(1+investment yield)^{½}].*

Atkinson and Dallas [2000] define the cost of holding capital as the difference between the cost of equity capital and the after-tax investment yield of the insurance company. To illustrate, suppose the cost of equity capital is 12% per annum, but the insurance enterprise invests in 8% Treasury securities. The cost of double taxation is 35% × 8% = 2.8%. The additional cost stemming from the conservative investments of the insurance company is 12% – 8% = 4%, and the total cost of holding capital is 2.8% + 4% = 6.8%. This is the amount that policyholders must pay to the investors to induce them to fund the insurance operations. Since the

policyholders pay this money indirectly through the profit margin in the premium, which is taxed as underwriting income, the additional premium is 6.8% / (1–35%) = 10.46%. If the premium is paid at policy inception and the taxes are paid (on average) at mid-year, the profit margin is 10.46% / $1.08^{½}$ = 10.07%.

This implies that with an 8% investment yield and a 400 basis point spread between the target return on capital and the investment yield, the policyholders pay 10% of investor supplied capital to compensate for the indirect investment of their funds. The needed underwriting profit margin to be combined with expenses and discounted losses is 10% divided by the premium to capital ratio. If discounted losses and fixed expenses are $2,800, the variable expense ratio is 22%, and the premium to capital ratio is 1.25, the needed underwriting profit margin is 10% / 1.2 = 8%, and the indicated premium is $2,800 / (1 – 22% – 8%) = $4,000.

The cost of holding capital depends on both the capital explicitly held as surplus and the capital embedded in statutory reserves. We illustrate the cost of double taxation both with and without consideration of deferred tax assets:

An insurer operates at a two to one premium to surplus ratio. Each year, written premium is $200 million, the unearned premium reserve is $100 million, the pre-paid acquisition expense ratio is 25% of written premium, and the undiscounted loss reserves are $300 million. The risk-free interest rate is 5% per annum and the company's investment yield is 8% per annum. The IRS loss reserve discount factor is 80% for all years and all valuation dates (and the tax basis reserves are at fair value), and 25% of held reserves are paid out during the next year.

If deferred tax assets are not considered, the invested capital is $100 million of surplus + 25% × $100 million = $25 million of equity in the unearned premium reserve + (1 – 80%) × $300 million = $60 million in the undiscounted loss reserves, for a total of $185 million. The cost of double taxation using the Myers' Theorem is $185 million × 5% × 35% = $3.24 million. The cost of double taxation using the company's investment yield is $185 million × 8% × 35% = $5.18 million. The Atkinson and Dallas cost of holding capital is $185 million × 6.8% = $12.58 million.

The statutory deferred tax asset stemming from revenue offset is 35% × 20% × the unearned premium reserve = 35% × 20% × $100 million = $7 million. The statutory deferred tax asset stemming from loss reserve discounting is 35% × the reserve discount that is expected to reverse in the next 12 months, or 35% × 25% × 20% × $300 million = $5.25 million.

The invested capital is $185 million – $7 million – $5.25 million = $172.75 million. The cost of double taxation using the Myers' Theorem is $172.75 million × 5% × 35% = $3.02 million. The cost of double taxation using the investment yield of the company is $172.75 million × 8% × 35% = $4.84 million. The Atkinson and Dallas cost of holding capital is $172.75 million × 6.8% = $11.75 million.

Valuation: Cost of Holding Capital:

We continue the illustration to show the valuation of the company. The insurer has $100 million of surplus of which $12.25 million are deferred tax assets; $200 million of written premium each year, $100 million of unearned premium reserves, and $300 million of undiscounted loss reserves. The cost of equity capital is 12% per annum, and the tax rate is 35%. The pre-paid acquisition expense ratio is 25% of written premium, and the discount factor for loss reserves is 80%. After-tax net income is remitted to shareholders.

The invested capital is $100 million (surplus) + 25% × $200 million (equity in UEPR) + 20% × $300 (equity in undiscounted loss reserves) – $12.25 (DTA) = $172.75 million.

If the insurer expects to earn $36 million of pre-tax income each year, the after-tax net income is $36 million × (1 – 35%) = $23.40 million. The present value of the future net income is $23.4 million / 12% = $195 million. The company is profitable; its net worth is $195 million.

If the insurer expects to earn $30 million of pre-tax income each year, the after-tax net income is $30 million × (1 – 35%) = $19.5 million. The present value of the future net income is $19.5 million / 12% = $162.50 million. The company is not profitable; the shareholders would gain by liquidating the company and taking the $172.75 million. If the costs of liquidation are more than $172.75 – $162.50 = $10.25 million, the company should continue operating.

*****

Statutory surplus and GAAP equity of property-casualty insurance companies differ from invested capital. For pricing insurance products of valuing an insurance company, actuaries must be careful to include all capital in their analyses. This requires a complete understanding of statutory accounting, with particular emphasis on direct charges and credits to surplus.

Endnotes:

[1] See Robbin, "The Underwriting Profit Provision" [1992], algorithms 1 and 2.

[2] The capital invested in reserves is sometimes larger than the capital explicitly held as statutory surplus.

[3] We use the term *expenditures*, to avoid confusion with underwriting expenses; accountants say *expenses.*

[4] Cf the AAA Standard of Practice on Valuations. Sturgis [1981] takes the view of Atkinson and Dallas, but he leaves out the cost of double taxation; this is an inadvertent omission, not a difference of opinion. Miccolis, commenting on Sturgis, notes that Sturgis ignore risks; Miccolis [1987] follows Myers and Cohn, though he also omits the cost of double taxation.

[5] The cost of double taxation may change with the 2003 tax amendments now before the Congress.

[6] Myers asserts that the cost of double taxation is the same regardless of the investment portfolio of the insurer. If the cost of double taxation is $20 million if the insurer holds Treasury securities, the cost of double taxation is $20 million even if the insurer holds risky securities with a higher expected return and higher expected tax liabilities; see Derrig [1995]. According to Myers, just as the present value of the return from risky securities equals the present value of the return from risk-free securities, the present value of the federal income taxes on the investment income from risky securities equals the present value of the federal income taxes on the investment income from risk-free securities.

[7] If one dollar of investment income is received directly, the IRS takes about 30¢. If one dollar of investment income is earned through an insurance company, the IRS takes 83.85¢.

Common Pitfalls and Practical Considerations in Risk Transfer Analysis

Derek Freihaut, FCAS, MAAA, and Paul Vendetti, FCAS, MAAA

The current papers available on risk transfer have provided background and a general description of the tools available for analysis. Risk transfer analysis has many nuances that can trip up an actuary testing a contract. This paper discusses several of these pitfalls and provides direction on how to address them based on previously published materials from the accounting boards, the American Academy of Actuaries (AAA), and the Casualty Actuarial Society (CAS). This paper also addresses several outstanding risk transfer concerns that have no easy answers. While these issues do not have obvious solutions, the intent of the paper is to shed some light on these topics and open the door for further discussion.

To facilitate the discussion of these common pitfalls and practical considerations two example contracts are reviewed with an Expected Reinsurer Deficit (ERD) calculated for both.

Keywords: Risk transfer, Expected Reinsurer Deficit (ERD), FAS 113, Reinsurance Attestation Supplement (RAS), SSAP 62.

1. INTRODUCTION

Current papers available on risk transfer have provided background and a general description of the tools available for analysis. However, risk transfer analysis has many seemingly minor nuances that can trip up an actuary testing a contract. In this paper, we will discuss several of these pitfalls and provide direction on how to address them based on previously published materials from the accounting boards, the American Academy of Actuaries (AAA), and the Casualty Actuarial Society (CAS). We will also highlight a number of practical considerations that have not received as much attention in the available literature. While these practical considerations do not have obvious solutions, we hope to shed some light on the available options and open the door for further discussion on the topic.

1.1 Risk Transfer in Current Literature

This discussion is derived from a review of existing risk transfer literature, most notably "Reinsurance Attestation Supplement 20-1: Risk Transfer Testing Practice Note" from the AAA Committee on Property and Liability Financial Reporting and "Risk Transfer Testing of Reinsurance Contracts: Analysis and Recommendations" from the CAS Research Working Party on Risk Transfer Testing [1][2]. We also relied heavily on the accounting standards, Financial Accounting Standard No. 113, "Considerations in Risk Transfer Testing" (FAS 113) and SSAP 62, "Property and Casualty Reinsurance." While some discussion of the CAS Working Party paper and the AAA Practice Note is necessary, this paper is an attempt to go beyond the framework provided in the

current literature and review the more routine issues faced by actuaries in reviewing reinsurance transactions for risk transfer.

1.2 Objective

In this paper, we will discuss several pitfalls and practical considerations with risk transfer analyses. We will provide direction on how to address the pitfalls based on previously published materials and we hope to shed some light on the available options concerning the practical considerations and open the door for further discussion on the topics.

1.3 Outline

In Section 2 of this paper we will present a brief history and background of risk transfer, including a discussion of the terms "substantially all" and "self-evident," as well as discussion on measuring risk transfer and risk transfer thresholds.

Section 3 will contain a discussion on the pitfalls and practical considerations. We will start by showing two sample contracts that will be used as a basis for much of the discussion, and how to analyze risk transfer. Next we will cover various pitfalls, including discussion on the following topics:

- Profit Commissions
- Reinsurer Expenses
- Interest Rates and Discount Factors
- Premiums
- Evaluation Date
- Commutation and Timing of Payments

In the last part of Section 3, we will highlight some of the practical considerations in risk transfer testing, including discussion on:

- Parameter Selection
- Interest Rate
- Payment Pattern
- Loss Distribution

- Parameter Risk
- Use of Pricing Assumptions
- Commutation Clauses

The fourth and final section of the paper will contain a short wrap up, conclusions and a reminder that risk transfer testing is a principle-based exercise and not just a "plug and chug" methodological exercise.

2. BRIEF HISTORY OF RISK TRANSFER

Since the reinsurance goals of ceding companies are as different as the risks reinsured, reinsurance contracts contain a variety of terms and conditions that can impact the economic structure of the reinsurance transaction. When a contract qualifies as reinsurance there are certain accounting benefits that a ceding company can realize.

The demonstration of risk transfer for reinsurance is required by FAS 113 in order for the contract to receive reinsurance accounting treatment under Generally Accepted Accounting Principles (GAAP). Statutory Accounting Principles (SAP) defined in SSAP 62 are similar in guidance to FAS 113. Generally, both standards for risk transfer require that:

1. The reinsurer assumes significant insurance risk under the reinsured portion of the underlying insurance agreement; and

2. It is reasonably possible that the reinsurer may realize a significant loss from the transaction.

Because the terms "significant insurance risk," "reasonably possible," and "significant loss" are not defined in either accounting standard, the challenge is to appropriately interpret and apply the accounting standards to each reinsurance transaction.

The abuses of the past several years in the use of finite reinsurance contracts have highlighted the need to document and quantify risk transfer. An increase in scrutiny of reinsurance contracts led to the introduction of the "Reinsurance Attestation Supplement," in the 2005 NAIC Annual Statement.

The supplement requires the chief executive officer (CEO) and chief financial officer (CFO) to confirm that:

1. There are no separate written or oral agreements between the reporting entity and assuming

reinsurer.

2. There is documentation for every reinsurance contract for which risk transfer is not reasonably self-evident that details the transaction's economic intent and that documentation evidencing risk transfer is available for review.

3. The reporting entity complies with all requirements set forth in the Statement of Statutory Accounting Principles No. 62, "Property and Casualty Reinsurance" (SSAP 62).

4. The appropriate controls are in place to monitor the use of reinsurance.

CEOs and CFOs have the responsibility to attest to risk transfer in reinsurance transactions. However, since actuaries are uniquely qualified to quantify and evaluate risk transfer, they are increasingly being called upon to quantify risk transfer and provide the necessary documentation.

As mentioned above, GAAP and SAP accounting standards contain similar wording about what is required for risk transfer to be present. Most notably, both require the presence of insurance risk. Insurance risk has two components, underwriting risk and timing risk. If both of these types of risk are not present, then insurance risk has not been transferred. While risk transfer is independently defined in each standard, we are unaware of any examples of a contract that would meet the requirements of one standard, but not the other. Contracts that qualify according to one standard are generally considered to meet the requirements of the other standard as well.

2.1 One Exemption from Risk Transfer Requirements – "Substantially All"

Both GAAP and SAP accounting standards specifically require that it be reasonably possible that the reinsurer may realize a significant loss from the transaction, except in cases where the reinsurer meets the "substantially all" requirement. This is meant to exempt a very narrow definition of contracts where the reinsurer assumes "substantially all of the insurance risk relating to the reinsured portions of the underlying insurance contracts." The most common examples are straight quota share or individual risk contracts with no loss ratio caps or other risk limiting features. The reason for this exemption is that it allows companies to acquire qualifying reinsurance on inherently profitable books of business where it may not be reasonably possible that the reinsurer will realize a significant loss.

2.2 Required Risk Transfer Documentation and Reasonably Self-Evident

When the NAIC introduced the "Reinsurance Attestation Supplement" (RAS) in 2005 they also

introduced a new term to the risk transfer lexicon, "reasonably self-evident." The RAS requires documentation "for every reinsurance contract for which risk transfer is not reasonably self-evident." This classification of contracts is meant to reduce the need to rigorously test every reinsurance contract for risk transfer. Unfortunately, very little guidance was offered on what "reasonably-self evident" encompasses. The AAA Practice Note followed the introduction of the RAS and laid out some general guidelines for establishing when the presence of risk transfer is reasonably self-evident. The guidelines were general in nature and provided characteristics to look for in contracts to determine when risk transfer is reasonably self-evident and when it is not.

The CAS Working Party paper took these guidelines one step further and provided a list of specific contract categories where risk transfer is reasonably self-evident based on meeting a 1% Expected Reinsurer Deficit (ERD) threshold. They point out that this list is preliminary and expect it could be considerably expanded. They also point out that there are exceptions to the list, such as when a contract looks contrived. We feel that it can be dangerous to attempt to codify this terminology with explicit definitions. Every contract is different and must have its terms thoroughly reviewed.

Specifically, the CAS Working Party paper lists a couple of categories that we do not agree are always reasonably self-evident such as individual risk contracts and certain long tail excess of loss treaties. Individual risk treaties with no significant risk limiting features would likely be exempt from the accounting standards since the reinsurer assumes "substantially all" of the underlying risk. For individual risk contracts that do not qualify for this exemption, it is not hard to imagine special features that would restrict risk transfer.

For long tail excess of loss treaties, the CAS Working Party paper provides a few numerical qualifications to meet the reasonably self-evident standard. For excess of loss contracts that are not on short tail exposures, the CAS Working Party paper finds that any contract with aggregate limits no less than one per occurrence limit or twice the premium, meets the reasonably self-evident criteria if there are no ceding commissions and the rate on line is below 500%. It is not difficult to construct a contract around these parameters that clearly does not transfer risk. An extreme example would be a single doctor paying $1M for a $1M x $5M medical malpractice treaty with a $2M aggregate limit. This contract passes the established criteria for the risk transfer to be reasonably self-evident, but I think most would agree that not enough risk is transferred in this contract for it to qualify as reinsurance. This is obviously an unrealistic example, but it shows how applying specific parameters on the terminology can lead to unintended results.

The RAS requires documentation "for every reinsurance contract for which risk transfer is not reasonably self-evident." It seems obvious that any contract requiring a more rigorous review would also require documentation for the model results. However, it is our recommendation that documentation be kept on all reinsurance contracts reviewed for risk transfer. We think it is valuable to have documentation for those contracts found to be exempt for any reason, although the most notable are those that meet the "substantially all" clause. We find it to be just as important to document any contract where the risk transfer is found to be reasonably self-evident. While the term reasonably self-evident might lead one to believe the conclusion is obvious and anyone who picks up the contract will reach the same conclusion, not all contracts that meet this standard are clear cut. This is of particular importance if you are using any reference, such as the previously discussed list from the CAS Working Party Paper, to make your determination. The AAA Practice Note also recommends keeping documentation for reasonably self-evident contracts. The practice note also includes several example checklists in the appendix from companies who have made this type of documentation standard.

2.3 Selected Risk Measuring Method – Expected Reinsurer Deficit (ERD)

Neither SSAP 62 nor FAS 113 provide a clear numeric trigger of when risk transfer fails. The "10-10" rule was developed as a benchmark to give meaning to the criteria in the two accounting standards. The "10-10" rule says that a reinsurance contract exhibits risk transfer if there is at least a 10% chance of a 10% or greater loss for the reinsurer.

Another method that has gained acceptance and overcomes some shortcomings of the "10-10" rule is the Expected Reinsurer Deficit (ERD). ERD can be viewed as the probability of a net present value (NPV) underwriting loss for the reinsurer multiplied by the NPV of the average severity of the underwriting loss. A treaty is typically considered to exhibit risk transfer if ERD is greater than 1%, which is consistent with the "10-10" rule (10% loss multiplied by 10% chance is a 1% ERD). Therefore, contracts that qualify for risk transfer under the "10-10" rule generally qualify under a 1% ERD. We will discuss thresholds more in the next section.

ERD has not been explicitly endorsed by any professional body. However, while the CAS Working Party paper stopped short of endorsing ERD, they did prefer its use as a de facto standard over the "10-10" rule. There are a handful of other methods, but none of them are as widely used as the two previously mentioned. Some methods, such as Value at Risk (VaR) and Tail Value at Risk (TVaR) are generalizations of methodologies we have already discussed. Others, such as the

Right Tail Deviation (RTD) method by Wang outlined in the CAS practice note, have not caught on due to the complexity of the model [4][5]. There are also methods, such as the Risk Coverage Ratio (RCR) by Ruhm, which have not caught on due to the exclusion of key variables [3]. RCR does an adequate job of evaluating risk in the losses that are transferred, but it does not make any comparison to premium.

In this paper we will test for risk transfer using a simple cash flow simulation and calculating the Expected Reinsurer Deficit (ERD). While some of these other measures could be used in our example analysis we will use only ERD in the interest of consistency.

2.4 Risk Transfer Thresholds

The CAS Working Party paper began some brief discussion about what the appropriate guideline threshold percentage should be and suggested that further research be done. Currently, because it is consistent with the "10-10" rule, the most commonly recognized threshold for ERD is 1%. Some have suggested that a 2% threshold would be more appropriate. Our recommendation is to continue using the 1% threshold until a more thorough analysis suggests otherwise. Using 2% would be a more stringent guideline, but the 2% threshold does not appear to be any less arbitrary than the current 1% threshold. While the 1% threshold is based on the somewhat arbitrary "10-10" rule, there is some reasoning behind it. The "10-10" rule was loosely derived from the accounting standard language that required that the reinsurer face a "reasonable chance of a significant loss." For the purposes of risk transfer, it has been commonly accepted that a 10% chance is a "reasonable chance" and that a 10% loss is a "significant loss." From these two accepted values, the ERD of 1% has been derived and this threshold continues to gain acceptance.

The CAS Working Party paper also mentions the possibility of including other requirements, such as a required maximum loss, in order to show risk transfer. We recommend not complicating the methodology with extra arbitrary requirements. While adding a maximum loss requirement may feel intuitive, it begins to complicate the process and makes explaining results to the decision-makers more difficult. Adding requirements can also lead to more engineering of contrived contracts. If a maximum loss is required, any contract can be rewritten to incorporate a rare maximum loss.

3. COMMON PITFALLS AND PRACTICAL CONSIDERATIONS DISCUSSION

In order to illustrate the common pitfalls that can affect a risk transfer analysis it is first important to demonstrate how a basic risk transfer analysis is completed, highlighting many of the issues that can surface along the way. Many of the pitfalls referenced in this section are further emphasized later in the paper.

To demonstrate risk transfer analysis two reinsurance contracts are used. Contract #1 is a quota share contract while Contract #2 is an excess of loss contract.

The terms for Contract #1 are summarized in Table 1:

Table 1 - Summary of Terms - Contract #1

Inception Date	1/1/2008
Estimated Subject Premium	10,000,000
Reinsurance Premium	8,000,000
Cession	80.0%
Ceding Commission	25.0%
Profit Commission	
Loss Ratio	66.0%
Profit Swing	5.0%
Loss Ratio Cap	100.0%
Reinsurers Expenses as % of Prem.	
Brokerage	*2.0%*
Underwriting Exp.	*2.0%*
Federal Excise Taxes	*1.0%*

The underlying exposure for Contract #1 is multi-state workers compensation. The company has written workers compensation for a number of years. The cession is a straightforward quota share with a loss ratio cap of 100%. This loss ratio cap has the potential to significantly affect risk transfer. The presence of the loss ratio cap does not always indicate a lack of risk transfer. Contracts, with loss ratio caps at 200% to 300% can clearly result in a significant loss ot the reinsurer. Secondly, there is a profit commission provision whereby the ceding company will receive a profit commission if the underlying loss ratio is 66% or less with maximum profit provision of 5.0%. The profit provision swings on a one-to-one basis with the loss ratio. The impact of profit

provisions on risk transfer is discussed later in the paper.

The terms of the second contract are summarized in Table 2:

Table 2 - Summary of Terms - Contract #2

Inception Date	1/1/2008
Estimated Subject Premium	10,000,000
Provisional Reinsurance Rate	8.50%
Provisional Premium	800,000
Maintenance Fee	50,000
Retention	250,000
Limit	250,000
Swing Rate	
Swing Loss Ratio	75.0%
Minimum Rate	6.00%
Maximum Rate	11.00%
Reinsurers Expenses as % of Prem.	
Brokerage	*10.0%*
Underwriting Exp.	*7.0%*
Federal Excise Taxes	*1.0%*

This is an excess of loss contract covering workers compensation exposure that has a number of potential risk limiting features. The contract is swing rated with a provisional rate of 8.5% which can swing up or down by 2.5%. The swing is based on a ceded loss ratio of 75.0%. Secondly, there is a feature that states that the contract is automatically commuted after five years unless the ceding company pays an additional maintenance fee of $50,000.

For the two example contracts it is not reasonably "self-evident" that risk transfer exists due to the presence of such features as low loss ratio caps and swing-rated premiums.

3.1 Analyzing Risk Transfer

The first step in any risk transfer review is to understand the reinsurance contract's terms and conditions, focusing especially on the terms that can affect the amount of risk being transferred. Care must be taken to understand not only the terms of the treaty but also when those terms will be triggered. In Contract #2 there is a commutation clause that requires a maintenance fee to avoid early commutation that is triggered after five years.

Next the reporting dates and premium due dates need to be determined. In both example

contracts the reinsurance premium is payable in quarterly installments due one month after quarter end , i.e., on April 30, July 31, October 31, and January 31 of the following year.

In both contracts there is not a pre-defined loss payment schedule and therefore losses are reimbursed as they occur. To determine the net present value of the losses, a loss payment pattern reflecting the underlying exposure being reinsured is applied. It is further assumed that losses in any given calendar year are paid at the midpoint of the year.

For Contract #2, it is assumed that the first swing rate adjustment is applied two years after the contract's effective date. Most contracts will define the timing of the experience adjustments to the premium. It is also assumed in the model that the impact of the adjustment is correctly identified for the first adjustment with no further changes to the ceding commission necessary. This assumption implies that the ultimate loss ratio is known at the first adjustment.

The second assumption is that the commutation fee will be paid by the ceding company after five years. This is a reasonable assumption since the ceding company may not want to commute the contract and reassume the risk of changes in the unpaid claims estimates.

The risk transfer analysis was completed using Monte Carlo simulation, modeling first the direct loss payments and then projecting the treaty cessions from the direct loss payments. The ceded losses are then discounted to the effective date of the treaty. Next, the final premium amounts are determined based upon the nominal treaty results, not on the discounted premiums or losses. Any premium adjustments are determined from the modeled results. Care must be taken so that the premium payment dates are appropriately modeled. Like the losses, premium payments are discounted to the treaty effective date. The reinsurer profit/loss is then calculated for each iteration of the simulation as the net present value (NPV) of all payments made from the ceding company to the reinsurer minus the NPV of all the payments made from the reinsurer to the ceding company.

All cash flows between the ceding company and reinsurer need to be represented in the model whether they are called premiums, fees, or experience adjustments. Reinsurer expenses are not included in the model since this is not a cash flow between the ceding company and the reinsurer. For instance in Contract #2 the maintenance fee is included in the analysis and the reinsurer expenses are not. The reinsurer expenses are not part of the risk assumed by the reinsurer from the ceding company.

Finally, the Expected Reinsurer Deficit (ERD) is calculated. ERD can be viewed as the probability of a net present value (NPV) underwriting loss for the reinsurer multiplied by the NPV

of the average severity of the reinsurer underwriting losses. The resulting ERD values are 2.85% for Contract #1 and 2.09% for Contract #2. Details of the simulation and ERD calculation can be found in Appendices A and B. These results indicate that both of these contracts appear to exhibit risk transfer. This conclusion is based on the calculated ERD values and the commonly accepted threshold of 1.0%. As with any risk transfer decision, the ultimate determination must be made by the company CEO or CFO or both.

3.2 Common Pitfalls

This section will highlight easy-to-make mistakes or common pitfalls. Most of these come from our own experience in reviewing contracts for risk transfer and reviewing risk transfer analyses of other actuaries. It is our intent to provide concrete solutions citing previously published materials.

3.2.1 Profit Commissions

Profit commissions generally should not be considered in risk transfer analysis. When determining if risk transfer is present, the analysis focuses only on the scenarios resulting in a loss for the reinsurer. While profit commissions can affect the economic results of a treaty, they usually are not triggered during a reinsurer loss.

This exclusion of profit commissions and focus on reinsurer loss scenarios is not necessarily intuitive. However, the accounting standards clearly state that the presence of risk transfer requires a "reasonable chance of a significant loss" to the reinsurer. Therefore, the results of the ceding company should not be considered in a risk transfer analysis.

It is important to remember that contract features like profit commissions can still have an indirect impact on risk transfer. This impact on risk transfer stems from how these features may affect other aspects of the contract, most notably the premium. Reinsurance contracts are priced while considering any and all expected payments paid and received by the reinsurer. Any addition of a profit commission clearly increases the amount of future expected payments by the reinsurer to the ceding company and may result in a higher premium for the contract.

In the example analysis for Contract #1, the profit commissions were included in the simulation to demonstrate that they did not affect the reinsurer in any loss scenarios. However, if the contract failed to meet risk transfer requirements, the ceding company and the reinsurer may consider potential changes that would allow the contract to be accounted for as reinsurance. One potential change would be to eliminate or reduce the profit commissions with a corresponding decrease in

premium. This change in premium may result in the contract meeting risk transfer requirements.

Another way profit commissions can affect risk transfer is through carryforwards. Carryforwards may be used in multi-year contracts where the profits or losses from prior years may affect the results of the future years. A contract for periods of more than one year usually requires further testing for risk transfer and any carryforwards that may impact a loss position for the reinsurer would need to be incorporated into the model. Carryforwards can also be used in one-year contracts where the primary company and reinsurer agree to terms each year and at that time choose whether or not results will be carried forward. In this case each contract renewal may require a specific analysis. If there is a carryforward from a previous year that would affect results when there is a loss for the reinsurer, then it must be incorporated into the cash flow model. However, when considering one-year contracts with no impact from prior carryforwards there is no need to incorporate potential future carryforwards since they have no impact on the contract being reviewed.

3.2.2 Reinsurer Expenses

Only cash flows between the ceding company and the reinsurer should be considered in a risk transfer analysis. According to SSAP 62, "The evaluation is based on the present value of all cash flows between the ceding and assuming enterprises under reasonably possible outcomes." This means that broker expenses, operating expenses, fees related to letters of credit, and taxes should bear no impact on the analysis. As can be seen in the Appendices, the analyses of the example contracts did not incorporate any of these expenses that did not result in a cash flow between the reinsurer and the ceding company.

3.2.3 Interest Rates and Discount Factors

SSAP 62 requires a constant interest rate to be used for discounting across all simulated scenarios. The interest rate should not vary by scenario because risk transfer analysis should only consider insurance risk. Non-insurance risks such as investment risk, currency risk, and credit risk should not be included. The AAA Practice Note interprets this to also mean that the same interest rate should be applied to all cash flows, including premiums and losses.

SSAP 62 only requires the selection of the interest rate to be reasonable and appropriate. The AAA Practice Note recommends the risk free rate as a reasonable choice. This is not necessarily a conservative selection. Because the risk free rate is commonly below a reinsurer's expected

investment returns, it will actually result in higher projected present valued losses. However, the investment abilities of the reinsurer should not affect the presence of risk transfer, so the risk-free rate is a consistent and reasonable selection for the analysis. The selection of other interest rates is considered later in the paper.

SSAP 62 states that a reasonable and appropriate interest rate "generally would reflect the expected timing of payments to the reinsurer and the duration over which those cash flows are expected to be invested by the reinsurer." Therefore the duration used to select an interest rate should be based on the net cash flows to the reinsurer.

There has been a lot of guidance on interest rate selection and there is very little room for deviation from the use of a constant interest rate in all risk transfer analyses. However, in the selection of the interest rate the accounting standards do not prescribe a set framework and note that judgment is involved. While using a risk-free rate with duration equal to that of the reinsurers net cash flows is recommended, a selected rate could still be considered a "reasonable and appropriate rate".

Page 4 of Appendix A provides an example of calculating a duration using loss and premium payments and then selecting a risk-free rate based on that duration. To get the duration of the net cash flows we performed two duration calculations. First we determined the duration of the premium payments. This was straight forward since the premium payment schedule is laid out in the contract. Next the loss duration is calculated using an industry payment pattern. The duration of the net cash flows is then the difference between the two. This calculation may not be exact, but it is a good approximation of the "duration over which those cash flows are expected to be invested by the reinsurer," as the standard requires. The calculated duration of net cash flows was then used to select an interest rate based on the years of maturity and yield curve rates from the U.S. Treasury in Columns (7) and (8). This interest rate was used in the analysis for Contract #1.

For Contract #2 an interest rate was selected with consideration given to the current risk-free rates and longer expected payment pattern for an excess of loss contract.

3.2.4 Premiums

The premium paid by the ceding company is one of the most significant inputs when determining if risk transfer is present. When using the "10-10" rule or ERD all potential loss situations are going to be compared against the premium to calculate a percent of loss. While its importance is clear, what the premium should include is not nearly as straightforward.

First, the premiums used in risk transfer analysis should be gross premiums. This is specifically pointed out in SSAP 62. Gross premiums entail all premium paid to the reinsurer before the consideration of any payments back such as a ceding commission.

When making comparisons against premium to determine a reinsurer's profit or loss, it is required that the present value of the premium be used. Reinsurance contracts often lay out specific payment plans for premium. The same interest rate used to discount losses should be applied to calculate the present value of the premium. While the risk transfer analysis is a present value calculation, it is important to model the actual functioning of the contract. This means that the application of the loss ratio caps and experience adjustments are based upon the nominal premium and loss amounts. As shown in Appendix A, the loss ratio cap in Contract #1 is applied to nominal losses and premiums in the simulation. The discounting of premium and losses happens after the contract losses and premiums are determined and any caps or experience based features are applied.

When the premium of a reinsurance contract is dependent upon future events, using the proper premium in a cash flow simulation is slightly more complicated.

There are a number of premiums that could be considered for this purpose. The initial deposit premium is an intuitive and simple choice, but it does not account for future payments from the ceding company to the reinsurer and could therefore be easily manipulated. The other options are to use an expected premium or the actual premium in each scenario.

The use of expected premiums may also seem intuitive, but can be troublesome as well. The most significant concern with using expected premiums is the potential over detection of risk transfer. When premium is dependent upon loss experience, the highest premium levels often occur when the loss experience is the poorest and the reinsurer's losses are at their highest. If the reinsurer's percent of loss is calculated using an average expected premium, it is likely that the resulting reinsurer loss percentage will be a larger negative value than what is actually possible. Because of this it is imperative that actual premiums are developed along with the losses for each scenario and that each scenario has a corresponding percent of reinsurer loss developed. From these simulated results, percentiles and values such as ERD can be calculated.

It is not uncommon for a reinsurance contract to include fees other than premium. When there are fees that depend upon future events, the impact of these events should be included in the model. If it is not possible to include certain events in the model, a general assumption about their impact on any future cash flows may be necessary. The conservative decision would be to include all fees

that the ceding company may be required to pay to the reinsurer. There is an example of this in Contract #2, which requires a fee to delay mandatory commutation of the contract after five years. In the example it is assumed that the primary company will not want to commute the contract and reassume the risk after five years and therefore will be required to pay a fee of $50,000. When this type of fee is expected to occur, it should be considered as premium in any calculation of reinsurer loss. While the fee may be entirely administrative and related to the reinsurer's claim handling costs, any cash flows from the ceding company to the reinsurer should be considered as premium. If this were not the case, the determination of risk transfer could be manipulated based upon the labeling of certain cash flows as premiums or fees.

3.2.5 Evaluation Date

The date used in risk transfer analysis will likely only be used in the selection of an interest rate or in determination of how much was known about potential losses when the contract was entered into. SSAP 62 states that "risk transfer assessment is made at the inception date based on facts and circumstances known at the time." Therefore any parameters that may be affected by the date at which they were determined should be considered from the time of the contract's inception. The contract inception date is the date the contract comes into force, or the original effective date. According to SSAP 62 it is not necessary to retest for risk transfer at every renewal unless there are any significant amendments made to the treaty. If a contract is tested at inception, the results of that test are unlikely to change. In the case of an amendment that makes a material change to the amount of risk being transferred, the amendment date should be treated as the inception date of the contract and the contract should be reviewed again for risk transfer.

3.2.6 Commutations and Timing of Payments

According to SSAP 62, any reinsurance contracts that have prescribed payment patterns do not meet the risk transfer requirements. In order to have risk transfer in a reinsurance contract, there must be timing risk as well as underwriting risk. Prescribed payment plans remove the timing risk necessary for risk transfer. In order for the contract to contain timing risk the reinsurer must make "timely reimbursement payments."

Contracts with commutation clauses may still meet risk transfer requirements, but to the extent they affect the cash flows between the ceding company and reinsurer, they must be modeled. If a fee is required to avoid an early forced commutation, this fee should be considered as part of the expected premium paid. If the commutation decision is unilateral, it may be necessary to

incorporate the commutation decision into the model based on economically rational decision making. To the extent the commutation clause impacts the payment pattern, this too should be considered in the cash flow model.

3.3 Practical Considerations

This section is meant to highlight a number of practical considerations that commonly appear in risk transfer analyses and have not been thoroughly addressed in the current literature. While not all of these practical considerations have obvious solutions, we hope to shed some light on the available options and open the door for further discussion on the topics.

3.3.1 Parameter Selection

One of the first and most important steps in performing a cash flow simulation for risk transfer analysis is choosing the parameters. Any parameters that are not given by the contract must be selected after some contemplation. This includes the interest rate, payment pattern, and any loss distributions used for projecting cash flows.

3.3.2 Interest Rate

Making the appropriate interest rate selection was previously addressed in the Common Pitfalls section. Using a risk-free rate based upon a duration calculation and the expected premium and loss payments is recommended by the AAA Practice Note. It is also required by the accounting standards that the same rate be used throughout the analysis.

While the risk-free rate is recommended, there are other possibilities to consider. It is difficult to envision a scenario were it would be reasonable to use an interest rate that is lower than the risk-free rate. This may seem conservative, but using a lower interest rate would lead to higher losses at present value and could result in over-detecting risk transfer. It is also difficult to construct an argument for why a company would not have the risk-free rate available to them. Therefore, it seems reasonable to treat the risk-free rate as the lowest possible choice, or floor, when selecting an interest rate.

A better argument could be made for selecting an interest rate above the risk-free rate. The most logical argument is that the reinsurer in the contract has a higher expected return on investments and this expected return should be used when determining if they face a "reasonable chance of a significant loss." While this argument is intuitive, it does have its flaws. First, this is not likely an

available parameter if the risk transfer analysis is being done on behalf of the ceding company. Next, if a reinsurer's expected investment returns are used in the risk transfer analysis, it will create the situation where a contract may be found to exhibit risk transfer for a reinsurer with poor investment strategy, but be found not to transfer risk for a reinsurer with superior investment strategies. This type of counter-intuitive result is also why cash flows that are not between the ceding company and the reinsurer are not considered.

Based on these considerations it is difficult to construct an argument for using anything that is not at least loosely based upon the risk-free rate. For consistency and to provide support for the interest rate selected, it may be worthwhile to base the selection on the treasury yields available at the inception date of the contract and the expected duration of the cash flows, as was done in the example for Contract #1. This approach is consistent with the recommendation from the AAA Practice Note. However, depending on the situation and in an effort to keep an analysis simple, it may also be just as reasonable to select an appropriate approximation of the current risk-free rate, as was done in the example for Contract #2.

An alternative to selecting a duration-matched interest rate, which has been used by some practitioners, is the selection of a constant yield curve. Use of a yield curve is common in company planning and in making economic decisions on contracts. However, the use of yield curves in risk transfer analysis does not appear to be consistent with the accounting standards. The AAA Practice Note finds that SSAP 62 requires, "that a single interest rate be used to present-value the cash flows."

A constant yield curve would generally result in a more stringent risk transfer analysis since interest rates tend to be higher at longer durations. The typical yield curve would lead to more discount being applied to losses in comparison to the premiums, which are often paid much quicker. While the use of a yield curve may seem like an improvement to the analysis, the language in the accounting standards clearly leads to a similar conclusion to the AAA Practice Note. Both standards refer to the use of "a constant interest rate," through all cash flow scenarios. The intent of the standards appears to be that interest rate risk should not be incorporated in the model. Thus, an interest rate that varies by scenario is not allowed. Capturing interest rate risk is not the intent of incorporating a yield curve into the analysis. A constant yield curve across all scenarios would only result in a different interest rate when the timing of the cash flows differed, which reflects risk due to the timing of losses and premiums, not the interest rate. However, the use of a yield curve to discount cash flows would result in a different effective interest rate when no losses are paid

compared to a situation where significant losses are paid. This appears to violate the requirement in SSAP 62 that the "same interest rate shall be used to compute the present value of cash flows for each reasonable possible outcome tested."

3.3.3 Payment Pattern

Payment patterns are often based on previous experience for the ceding company or industry benchmarks or both. While this can be a simple parameter to select, it is important to remember that there is uncertainty involved in the payment pattern. While this risk is more difficult to measure than the risk involved in a loss distribution, the timing of payments can play a significant role in the amount of risk transferred. For example, when a constant payment pattern is applied to a loss distribution, the results will not recognize the potential impact of quicker than expected payments. This will have the most significant impact on the tails of the distribution, which is often the portion we are the most interested in for determining risk transfer. While introducing variability into a payment pattern may be too complicated for the benefit it provides, it is important to at least consider this risk as you complete your analysis.

3.3.4 Loss Distribution

Loss distributions are often based on previous company experience, industry benchmarks, pricing information, or judgment, or all of these factors. For transactions covering large books of business with several years of historical experience available, selecting a loss distribution can be as easy as fitting a distribution to the available data. For books of business with low premium volume or immature loss experience, selecting the appropriate distribution can be much more difficult. Even for mid-size books of business it can be difficult to select a loss distribution because risk transfer testing focuses on the right tail of the distribution. This concern is compounded when working with high-level excess of loss contracts. However the loss distribution is determined, it is important to test the reasonableness of the tail results. Having an adequate comfort level with the tail results produced by the selected distribution is crucial.

When a company does not have enough historical loss experience to base a distribution upon, it is typical to turn to industry benchmarks or the information used to price the reinsurance contract. The use of pricing assumptions in risk transfer analyses is discussed later in the paper. Industry data can provide a starting point for overall expected loss ratios or frequencies and severities. However, it is difficult to select a distribution and develop a variance using only industry results. Individual companies can experience significantly higher variance in their loss than the industry as a whole. In

these instances it may be necessary to rely on some generally accepted distributions. Likewise a selected variance will be required. This selection will depend on a number of considerations, such as the size of the book of business, the type of coverage, the type of business being underwritten, and a variety of other factors.

3.3.5 Parameter Risk

A key consideration for any simulation model is parameter risk. Cash flow simulations for risk transfer are no different. As we previously discussed, selecting parameters to simulate future loss payments is a difficult process and it is important to account for the risk that the selected parameters or model are incorrect. Accounting for this increased variability in your simulation will increase the likelihood that your analysis will determine risk transfer is present. This is a reasonable result when you consider that the reinsurer is clearly accepting this same parameter risk when entering into the contract.

Parameter risk can be accounted for explicitly or implicitly. Implicitly it can be reflected in a slightly higher expected loss selection or in an increase to the expected volatility of losses. In the case of explicit recognition it is common to see a probability distribution assigned to key parameters and then to have them simulated also. This provides some variability to the selected parameters to help account for parameter risk. While this is a more concrete method than including it implicitly, it also depends on judgment and the selection of more distributions and parameters. There is not much information available about incorporating parameter risk into cash flow simulation models. Currently, there are no widely accepted methods and the costs of more complicated techniques may tend to outweigh the benefits.

Parameter risk is going to have the greatest impact on the losses simulated, but it can affect other facets of the analysis as well. When premium projections must be estimated based on the treaty terms, there is some additional parameter risk, but it will rarely affect the result of the analysis. There is also parameter risk in the discounting function used in the analysis. However, not all of that risk should be accounted for in a risk transfer analysis.

The majority of the parameter risk in discounting comes from two key inputs, the payment pattern and the interest rate. As we previously discussed, there is real risk in not incorporating an accurate payment pattern. This risk relates to timing risk, which is a part of insurance risk and should be considered in a risk transfer analysis. The second piece of the discount, the interest rate, however, should not contribute any risk, parameter or process, to the analysis. SSAP 62 clearly

states that "the possibility of investment income varying from expectations is not an element of insurance risk."

Because there are no widely accepted methods and because the methods available either require some arbitrary selections or may add more cost than benefit to the analysis, we do not feel that parameter risk must be explicitly shown in a risk transfer analysis. We would strongly encourage practitioners to at least include it implicitly if not explicitly. Regardless, we recommend documenting the existence of parameter risk and, whether or not it is included in the analysis, documenting how it could affect the results. This documentation can be beneficial if another actuary needs to review the analysis. More importantly, parameter risk is too important to entirely exclude from both the analysis and the report when the analysis may be directly used to make the decision on risk transfer.

3.3.6 Use of Pricing Assumptions

One potential resource, if available, for selecting parameters for small or immature books of business is the reinsurance pricing assumptions. This concept is very attractive since a properly priced reinsurance agreement is likely to be based on an appropriate expected loss assumption with an appropriate risk load and payment pattern. While we are often more interested in a loss distribution than just the expected losses for testing risk transfer, these assumptions can help provide some of the necessary parameters for our simulation.

Pricing assumptions can also be helpful in parameter selection since they reflect how risky the market views a particular piece of business. The reinsurance market may provide a better indication of the amount of risk involved in a small new primary company searching for reinsurance than what you could find based on industry benchmarks. Of course, this market-driven view of a reinsurance contract is also one of the biggest drawbacks to using pricing assumptions. Simulation testing for risk transfer should be based on expected loss experience and should not be market-driven. Pricing assumptions should only be used in selecting parameters when reasonable. A hard insurance market with higher premiums does not mean that companies do not need to meet the same risk transfer standards. Because of this, when available, the underlying data that the pricing assumption was based upon can be even more beneficial than the parameters actually used in the pricing of the reinsurance.

To correctly apply the expected loss assumptions from a pricing model to a risk transfer analysis, it is important to properly account for the risk load in the pricing. In many reinsurance contracts,

risk load is a significant piece of the puzzle. It may be implicitly added into the expected loss ratio or explicitly stated in the development of the rate. If it is implicit in the expected losses, it is important not to blindly carry forward the expected losses without recognizing the extra loaded amount. If it is explicitly stated, intuitively there should be a relationship between this risk load amount and the level of risk inherent in the underlying coverage. While this risk load reflects the amount of variability the reinsurer anticipates in the contract, it is not easy to translate this load into a variance for your loss distribution. However, it is worthwhile to at least consider the size of this risk load when selecting the loss distribution and variance.

Another caveat to remember when using pricing information to select parameters for risk transfer testing is that while both practices are generally aimed at determining expected future losses, they both are doing so for very different reasons. The differences in intent can lead to different approaches and selections. Notably, when pricing a reinsurance contract, it might be considered prudent to make conservative selections. This might lead to slightly higher expected losses and risk load. These selections would not be considered conservative in a risk transfer analysis. Selecting higher expected losses and increasing the expected variability would lead to over-detecting risk transfer. For risk transfer testing the more conservative approach would be to use lower expected losses and variability. These differences in approach are important to remember anytime you are relying on assumptions from an analysis developed for a different purpose.

While pricing assumptions can clearly provide valuable input to any risk transfer analysis, it should also be clear that there are variety of reasons one may deviate from them. This is true even for reinsurance analysts who may be testing the same contracts they priced. These two exercises might require different assumptions about the modeled losses. Loss models used for pricing are often optimized based on their projections of all the potential results. Risk transfer, on the other hand, requires a model that is optimized on the right tail of the distribution. Due to this distinct difference in focus, the resulting selections for loss distribution and/or parameters may not be the same for pricing and risk transfer analysis.

3.3.7 Commutation Clauses

As previously discussed, any mandatory fees to delay a required commutation should be included when determining if risk transfer is present. Commutation clauses should be read carefully to determine their entire impact on risk transfer. While commutation clauses do not often prohibit a contract from exhibiting risk transfer, it is important to recognize that any commutation requirement

does restrict the amount of risk transferred. It is not uncommon for these clauses to set a predetermined date for commutation based on an actuarial determination of the unpaid claim estimates at that time. While this is a fair method for completing a commutation, it does require the ceding company to reassume the risk of any changes in the unpaid claims after the predetermined commutation date. This clearly returns some risk back to the ceding company, limiting the amount of risk transferred in the original transaction.

If a commutation clause states that the future commutation will be based on a mutually agreed upon value or on an actuarial determination, the payment pattern used to discount losses in the risk transfer analysis may not need to be adjusted. While the commutation may result in an earlier payment than anticipated by the reinsurer for any outstanding claims, the payment should reflect the present value of expected payments at that time and the impact on the original payment pattern assumption should be minimal. If there are explicit rules for the calculation of the value of outstanding claims at commutation, these rules may need to be included in the original analysis and may affect the selected payment pattern.

4. CONCLUSIONS

It is important to remember that none of the methods to test risk transfer provide a "bright line" indicator for its existence. While actuaries have the necessary skill set to evaluate the existence of risk transfer in any reinsurance contract, the final decision belongs to the CEO or CFO of the company. Risk transfer analysis, and more specifically ERD, is a tool to aid them in that decision. If a risk transfer analysis produces a borderline result, such as an ERD of 0.95% or 1.05%, it will likely require further consideration and documentation to show that risk transfer does or does not exist in the contract being reviewed. Risk transfer testing is a principle-based exercise and the existence of risk transfer is entirely based upon there being a "reasonable chance of a significant loss" to the reinsurer. ERD and other methodologies are just tools to help determine if a contract meets this standard.

Acknowledgment

RISK RETENTION GROUPS

Clarifications Could Facilitate States' Implementation of the Liability Risk Retention Act

On January 10, 2012, this report was reposted on the GAO website to correct information in appendix I that was not included in the previously posted file.

December 2011

RISK RETENTION GROUPS

Clarifications Could Facilitate States' Implementation of the Liability Risk Retention Act

GAO Accountability * Integrity * Reliability

Highlights

Highlights of GAO-12-16, a report to congressional requesters

Why GAO Did This Study

Congress authorized the creation of risk retention groups (RRG)—a group of similar businesses that creates its own insurance company to insure its risk—to increase the affordability and availability of commercial liability insurance. Through the Liability Risk Retention Act (LRRA), Congress partially preempted state insurance laws to allow RRGs licensed in one state (the domiciliary state) to operate in all other states (nondomiciliary states) with minimal additional regulation. In a 2005 report (GAO-05-536), GAO noted concerns with the adequacy of RRG regulation. This report (1) describes changes in the financial condition of the RRG industry from 2004 to 2010; (2) examines the regulatory treatment of RRGs across domiciliary and nondomiciliary states; and (3) examines changes to federal and state regulatory practices regarding RRGs since 2004. GAO analyzed RRG financial data, surveyed state insurance regulators (96 percent response rate), and interviewed RRG industry representatives.

What GAO Recommends

To further facilitate states' implementation and help reduce the varying interpretations of LRRA, Congress should consider the merits of clarifying certain LRRA provisions regarding registration requirements, fees, and coverage. NAIC concurred with this matter for congressional consideration.

What GAO Found

Certain indicators suggest that the financial condition of the RRG industry in aggregate generally has remained profitable. In 2003, RRGs wrote about $1.8 billion, or 1.17 percent of commercial liability insurance. In 2010, RRGs continued to comprise a small percentage of the total market, writing about $2.5 billion—or about 3 percent of commercial liability coverage. Other financial indicators, such as ratios of RRG premiums earned compared to claims paid—also suggest profitability. In addition, the number of RRGs has increased since 2004, with the most growth occurring in health care-related lines. In 2010, more than 80 percent of RRGs were domiciled in Vermont, South Carolina, the District of Columbia, Nevada, Hawaii, and Arizona, but RRGs wrote about 95 percent of their premiums outside their state of domicile. Evidence suggests that RRGs may choose to domicile in a particular state, partly due to some financial and regulatory advantages such as lower minimum capitalization requirements. RRG representatives opined that RRGs have expanded the availability of commercial liability insurance—particularly in niche markets—but differed in their opinions of whether RRGs have improved its affordability.

Different interpretations of LRRA have led to varying state regulatory practices and requirements in nondomiciliary states and disputes between state regulators and RRGs in areas such as registration requirements, fees, and types of coverage RRGs may write. For example, while some states have interpreted LRRA to permit RRGs to write contractual liability coverage, others have not, and therefore may not allow RRGs to write this coverage in their state. RRGs have challenged requirements established by nondomiciliary states that RRGs assert are not permitted by LRRA. However courts also have differed in their interpretations of LRRA. Some regulators with whom GAO spoke indicated that their actions toward nondomiciled RRGs reflect an effort to use their limited regulatory authority to protect insureds in their states as well as address concerns about RRG solvency.

Some state regulatory practices for RRGs have changed since 2004, and federal legislation has been proposed. In 2005, GAO recommended implementation of more uniform, baseline state regulatory standards, including corporate governance standards to better protect RRG insureds. The National Association of Insurance Commissioners (NAIC) has since revised its accreditation standards to more closely align with those for traditional insurers which are subject to oversight in each state in which they operate. For example, all financial examinations of RRGs that have commenced during or after 2011 should use the risk-focused examination process. NAIC also has begun developing corporate governance standards that it plans to implement in the next few years. Proposed legislation would amend LRRA to allow RRGs to provide commercial property insurance and also include a federal arbitrator to resolve disputes between RRGs and state insurance regulators. While some RRG representatives and state regulators supported this legislation, others expressed concerns about whether RRGs would be adequately capitalized to write commercial property insurance and about federal involvement in state regulation.

GAO
Accountability * Integrity * Reliability

United States Government Accountability Office
Washington, DC 20548

December 8, 2011

The Honorable Michael Capuano
Ranking Member
Subcommittee on Oversight and Investigations
Committee on Financial Services
House of Representatives

The Honorable John Campbell
House of Representatives

Responding to shortages that constrained the availability and affordability of commercial liability insurance, Congress passed the Product Liability Risk Retention Act of 1981 (PLRRA) to authorize creation of risk retention groups (RRG)—similar businesses with similar risk exposures that create their own insurance company to self-insure their commercial liability risks on a group basis.[1] In 1986 Congress amended PLRRA by passing the Liability Risk Retention Act of 1986 (LRRA), which allows RRGs to extend coverage beyond product liability into most of the commercial liability market and establishes a regulatory framework that partially preempts state insurance laws.[2]

LRRA allows an RRG to be regulated primarily by its chartering (domiciliary) state, even when it sells insurance in other (nondomiciliary) states.[3] With one regulator, RRGs differ from "traditional" insurers, which are subject to licensing and oversight by regulators in each state in which they operate. While LRRA requires RRGs to provide to nondomiciliary state regulators copies of the RRG's business plan or feasibility study and annual financial statements, it neither explicitly permits nor prohibits nondomiciliary states from requesting additional documentation or

[2]Pub. L. No. 99-563, 100 Stat. 3170 (1986). As amended, LRRA permits RRGs to offer commercial liability insurance, excluding worker's compensation.

[3]*See* 15 U.S.C. §§ 3901-02. A domiciliary state is the state in which the RRG is chartered and primarily regulated, whereas a nondomiciliary state is any state in which the RRG is not chartered or regulated, but conducts business.

charging fees.[4] LRRA preempts the laws of nondomiciliary states to oversee RRGs selling insurance in their states except in specified circumstances.[5]

Congress intended for the regulatory framework established by LRRA "to strike a balance between the RRGs' need to be free of unjustified requirements and the public's need for protection from insolvencies."[6] The legislative history indicates that Congress viewed RRGs as having incentives to practice effective risk management both in their own businesses and the RRG because the RRG is owned by insureds, who may have business assets at risk should the RRG become insolvent. To further encourage RRG members to establish adequate premiums and reserves, LRRA prohibits RRGs from participation in state guaranty funds.[7] According to recent data from the National Association of Insurance Commissioners (NAIC), eight RRGs became insolvent from 2004 to year-end 2010.[8]

Our 2005 report on RRGs noted that RRGs played a small but important role in increasing the availability and affordability of commercial liability insurance in niche markets, but that they operated in a regulatory environment characterized by varying state standards due to the partial preemption of state insurance laws by LRRA.[9] We found that RRGs might not consistently protect the best interest of owners/insureds due to a lack of uniform corporate governance standards. Our report was prompted by

[4]15 U.S.C. § 3902(d)(2)-(3). *See* 15 U.S.C. § 3902(a)(1)(B), which allows any state (domiciliary or nondomiciliary) to require payment of premium and other taxes, but does not mention fees.

[5]15 U.S.C. § 3902(a)(1).

[6]H.R. Rep. No. 99-865, at 12 (1986), *reprinted in* 1986 U.S.C.C.A.N. 5303, 5309; S. Rep. No. 99-294, at 13-14 (1986).

[7]Insurance insolvency guaranty funds typically are maintained by contributions of insurance companies operating in a particular state and are made available to settle the claims of insureds in the event of insolvency of traditional insurance companies.

[8]NAIC is a voluntary association of the heads of insurance departments from each state, the District of Columbia, and five U.S. territories that provides a national forum for addressing and resolving major insurance issues (including those concerning RRGs) and for promoting the development of consistent policies among the states.

[9]GAO, *Risk Retention Groups: Common Regulatory Standards and Greater Member Protections Are Needed*, GAO-05-536 (Washington, D.C.: Aug. 15, 2005).

a rise in the formation of RRGs coupled with the failure of several large RRGs—22 RRGs failed between 1987 and 2003—which raised questions about the adequacy of the RRG regulatory environment and safeguards to protect RRG members/insureds and consumers.[10] We recommended that the NAIC develop and implement a set of broad-based, uniform, baseline standards for RRG regulation. These standards should include regularly filing financial reports using a uniform accounting method, because both NAIC and some nondomiciliary states reported difficulty assessing the financial condition and solvency of RRGs reporting under generally accepted accounting principles (GAAP) as compared with the condition of RRGs reporting under statutory accounting principles (SAP).[11] We also recommended establishing minimum corporate governance standards, such as independent members on an RRG's board of directors.

As we also reported in 2005, some states may have modified policies and procedures to attract RRGs to domicile in the state, such as lowering statutory minimum capital and surplus requirements. Some regulators also expressed concerns over aspects of RRGs' operations that they would not be able to influence, such as minimum capital and surplus requirements for RRGs operating in but not domiciled in their state. The various interpretations of LRRA by state insurance regulators have led to disputes and in some cases litigation between RRGs and states.[12] More recently, legislation has been proposed to develop a federal mechanism to arbitrate disputes between RRGs and states as well as to permit RRGs to offer commercial property coverage in addition to commercial liability coverage.[13] Some state insurance regulators expressed concerns about the capital adequacy of RRGs wishing to incorporate commercial property coverage into their business lines.

[10]In 2003, 127 RRGs were licensed to write business.

[11]SAP is a set of accounting principles dominant in the traditional insurance industry that is geared towards assessing solvency, and produces some variations from another set of accounting principles—GAAP—which are more widely used outside the insurance industry to assess the general performance of a business.

[13]*See, e.g.,* H.R. 2126, 112th Cong. (2011).

In light of regulatory and industry concerns, as well as recent proposals to expand LRRA, you asked us to update our analysis from our 2005 report. This report (1) describes changes in the financial condition of the RRG industry from 2004 through 2010; (2) examines the regulatory treatment of RRGs across domiciliary and nondomiciliary states; and (3) examines changes to federal and state regulatory practices regarding RRGs since 2004.

To determine the financial condition of the RRG industry, we analyzed data on the commercial liability insurance market such as trends in the types of coverage provided, concentration of domiciled RRGs, and financial ratios based on data from NAIC. We also reviewed documentation from 2004 through 2010 from NAIC and the *Risk Retention Reporter*, a trade journal and industry data source. We determined that the data were sufficiently reliable for the purposes of our report. To evaluate the differences in regulatory treatment of RRGs across states, we reviewed and analyzed LRRA and its legislative history. We conducted a web-based survey of insurance regulators in the 50 states and the District of Columbia (96 percent response rate) and interviewed 13 domiciliary and nondomiciliary state insurance regulators from a nonstatistical sample.[14] States were selected based on the number of domiciled RRGs or the amount of premiums written by RRGs and perceived differences in regulatory treatment of RRGs in these states. We held two discussion groups with multiple RRG representatives that volunteered to participate and interviewed representatives from a nonstatistical sample of 11 RRGs. These RRGs were selected based on the amount of premiums written, state of domicile, number of states in which they operated, and type of insurance coverage provided. We are not able to generalize results from this sample to the entire RRG industry. Further, we interviewed representatives of two industry associations on their members' regulatory experiences operating in domiciliary and nondomiciliary states. We reviewed correspondence from state insurance regulators to RRG representatives about topics such as registration processes and fees charged to RRGs. To examine changes in regulatory practices since 2004, we analyzed documentation on and interviewed NAIC officials about changes to the accreditation process affecting RRGs and measures to develop corporate governance standards for RRGs. We also asked representatives of RRGs and state insurance departments, as

[14]The survey and corresponding results can be viewed at GAO-12-17SP.

well as an actuarial expert, about the potential impact of these efforts. Our web-based survey also asked about regulatory changes. Finally, we reviewed key legislation concerning RRGs that had been introduced at the federal and state levels since 2004. We conducted this performance audit from October 2010 to December 2011 in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives. Appendix I provides additional details about our objectives, scope, and methodology.

Background

Traditional insurance companies sell insurance to the public and are subject to the licensing requirements and oversight of each state in which they operate. The licensing process allows states to determine if an insurer domiciled in another state but operating in their state meets the nondomiciliary state's regulatory requirements before granting the insurer permission to operate in their state. According to NAIC's uniform application process, which has been adopted by all states, an insurance company must show that it meets the nondomiciliary state's minimum statutory capital and surplus requirements, identify whether it is affiliated with other companies (that is, part of a holding company system), and submit biographical affidavits for all its officers, directors, and key managerial personnel. After licensing an insurer, regulators in nondomiciliary states can conduct financial examinations, issue an administrative cease-and-desist order to stop an insurance company from operating in their state, and withdraw the company's license to sell insurance in the state. In addition, most nondomiciliary states have "seasoning requirements" that call for an insurance company to successfully have operated in its state of domicile for anywhere from 1 to 5 years before it can qualify for a license.

Regulatory Framework for RRGs

Although RRGs have some regulatory relief due to the lead state regulatory framework established under LRRA, they still are expected to comply with certain other laws administered by nondomiciliary states.[15]

[15] 15 U.S.C. § 3902(a)(1).

For example, RRGs must pay applicable taxes on premiums and other taxes imposed by nondomiciliary (as well as domiciliary) states.[16] LRRA also imposes other measures that offer protections or safeguards to RRG members including the requirement that each RRG must submit to the domiciliary state insurance regulator a plan of operation or feasibility study that includes the coverages, deductibles, coverage limits, rates, and rating classification system for each line of insurance the RRG intends to offer.[17] The RRG must (1) provide a copy of the plan or study to the insurance regulator in the nondomiciliary states in which the RRG intends to conduct business before it can write any insurance coverage in that state;[18] (2) provide a copy of the group's annual financial statement (certified by an independent public accountant) to the insurance commissioner of each state in which it is doing business (the financial statement should include a statement of opinion on loss and loss adjustment expense reserves by a qualified loss reserve specialist or actuary);[19] and (3) submit to an examination by a nondomiciliary state regulator to determine the RRG's financial condition, if the domiciliary state regulator has not begun or refuses to begin an examination.[20] Nondomiciliary, as well as domiciliary, states also may seek an injunction in a "court of competent jurisdiction" against RRGs that they believe are in hazardous financial condition.[21]

Other Self-Insurance Structures

RRGs are not the only form of self-insurers. "Captive insurance companies" (captives), also chartered and regulated by states, are established by single companies or groups of companies to self-insure their own risks. States chartering captives offer some regulatory relief to these companies based on the presumption that owners of captive

[16] *Id.* § 3902(a)(1)(B).

[17] *Id.* § 3902(d)(1).

[18] *Id.* § 3902(d)(2).

[19] *Id.* § 3902(d)(3). Loss reserve is the estimated liability, as it would appear in an insurer's financial statement, for unpaid insurance claims or losses that have occurred as of a given evaluation date. Loss reserves usually include losses incurred but not reported, losses due but not yet paid, and amounts not yet due. For individual claims, the loss reserve is the estimate of what ultimately will be paid out on that claim.

[20] 15 U.S.C. § 3902(a)(1)(E).

[21] *Id.* § 3902(a)(1)(H), (e), (f).

companies have sophisticated knowledge about managing their risks and would protect their own interests. States can charter RRGs under regulations intended for traditional insurers or for captives. Non-RRG captives exist largely to cover the risks of their parent, which can be one large company (pure captive) or a group of companies (group captives). Group captives share certain similarities with RRGs because they also comprise several companies, but group captives, unlike RRGs, do not have to insure similar risks. Further, captives may provide property coverage, while RRGs currently may not. Regulatory requirements for captives generally are less restrictive than those for traditional insurers. However, non-RRG captives, like traditional insurance companies, generally cannot conduct insurance transactions in any state except their domiciliary state, unless they become licensed in that other state.

NAIC and State Coordination

State insurance regulators that oversee both traditional insurers and RRGs participate in NAIC's voluntary accreditation program for the regulation of insurers' financial solvency.[22] NAIC accreditation is a certification given to a state insurance department once it has demonstrated it has met and continues to meet an assortment of legal, financial, and organizational standards. According to NAIC officials, all 50 state insurance departments and the District of Columbia were accredited as of March 2011. NAIC developed its Financial Regulation Standards and Accreditation Program in 1989 and adopted its formal accreditation program in June 1990. The mission of the program is to establish and maintain standards to promote sound insurance company financial solvency regulation. To execute this mission, NAIC assesses how each state insurance department reviews and monitors the solvency regulation of multistate insurance companies and RRGs to ensure states have (1) adequate solvency laws and regulations to protect consumers, (2) effective financial analysis and examination processes, and (3) appropriate organizational and personnel practices.

[22]In general, accreditation is a process by which a program has been certified as fulfilling certain standards by a national professional association.

RRGs Generally Reported Increased Profitability and Continue to Write the Majority of Their Business in Nondomiciliary States

Premiums Written by RRGs Generally Increased, Particularly in Health Care-Related Lines

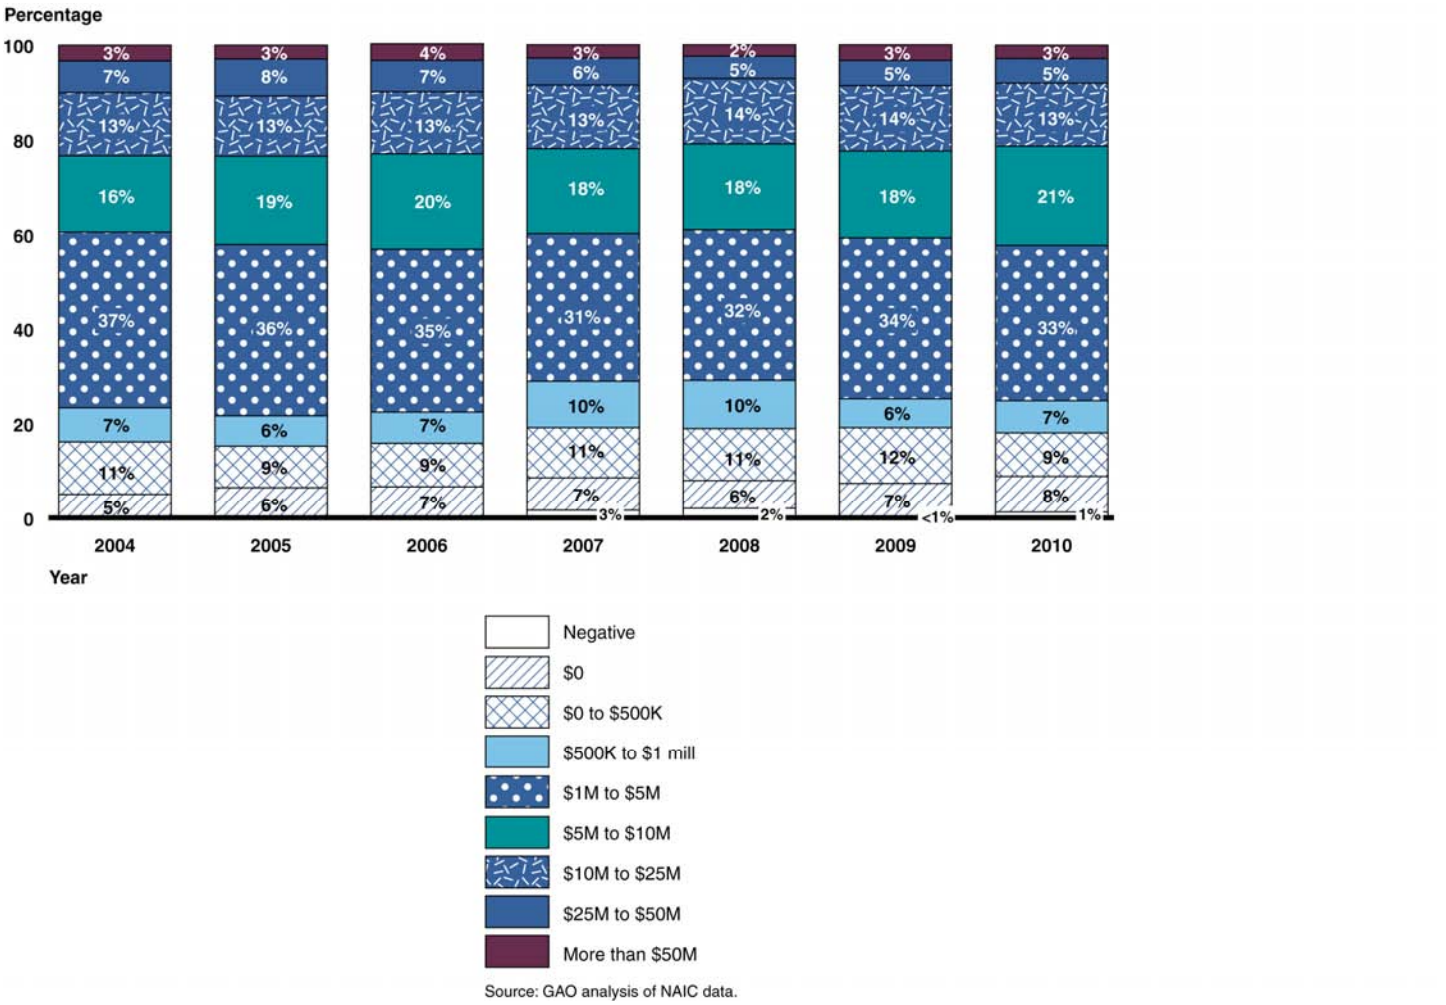
Based on data reported by RRGs to NAIC since 2004, RRGs in aggregate have shown an increase in premiums written and in their share of the broader commercial liability market.[23] In 2005, we reported that RRGs wrote about $1.8 billion of commercial liability coverage, which constituted about 1.17 percent of the overall market in 2003.[24] According to NAIC data, in 2010 RRGs wrote about $2.5 billion in premiums, which was about 3 percent of the total $92 billion of commercial liability insurance coverage written industrywide.[25] An analysis of direct written premiums by dollar amount indicates that between 2004 and 2010, the largest percentage of RRGs (31 to 37 percent) wrote premiums between $1 million and $5 million (see fig. 1).

[23]Premiums written are the total amount of premium charges in a particular period for all policies the insurer "writes."

[24]GAO-05-536.

[25]Commercial liability comprises various insurance lines, which include the liability portion of commercial multiple peril; other liability; products liability; commercial automobile (personal injury protection); other commercial automobile liability; warranty; and medical professional liability. The medical professional and other liability data consolidate occurrences (an event resulting in an insured loss during the policy period) and claims made (claims filed during the policy's term or applicable reporting period). Workers' compensation premiums for traditional insurance companies are excluded as RRGs cannot write this type of coverage. *See* 15 U.S.C. § 3901(a)(1). The difference in the total premiums written by RRGs and the total premiums written industrywide equals the coverage written by traditional insurance companies.

Figure 1: RRG Premiums Written by Percentage of RRGs Writing Specified Dollar Amounts, 2004–2010



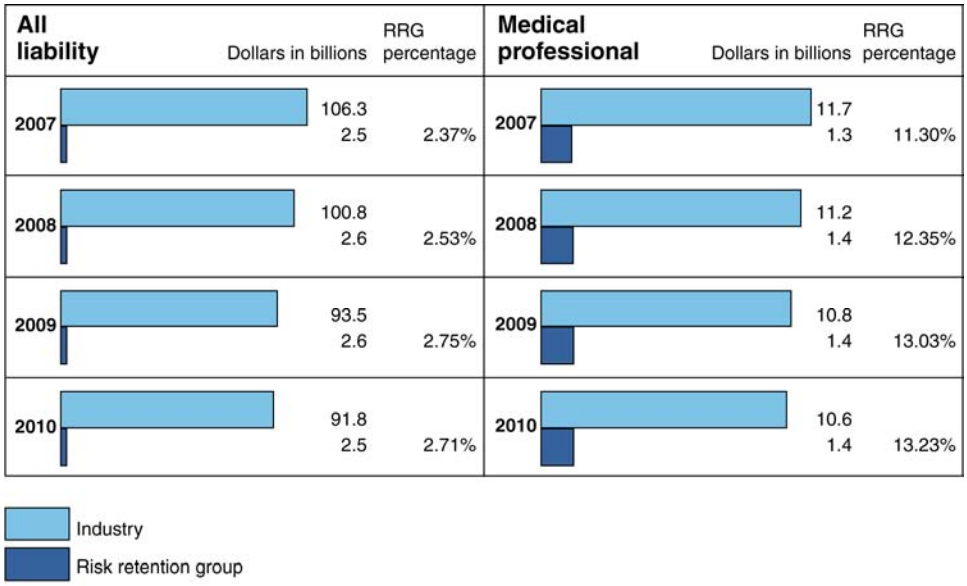
Source: GAO analysis of NAIC data.

Note: According to NAIC, negative premiums may be due to premiums returned to the purchasers of the policy after cancellation or the company writes little business and the direct written premiums are uncollectible.

Of the almost $92 billion of commercial liability insurance written industrywide in 2010, about $10.6 billion was written in the medical professional liability line—also known as medical malpractice. In an analysis of the premiums written for the medical professional liability line, RRGs had a higher share of this specific market compared with their share of the overall commercial liability market. RRGs wrote about 13 percent ($1.4 billion of the total $10.6 billion) of medical professional liability insurance in 2010 (see fig. 2). We

further discuss growth in the number of RRGs offering health care-related insurance later in this section.

Figure 2: Direct Premiums Written for the Overall Commercial Liability and Medical Professional Liability Industries, 2007–2010



Source: NAIC.

Note: Premiums written for workers' compensation insurance were excluded from this analysis as RRGs cannot provide this coverage. Separate data were not available for RRG direct written premiums for the medical professional liability line from 2004–2006.

Certain Indicators Suggest the RRG Industry Generally Has Remained Profitable

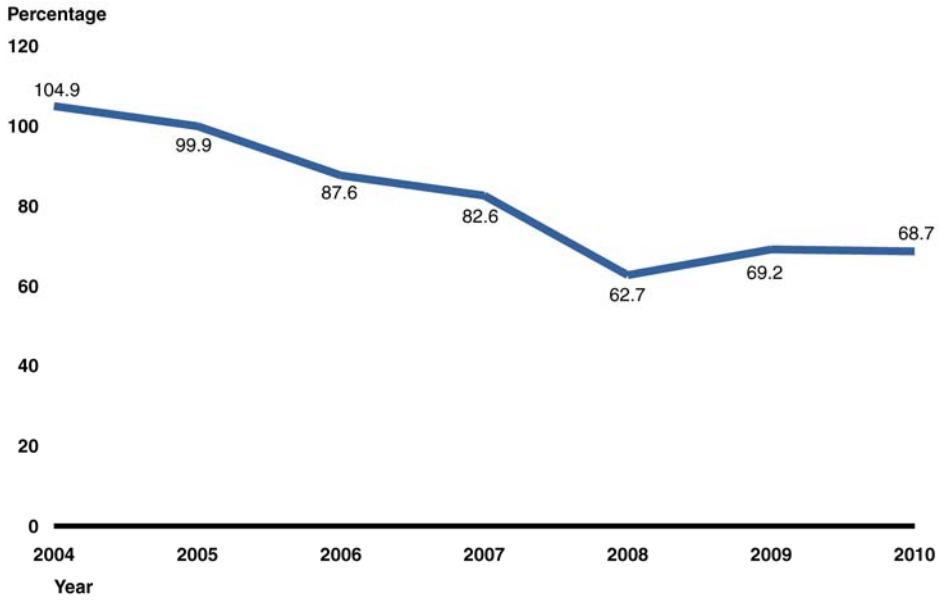
Based on several measures of financial strength or profitability, the RRG industry as a whole generally reported year-to-year gains from 2004 to 2010 (see fig. 3). A key factor in determining an insurer's overall financial strength is capital and surplus—also known as policyholder surplus—which reflects the amount by which an insurer's assets exceed its liabilities. Regulators require insurers to maintain adequate surplus so that an insurer can remain solvent even in the face of greater losses than predicted or lower earnings than projected. One of the indicators used to measure the adequacy of policyholder surplus is the ratio of an insurer's premiums written to its policyholder surplus, which measures an insurer's ability to pay claims given the volume of premiums written. A lower ratio of premiums written to surplus means an insurer has more net assets available relative to the amount of premiums written. According to the NAIC's Financial Analysis Handbook–Property/Casualty Edition and other general benchmarking guidelines from NAIC officials, the net written

premium-to-surplus ratios for property/casualty insurers in general would receive regulatory scrutiny for excessive leverage risk concerns for ratios greater than 250 to 300 percent, depending on the particular line of insurance.[26] If an insurer's ratio exceeds this range, a state regulator may conduct additional analyses of the insurer's financial solvency. According to NAIC officials, there is not an established benchmark for an acceptable premium-to-surplus ratio for the RRG industry. An analysis of NAIC data shows that on average, the industry's net written premium to policyholder surplus declined from 2004 to 2010, indicating that the financial strength of the industry during this time period has likely either improved or remained stable (see fig. 3).[27]

[26]Net written premiums are written premium less deductions for commissions and ceded reinsurance.

[27]In some states, RRGs are allowed to use letters of credit as assets, which in some cases can result in a varied interpretation of the financial condition of an RRG based on the accounting principle used for financial reporting. Information on select differences between accounting principles as they relate to financial reporting for RRGs are available in appendix III of GAO-05-536.

Figure 3: RRG Industry Average Net Written Premium, as a Percentage of Policyholder Surplus, 2004–2010



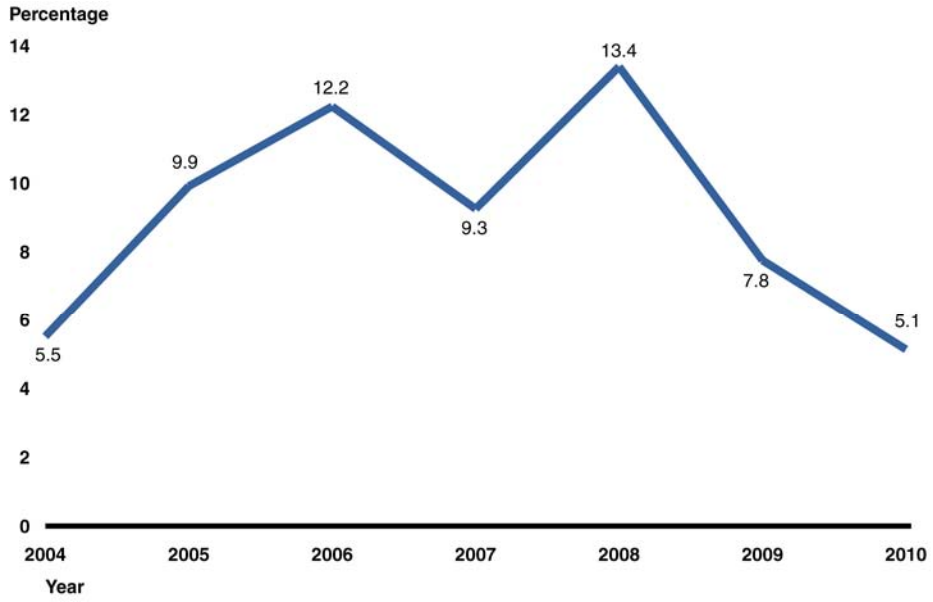
Source: GAO analysis of NAIC data.

Note: Analysis includes RRGs with positive net written premiums. RRGs with negative and zero written premiums are excluded. The average annual ratios are unweighted averages, that is, we computed ratios for individual RRGs and used these to determine an average ratio for all RRGs.

Another indicator of financial strength is return on policyholder surplus, or return on equity (ROE).[28] ROE is generally calculated as the ratio of net income to equity, or in the case of insurers, policyholder surplus. From 2004 to 2010, the average ROE in the RRG industry fluctuated, with a high of 13.4 percent in 2008 and a low of 5.1 percent in 2010 (see fig. 4). While no clear trend was visible over the 7-year period we analyzed, the average ROE for each year generally indicated profitability for the RRG industry.

[28]ROE is expressed as a percent of the mean of prior and current year-end policyholder surplus. This ratio measures a company's overall after-tax profitability from underwriting and investment activity.

Figure 4: RRG Average Return on Equity, 2004–2010



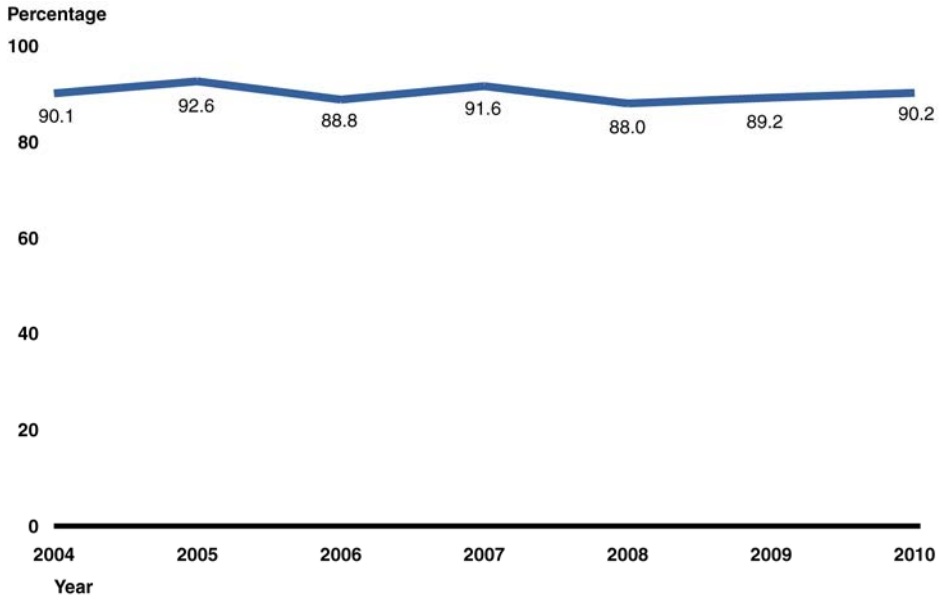
Source: GAO analysis of NAIC data.

Note: Analysis includes RRGs with positive net written premiums. RRGs with negative and zero written premiums or without ROE data as provided by NAIC are excluded. The average annual ratios are unweighted averages, that is, we computed ratios for individual RRGs and used these to determine an average ratio for all RRGs.

The combined ratio is another measure of an insurer's financial strength and profitability.[29] This ratio shows the claims and related expenses incurred by an insurer as a percentage of the premiums earned. According to NAIC officials, a combined ratio of less than 100 indicates an underwriting profit (gain)—that is, premiums collected were higher than the claims paid and related expenses—while a combined ratio above 100 can be an indicator of an unprofitable insurer that could be in a hazardous financial condition. An analysis of NAIC data shows that the average combined ratio for RRGs that filed financial statements ranged from a high of 92.6 percent in 2005 to a low of 88 percent in 2008 (see fig. 5). The average combined ratio in 2010 was 90.2.

[29]Two ratios, the loss ratio and the expense ratio, constitute the combined ratio. The loss ratio is calculated by dividing incurred losses plus loss adjustment expense by earned premiums. The expense ratio is calculated by dividing all other expenses by either written or earned premiums.

Figure 5: RRG Industry Average Combined Ratio, 2004–2010

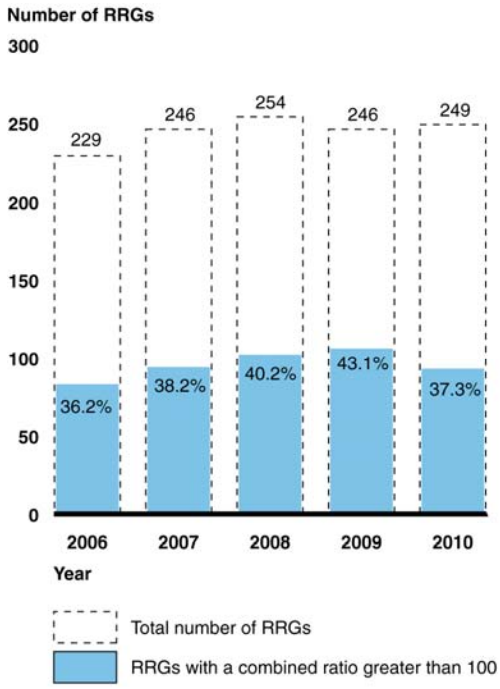


Source: GAO analysis of NAIC data.

Note: The combined ratio for each year is based on the number of RRGs that filed financial statements with NAIC. According to NAIC officials, RRG financial statements generally are filed using GAAP or modified GAAP and are reconciled to SAP. NAIC calculates the ratios using the data from financial statements as filed by the insurers. NAIC's formulas and benchmarks for financial ratios are based on SAP.

Also based on NAIC data, the percentage of RRGs with a combined ratio above 100 fluctuated from 2006 to 2010 (see fig. 6). For example, 36 percent of the RRGs writing premiums in 2006 had a combined ratio above 100. These percentages increased from 2007 to 2009, with a high of 43 percent in 2009, and decreased to about 37 percent in 2010. Together, these data indicate that while most RRGs appear to have been profitable in any one year, a sizeable but relatively stable percentage in each year could have experienced some financial challenges.

Figure 6: Number of RRGs, and Percentage of Total RRGs with Combined Ratios above 100, 2006–2010



Source: GAO analysis of NAIC data.

Note: The percentage is based on the total number of active RRGs each year with positive net premiums written.

Although the reported financial condition of RRGs appeared favorable in most years since 2004, according to NAIC officials, the recent financial crisis also affected the RRG industry. Capital sources for RRGs became more constrained as banks became more stressed and tightened their lending practices, prompting concern by state regulators about the financial condition of some RRGs. Industry participants with whom we spoke said that some RRGs may have found the experience especially challenging, particularly in instances in which the RRGs were in part capitalized by letters of credit from financial institutions adversely affected by the recent

financial crisis.[30] An NAIC official said that similar to the rest of the insurance industry, RRGs have earned less income on their investments. In addition, one insurance regulator said that some RRGs had invested in the real estate market, and the resulting devaluation of these assets affected their balance sheets, particularly those of smaller RRGs.

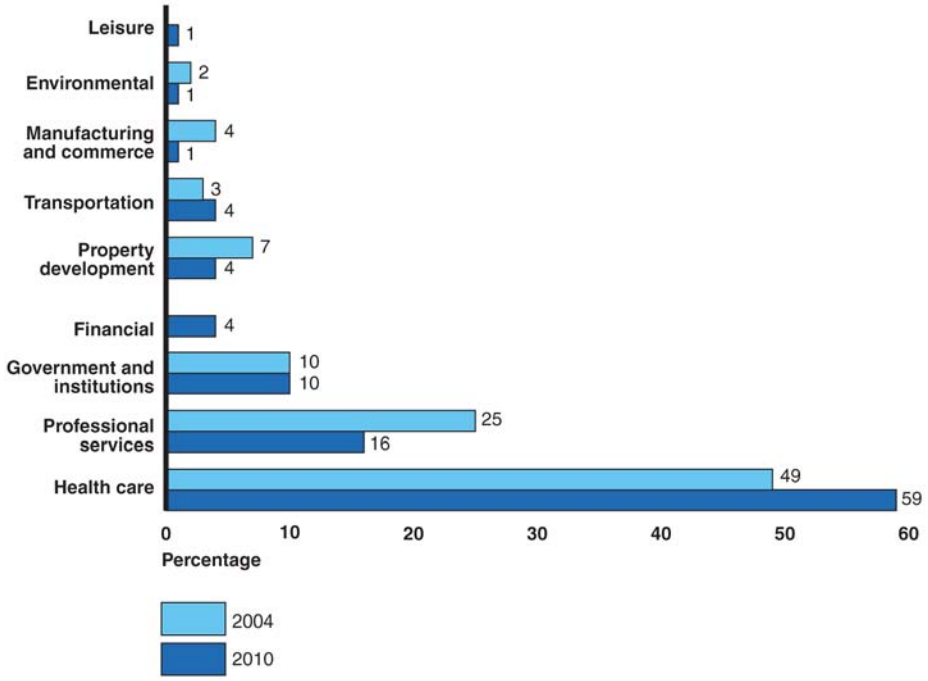
The Total Number of RRGs Increased Since 2004, with Most Growth Occurring in Health Care-Related RRGs

In 2004 and 2010, most RRGs were concentrated on health care-related lines of business. According to data from the *Risk Retention Reporter*, in both years the top four business lines for RRGs in terms of gross premiums were (1) health care; (2) professional services; (3) government and institutions; and (4) property development (see fig. 7).[31]

[30]For an RRG, a letter of credit is a document issued by a financial institution on behalf of a beneficiary (for example, the insurance commissioner) stating the amount of credit the customer has available, and that the institution will honor drafts up to the amount written by the customer. An irrevocable letter of credit could not be canceled or amended without the beneficiary's approval.

[31]Gross premiums are the premiums paid by the original insureds.

Figure 7: Percentage of Overall RRG Gross Premiums by Business Line, 2004 and 2010



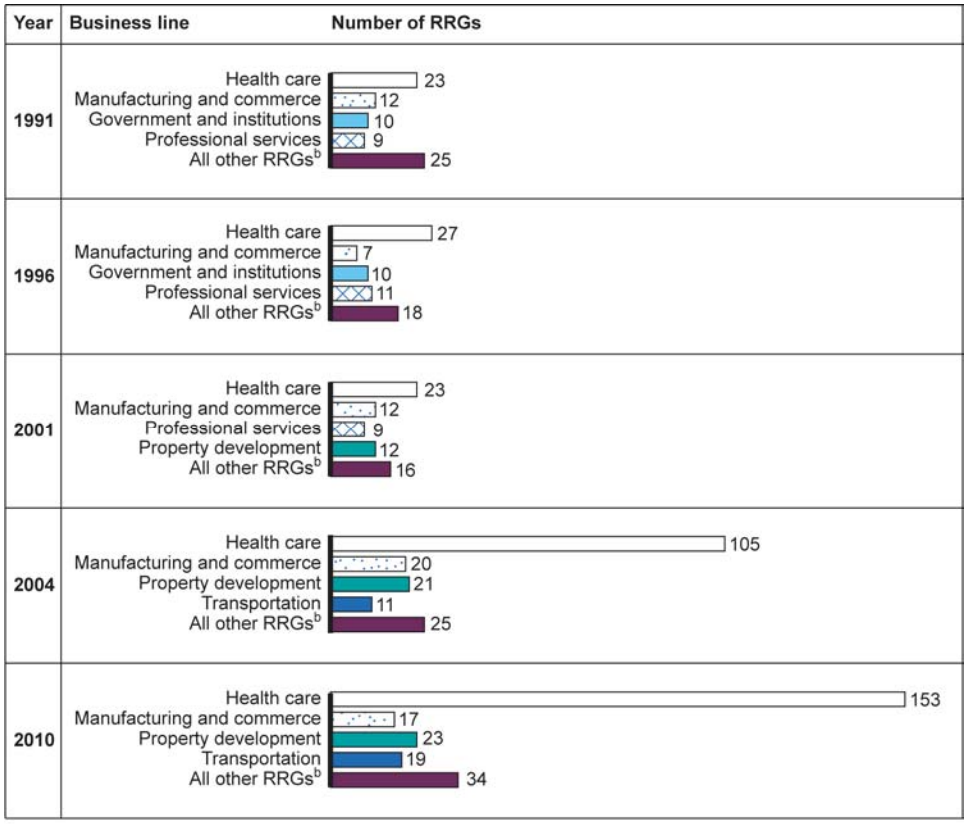
Source: GAO analysis of *Risk Retention Reporter* data.

Note: Percentages are rounded to the nearest whole number. In 2010, the actual percentage for the financial business line was 3.6 percent and for transportation, 3.8 percent.

The majority of RRGs licensed in 2004 and 2010 offered health care-related insurance (see fig. 8). According to our analysis of data from the *Risk Retention Reporter*, 148 of the 153 health care-related RRGs (97 percent) wrote medical malpractice coverage in 2010. The medical malpractice industry generally has been characterized as volatile because of the risks associated with providing this line of insurance. Health care providers sought alternative sources of insurance after some of the largest medical malpractice insurance providers exited the market because of declining profits, partly caused by market instability and high and unpredictable losses—factors that contribute to the high risk of providing medical malpractice insurance.[32]

[32]GAO, *Medical Malpractice Insurance: Multiple Factors Have Contributed to Increased Premium Rates*, GAO-03-702 (Washington, D.C.: Jun. 27, 2003).

Figure 8: RRGs Licensed by Business Line, 1991, 1996, 2001, 2004, and 2010[a]



Source: GAO analysis of *Risk Rentention Reporter* data.

[a]Data for 1991, 1996, 2001, and 2004 are as reported in GAO-05-536. Data for 2010 are as of April 2010.

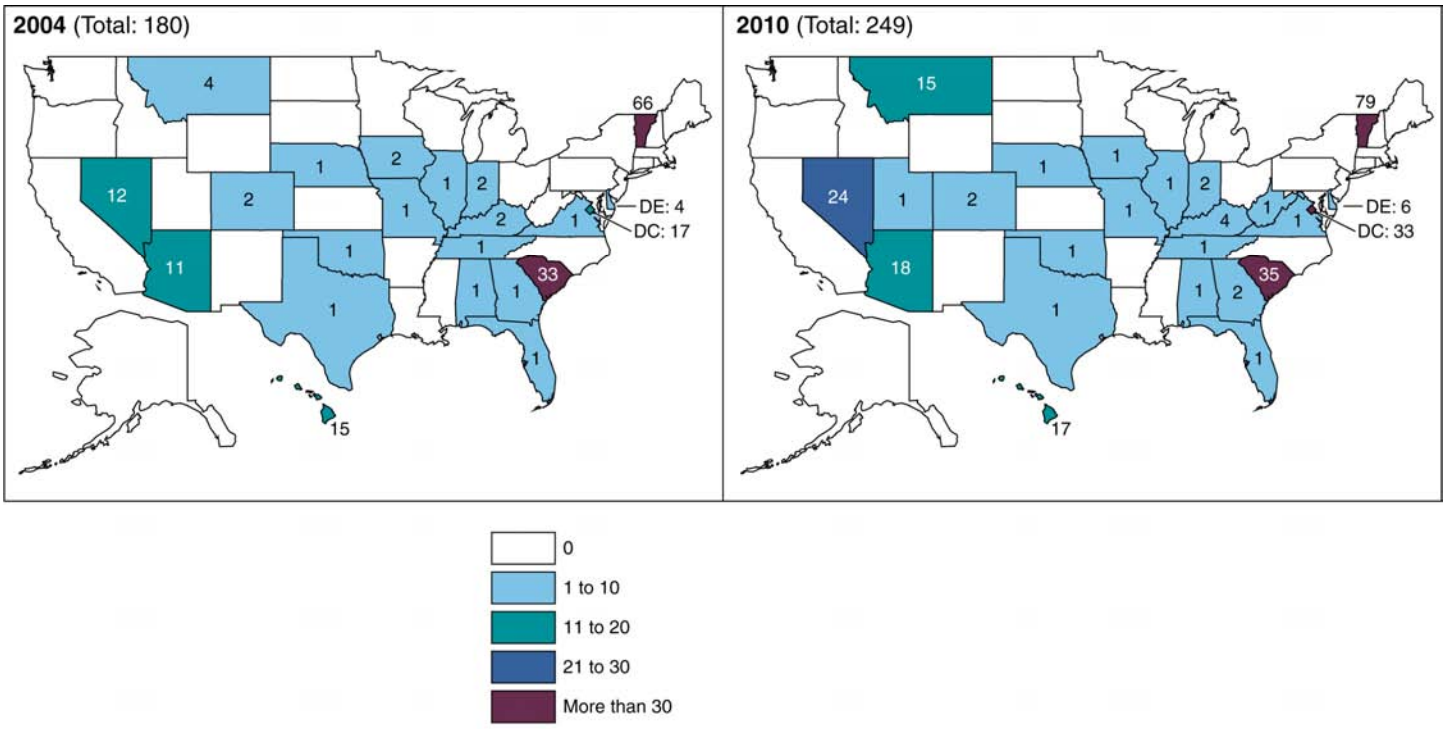
[b]For each year, we show only the business lines with the highest number of RRGs. RRGs that were not in these business lines are included in the "All other RRGs" category.

According to an RRG industry representative, although the overall liability insurance market currently is soft—which may be described as a period during which premiums are low, capital and competition are high, and demand for RRGs is lower—the RRG industry has continued to grow, especially in the area of medical malpractice coverage. Nine of the 13 state insurance regulators we interviewed affirmed that the majority of RRGs domiciled or operating in their states provide insurance for various health care-related lines, such as medical malpractice and liability insurance for nursing homes.

Although Most RRGs Are Domiciled in One of a Few States, They Wrote the Majority of Business Outside Their State of Domicile

Although they conducted business nationwide, similar to what we reported in 2005 more than 80 percent of active RRGs in 2010 were domiciled in five states and the District of Columbia.[33] Based on an analysis of data from NAIC, the states with the most domiciled RRGs as of 2010 were Vermont, South Carolina, the District of Columbia, Nevada, Arizona, and Hawaii (see fig. 9). Montana, which was not one of the leading domiciliary states when we reported in 2005, accounted for about 16 percent of the increase of domiciled RRGs in 2010. As of 2010, 24 states had domiciled RRGs.

Figure 9: Number of Active RRGs Domiciled by State, 2004 and 2010



Source: GAO analysis of NAIC data; map (MapInfo).

Note: U.S. territories (American Samoa, Guam, Northern Mariana Islands, Puerto Rico, and the Virgin Islands) and Canada are excluded.

[33]According to NAIC, "active" includes RRGs writing insurance premiums, formed but not yet writing insurance premiums, under receivership, or in liquidation. "Inactive" RRGs were excluded.

RRGs may decide to domicile in a particular state for one or more reasons. First, RRGs are more likely to domicile in a state that permits their formation as a captive, which may not be one of the states in which the RRGs write the majority of their business. Some states allow RRGs to be chartered as captives because they only provide coverage to their owners and do not sell insurance to the public. Further, regulatory requirements for captive insurers generally are less restrictive than those for traditional insurers. According to the *Risk Retention Reporter*, about 20 states charter and regulate RRGs under captive legislation.[34] Second, according to NAIC officials with whom we spoke, states that allow RRGs to operate under captive laws often have less stringent financial requirements. NAIC officials also said that RRGs tend to gravitate to states that have lower capitalization requirements and in which the regulators are looking to promote the RRG industry as a source of revenue for the state. Finally, according to 9 of 13 state insurance regulators we interviewed, in addition to lower minimum capital and surplus requirements, RRGs may choose to domicile in certain states because of the state's expertise with regulating RRGs and knowledge of the industry.

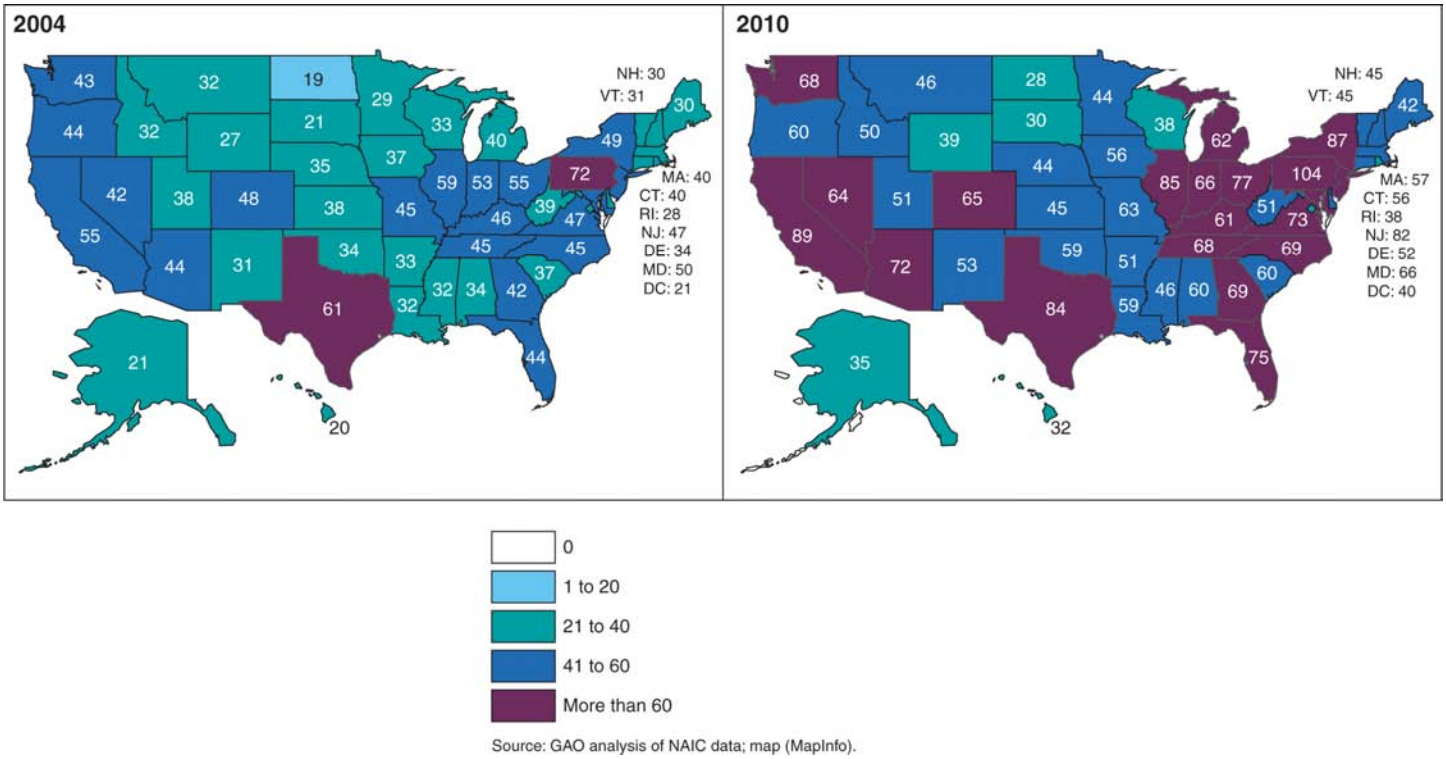
Evidence from our interviews and survey of state insurance regulators also suggests that lower capitalization requirements were a factor in RRGs choosing to domicile in those states. For example, in our interviews with insurance regulators representing 8 of the top 10 domiciliary states, 4 regulators reported that the minimum amount of capital required to domicile in their state was $500,000, 3 regulators reported a minimum requirement of $1 million, and 1 regulator reported $400,000. However, six of the regulators also reported that additional capital could be required.[35] Our interviews and state regulator survey also indicated that two domiciliary states reduced their minimum capital and surplus requirement since our 2005 report. For example, one domiciliary state's minimum capital requirement decreased from $500,000 to $400,000, while another state's decreased from $700,000 to $500,000. While RRGs tend to domicile in a few states, they operate and write business in all 50

[34]According to the *Risk Retention Reporter*, the laws of three states are silent about whether RRGs can form under captive legislation.

[35]According to these domiciliary state regulators, regardless of the statutory minimum required, regulators may require an increased minimum capital amount based on factors such as an assessment of the RRG's proposed business plan—including the volume of premiums written and the types of coverage offered.

states and the District of Columbia (see fig. 10). Collectively, between 2004 and 2010, the number of operating RRGs increased by about 50 percent.

Figure 10: Number of Operating RRGs by State, 2004 and 2010



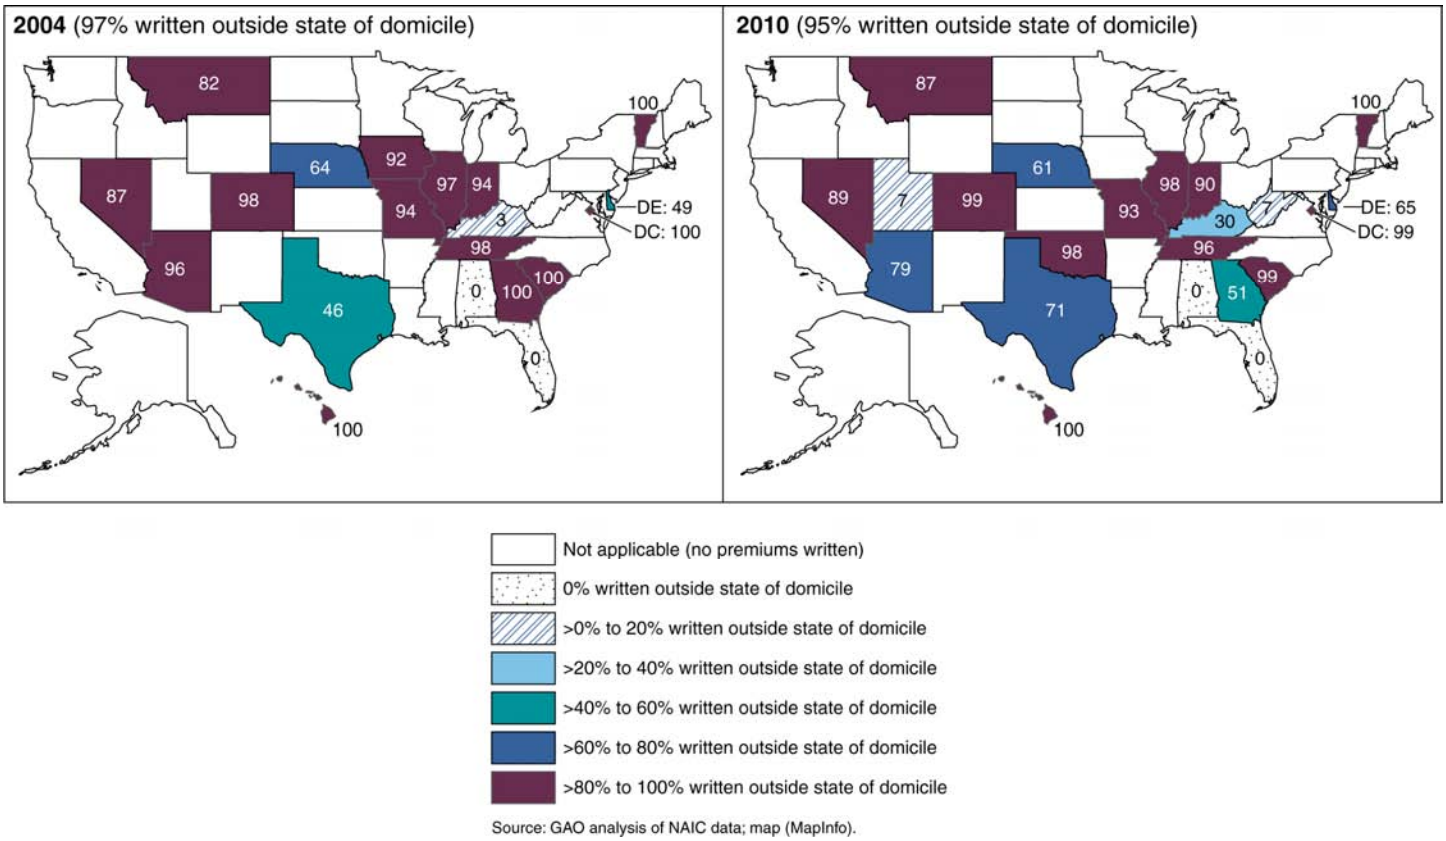
Source: GAO analysis of NAIC data; map (MapInfo).

Note: RRGs that operate on a multistate basis are counted more than once.

NAIC data also show that more than half of the RRGs in both 2004 and 2010 wrote premiums in two or fewer states, and two-thirds of the RRGs wrote premiums in fewer than 10 states in both years. Of all the direct premiums written by RRGs, about 97 percent and 95 percent were written outside the state of domicile in 2004 and 2010, respectively (see fig. 11). The nondomiciliary states in which RRGs wrote most of their business in 2004 were Pennsylvania ($308 million), New York ($226 million), California ($210 million) and Massachusetts ($114 million). In 2010, RRGs again wrote the majority of their business in these states: $369 million in Pennsylvania, $366 million in New York, $230 million in California, and $172 million in Massachusetts. In 2005, we noted that, according to NAIC, 73 of 115 RRGs active in 2003 (63 percent) did not write any business in their state of domicile. According to data from NAIC,

168 of the 249 RRGs active in 2010 (67 percent) did not write any business in their state of domicile.[36]

Figure 11: Percentage of Premiums RRGs Wrote in Nondomiciliary States (Shown by Domiciliary State), 2004 and 2010



Source: GAO analysis of NAIC data; map (MapInfo).

Nondomiciliary state insurance regulators we interviewed expressed concerns about the amount of RRG business in their states and their limited authority to regulate RRGs providing coverage to their state's insureds. In our 2005 report, some nondomiciliary regulators expressed concerns that domiciliary states were lowering their regulatory standards to attract RRGs for economic development purposes. Similarly, NAIC officials we interviewed said that when RRGs write the majority of their business outside their state of domicile, the domiciliary state regulator

[36]In 2010, 19 of the 249 active RRGs did not write any premiums.

does not have “skin in the game” and cannot protect insureds who might be affected if an RRG became insolvent. According to an NAIC official, these states may allow actions that RRGs find favorable, but that are not in the best interest of the insureds.

Industry Participants’ Views Differed on the Impact of RRGs on the Availability and Affordability of Commercial Liability Insurance

Based on our interviews and survey of state insurance regulators, RRG industry participants had different views about the effects RRGs have had on the availability and, to a lesser extent, the affordability of commercial liability insurance. RRG representatives with whom we spoke generally believed that RRGs have increased the availability of such insurance. According to industry participants, RRGs have been providing coverage in niche markets in which consumers otherwise might not be able to obtain insurance (that is, from traditional insurers). However, one insurance regulator with whom we spoke said that commercial liability insurance has been readily available through traditional insurers, and therefore questioned the need for mechanisms such as RRGs to obtain this type of insurance. Our survey of state insurance regulators further suggests that regulators generally had different views than RRG representatives about the impact of RRGs on availability. In our survey, 17 out of the 49 state insurance regulators who responded (35 percent) said that RRGs have expanded the availability of commercial liability insurance for groups that would otherwise have difficulty obtaining coverage. Conversely, 8 of the regulators (16 percent) responded that RRGs have not expanded availability, while 24 regulators (49 percent) did not have an opinion.[37]

Industry participants were unsure of the impact of RRGs on the affordability of commercial liability insurance. Some industry participants with whom we spoke said that RRGs would not continue to exist if their rates were not affordable. Other industry participants said that it was difficult for them to assess the impact of RRGs on affordability, but acknowledged that RRGs played a role in the insurance market. NAIC officials with whom we spoke said that the affordability of rates offered by RRGs has not been determined, as RRGs are not required to file their premium rates with nondomiciliary state regulators. Therefore, an analysis has not been conducted to compare RRG rates to those of

[37]One state did not respond to this survey as state employees were furloughed for a part of the period in which this survey was open. Another state insurance regulator did not completely respond to all survey questions, therefore this regulator’s responses were omitted from our analyses.

traditional insurers. In addition, an actuarial expert with whom we spoke said that the rates and language included in each policy written by traditional commercial insurers and by RRGs would need to be obtained to make a true comparison, because this information differs among insurers and among RRGs. In our survey, 13 of 48 respondents (27 percent) said that RRGs have improved affordability of commercial liability insurance for groups that would otherwise have difficulty obtaining coverage. Nine regulators (19 percent) responded that RRGs have not improved affordability while 27 regulators (54 percent) did not have an opinion.

Varying Interpretations of LRRA Result in Different Regulatory Treatment of RRGs across States

State Insurance Regulators and RRGs Have Differed on Registration Processes and Requirements LRRA Allows in Nondomiciliary States

Apart from the submission of required documentation, LRRA does not provide for a specific process for RRGs to register to conduct business in nondomiciliary states. States and RRGs have disagreed on issues relating to registration such as the level of documentation required and review and approval processes.

Interpretations about what documentation can be required vary by state. Based on our analysis of interview and survey responses, some RRG industry representatives and state insurance regulators interpreted LRRA's failure to mention registration as an indication that submission of the specified documents in LRRA is all that can be required by a nondomiciliary state before allowing an RRG to operate in that state. Others interpreted LRRA's silence on registration in nondomiciliary states to mean that states can impose their own requirements. Responses to our survey of state insurance regulators indicate that states have varying registration requirements and practices, but respondents generally reported that RRGs must submit required documentation as outlined in LRRA. However, regulators also provided information on additional information and documentation their states required to fulfill individual state registration processes. For example, a few states will accept NAIC's

uniform application form, while another state requires a state-specific registration form. An RRG representative with whom we spoke said that using NAIC's uniform application form instead of state-specific forms would simplify the registration process and make it more beneficial to RRGs.

An RRG representative said that one state requires a listing of all other states in which the RRG is registering and the status of the registration in each state; copies of any condition or contingencies placed on the RRG by its domiciliary state; copies of requirements or restrictions placed on RRG members; copies of soliciting and marketing materials including membership and subscription agreements; and projected premiums for the next 3 years for the state in which the RRG is applying as well as nationwide, among other requirements. According to another RRG representative, one nondomiciliary state requires specific forms for biographical affidavits of officers and directors, including Social Security numbers. In documentation from state insurance regulators that we received from an RRG industry association, as a part of the registration process one state required the name, physical address and mailing address of all agents or brokers for the RRG, and a copy of each examination of the RRG, among other requirements. Representatives from the RRG industry maintain that state regulatory practices such as registration requirements beyond what is specified in LRRA "encroached" on LRRA's partial preemption of state insurance laws.

RRG representatives said that there is a fear among RRGs that repeated objections to states' requests for information will lead to RRGs being targeted by state insurance offices. They also feared that providing information would lead to more onerous requests. However, one state insurance regulator with whom we spoke said that the additional document requests were intended to provide the regulators with necessary information to understand the operations of the RRGs providing coverage in their states. Further, the regulator stated that information requested is often the same information provided to the domiciliary state regulator and that domiciliary regulators may be slow to send the information or sometimes may not provide it. Two state insurance regulators said that sometimes the information requested is subject to a confidentiality agreement between the state and the RRG, which makes it challenging for regulators to share information. To alleviate this issue, one state insurance regulator suggested developing a mechanism that would allow for a central repository of RRG financial data for information-sharing purposes.

States and RRGs also have disagreed about registration and approval processes. While some states require certain information in order to approve RRGs' registrations, RRG representatives with whom we spoke said that LRRA does not require RRGs to go through a regulatory review and approval process by state regulators to conduct business in nondomiciliary states. In 2009, the *Risk Retention Reporter* surveyed captive managers representing 260 RRGs to determine whether nondomiciliary states were "encroaching" on LRRA preemptions.[38] In the 2009 survey, 44 percent of RRGs responded that states made operation contingent upon regulatory review and approval, while 56 percent found that states did not. Also in the 2009 survey, 47 percent of respondents said they were subject to "impermissible" requests for information, while 53 percent said that they were not subject to such requests.

RRG representatives with whom we spoke said that even after completing the registration process for some nondomiciliary states, the RRG still may not be recognized as registered, or such recognition may take several years. For example, according to an RRG representative with whom we spoke, an RRG sent a letter to a nondomiciliary state in May 2006 with notification of its intent to do business. The RRG did not receive a letter approving its registration until April 2008. Another RRG representative said that an RRG filed the documents required by LRRA to register in about 40 states. About one-third of the states responded affirmatively to the submissions for this RRG without any further questions. Another one-third of states responded to the RRG with additional questions before allowing the RRG to conduct business in those states. The remaining states did not respond to the RRG's registration filings.

Some states have mandatory waiting periods before a traditional insurer, domiciled RRG, or nondomiciled RRG can begin writing business in their state. In our survey of state insurance regulators, 3 of 49 states reported having such a waiting period. However, the waiting period can be longer for traditional insurers and domiciled RRGs than for nondomiciled RRGs. For example, one state reported that its mandatory waiting period for traditional insurers and domiciled RRGs was 90 to 120 days, and 15 to 30 days for nondomiciled RRGs. Another state did not have a minimum or maximum waiting period, but traditional insurers and domiciled RRGs could not write

[38]"Special Report: Impact on Risk Retention Groups of State Encroachment of Liability Risk Retention Act Preemptions," *Risk Retention Reporter* (January 2009). The response rate for this survey was 45 percent, representing 118 RRGs.

business until their state issued a license, and the waiting period for nondomiciled RRGs to begin writing business in the state was 60 days. A third state reported no waiting period for traditional insurers and domiciled RRGs and a waiting period of 30 to 60 days for nondomiciled RRGs.

NAIC has not taken a position on the legality or utility of different state approaches to the interpretation of LRRA or state regulation of RRG activities. NAIC published its Risk Retention and Purchasing Group Handbook in 1999 to provide guidance to domiciliary states that have adopted NAIC's Model Risk Retention Act.[39] The purpose of the handbook is to present advisory information on issues that have arisen or can be expected to arise when regulating RRGs under LRRA. For example, while the handbook provides information on the notice and registration process for nondomiciliary states, it does not take a position on different state approaches.

As a result of state regulators' varying interpretations of LRRA, registration requirements may differ across states. As previously noted, some RRGs believe that some states have registration requirements that go beyond what is allowed under LRRA, and in some cases, these requirements have caused delays in an RRG's ability to begin operating in those states. Conversely, some state regulators believe such requirements are necessary as well as allowable under LRRA. These differing interpretations have resulted in an environment of uncertainty for both RRGs and regulators and, according to RRGs, are a potential regulatory burden not intended by LRRA.

State Insurance Regulators and RRGs Differ on Their Interpretation of Fees Allowed under LRRA

LRRA allows nondomiciliary states to require RRGs to pay premium and other taxes but does not explicitly state whether nondomiciliary insurance regulators can or cannot charge fees. The silence of LRRA on fees has prompted state insurance regulators and RRG representatives to interpret the law differently. Both domiciliary and nondomiciliary state insurance regulators routinely charge RRGs one-time registration fees, annual

[39]NAIC's model laws are designed to create a national standard by providing guidance to states on implementing laws that affect the insurance industry. The Model Risk Retention Act, developed in 2002, aims to present a model for state regulation of the formation and operation of RRGs and purchasing groups (any group of persons with similar or related liability risks who form an organization for the purpose of purchasing commercial liability insurance).

renewal fees, and filing fees. Based on our survey of state insurance regulators, the amount of fees charged varies across states and may differ based on whether the RRG is domiciled in the state. Among the respondents, most reported that they charged RRGs (domiciled and nondomiciled) initial and annual fees to operate in their state. Specifically, among the 37 states identifying specific fees charged to insurers, most reported that they charged RRGs with some of the same types of fees applicable to traditional property/casualty insurers.

In addition, the responses indicated that premium taxes—which LRRA specifically authorizes—vary across states and in some cases have a complex structure. For example, premium tax rates may be different for domiciled or nondomiciled RRGs or for traditional property/casualty insurers. In addition, a few states reported incremental tax rates based on the volume of premiums written by the RRG. Further, some states implement a "retaliatory" premium tax rate—meaning a state taxes out-of-state insurance companies operating in its jurisdiction in the same way that the state's own insurance companies are taxed by other states.

A majority of RRG representatives with whom we spoke said that varying fees other than premium taxes that nondomiciliary states charged RRGs were expensive and a financial burden and were also inconsistent with LRRA. For example, one RRG representative said that the insurer, which operates in 50 states and the District of Columbia with total national premiums of $124 million, paid in excess of $500,000 in combined state fees to conduct business outside its domiciliary state. A smaller RRG that wrote premiums of about $1 million said it paid $6,000 to $7,000 in additional fees. Three RRG representatives said that their RRGs often "pay fees under protest," while other RRG representatives said that they often paid the fees because paying was less expensive than litigation against the states.

RRGs have challenged requirements established by nondomiciliary states that RRGs believe are preempted, and therefore not permitted, by LRRA. For example, in *National Risk Retention Association v. Brown*, a U.S. district court found that LRRA does not authorize a nondomiciliary state to require RRGs domiciled in another state to pay annual, application, or policy form review fees as part of registration or examination requirements before being allowed to do business in that state.[40]

[40]927 F. Supp. 195 (M.D. La. 1996), *aff'd*, 114 F.3d 1183 (5th Cir. 1997).

However, the court did not hold that all fees nondomiciliary states charged necessarily were prohibited but that the types of fees charged in that case were broader than those allowed by the registration and examination requirements enumerated in LRRA. In *Attorneys' Liability Assurance Society, Inc. v. Fitzgerald* the court also addressed the issue of fees.[41] In that case, a state statute required nondomiciled RRGs to pay a fee of a certain percentage of their business written in that state. The court held that such a fee was not permitted, as LRRA permits only taxes by nondomiciliary states, and such a fee was not considered a tax. The fee in this case was to be used for regulatory purposes only, and therefore was considered an impermissible attempt to regulate an RRG by a nondomiciliary state.

As a result of differing interpretations of LRRA, fee structures vary across states. While some RRGs believe some of these fees go beyond what is allowed by LRRA, state regulators believe these fees are permissible. While the impact on RRGs of fees charged in some states is not clear, several RRG industry participants with whom we spoke said that fees may be more challenging for smaller RRGs and RRGs operating in multiple states. In addition, this variation of fees across states also contributes to the uncertainty under which RRGs and state regulators operate.

Regulators, RRGs, and Courts Also Differed on the Types of Coverage That RRGs Can Offer and What Constitutes Discrimination as Prohibited by LRRA

LRRA allows RRGs to provide commercial liability insurance and provides a general definition of liability.[42] However, beyond its general definition, LRRA is silent on the specific types of liability insurance that RRGs can provide, which has resulted in differences of interpretation by RRGs and state insurance regulators about the types of liability coverage permitted under LRRA. In our survey of state insurance regulators, 6 of 49 regulators responded that they had between one and five differences of interpretation

[41] 174 F. Supp. 2d 619 (W.D. Mich. 2001).

[42] According to LRRA, "liability – (A) means legal liability for damages (including costs of defense, legal costs and fees, and other claims expenses) because of injuries to other persons, damage to their property, or other damage or loss to such other persons resulting from or arising out of – (i) any business (whether profit or nonprofit), trade, product, services (including professional services), premises, or operations, or (ii) any activity of any state or local government, or any agency or political subdivision thereof; and (B) does not include personal risk liability and an employer's liability with respect to its employees other than legal liability under the Federal Employers' Liability Act." 15 U.S.C. § 3901(a)(2).

with other state insurance regulators about the definition of commercial liability insurance in the last 24 months. One regulator reported more than 10 differences. In our interviews, five regulators said they believed that insurance lines such as contractual liability (for example, vehicle service or builder warranties) and stop-loss coverage were not permitted under LRRA.[43] In some cases, nondomiciliary state insurance regulators have not allowed RRGs to provide insurance in their state that they believe does not fit the definition of liability under LRRA. For example, one nondomiciliary state regulator said it denied the registration of an RRG that planned to offer contractual liability insurance. In addition, an RRG representative reported its registration application was denied in five states because regulators did not believe contractual liability coverage fell within the definition of liability in LRRA. Further, one domiciliary state insurance regulator we interviewed said the state believed contractual liability coverage was permitted under LRRA; however, the state generally did not allow this coverage to be offered in the state to "avoid the politics of the issue." This regulator, along with three other regulators with whom we spoke, said that the RRG industry needed a clearer definition of contractual liability or the types of coverage permissible under LRRA. Differences in interpretation of the types of coverage permitted under LRRA have led to litigation between states and RRGs.

States and federal courts also have differed in their interpretations. For example, in *Auto Dealers RRG v. Steve Poizner,* an RRG provided stop-loss insurance that covered liability by its members, employees of California automobile dealers that maintained self-funded employee benefit plans.[44] The California insurance office issued a cease-and-desist order because it believed that the RRG was providing health insurance, not liability insurance as defined by LRRA. The RRG challenged the California insurance office's cease-and-desist order in federal court, and the court issued a preliminary injunction blocking the cease-and-desist order. However, the court never decided the case on its merits—that is, the court never decided whether the RRG was issuing valid liability insurance policies—because the RRG decided to stop pursuing the case and instead stopped issuing policies in California. In *Attorneys' Liability*

[43]Contractual liability insurance covers liability of the insured that is assumed in a contract under specified conditions. Stop-loss refers to any provision in a policy designed to end an insurer's losses at a given point.

[44]No. Civ. 07-2660 FCD KJM (E.D. Cal., Mar. 7, 2008).

Assurance Society, Inc. v. Fitzgerald (discussed previously), the court held that LRRA permitted an RRG to cover liability by its members for wrongful employment practices.[45] The court held that while RRGs specifically were not to cover workers' compensation, the types of coverage provided by the RRG at issue in the case were permissible under the broad scope of LRRA.

Federal courts have rendered varying decisions relating to what is considered prohibited discrimination per LRRA's state financial responsibility requirements. These financial responsibility requirements consist of state or local provisions that establish conditions for obtaining a license or undertaking certain activities. For example, many states require that anyone registering a motor vehicle demonstrate proof of financial responsibility (show that the owner of the vehicle has financial means sufficient to compensate any injured persons). State laws may provide that financial responsibility can be shown by coverage in a liability insurance policy by an insurer that is regulated by the state and protected by the state's guaranty fund. LRRA does not preempt state authority to apply financial responsibility standards as long as those standards do not discriminate against RRGs within the meaning of LRRA.[46] For example, in *National Warranty Insurance Company RRG v. Greenfield,* the U.S. Court of Appeals for the Ninth Circuit held that LRRA preempted provisions of the Oregon Service Contract Act that required automobile dealers to obtain liability insurance from an insurer that was a member of the Oregon Insurance Guaranty Association.[47] Because RRGs do not participate in state guaranty associations, the Oregon law effectively excluded RRGs from providing liability insurance to automobile dealers. Thus, the court held that Oregon could not exclude coverage from all RRGs because that would discriminate against RRGs. However, Oregon could exclude coverage from a particular RRG if it could show that the RRG was financially unsound or otherwise dangerous to those who relied on insurance purchased pursuant to the Oregon Service Contract Act. In another case, *Charter Risk Retention Group Insurance Company v. Rolka*, a U.S. district court noted similarly that discrimination against RRGs as a whole is prohibited under LRRA.[48] However, state laws

[45]174 F. Supp.2d 619.

[46]15 U.S.C. §§ 3902(a)(4), 3905(d).

[47]214 F.3d 1073 (9th Cir. 2000).

[48]796 F. Supp. 154, 159 (M.D. Pa. 1992).

relating specifically to financial responsibility requirements could be valid, if they caused a *particular* RRG to be excluded if it lacked acceptable evidence of financial responsibility for a state license or permit, as long as they did not discriminate against RRGs as a whole.[49]

Other courts have interpreted the provisions of LRRA prohibiting discrimination against RRGs differently. In *Ophthamalic Mutual Insurance Company v. Musser,* the U.S. Court of Appeals for the Seventh Circuit affirmed a district court decision that LRRA does not preempt a Wisconsin requirement that health providers offer proof of financial responsibility to do business in the state by obtaining professional liability insurance coverage from insurers authorized to do business in Wisconsin, although it effectively excludes nondomiciliary RRGs from operating in that state.[50] The court found that the challenged statute neither impermissibly regulated RRGs nor was intended to discriminate against them, and therefore is not preempted by LRRA. The court concluded that the Wisconsin requirement fit within the saving clause of LRRA providing that states are not bound by LRRA when crafting statutes concerning financial responsibility, as long as the statutes were not intended to discriminate against RRGs. Similarly, in *Mears Transport Group v. State*, the U.S. Court of Appeals for the Eleventh Circuit held that LRRA did not preempt a Florida law requiring owners or operators of for-hire passenger transportation vehicles to provide evidence of financial responsibility by having a motor vehicle liability policy issued by an insurer that is a member of the Florida Insurance Guaranty Association.[51] Although RRGs effectively are disallowed from doing business in Florida under this law, as they are not permitted to be members of guaranty associations under LRRA, the court held that the Florida law does not single out RRGs for exclusion, as RRGs are one of many types of insurance carriers ineligible for membership in the guaranty association. Therefore, the court held that the Florida law was not *intended* to be discriminatory. Since the Florida law is "precisely the type of state financial responsibility law that

[49]*Id.* at 159 n.6. The court did not decide this case on the merits, but denied the defendant's motion to dismiss on the grounds that the case did not involve a federal question, by holding that the case involved interpretation of a federal law, LRRA, which *was* a federal question.

[50]143 F.3d 1062, 1070 (7th Cir. 1998).

[51]34 F.3d 1013 (11th Cir. 1994).

Congress expressly exempted from the preemption provisions of LRRA," according to the court, it is allowed and not preempted by LRRA.[52]

Different interpretations of the types of coverage permitted under LRRA have resulted in the inability of some RRGs to provide coverage in certain states. And, in cases in which RRGs choose to pursue legal action when states deny their ability to provide that coverage, the RRGs may incur substantial legal fees. As previously noted, different interpretations by federal courts on issues such as permissible coverage types and what constitutes discrimination under LRRA can further contribute to an uncertain regulatory environment for RRGs and state insurance regulators.

State Insurance Regulators Have Expressed Concerns about the Capitalization and Solvency of Some RRGs

Because LRRA does not comprehensively address the capitalization or solvency requirements of RRGs, states can develop their own statutory minimum capital and surplus requirements for RRGs domiciled in their state. According to some state insurance regulators with whom we spoke, these requirements are based on the type of insurance coverage offered, the volume of business the RRG intends to write, and other factors. Two nondomiciliary state insurance regulators with whom we spoke indicated concerns about the capitalization and solvency of RRGs operating in their states, and two regulators support increasing the minimum capital requirement. In addition, some states allow RRGs, unlike traditional insurers, to meet and maintain their minimum capital and surplus requirements in the form of an irrevocable letter of credit rather than cash. Data from NAIC show that as of June 2010, 62 RRGs were capitalized with letters of credit.

Although RRGs write most of their business outside their state of domicile, nondomiciliary state insurance regulators must rely on domiciliary regulators to establish minimum capitalization and solvency requirements for their domiciled RRGs—and ensure that the requirements are commensurate with the type of coverage provided and the volume of premiums written. Some RRG representatives with whom we spoke believed that there is a lack of confidence in the RRG regulatory environment or that some states prefer their own authority to regulate RRGs writing business in their state. Two state insurance

[52] *Id.* at 1016.

regulators and four RRG representatives said they believed that some of these issues will be resolved through NAIC's efforts to develop uniform, baseline standards for the regulation of RRGs.

NAIC Actions Address Some Regulatory Concerns, While Recent Federal and State Proposals May Affect Future RRG Operations

Revised Accreditation Standards Address Some Regulatory Concerns with RRGs' Financial Solvency Practices

Our 2005 report found that the wide variance in solvency regulation among domiciliary states, along with the growth of the RRG industry, increased the potential for future solvency risks. In response to recommendations from our 2005 report to provide a more uniform regulatory environment for RRGs, NAIC revised its accreditation standards to include standards for the way in which states regulate RRG solvency.[53] These new standards went into effect on January 1, 2011. NAIC also began to address our recommendations to develop corporate governance standards concerning ownership and operational issues within RRGs. Initial discussions in 2005 led to the development of draft corporate governance standards by 2007, and later in 2010 NAIC working groups initiated steps toward integrating these standards into the RRG oversight process. In addition, NAIC has started the process to integrate corporate governance standards into its accreditation standards, so that states would be required to review RRG's corporate governance standards to be accredited. The groups' discussions were open to

[53]NAIC's accreditation standards are minimum standards that state regulators must meet to remain accredited with NAIC. NAIC's full accreditation review of a state's solvency regulation of multistate insurance companies occurs once every 5 years and includes the examination of (1) the state's relevant laws and regulations, (2) the financial analyses and examinations conducted by the insurance department, and (3) the department's organizational and personnel practices.

interested parties, including RRG representatives. For instance, the National Risk Retention Association (NRRA), told us it actively participated in NAIC working groups. The revisions to the financial accreditation standards for state insurance departments' oversight of domiciled RRGs more closely align the standards applied to the oversight of RRGs with those that are applied to traditional insurers. The revisions affect key areas of RRGs' financial solvency oversight, including revising accounting requirements for annual financial reporting and making financial examinations risk-focused.

Financial Reporting Requirements for RRGs Made More Similar to Those for Traditional Insurers

Among the recent revisions to NAIC's accreditation standards is a new requirement that applies to RRGs that do not file their annual financial statements using SAP: these statements must contain a reconciliation to SAP, effective January 1, 2011. According to NAIC, in 2010, 72 RRGs reported filing their financial statement using SAP and 177 reported using another accounting principle such as GAAP. The reconciliation is designed to indicate to regulators how the accounting principles used in financial statements result in figures different from those that SAP would have produced. RRGs can include this reconciliation in the footnotes to the financial statement. This new standard aims to address some of the challenges identified in our 2005 report that arose from the use of different accounting principles, such as difficulties in assessing the financial condition of RRGs reported by some nondomiciliary state insurance regulators more accustomed to SAP. The new standards also move financial reporting requirements for RRGs closer to those of traditional insurers.[54] Our survey responses from state insurance regulators showed that 32 state regulators reported requiring SAP for financial reporting, 14 reported requiring GAAP or a modified version of GAAP and 3 reported a choice of accounting principles within their requirements.[55]

Financial reporting practices for RRGs still vary and the choice of accounting method can produce different conclusions about a company's

[54]Statutory accounting principles were established and promulgated by NAIC for the insurance industry.

[55]A total of 49 states responded to the survey.

financial strength.[56] NAIC analysts continue to report that allowing financial statements using different accounting principles, even when reconciled to SAP in the footnotes, diminishes the usefulness of their underlying data and analysis tools because the tools were designed around data extracted from financial statements based on SAP. Statements filed using other accounting principles can produce distorted results when looked at through traditional computerized analysis tools. As a result, NAIC must then revise the analyses to produce information useful to state regulators, which requires more staff resources. In prior reports we have noted that NAIC's solvency analysis is an important supplement to the overall solvency monitoring performed by states and can help states focus their examination resources on potentially troubled companies, including flagging financial ratios that are outside the usual range for additional regulatory attention.[57] Further, the choice of accounting method can have important repercussions for certain RRGs. For example, representatives of two RRGs with whom we spoke reported letters of credit to be critical for some RRGs to meet minimum capitalization requirements; and as a result, they often preferred to file their financial statements using GAAP where letters of credit can, in some states, improve the RRG's appearance of financial solvency.

Risk-Focused Examinations Already Required of Traditional Insurers, Now Required for RRGs

The revised accreditation standards also require all RRGs to have risk-focused examinations in an effort to implement more uniform baseline standards for RRG regulation, applicable to all financial examinations of RRGs commencing on or after January 1, 2011. Risk-focused examinations emphasize reviews of higher-risk areas and tend to be more specialized and tailored to individual companies. Risk-focused examinations are already a regulatory requirement for traditional insurers. Nondomiciliary states have the right to review the results of these examinations for RRGs.

[56]The differences in the two sets of accounting principles reflect the different purposes for which each was developed and each produces a different, and not necessarily comparable, financial picture of a business. SAP generally meets the needs of insurance regulators, the primary users of insurance financial statements, and stresses the measurement of an insurer's ability to pay claims and remain solvent in order to protect owner/insureds. However, GAAP provides guidance that businesses follow in preparing their general purpose financial statements that provide users, such as investors and creditors, with useful information that allows them to assess a business's ongoing financial performance.

[57]GAO, *Insurance Regulation: The NAIC Accreditation Program Can Be Improved*, GAO-01-948 (Washington, D.C.: Aug. 31, 2001).

Three representatives of RRGs with whom we spoke supported the move to risk-focused examinations because they believed more uniform regulatory activities among domiciliary states would result in more trust among state regulators and ultimately would benefit the RRG industry. However, six representatives also acknowledged some potential challenges in implementing risk-focused examinations for some RRGs, particularly the smaller ones. For example, they said it could increase financial costs and regulatory burden for these RRGs because state regulators might need to hire more specialized auditors for more detailed reviews, and pass on the associated costs to the RRGs in the form of examination fees. NRRA also expressed its concern about the efficiency and effectiveness of risk-focused examinations for small liability insurance companies, which compose the majority of RRGs. NRRA characterized the impact on small RRGs as excessively expensive without yielding commensurate benefit, and held that implementing risk-focused examinations for small RRGs would run counter to the intent of LRRA. In its letter to NAIC, NRRA questioned the cost-effectiveness of the more rigorous examinations for certain RRGs based on characteristics such as the RRG's size, its impact in nondomiciliary states, and the structure of its membership.

Four state insurance regulators with whom we spoke also said that requiring risk-focused examinations might not be an efficient use of resources, particularly for small RRGs that represent the majority of the RRG population. Three state insurance departments we interviewed reported having already implemented risk-focused examinations for their domiciled RRGs. Based on its experience conducting risk-focused examinations, one domiciliary state regulator recommended that criteria be used to determine the efficiency and effectiveness of applying a risk-focused examination to an RRG. For example, the regulator recommended that risk-focused examinations should be required for RRGs with more than $10 million in direct written premiums, owned and operated by a group of shareholders with unrestricted membership, and registered to operate in at least 15 states. Alternatively, the regulator suggested leaving it at the discretion of the domiciliary state regulator to decide whether the risk-focused approach would be the most efficient approach to oversee a particular RRG.

According to NAIC officials, the possibility of exempting certain types of RRGs from the risk-focused examination requirement was considered in working groups. However, they also expressed concern about whether alternative examinations would qualify as full-scope examinations in accordance with NAIC's guidance on examinations as outlined in the

Financial Condition Examiners Handbook. The guidance requires RRGs to undergo full-scope examinations at least once every 5 years, or in accordance with the respective state law if it requires more frequent examinations.[58] NAIC decided that the risk-focused examination process was flexible enough to allow examiners to tailor examinations to fit the unique characteristics of RRGs.

RRG Oversight Could be Affected by Future Developments with NAIC and Federal Legislation

NAIC Plans to Incorporate Risk-Based Capital Analyses into RRG Oversight, as Already Done for Traditional Insurers

NAIC's risk-based capital (RBC) system was created to provide a capital adequacy standard for traditional insurers that creates a financial safety net, is uniform among the states, and provides regulatory authority for timely action. The RBC formulas can be technical and involve a number of components. Each of the primary insurance types—such as property/casualty, life or health—has a separate RBC formula that emphasizes the material risks common for that particular insurance type. Regulatory actions may be triggered by the RBC calculation for an insurer, and actions may include requiring the insurance company to issue comprehensive financial plans, issue corrective orders, or authorize the take-over of the insurer.[59]

NAIC officials said that they are pursuing the use of RBC calculations in the oversight of RRGs as part of the accreditation process. While regulators may voluntarily include RBC calculations in the financial examinations of RRGs, these calculations are not specifically required. According to NAIC officials, it is expected that RBC will be incorporated into the accreditation standards. If incorporated into the accreditation standards, regulators would be expected to incorporate RBC calculations into their broader financial analyses to determine whether any actions

[58]The Risk Retention Group (E) Task Force formed the RRGs and Risk-Focused Examinations Subgroup in 2010 to consider possible exemptions to the risk-focused examination process for RRGs.

[59]A completed RBC calculation of a company is considered confidential and not available to the public.

would be necessary, although, unlike traditional insurers, the RBC calculations for RRGs do not automatically trigger regulatory actions.

While five RRG representatives we interviewed generally supported NAIC's revisions to the accreditation standards in the RRG industry, three representatives expressed some concern about how meaningful an RBC analysis would be as a requirement in RRG oversight. For example, they said that the use of RBC for small RRGs, which tend to use GAAP accounting and rely more heavily on letters of credit to meet their capitalization requirements, might not be useful. Five state insurance regulators we interviewed were also unsure of the usefulness of incorporating RBC calculations into the accreditation standards, particularly in situations in which otherwise healthy RRGs could fare poorly when RBC calculations were applied. An actuarial expert we interviewed also expressed concern that an RBC requirement could lead to an overemphasis on the RBC figures for regulators and undue pressure on otherwise sound RRGs to increase capital. According to an NAIC working group analysis, an RBC formula using figures based on GAAP could result in different numbers compared with RBC calculations using figures based on SAP, potentially changing the picture of that RRG's financial condition. However, the working group also said that using figures determined under GAAP might not unreasonably alter the RBC conclusions for most RRGs and still could be meaningful.

NAIC Has Developed Corporate Governance Standards for RRGs, but Has Not Implemented Them

In response to our 2005 recommendations to establish minimum corporate governance standards for the RRG industry, NAIC developed such standards for RRGs but has not yet implemented them with a model act or through their accreditation standards. NAIC officials reported that they expect these corporate governance standards to be incorporated into the Model Risk Retention Act by the end of 2011. Further, the officials said that in 2012 they will consider adopting corporate governance standards as part of the accreditation standards.

An RRG is often operated by a management company or another service provider that generally supplies key services. However, the potential for abuse arises if the interests of a management company are not aligned with the interests of the RRG insureds to achieve long-term solvency and obtain self-insurance at an affordable price. In our 2005 report, we found behavior suggesting that management companies and affiliated service providers promoted their own interests at the expense of the RRG insureds in 10 of the 16 cases of RRG failures we examined. LRRA includes no provisions for governance controls that could help mitigate the risk to RRG insureds from potential abuses by other interests, such as

their management companies, should these companies choose not to operate in the best interest of RRG insureds.

In response to GAO's recommendations, NAIC's working groups have included corporate governance standards as part of their efforts to develop uniform baseline standards for RRGs. NAIC first adopted corporate governance standards for RRGs in June 2007 as a separate stand-alone guidance that was not incorporated into the accreditation standards. As of October 2011, the revisions to the Model Risk Retention Act that include corporate governance standards had been reviewed, but not yet approved, by the NAIC member states. As of November 2011 these revisions were approved and NAIC had adopted corporate governance standards into the Model Risk Retention Act. However, corporate governance standards are not yet a part of the accreditation standards and NAIC officials said that they will not begin discussions on adopting these standards into the accreditation requirements until 2012.

Three state insurance regulators with whom we spoke expressed support for corporate governance standards as a requirement for RRGs because they felt it would improve transparency of the management of RRGs. While five regulators generally did not think implementing corporate governance standards would be burdensome for RRGs, one regulator did expect that some RRGs, depending on their size, could find the implementation of some standards, such as the requirement for an audit committee, to be a challenge. Representatives of two large RRGs with whom we spoke supported corporate governance standards as good business practice. However, four representatives of RRGs also expressed concern about the cost of implementing these standards for smaller RRGs, particularly those without their own internal counsel.

Some Legislative Proposals Would Allow RRGs to Insure Commercial Property and Provide for Federal Arbitration and Governance Standards

Recent federal legislative proposals to amend LRRA, if passed, would offer new options to RRGs.[60] One proposed change would expand the type of insurance RRGs may provide to include commercial property coverage. RRG representatives with whom we spoke generally favored amending LRRA to allow RRGs to provide commercial property insurance coverage. For example, one representative said the differences in the risk

[60]For example, the Risk Retention Modernization Act of 2011 (H.R. 2126, 112th Cong. (2011)) was introduced in the U.S. House of Representatives in June 2011, and a similar bill, The Risk Retention Modernization Act of 2010 (H.R.4802, 111th Cong. (2010)), was introduced in the 111th Congress in the prior year.

profile between commercial property coverage and commercial liability coverage is a potential opportunity to manage their risks more strategically.

In addition, six RRG representatives we interviewed felt that allowing coverage of commercial property insurance constituted a removal of restrictions on providing insurance products that could be a natural extension of their core line of business. For example, an RRG that offers professional liability coverage to dentists currently cannot underwrite coverage for dental equipment. Similarly, one representative of an RRG offering commercial liability insurance products to the construction business said that the RRG could not offer property insurance related to the same homes constructed under their insurance coverage. Another RRG representative said their clients would like the option to bundle their property coverage with a wide range of specialized insurance products they purchase from the RRG for both convenience and cost-effectiveness. Eight RRG representatives we interviewed were concerned that some RRGs entering the commercial property market might not have adequate capital to cover the potentially severe losses that are a part of that line of coverage. Four RRG representatives also said that they would expect the domiciliary state regulator to review any changes to an RRG's business plan to ensure that it had an appropriate capital base for its underwriting coverage and risk profile.

Ten regulators with whom we spoke expressed concerns about RRGs entering the commercial property insurance market because of the potential risks to owner/insureds and consumers. For example, six regulators expressed concern that if an RRG was unable to pay the potentially severe losses associated with some lines of property insurance, the RRG members could be at financial risk. RRGs cannot participate in state guaranty funds that otherwise could help pay losses in such cases. In our survey of state insurance regulators, we asked whether they thought LRRA should be amended to enable RRGs to provide commercial property insurance. Among the responses, 32 regulators did not think LRRA should be so amended while 5 thought LRRA should be amended to allow RRGs to provide property insurance.[61] Three of the five regulators that favored amending LRRA in this way were from the 10 states with the highest RRG gross premiums in 2010.

[61]Twelve respondents had "no opinion."

The proposed legislation also would grant authority to a federal entity, such as the recently created Federal Insurance Office in the Department of the Treasury, to oversee state compliance with the regulatory preemptions in LRRA. For example, the office would resolve disagreements about whether LRRA preempts any regulatory actions by a state.[62] Among the state insurance regulators we surveyed, 29 said that the federal government should not have a primary role in arbitrating disputes between state regulators and RRGs, while 6 said that the federal government should have a primary role.[63] We also asked regulators which department or agency they thought should have this authority if the federal government were to arbitrate disputes between states and RRGs. Twenty-nine regulators responded with no opinion, while 13 regulators indicated their preference for the Federal Insurance Office and 6 regulators indicated other agencies including the Department of Commerce.[64]

Another proposed change would have the Federal Insurance Office issue corporate governance standards for RRGs that would preempt any corporate governance standards under state laws.[65] Five state regulators with whom we spoke also favored developing an arbitration mechanism, while five regulators did not think corporate governance standards would be burdensome for RRGs to implement. While seven RRG representatives we interviewed generally supported establishing a federal arbitration mechanism as a more efficient and cost-effective way of resolving disputes, four representatives also expressed concern about potential encroachment into state regulatory activities by a federal entity.

[62]If passed, the Risk Retention Modernization Act of 2011 (H.R. 2126, 112th Cong. (2011)) would designate the Federal Insurance Office as a federal arbitrator.

[63]Fourteen respondents stated “no opinion.”

[64]One respondent did not provide a response to the question.

[65]If passed, the Risk Retention Modernization Act of 2011 (H.R. 2126, 112th Cong. (2011)) also would establish such a requirement for the Federal Insurance Office to set corporate governance standards for RRGs.

Conclusions

In establishing the Liability Risk Retention Act, Congress allowed RRGs to provide commercial liability insurance to RRG members and established a lead-state regulatory framework. While constituting a small portion of the total liability insurance market, the amount of premiums written by RRGs increased from 2004 to 2010 and the financial condition of the RRG industry generally has remained profitable during this same period. Based on our analysis, RRGs appear to have maintained a relatively consistent presence in the market, primarily providing coverage in niche markets such as medical professional liability insurance and other health care-related insurance lines.

RRGs have continued to domicile in one of a few states but write most of their business in other states, highlighting the importance of LRRA's provisions governing the rights and actions available to regulators in nondomiciliary states as well as the types of coverage allowed under LRRA. However, states have interpreted these provisions differently, due in part to LRRA's silence on certain issues such as registration requirements, fees, and the types of insurance coverage RRGs can write, sometimes resulting in litigation between state insurance regulators and RRGs. In addition, some federal courts to which these disputes have been brought also have interpreted LRRA differently. As a result, RRGs and state insurance regulators have continued to operate in an environment with some uncertainty, potentially affecting RRGs' operations as well as the ability of state regulators to take actions deemed necessary to protect insureds in their states.

To establish a more consistent regulatory environment for the members of RRGs and their claimants, our previous report recommended the development of broad-based, uniform, baseline standards for the regulation of RRGs. NAIC has made progress addressing these concerns, including requiring accredited states to implement risk-focused examinations and risk-based capital analyses, as well as developing corporate governance standards for the RRG industry. Further, NAIC has made efforts to more closely align the accreditation standards for RRGs with those of traditional insurance companies. Because some of these standards only recently were implemented or have not yet been implemented, it is too early to evaluate their effect on the RRG industry and its regulation.

Matter for Congressional Consideration

To reduce the varying interpretations of LRRA, which have led to uncertainty and disagreements among RRGs and state insurance regulators, and at the same time continue to facilitate the formation and efficient operation of RRGs, Congress should consider clarifying certain LRRA provisions. For example, clarifying whether (1) RRG registration requirements beyond those currently specified in LRRA are permitted in nondomiciliary states and (2) fees in addition to premium and other taxes could be charged to RRGs by nondomiciliary states in which they operate. Congress also should consider providing a more specific definition of the types of insurance coverage permitted under LRRA.

Agency Comments and Our Evaluation

We requested comments on a draft of this report from the National Association of Insurance Commissioners. NAIC provided written comments, which are reproduced in full in appendix II. NAIC also provided technical comments, which we incorporated as appropriate.

NAIC agreed that Congress should consider the merits of clarifying certain aspects of LRRA, in particular by providing more specific definitions of the type of insurance coverage permitted under the LRRA. NAIC further recommended that the definition of "commercial liability insurance" be included for consideration since disagreements concerning the scope of this definition have led to disputes between the states and RRGs that, without further clarification, may continue. NAIC also provided several additional comments.

- NAIC provided clarification regarding the status of their Risk Based Capital Models (RBC) and corporate governance standards as it relates to NAIC's accreditation standards for RRGs, which we incorporated into the draft.

- NAIC expressed concern with the methodology we used to calculate the annual average ratios in figures 3 and 4, and suggested we either use an alternate methodology or more clearly describe the one we used. We added a more detailed description of our methodology to each of the figures.

- NAIC clarified that when analyzing the ratio of premiums to policyholder surplus, whether or not a state allows a letter of credit as an admitted asset can change the results of such an analysis. We agree and added an explanatory footnote.

As agreed with your offices, unless you publicly release its contents earlier, we plan no further distribution of this report until 30 days from its date of issue. At that time, we will send copies of this report to the Chairman and Ranking Member of the Senate Committee on Banking, Housing and Urban Affairs; the Chairman and Ranking Member of the House Financial Services Committee; the Ranking Member of the Subcommittee on Oversight and Investigations, House Financial Services; and to the Chief Executive Officer of NAIC. In addition, the report will be available at no charge on the GAO website at http://www.gao.gov.

If you or your staff members have any questions about this report, please contact me at (202) 512-7022 or cackleya@gao.gov. Contact points for our Offices of Congressional Relations and Public Affairs may be found on the last page of this report. GAO staff who made key contributions to this report are listed in appendix III.

Community Investment

Appendix I: Objectives, Scope, and Methodology

Our objectives were to (1) describe changes in the financial condition of the risk retention group (RRG) industry from 2004–2010; (2) examine the regulatory treatment of RRGs across domiciliary and nondomiciliary states; and (3) examine changes to federal and state regulatory practices regarding RRGs since 2004.

To determine the extent to which the financial condition of the RRG industry has changed since 2004, we examined previous GAO reports, various financial indicators from data provided by the National Association of Insurance Commissioners (NAIC) and the *Risk Retention Reporter*, a trade journal and data source for the industry. We interviewed representatives of two industry associations on their members' regulatory experiences operating in domiciliary and nondomiciliary states. We reviewed correspondence from state insurance regulators to RRG representatives about topics such as registration processes and fees charged to RRGs. NAIC officials calculated the overall market share of RRGs in the commercial liability insurance market for each year during 2004–2010 and the overall market share of RRGs in the medical professional liability line for 2007–2010 only. We examined the amount of premiums written by RRGs and traditional property/casualty insurers for commercial liability insurance in all 50 states, the District of Columbia, the U.S. territories (American Samoa, Guam, Northern Mariana Islands, Puerto Rico, and the Virgin Islands), and Canada. To ensure data were comparable, we limited our analysis to commercial liability lines of insurance that RRGs are allowed write. We examined and analyzed RRG industry data on financial indicators of profitability and ability to pay claims, such as policyholder surplus, return on equity and combined ratio for 2004–2010. To determine the number of RRGs domiciled in and operating by state, and the percentage of direct written premiums written outside the state of domicile, we analyzed information provided by NAIC.

To assess the reliability of NAIC data we received, we (1) performed electronic testing for obvious errors in accuracy and completeness; and (2) worked with agency officials to identify any data concerns. When we found discrepancies, such as data that were inconsistent, we notified agency officials and worked with these officials to correct the discrepancies before conducting our analysis. We determined that the data were sufficiently reliable for the purposes of our report.

To compare the concentration of RRGs by business area, we used data from 2004 and 2010 from the *Risk Retention Reporter*. We also obtained data from this source for the number of RRGs licensed by business area. Data from the *Risk Retention Reporter* were as of April 2010. We did not

attempt to verify these data, but did interview officials of the *Risk Retention Reporter* to discuss their data collection methods. We determined that the data were sufficiently reliable for the purposes of our report.

Overall, we used interviews, a Web-based survey, and analysis of the Liability Risk Retention Act of 1986 (LRRA) with other available documentation to determine potential inconsistencies in the regulatory treatment and regulatory environment of RRGs in domiciliary and nondomiciliary states. We reviewed and analyzed LRRA and its legislative history. To determine states' rules and regulations for RRGs domiciled or operating in those states, we designed and administered a Web-based survey of state insurance regulators in all 50 states and the District of Columbia. Specifically, the survey asked about each state's (1) requirements for RRGs domiciled in state; (2) role as a host (nondomiciliary) state regulator for RRGs operating in state; (3) applicable fees, taxes, and registration requirements; (4) regulatory experiences such as conducting examinations of, taking administrative actions against, and filing civil or criminal lawsuits against RRGs; and (5) opinions on LRRA. A copy of the questionnaire and results are available in the e-supplement to this report, GAO-12-17SP. The Web-based survey was administered from May 19, 2011, through July 25, 2011. Respondents were sent an e-mail invitation to complete the survey on a GAO Web server using a unique username and password. Throughout the data collection period, nonrespondents received reminder e-mails and telephone calls. The final response rate was 49 out of 51 states including the District of Columbia (96 percent).[1]

The practical difficulties of conducting any survey may introduce nonsampling errors, such as difficulties interpreting a particular question, which can introduce unwanted variability into the survey results. We took steps to minimize nonsampling errors by pretesting the questionnaire over the telephone in March and April 2011 with four state insurance regulators (in both domiciliary and nondomiciliary states) and with NAIC officials. We conducted pretests to make sure that the questions were clear and unbiased, the data and information were readily obtainable, and

[1]According to officials from the state of Minnesota, the state did not respond to this survey because state employees were furloughed for a part of the period in which this survey was open. Maryland did not completely respond to all survey questions, therefore this regulator's responses were omitted from our analyses.

the questionnaire did not place an undue burden on respondents. We made appropriate revisions to the content and format of the questionnaire after the pretests. After the data were collected, we identified unanswered questions and inconsistencies in some responses. We conducted follow-up with the specific states by e-mail and telephone to obtain responses to unanswered survey questions and confirm the accuracy of responses to several key questions, including applicable fees, premium tax rates, waiting periods, and regulatory actions. We received a 100 percent response rate to our follow-up questions and response confirmations.

While many of the questions on the 2004 and 2011 surveys are similar, slight differences in wording or question format could result in slightly different responses between the two surveys.[2] All data analysis programs used for this report were independently verified for accuracy. Due to the wide variety of responses to some of our open-ended questions, preparing statistics and summary presentation of findings to these questions was not possible in some cases. Therefore, in some cases we provided qualitative explanations with examples of responses we received.

To obtain the information and opinions on the regulatory treatment of RRGs across domiciliary and nondomiciliary states, we interviewed 13 regulators from domiciliary and nondomiciliary states representing a nonstatistical sample of states selected for RRG business activity and perceived differences in their regulatory treatment of RRGs. The nine domiciliary states—Delaware, Florida, Hawaii, Illinois, Montana, Nevada, South Carolina, Vermont, and the District of Columbia—included eight that were among the top 10 states that domiciled the highest number of RRGs or had the highest amounts of written premiums as of December 31, 2010.[3] For states that do not have domiciled RRGs, we identified and selected those in which RRGs were writing the highest amounts of total premiums as of year-end 2010. Those four states were California, Massachusetts, New York and Pennsylvania. Views of other domiciliary and nondomiciliary insurance regulators were obtained through our Web-

[2]Information on the methodology and results of the 2004 questionnaire is available in appendixes I and II of the previous report, GAO-05-536.

[3]The eight states that placed among the top 10 domiciliary states with the highest amounts of RRGs or direct written premiums as of year-end 2010 were: Delaware, Hawaii, Illinois, Montana, Nevada, South Carolina, Vermont, and the District of Columbia.

based survey. To obtain comparable data, the same topics were included in the Web-based survey and in interviews with domiciliary and nondomiciliary state insurance regulators.

We also obtained information and opinions on the regulatory treatment of RRGs across states from RRG representatives. First, we conducted two discussion groups at the 2011 annual conference for a captive industry association. We coordinated with the industry association to determine which conference participants had specific knowledge of and were representatives of the RRG industry. To determine which individuals to select to participate in our discussion groups, we developed an invitation letter that the industry association e-mailed to the identified RRG industry representatives. The letter also included a questionnaire to aid in identifying the organization name, title, and industry type of the RRG representative. We received 10 completed questionnaires from conference registrants expressing interest in participating in the discussion groups.[4] Based on the information provided in the questionnaire, we assembled discussion group volunteers into two groups: (1) RRG owner/insureds and (2) captive/RRG managers. For conference attendees who did not respond to the questionnaire by the deadline in the invitation but wanted to participate, we provided blank questionnaires at the registration table and before the discussion groups. Those who met the criteria for either group were allowed to participate in the discussion groups. We excluded individuals from industry associations whom we previously interviewed and state insurance regulatory agencies, as their views were captured in the GAO-administered Web survey. Second, we selected a non-statistical sample of 11 RRGs that operate on a multistate basis and represent a variety of business areas, insurance products, domiciliary states, and a range of direct written premiums to obtain their perspectives on the regulatory treatment of RRGs across domiciliary and nondomiciliary states. We excluded RRGs that we previously interviewed and RRGs that domiciled and operated only in their domiciliary state. We are not able to generalize results from this sample to the entire RRG industry. To obtain comparable

[4]One respondent was a domiciliary state regulator, and therefore was excluded from the focus groups. A separate interview was scheduled to obtain the views of this regulator. In addition, one representative of a captive management company that provides service to RRGs could not attend the discussion group and was interviewed by telephone at a later date.

data, we covered the same topics in these interviews as in the discussion groups noted above.

To determine the extent to which state and federal regulatory practices affecting RRGs have changed since 2004, we reviewed regulations, guidance, and legislative and regulatory proposals and interviewed stakeholders. More specifically, we reviewed NAIC literature and guidance to state insurance departments about RRG oversight. We also interviewed NAIC officials about efforts to address recommendations from our 2005 report, including revisions to NAIC's state accreditation process and progress with developing and implementing corporate governance standards for RRGs. We attended NAIC working group meetings concerning implementation of accreditation standards and approval of updates to the RRG Handbook and corporate governance standards for RRGs. We also obtained information about RRGs' regulatory environment and views on the potential impact of NAIC's changes to the accreditation standards from the 13 select domiciliary and nondomiciliary state insurance regulators mentioned above. In addition, we obtained information on any changes to state regulations affecting RRGs since 2004 through our Web-based survey of regulators. We interviewed an actuarial expert about the revisions to the accreditation standards. Furthermore, we obtained views from representatives of RRGs on their primary challenges and NAIC's efforts to establish broad based uniform standards for the oversight of RRGs. More specifically, we spoke with the discussion group participants and representatives from 11 select RRGs mentioned in the previous paragraph. The criteria for selection of these RRGs are described above. We excluded those RRGs we already interviewed and RRGs that domiciled and operated in only their home state. We are not able to generalize results from this sample to the entire RRG industry. We also reviewed documentation we received from RRG representatives related to their regulatory experiences and the expected impact of the revised accreditation standards. Finally, we reviewed key legislation concerning RRGs that had been introduced at the federal and state level since 2004 to identify recent changes in laws and regulations affecting RRGs.

We conducted this performance audit from October 2010 to December 2011 in accordance with generally accepted government auditing standards. Those standards require that we plan and perform the audit to obtain sufficient, appropriate evidence to provide a reasonable basis for our findings and conclusions based on our audit objectives. We believe that the evidence obtained provides a reasonable basis for our findings and conclusions based on our audit objectives.

Appendix II: Comments from the National Association of Insurance Commissioners

November 30, 2011

Ms. Alicia Puente Cackley
Director, Financial Markets and Community Investment
U.S. Government Accountability Office
441 G. Street, NW
Washington, DC 20548

Dear Ms. Puente Cackley,

Thank you for providing the National Association of Insurance Commissioners (NAIC) with an opportunity to submit comments on the GAO's draft report, *Risk Retention Groups: Clarifications Could Facilitate States' Implementation of the Liability Risk Retention Act* (GAO-12-16).

As a general comment, we agree Congress should consider the merits of clarifying certain aspects of the LRRA. The GAO draft report mentions Congress should consider providing more specific definitions of the type of insurance coverage permitted under the LRRA. The NAIC would further recommend Congress consider clarifying the definition of "commercial liability insurance." Some RRGs and their domiciliary states have taken a broader view of what constitutes commercial liability insurance than may have been originally intended by Congress. This in turn is causing confusion and leading to disputes between the states. Without legislation or further guidance these disputes most likely will continue.

We would also like to provide additional clarification regarding the NAIC's accreditation standards for Risk Based Capital Models (RBC) and corporate governance standards. Although the NAIC Risk Retention Group (E) Task Force has recommended RBC should become an accreditation requirement, the Financial Regulation Standards and Accreditation (F) Committee has not yet adopted this recommendation. However, since this does not appear to be a contentious issue it is anticipated the Financial Regulation Standards and Accreditation (F) Committee will adopt the Task Force's recommendation and make RBC an accreditation standard for RRGs.

Corporate governance standards will be incorporated into the NAIC's Model Risk Retention Act, having been adopted by the NAIC Property and Casualty Insurance Committee (C) on November 5, 2011. The NAIC membership is expected to adopt the corporate governance standards for RRGs by this year end. After the final adoption of the corporate governance standards, the Financial Regulation Standards and Accreditation (F) Committee will begin considering whether the standards will become an accreditation requirement. These discussions are expected to begin in March 2012.

EXECUTIVE OFFICE 444 North Capitol Street NW, Suite 701, Washington, DC 20001-1509 p | 202 471 3990 f | 816 460 7493
CENTRAL OFFICE 2301 McGee Street, Suite 800, Kansas City, MO 64108-2662 p | 816 842 3600 f | 816 783 8175
CAPITAL MARKETS & INVESTMENT ANALYSIS OFFICE 48 Wall Street, 6th Floor, New York, NY 10005-2906 p | 212 398 9000 f | 212 382 4207
www.naic.org

Additionally, the NAIC has concerns with the methodology used to calculate Figure 3 and Figure 4 in the Report, as it appears the GAO added together the legal entity ratios and then divided by an average number of entities for a given year to arrive at another ratio. It is our understanding the GAO's rationale for using this methodology stems from the desire to capture the experience of a large number of small RRGs. The NAIC recommends the GAO use one of the following approaches: (1) sum the numerators and denominators of each entity and then divide the total numerator and total denominator to arrive at a ratio; or (2) create two or three RRG groupings based on direct premium size and then repeat #1 for each. If the GAO insists on using the current methodology, the NAIC requests a more detailed description of the methodology to better inform readers of the report.

Finally, we would like to make a clarification regarding the financial position of RRGs. The comparison of the ratio of net written premium to policyholder surplus ignores one important fact. RRGs are allowed, in some states, to recognize a letter of credit as an admitted asset. However, both Statutory Accounting Principles (SAP) and Generally Accepted Accounting Principles (GAAP) do not allow a letter of credit to be treated as an admitted asset. If the analysis were repeated without counting the letters of credit, the financial position of RRGs would look very different than presented.

Please do not hesitate to contact me if you have any questions regarding our comments. We value our ongoing relationship with the GAO and appreciate your continued interest in state-based insurance regulation.

Sincerely,

Andrew J. Beal
Chief Operating Officer and Chief Legal Officer

INTRODUCTION

Nyce [1] provides an excellent introduction to government insurance including the five main reasons for government insurance, which are summarized in this study note.

Both the federal and state governments are involved in insurance as regulators of insurance companies and as insurers. As insurers, they participate in a number of insurance programs either as the sole insurer, in partnership with insurance companies or in competition with insurance companies. Several major programs that are discussed elsewhere in the syllabus include the National Flood Insurance Program, Social Security, Guaranty Funds, FAIR plans, TRIA, and various state Auto Plans. In this study note, we will discuss state and federal involvement in Workers Compensation Insurance, Crop Insurance, and Unemployment Insurance.

Is government participation in insurance necessary? According to Greene and Weining, there are several reasons for government participation in insurance:

- Filling insurance needs unmet by private insurance
- Compulsory purchase of insurance
- Convenience
- Greater efficiency
- Social purposes

Filling Insurance Needs Unmet by Private Insurance

According to Nyce [1] and Greene [2], one justification for government participation in insurance is the residual market philosophy, with governments offering insurance in markets unserved by private insurance; either because of unavailability or affordability. One implication of the residual market philosophy is that government requirements for insurability are different from private insurers' requirements. A government may step into situations in which private insurers do not because the government has the financial capacity to subsidize losses, either by directly taxing taxpayers for the insurance program even those who do not benefit from the program, or indirectly by charging less than the actuarial cost of providing insurance coverage for the exposure and making up the difference through government-provided funds (crop / flood). There are strong

arguments, both pro and con, as to whether a government should provide this type of subsidy.

Begun in 1968, the Federal Crime Insurance Program was intended to provide coverage for homeowners and small businesses located in neighborhoods with high crime rates, primarily because private insurance for burglary or robbery was not available at affordable rates for these risks. With proper loss prevention methods, this insurance was available from the private market at rates less than the government rates and the Federal Crime Insurance Program expired in 1995.

Crop insurance and Flood insurance are available and affordable only because of subsidies from the federal government.

Compulsory Purchase of Insurance

Government may require individuals or businesses to obtain insurance to meet social responsibilities. A driver who causes an automobile accident is responsible for repairing the damage or injury caused by the accident. Many people would not have the financial resources to meet this obligation without insurance protection. An employer is deemed responsible for injury to an employee regardless of fault. Again, without insurance protection an employer may not be able to meet this obligation. Without a compulsory insurance requirement, some persons who have suffered injury or loss may not have the costs of repairing the damage to their property or their medical costs covered by the person responsible for these costs.

Since purchase of insurance such as workers compensation or automobile insurance may be compulsory, some state legislatures felt obliged to offer the insurance to individuals who could not find a private market [2]. The workers compensation state funds established in several states and the Maryland Automobile Insurance Fund are examples of this philosophy. Another reason why some federal and state legislators believe that government should provide compulsory insurance is that private companies should make only limited profits, given the government guaranteed market. A government program would operate as a not-for-profit entity and the cost of the compulsory insurance would be lower than if offered by a for-profit insurer. In other non-insurance government mandated programs such as highway construction contracts, private organizations often service the program. Within a purely competitive market excessive profits cannot persist in the long run. Private insurance seems to work for most states in supplying the vast majority of the public with compulsory insurance such as workers compensation and auto insurance.

While workers compensation insurance is administered by a monopolistic state fund in a few states, most states have private companies that offer workers compensation insurance, sometimes in competition with state-run funds that will provide coverage to anyone who applies for coverage to the fund, sometimes referred to as “take all comers.” For those states without a state fund, and some with a state fund, there is usually some

other form of residual market that provides coverage to those who are unable to find the required coverage with a private insurer.

For compulsory auto insurance, government insurance is normally not the answer; so provisions are in place to make auto insurance available for those unable to buy insurance on the open market. Sometimes these alternate sources also provide the coverage at costs below the actuarial cost of providing the coverage. In these situations, insurers, other insureds or taxpayers subsidize part of the cost of the coverage for high risk drivers. Hamilton and Ferguson [3] discuss these provisions, which include assigned risk plans, reinsurance facilities, and joint underwriting associations depending on the state. Maryland has the only state-owned auto insurance company.

Convenience

Some government insurance programs are established because it appears to be easier for the government to set up a program quickly as a legislature can appropriate funding for the new program, whereas the private market may take longer to find the necessary funding [3]. A government program may also be already set up to provide certain types of services needed by the insurance program. These services include loss mitigation development and funding, as the Florida legislature did when establishing the Florida Hurricane Catastrophe Fund.

Using government insurance programs only for convenience may not be justified if the private market is willing and able to provide a reasonable market.

Greater Efficiency

One argument in favor of government insurance is that there is greater efficiency than in the private market [2]. Some government insurance programs may be established because of the belief that government can provide the service at a lower cost than the private market. However, the costs of providing insurance, including the costs of keeping records, providing consumer education, issuing policies and paying claims, exist even in government insurance programs. Services such as explaining coverages, keeping records, and handling claims questions are still provided by customer service representatives (who must be compensated). The cost savings claimed for government insurance programs might be overstated because other government departments may perform services on behalf of the government insurance entity that are usually performed by insurance companies, including appraising property, administering claims, or making investments.

Social Purposes

The use of government insurance to achieve social purposes may be the main reason for government insurance programs [3]. Some feel that these social purposes can only be fully achieved within government-owned insurance programs. For example, rehabilitation and vocational training of injured workers are important goals of a workers compensation

system and requirements for loss mitigation in catastrophe insurance plans may be more easily accomplished under government insurance programs. Can private insurance programs accomplish the same goals? If Social Security benefits were made available through a welfare program for the truly needy elderly and disabled while pension plans, 401(k)s, life insurance and disability insurance were to be used to fill the needs of others, would adequate protection for retirement and the disabled be available? If building codes and zoning requirements could be altered to prevent construction in flood-prone areas would private insurers be willing to provide flood coverage? In this scenario, government flood insurance would still be needed for existing buildings in the flood zones, but the need for government flood insurance on new construction would be reduced.

Level of Government

The government (either state or federal) can be involved in three levels as either exclusive insurer, partner with private insurers or as a competitor to private insurers.
As an exclusive insurer the government functions as a primary insurer by collecting premiums, providing coverage and paying all claims and expenses. An example of this at the federal level is Social Security and at the state level with some state government-run workers compensation programs.

In partnership with private insurers the government offers reinsurance coverage on specific loss exposures for which the private insurer may retain only a portion of the loss. Examples of this at the federal level are National Flood insurance program, Terrorism Risk Insurance Program and Federal Crop insurance. On the state level this includes several programs to address residual markets where the insured cannot find coverage on the open market. Examples of this are Fair Access to Insurance Requirements (FAIR) plan, Workers Compensation, Windstorm plans and Residual Auto Plans.

In some cases the states operate in direct competition to private insurers such as in the Workers Compensation market in some states.

Detail of the various government insurance plans are provided in this document or in other readings on the Syllabus.

Evaluation of Government Insurance Programs

How well have the federal and state governments performed in providing insurance? According to Greene [2] the questions to be asked are:

- Is the provision of the insurance by the government necessary or does it achieve a social purpose that cannot be provided by private insurance?
- Is it insurance or a social welfare program? Social welfare is designed to provide benefits to qualified people based on demonstrable need for assistance without any payment or contribution by those receiving assistance. These benefits are usually

financed by general tax resources. The public welfare programs are an example of social welfare.

- Is the program efficient, is it accepted by the public?

Based on experience in 2004, 2005 and 2012 how is the Federal Flood Insurance Program performing? The rates don't seem to be actuarially sound; insurance is usually only purchased if required by law or mortgage companies; people who do not buy flood insurance seem to be getting federal disaster assistance. With appropriate rates, enforceable building codes, up-to-date flood maps, and available reinsurance could private insurance companies provide flood insurance?

In the following sections, we will discuss several government insurance programs, how they work, their origin and purpose, and their effectiveness.

CROP INSURANCE

To help farmers recover from the Great Depression and the Dust Bowl, in 1938 the federal government created the Federal Crop Insurance Corporation (FCIC), a wholly owned corporation of the U.S. Department of Agriculture (USDA), to oversee the newly created federal crop insurance program. The initial program, intended to provide farmers protection against low yields, was limited to a few major crops (wheat and corn) in the main producing areas [4] and was not successful due to high costs and low participation by farmers [5]. In 1980, Congress passed legislation that expanded the types of crops covered and the regions of the country in which the federal crop insurance was available. To encourage participation the 1980 Federal Crop Insurance Act also authorized a subsidy of the crop insurance premium. According to the Congressional Research Service, in 2014 farmers paid about 38 percent of the policy premium [6].

In the late 1980's and early 1990's, droughts, and wet and cool growing seasons resulted in Congress passing several disaster bills to assist farmers in recovering from these disasters. These disaster bills were still costly and competed with the insurance program, so in 1994, Congress made participation in the crop insurance program mandatory for farmers to be eligible for payments under price support programs, certain loans and other benefits. In addition, catastrophic coverage became available and the premium for this coverage was completely subsidized.

In 1994, the mandatory participation requirement was repealed, but farmers who accepted other types of benefits were required to purchase crop insurance. Participation in the crop insurance program increased significantly.

Multiple Peril Crop Insurance policies are a public-private partnership. Private insurers market and write crop insurance policies, which generally indemnify farmers if yields fall below a given baseline due to natural causes (drought, heat, cold, fire, wind, or flood). Some policies also provide protection if prices fall below a given level. The RMA sets

the rates for these policies and determines which crops can be insured in different parts of the country. The private insurer services the policies including adjusting and settling any claims resulting from the policies. The RMA acts as a reinsurer, reimbursing the participating insurers for losses in return for a portion of the premium. In addition, the federal government reimburses the private insurance companies for their operating and administrative costs. The premiums paid by farmers are subsidized by the federal government to reduce the cost to farmers and encourage farmers to participate in the program.

A farmer must elect to purchase multi-peril coverage prior to planting. The crop insurance subsidies may encourage farmers to purchase more coverage than they might if they paid the full price. A higher participation in the program provides better protection to farmers and may reduce requests for disaster assistance, but it also increases costs to taxpayers.

The Federal crop insurance program differs from most private insurance programs in that an insurer who participates in the Federal program must sell the coverage to any farmer at the rate set by the Federal government. Because the insurer cannot impose its own underwriting standards, judgment or desired rate level regardless of the risk, the risk sharing agreement between the federal government and insurance companies allows an insurer to transfer some liability associated with riskier policies to the government and retain profits or losses on less risky policies.

Some private insurers offer crop-hail insurance which is not part of the federal program. Unlike the multi-peril coverage, a crop-hail policy may be purchased at any time during the growing season. Many farmers purchase this coverage because hail can totally destroy a planted field.

Crop insurance is not mandatory. Farmers may choose whether to buy it, and for which crops. However, the RMA requires that if a farmer chooses to insure a particular field, he or she must insure *all* of his or her fields growing the same crop in the same county. This alleviates problems of adverse selection, since otherwise farmers would insure only their most loss-prone locations and the program would bear a higher loss ratio. In addition, farmers who choose to forego crop insurance are not eligible for payments for crop loss from federal disaster relief programs.

Supporters of federally backed crop insurance argue that it is necessary to bring stability to a very volatile but important sector of the American economy. Private crop insurance would definitely be more expensive (if the subsidy were removed), and might be substantially more expensive or even unavailable due to the risk of catastrophic losses over a large geographic region. Opponents have charged that crop insurance subsidies encourage agricultural over-production and encourage farming in marginal and disaster-prone areas, which harms the environment and increases general disaster relief costs.

WORKERS COMPENSATION INSURANCE

With the advent of the industrial revolution, new technology and machinery resulted in more industrial accidents. The only recourse an injured worker had was to sue their employer - a long, expensive process with an uncertain outcome. Workers compensation benefits evolved as a means by which employees injured on the job would be certain to have their injuries adequately taken care of by their employer without having to sue. Employers, as well as employees, benefited from the new system as the employer also exchanged an uncertain, potentially large payment, for a certain guaranteed benefit system.

Governments, both state and federal, participate in workers compensation insurance programs in a variety of ways. In some states, workers compensation insurance is only available through private insurance companies, while in other states it is only available from a state fund (an entity established by law to provide workers compensation insurance.) In some states, a state fund may compete with private insurers. In all states, government and private insurers cooperate in providing workers compensation insurance as the benefits are defined by law, either state or federal, and unless there is an exclusive state fund, private insurers provide the insurance coverage.

Workers compensation programs covering most employees are enacted and administered at the state level in all fifty states, the District of Columbia and the five U.S. territories. Federal government employees and certain categories of workers, such as longshoremen or railroad workers, are covered by federal workers compensation programs.

A) Federal Workers Compensation Programs

Various federal programs compensate certain categories of workers for disabilities caused on the job and provide benefits to dependents of workers who die of work-related causes. The federal government works to ensure these programs perform well under the U.S. Office of Management and Budget and Federal Agencies. The following are some major federal programs:

1) The **Federal Employee Compensation Act (FECA)** provides compensation benefits to non-military, federal employees for disability due to personal injury sustained while in the performance of duty and for employment-related disease. It is administered by the Office of Workers' Compensation Programs (OWCP) in the U.S. Department of Labor.

The Act is the exclusive remedy for federal civilian employees who suffer occupational injury or illness. There is some claimant overlap with other federal programs; however, regulations generally bar the receipt of dual benefits for the same injury/illness and mandate the reduction in benefits to offset other sources of compensation.

The program's purpose is to return individuals to work while containing the costs of the system. Designed as a non-adversarial system (i.e., no judicial review and limited

employer ability to contest claims) the program limits administrative and litigation costs, which may account for a substantial share of payout in some systems.

2) The **Longshore and Harbor Workers' Compensation Act of 1927** requires employers to provide workers compensation protection for longshore, harbor, and other maritime workers who are injured or suffer occupational diseases while working on or near navigable water in the United States. These benefits are provided by employers by either procuring insurance coverage from private insurers or by qualifying to self-insure. In some special circumstances, such as second injuries or default in payment of claims by insurers or employers, benefits are paid by a special fund administered by the Department of Labor Employment Standards Administration, Division of Longshore and Harbor Workers' Compensation (DLHWC). The DLHWC is responsible for adjudicating disputed claims and ensuring that employers and carriers pay benefits.

The Act was created to provide workers' compensation coverage for categories of workers who were not seamen and were injured while working on or near navigable water in the United States and for which no state act coverage applied. Since the enactment of the Act, there have been questions regarding when coverage under the Act ends and state act coverage begins, particularly when the injury occurs "near" navigable water. In 1984 the scope of the program was amended in an attempt to clarify the extent to which shoreside coverage applied. However, about 40 states allow concurrent receipt of state and longshore benefits. The Act provides for the offset of compensation paid to individuals under any other workers compensation law for the same disability or death. The possibility of an injured worker pursuing either longshore benefits or state act benefits is an issue that employers need to be aware of so that they have adequate insurance protection for their exposure.

3) The **Black Lung Benefits Act** (BLBA) provides wage-replacement and medical benefits to coal miners who are totally disabled due to pneumoconiosis (black lung disease) and to eligible survivors.

The program was established in 1969 out of concern that black lung victims were not receiving adequate recompense from state workers compensation systems. States have sometimes been slow to recognize chronic occupational diseases such as black lung as compensable injuries. Coal miners frequently change employment, which made it difficult to assign responsibility for a chronic disease to a particular employer. In addition, the BLBA acts as a form of disability insurance, providing compensation to survivors and dependents over and above medical care and loss of earnings. Black lung victims do remain eligible for ordinary workers compensation benefits, but if an individual receives both state and federal benefits, the federal benefit is reduced by the full amount of the state benefit.

Federal benefits are paid by the Black Lung Trust Fund which is financed by coal mine operators through a federal excise tax. In years when payouts exceed revenues, the fund borrows from general government revenue. These deficits are intended to eventually be

paid back with interest. In 2008, however, the Trust Fund deficit had grown so large that Congress made a one-time appropriation to reduce the deficit out of general funds. The hope as of 2016 is that the deficit will eventually be paid down without further excise tax increases or appropriations from general revenue.

B) State Workers Compensation Programs

The state government can act as a partner with private insurers, a competitor of private insurers, or an exclusive insurer.

Partnership with Private Insurers

State programs vary concerning who is allowed to provide insurance, which injuries or illnesses are compensable, and the level of benefits. State laws prescribe workers compensation benefits, but these laws assign to employers the responsibility for providing benefits. Employers can obtain workers compensation coverage to provide benefits to their employees by purchasing insurance from a private carrier or a state workers compensation fund, depending upon the options available in their state. They can also use self-insurance in almost every state if they demonstrate the financial capacity to do so by meeting certain requirements.

Private insurers are allowed to sell workers compensation insurance in all but a few states and territories that have exclusive state funds. Where private insurers may sell workers compensation, a public-private partnership exists since the benefits are established by state law, but insuring those benefits is the role of private insurers.

State Funds

With enactment of state workers compensation laws, the need for workers compensation insurance created its own set of problems, while solving others. Employers feared they would be forced out of business if refused coverage by insurance companies. They were also fearful that insurance carriers might impose excessive premium rates that would be a financial burden. High premium rates could negatively affect a state's economy and ultimately limit opportunities for employment. Another fear was that because the mandatory nature of the coverage reduces elasticity of demand, insurance rates might soar, enabling insurers to reap unfair profits. Some state legislators addressed these concerns by establishing state workers compensation insurance funds to provide a stable source of affordable insurance coverage.

Washington was the first state to adopt the state fund approach in 1911 and by the end of 1916, thirteen states had established state funds. As of 2016, a total of twenty- three states have state funds that provide workers compensation insurance [7].

In general, state funds are established by an act of the state legislature, have at least part of their board appointed by the governor, are usually exempt from federal taxes, and typically serve as the insurer of last resort – that is, they do not deny insurance coverage to employers who have difficulty purchasing it privately.

Among the twenty-three states that have state workers compensation funds, four have exclusive state funds and nineteen have competitive state funds. The four states with exclusive funds are North Dakota, Ohio, Washington and Wyoming. The South Carolina state fund is a hybrid; it is an exclusive insurer for state employees and is available to cities and counties to insure their employees, but it does not insure private employers.

Competitive State Funds

In states with competitive state funds [8], state funds sell workers compensation insurance, at least theoretically, in competition with private insurers in insuring and administrating the workers compensation laws. In some states, Oklahoma is one example, the state fund is not permitted to refuse coverage to an employer, no matter how undesirable the risk, so long as past and current premiums are paid. In this regard they are referred to as "insurers of last resort". In other states such as Oregon, the state fund does not operate as the insurer of last resort. The mission of the state fund is set out in the Oregon statute that authorizes the existence of the state fund. This mission is to "make insurance available to as many Oregon employers as inexpensively as may be consistent" with protecting the integrity of the Industrial Accident Fund and sound principle of insurance [9].

Exclusive State Funds

In states with exclusive state funds, private insurers are not permitted to provide workers compensation insurance and state funds enjoy the exclusive right to sell workers compensation insurance. All employers are required to procure their workers compensation insurance from the state fund, or, in some jurisdictions, an employer may also self-insure.

Residual Markets

In states without a state fund, or with a state fund that does not serve as an "insurer of last resort", it will sometimes happen that an applicant for workers compensation insurance is unable to obtain coverage. Private carriers are limited by regulation in the rates that they can charge. If they believe that the maximum rate will be inadequate for a particular insured, they simply decline to write the policy. This may be because the prospective insured has an inherently hazardous business model, or poor safety practices, or a poor or inadequate loss record.

If states took no action on behalf of such applicants, the applicants would have little choice but to go out of business. This would increase unemployment and impair tax revenues. As a result states without state funds have set up residual market mechanisms to act as insurers of last resort.

The details of this mechanism vary from state to state. Applicants generally enter the residual market after being declined by at least two private carriers. In some states such applicants are assigned to carriers based on their workers compensation market share, with the carriers writing policies and collecting premium and paying claims just as if they were serving the applicants voluntarily.

In other states, carriers reinsure undesirable applicants via a reinsurance pool, and profits or losses from the pool are shared among carriers in proportion to market share. In still other states, the state authorizes a Joint Underwriting Association to serve the residual market, and with carriers sharing on a pro-rata basis profit or loss. Note that these residual market mechanisms closely parallel the automobile liability residual market mechanisms described by Cook [10].

The market share within the residual market varies from state to state and year to year, depending on filed rate adequacy and the risk appetites of insurers. In 2014 the aggregate residual market share was about 8% within the states for which the National Council on Compensation Insurance (NCCI) collects data. The combined ratio for residual market business, over the last several years, has been running between 105% and 115% [11]. As one would expect, residual market business is generally written at a loss despite generally higher rate levels for residual market risks. This results in a higher combined ratio for workers compensation insurers, either directly as residual risks are assigned to carriers, or indirectly as reinsurance or JUA losses are pro-rated. The voluntary market effectively subsidizes the higher-risk residual market, despite higher rate levels for residual market risks.

C) Evaluation of Workers Compensation Insurance

Private carriers remain the largest source of workers compensation benefits. In 2013, they accounted for 56% of benefits paid in the nation, with state funds at 15%, self-insurers at 23%, and the federal government at 6% [12]. The trend in the share of benefits paid by state funds has decreased in recent years, down from 20% in 2004.

Nevertheless, the state funds have created significant competition in the workers compensation insurance business in the states where they operate. State funds have a significant market share in virtually every state where they are located. In 2013, state fund market share (as measured by benefits paid) in competitive state ranged from 7% in Pennsylvania to 59% in Idaho [12].
Proponents of state funds argue that because the state funds are specialists in workers compensation they can be expected to offer more intensive levels of rehabilitation and

other services than some private insurers whose workers compensation plan is only one of several types of coverage offered. However, there are private insurers who also specialize in providing only workers compensation coverage and may offer the same level of service and expertise as the state funds.

State funds are, by law, designed to be self-supporting from their premium and investment revenue. Overhead expense ratios of both exclusive and competitive funds may be lower than expense factors for private carriers in part because of absence of some administrative costs such as agency commissions and other marketing costs. As nonprofit departments of the state, or as independent nonprofit companies, they are able to return dividends or safety refunds to their policyholders, just as some private insurers do. This further reduces the overall cost of workers compensation insurance both for the state fund as well as the private insurer that offers these types of programs [2] [3]. While lower administrative costs for state funds may reduce the cost of providing workers compensation coverage, the fact that more states have not created state funds, and some state funds have been privatized recently, suggests that private insurers are also able to provide this coverage in an efficient manner.

The evidence suggests that both state funds and private insurers are able to provide workers compensation coverage in an efficient manner.

D) Interaction of Workers Compensation Insurance with Medicare

Background

In 1965, Congress created the Medicare program to provide health insurance for elderly Americans. The authors of the law creating Medicare recognized that it might overlap with other private or government insurance programs—especially workers compensation insurance.

For example, a 67-year-old worker might be injured in a job accident. That worker would be entitled to have his or her medical costs reimbursed by his or her employer's workers compensation insurer. However, that worker, being more than 65 years of age, might also be eligible for Medicare. To save Medicare costs, Congress therefore stipulated that workers compensation insurance would be primary in such a case. Medicare would be secondary and would begin to pay only if and when workers compensation benefits were exhausted.

In 1980, Congress passed the Medicare Secondary Payer Act, which stipulated that Medicare was also secondary to liability insurance. For example, if an elderly American were injured by another driver in an auto accident, the responsible driver's insurance would be primary and Medicare secondary.

The 1980 act also introduced the notion of a "conditional payment". In many cases persons begin incurring medical costs before eligibility to collect insurance has been

determined. In such cases Medicare will make "conditional payments" to medical providers, subject to later reimbursement by an insurer subsequently determined to be primary.

In some cases workers compensation claims are closed via a settlement which provides compensation to the injured worker for anticipated *future* medical payments. These payments can also overlap with Medicare. For example, a 63-year-old worker may be injured on the job. That worker is not eligible for Medicare. However, the worker's claim may be closed with a settlement that allows for medical treatment anticipated to last five years. By the end of that time the worker will be Medicare-eligible.

Federal regulators therefore introduced (1989) the Medicare Set-Aside Allocation (MSA), in which all parties to a settlement would agree to "set aside" a portion of the workers' compensation or liability settlement to be used to pay for future medical costs related to the workers' compensation or liability injury. The MSA funds are primary over Medicare and are limited to services that are related to the injury that would be covered by Medicare after the injured party becomes Medicare eligible.

Despite these laws and regulations, the status of Medicare as secondary insurer remained mostly notional through the Twentieth Century. Medicare administrators simply did not know when Medicare eligible (or soon to be eligible) parties were collecting workers compensation or liability payments. In the absence of aggressive collection, parties had little incentive to agree to MSA's.

Medicare Set-Aside Allocations since 2001

This became increasingly untenable as Medicare costs rose due to medical cost inflation and longer life expectancy. In 2001 the Center for Medicare and Medicaid Services (CMS), which administers Medicare, established its first guidelines for the review and approval of MSA's. The implied threat was that, where MSA's were not submitted, or not approved, Medicare would refuse payment for future care, and be more aggressive in seeking reimbursement for past conditional payments.

Since 2001, the submission and approval process for MSAs has changed several times. The changes have generally been in the direction of making MSA approval more difficult. A new sub-industry of MSA consultants has emerged to assist Third Party Administrators and insurers to evaluate settlements for MSA requirements and gain the approval of CMS.

As of 2012, CMS will review all workers compensation MSA's where:

- The claimant is either a Medicare beneficiary and the settlement is greater than $25,000 or
- The claimant is expected to be Medicare eligible within 30 months of the settlement and the settlement or expected future medical costs and lost wages of the injury exceeds $250,000.

The CMS thresholds do not create a safe-harbor, so even smaller medical settlements should consider Medicare's interests.

In 2016, the CMS announced that it will also begin reviewing liability and no-fault insurance MSA's.

After an MSA is approved, the injured worker must comply with reporting requirements and use the MSA appropriately. Claimants must agree to pay their workers compensation-related medical bills, using an interest-bearing account, and to complete reporting of their payments before Medicare will make any payments for claim-related conditions.

CMS can reject or revise MSA proposals, increasing the estimated lifetime medical need, to assure that Medicare rarely becomes liable for claim-related expenses throughout the claimant's life. Two specific issues – pharmacy costs and life expectancy – are often cited as areas of concern. With Medicare Part D, pharmacy costs were added to Medicare. In 2009, CMS issued pharmacy guidelines for MSAs, which essentially priced drugs at the retail cost level without regard to negotiated price arrangements that the insurer may have. However, many drugs commonly used for pain management are not included in Medicare Part D.

Due to industry concerns [13], in May 2010 Medicare issued clarifying language that drugs which were not included in Medicare Part D did not need to be considered in a MSA. This reduced the prescription costs in MSAs and was hailed as a significant victory in the insurance industry.

Another issue which can raise the costs of a MSA is use of a "rated age" or impaired life expectancy versus the claimant's actual age. If a rated age is used, that means the injured person's life expectancy is less than normal which allows the settlement amount to be less than would be needed for an individual with a normal life expectancy. If CMS protocols for rated ages are not followed, CMS will recalculate the MSA using the claimant's actual age rather than the impaired life expectancy. Due to the nuances of CMS approval, many insurers use specialists to review their MSA proposals prior to submission to CMS and to shepherd the claim through the process. Use of specialists increases the administrative costs of settling such claims.

New Reporting Requirements since 2007

On December 29, 2007, President George W. Bush signed the "Medicare, Medicaid and SCHIP Extension Act of 2007" (MMSEA). This law sought to address the problem of CMS being unaware of primary payer responsibilities, whether or not a claim involved an MSA. The law requires claim payers, known as Responsible Reporting Entities (RREs), to report claim data to the CMS. Specifically, Section 111 of the act requires the providers of liability insurance (including self-insurers), no fault insurance and workers' compensation insurance (hereinafter "insurers") to determine the Medicare-enrollment

status of all claimants and report certain information about those claims to the Secretary of Health and Human Services, through the CMS.

The implementation of the reporting requirement was delayed, as regulations and technology issues were ironed out, but reporting became mandatory on January 1, 2011 for insurers with workers' compensation claims. Reporting of liability claims was phased in (with the largest claims first) beginning on January 1, 2012.

CMS uses the Section 111 data to assist Medicare in coordinating benefits and in uncovering potentially reimbursable claims. There are substantial penalties for non-compliance with the required reporting of claims - $1,000 per day per beneficiary for each day the insurer is out of compliance. This penalty is in addition to a "Double Damages Plus Interest" penalty that defendants (as primary payers) can be fined if Medicare's right to reimbursement is ignored in any settlement. This rule applies to settlements on or after October 1, 2010.

Property/Casualty Actuarial Implications of the Recent Changes

From 2008 through 2010 there may have been an increase in claim closings, lump-sum payments or settlement in advance of the Section 111 reporting deadline. Some RREs may have taken the opportunity to decrease the volume of relatively minor claims that would otherwise need to have the Medicare eligibility status of the claimant determined and reports made to CMS. For actuaries reviewing both insurers' and self-insurers' loss data, such claim activity can distort both paid and reported losses.

Slowdowns in claim settlement rates are sometimes attributed by Workers Compensation claims professionals to the CMS changes in procedures and increased emphasis on MSAs. CMS approval of MSAs generally takes 60 to 90 days, which can contribute to a slowdown in settlements. It is possible that some portion of increasing WC medical trends is due to MSAs. In the past, claim settlements may not have specifically identified medical vs. indemnity components and the settlement costs may have been entirely attributed to indemnity. With MSAs, a clear portion of the settlement is identified as medical cost, and the CMS procedures may also have increased the average size of the settlements due to future medical considerations. However, to date there are no publicly available studies to quantify the impact on overall costs or severity trends.

In addition, for some entities, a significant risk factor could be that some injured workers currently receiving Medicare payments should be classified as workers compensation claims. The Section 111 reporting could uncover Medicare payments that should shift to workers compensation claims, causing actuarial estimates to increase as CMS files liens to recover payments. Over the last three years *before* claim reporting was required, the number of recovery demands from CMS increased significantly to 74,000 in 2010 from 43,000 in 2007 [14]. The number may continue increasing after 2011, or it may spike and then settle down as CMS catches up. Note that recovery can affect claims that were open in prior years, even if they are closed now.

Successful recoveries naturally increase claim severity to an insurer. The General Accounting Office (GAO) estimates total saving due to Medicare claim denials and recovery of payments of $737 million in 2008, rising to $861 million in 2011. These are costs that are borne by insurers instead of Medicare. Furthermore the GAO notes that "(A)n accurate estimate of savings could take years to determine because of the time lag between initial notification of Medicare Secondary Payer situations and recovery, the fact that not all situations result in recoveries, and the fact that mandatory reporting is still being phased in." [15]

In 2012, new legislation affecting the interaction of Medicare and private property-casualty insurance was passed. A key provision of the Strengthening Medicare and Repaying Taxpayers Act, or SMART Act, was the implementation of a 3-year statute of limitations on Medicare conditional payment recovery. This provision became effective on July 10, 2013 and provides that an action by the federal government for recovery must be filed no later than 3 years after the date of the receipt of notice of a settlement, judgment, award, or other payment.

While the statute does not define how notice of the settlement, judgment, award or other payment is to be made to Medicare, the provision was put in place with the understanding that notice would be through Section 111 Mandatory Insurer Reporting. It is unclear then whether other types of "non-Section 111 Mandatory insurer Reporting" to Medicare will trigger the limitations period, or whether the statute of limitations will be effective in curtailing increased workers compensation claims should Medicare not cover certain claims.

Changes in the Future?

Section 111 reporting is in its infancy. It is uncertain how CMS will use the huge volume of data that it is collecting, whether this will lead to a significant further increase in set-asides or recovery demands, and whether the statute of limitations will temper claim volume. It may take years for changes to be fully apparent, especially for liability lines for which mandatory reporting didn't begin until 2012 and will be phased in.

CRS REPORT
Prepared for Members and
Committees of Congress

Summary

The National Flood Insurance Program (NFIP) is the main source of primary flood insurance coverage in the United States, collecting $3.5 billion in premiums for over five million flood insurance policies. This is in contrast to the majority of other property and casualty risks, such as damage from fire or accidents, which are covered by a broad array of private insurance companies. One of the primary reasons behind the creation of the NFIP in 1968 was the withdrawal by private insurers from providing flood insurance coverage, leaving flood victims largely reliant on federal disaster assistance to recover after a flood. While private insurers have taken on relatively little flood risk, they have been involved in the administration of the NFIP through sales and servicing of policies and claims.

In recent years, private insurers have expressed increased interest in providing flood coverage. Advances in the analytics and data used to quantify flood risk along with increases in capital market capacities may allow private insurers to take on flood risks that they shunned in the past. Private flood insurance may offer some advantages over the NFIP, including more flexible flood polices, integrated coverage with homeowners insurance, or lower-cost coverage for some consumers. Private marketing might also increase the overall amount of flood coverage purchased, reducing the amount of extraordinary disaster assistance necessary to be provided by the federal government. Increased private coverage could reduce the overall financial risk to the NFIP, reducing the amount of NFIP borrowing necessary after major disasters.

Increasing private insurance, however, may have some downsides compared to the NFIP. Private coverage would not be guaranteed to be available to all floodplain residents, unlike the NFIP, and consumer protections could vary in different states. The role of the NFIP has historically been broader than just providing insurance. As currently authorized, the NFIP also encompasses social goals to provide flood insurance in flood-prone areas to property owners who otherwise would not be able to obtain it, and to reduce government's cost after floods. Through flood mapping and mitigation efforts, the NFIP has tried to reduce the future impact of floods, and it is unclear how effectively the NFIP could play this broader role if private insurance became a large part of the flood marketplace. Increased private insurance could also have an impact on the subsidies that are provided for some consumers through the NFIP.

The 2012 reauthorization of the NFIP (Title II of P.L. 112-141) included provisions encouraging private flood insurance; however, various barriers have remained. Legislation passed the House in the 114th Congress (H.R. 2901) which was intended to loosen requirements on private flood insurance, but it was not taken up by the Senate before the end of the 114th Congress.

The NFIP is currently operating under a short-term reauthorization until November 30, 2018. A bill for longer-term reauthorization (H.R. 2874) passed the House in November 2017. Three bills (S. 1313, S. 1368, and S. 1571) have been introduced in the Senate, but none have been acted on by the full Senate. H.R. 2874 includes several provisions intended to promote private flood insurance. S. 1313 mirrors some of these provisions, while the other Senate bills have fewer provisions promoting private flood insurance.

This report describes the current role of private insurers in U.S. flood insurance, and discusses barriers to expanding private sector involvement. The report considers potential effects of increased private sector involvement in the U.S. flood market, both for the NFIP and for consumers. Finally, the report outlines the provisions relevant to private flood insurance in the House and Senate NFIP reauthorization bills.

Introduction

Congress is currently considering reauthorization of the National Flood Insurance Program (NFIP) during the 2018 hurricane season, while still dealing with the financial impact of the 2017 hurricane season. Total losses (insured and uninsured) for the 2017 hurricane season are estimated at a record $270.3 billion, with losses for Hurricane Harvey estimated at $127.5 billion, Hurricane Maria at $91.8 billion, and Hurricane Irma at $51.0 billion.[1] FEMA projects total NFIP claims for the three hurricanes at more than $9.7 billion.[2] The NFIP is designed to borrow money from the Treasury to cover claims for extreme events;[3] however, the 2017 losses would have pushed the program over its authorized borrowing limit. Rather than increase the borrowing limit, Congress canceled $16 billion of NFIP debt to allow the program to pay claims.[4]

Expanding the availability of private flood insurance has been seen by many as an answer to the variability of the financial position of the NFIP.[5] An increased role of private insurers could transfer more flood risk from policyholders to the private insurance sector, as opposed to transferring the risk to the federal government through the NFIP. In addition to the possible advantage to the NFIP, the increased availability of flood insurance as private companies enter the market may benefit households and businesses, as insured flood victims are likely to recover more quickly and more fully after a flood.

Private insurer interest in directly providing and underwriting flood risk has increased in recent years. Advances in the analytics and data used to quantify flood risk along with increases in capital market capacities may allow private insurers to take on flood risks that they shunned in the past. However, increasing the private sector role in providing flood insurance coverage directly to consumers may have implications for the operations and fiscal solvency of the NFIP as currently structured. Increased access to private flood insurance could provide individual policyholders with a wider choice of coverage and possibly cheaper premiums, but may also lead to variable consumer protections.

The extent to which private insurance companies participate in the U.S. flood insurance market represents an area of congressional concern. The NFIP is currently operating under a short-term reauthorization until November 30, 2018. A bill for longer-term reauthorization (H.R. 2874) passed the House in November 2017. Three bills (S. 1313, S. 1368, and S. 1571) have been introduced in the Senate, but none have been acted on by the full Senate. H.R. 2874 includes several provisions intended to promote private flood insurance. S. 1313 mirrors some of these provisions, while the other Senate bills have fewer provisions promoting private flood insurance. This report describes the current role of private insurers in U.S. flood insurance, and discusses barriers to private sector involvement. The report considers potential effects of increased private sector involvement in the U.S. flood market, both for the NFIP and for consumers. Finally, the

[1] Note that these figures include losses due to wind damage as well as flood damage.

[2] Email from FEMA Congressional Affairs staff, March 19, 2018. These are conservative numbers that do not include Loss Adjustment Expense (which would add approximately 5.3%), supplemental claims payments, or Increased Cost of Compliance expenditures.

[3] The NFIP was not designed to retain funding to cover claims for truly extreme events; instead, the National Flood Insurance Act of 1968 allows the program to borrow money from the Treasury for such events (42 U.S.C. §4106(a)).

report outlines the provisions relevant to private flood insurance in the House and Senate NFIP reauthorization bills.

Background

The NFIP is the main provider of primary flood insurance coverage for residential properties in the United States, providing nearly $1.28 trillion in coverage for over 5 million residential flood insurance policies. It also provides over $66 billion in coverage for non-residential properties. The program collects about $3.5 billion in annual premium revenue.[6] Nationally, over 22,000 communities in 56 states and jurisdictions participate in the NFIP.[7] The role of the federal government in flood insurance is in contrast to the majority of other property and casualty risks, such as damage from fire or accidents, which are covered by a broad array of private insurance companies. The premiums for this private insurance in 2017 totaled $556 billion, with the policies backed by nearly $2 trillion in assets held by private insurers.[8]

Objectives of the NFIP

The NFIP has two main policy goals: (1) to provide access to primary flood insurance, thereby allowing for the transfer of some of the financial risk of property owners to the federal government; and (2) to mitigate and reduce the nation's comprehensive flood risk[9] through the development and implementation of floodplain management standards. A longer-term objective of the NFIP is to reduce federal expenditure on disaster assistance after floods.

As a public insurance program, the NFIP is designed differently from private-sector companies. As currently authorized, the NFIP also encompasses social goals to provide flood insurance in flood-prone areas to property owners who otherwise would not be able to obtain it, and to reduce government's cost after floods.[10] The NFIP also engages in many "non-insurance" activities in the public interest: it disseminates flood risk information through flood maps, requires communities to adopt land use and building code standards in order to participate in the program, potentially reduces the need for other post-flood disaster aid, contributes to community resilience by providing a mechanism to fund rebuilding after a flood, and may protect lending institutions against mortgage defaults due to uninsured losses. The benefits of such tasks are not directly measured in the NFIP's financial results from selling flood insurance.[11]

From the inception of the NFIP, the program has been expected to achieve multiple objectives, some of which may conflict with one another:

- To ensure reasonable insurance premiums for all;

[6] Statistics on the National Flood Insurance Program (NFIP) policy and claims are available from the Federal Emergency Management Agency (FEMA) website at https://www.fema.gov/policy-claim-statistics-flood-insurance.

[7] Detailed information about which communities participate and where is available from the Community Status Book, found on FEMA's website at https://www.fema.gov/national-flood-insurance-program-community-status-book.

[8] Premium amounts used are net premiums written and asset amounts are admitted assets from A.M. Best, *Statistical Study: U.S. Property/Casualty - 2017 Financial Results*, March 26, 2018.

[9] In the context of this report, *comprehensive* flood risk means that the risk includes both financial risk (i.e., physical damage to property), and also the risk to human life.

[10] See 82 Stat. 573 for text in original statute (Section 1302(c) of P.L. 90-448). This language remains in statute (see 42 U.S.C. §4001(c)).

[11] American Academy of Actuaries Flood Insurance Work Group, *The National Flood Insurance Program: Challenges and Solutions*, April 2017, p. 79, http://www.actuary.org/files/publications/FloodMonograph.04192017.pdf.

- To have risk-based premiums that would make people aware of and bear the cost of their floodplain location choices;
- To secure widespread community participation in the NFIP and substantial numbers of insurance policy purchases by property owners; and
- To earn premium and fee income that, over time, covers claims paid and program expenses.[12]

Primary Flood Insurance Through the NFIP

The NFIP offers flood insurance to anyone in a community which chooses to participate in the program. Flood insurance purchase generally is voluntary, except for property owners who are in a Special Flood Hazard Area (SFHA)[13] and whose mortgage is backed by the federal government.[14] Flood insurance policies through the NFIP are sold only in participating communities and are offered to both property owners and renters and to residential and non-residential properties. NFIP policies have relatively low coverage limits, particularly for non-residential properties or properties in high-cost areas. The maximum coverage for single-family dwellings (which also includes single-family residential units within a 2-4 family building) is $100,000 for contents and up to $250,000 for building coverage. The maximum available coverage limit for other residential buildings is $500,000 for building coverage and $100,000 for contents coverage, and the maximum coverage limit for non-residential business buildings is $500,000 for building coverage and $500,000 for contents coverage.

The Mandatory Purchase Requirement

By law and regulation, federal agencies, federally regulated lending institutions, and government-sponsored enterprises (GSE)[15] must require the property owners in an SFHA to purchase flood insurance as a condition of any mortgage that these entities make, guarantee, or purchase.[16] In addition to this legal mandatory purchase requirement, lenders may also require borrowers outside of an SFHA to maintain flood insurance as a means of financially securing the property.

In order to comply with this mandate, property owners may purchase flood insurance through the NFIP, or through a private company, so long as the private flood insurance "provides flood insurance coverage which is at least as broad as the coverage" of the NFIP, among other conditions.[17] The mandatory purchase requirement is enforced by the lender, rather than FEMA,

[12] National Research Council of the National Academies, *Affordability of National Flood Insurance Program Premiums: Report 1*, 2015, p. 3, at http://www.nap.edu/catalog/21709/affordability-of-national-flood-insurance-program-premiums-report-1.

[13] A Special Flood Hazard Area (SFHA) is defined by FEMA as an area with a 1% or greater risk of flooding every year.

[14] This includes mortgages from banks insured by the Federal Deposit Insurance Corporation and mortgages backed by Fannie Mae or Freddie Mac, as well as federal entities such as the Federal Housing Administration and the Department of Veterans Affairs.

[15] Government-Sponsored Enterprises (GSEs) are private companies with congressional charters. Examples of GSEs providing mortgages which would be affected by the mandatory purchase requirement include the Federal Home Loan Mortgage Corporation (Freddie Mac) and the Federal National Mortgage Association (Fannie Mae).

[16] 42 U.S.C. §4012a.

[17] 42 U.S.C §4012a(b). For additional information on private flood insurance, see CRS Insight IN10450, *Private Flood Insurance and the National Flood Insurance Program (NFIP)*, by Baird Webel and Diane P. Horn. The "at least as broad as" requirement is discussed in more detail in the section titled "Flood Insurance Coverage "at Least as Broad as" the NFIP" in this report.

and lenders can be fined up to $2,000 by banking regulators for each failure to require flood insurance or provide notice.[18] Property owners who do not obtain flood insurance when required may find that they are not eligible for certain types of disaster assistance after a flood.[19]

Premium Subsidies and Cross-Subsidies

Flood insurance rates in the NFIP generally are directed by statute to be "based on consideration of the risk involved and accepted actuarial principles,"[20] meaning that the rate is reflective of the true flood risk to the property. However, Congress has directed FEMA *not* to charge actuarial rates for certain categories of properties and to offer discounts to other classes of properties.[21] FEMA is not, however, provided funds to offset these subsidies and discounts,[22] which has contributed to FEMA's need to borrow from the U.S. Treasury to pay NFIP claims.

There are three main categories of properties which pay less than full risk-based rates:

- *Pre-FIRM*: properties which were built or substantially improved before December 31, 1974, or before FEMA published the first Flood Insurance Rate Map (FIRM) for their community, whichever was later;[23]
- *Newly mapped*: properties that are newly mapped into a SFHA on or after April 1, 2015, if the applicant obtains coverage that is effective within 12 months of the map revision date;[24] and
- *Grandfathered*: properties which were built in compliance with the FIRM in effect at the time of construction and are allowed to maintain their old flood insurance rate class if their property is remapped into a new flood rate class.[25]

NFIP Reauthorization and Legislation in the 115th Congress

The NFIP is currently authorized until November 30, 2018.[26] Since the end of FY2017, seven short-term NFIP reauthorizations have been enacted. A number of bills have been introduced to

[18] 42 U.S.C §4012a(f).

[23] 42 U.S.C. §4015(c).

[24] §6 of P.L. 113-89, 128 Stat.1028, as codified at 42 U.S.C. §4015(i).

[25] For a full description, see FEMA, *NFIP Grandfathering Rules for Agents*, March 2015, at http://www.fema.gov/media-library-data/1428677451158-82ba453a84ad628c406d69957b3d8622/Grandfathering_for_Agents_03_2015.pdf.

[26] The statute for the NFIP does not contain a comprehensive expiration, termination, or sunset provision for the whole of the program. Rather, the NFIP has multiple different legal provisions that generally tie to the expiration of key components of the program. Unless reauthorized or amended by Congress, the following will occur on November 30, 2018: (1) The authority to provide new flood insurance contracts will expire. Flood insurance contracts entered into before the expiration would continue until the end of their policy term of one year. (2) The authority for NFIP to borrow funds from the Treasury will be reduced from $30.425 billion to $1 billion (42 U.S.C. §4016(a)).

provide a longer-term reauthorization of the NFIP as well as numerous other changes to the program. The House of Representatives passed H.R. 2874 (The 21st Century Flood Reform Act) by a vote of 237-189 on November 14, 2017. Among its numerous provisions, H.R. 2874 would authorize the NFIP until September 30, 2022.

Three bills have been introduced in the Senate that would reauthorize the expiring provisions of the NFIP:

- S. 1313 (Flood Insurance Affordability and Sustainability Act of 2017);
- S. 1368 (Sustainable, Affordable, Fair, and Efficient [SAFE] National Flood Insurance Program Reauthorization Act of 2017);[27] and
- S. 1571 (National Flood Insurance Program Reauthorization Act of 2017).

None of these bills have yet been considered by the Senate Committee on Banking, Housing and Urban Affairs. Among their other provisions, S. 1313 would authorize the NFIP until September 30, 2027; S. 1368 would authorize the NFIP until September 30, 2023; and S. 1571 would authorize the NFIP until September 30, 2023.

The four reauthorization bills differ significantly in the degree to which they encourage private participation in flood insurance, particularly flood insurance sold by private companies in competition with the NFIP. In general, legislation passed by the House has been more encouraging of private flood insurance than Senate legislation. The House passed standalone legislation to encourage private insurance in the 114th Congress (H.R. 2901), but the Senate did not take up H.R. 2901 in the 114th Congress. In the 115th Congress, the House included the same provisions in H.R. 2874 and in an unrelated bill to reauthorize the Federal Aviation Administration (H.R. 3823). The Senate stripped the flood insurance language from H.R. 3823 before passing it, with the provisions relating to private flood insurance reportedly a particular issue of concern.[28] S. 1313 includes some similar provisions to H.R. 2874, but S. 1368 and S. 1571 do not.

Details of the provisions relating to private insurance in the House and Senate bills are described in the Appendix, and **Table A-1** relates the provisions in the bills to the issues discussed in this report.

The Current Role of Private Insurers in the NFIP

Private insurers can be involved in the flood insurance market in a number of ways: (1) by helping to administer the NFIP; (2) by sharing risk with the NFIP; (3) by taking on risk themselves as a primary insurer, where the insurer contracts directly with a consumer; or (4) by taking on risk as a reinsurer, where the insurer shares risk from another insurer. Since 1983,

[27] A similar bill was introduced in the House, H.R. 3285.

[28] See, for example, Shaun Courtney, "'Hard to Envision' Senate Democrats Blocking FAA Extension, Thune Says," *Bloomberg BNA*, September 27, 2017, Daily Report for Executives, https://www.bna.com/hard-envision-senate-n73014470158/,

> Thune wants to see the Senate pass the House bill under unanimous consent, but committee ranking member Bill Nelson (D-Fla.) made that sound unlikely. "That will not get passed here," Nelson said Sept. 26 in response to Bloomberg BNA's inquiry about the House's flood insurance provision.… Senator Sherrod Brown (D-Ohio), ranking member on the Banking, Housing, and Urban Affairs Committee, which has jurisdiction over flood insurance proposals, said the House provision was unacceptable. "We're not going to do it," Brown said. "This would undermine all of our flood insurance efforts. It will cause all kinds of cherry-picking by private insurance."

private insurers have played a major role in administering the NFIP, including selling and servicing policies and adjusting claims, but they largely have not been underwriting flood risk themselves.[29] Instead, the NFIP retains the direct financial risk of paying claims for these policies. Since 2016, however, the NFIP has purchased a limited amount of reinsurance, thus transferring some of the flood risk to the private sector.

Servicing of Policies and Claims Management

While FEMA provides the overarching management and oversight of the NFIP, the majority of the day-to-day operation of the NFIP is handled by private companies. This includes marketing, selling and writing policies, and all aspects of claims management.[30] FEMA has established two different arrangements with private industry. The first is the Direct Servicing Agent, or DSA, which operates as a private contractor, selling NFIP policies on behalf of FEMA for individuals seeking to purchase flood insurance policies directly from the NFIP.[31] The DSA also handles the policies of severe repetitive loss properties. The second arrangement is the Write-Your-Own program, where private insurance companies are paid to issue and service NFIP policies. With either the DSA or WYO program, the NFIP retains the actual financial risk of paying claims for the policy, and the policy terms and premiums are the same. Approximately 12% of the total NFIP policy portfolio is managed through the DSA and 88% of NFIP policies are sold by the 67 companies participating in the WYO program.[32]

Companies participating in the WYO program are compensated through a variety of methods, but this compensation is not directly based on the costs incurred by the WYOs. In the Biggert-Waters Flood Insurance Reform Act of 2012 (Title II of P.L. 112-141, hereinafter BW-12), Congress required FEMA to develop and issue a rulemaking on a "methodology for determining the appropriate amounts that property and casualty insurance companies participating in the WYO program should be reimbursed for selling, writing, and servicing flood insurance policies and adjusting flood insurance claims on behalf of the National Flood Insurance Program."[33] This rulemaking was required within a year of enactment of BW-12. As of June 2018, FEMA has yet to publish a rulemaking to revise the compensation structure of the WYO companies. Without this analysis, it is difficult to ascertain how much it actually costs WYO companies to administer the NFIP policies, or the WYO's profit margins (if any). H.R. 2874 would cap the allowance paid to the WYOs at 27.9% of premiums, while S. 1368 would cap the allowance at 22.46%.

Reinsurance

In the Homeowner Flood Insurance Affordability Act of 2014 (P.L. 113-89, HFIAA), Congress revised the authority of FEMA to secure reinsurance for the NFIP from the private reinsurance

[29] Underwriting risk refers to the potential loss to an insurer or reinsurer. An insurer takes on this risk in return for a premium, and promises to pay an agreed amount in the event of a loss. See NAIC, *Glossary of Insurance Terms*, http://www.naic.org/consumer_glossary.htm#U.

[30] See primarily 42 U.S.C. §4081 and §4018, and 44 C.F.R. Part 62.

[31] The current Direct Servicing Agent is a company called Torrent Technologies, Inc., who was awarded the contract in September 2016. See https://www.fbo.gov/index?s=opportunity&mode=form&id=58bec8ac15f6944abe778f4ae49a0841&tab=core&_cview=1. The website for Torrent Technologies, Inc. is at http://torrentcorp.com/.

[33] §100224 of P.L. 112-141, 126 Stat. 936.

and capital markets.[34] The purchase of private market reinsurance reduces the likelihood of FEMA needing to borrow from the Treasury to pay claims. In addition, as the U.S. Government Accountability Office (GAO) noted, reinsurance could be beneficial because it allows FEMA to price some of its flood risk up front through the premiums it pays to the reinsurers rather than borrowing from Treasury after a flood.[35] From a risk management perspective, using reinsurance to cover losses in only the more extreme years could help the government to manage and reduce the volatility of its losses over time. However, because reinsurers understandably charge FEMA premiums to compensate for the risk they assume, the primary benefit of reinsurance is to transfer and manage risk rather than to reduce the NFIP's long-term fiscal exposure.[36] For example, a reinsurance scenario which would provide the NFIP with $16.8 billion coverage (sufficient for Katrina-level losses) could cost an estimated $2.2 billion per year.[37] Such a reinsurance premium, however, would be a large portion of the total premiums paid into the NFIP, possibly leaving insufficient funds for paying claims outside of large disasters,[38] or for covering the other purposes for NFIP funds, such as flood mitigation, mapping, and improving NFIP rating structures.

In January 2017, FEMA purchased $1.042 billion of reinsurance to cover the period from January 1, 2017, to January 1, 2018, for a premium of $150 million. Under this agreement, the reinsurance covered 26% of losses between $4 billion and $8 billion arising from a single flooding event.[39] FEMA has so far paid over $8.6 billion in claims for Hurricane Harvey, triggering a full claim on the 2017 reinsurance.[40] In January 2018, FEMA purchased $1.46 billion of reinsurance to cover the period from January 1, 2018, to January 1, 2019, for a premium of $235 million. The agreement is structured to cover losses above $4 billion for a single flooding event, covering 18.6% of losses between $4 billion and $6 billion, and 54.3% of losses between $6 billion and $8 billion. In April 2018, FEMA announced that it would seek to transfer additional NFIP risk to private markets through a reinsurance procurement in which the reinsurer acts as a transformer to transfer NFIP-insured flood risk through the issuance of a catastrophe bond, to be effective for a term of "likely" three years.[41]

H.R. 2874, S. 1313, and S. 1571 all contain provisions requiring or encouraging the NFIP to transfer a portion of its risk to the private reinsurance market.

Private Flood Insurance Outside the NFIP: Issues and Barriers

One of the reasons that Congress created the NFIP in 1968 was the general unavailability of flood insurance from private insurers. Private flood insurance was offered between 1895 and 1927, but losses incurred from the 1927 Mississippi River floods and additional flood losses in 1928 led most insurers to stop offering flood policies.[42] Private flood insurance companies largely concluded that flood peril was uninsurable because of the catastrophic nature of flooding, the difficulty of determining accurate rates, the risk of adverse selection,[43] and the concern that they could not profitably provide risk-based flood coverage at a price that consumers felt they could afford.[44]

Currently, the private flood insurance market most commonly provides commercial coverage, secondary coverage above the NFIP maximums, or coverage in the lender-placed market.[45] The 2017 premiums for private flood insurance as reported to the National Association of Insurance Commissioners (NAIC)[46] totaled $589 million, up from $376 million in 2016,[47] compared to the $3.5 billion total amount of NFIP premiums. In general, the private flood market tends to focus on high-value properties, which command higher premiums and therefore the extra expense of flood underwriting can be more readily justified.[48]

Currently very few private insurers compete with the NFIP in the primary residential flood insurance market. One illustration of this is that the NAIC only began systematically collecting separate data on private flood insurance in 2016.[49]

A number of issues have been identified by private insurers as potential barriers to more widespread private sector involvement. Moreover, increasing private insurance may present a number of issues for the NFIP and for consumers.

[49] Reinsurance is defined as a transaction between a primary insurer and another licensed (re)insurer where the reinsurer agrees to cover all or part of the losses and/or loss adjustment expenses of the primary insurer. See NAIC, *Glossary of Insurance Terms*, http://www.naic.org/consumer_glossary.htm#R.

Flood Insurance Coverage "at Least as Broad as" the NFIP

In BW-12, Congress explicitly allowed federal agencies to accept private flood insurance to fulfill the mandatory purchase mortgage requirement as long as the private flood insurance "provides flood insurance coverage which is at least as broad as the coverage" of the NFIP, among other conditions.[50] Implementation of this requirement has proved challenging. The crux of the implementation issue is in answering the question of who would evaluate whether specific policies met the "at least as broad as" standard and what criteria would be used in making this evaluation. Some lending institutions feel that they lack the necessary technical expertise to evaluate whether a flood insurance policy meets the definition of private flood insurance set forth in BW-12.[51]

The responsible federal agencies[52] issued two separate Notices of Proposed Rulemaking (NPRM), the first in October 2013,[53] and the second in November 2016.[54] In response to comments received on the first NPRM, the second NPRM proposed a rule which would require regulated lending institutions to accept policies that meet the statutory definition of private insurance in BW-12 and permit regulated lending institutions to accept flood insurance provided by private insurers that does not meet the statutory definition on a discretionary basis, subject to certain restrictions. It also included a compliance aid provision that a private flood insurance policy is deemed to meet the BW-12 definition of "private flood insurance" if the following three criteria are met: (1) the policy includes, or is accompanied by, a written summary that demonstrates how the policy meets the definition of "private flood insurance" by identifying the provisions of the policy that meet each criterion in the definition, and confirms that the insurer is regulated in accordance with that definition; (2) the regulated lending institution verifies in writing that the policy includes the provisions identified by the insurer in its summary and that these provisions satisfy the criteria included in the definition; and (3) the policy includes the following provision within the policy or as an endorsement to the policy: ''This policy meets the definition of private flood insurance contained in 42 U.S.C. §4012a(b)(7) and the corresponding regulation'' (assurance clause). However, no final rule has been promulgated, and the uncertainty about whether or not private policies would meet this standard has been viewed as a barrier to private sector participation in the flood insurance market.[55]

H.R. 2874 and S. 1313 include provisions to revise the definition of private flood insurance to strike existing statutory language requiring private flood insurance to provide coverage "as broad as the coverage" provided by the NFIP in order to meet the mandatory purchase requirements. Instead, the definition would rely on whether the insurance policy and insurance company were in

compliance with the individual state's laws and regulations. S. 1368 and S. 1571 have no similar provisions.

Continuous Coverage

An associated issue is that of continuous coverage, which is required for property owners to retain any subsidies or cross-subsidies in their NFIP premium rates. Under existing law, if an NFIP policyholder allows their policy to lapse, any subsidy that they currently receive would be eliminated immediately.[56] Unless legislation specifically allows private flood insurance to count for continuous coverage, a borrower may be reluctant to purchase private insurance if doing so means they would lose their subsidy should they later decide to return to NFIP coverage. H.R. 2874 includes a provision to specify that if a property owner purchases private flood insurance and decides then to return to the NFIP, they would be considered to have maintained continuous coverage. S. 1313 includes a provision to allow private flood insurance to count as continuous coverage. S. 1368 and S. 1571 have no similar provisions.

The "Non-Compete" Clause

Private insurers who sell and service NFIP policies, known as Write Your Own (WYO) carriers, have been restricted in their ability to sell flood insurance policies on their own behalf while also participating as a WYO, due to the "non-compete" clause contained in the standard contracts in place with the NFIP.[57] These contracts governing the WYO companies' participation in the NFIP restrict the WYO carriers from selling their own standalone private flood products that compete with the NFIP policies, curtailing the potential involvement of the WYO companies in the flood insurance marketplace.[58] The non-compete clause requires WYO companies to decide whether to offer private flood insurance policies in their own right or to act as WYO carriers; however, they cannot do both, potentially limiting the size of the private flood market. H.R. 2874 would eliminate the non-compete clause, while S. 1313 would give temporary authorization for WYOs to sell private flood insurance for certain types of properties,[59] with a follow-up study by FEMA to determine if the authorization should be made permanent.

FEMA announced proposed changes for FY2019 in which they would remove restrictions on WYO companies choosing to offer private flood insurance, while maintaining requirements that such private insurance lines remain entirely separate from a WYO company's NFIP insurance business.[60] If implemented, this may remove the non-compete clause without need for legislation. Possible implications if the non-compete clause were to be removed and WYO companies are

[56] As required by Section 100205(a)(1)(B) of BW-12 (P.L. 112-141, 126 Stat. 917), only for NFIP policies that lapsed in coverage as a result of the deliberate choice of the policyholder.

[57] Details of the WYO company arrangements are available at https://www.fema.gov/media-library-data/1504278934379-6bdf86cd243d53170e7ff8a2afc6770d/FY2018_Financial_Assistance_Subsidy_Arrangement_Oct_2017.pdf.

allowed to sell flood insurance policies in competition with the NFIP are discussed later in this report in the section on "Adverse Selection."

NFIP Subsidized Rates

FEMA's subsidized rates are often seen as one of the primary barriers to private sector involvement in flood insurance.[61] However, even without the subsidies mandated by law, the NFIP's definition of full-risk rates differs from that of private insurers. Whereas the NFIP's full-risk rates must incorporate expected losses and operating costs, a private insurer's full-risk rates must also incorporate a profitable return on capital. As a result, even those NFIP policies which are considered to be actuarially sound from the perspective of the NFIP may still be underpriced from the perspective of private insurers.[62] In order to make the flood insurance market attractive, private insurers would want to be able to charge premium rates that reflect the full estimated risk of potential flood losses while still allowing the companies to make a profit. A reformed NFIP rate structure could have the effect of encouraging more private insurers to enter the primary flood market because NFIP full-risk based rates would be closer to the rates that private insurers would likely charge; however, this could lead to higher rates for households.

H.R. 2874 would phase out the pre-FIRM subsidy for primary residences at a rate of 6.5%-15% (compared to the current rate of 5%-18%), in a staged manner. In the first year after enactment, the minimum rate increase would be 5%; in the second year after enactment, the minimum rate increase would be 5.5%; and in the third year of enactment, the minimum rate increase would be 6%. The phaseout of the pre-FIRM subsidy for other categories of properties[63] would remain at 25%. The Senate bills do not contain any provisions related to premium rate subsidies.

Regulatory Uncertainty

As addressed above, the rules on the acceptance of private insurance for the mandatory purchase requirement, and whether or not private flood insurance would count for continuous coverage, have had a significant impact on the market potential for private insurers.[64] Another driver of private sector concern is regulatory uncertainty at the state level. The role of state regulators would increase in a flood insurance market with increased private sector involvement, which could increase the burden of oversight. The involvement of 56 state and territorial insurance regulators is likely to add complexity and additional costs for insurers, lenders, or property owners.[65] For example, some private insurers cited the intervention of state regulators in controlling rates for wind insurance in Florida as a reason for withdrawing from that market.[66]

[65] Ibid., p. 63.

[66] Ibid., p. 105.

However, this could also lead to the development of state-specific insurance solutions, which might better suit local social and economic conditions.[67] H.R. 2874 and S. 1313 reference state laws and regulations in their definition of private flood insurance that could meet the mandatory purchase requirements.

Ability to Assess Flood Risk Accurately

Many insurers view the lack of access to NFIP data on flood losses and claims as a barrier to more private companies offering flood insurance. It is argued that increasing access to past NFIP claims data would allow private insurance companies to better estimate future losses and price flood insurance premiums, and ultimately to determine which properties they might be willing to insure.[68] However, FEMA's view is that the agency would need to address privacy concerns in order to provide property level information to insurers, because the Privacy Act of 1974[69] prohibits FEMA from releasing policy and claims data which contain personally identifiable information. Private insurers have also suggested that better flood risk assessment tools such as improved flood maps and inland and storm surge models are needed in order to price risks at the individual and portfolio level.[70] H.R. 2874 would require FEMA to make all NFIP claims data publicly available in a form that does not reveal personally identifiable information, while S. 1313 would authorize FEMA to sell or license individual claims data while requiring FEMA to make aggregate claims data available.

Adequate Consumer Participation

Insurers need sufficient consumer participation to manage and diversify their risk exposure. Many private insurers have expressed the view that broader participation in the flood insurance market would be necessary to address adverse selection and maintain a sufficiently large risk pool.[71] A long-standing objective of the NFIP has been to increase purchases of flood insurance policies, and this objective was the motivation for introducing the mandatory purchase requirement.

Despite the mandatory purchase requirement, not all covered mortgages carry the insurance as dictated, and no up-to-date data on national compliance rates with the mandatory purchase requirement are available. A 2006 study commissioned by FEMA found that compliance with this mandatory purchase requirement may be as low as 43% in some areas of the country (the Midwest), and as high as 88% in others (the West).[72] A more recent study of flood insurance in

New York City found that compliance with the mandatory purchase requirement by properties in the SFHA with mortgages increased from 61% in 2012 to 73% in 2016.[73] The escrowing of insurance premiums, which began in January 2016, may increase compliance with the mandatory purchase requirement more widely, but no data are yet available.

The mandatory purchase requirement could potentially be expanded to more (or all) mortgage loans made by federally regulated lending institutions for properties in communities participating in the NFIP.[74] Another possible option would be to require all properties within the SFHA to have flood insurance, not just those with federally backed mortgages.[75] Consumer participation could also be increased if the federal government were to mandate that homeowners' insurance policies include flood coverage or require all homeowners to purchase flood insurance.[76] All four bills contain provisions for some form of study to assess the compliance with the mandatory purchase requirement. H.R. 2874 would also increase civil penalties on lenders for failing to enforce the mandatory purchase requirement.

Potential Effects of Increased Private Sector Involvement in the Flood Market

Increased Consumer Choice

Current NFIP policies offer a relatively limited array of coverages, particularly compared to what is available in private markets for similar insurance against perils other than floods. Private insurance companies could potentially compete with the NFIP by offering coverage not available under the NFIP, such as business interruption insurance, living expenses while a property is being repaired, basement coverage, coverage of other structures on a property, and/or by offering policies with coverage limits higher than the NFIP. The NFIP currently also has a 30-day waiting period in almost all cases before the insurance coverage goes into effect,[77] whereas private insurance companies may have a shorter waiting period. Private companies could also offer flood coverage as an add-on to a standard homeowners' policy, which could eliminate the current problem of distinguishing between flood damage (which is covered by the NFIP) and wind damage (which is often covered by standard homeowners' insurance). Unlike the NFIP, private

flood insurance companies may also issue a policy without necessarily requiring elevation certificates, perhaps by using new technology to measure the elevation of individual structures.

Cheaper Flood Insurance

Since some properties receive lower NFIP rates due to cross subsidies from other NFIP policyholders, it seems likely that some of the non-subsidized NFIP policyholders would be able to obtain less expensive flood insurance from private insurers. Private insurers may also be able to offer premiums more closely tied to individual risks than the NFIP currently does, which would provide lower premiums for some policyholders. Quantifying the potential savings for some policyholders from private insurance is, however, difficult. The amount and extent of cross-subsidization within the NFIP is not currently known, as the NFIP has not historically tracked the number of grandfathered properties.[78] One example of an attempt to provide estimates of NFIP versus private insurance is a modeling exercise carried out by two private companies, Milliman and KatRisk, which looked at premiums for single-family homes in Louisiana, Florida, and Texas. Their modeling suggested that 77% of single-family homes in Florida, 69% in Louisiana, and 92% in Texas would pay less with a private policy than with the NFIP; however, 14% in Florida, 21% in Louisiana, and 5% in Texas would pay over twice as much.[79] Milliman did not provide any details of the coverage offered by these private policies, nor the basis on which their figures were estimated.

Variable Consumer Protections

The consumer protections associated with private policies are likely to be enforced at a state level and will therefore be variable; some states may offer a higher level of protection than others. Because private insurers are free to accept or reject potential policyholders as necessary in order to manage their risk portfolio, private insurers may not necessarily renew a policy. A private flood insurance policy might be less expensive than an NFIP policy, but it might also offer less extensive coverage, which a policyholder may not realize until they make a claim following a flood. Unlike the NFIP, the language in private flood insurance policies is not standardized and has not yet been tested in court in the same way as, for example, homeowners' insurance. Thus there may be greater variability in claims outcomes for consumers in the early years of private flood insurance penetration.

Adverse Selection

Private sector competition might increase the financial exposure and volatility of the NFIP, as private markets will likely seek out policies that offer the greatest likelihood of profit. In the most extreme case, the private market may "cherry-pick" (i.e., adversely select against the NFIP) the

[78] FEMA does not have a definitive estimate on the number of properties that have a grandfathered rate in the NFIP, though data are being collected to fulfill a separate mandate of HFIAA. Section 28 of HFIAA (P.L. 113-89, 128 Stat. 1033) requires that the Administrator "clearly communicate full flood risk determinations to individual property owners regardless of whether their premium rates are full actuarial rates." To fulfill this mandate, FEMA must identify all properties that are grandfathered or pre-FIRM and notify those policyholders what their property's true flood risk is versus the risk they are currently paying for with a subsidy/cross-subsidy. See FEMA, *Clear Communication Letters*, https://www.fema.gov/media-library/collections/553.

[79] Nancy P. Watkins, *Could Private Flood Insurance Be Cheaper Than the NFIP?* Milliman, Milliman Briefing Paper, San Francisco, CA, July 10, 2017, pp. 1-2, http://www.milliman.com/insight/2017/Could-private-flood-insurance-be-cheaper-than-the-NFIP/.

profitable, lower-risk NFIP policies that are "overpriced" either due to cross-subsidization or imprecise flood insurance rate structures, particularly when there is pricing inefficiency in favor of the customer.[80] This could leave the NFIP with a higher density of actuarially unsound policies that are being directly subsidized or benefiting from cross-subsidization. Because the NFIP cannot refuse to write a policy, those properties that are considered "undesirable" by private insurers are likely to remain in the NFIP portfolio—private insurers will not compete against the NFIP for policies that are inadequately priced from their perspective.[81] Private insurers, as profit-seeking entities, are unlikely independently to price flood insurance policies in a way that ensures affordable premiums as a purposeful goal, although some private policies could be less expensive than NFIP policies. It is likely that the NFIP would be left with a higher proportion of subsidized policies, which may become less viable in a competitive market.[82]

The extent of such "cherry picking" is uncertain with some arguing that it would have little effect.[83] However, evidence from the UK flood insurance market suggests that even in an entirely private market "cherry picking" can be difficult to avoid. Interviews of private insurers indicate that one of the key drivers for the introduction of Flood Re, the new UK private flood insurance scheme, was the emergence of new entrants in the flood insurance market after 2000. These new entrants had little or no existing high-flood-risk business and no commitment to continue to insure this business under the terms of the informal agreement with the government. This gave them a competitive advantage, as they could choose to select the more profitable lower-risk business. One driver for change therefore was that Flood Re would include these new entrants and force them to contribute by charging their clients for the cross-subsidy for Flood Re, leveling the playing field between the private insurers.[84]

A significant increase in private flood insurance policies that "depopulates" the NFIP may also undermine the NFIP's ability to generate revenue, reducing the amount of past borrowing that can be repaid or extending the time required to repay the debt. If the number of NFIP policies decreases, it would likely become increasingly difficult for the remaining NFIP policyholders to subsidize policies, raising prices for the non-subsidized policyholders and thus accelerating the move to private insurance. In the long term the program could be left as a "residual market" for subsidized or high-risk properties. Residual market mechanisms are used in areas such as auto insurance, where consumers may be required to purchase insurance, but higher risk individuals may be unable to purchase it from regular insurers. The exact form of residual market mechanisms vary in different states and for different types of insurance, but they typically require some form of outside support either from the government or from insurers themselves.

[84] Edmund C. Penning-Rowsell, Sally Priest, and Clare Johnson, "The Evolution of UK Flood Insurance: Incremental Change Over Six Decades," *International Journal of Water Resources Development*, vol. 30, no. 4 (2014), pp. 694-713.

In its cost estimate of H.R. 2874,[85] CBO considered the impact of eliminating the WYO companies' non-compete agreement and estimated that holders of about 690,000 properties that would have been purchased under the NFIP under current law over the 2017-2027 period would instead choose to buy private flood insurance. In CBO's view, no property owners who are subsidized by the NFIP would be expected to be among those leaving the program.[86] CBO estimated that eliminating the non-compete clause and making NFIP data publically available would lead to an increase in spending of $39 million for the 2018-2022 period and $393 million for the 2018-2017 period.[87]

S. 1313 would require FEMA, within two years of enactment, to report on the extent to which the properties for which private flood insurance is purchased tend to be at a lower risk than properties for which NFIP policies are purchased (i.e., the extent of adverse selection), by detailing the risk classifications of the private flood insurance policies. S. 1313 would also give the FEMA Administrator the power to limit the participation of WYO companies in the broader flood insurance marketplace if the Administrator determines that private insurance adversely impacts the NFIP.

Issues for NFIP Flood Mapping and Floodplain Management

If the number of NFIP policyholders were to decrease significantly, it might also be difficult to support the NFIP's functions of reducing flood risk through flood mapping and floodplain management.[88] NFIP flood mapping is currently funded in two ways, through (1) annual discretionary appropriations; and (2) discretionary spending authority from offsetting money collected from the Federal Policy Fee (FPF).[89] The FPF is paid to FEMA and deposited in the National Flood Insurance Fund (NFIF). The income from the FPF is designated to pay for floodplain mapping activities, floodplain management programs, and certain administrative expenses.[90] About 66% of the resources from the FPF are allocated to flood mapping, with floodplain management receiving about 19% of the overall income from the FPF.[91] To the extent that the private flood insurance market grows and policies move from the NFIP to private insurers, FEMA will no longer collect the FPF on those policies and less revenue will be available for floodplain mapping and management. Concerns have been raised about maintaining the activities funded by the FPF, with some stakeholders arguing that a form of FPF equivalency, or some form of user fee, should be applied to private flood insurance.[92] Both S. 1313 and S. 1368 contain mechanisms by which private insurance companies could contribute to the costs of floodplain mapping in lieu of paying the FPF.

Enforcement of floodplain management standards could be more challenging within a private flood insurance system, as the current system makes the availability of NFIP insurance in a community contingent on the implementation of floodplain management standards. For example, the Association of State Floodplain Managers (ASFPM) has expressed concerns that the widespread availability of private flood insurance could lead some communities to drop out of the NFIP and rescind some of the floodplain management standards and codes they had adopted, leading to more at-risk development in flood hazard areas.[93] ASFPM suggested that this issue could be addressed by allowing private policies to meet the mandatory purchase requirement only if they were sold in participating NFIP communities.[94] FEMA suggested that access to federal disaster assistance could be made partially contingent on the adoption of appropriate mitigation policies, but noted that this approach could be politically challenging.[95] However, a positive consequence is that government investment in mitigation could increase private market participation by reducing the flood exposure of high-risk properties and thereby increasing the number of properties that private insurers would be willing to cover.[96]

Concluding Comments

The policy debate surrounding NFIP and private insurance has evolved over the last few years. The discussion in 2012 was framed in the context of privatization of the NFIP and actions that might be taken to create conditions for private sector involvement. One of the primary interests of Congress at the time was to reduce the federal government's role in flood insurance by transferring its exposure to the private sector,[97] with an expectation that a realignment of roles would allow the federal government to focus on flood risk mitigation while private markets focused on providing flood insurance.[98] One argument for increasing private sector participation in the U.S. flood market was that competition should lead to innovation in flood risk analytics and modeling and produce new flood insurance products that would better meet customer needs and lead to greater levels of insurance market penetration.[99] In fact, private sector flood risk analytics and modeling have improved significantly before any sizable entry of private insurers into the market. Another argument was that, in contrast to the NFIP, which cannot diversify its portfolio of flood risk by insuring unrelated risks, the insurance industry can diversify catastrophic risks with uncorrelated or less correlated risks from other perils, other geographic regions, non-catastrophic risks, or risks from unrelated lines of business.[100]

[100] Ibid., p. 51.

FEMA considered a range of concrete steps by which the barriers to private sector involvement could be addressed.[101] One of these has been introduced: the purchase of reinsurance. Two others are in progress: the reduction of premium subsidies for some properties[102] and reporting to make premium subsidies and cross-subsidies more transparent.[103] Although BW-12 directed FEMA to make a recommendation about the best manner in which to accomplish the privatization of the NFIP, FEMA presented the report without a recommendation, arguing that any privatization strategy is complex and involves significant policy decisions that would require input from a variety of stakeholders. They concluded that there is no single, clear solution; it is heavily politicized; and harsh criticism of any change is inevitable.[104]

Currently the discussion is more focused on sharing risk, with the recognition that neither the NFIP nor the private sector is likely to be able to write all of the policies needed to cover all of the flood risk in the United States. FEMA has identified the need to increase flood insurance coverage across the nation as a major priority for NFIP reauthorization, and this also forms a key element of their 2018-2022 strategic plan.[105] FEMA has developed a "moonshot" with the goal of doubling flood insurance coverage by 2023 through the increased sale of both NFIP and private policies.

The 2017 hurricane season highlighted the flood insurance gap in the United States, where many people that are exposed to flood risk are not covered by flood insurance. For example, in Texas and Florida, less than a third of the flooded residential structures in SFHAs were insured, and no more than 10%-12% of flooded residential structures outside the SFHA were insured.[106] Recent floods have also demonstrated that insured flood victims generally receive significantly more from NFIP flood insurance than from FEMA Individual Assistance (IA). For example, in the 2015 South Carolina floods, the average NFIP claim was $34,936, while the average IA payment was about $3,199. In the 2016 Louisiana floods, the average NFIP claim was $90,725, while the average IA payment was about $9,349. For Hurricane Harvey, the average NFIP claim was $112,964, while the average IA payment in Texas was about $4,331. For Hurricane Irma, the average NFIP claim was $45,421, while the average IA payment in Florida was about $1,302.[107]

FEMA's view is that both the NFIP and an expanded private market will be needed to increase flood insurance coverage for the nation and reduce uninsured flood losses.[108] However, the private market is unlikely to expand significantly without congressional action. The concerns of private companies related to the mandatory purchase requirement and continuous coverage and the concerns of some Members of Congress about adverse selection are among the most pressing issues likely to be addressed in any long-term NFIP reauthorization.

Appendix. Provisions Related to Private Flood Insurance in Legislation in the 115th Congress

The provisions in the House bill and the three Senate bills which relate to private flood insurance, and the issues raised as barriers to private sector involvement, are summarized below and compared side-by-side in **Table A-1**. All of the bills also include provisions related to administrative reforms of the NFIP, some of which may be relevant to private insurance companies, which are not described in this report.

H.R. 2874, 21St Century Flood Reform Act

- H.R. 2874, Section 102, would phase out the pre-FIRM subsidy for primary residences at a rate of 6.5%-15% (compared to the current rate of 5%-18%), except that in the first year after enactment, the minimum rate increase would be 5%; in the second year after enactment, the minimum rate increase would be 5.5%; and in the third year of enactment, the minimum rate increase would be 6%. The phaseout of the pre-FIRM subsidy for other categories of properties (non-primary residences, non-residential properties, severe repetitive loss properties, properties with substantial cumulative damage, and properties with substantial damage or improvement after July 6, 2012) would remain at 25%. This section would make it possible, but not certain, for FEMA to raise premiums more rapidly than under current legislation by increasing the minimum rate at which the pre-FIRM subsidy could be removed for primary residences.
- H.R. 2874, Section 201, would revise the definition of private flood insurance previously defined in BW-12. This section would strike existing statutory language describing how private flood insurance must provide coverage "as broad as the coverage" provided by the NFIP. Instead, the definition would rely on whether the insurance policy and insurance company were in compliance in the individual state (as defined to include certain territories and the District of Columbia). Further, "private flood insurance" would be specifically defined as including surplus lines insurance.[109] Though the majority of regulation of private flood insurance would then rest with individual states, federal regulators[110] would be required to develop and implement requirements relating to the financial strength of private insurance companies from which such entities and agencies will accept private insurance, provided that such requirements shall not affect or conflict with any state law, regulation, or procedure concerning the regulation of the business of insurance. The dollar amount of coverage would still have to meet federal statutory requirements and the GSEs may implement requirements relating to the financial strength of such companies offering flood insurance. This section would also specify that if a property owner purchases private flood insurance and decides then to return to the NFIP, they would be considered to have maintained continuous coverage. This section would allow private insurers

[109] Surplus lines (or non-admitted) insurance provide coverage for unusual risks typically unavailable in the traditional insurance marketplace. For a further discussion of surplus lines insurance, see the NAIC website at http://www.naic.org/cipr_topics/topic_surplus_lines.htm.

[110] Specifically "the Director of the Federal Housing Finance Agency, in consultation with the Federal National Mortgage Association, the Federal Home Loan Mortgage Corporation, the Secretary of Housing and Urban Development, the Government National Mortgage Association, and the Secretary of Agriculture."

to offer policies that provide coverage that might differ significantly from NFIP coverage, either by providing greater coverage or potentially providing reduced coverage that could leave policyholders exposed after a flood.

- H.R. 2874, Section 202, would apply the mandatory purchase requirement only to residential improved real estate, thereby eliminating the requirement for other types of properties (e.g., all commercial properties) to purchase flood insurance from January 1, 2019. This would likely affect the policy base of the NFIP by reducing the number of commercial properties covered.[111] However, it is uncertain how many would elect to forgo insurance coverage (public or private) entirely. To the extent that commercial properties no longer choose to carry insurance (or are allowed to drop insurance coverage by the conditions of their mortgages), there may be increased uninsured damages to these properties from floods.
- H.R. 2874, Section 203, would eliminate the non-compete requirement in the WYO arrangement with FEMA that currently restricts WYO companies from selling both NFIP and private flood insurance policies. This would allow the WYO companies to offer their own insurance policies while also receiving reimbursement for their participation in the WYO program to administer the NFIP policies. It is unknown what criteria WYO companies would use to establish their own policies, and how they would choose to offer those policies rather than NFIP policies to potential customers. This section has essentially been pre-empted by FEMA's proposed changes for FY2019 to remove the WYO non-compete clause.[112]
- H.R. 2874, Section 204, would require FEMA to make publicly available all data, models, assessments, analytical tools, and other information that is used to assess flood risk or identify and establish flood elevations and premiums. This section would also require FEMA to develop an open-source data system by which all information required to be made publicly available may be accessed by the public on an immediate basis by electronic means. Within 12 months after enactment, FEMA would be required to establish and maintain a publicly searchable database that provides information about each community participating in the NFIP. This section provides that personally identifiable information would not be made available; the information provided would be based on data that identifies properties at the zip code or census block level. Ultimately, this data could be used to better inform the participation of private insurers in offering private flood insurance, as well as informing future flood mitigation efforts. However, the availability of NFIP data could make it easier for private insurers to identify the NFIP policies that are "overpriced" due to explicit cross-subsidization or imprecise flood insurance rate structures, and adversely select these properties, while the government would likely retain those policies that benefit from those subsidies and imprecisions, potentially increasing the deficit of the NFIP.[113]

[111] As of March 2018, there were 262,283 non-residential policies out of a total of 5,025,389 NFIP policies, or 5.2%. See https://www.fema.gov/policies-force-occupancy-type.

[112] FEMA, "National Flood Insurance Program (NFIP); Assistance to Private Sector Property Insurers, Notice of FY 2019 Arrangement," 83(52) *Federal Register* 11772-11778, March 16, 2018.

[113] American Academy of Actuaries Flood Insurance Work Group, *The National Flood Insurance Program: Challenges and Solutions,* April 2017, p. 4, http://www.actuary.org/files/publications/FloodMonograph.04192017.pdf.

- H.R. 2874, Section 506, would establish that the allowance paid to WYO companies would not be greater than 27.9% of the chargeable premium for such coverage. It would also require FEMA to reduce the cost of companies participating in the WYO program.
- H.R. 2874, Section 507, would increase the civil penalties from $2,000 to $5,000 on federally regulated lenders for failure to comply with enforcing the mandatory purchase requirement. In addition, the federal entities for lending regulations, in consultation with FEMA, would be required jointly to update and reissue the guidelines on compliance with mandatory purchase.
- H.R. 2874, Section 513, would require a report by GAO on the implementation and efficacy of the mandatory purchase requirement within 18 months of enactment.
- H.R. 2874, Section 511, would require annual transfer of a portion of the risk of the NFIP to the private reinsurance or capital markets to cover a FEMA-determined probable maximum loss target that is expected to occur in the fiscal year, no later than 18 months after enactment.

S. 1313, Flood Insurance Affordability and Sustainability Act of 2017

- S. 1313, Section 101, would require annual transfer of a portion of the risk of the NFIP to the private reinsurance or capital markets in an amount that is sufficient to maintain the ability of the program to pay claims, and limit the exposure of the NFIP to potential catastrophic losses from extreme events.
- S. 1313, Section 102, would require FEMA to conduct a study in coordination with the National Association of Insurance Commissioners to address how to increase participation in flood insurance coverage through programmatic and regulatory changes, and report to Congress no later than 18 months after enactment. This study would be required to include but not be limited to options to (1) expand coverage beyond the SFHA to areas of moderate flood risk; (2) automatically enroll customers in flood insurance while providing customers the opportunity to decline enrollment; and (3) create bundled flood insurance coverage that diversifies risk across multiple-peril insurance.
- S. 1313, Section 401, would allow any state-approved private insurance to satisfy the mandatory purchase requirement, and allow private flood insurance to count as continuous coverage. This section would also change the amount of insurance required[114] for both private flood insurance policies and NFIP policies in order to satisfy the mandatory purchase requirement. The required coverage would be the lesser of 80% of the purchase price of the property, the maximum NFIP coverage for that type of property, or the outstanding balance of the loan (for multiunit structures only). This section would also require FEMA, within two years of enactment, to report on the extent to which the properties for which private flood insurance is purchased tend to be at a lower risk than properties for which NFIP

[114] 42 U.S.C. §4012a(a) requires that a building or mobile home must be covered by flood insurance in an amount at least equal to its development or project cost (less estimated land cost) or to the maximum limit of coverage made available with respect to the particular type of property under the NFIP, whichever is less. This section also provides that the amount of flood insurance need not exceed the outstanding principal balance of the loan and need not be required beyond the term of the loan.

policies are purchased (i.e., the extent of adverse selection), by detailing the risk classifications of the private flood insurance policies. This data, while identifying adverse selection based on risk profiles, might not identify if there has been adverse selection based on subsidization.

- S. 1313, Section 402, would give temporary authority for sale of private flood insurance by WYO companies for certain properties during the first two years after enactment (e.g., non-residential properties, severe repetitive loss properties, business properties, or any property that has incurred flood-related damage in which the cumulative amount of payments equaled or exceeded the fair market value of the property).[115] After two years and on completion of a study measuring the risk classification underwritten by participating WYO companies, if the FEMA Administrator determines that the provision of flood insurance to properties in addition to those categories above will not adversely impact the ability of the NFIP to maintain a diverse risk pool, the Administrator would be authorized to expand (or limit) the participation of WYO companies in the broader flood insurance marketplace.
- S. 1313, Section 403, would require FEMA to study the feasibility of selling or licensing the use of historical structure-specific NFIP claims data to non-governmental entities, while reasonably protecting policyholder privacy, and report within a year of enactment. This section would also authorize FEMA to sell or license claims data as the Administrator determines is appropriate and in the public interest, with the proceeds to be deposited in the National Flood Insurance Fund (NFIF).
- S. 1313, Section 404, would require an insurance company that issues a policy for private flood insurance to impose and collect an annual surcharge equivalent to the Federal Policy Fee (FPF),[116] which would be transferred to the FEMA Administrator and deposited in the NFIF.
- S. 1313, Section 602, would require FEMA, not later than one year from enactment, to create and maintain a publicly searchable database that includes the aggregate number of claims filed each month, by state; the aggregate number of claims paid in part or in full; and the aggregate number of claims denials appealed, denials upheld on appeal, and denials overturned on appeal; without making personally identifiable information available.

S. 1368, Sustainable, Affordable, Fair, and Efficient [SAFE] National Flood Insurance Program Reauthorization Act of 2017

- S. 1368, Section 302, would establish that the total amount of reimbursement paid to WYO companies would not be greater than 22.46% of the chargeable premium for such coverage.
- S. 1368, Section 303, would require FEMA to develop a fee schedule based on recovering the actual costs of providing Flood Insurance Rate Maps (FIRMs) and charge any private entity an appropriate fee for use of such maps. This

[115] 42 U.S.C. §4014(a)(2)(A)-(D).

[116] The Federal Policy Fee (FPF) was authorized by Congress in 1990 and helps pay for the administrative expenses of the program, including floodplain mapping and some of the insurance operations. See 42 U.S.C. §4014(a)(1)(B)(iii).

requirement would provide a mechanism by which private insurance companies could contribute to the costs of floodplain mapping in lieu of paying the FPF.

- S. 1368, Section 304, would require FEMA, within 12 months of enactment, to develop a schedule to determine the actual costs of WYO companies, including claims adjusters and engineering companies, and reimburse the WYO companies only for the actual costs of the service or products.
- S. 1368, Section 410, would require FEMA to conduct a study and report to Congress within one year of enactment on the percentage of properties with federally backed mortgages located in SFHAs that satisfy the mandatory purchase requirement, and the percentage of properties with federally backed mortgages located in the 500-year floodplain that would satisfy the mandatory purchase requirement if the mandatory purchase requirement applied to such properties.

S. 1571, National Flood Insurance Program Reauthorization Act of 2017

- S. 1571, Section 302, would specify that FEMA may consider any form of risk transfer, including traditional reinsurance, catastrophe bonds, collateralized reinsurance, resilience bonds, and other insurance-linked securities.
- S. 1571, Section 303, would require the federal banking regulators to conduct an annual study regarding the rate at which persons who are subject to the mandatory purchase requirement are complying with that requirement. Section 303 would also require FEMA to conduct an annual study of participation rates and financial assistance to individuals who live in areas outside SFHAs.

Table A-1. Provisions Related to Private Flood Insurance in Legislation in the 115th Congress

Provision	H.R. 2874	S. 1313	S. 1368	S. 1571
Revised definition of private flood insurance	§201. Would define private flood insurance as any policy that complies with state laws and regulations.	§401. Would define private flood insurance as any policy that complies with state laws and regulations.	No comparable provisions	No comparable provisions
Mandatory purchase requirement	§202. Would allow any state-approved private insurance to satisfy mandatory purchase requirement and continuous coverage. Commercial properties would not require flood insurance after January 1, 2019.	§401. Would allow any state-approved private insurance to satisfy mandatory purchase requirement and continuous coverage.	No comparable provisions	No comparable provisions
Non-compete clause	§203. Would eliminate non-compete requirement for WYO companies.	§401. Would give temporary authority for sale of private flood insurance by WYO companies for certain types of properties.[a] After two years and on completion of study, if FEMA determines that provision of flood insurance in properties in additional categories would not adversely impact ability of the NFIP to maintain a diverse risk pool, FEMA could expand participation of WYO companies in flood market.	No comparable provisions	No comparable provisions

Provision	H.R. 2874	S. 1313	S. 1368	S. 1571
Risk transfer	§511. Would require annual transfer of a portion of NFIP risk to capital or reinsurance markets to cover a FEMA-determined probable maximum loss target that is expected to occur in the fiscal year.	§101. Would require annual transfer of a portion of NFIP risk to capital or reinsurance markets to cover an amount that is sufficient to maintain ability of NFIP to pay claims and limit exposure of NFIP to catastrophic losses from extreme events.	No comparable provisions	§302. Would specify that FEMA may consider any form of risk transfer, including traditional reinsurance, catastrophe bonds, collateralized reinsurance, resilience bonds, and other insurance-linked securities.
WYO allowance	§506. WYO allowance would not be greater than 27.9% of the chargeable premium.	No comparable provisions	§302. WYO allowance would not be greater than 22.46% of the chargeable premium.	No comparable provisions
WYO costs	No comparable provisions	No comparable provisions	§304. Would require FEMA to develop a schedule to determine actual costs of WYO companies, including claims adjusters and engineering companies, and reimburse WYO companies only for actual costs of services or products.	No comparable provisions
Changes to NFIP subsidized rates	§102. Would phase out the pre-FIRM subsidy for primary residences at a rate of 6.5%-15%. The phaseout of the pre-FIRM subsidy for other categories of properties[b] would remain at 25%.	No comparable provisions	No comparable provisions	No comparable provisions

Provision	H.R. 2874	S. 1313	S. 1368	S. 1571
NFIP claims data	§204. Would make all NFIP claims data, models, analytical tools, and other information publicly available. Would require FEMA to create and maintain a publically searchable database.	§403. Would require FEMA to study feasibility of selling or licensing use of claims data, and would authorize FEMA to sell or license claims data and deposit funds in NFIF. §602 would require FEMA to create and maintain a publically searchable database of aggregate claims data.	No comparable provisions	No comparable provisions
Increasing participation	§507. Would increase civil penalties from $2,000 to $5,000 on federally regulated lenders for failure to comply with enforcing mandatory purchase requirement. §102. Would require report by GAO on implementation and efficacy of mandatory purchase requirement.	§102. Would require FEMA to conduct study on how to increase participation in flood insurance coverage.	§410. Would require FEMA to conduct study on percentages of properties with federally backed mortgages in SFHAs that satisfy the mandatory purchase requirement, and percentages of properties with federally backed mortgages in 500-year floodplains that would satisfy the mandatory purchase requirement if applied to such properties.	§303. Would require federal banking regulators to conduct annual study on compliance with mandatory purchase requirement. Would also require FEMA to conduct annual study of participation rates and financial assistance to individuals who live in areas outside SFHAs.
Study of risk classification of private insurance policies	No comparable provisions	§401. Would require FEMA to report within two years on the extent to which the properties for which private flood insurance is purchased tend to be at a lower risk than properties for which NFIP flood insurance is purchased by detailing the risk classification of private insurance policies.	No comparable provisions	No comparable provisions

Provision	H.R. 2874	S. 1313	S. 1368	S. 1571
Funding for flood mapping	No comparable provisions	§404. Would require insurance company that issues policy for private flood insurance to impose and collect an annual surcharge equivalent to the Federal Policy Fee, which would be transferred to FEMA and deposited in the NFIF.	§303. Would require FEMA to develop a fee schedule based on recovering the actual costs of providing FIRMs and charge any private entity an appropriate fee for use of such maps.	No comparable provisions

The development of telematics-supported usage-based insurance (UBI) has ushered a new era in the world of automobile insurance. This study will take a closer look at these technological advances, explore the changes in the insurance market and analyze in-depth the implications of telematics for insurers, consumers and state regulators.

Vehicle telematics, integrated navigation, and computer and mobile communication technology used to directly monitor driving behavior allow insurers to use true causal risk factors to accurately assess risks and develop precise UBI rating plans. Furthermore, with premiums accurately reflecting true risks, policyholders are incentivized to adopt risk-minimizing behaviors with benefits accruing not only to consumers and insurance companies, but also to society as a whole. These benefits are propelling the insurance market to quickly expand the availability of telematics-based UBI programs. This was illustrated by the CIPR survey of state departments of insurance (DOI), which found telematics programs are now available in at least 42 states. A detailed description of the results of the survey can be found in the appendix of this study. (See page 71.)

Until recently and since the first automobile liability insurance was sold in the U.S. 116 years ago, premiums were generally determined, in the absence of true causal data, by using a variety of group behavior-based demographic proxy factors affecting loss costs, such as driver record, age, gender, marital status and residence geographic location known as territory. More recently, other variables such as education, occupation and credit scores have been found to correlate with loss ratio, although their usage is controversial and restricted in a number of jurisdictions.

At the individual driver level, the concepts of UBI, pay-as-you-drive (PAYD), pay-as-you-drive-as-you-save (PAYDAYS) and pay-how-you drive (PHYD) are not new at all, with mileage being among the rating variables insurers have historically used. However, the predictive value of variables such as mileage and other driving details (i.e., commuting distance and location) always hinged on the veracity of the information furnished by consumers.

The value of real driving behavior data for calculating a more precise premium reflecting true risk exposure was recognized in the early days of automobile insurance history in a 1929 paper[1] by Paul Dorweiler, president of the Casualty Actuarial Society (CAS) in the early 1930s. Dorweiler identified driver habits, speed, weather conditions, seasonal and daily car use, and

[1] Dorweiler, Paul. 1929. "Notes on Exposure and Premium Bases," Proceedings of the Casualty Actuarial Society XVI, p. 319; reprinted PCAS LVIII, 1972, p. 59.

mileage as critical factors directly contributing to accident frequency and severity.[2] While he recognized the simplicity, directness and definiteness in the measurement of these variables, Dorweiler lamented the fact they were not yet practically applicable due to the absence of the type of devices needed to record and convey such information.[3] Fast forward about seven decades, and Dorweiler's solution moved from science fiction realm to scientific fact and practical use for the everyday consumer.

The incorporation of new digital technologies in cars during the 1980s allowed for the development of increasingly electronic management and operation control sophisticated systems (engine management, suspension systems, braking, safety, etc.). All types of on-board diagnostics and other data could be collected and analyzed, but technologies similar to the telemetry systems, first used exclusively in high-tech race cars, with wireless communication capabilities, were only introduced for commercial use in the mid-1990s. Long-distance truck fleet operators started first successfully using telematics to track and coordinate vehicle movements for operational, maintenance and other purposes.

In addition to the proliferation of mobile telephony, it was the emergence of satellite-based navigation technology and the opening of the global positioning system (GPS), originally developed by the U.S. Department of Defense for the military, for civilian use that paved the way for the rapid development and successful use of telematics. Through the integration of these new systems, vehicle telematics could provide very detailed driving behavior data, including exact time and location, and communicate it to a remote central location. By the late 1990s, telematics were introduced to the insurance business, first to assist with underwriting decisions and then to help determine premiums more accurately reflecting real risks. However, despite the apparent popularity of the initial programs, the high costs of integrating the new technology temporarily interrupted its use and deterred other would-be early adopters.[4]

With technology advancing in leaps and bounds and related costs coming down in the 2000s, the doors were wide open for viable and successful telematics-based UBI programs. The integration of GPS-enabled two-way communication systems by automobile manufacturers in their cars helped familiarize drivers with telematics technology and the services it can offer. Existing car telematics systems, such as General Motor's OnStar, Lexus' Link and BMW's Assist, offer a wide range of services such as remote diagnostics, roadside assistance, emergency response and stolen vehicle location services. According to IHS iSuppli, approximately 38

[2] Ibid.

[4] Weiss, Jim and Smollik, Jared. 2012. "Beginner's Roadmap to Working with Driving Behavior Data." Casualty Actuarial Society E-Forum, Winter 2012-Volume 2.

percent of the 2013 model-year cars in the U.S. were equipped with a telematics device.[5] By the end of 2018, the percentage of new cars available for sale in the U.S. market with embedded telematics will soar to 80 percent.[6] The section of the study on the technology of telematics (page 7) details further the technological options currently available to insurance consumers.

Consumers' growing enthusiasm for in-car connectivity in the last 10 years has added to the appeal of insurers' telematics-based programs. As applied in insurance, telematics is defined by SAS as "the use of wireless devices to transmit data in real time back to an organization. The data recorded in telematics devices can be used to develop more accurate pricing, improve the granularity of risk management techniques and reduce losses by enabling better claims assessments."[7] The more granular driving behavior and vehicle data can be collected the better the predictive models used to identify and analyze risks would be. A discussion of the data and modeling challenges facing insurers as they try to develop telematics UBI programs is found in the predictive models and analytics section of the study. (See page 14.)

Many U.S. insurers have telematics-based UBI policies available offering significant discounts to consumers who, according to recent market surveys, seem overwhelmingly favorable to the technology and the value it can offer.[8] With the technology advancing, insurers' telematics programs are expanding beyond premium discounts to include other value-added services aimed at increasing competitiveness and consumer loyalty.[9] ABI Research predicts global insurance telematics subscriptions to grow at a compound annual rate of 81 percent from 5.5 million at the end of 2013 to 107 million in 2018.[10] A more detailed account of the current state of the insurance telematics UBI market and its transformative effect on the car insurance industry as a whole can be found on the relevant section of the study. (See page 18.) Also, for the availability of telematics UBI programs across the country and the state legislative efforts regarding the use of telematics in auto insurance see the CIPR state survey in the appendix of the study.

Most existing telematics-based insurance programs use descriptive acronyms such as UBI, PAYD, PAYS or PHYD partly for marketing purposes. As consumers' decisions are driven by more than just price, these programs' added benefits and services should be instantly recognizable in the name and/or the description of the product. While these acronyms may be confusing and

[10] ABI Research. 2013. "Global Insurance Telematics Subscriptions to Exceed 100 million by 2018, but Auto Insurance Faces Dramatic Changes." June 6, 2013.

imprecise, the main idea they all try to convey is that the factors affecting premiums are generally where (location) the automobile is driven, how often (number of trips), how far (mileage) and how well (driver behavior.) A very important aspect of the development and wider adoption of telematics UBI is the design and marketing of these programs. An exploration of consumer decision-making can be found in the section on behavioral economics concepts used in designing telematics UBI programs. (See page 28.)

The key drivers for the rapid growth of telematics-based UBI are the numerous benefits accrued to both insurers and consumers alike. For consumers, among the benefits are possible lower premiums, enhanced safety and improved claims experience, while for insurers, the main benefits are reducing claim costs, better risk pricing, mitigating adverse selection and moral hazard, modifying risky behavior, and improving brand recognition and loyalty.

Additionally, telematics PAYD insurance programs provide wider social benefits by effectively reducing negative externalities resulting from private automobile use. With premiums tied to mileage, PAYD incentivizes drivers to drive fewer overall miles, thereby reducing accidents, congestion and fuel consumption, which will cut down carbon emissions, as well as lessen dependence on fossil fuels. The section of the study on consumer and societal benefits derived from the generalized use of telematics PAYD UBI explores these issues in greater detail. (See page 42.)

However, a major barrier remains for the public acceptance and the complete mainstreaming of telematics. Many consumers have concerns regarding the privacy of the data they share with insurance companies, and they question insurers' ability to safeguard their data given the recent cases of major corporate security breaches. However, consumers are gradually feeling less uneasy with the use or potential misuse of their private data (e.g., when and where they are driving) by insurance companies,[11] particularly following insurers' assurances regarding the limited use and storing of private data (e.g., GPS–detailed data) and not sharing such data with other third parties (e.g., police enforcement, marketing companies). Consumer concerns vis-à-vis the promise of telematics are discussed in the relevant section of the study. (See page 50.)

Consumer privacy issues are also addressed in existing state legal frameworks (e.g., California prohibiting the use of private data for most insurance purposes) as it is detailed in the CIPR survey of state DOIs in the appendix of this study. The transmission, storage and reporting of private data constitute a key concern for state regulators along with the rating factors used to determine UBI premiums.

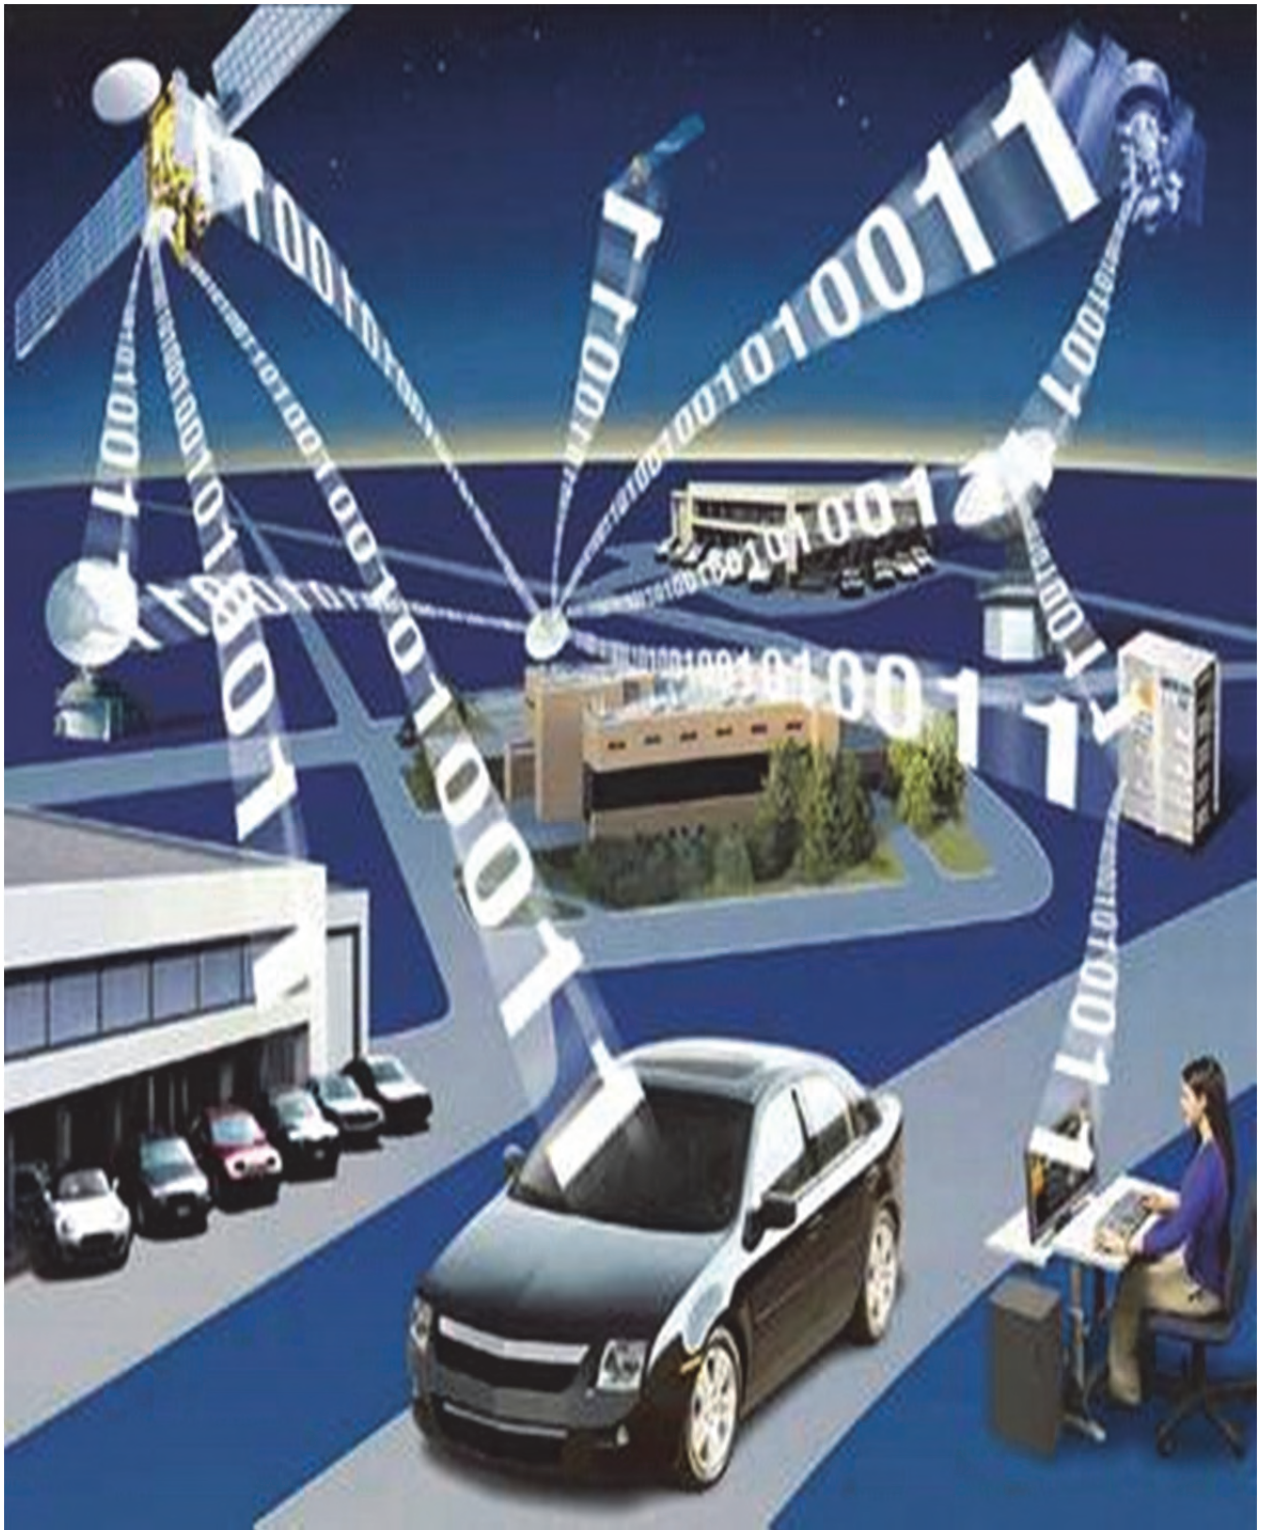
Generally, regulators in states with and without active telematics UBI programs, as shown in the CIPR state DOI survey, emphasize: 1) requirements for rates not to be excessive, inadequate

[11] Towers Watson. 2014. "Usage-Based Insurance." U.S. Consumer Survey, July 2014.

or unfairly discriminatory; and 2) the need for public disclosure and transparency. The survey showed that a number of states have introduced and passed legislation regarding the use of telematics devices and the choice of rating factors used. If the rating factors specified in statute do not include the standard UBI PAYD behaviors, as is in the case of California, the availability of telematics UBI programs is in question. In states encouraging the development of telematics, UBI-specific legislation has been enacted affording confidentiality protection for insurers' proprietary UBI solutions. Given the novelty of telematics and the regulatory challenges of dealing with technological innovation, state regulators will continue to focus on safeguarding consumers' rights while allowing for the development of new and potentially more effective insurance plans. The section on regulatory implications explores in-depth these issues facing state regulators. (See page 54.)

To assist in the development of a competitive marketplace for telematics-based PAYD UBI programs ultimately delivering on the promise to be beneficial not only to insurers but also to consumers and society as a whole, the Federal Highway Administration (FHWA) is funding multiple promotion efforts. The last section of the study provides details on federal initiatives and other PAYD telematics UBI-related activities. (See page 61.)

Telematics Technology in the Automobile Insurance Industry



Telematics Technology in the Automobile Insurance Industry

By NAIC Staff

Introduction

Data has traditionally been one of insurance industry's greatest and more valuable assets. The ubiquity of wireless connectivity, the increasing sophistication of in-vehicle electronics and machine-to-machine (M2M) communication is presenting the auto insurance industry with a historic transformational challenge. Insurers are investing on their ability to collect, store, manage and analyze vast amounts of variable data to solve complex problems in order to remain competitive and profitable. Auto insurance is fast becoming a big data industry, with telematics-based UBI poised to potentially change the business of insurance as we know it.

Depending on the frequency and length of trips taken, data sets can represent about 5MB to 15MB of data annually, per policyholder. An insurer with 100,000 insured vehicles can collect more than one terabyte of data per year.[12] The cost of the technology and the hardware—as well as the indirect cost for installation, maintenance and logistics—is one of the main limiting factors to the quicker and wider adoption of telematics.[13] As the technology becomes cheaper, the scalability and availability of telematics-based insurance programs is expected to grow at a faster rate.

The huge data demands in terms of storage and analytics, along with the lack of standardization in telematics devices, present significant challenges to insurers in their effort to successfully integrate telematics in their information technology (IT) infrastructure. The main players in the telematics ecosystem—auto manufacturers, insurance companies and telematics service providers—are competing for a larger slice of the market by developing their own telematics solutions and products. Choosing the technology that best fits their needs in order to start a UBI program is only the first challenge for insurers. The lack of publicly available driving behavior data that can be leveraged and the patented existing UBI technology are driving the high costs associated with launching and maintaining a telematics-based UBI program. The measure of success for insurers is centered on their ability to build an effective and profitable program without passing the costs of the device, installation and operation to consumers.[14]

Current Telematics Technological Solutions

The telematics devices generally used by insurance companies are plugged into the on-board diagnostics (OBD-II)[15] port of an automobile or are already integrated in original equipment installed by car manufacturers. The type of data recorded and transmitted from the car varies according to the telematics technology chosen and by policyholders' willingness to share personal data. Sensors in telematics devices can capture data as simple as date, time, location and distance driven to more complex as speed, lane changing, cornering, acceleration and deceleration.

Currently, there are four distinct categories of telematics solutions available in the market:

- **Dongle**: The dongle is a self-installed device provided by the insurer to be used for a certain time, typically for six months. This is the most preferred solution in the U.S. market due to its relatively low cost and high reliability. Its "plug and play" low cost makes it the most suitable choice for new and emerging telematics UBI markets. The dongle is typically installed by the driver, is re-usable, can be transferred to another vehicle, automatically turns on with the car's ignition, generates high-quality and secure data on location and driving style, and can be bundled with other value-added services. However, along with its many strengths, the dongle has a number of weaknesses, such as the fact that it can only be used in modern vehicles, is vulnerable to fraud as it could be tampered since it cannot be hard-wired into the car's electronics, and will soon (12 to 18 months) be technologically obsolete.[16]
- **Black box**: The professionally-installed black box, popular across Europe, is considered to be one of the most secure and reliable solutions. The black box can be used with both PAYD and PHYD, but it is most suitable for the latter since it can provide some of the most in-depth and detailed data on driving behavior. Because PHYD plans tend to be the most sophisticated of the telematics, UBI products require devices like the black box with integrated accelerometers to track a variety of performance data like speed, g-forces in hard cornering and braking. The black box, in addition to its own sensors, can use the vehicle's internal sensors by linking with its electronic control unit (ECU). The black box is also ideally suited for first notice of loss (FNOL) services as it is fixed in the car chassis, providing early notice in the event of theft and valuable information for forensic crash reconstruction in the case of an accident. The black box is also preferred for tracking driving behavior data (DBD) of young and inexperienced drivers. However, it

[15] OBD is a computer-based system built into all 1996 and later light-duty vehicles and trucks, as required by the Clean Air Act Amendments of 1990. OBD systems are designed to monitor the performance of some of an engine's major components, including those responsible for controlling emissions. The OBD-II port is the U.S. Environmental Protection Agency (EPA) standard allowing single devices to query the on-board computer(s) in any vehicle.
[16] Telematics Update.2014. "Insurance Telematics Report 2014." Insurance Report, Telematics Update.

is not portable, and it tends to be the most expensive solution in the market with high installation and administrative costs.

- **Embedded**: As of the end of 2013, there were 11 car manufacturers with embedded telematics equipment in vehicles. While early on, embedded telematics provided services such as remote diagnostics, navigation and infotainment services, now they can deliver UBI services. The embedded module connected to the vehicle's ECU is able to record and transmit a wealth of data about the vehicle's performance. The strengths of embedded telematics range from product differentiation to improved customer relationship management and potentially lower costs in the case of product recalls.[17] Some importance challenges with embedded telematics are the comparatively high cost for the consumer (most are subscription-based), lack of standardization, compatibility with insurance solutions and obsolescence. The lengthy product cycles of automobile manufacturers practically ensures that whatever cutting-edge telematics technology gets designed for a particular car, it will be nearing obsolescence by the time the car hits the market.[18]
- **Smartphones**: Mobile telecommunication technology is the latest tool in telematics, with smartphones working as stand-alone devices or linked to vehicles' systems to transmit a variety of information to and from the car. Smartphones are an ideal telematics solution as they are typically equipped with a host of relevant sensors, such as GPS, accelerometers and gyroscopes. They also have large data storage capacity, or infinite with the cloud, and superior communication capabilities. There are no device, installation or data connectivity costs to the insurers (and no additional cost to the consumers) with smartphones-based UBI programs. Smartphones' computing power allows a big part of the data processing to be done on the device, helping to lower data handling and storage costs.[19] The large manufacturing volumes for smartphones exploiting economies of scale make the price–performance metric of the technical capabilities of the smartphone superior to many rivals, and it is still continuously improving over time.[20] However, despite the advantages the smartphone can offer, smartphone-based telematics programs have not taken over the market. A weakness possibly slowing down their deployment is the quality of data and the reliability of measurement data smartphones can provide.[21] Smartphones' accelerometer data is not

calibrated, while the cellular gyroscopes need to be constantly adjusted based on the phone's changing positions.[22]

Insurers' PAYD UBI Telematics Programs

Progressive's Snapshot is a wireless device plugged into an OBD II port and records and transmits time, speed and harsh braking. Progressive has partnered with AT&T for network support. The Snapshot device collects the time of the day the vehicle is in operation, vehicle speed, mileage and frequency of hard stops. Progressive notes the device does not record and transmit the location of the vehicle because unlike other onboard devices, Snapshot does not currently have GPS functionality. According to the company, drivers' personal data received is not shared with any third parties, and Snapshot information is only used to resolve a claim if the policyholder permits it and will not be shared unless it is required to prevent fraud.

Progressive's telematics UBI technology is covered by 598 patents relating to systems for monitoring and communicating operational characteristics and driving behavior. While the technology is available to other insurers via licensing agreements, a number of these patents, generally related to commercial applications, have been challenged by competing insurers.[23]

In March 2014, Progressive announced it had already reached more than 10 billion miles of collected driving data with its telematics Snapshot program.[24] Additionally, the insurer stated it is exploring new tracking methods, such as mobile applications and GPS, to capture new driving factors. These new factors could then be added to its existing database of driving data to further refine predictive models. Similarly to the Progressive Snapshot program, Allstate's Drivewise employs a telematics device installed in the vehicle's diagnostic port. Allstate has also partnered with AT&T to support and provide connectivity for its telematics devices. The device records the time and location of the vehicle during trips, the number of trips per day, the speed at which the vehicle is traveling, hard breaking and mileage.

According to Allstate, average driving performance on the factors above would not earn policyholders any discounts. A high number of speeding miles, braking events, high annual miles driven or high-risk-hours driving (e.g., during the night) may actually reduce, and in some cases even eliminate, any potential savings a driver had earned. Drivewise participants can monitor their behaviors and view potential discounts by using a smartphone app.[25]

State Farm's telematics solution, unlike Progressive and Allstate, uses a third-party technology. The Drive Safe & Save program offered to drivers by State Farm works with existing telematics technology embedded into vehicles such as OnStar and SYNC and with an In-Drive device provided by Verizon. Drivers who enroll in the program have to pay an annual subscription after the first year, which they receive for free. The recorded data includes, miles driven, acceleration, hard braking, sharp turning, speeding and time of the day the vehicle is driven. State Farm's solution provides some additional services like roadside assistance, maintenance alert and stolen vehicle locator.[26]

Although all State Farm's third-party solutions use a GPS tracker, the company states it only records the general location (within 40 miles) of where the vehicle is driven and does not share that private information with any third parties, except in certain cases as required by law.[27]

The Hartford's TrueLane solution relies on a telematics device that plugs into vehicles' OBD-II port. The device collects and transmits drivers' data to the company using cellular phone signal.[28] National General's telematics UBI program is based on General Motor's OnStar connectivity to confirm miles driven, making it available only to those vehicles equipped with OnStar.[29] Nationwide's SmartRide also employs a plug-in device that collects only driving behavior data and GPS information to detect drivers' location. Drivers can go online to track their discount and get personalized feedback about their driving trends.[30]

Data Challenges

Aside from the choice of the most appropriate device, the other technological challenge is achieving a critical mass of data necessary for an effective telematics. Abstracting from cost considerations, given the right technology tools and information infrastructure, collecting and analyzing massive amounts of driving behavior data is within reach. However, the insurance industry, for the most part, has not yet moved to richer and more granular data that includes not only driving behavior, but also environment (i.e., road type and conditions, traffic patterns, etc.) and still depends on exposure-related driving variables such as mileage, duration of driving, and number of braking or speeding events, which are just secondary contributors to risk.[31]

Collecting the right data is necessary if the aim is to understand and adequately model risky driving behavior. For insurers to be and remain competitive over time in the new telematics UBI market, they must be able to collect and analyze the right data. Collecting the wrong type of data would quickly render insurers' telematics UBI program mostly ineffective, with only limited benefits. The one sustainable solution to this problem is rich data that can ensure, particularly as analytics continuously improve, a competitive telematics UBI program for many years to come.[32]

Moreover, the right data has to be appropriately communicated to the end-user in order to be really effective. The standardization of telematics data collected and reported to insurers for the purpose of making risk decisions is a necessary and important step for effective analytics and widespread telematics adoption. The Association for Cooperative Operations Research and Development (ACORD), a global standards development organization, is actively working on standardizing data elements involved in delivery of telematics data to insurers in order to improve analytic consistency and reduce the need to support multiple data interfaces. As there are multiple representations of the data, from any of the many devices available—to a cell tower/satellite to the device manufacturer, to the data aggregator, to the insurer—ACORD is engaged at the final step by striving to ensure data is delivered in a standard format to all insurers.[33]

Once the right telematics data is delivered to insurers, it is critically important to be able to make sense of the data collected in order to understand specific driving events and their context. In reality, no one braking event is the same as another. A real dynamic environment is far more complex, and it cannot be modeled by simply counting how many times a driver applies the brakes. Braking while traveling at low speeds on a rural road is much less risky than aggressive high-speed braking on a highway. While it can be very challenging to make sense of the various driving events and the permutations of their environmental characteristics, an effective analytics platform should be able to differentiate, for example, between types of braking events and how and where they took place in order to assess their true overall contribution to risk.[34]

Rich PAYD variables are the best way to understand how drivers behave under real conditions and to help sustain telematics UBI risk models over many years. For most insurers, telematics data provides the foundation for understanding how a person drives and under what type of conditions a person drives, as well as the basis for more sophisticated data modeling.

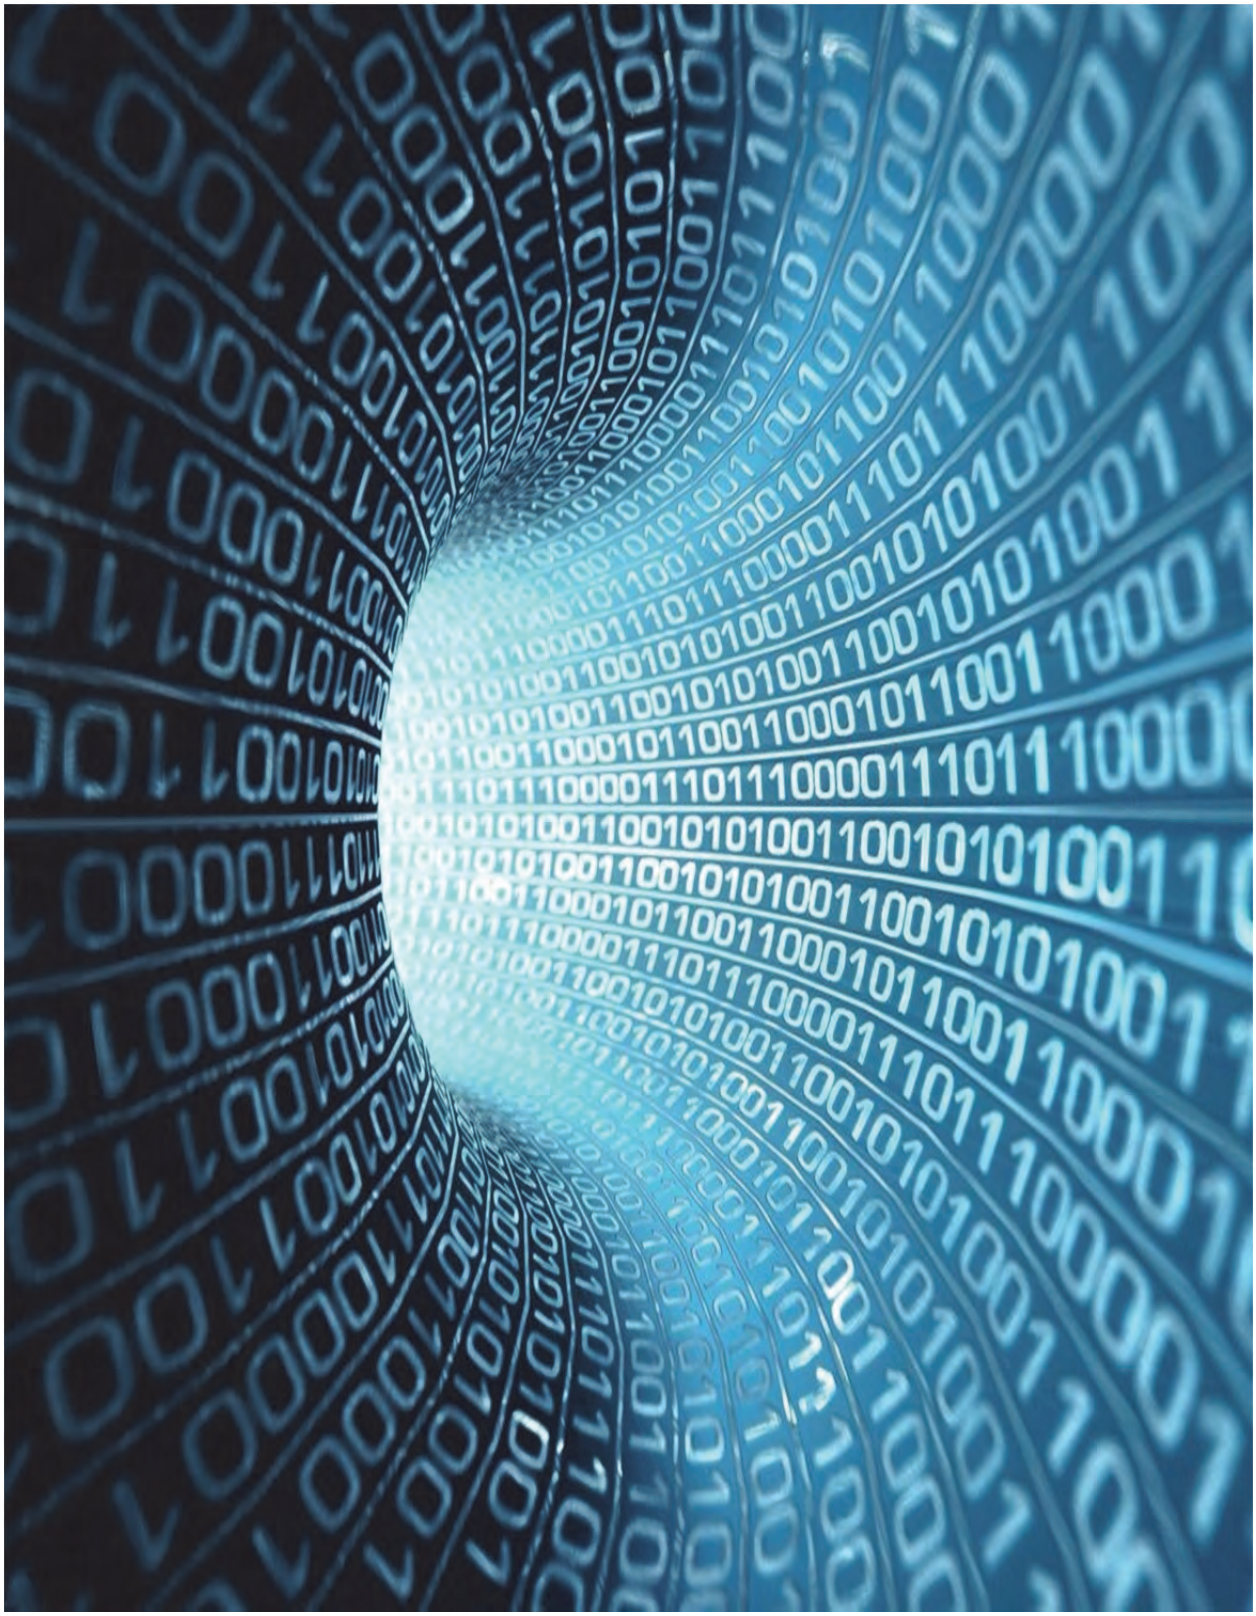
Telematics UBI Modeling and Analytics



Telematics UBI Modeling and Analytics

By Robin Harbage, Director, Towers Watson

Introduction

Usage-based insurance has been in development since the 1990s. The original research relied on data collected from telematics devices professionally installed in automobiles either in the manufacturer factory or by a technician equipping an aftermarket device. After a defined period of monitoring the vehicle operation, the insured is provided with a new rate that uses the driving experience as a part of the rating algorithm. Almost no insurers base the entire premium on just the driving behavior, and most still largely rely on the common proxy variables approved for use in their jurisdiction.

At the top of the list of the key issues facing insurers trying to adopt or expand a telematics-based UBI programs is the ability to build predictive loss cost models that identify behaviors indicative of unsafe vehicle operation.

Predictive Models

Current loss cost models for telematics-based UBI products are largely of two types. One type relies on total mileage, time of day and a set of predefined events. The “event counter” scores are limited in their capability because they are based on the assumption that a few harsh braking, acceleration or cornering events constitute the universe of variables to predict loss costs based on patterns of vehicle operation.

A second approach is based on collecting much more granular data about vehicle use on a second-by-second basis, or even slightly more granular as needed for accelerometers, and then using the more granular detail to research the predictive power of a host of vehicle operation characteristics in a very contextual basis. An example might be to observe the distribution of g-force when changing heading by more than 45 degrees at greater than 45 mph. If the researcher chooses a series of thresholds based on what percentage of the turns actually indicate that behavior and then validates which of the threshold events is most correlated with actual insured losses, the researcher may identify an event that adds to the predictive power of an existing loss cost model. This type of continual research and refinement can lead to increasingly more predictive models over time as it was discussed in the previous section. However, it requires the insurer to collect highly granular data and is improved by recording GPS coordinates and other information which allows the insurer to place the events in the context of road type, sunlight or darkness, weather, road speed limit, etc.

There are several distinct differences between these two approaches of using a predefined set of events or refinement through collecting granular data. First, the granular data allows the researcher to identify new predictive variables much more quickly as they do not need to guess at new events which might be predictive, and then reconfigure the collected data and wait for sufficient new data to be collected before testing the value of the new characteristic. With granular data, the new variable can be created from current historical data and tested based on previously collected trips and losses.

Another advantage to granular data is that the researcher can identify driving behaviors that can be described in a manner that the operator may be coached to correct hazardous behavior to improve their driving and the road safety.

Vehicle operation characteristics may also be correlated with fuel consumption, so the vehicle operator may be coached on behaviors to improve fuel consumption and save fuel. The key to this accelerated learning is the type of data collected and the ability to place the collected data in the context of road type, speed limits, weather and other contextual information which allows for increasingly more accurate loss cost models and better contextual information for the consumer. The challenge for regulatory bodies is to balance the desire for privacy protection against the value of allowing consumers to voluntarily join programs where their data can inform and improve models which will lead to the ability to coach for behavior change that will lower loss costs, improve fuel consumption and save lives.

Tower Watson's DriveAbility®

Towers Watson has taken a leadership role globally in assisting with development of UBI programs. Beginning in 2008, Towers Watson has worked with more than 45 clients on six continents in the development and operation of the clients' UBI programs. These engagements have taken a number of different approaches, from day-long workshops to introduce company management to the concepts of UBI, to long-term engagements in which Towers Watson manages all telematics data for the insurer and provides DriveAbility vehicle operation scores for each enrolled vehicle.

The data management and scoring service includes analytics to create UBI models and file those models for approval with the regulatory authorities for the clients' geographic jurisdictions of operation. These filings include all actuarial support. The DriveAbility score is based on an expected pure premium relativity, but it is up to each individual subscribing insurer to file their own proprietary rates using the DriveAbility score.

One of the biggest challenges for Towers Watson's clients is the collection of sufficient vehicle operation data to develop a predictive model of vehicle operation correlated with expected loss

costs. The DriveAbility database, which supports Towers Watson's UBI services, includes all of the telematics data from a group of global insurers. Each insurer contributes all of its telematics data and all of the associated policy and loss data for the enrolled vehicles. Each insurer has access to its own data, but only Towers Watson has access to the combined data, which is not shared with any of the contributing companies.

This telematics data includes very granular information collected on a second-by-second basis for each trip, and is linked with the insured policy and loss data for the UBI-enrolled vehicles. The database also includes associated external data such as maps, road type and weather matched with each vehicle and trip. The loss data is linked to the precise point in each trip where the loss occurred. This matching allows Towers Watson to perform unique analytics in which all vehicle operation behaviors can be assessed during trips leading up to an accident, and commonly observed behaviors can be noted for testing in each update of the scoring model. Through this method, Towers Watson has identified a number of vehicle operation characteristics which are not only highly correlated with losses, but are actually believed to be causative of losses.

Using actual vehicle operation has been proven to be significantly more predictive of expected loss costs than proxy variables commonly employed for auto insurance ratemaking. Towers Watson's DriveAbility score has been demonstrated to be at least three times more predictive than any rating variable previously employed when comparing the difference in loss costs between the riskiest decile of insured vehicles and the safest decile.

Towers Watson's goal is to not only produce scores which are highly predictive of future losses, but also to develop driver feedback programs which can improve driving behavior and lead to significantly safer roadways. Evidence exists in Canada, the UK and the U.S. that driving behavior is improved through the operation of UBI programs. This will only become more successful as better feedback and coaching is developed that identifies the most risky behaviors and those behaviors that are most controllable by the insured.

The Insurance Market for Telematics UBI

The Insurance Market for Telematics UBI

By NAIC Staff

Introduction

Auto insurance markets are changing rapidly. In the past, auto insurance policies were rated on a small number of rating factors, with each having a multiplier effect on the overall rate. A policyholder might receive a quote based on the fact the person was a 30-year-old married woman who drives less than 15,000 miles per year with the car garaged in a particular ZIP Code.

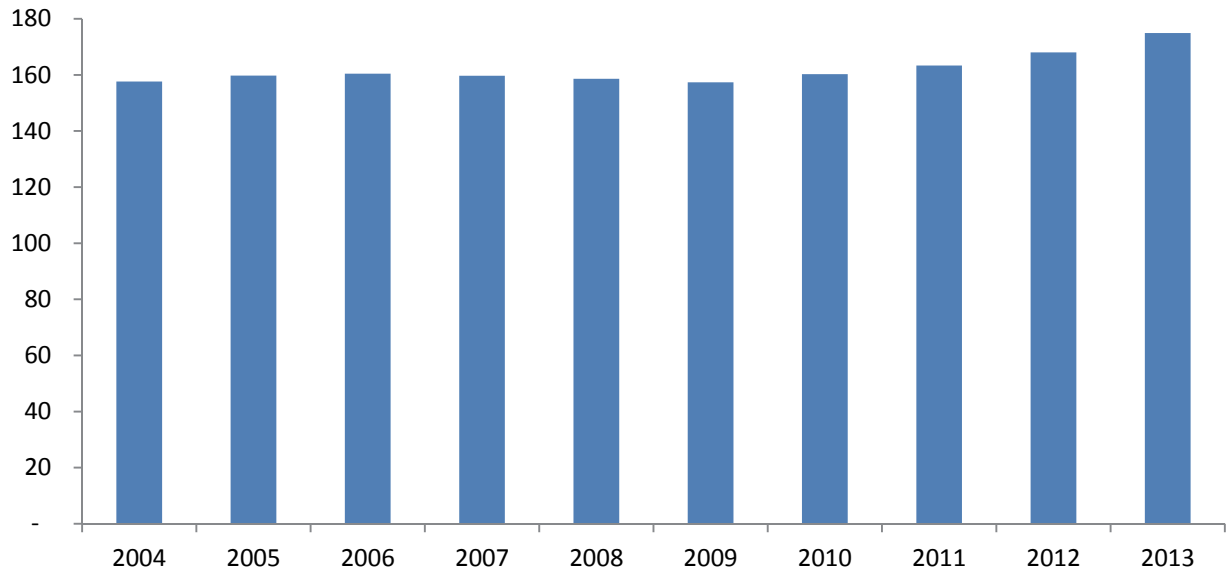
As technology has evolved and as the price of data has fallen, rates can now be produced through millions of variables in a multivariate analysis. Factors can include gender, age, driving experience, marital status, education, occupation, credit score, multi-policy discounts, location, annual mileage, vehicle use, lapse in coverage and type of vehicle, just to name a few.

As illustrated in the previous sections of this study, the next step in the evolution of auto insurance rating is here via telematics. Through telematics, risks can be rated on an individual basis. An insurer can now technically identify, measure and rate a particular person's driving ability. An insurer can now know when, where, at what speed and how a person drives—i.e., the number of hard brakes, sharp turns and other potentially dangerous maneuvers.

Current State of Personal Auto Insurance Market

The auto insurance market is the largest insurance market segment in the U.S., and it is fiercely competitive, as insurers strive to attract the more profitable low-risk drivers. Hundreds of auto insurance writers are essentially competing for the same premium base, which is not growing. As vehicles and roads are becoming safer, premiums are falling. In such an environment, the opportunity for growth appears to be limited. Total premiums in the private passenger auto insurance market (liability and physical damage) have only grown from $158 billion to $175 billion in the last 10 years (Figure 1.) Over this period, the market has not even kept up with inflation. For some large insurers showing strong growth, most of the growth is primarily a result of increasing their market share. The stagnant growth in a competitive market makes the attraction, retention and accurate rating of policyholders all the more important, and any tools that can help achieve these goals are immensely valuable.

Figure 1: Total Private Passenger Auto Direct Written Premiums (2004-2013 in $Billions)
Source: NAIC



The Telematics Market within Auto Insurance

The telematics UBI market is still a fast-growing developing market, with insurers trying to compete for a bigger slice of the $170 billion auto insurance market. Although the use of telematics has accelerated in recent years, it is difficult to estimate with any accuracy the overall size of the market. A July 2014 Towers Watson survey found that 8.5 percent of consumers had a UBI policy in force in the prior 17 months, up from 4.5 percent in February 2013. Most large auto insurers, with the exception of GEICO, have publicly discussed their venture into the world of UBI for underwriting and rating purposes. According to SMA Research, approximately 36 percent of all auto insurance carriers are expected to use telematics UBI by 2020.[35] Based on the CIPR survey of state insurance departments (see appendix), in all but five jurisdictions—California, New Mexico, Puerto Rico, Virgin Islands and Guam—insurers currently offer telematics UBI policies. In 23 states, there are more than five insurance companies active in the telematics UBI market.

Progressive appears to be the most active and largest auto writer using telematics-based UBI, with its well-known and heavily advertised Snapshot program, currently available in 45 states and Washington, DC. Progressive was among the very early adopters of the telematics technology introducing its UBI program in March 2011. Progressive has an estimated $2 billion

[35] SMA Research. 2013. "How Do Insurers and Agents Think Telematics Will Impact the Industry." SMA, Insurance Telematics ExecuSummit, Nov. 6, 2013.

in premiums and 2 million customers in its Snapshot auto insurance program. If the Snapshot program were a stand-alone insurer, it would be a top 15 writer of private passenger auto insurance by itself.

The discount offered to drivers who enroll in the Snapshot program is based in the first 30 days and applied for the remainder of the policy's term, typically six months. The discount set in the first six months continues to apply as long as nothing else changes. Policyholders who tend to drive less can get discounts on their premiums up to 30 percent, according to Progressive. Premiums can only be discounted and cannot be negatively affected by participants' driving behavior data.[36]

Although telematics was pioneered by Progressive, currently more than half of the major insurers in the U.S. have an active telematics UBI program, and several others are conducting market trials for their own UBI offerings.[37] Towers Watson notes U.S. insurers, representing close to 75 percent of the auto insurance market, have telematics programs or are currently active in preparing to deploy them.[38] Frost & Sullivan projects telematics UBI activations in the U.S. market will increase from 137,000 in 2010 to 1.1 million by 2017, a compound annual growth rate of 34.7 percent.[39] The major providers of telematics solutions wrote approximately $79 billion in total auto insurance in 2013 (includes traditional as well as telematics UBI policies) or about 45 percent of the aggregate industry premiums written (Figure 2.)

[39] Frost & Sullivan. 2011. "Strategic Analysis of North American Market for Telematics-enabled Usage-based Insurance." March 9, 2011.

Allstate launched its own telematics solution, Drivewise, in January 2011, and it is currently available in 28 states. The discount applied is based on the driver's performance rating, which is calculated on a rolling basis using 12 months of driving information. Policyholders enrolling in the program receive an automatic discount of 10 percent with additional savings calculated and applied every six months, with total discount of up 30 percent.[40]

In 2012, State Farm expanded its Drive Safe & Save initiative adding a telematics solution called In-Drive. Travelers' IntelliDrive telematics UBI solution was launched in October 2011 and it is currently available in eight states. According to State Farm, drivers initially receive an automatic five percent discount for signing up and subsequently they may earn discounts of up to 50 percent. The discounts are calculated based on 30-day monitoring periods with premiums adjusted at renewal every six months. State Farm states that while not everyone is guaranteed a discount, which is contingent on drivers' monitored behavior, no policyholder should see an increase in premiums after participating in the program, except if they already receive a low-mileage discount (less than 7,500 miles annually) and record an excess of that.[41]

The Hartford also offers its own telematics device called TrueLane, which was launched as a pilot in 2012 and is currently available in 34 states. Instead, TrueLane uses telematics to get a clear picture of policyholders' driving habits and adjusts their rates accordingly. TrueLane can potentially save policyholders up to 25 percent on their auto insurance premium. [42]

National General offers a Pay-As-You-Go insurance program to OnStar subscribers, with discounts exclusively based on mileage driven and confirmed by the OnStar vehicle diagnostics reports. The National General OnStar program is currently available in 35 states. Policyholders can get discounts ranging from 7 percent to 54 percent depending on how many miles they drive per year, with 15,000 being the maximum allowed.[43]

Nationwide SmartRide uses a plug-in telematics device to monitor and collect data and offers discounts based on driving behavior data like some of its competitors. Participants receive an immediate 5 percent for signing up, and then based on their data, they can qualify for discounts up to 30 percent. Similar to the competition, participation in the SmartRide will not negatively affect premiums.[44]

Insurers who adopted telematics early on gained a great competitive advantage as they were able to not only increase their market share by offering better pricing and services, but also win consumers' loyalty. In a new segment of the market, particularly one based on a game-changing technological innovation, such as telematics, retaining consumers is a less costly proposition than acquiring them. Having telematics UBI in their business mix can be a powerful tool in attracting new consumers as well as retaining them. Insurers are keenly aware that the first telematics device consumers install will most likely be their last, and they will almost certainly remain with their existing carrier as technology evolves.

By deploying telematics programs, insurers can provide discounted coverage underwritten on the risk consumers personally pose, thanks to the accumulated data on their driving behavior. According to consumer research by LexisNexis, 36 percent of insurance consumers would consider switching insurance companies in order to participate in a telematics PAYD UBI program if they are offered discounts of 10 percent as rewards for safe and better driving behavior.[45] Leading auto insurers assert using telematics UBI can save consumers 10 percent to 15 percent on their premiums and could soon increase to 30 percent based on accumulated data on their driving behavior and car usage.[46] Discounts are particularly important to lower-income drivers, whose insurance premiums are often higher than their car loan payments despite their clean driving record.[47] Additionally, to further differentiate themselves from other insurers, telematics UBI carriers can enhance their consumers' experience with a number of value-added features tied to their telematics program.

Competing insurers entering the market later are placed at a serious disadvantage because they lack the valuable large and statistically credible UBI data sets to lure existing customers away from their insurers with better pricing. Also, late adopters may end up competing with each other for a shallower pool of riskier drivers.

Consumer Acceptance

One of the biggest and most obvious challenges to telematics adoption in the auto insurance world is the degree to which consumers are ready to accept the product. Recent surveys have shown a majority of auto insurance policyholders are at least open to the idea of telematics. A January 2014 survey by Deloitte found more than 25 percent of respondents would allow monitoring of their driving without any minimum discount in return. About the same percentage of people were comfortable with the use of telematics if the premium discount was

high enough. Less than half actually said they would not want their driving monitored regardless of any savings. The younger consumers seem to be more receptive to the idea. Nearly two-thirds of those in their 20s were receptive to telematics, compared to 44 percent of those over 60.

Ongoing Value

Auto insurers can attract new customers by enticing them with not just lower premiums, but also add-on services. These include immediate feedback on driving, alerts related to road or weather conditions, tracking or locating stolen vehicles, roadside assistance, or monitoring or geo-fencing youth drivers. Several consumer preference studies indicate consumers have a strong desire for ancillary services, such as vehicle maintenance reports, fuel management and concierge services. Insurers offering these value-added services have the potential to increase customer satisfaction, add new revenue streams and differentiate themselves from other insurers. Once policyholders become used to an insurer's ancillary benefits, they are less likely to move to another carrier.

There has been a great deal of focus recently on the gamification or the application of gaming concepts to a broader commercial experience. Policyholders become active participants in safe driving as they earn rewards and compete against friends or others in driving more safely or driving less and being more green. (See the Benefits section of this study for more details.) Policyholders will drive less and drive more safely in order to get instant feedback and feel not just a sense of pride, victory or accomplishment, but win actual tangible prizes or reductions in premium. To many policyholders, the customer experience goes from being one of paying a premium and getting nothing in return to one of competition, interaction and fun. Like the add-on services, these policyholders find value in the whole experience and are more loyal customers.

How Telematics Can Change the Auto Insurance Industry

The use of telematics has already changed the industry, and it has the possibility of revolutionizing the industry. As the population becomes more accepting of technology and as the generation that has grown up surrounded by technology in their everyday life grows, it is likely that the percentage of policyholders ready to adopt telematics will increase dramatically.

Traditional rating factors tend to be proxies for risk. The idea of telematics is to actually measure risk on an individual level. Recently, actual mileage driven has been added to the more traditional factors such as age, gender and experience. Now telematics promises to add even more accurate factors to the equation by measuring actual driving behavior through events such as hard breaking or swerving. Ultimately, an insurer will measure how a car is driving as well as the situation, such as time of day and weather and traffic conditions. Technology, due to

advancements and reductions in price, allows insurers to directly measure factors that determine risk. By using UBI rating factors instead of traditional rating proxies, insurers could offer an 80 percent discount on the best drivers and still be profitable.[48] The competitive advantage gained by insurers with a telematics UBI program over non-UBI insurers is enormous, especially considering that even late adopters may not be able to catch up due to adverse selection.

In telematics' infancy and in the near future, it is likely that insurers actively pushing their telematics programs will attract good risks, partly by promising discounts. It makes sense that someone who drives a lot, at unusual times and unsafely probably will not sign up for these programs. The early adopters will bring in good drivers and can rate them at fairly cheap prices. As the use of telematics grows, companies will have to include both increases and decreases to rates in order to avoid adverse selection. More precise pricing will reduce or eliminate cross subsidies. Currently risk characteristics grouped together in the process of risk classification are priced on an average, so some individual risks are above the average and some are below.

As detailed in the Technology section of the study, many large insurers currently have their own telematics programs, usually using their own data, as it has been detailed in the technology section of the study. Medium and small insurers may use consultants or third-party vendors because they do not have the expertise or the vast amount of data needed to have a telematics program. Those companies not rating correctly may be left behind. If a company is overcharging a good risk, it will lose that policyholder to a company with a cheaper, more accurate, rate. If a company is undercharging a bad risk, the company will lose money and not be profitable. Eventually, companies charging inaccurate rates will not be able to survive in the market. There is an incentive for insurers to use the technology because there will be adverse selection where riskier drivers may be more likely to use insurers not using a telematics system.

The use of telematics has the potential to reduce insurers' reliance on controversial rating factors. There are factors—such as credit scoring, occupation and education—that are used by many insurers but are not intuitive to policyholders why they are risk factors for auto insurance. Consumer advocates believe the use of these factors disproportionately harms certain disadvantaged classes. The use of telematics may eventually reduce the need for these factors. If a person's true driving behavior can be observed, measured and compared to others, insurers will be able to rate more accurately and may not need to rely upon credit scores, occupation, education or other traditional risk classification factors. Ultimately, what matters to an auto insurer is how a policyholder drives and how to accurately price for that risk.

[48] Verisk Telematics. 2014. "Telematics Rivals the Traditional." Sept. 3, 2014.

The use of telematics could have another dramatic effect on the industry by causing drivers to drive more safely. The degree to which an insurer can influence its policyholders' driving behavior is heavily dependent on the sophistication of its telematics program and its communication with drivers. Drivers receiving feedback on their driving behavior will be more likely to try to improve their behavior. They will wish to improve the behavior in order to be safer, and they will be incentivized to do so through lower premiums offered by their insurer. This is expected to reduce losses as well as rates. According to a study by the Brookings Institute, reducing miles driven correlates to fewer accidents and lower claims costs.[49] Thus, tying premium to miles driven encourages drivers to limit their vehicle use, lowering insurers' associated loss costs.

Policyholders will know that they actually have control over their rates. Previously, a policyholder had little control because rates were based on factors such as location, gender, age or credit score. These factors are difficult, or in some cases impossible, to change. Now a person can actually drive less or drive more safely in order to receive a better score and, therefore, reduced rates.

Obstacles to Growth

Insurers are currently exploring technologies that would allow mobile devices like cell phones to transmit the telematics data as discussed in the technology section. Challenges include battery usage and knowing whether the mobile phone is with a driver or passenger. If solutions can be found, it is promising as insurers would save the cost of purchasing monitoring devices for each user. With current monitoring devices usually placed on the car for only a limited time, the increasing use of a mobile device would improve data collection because it stays with the policyholder indefinitely through the term of the policy or life cycle of the customer. The potential for increased amounts of data is also critical to an insurer in order to create more accurate rating outcomes.

A potential obstacle to the expansion of the telematics UBI program could be Progressive's decision to patent telematics as strictly a proprietary technology, obliging other insurers to license the technology if they wish to market similar and competing UBI products. Recently, several of the patents were cancelled by the U.S. Patent Trial and Appeal Board, and while the decision may be a controversial opinion not shared by patent-holders, it could lead to a faster and more widespread adoption of the technology.[50]

[49] Jason E. Bordoff and Pascal J. Noel (2008), "Pay-As-You-Drive Auto Insurance: A Simple Way to Reduce Driving-Related Harms and Increase Equity," *The Brookings Institution.*

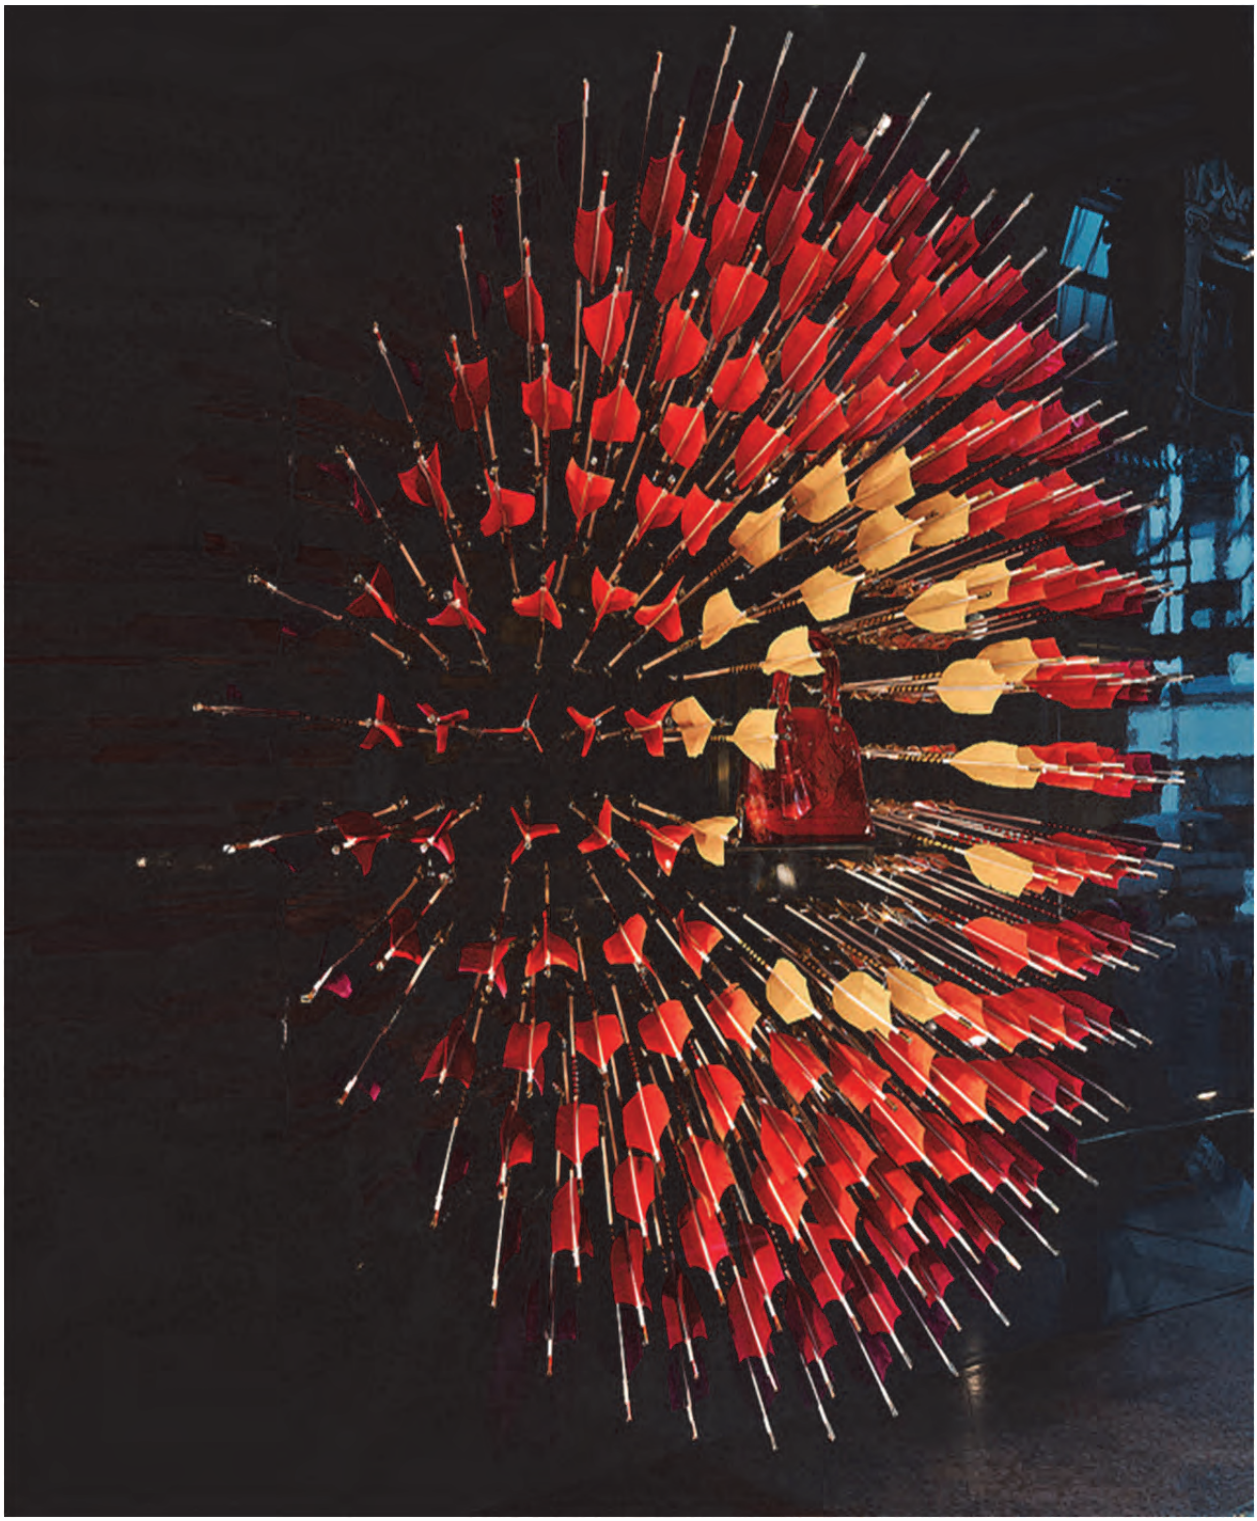
[50] Insurance Networking News (Online.) 2014. "Progressive UBI Patents Cancelled." March 27, 2014.

A further hindrance to the growth of the market is if a driver leaves an insurer with which he or she had a telematics device installed, the driving behavior data is property of the insurer and cannot be transferred to a new carrier to help price a new policy. One idea floating through the industry is the creation of a statistical agent to collect centralized telematics data, similar to what exists with credit scores for insurance. This would allow customers to shop around. A centralized agent would allow insurers to have additional amounts of information about a driver's driving behavior prior to becoming insured. The logistics behind this idea are not developed, but portability could dramatically change telematics.

The use of telematics may also introduce concerns about affordability if territorial rating is used, which is likely to harm those in economically disadvantaged neighborhoods. Similarly, older cars may drive differently and lead to higher rates. Telematics introduces the possibility of using the devise for claim adjusting. Consumers wonder if the decision to use a telematics device will be forced upon them by the insurer. Other concerns include whether telematics will be transparent so that drivers know what is being measured and have an opportunity to improve these characteristics and then see the resulting lower rate. If drivers have a full understanding of what metrics make up their telematics score and how to improve that score, they will have the tools to take action. This will allow drivers to improve their insurance rates by improving their score by either driving less or driving more carefully or in less dangerous locations or times. This reduces risk for all.

If telematics can be shown to reduce risks and encourage people to drive less or drive more safely, it is likely to have fairly widespread support from all parties. As an example, individuals receive insurance discounts for smoke alarms or seat belts, which encourages them to use those devices.

Applying Behavioral Economics Concepts in Designing PAYDAYS UBI Products



Applying Behavioral Economics Concepts in Designing PAYDAYS UBI Products

By Allen Greenberg, Federal Highway Administration

Introduction

Behavioral economics, a discipline combining economics and psychology to explain consumer decision making, offers insights on marketing and designing telematics PAYDAYS UBI products to maximize profitability, consumer acceptance and public benefits. Through behavioral economics, one can determine how different product designs and marketing could strongly influence both consumer acceptance of the product and how effectively the product encourages consumers to curb their driving.

By converting fixed insurance costs to per-mile or per-minute-of-driving charges, PAYDAYS insurance encourages voluntary reductions in driving that reduce congestion, air pollution and crashes, as it was discussed in the Benefits section of the study. General behavioral economics research findings strongly suggest that different product offerings among the myriad of PAYDAYS insurance product possibilities would result in substantial differences in vehicle miles traveled (VMT) and in the magnitude of related benefits. This section analyzes how PAYDAYS insurance plans are designed to attract and retain customers, and discourage driving. A pilot experiment is proposed to help illuminate consumer response to this kind of insurance program, and improve the application of behavioral economics principles to the design of PAYDAYS insurance products.

General Consumer Decision-Making

As a group, consumers avoid making decisions they see as complex, and if they cannot avoid such decisions, they often apply only minimal mental effort to the task. They rarely reconsider past decisions that continue to influence their current circumstances. In consideration of complex products, such as of telematics PAYDAYS insurance, this bodes ill for consumer adoption.

While consumers consider economic factors beyond just product price in their decision-making, such factors generally tend to have relatively little influence. Consumers typically formulate very rough budgets in their heads that cover short periods of time, with little economic concern for the long term. They consider savings opportunities only where potential savings appear to be significant relative to price, and they look for deals that make sense to them and appear fair. Consumers also tend to be biased toward accepting a default option even if better non-default

options are readily available. All this is especially true in markets where the products are complex.

Consumers are most likely to shop for new insurance when premiums rise or when changes occur in their household (the addition of a driver), circumstances (financial, employment, etc.) or vehicle (purchasing or leasing a vehicle). Financial pressure is a major motivator for changing insurance policies. For example, from October 2008 to March 2009, a period of sharp decline in the economy, 25 percent of surveyed car insurance shoppers reduced their insurance coverage, while 31 percent increased their deductibles. During this period, quotes for coverage on the website *www.Insurance.com* dropped by an average $100.[51]

Consumers readily categorize spending decisions into different budgets, such as food and transportation, and they tend to calculate trade-offs within each category without regard to changes in other budget categories.[52] Put another way, consumers may view spending related to driving within the broader context of their predetermined car insurance and travel budgets. This suggests advocates of PAYDAYS UBI seeking reduced VMT should persuade consumers they can actually reduce their car insurance budget relative to its size under traditional insurance.

Consumers generally appear to be more sensitive to their immediate cash flow needs than to longer term budgets (although this is less true for affluent consumers.) For example, when making car-buying or leasing decisions, the average consumer is much more sensitive to the size of the monthly payment than to the total number of monthly payments.[53] Because of consumers' cash-flow concerns, PAYDAYS UBI will be more effective in encouraging reduced driving if billing is frequent—thus reminding PAYDAYS UBI customers that they incur insurance costs every time they drive.

As noted above, consumers concern themselves with opportunities to save only when the potential savings seem significant relative to the price. Thus, if PAYDAYS insurance is sold in use-or-lose packets of 2,500 miles—about two months-worth for the average American driver—this may do little to discourage short and frequent trips. However, such packets would be likely to influence longer-term decisions, such as whether to join a carpool, purchase a commuter rail pass, or try to telecommute a couple of days per week. Conversely, two-week packets of PAYDAYS insurance might also encourage buyers to avoid or consolidate individual trips, while longer-term packets probably would not.

Marketing PAYDAYS UBI as a better and fairer deal could help it gain acceptance. Consumers generally are very sensitive to the perceived fairness of the deal (transaction utility), and they are much more willing to spend on what seems like a good deal, regardless of the purely economic value they may derive from using a particular product or service.

Consumers are much more likely to choose a default option than an alternative, even if choosing the alternative involves no more effort than checking a box on a form. Thus, for PAYDAYS UBI to become highly successful, insurers should start offering it as the default. This propensity to pick the default has been shown in a variety of markets, including automobile insurance. In Pennsylvania, for example, where full-tort insurance coverage is the default option, more than half of drivers sign up while in New Jersey; where it is not, fewer than one in 12 consumers sign up.[54]

Consumer Responses to Financial Gains and Losses

One of the major lessons from behavioral economics, derived from microeconomics, is that consumers discount the future generally preferring present value far more than a higher value they could gain in the future. This is central in the design of PAYDAYS UBI pricing schemes in order to get the greatest reduction in mileage. Consumers will drive fewer miles if they have to pay for them now than if they are offered a rebate for miles not driven in the future.

Unfortunately, virtually all U.S. pilot projects testing consumer response to mileage pricing have not been designed to take advantage of loss aversion. These pilots give participants bank accounts which are incrementally depleted for each mile driven, with the money remaining at the pilot's end given to the participant. People perceive money that is given to them as a windfall, rather than as their own hard-earned cash that they saved through driving less, and they would, therefore, value it commensurately less. Thus, these pilot studies were far less effective at reducing miles driven than they would have been had there been direct mileage pricing.

Similarly, various PAYDAYS UBI policies in the marketplace are framed as offering low-mileage discounts instead of basing their premiums directly on mileage. This may result in comparatively higher mileage than if the products were to be framed the other way.

[54] Leonhardt, David. 2005. "Why Do So Many Consumers Choose Frills When Plain-Old Will Do? Pure Laziness," *The New York Times*, Business, New York, July 11, 2005.

Payment Frequency and Payment Method Affecting Propensity to Conserve

The timing and frequency of payments have a profound effect on the propensity to conserve. Part of this stems from peoples' general aversion to decision-making, especially regarding complex financial decisions whose consequences are not immediate and/or transparent. Thus, if PAYDAYS insurance could be purchased only in use-it-or-lose-it buckets of 2,500 miles, consumers would not worry about the financial consequences of short trips until they approach the bucket's mileage limit. On the other hand, with frequent payments, people would be acutely aware that their driving was costing them money, and they would make a conscious effort to conserve miles.

The form of payment also influences decision making. People tend to spend more freely when paying by credit card than by cash or check, because credit cards reduce the frequency of the pain of paying to once monthly and the impact of individual charges are somewhat masked by the size of the overall bill.[55]

Perspectives on Price Bundling

Consumers may prefer all-inclusive pricing over pay-per-use pricing schemes for a variety of reasons. People love to feel that they are getting something for nothing, even if the freebie requires paying far more for what the freebie is bundled with than what that something is really worth.[56] Nevertheless, unbundling, or pay-per-use pricing, has been shown to be an effective strategy in the marketplace if deployed with particular attention to consumer concerns, needs and desires.

Consumers often prefer buying in bundles partly because this way, they do not need to worry about usage. A number of the reasons consumers hesitate to accept pay-per-use schemes, which also apply to UBI, include: 1) difficulty to estimate usage costs; 2) laziness regarding tracking expenses; and 3) excessive concern they will pay a lot for those few times when they need to take longer trips, combined with undervaluing the savings that will accrue from driving less overall. Telecom industry research shows most consumers are ignorant of the price of individual phone calls, and may over-estimate the cost by a factor of three. Since bundled products seem to come with more price certainty than unbundled products, consumers demonstrate a general preference for bundled products. This is especially the case since "most

[55] Thaler, Richard H. 1999. "Mental Accounting Matters," *Journal of Behavioral Decision Making*, Vol. 12, John Wiley & Sons, Hoboken.
[56] Anderson, Chris. 2009. "Free: The Future of a Radical Price." Hyperion Books, New York.

people are risk averse and, other things being equal, will choose an option with a known price over one with an uncertain price."[57]

Not all purchasing in bundles is done by consumers to avoid the risk of paying more with pay-per-use pricing. Purchasing in bundles (e.g., all-you-can-use monthly gym memberships instead of single-use one-day passes) has been shown to be especially prevalent with health club memberships, because consumers typically overestimate how much they will use their memberships and also want to motivate themselves to use them more.[58] In the context of PAYDAYS UBI plans, this overestimation of personal discipline suggests that consumers see UBI pricing as offering even greater savings than they would typically ultimately realize. Thus, if consumers understand the benefits of driving less, and are optimistic about their ability to do so, UBI seems like a very attractive deal.

And while many consumers may still be reluctant to sign up for PAYDAYS—probably due to fear of the unknown—attracting them with a trial run can make the unfamiliar familiar, with positive results. Participants in a Minnesota PAYDAYS leasing simulation pilot—entailing a reduced fixed monthly vehicle charge in combination with a variable per-mile charge—who were randomly assigned the pricing treatment were substantially more likely than control group participants to be interested in securing a similar leasing arrangement and PAYDAYS UBI plans after pilot completion.[59]

The preference for purchasing some products in bundles is not boundless, and a maximum monthly charge might be useful in encouraging acceptance of UBI plans. Among six separate PAYDAYS focus groups observed in Minnesota, participants showed substantial preference for scenarios where the maximum monthly lease payment was capped, even though mileage charges in excess of caps were rolled into subsequent bills. The latter presumably would keep consumers from driving excessively after breaching the mileage corresponding to the maximum monthly payment.

Surveys associated with the Minnesota leasing pilot showed that interest in leasing tripled (from 6% to 18%) as the top choice of respondents for acquiring their next vehicle when new leasing plans were presented that combined a reduced fixed monthly charge and a variable mileage charge. When two variants of this new type of lease were presented, two-thirds

[57] Bonsall, Peter, et al. 2004. "Road User Charging—Pricing Structures." Final Report for the Department for Transport on PPAD 99/159/002. University of Leeds, England, September 2004.
[58] DellaVigna, Stefano and Malmendier, Ulrike. 2004. "Contract Design and Self-Control: Theory and Evidence," *The Quarterly Journal of Economics*, Vol. 119, Issue 2, MIT Press, Cambridge.
[59] Minnesota Department of Transportation. 2005. "Pay-As-You-Drive Experiment Findings: Mileage-Based User Fee Demonstration Project Technical Memorandum," Draft prepared by Cambridge Systematics, Inc., Aug. 29, 2005.

preferred the option with the higher per-mile price and lower fixed-monthly price over the reverse.[60]

But introducing too many pricing schemes at once could be risky by creating confusion and discouraging consumers from trying something new. As the market for cell phone services suggest, however, PAYDAYS UBI could ultimately be offered by different companies in many different forms, but behavioral economics suggest that individual companies would be wise not to confuse customers with too many different offerings.

A number of surveys and real-world marketing experiences of insurance companies show how consumers tend to react to bundled PAYDAYS insurance versus traditional insurance. The survey in Minnesota found that 32% of respondents would prefer PAYDAYS UBI pricing over having to pay traditional insurance premiums.[61]

A 2010 comScore survey showed similar results about consumers' growing desire for unbundled PAYDAYS UBI products, with 20% of respondents claiming to have heard of the term "pay-as-you-drive insurance" versus 17% in 2009. More significantly, of those who had heard of it, 31% said that they would definitely purchase it in 2010 versus only 17% in 2009. Also, while 18% of 2009 respondents who had heard of it said that they definitely would not purchase it, only 11% said that in 2010.[62]

Optimal Customer Profile and PAYDAYS UBI Product

Once PAYDAYS UBI programs become widely available, the human biases and foibles described above—especially the aversion to decision-making—suggest adoption may be somewhat slow, at least absent superb product design and marketing efforts. Nonetheless, behavioral economics can help guide selection of product design features to enhance UBI's attractiveness to the most promising segments of the insurers' customer base.

Tables at the end of this document profile the most receptive potential customers (Table 1), identify marketing features to appeal to such customers (Table 2), and specify product characteristics that would achieve the highest possible mileage reductions among these customers (Table 3).

[60] Minnesota Department of Transportation. 2004. "Market Assessment Survey Results: Mileage Based User Fee Demonstration Project." Prepared by Cambridge Systematics, Inc., with MarketLineResearch, St. Paul, June 2004.

Table 1: Targeting the Most Receptive Potential PAYDAYS UBI Insurance Customers

Customer Attribute	Effect of Attribute on Mileage Reductions	Boosting Mileage Reductions Where Feasible
Low mileage	This would yield smaller mileage reductions than with higher-mileage drivers.	"Skimming" of profitable low-mileage drivers would in time force traditional time-based policy rates to rise and thereby expand the PAYDAYS insurance market beyond low-mileage drivers.
High premiums	Large reductions would result because of high per-mile savings.	
Low income	Because low-income drivers are the most price-sensitive, large driving reductions would result.	
Urban	The relatively higher number of transportation and home-delivery options would suggest large driving reductions.	Consider subsidizing customer transit passes to encourage transit use.
Environmentalists	Large driving reductions would be expected.	Reinforce environmental benefits of reduced driving in communications.
Current transit, vanpool, carpool and non-motorized commuters	Potential peak-period mileage reductions would be much lower than for current drive-alone commuters.	Work with Transportation Management Associations and service providers to co-market PAYDAYS insurance to both existing and potential alternative transportation customers.
Vehicle lessees	A positive effect on reductions was found in Minnesota, most likely because vehicle lessees are more accustomed than others to managing their mileage (Gourville, 2004).	Work with vehicle leasing entities to allow customer rebates, reflective of increased residual value, for vehicles returned from lease with lower than allowable mileage.
Owners of multiple vehicles driven infrequently, including car collectors and do-it-yourself mechanics	Pricing of low-mileage vehicles would result in less per-vehicle mileage reductions than pricing of higher mileage vehicles. Nevertheless, households with many vehicles tend to drive more than other households, even if mileage on individual vehicles may be low.	

Table 2: Marketing PAYDAYS UBI Products

Product or Marketing Attribute	Effect of Attribute on Mileage Reductions	Boosting Mileage Reductions Where Feasible
Default option (but with traditional time-based policy readily available)	Has the potential to boost participation substantially if company already has a large customer-base.	
Limited, free miles of PAYD UBI provided upfront with the purchase of a transit pass, car sharing membership, or commuter bicycle	Should be negligible as almost all drivers would need to purchase additional miles because the initial provision would be small.	
Simple pricing (but algorithm to determine a policyholder's price need not be)	Unknown.	
Savings	Customers who continue to focus on overall premium savings after switching to PAYD insurance would be less motivated to reduce mileage than those focusing on per-mile or per-minute costs.	After customers switch to PAYDAYS insurance, immediately refocus communications to emphasize cost per mile or minute. When marketing policy renewal, focus back onto total savings.
Control over total premiums	There should be some positive effect.	
Low premium payments with some timing discretion	Unknown.	
Cap maximum premium billed	While this may be critical to some to accept PAYD insurance, it reduces disincentives for high mileage.	Charges in excess of cap need not generally be forgiven but rather rolled over into subsequent bills until paid off.
Promise to compare after-the-fact costs with traditional premium	Unknown, but consumers are willing to take greater financial risks (e.g., accepting a new insurance product) if they know they will see a later cost comparison with the alternative not chosen (Gourville, 2002).	
Societal benefits (model after hybrid car marketing)	Some additional reductions among environmentalists and other socially conscious customers may occur.	

Table 3: Maximizing Mileage Reductions across Customers

Strategy	Effect on Customer Acceptance	Improving Customer Acceptance Where Feasible
Direct and transparent per-mile charges (no rebates or requirements to purchase miles in large use-or-lose bundles)	Customers would sometimes like to forget about their per-mile costs and might be reluctant to accept a PAYDAYS UBI product with these price-related attributes.	Avoid focusing on per-mile or per-minute charges until after customer has chosen PAYDAYS insurance. Refocus to total savings and away from per-mile pricing when seeking policy renewal.
Frequent billing emphasizing tangible (check or even cash) as opposed to less tangible (credit card) payment forms		
Reinforce pricing through e-mail reminders and taxi-like in-vehicle meters.		
Negotiate transit pass discounts and matching funds to buy down prices of alternative transportation modes.	Would be very popular, especially in urban and other areas with good transit options.	Engage in joint marketing campaigns with transit providers (e.g., "Wouldn't it be great if your insurance company helped pay for your transit trips? Now it might!")
Provide individualized assistance to customers to reduce driving by identifying alternative transportation, trip consolidation and trip elimination (e.g., through Internet shopping) options.	Would be positively construed generally and potentially very useful to some.	
Establish reasonable driving-reduction goals for participants and provide frequent-flyer-program-like status-related designations and rewards, and "regret lottery" rewards, contingent upon achieving such goals.	Would be positively construed because the only consequence of not achieving a program-established goal would be not receiving an extra reward. Customers who achieve a high status would be expected to be especially loyal.	

Proposed target customers who would benefit most from PAYDAYS UBI pricing include those with the following characteristics: low mileage (can save money right from the start); high premiums (can get substantial discounts with even modest driving reductions); low income (need to save money); urban (have many options to reduce driving); environmentalists (committed to reducing pollution); current transit, vanpool, carpool and non-motorized commuters; vehicle lessees; and owners of multiple vehicles driven infrequently, including car collectors and do-it-yourself mechanics.

A great marketing idea, aimed at likely receptive customers, would be to bundle 100 (irresistibly) free miles of insurance per month (or, for non-car owners, $10 worth of car-sharing or bicycle supplies/repairs per month) with a transit pass. Free miles of insurance could also be offered to those purchasing commuter bicycles and car-sharing memberships (replacing their second vehicle). Such short-lived bundling might encourage recipients of the small amount of already-paid-for PAYDAYS insurance to switch from traditional insurance to PAYDAYS UBI.

Regarding the product itself, PAYDAYS UBI pricing should, as reflected in Table 2, be the default option unless the consumer explicitly chooses standard pricing. Pricing should be clearly explained and simple, with a cap placed on the maximum billable premium, because many consumers will not choose such a product without a cap.[63] Marketing materials should highlight potential personal savings, control over premium size and payment terms, and environmental and other societal benefits.

To maximize mileage reductions, as outlined in Table 3, per-mile or per-minute-of-driving charges should be direct and transparent, and billing should be frequent, with interim pricing reminders sent through e-mail or conveyed via taxi-like meters in the consumer's car, such as have been deployed in the Washington state mileage-pricing pilot that tested pricing alternatives to a fuel tax.[64] Transportation alternatives should be made more appealing through negotiated price discounts for unlimited ride transit passes and by providing individualized assistance in identifying appropriate options.

A major product design issue is whether premium charges and related vehicle monitoring should be based only on miles or driving time, or whether other usage-based factors should be part of the reckoning: time of day of driving, driving style (aggressive vs. calm) and the relative safety of the types of roads driven. Research shows that tracking more factors and incorporating them into premiums improves actuarial accuracy. Rewarding calmer, presumably safer driving would further enhance safety and reduce fuel consumption.

[64] Department of Commerce, State of Washington. 2013. "Washington State Energy Strategy." May 2013.

The main PAYDAYS UBI products' pricing is based, to a degree, on drivers' behavior observed via a telematics device. It has been noted that 90% of drivers view themselves as better than average, suggesting they would be amenable to products which base their rates partially on "how" they drive—e.g., avoiding hard braking and swerving—when compared to others, even if they are really no better than the average driver.[65] In fact, in surveys conducted as part of a pilot that involved the North Central Texas Council of Governments and Progressive Insurance where participants were paid for reducing their driving time and mileage, some said they would like having the quality of their driving monitored as part of determining their discounts because they believed they were better drivers than others even if they were not sure they could cut down their mileage[66]

Designing PAYDAYS Insurance Pilot Projects to Learn More

While it is possible to make theoretical projections of the success of different PAYDAYS UBI programs, in terms of accuracy, these cannot replace pilot studies. Unfortunately, federally funded pilot studies of transportation pricing have sometimes faced practical constraints that have not always enabled them to be ideally designed.

First, it is important to start with what not to do. The studies mentioned above all gave participants a "bank account," a specific sum from which deductions were made for each mile driven. Participants got to keep whatever cash was left in these accounts at the pilot's end. As noted earlier, people perceive such cash as a windfall that they value far less than their own hard-earned dollars, and they, therefore, put far less effort into preserving the windfall by curbing their driving than they would if required to pay outright for each mile driven.

A better design of a pilot program, assuming the commercial product cannot initially be offered in a test environment where before and after data can be collected, would entail providing a stipend up front, instead of the "bank account." Participants would be allowed to spend the stipend whenever and however they choose—conditioned upon signing a contract to complete the pilot which would entail direct per-mile pricing. Behavioral economics has shown once people take mental ownership of such a stipend, which they generally do after a bit of time elapses, but which they never got to do with the "bank accounts," they quickly come to see it as their own, rather than as a windfall. Thus, most participants would discount the importance of their initial stipend and consider money spent related to the pilot to be their own. Of course,

[65] Thaler, Richard H. and Sunstein, Cass R. 2008. "Nudge: Improving Decisions about Health, Wealth, and Happiness." Yale University Press, New Haven.
[66] North Central Texas Council of Governments. 2008. "Pay As You Drive (PAYD) Insurance Pilot Program: Phase 2 Final Report." Prepared by Progressive County Mutual Insurance Company and the North Central Texas Council of Governments.

this might lead some to try to abscond with the stipend without paying all of their incurred per-mile charges, but such risk is often part of high-reward research.

The pilot program should include sufficiently large numbers of urban, suburban and rural households to draw conclusions about responsiveness from each. Households with a range of incomes and insurance premiums should also be included, as should others with limited-mileage leased vehicles. Comprehensive surveys should be administered to participants in order to learn how their views about the need for environmental protection—especially related to driving—and openness to alternative transportation options affects their propensity to reduce their driving distance.

Surveys should also ask participants whether they prefer PAYDAYS UBI or traditional insurance pricing in order to determine how their insurance preferences influence their propensity to curb their driving under PAYDAYS UBI pricing. A good pilot program should include participants with both preferences; a generous stipend can motivate subjects to allow themselves to be assigned randomly to a PAYDAYS UBI group or a control group with a traditional insurance plan. Multiple billing protocols should be tested—perhaps including weekly, monthly, quarterly and semi-annual billing—as should pricing reminder protocols, including regular e-mails and in-vehicle taxi-like meters. Testing the effects of co-marketing transit pass subsidies with PAYDAYS insurance should also be considered. For projects designed to assess PAYDAYS UBI product demand, test groups should include permutations of PAYDAYS UBI that bundle transit passes as well as some free miles of car insurance as sweeteners. The opportunity to buy more miles of insurance should also be provided to test how effective a combined offer of some free miles of insurance with a simple system to purchase additional miles is in persuading drivers to accept PAYDAYS UBI premiums. Finally, some participants should be offered extensive hand holding in mapping out and determining their travel options to see how such information, in concert with the pricing signals, influences their mileage.

An inherent challenge in marketing any new product, no matter how thoughtfully designed, is that customers overvalue the features that they anticipate losing, and undervalue those that they anticipate gaining.[67] This was expressed in the Minnesota PAYDAYS lease focus groups.[68]

Inevitably, some consumers may refuse a PAYDAYS UBI product where payments vary with mileage. Nonetheless, given the interest in PAYDAYS UBI from insurance companies, governments, advocacy groups and consumers, along with the marketplace successes of other

PAYDAYS pricing products such as car-sharing, PAYDAYS UBI is very likely to succeed in the market.

Conclusion

The PAYDAYS UBI pricing strategy promises to benefit individuals, insurance companies and the country as a whole (as discussed in the section of the study dealing with benefits). Many individuals will be able to reduce their insurance premiums by driving less. The overall reduction in driving will cut CO 2 emissions, lessen traffic, improve public health through a reduction in car crashes, improve the nation's balance of payments and reduce the funds that go to hostile, oil-producing countries. All this is widely acknowledged. Moreover, the basic concept can be offered in many forms, each designed to appeal to a different segment of the market, raising the potential market penetration of this revolutionary concept. Insights from behavioral economics will continue to improve the design, marketing and pricing of PAYDAYS UBI products.

Insurer, Consumer and Societal Benefits of Telematics-Based UBI

Insurer, Consumer and Societal Benefits of Telematics-Based UBI

By NAIC Staff

Introduction

Telematics, particularly when paired with UBI, offers many potential benefits for insurers, consumers and society as a whole. Insurers benefit by being able to differentiate their product offerings, enhance pricing, lower claim costs, enhance brand awareness and create new revenue streams. For consumers, telematics-based UBI offers certain advantages over traditional insurance, including the ability to control premiums and receive ancillary benefits. Society as a whole accrues benefits from improved road safety, less road congestion and lower emissions resulting from drivers' focus on vehicle-usage and driving performance.

Insurer Benefits

As previously noted, telematics-based UBI programs benefit insurers most by enabling them to develop more accurate risk assessment and pricing practices. Insurers use collected driving behavior data to achieve a more granular predictor of risk, allowing underwriters to better segment drivers by their risk indicators. Underwriters can then offer premium rates, deductibles and coverage features appropriate for each segment.

Studies show applying variable pricing within existing classifications (such as age, annual mileage and territory) can be a much better pricing model than relying on indirect aggregated classification variables alone. This is because traditional classifications are based on indirect aggregated variables of past trends and events. However, insurers already using this data caution it is important to identify variables which enhance rather than duplicate existing model predictability. Doing so can provide insurers integrating telematics driving behavior data for risk-segmentation with a distinct competitive advantage over other insurers.

Telematics-supported UBI's focus on tying driver behavior to pricing also allows insurers to better control their risk exposure, potentially raising their risk tolerances and allowing them to reach new customer bases. The ability for insurers to charge drivers less for safer driving habits provides a powerful incentive to consumers to improve their driving behaviors in order to lower their premiums. This affords insurers using these programs several competitive advantages. First, insurers can identify their lowest-risk drivers, raising retention levels for preferred risks. Secondly, they are also likely to gain new customers by offering all drivers the opportunity to pay less for their car insurance. This could particularly help reach younger drivers who are generally riskier but more amenable to modifying their behavior in order to earn a discount.

The connected nature of telematics provides insurers with new policyholder communication channels. As illustrated in the insurance market section, insurers can leverage these new channels to increase their interaction with policyholders and build stronger relationships. Insurers also benefit from the potential reduction in loss costs derived from the incentive telematics-based UBI programs provide to modify driving behaviors. According to a study by the Brookings Institute, reducing miles driven correlates to fewer accidents and lower claims costs.[69] Thus, tying premium to miles driven encourages drivers to limit their vehicle use, lowering insurers' associated loss costs.

Additionally, insurers' claims management practices can be enhanced through telematics. More sophisticated telematics programs seamlessly transmit driving data between the insured's vehicle system and the insurer's application platform, increasing the speed and efficiency of claims processing. By analyzing real-time driving data (such as hard breaking, speed and time) during an accident, insurers can more accurately estimating accident damages and reduce fraud and claims disputes. As detailed in the market section of this study, ancillary safety benefits, offered in conjunction with many telematics-based UBI programs, also help insurers to lower accident and vehicle theft related costs by improving accident response time, allowing for stolen vehicles to be tracked and recovered, and monitoring driver safety.

Some studies predict insurers will receive more than 25 percent of their premium revenue, representing $30 billion, from telematics-based insurance programs by 2020.[70] Early adopters would most likely have a competitive advantage due to the rich driving behavior data they have collected for pricing analysis. The proprietary nature of the collected data available to the insurer would make it exceedingly difficult for its competitors who do not have historical driving data to appropriately price their products.

Consumer Benefits

Telematics-based UBI programs offer several potential consumer advantages. As exemplified throughout the study, consumers benefit most by having the ability to reduce their auto insurance costs. Premium reductions can come from insurer participation discounts, improved driving performance or voluntary reductions in mileage driven. Consumers are commonly told they can expect 20-50 percent reductions on their insurance premiums under a telematics-based UBI program.[71] Some insurers offer smaller program participation discounts to encourage drivers to switch to a UBI plan.

[71] Williams, G. (2014, January 13). "Should you try pay-as-you-drive insurance?" *US News and World Report.*

Telematics-based insurance programs are still evolving in the market. However, consumer surveys indicate premium discounts and the ability to control premiums are the primary drivers for consumer adoption of telematics-based UBI programs. According to the 2014 Annual LexisNexis Insurance Telematics study, 78 percent of respondents cited discounts as an incentive to adopt telematics insurance programs.[72] Seventy-four percent cited the ability to control their auto insurance costs as an incentive. This study, which focused on consumers and small fleet managers, found consumer awareness of UBI has plateaued, but demand among those who are aware continues to increase.

Consumers' attraction to these programs also lies in part from the empowerment to control premium costs with variables, which have a common sense link to pricing. Telematics UBI programs are designed to convert the fixed costs, or part of the fixed costs, associated with mileage driven into variable costs, which can then be integrated into existing class and risk categories for premium calculation. This provides consumers with a more transparent and direct link between driving behavior and usage and policy pricing. It also provides for more flexible pricing by allowing consumers to achieve more affordable premiums when needed by reducing the miles they drive or improving driving performance. This can be particularly beneficial to lower-income, urban and multi-car households.

This pricing scheme also eliminates the cross-subsidy between higher risk and lower risk drivers, benefiting the majority of consumers. According to a study done by the Brookings Institute, 63.5 percent of households with insured vehicles would save an average of $496 a year (a 28 percent average reduction in premium) under a fully variable mileage-based UBI program.[73] This savings is primarily from eliminating the subsidy for high mileage drivers, who account for the majority of miles driven within each risk class, but pay a disproportionately lower premium. Eliminating this cross subsidy increases affordability for lower-mileage drivers, many of whom are also lower-income drivers. Those who do not initially save still benefit by having the ability to shrink premiums by changing their driving habits.

Telematics-based UBI programs also benefit consumers by incentivizing them to increase their safety through better driving habits. Safer drivers become even safer and riskier drivers, whose premiums are typically highest, are educated to modify their high risk behavior. This focus on educating and promoting safety can be particularly appealing to households with young divers. According to the 2014 LexisNexis study, young driver programs were cited as one of the most popular value-added features among consumers, with 56 percent of respondents with children

[72] Lukens, D. 2014. "Usage-Based Insurance (UBI) Research Results for Consumer and Small Fleet Markets." LexisNexis.

[73] Jason E. Bordoff and Pascal J. Noel. 2008. "Pay-As-You-Drive Auto Insurance: A Simple Way to Reduce Driving-Related Harms and Increase Equity," The Brookings Institution.

on their policy indicating interest in telematics programs which track and provide feedback on their teens.[74] Parents enjoy the benefit of remaining informed on their young driver's performance behind the wheel of a car. Young drivers have the benefit of receiving educational coaching on riskier driving behaviors, such as rapid acceleration, speeding and sharp turns, tracked through telematics devices.

Like insurers, consumers accrue the benefits of safer driving and reduced usage in lower costs associated with accident frequency and severity. The use of telematics data, such as breaking, vehicle impact and speeding, to assess fault in accidents provides consumers with more efficient claims settlement. Telematics devices also facilitate more continuous communication between drivers and insurers, providing consumers with greater personalized communication. This continuous connection allows consumers to receive value-added benefits, such as faster emergency response time, road-side assistance, stolen vehicle recovery, and fuel efficiency and vehicle maintenance support. These types of value-added services are gaining in popularity and becoming important benefit features for consumers. Interestingly, the 2014 Annual LexisNexis study found bundling value-added services to discounts beyond ten percent was as effective as higher discounts alone.[75]

Societal Benefits

Many of same benefits consumers reap under telematics-based UBI programs provide significant societal benefits as well. Insurance programs linking premium to mileage provide a powerful incentive for consumers to reduce the miles they drive. Fewer miles driven mean fewer cars on the road, less road congestion, lower infrastructure costs, and lower overall fuel consumption and vehicle emissions. Additionally, insurers' use of telematics data to assess driving behaviors and encourage safer driving habits result in fewer accidents, creating safer roads for all citizens.

According to a study done by the Brookings Institute, tying insurance costs directly to miles driven would result in an approximate 8 percent reduction in vehicle miles traveled. The study, which focused on examining data from states with UBI programs, found policyholders were willing to seek out alternative transportation options or forego less valued travel altogether to lower their premiums. Researchers then extrapolated the findings to a national level and found this 8 percent reduction in vehicle miles traveled would result in annual net social benefits of $50 billion to $60 billion, related mainly to reduced accidents and road congestion. (See the section on FHWA UBI funding initiatives for more.) The study also found fewer VMT would

[74] Lukens, D. 2014. "Usage-Based Insurance (UBI) Research Results for Consumer and Small Fleet Markets." *LexisNexis.*
[75] Ibid.

proportionally reduce fuel consumption, but have a greater reduction on carbon emissions when the total refining process is considered. Accordingly, reducing VMT would result in a proportional 8 percent reduction in gasoline consumption, lowering carbon emissions by 126 tons, or 2 percent of the U.S. carbon emissions in 2006. This reduction in fuel consumption would reduce U.S. oil consumption by about 4 percent and potentially help to support U.S. national security policies.

UBI programs also have the potential to increase the number of insured drivers on the road by creating more affordable auto insurance options. Pricing insurance on usage allows consumers to adjust the mileage they drive to fit the amount of auto insurance premium they can afford. This has important implications for lower-income drivers, who may not be able to purchase auto insurance otherwise. The Insurance Research Council (IRC) estimates 29.7 million people, or 12.6 percent of drivers, nationwide were uninsured in 2012. In states with a higher proportion of lower-income drivers, the uninsured motorist rate shoots up to as much as 26 percent.[76] The Brookings Institute study found the average household making less than $52,500 a year save when using an insurance program where premiums are based on miles driven.[77] This savings has a much bigger impact on lower-income households, who spend up to four times more of their income on insurance and other transportation costs than higher-income households.[78] According to the 2013 U.S. Bureau of Labor and Statistics (BLS) Consumer Expenditures Survey, households in the lowest twentieth percent income quintile spent 5.7 percent of their income on vehicle insurance. In contrast, the highest twentieth percent income quintile spent just 0.9 percent of their income on vehicle insurance.

Lower auto insurance premiums and fuel consumption also help lower total transportation costs. As illustrated below, total transportation costs represented 34.4 percent of income for the lowest 20 percent income quintile in 2013. This compares to just 10.4 percent of income for the highest percent income quintile. Similarly, vehicle insurance and gas and motor oil represented 53.4 percent of total transportation costs for the lowest income quintile in 2013. This compares to just 33 percent of total transportation costs for the highest income quintile.

Because pricing insurance on usage and actual driving behaviors eliminates the cross-subsidy between lower-mileage and higher-mileage drivers, it is also more socially equitable. Depending on a state's regulations, insurers may use additional non-driving rating factors in their auto insurance pricing models. Common non-driving factors include marital status, occupation, educational attainment, credit score and homeownership.[79] Although these factors are statistically valid predictors of risk, they have the potential to penalize young drivers, the poor, senior citizens, urban residents and non-homeowners with higher rates. This issue was illustrated in a recent Consumer Federation of America (CFA) study. The study found a Baltimore driver would pay 46% less in premium for minimum liability coverage under one insurer's rating structure if he or she were a married homeowner in a higher-income ZIP Code.[80] This study also found auto premiums exceeded $500 annually in 24 out of 50 of the nation's largest urban areas. Because urban drivers usually drive fewer miles, they would likely pay less in auto insurance premium under an insurance program which based premiums on miles driven.

The potential for telematics PAYD UBI programs to deliver societal benefits is predicated on each program's ability to change consumer behavior. To affect consumer behavior, the link between behavior and pricing must be clearly understandable by consumers. However, the mix of factors used in complex algorithms to derive a driving score can complicate consumers' ability to identify which behaviors affect pricing the most.[81] Consider the drivers whose driving pattern includes too many hard breaks, but they do not know how many fewer breaks he they

need to lower their premium. Additionally, the proprietary nature of these models and the driving data they rely on can make it more difficult for consumers to move their business to a new insurer and continue to reap the benefits of their improved driving. For these reasons, consumers and society will benefit most from more transparent programs.

Consumer Concerns and the Promise of UBI

Consumer Concerns and the Promise of UBI

By Birny Birnbaum,* Executive Director, Center for Economic Justice

Introduction

Telematics-based UBI has the power to transform both auto insurance and auto safety. UBI has long been promoted by consumer advocates as a way to improve auto insurance pricing and to better empower consumers to modify their behavior to reduce accidents and lower auto insurance premiums.

Policy Goals

Consumers see two overriding public policy goals for insurance. First is ensuring that all consumers have access to essential insurance products. Insurance products are essential financial security tools for individual and community economic development and asset preservation. Low-income consumers, who need these products even more than more affluent consumers, must have access to these key products.

Second, insurance is the core institution for loss reduction and risk mitigation. Through the risk classification system, insurance has shown it can promote the reduction of loss of life and property by giving economic feedback to consumers through incentives for less risky behavior and disincentives for more risky behavior.

The insurance system is uniquely positioned to accomplish these goals. Consumer advocates have long pushed for pay-by-the-mile auto insurance, an early form of UBI, as a fairer way of pricing insurance by focusing rating factors on things that a consumer has some control over and, consequently, have the potential to change consumer behavior.

Bright Future for Consumers?

We see a future for telematics UBI that provides real-time feedback to consumers regarding risky driving and, in exchange for sharing the data with insurers, a future of auto insurance premiums based predominantly on miles driven and driving behavior while reducing or eliminating the use of the plethora of currently-used socio-economic rating factors like education, occupation, prior insurance, prior insurance limits, credit scoring, and other proxies for race and income.

* NAIC funded consumer liaison representative.

Unfortunately, the development of UBI and telematics has taken a wrong turn. Instead of using telematics to create transparency in auto insurance pricing and create new opportunities for loss mitigation, insurers have turned telematics into just another black box rating factor, like credit scoring but without even the limited protections afforded consumers for insurers' use of consumer credit information. Our concerns about the current state of telematics include:

- Privacy issues and use and distribution of data by insurers for purposes other than loss mitigation and pricing, including, for example, insurers using information from telematics in claim settlements when helpful to insurers but not making the data available to consumers when helpful to consumers.

- Disproportionate impact of offer and sale of UBI against consumers in low- and moderate-income and minority communities.

- Failure to achieve meaningful loss mitigation because of a black box approach by insurers of collecting data for rating.

- Use of telematics data as merely another data mining exercise following on insurer use of credit information—including penalizing consumers not because of driving behavior but because of where and when they drive as a function of work and housing segregation.

- Limited regulatory oversight to date.

Pushing Ahead

Industry representatives caution regulators not to do anything to impede insurers' ability to innovate with telematics; that is code for do not regulate. Consumer advocates have seen the results of innovation in the past—massive abuses in credit scoring in the 1990s early 2000s; counting inquiries as a claim in Comprehensive Loss Underwriting Exchange (CLUE) databases in the 2000s; and price optimization or price gouging under the banner of management pricing discretion in the 2010s.

The problem with unfettered "innovation" is that interests of insurers do not align with those of consumers. If the insurer and consumer interests did align, we would see telematics UBI programs featuring transparency and explicit protection of consumer privacy and consumer-generated driving data. Instead, insurers compete on the basis of risk classifications, slicing and dicing the population, and keep these methods secret. By using telematics in this manner, the

insurers defeat the key function of risk classification: to provide incentives for less risky behavior and disincentives for more risky behavior.

A Failed Promise?

From a consumer and public policy perspective, the development of telematics has been a market failure. Insurance regulators can and should address this market failure by providing a regulatory structure for telematics programs which would not only ensure transparency and fairness to consumers, but which promote greater confidence by consumers that their data would not be used against them. Consequently, consumer use and acceptance of UBI would grow more quickly and result in more loss reduction and greater fairness in insurance pricing. The regulatory framework should include:

- Establish data ownership and privacy standards.
- Establish standards for permitted and prohibited uses of consumer data.
- Collect and analyze granular data on offers and sales of UBI based related to prohibited risk classification factors, including race and income.
- Require insurers to include variables for race and income in generalized linear models.
- Establish standards for disclosure of telematics results and rating programs to ensure consumer receive feedback necessary to alter behavior.
- Replicate analyses presented by insurers in summary form—require insurers to produce all analyses—not just loss ratio as outcome variable, but other analyses using other outcome variables.
- Stop this fiction of discounts only unless and until the rating factor can be associated with lower overall claims and not simply a redistribution of income.

Regulation and competition are not inconsistent. We believe one of the impediments to greater use of telematics is consumer concern over privacy and the lack of transparency on the uses of the data. Regulatory efforts to establish data ownership, privacy and permitted/prohibited data use standards would increase consumer confidence and grow the market.

Regulatory Implications of Telematics UBI

Regulatory Implications of Telematics UBI

By Sandra Castagna, Associate Commissioner, Maryland Insurance Administration (Retired)

Introduction

Insurance companies underwrite and price risks, and pay claims based on data. By making telematics-based UBI programs available, insurers will gather more data than ever regarding the driving behavior and habits of policyholders. The implementation of these programs and the collection, analysis and use of the data present regulatory concerns and provide an opportunity to propose action to address them.

Data Collection

When first introduced to regulators, telematics-based UBI seemed simple enough: As it has been detailed in the technology and market sections of the study, a device is provided to the policyholder to plug into a port in the vehicle, and after a set period of time established by the insurer, the device is removed. Then, based on mileage information transmitted, a premium discount is applied to the policy by the insurer. These PAYD discounts can range from as low as one percent (just for participating) to a maximum of 30% (very few miles driven). There was little concern as to the real accuracy of the data collected by the device or to the application of the discount. The number of miles driven was technically verifiable and the less time spent on the road, the less risk an insured presented. This arrangement appeared straightforward, was understood by consumers, and any discount to the policy premium was easily computed.

Fast forward to the myriad technological methods now available to collect data related to driving behavior as has been discussed in the technology section. Currently, as regulators have seen, the devices capture much more information, including not only the number of miles driven, but also when, where and how they are driven. Furthermore, once captured, data can be reported in different formats. As a result, telematics-based UBI programs are no longer as simple and straightforward as they used to be.

Technology Concerns

A threshold concern for regulators reviewing filings containing telematics UBI programs is the method used by insurers to record, transmit, receive and report driving data. It is less likely the insurance company is collecting data directly and more likely it has entered into an agreement with one or more third parties. If raw driving data is transmitted to a vendor, how is the information processed before being forwarded to the insurer? Does the vendor scrub the data for accuracy? How will it be formatted, stored and protected from misuse by internal and

external actors? To fully understand and review a filing that contains telematics rules and discounts, the method(s) employed to capture the driving behavior requires disclosure to and understanding by regulators.

Another concern arises when different equipment is provided to insureds based on the make and model of the vehicle being driven. In certain instances, the devices may not record the same data or record the data in the same manner. No matter what arrangement an insurance company enters into for the collection and measurement of driving data, regulators should confirm the same data is obtained for every program participant and all potential discounts are made available to all participants who meet the established criteria.

The frequency and duration of data transmission to the recipient must be taken into account. Telematics devices or apps may record and transmit data every 30 seconds or less when the vehicle is in motion; therefore, a great deal of information is captured per day, week, and month or policy term. Some insurers' telematics UBI programs are structured to collect data continuously throughout the policy term, while others may limit collection to a specific period of time, such as 30 or 60 days. One insurer's experience may support the adequacy of 30 days' driving data to determine the risk an insured presents; however, another may determine only continuous monitoring throughout the policy term produces credible results. If data is to be captured for shorter periods, complete and consistent measurement is imperative.

The Need for Transparency

When credit history, occupation and education were introduced as rating factors for automobile insurance, their use was questioned, studied and, in some states, limited or prohibited. A lack of transparency and the failure to explain how and why socio-economic factors were predictive of loss, as well as concerns that their use may be unfairly discriminatory, were reasons cited by regulators and legislators for the increased level of scrutiny. The use of telematics in automobile insurance rating seemingly does not garner similar attention because driving factors are being measured, and driving behavior is considered fundamentally to be an accurate predictor of risk.

While data privacy concerns for some may outweigh the economic benefits to be gained by participating in a UBI program, for many consumers, providing access to some personal driving information in exchange for the opportunity to reduce insurance premiums makes perfect sense. If simply told "good driving behavior" will result in a premium reduction, just what constitutes good driving behavior becomes the question. If an insured is not privy to detailed information regarding the factors being measured and their relationship to the receipt of a discount, it is less likely that changes in driving behavior will result or premium reductions will

be achieved. Telematics then becomes another inaccessible black box understood by few and trusted by even fewer.

By making information related to data collection, use, ownership, storage, protection and dissemination available to regulators and policyholders, insurers could demystify their telematics programs. This information may be disclosed to regulators in the filing and to insureds via a UBI participation agreement. Insurer best practices and participation agreements should include instructions that clearly identify each driving factor being measured, why it is being measured and why making more right turns than left is safer, or why driving at certain times of the day presents a greater risk than driving at others. By entering into the agreement, the insured accepts its terms and acknowledges that the insurer or its vendor will obtain and use specific driving-related information.

Access to mobile applications on smartphones or websites that track driving history and identify improvements insureds can make in order to reduce premiums also serves to make UBI programs more transparent. Any other terms related to the data's use—such as information sharing with third parties for marketing purposes, claims management or disclosure to government officials—should be stated clearly in the agreement.

Although it may seem unrelated to the review of rates and rules, information about data collection, use, ownership, storage, protection and dissemination should be made available to regulators when a filing incorporates telematics-based UBI. To determine if insurers have charged and collected premium in accordance with the applicable rate filings during market conduct examinations and consumer complaint investigations, regulators generally require support for discounts applied to the policy. One-page reports generated by third-party vendors at specific points in time throughout the policy term may or may not be sufficient to support the application or removal of a UBI discount. Questions pertaining to assumptions made by insurers regarding the storage, ownership and protection of the underlying data are appropriately asked during the filing review process to avoid compliance issues at a later date. Such questions include: Can data be retrieved easily when required? Is it being secured safely in a protected environment? Will it be retained in accordance with record retention regulations?

Rating Considerations

The challenge for regulators is to understand how recorded driving information is predictive of loss and reflected in the insurer's rates. Regulators must ensure that insurers do not consider any factors prohibited by statute or that result in rates that are inadequate, excessive or unfairly discriminatory.

One may feel driving within the speed limit, limiting the number of hard stops and rapid accelerations, and making fewer left turns than right turns are all positives. It would be expected any reduction in the frequency and severity of claims resulting from the use of telematics will result in lower premiums for policyholders. When rates for auto insurance are based on loss costs for broad risk classes and an individual insured's driving record (accidents and violations), they are verifiable and understandable. But, when modeled data suggest people who drive in certain areas (urban) at certain times of the day (1 a.m. – 5 a.m.) present more risk than others and the developed rates reflect that, are those rates actuarially sound? If the insurer's rating plan also contains factors for education, occupation and credit scoring, will low-skilled employees who work evening shifts at offices or hospitals located in urban areas present the greatest risk and pay the higher rates, or is this an example of unfair discrimination in rating?

Insurers and/or their third-party vendors developed generalized linear models (GLMs)[83] to quantify characteristics most predictive of safe operation of a vehicle and least likely to result in a loss. These rating models or algorithms may be defined as supplementary rate information, subject to filing requirements under the rating laws of the state. Insurers may object to filing the models, asserting they represent confidential commercial information, are trade secrets or proprietary in nature and should not be made available for public inspection. However, absent a review of the models, it is difficult to determine if any rates based upon them are compliant. What assumptions were made regarding the driving factors being measured? When considering the number of left versus right turns, the speed at which the turns are made, the number of hard braking events and rapid accelerations, the time of day, miles driven, location driven and the length of time the vehicle is driven at a speed in excess of a certain number of miles per hour, e.g. 70 mph, what combination of values presents the least likelihood of loss and will result in the greatest premium discount?

As we have seen, telematics-based UBI programs enable tremendous amounts of data to be collected and analyzed by insurers. By slicing and dicing data, insurers would be able to identify and develop more granular risk classes. This would result in more complex models, nuanced rating plans and individualized rates for personal automobile insurance. While it is incumbent upon regulators to review the data and the rating plans rigorously for compliance with the insurance laws, this is easier said than done in a file-and-use or use-and-file regulatory environment.

[83] A GLM is a generalization of the basic statistical linear model to allow for a non-normal and continuous (can take any value in a range) distribution of the dependent (or response) variable.

Availability and Affordability

The availability and affordability of automobile insurance have been studied and debated for many years and in many contexts. Numerous reports have been issued by various insurance industry groups, consumer groups, insurance departments and the NAIC. Currently, the NAIC Auto Insurance (C/D) Study Group, a joint working group of the Property and Casualty Insurance (C) Committee and the Market Regulation and Consumer Affairs (D) Committee, is studying the affordability of automobile insurance as it relates to low-income insureds. Recently, the Federal Insurance Office (FIO) requested comments on the same subject. A definition of affordable, the impact of high rates on the number of uninsured motorists, and whether the inclusion of rating factors for education, occupation and credit history produces rates that are unfairly discriminatory continue to be topics of ongoing discussion.

The insurance industry maintains that telematics-based UBI programs are another way of making automobile insurance more affordable. Discounts related to driving behavior are made available, insurance premiums are reduced by demonstrating safe driving behavior and, therefore, coverage becomes more affordable. Thus, insureds who stand to benefit most from the implementation of telematics programs include those who pay higher than average premiums or pay higher premiums relative to income, including residents of high-risk territories, inexperienced operators and low-income individuals. Insurers assert that by maintaining competitive markets and providing policyholders with increased options, premium savings will automatically ensue.

There is some merit to this proposition. If what was previously $X is now $0.7X, the policy is less expensive for that insured. However, concerns related to cross subsidization and the use of certain rating factors remain valid. If insurance rates are higher at the outset for certain classes due to the use of alleged unfairly discriminatory factors unrelated to driving history, the application of a discount for some based on driving behavior masks the underlying issue. While premium discounts are welcomed, they are not a substitute for the establishment of appropriate classifications of risk and actuarially sound rates for those risk classifications.

Claims Management

As it was noted in the section discussing benefits, a major benefit insurers cite for the increased use of telematics in automobile insurance is a reduction in the frequency and severity of claims. One theory suggests people modify their behavior when they are being observed. Therefore, when driving behavior is recorded, people will tend to drive more attentively and conservatively. More attentive and conservative driving will usually result in fewer accidents. A vehicle's whereabouts are known when the telematics technology is GPS-enabled, so a reduction in theft and fraud claims also has been noted by insurers. By combining driving

information with mapping technology, insurers have additional evidence to consider when investigating claims. If, when and where an incident occurred may be corroborated or disputed by data received through the use of telematics.

Generally, denying a claim for an arbitrary or capricious reason based on all available information and misrepresenting a pertinent fact that relates to the claim at issue are violations of state unfair claims settlement practices acts. When information obtained through telematics exists, failure to consider it consistently may invite administrative action. Insurers should establish protocols to ensure consistency and uniformity with respect to telematics driving data usage in claims investigations. The information may support denials, but it also can aid in acceptance of claims, as appropriate.

Next Steps

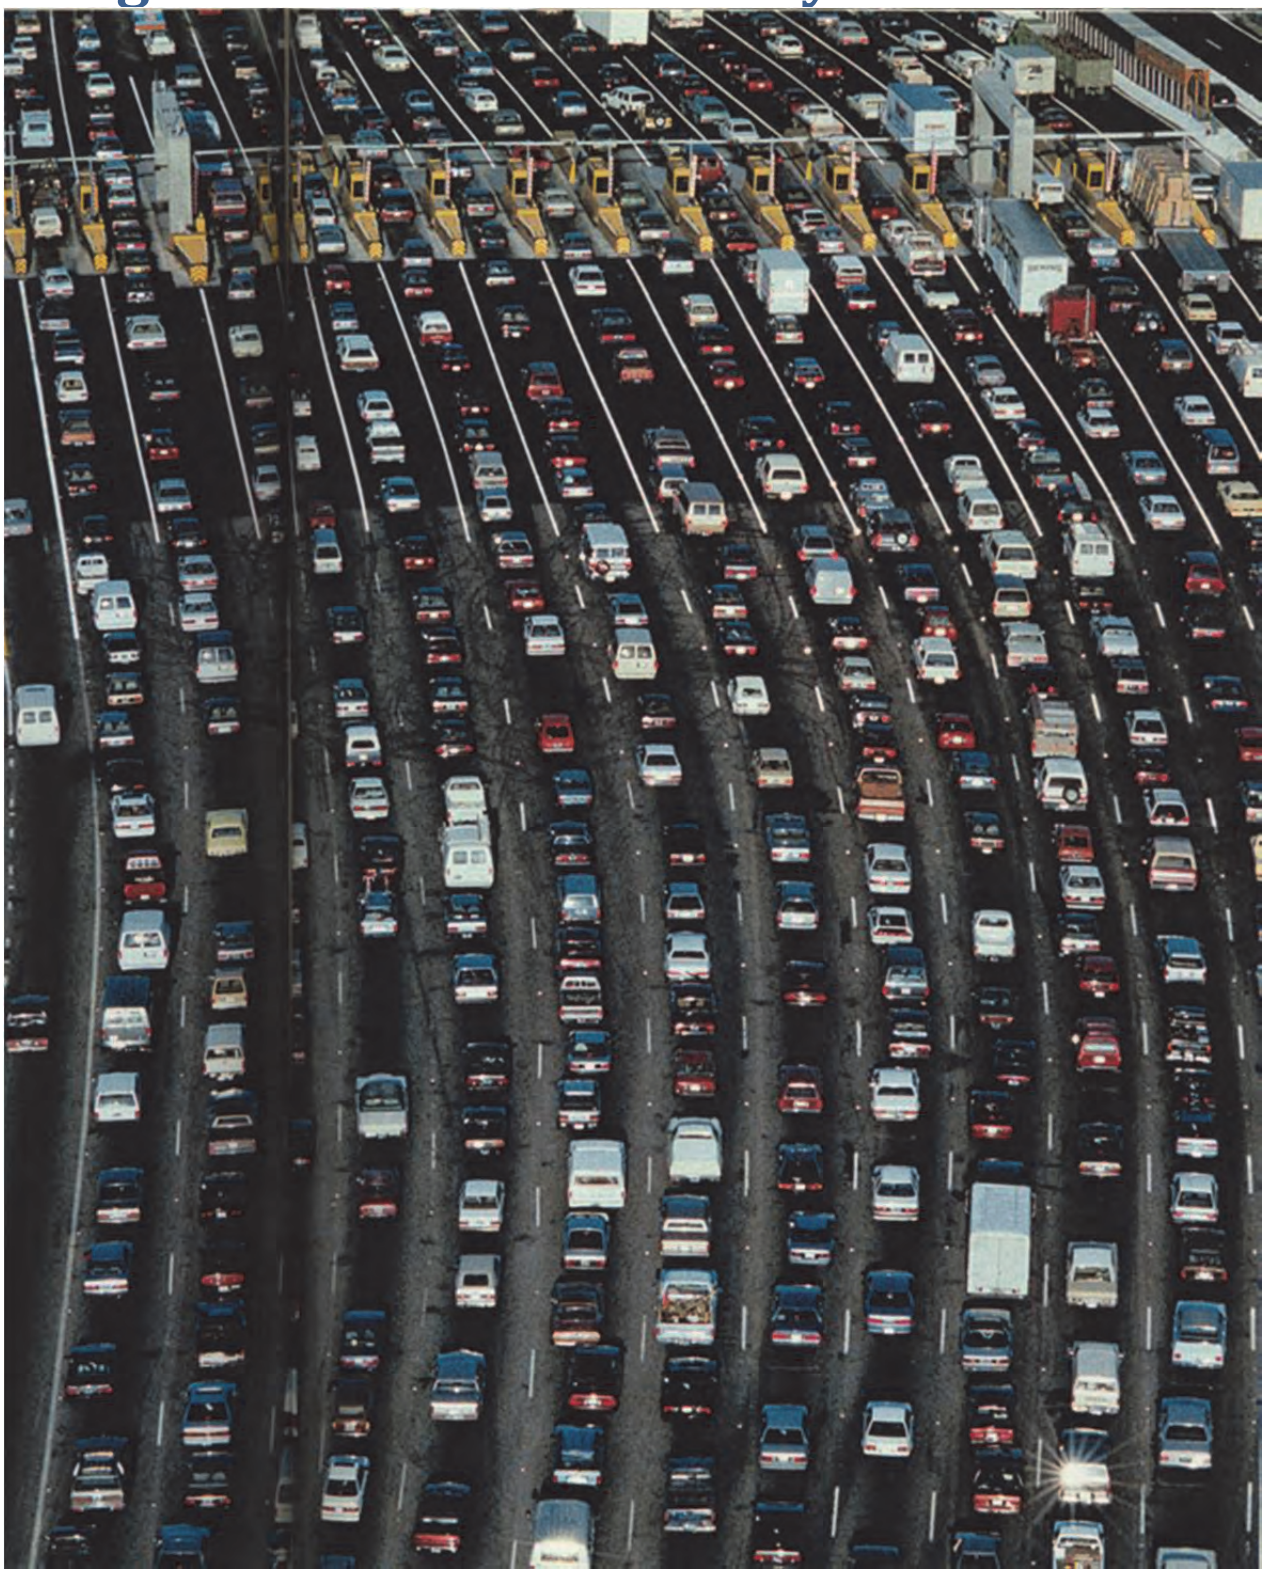
The challenges presented here are neither inconsequential, nor insurmountable; however, they do warrant attention. Vast amounts of information are collected, stored, analyzed and incorporated into rating plans by or on behalf of insurers. Currently, regulators must determine if the rating plans comply with rating laws, if premiums charged are in accordance with those filed plans and if appropriate disclosure and notice requirements have been met.

Regulators reluctantly acknowledge technological innovation will continue to affect rate development. Telematics began with PAYD and evolved into PHYD. Devices record data as the vehicle is being driven and presume the operator is the rated driver for the vehicle. However, with multiple operators and mobile technology, the driving behavior cannot always be linked to the actual operator. Insurers and rating organizations already overlay multiple models, including topography, GPS, crime, traffic and population density. When combined with driving behavior information, this could contain prohibited factors or produce rates that are unfairly discriminatory. If garaging location is replaced by factors related to the areas or zones where the vehicles are customarily driven and parked, could the new classifications discourage insureds from engaging in activities (e.g., working, shopping or visiting) in those zones if higher rates result?

If participation in the telematics UBI program requires policyholders to allow an insurer or its vendors to sell data to business partners, has the insurer engaged in unfair discrimination between insureds in “the other benefits payable on the insurance or in any of the other terms or conditions of insurance” if insureds in certain geographic areas receive discounts, coupons or other promotions, and others do not?

At a minimum, when the word “telematics” appears in a rate filing, regulators must ask questions.

FHWA UBI Funding Initiatives Promote Congestion Relief and Safety



FHWA UBI Funding Initiatives Promote Congestion Relief and Safety

By Allen Greenberg, Federal Highway Administration

Introduction

As documented elsewhere in this study, and also in the October 2013 CIPR Newsletter article, "Pay-as-you-drive-and-you-save (PAYDAYS) Insurance: Potential Benefits and Issues," there are numerous public policy benefits to telematics-supported PAYDAYS UBI—related to reducing congestion, curtailing vehicle emissions and enhancing roadway safety—that have inspired some federal and state government public policy measures to promote it.[84] These benefits of pricing insurance based on claims' risk associated with actual driving data come from voluntary actions taken by drivers in exchange for lower premiums. Obviously, insurance companies would only offer drivers such savings if they expect it would result in the company saving even more money due to reduced crash-caused claims. Motorists, of course, will only reduce their driving when the savings offered by UBI pricing exceeds the value of particular drive-alone trips to them.

While this section of the study is focused on federal PAYDAYS insurance related activities and investments, and especially those taken within the last 18 months, it is noteworthy that 13 states have included PAYDAYS insurance in at least some capacity within their climate action plans designed to reduce greenhouse gas emissions statewide. Oregon, in particular, has made tax credits available to insurance companies offering PAYDAYS UBI if at least 70% of the premium varies by miles or minutes of driving.

Current Efforts

The FHWA is currently funding multiple efforts to demonstrate and bring about the benefits of PAYDAYS insurance through the development of a competitive marketplace for PAYDAYS UBI programs. The efforts include: 1) supporting one or more before-after studies of driver behavioral changes resulting from PAYDAYS insurance; 2) helping small and mid-sized insurance companies through an initiative designed to figure out the precise relationship to crash-caused insurance claims of the amount of driving (distance and time in motion), driving conditions (congestion, roadway type, weather and night versus day) and driver behaviors (operating "smoothness" and speed limit compliance), bolstering companies' actuarial know-how and enabling them to offer PAYDAYS insurance products; and 3) working with small businesses and insured drivers to collect, understand and repackage usage-based driving data to coach drivers

[84] Greenberg, Allen. 2013. "Pay-as-you-drive-and-you-save (PAYDAYS) Insurance: Potential Benefits and Issues." CIPR Newsletter, October 2013.

to improve safety (and to save money) and provide them with multiple PAYDAYS insurance price quotes, thereby encouraging purchases of PAYDAYS UBI products that reward driving reductions and safer driving. Together, these initiatives, each described below, are intended to lead to better drivers and reduced exposure through a continuous incentive to reduce their risk of a crash by tying their UBI premiums to such risk.

Before-After Driver Behavior Study

Regarding the first topic area, and as discussed in the October 2013 CIPR Newsletter article cited above, reduced driving levels due to PAYDAYS UBI are projected using observed results from previous before-after studies where consumers experienced a change in their per-mile cost of driving (but not related to insurance costs) and adjusted their driving habits in response. Because consumers sometimes perceive identical costs are originating from varying sources differently (e.g., mileage-related costs associated with gasoline purchases versus tire replacement due to wear), they may in turn respond to actual price changes that look pretty similar to other proposed price changes in different ways. Thus, a before-after study of a specific price change—in this case, PAYDAYS UBI—is much preferable to having to extrapolate expected results of new price changes from studies following other price changes.

On Nov. 19, 2014, the FHWA issued a competitive solicitation seeking proposals (by Jan. 16, 2015) for the remaining balance of Value Pricing Pilot Program (VPPP) funds (authorized under Section 1012(b) of Pub. L. 102-240, as amended by Section 1216(a), Pub. L. 105-178 and Section 1604(a), Pub. L. 109-594). As noted in the solicitation, value pricing encompasses a variety of strategies to manage congestion on highways, including tolling of highway facilities through congestion pricing, as well as other strategies not involving tolls, such as PAYDAYS insurance and parking pricing. The FHWA is primarily seeking non-toll congestion pricing proposals in order to address the legislative requirement that a minimum amount of VPPP funds be "set-aside for projects not involving highway tolls." Also according to the notice: "While the FHWA evaluation team will consider a range of non-toll pricing projects of any variety, the intent is to prioritize applications that test something that has not yet been tested in the United States, such as a before/after study of driver behavior impacted by [PAYDAYS insurance], where the insurance premium varies substantially and transparently by miles or minutes of driving; however this interest does not preclude submission of other applications that meet VPPP eligibility criteria."

This is not the first time the FHWA solicited for before-after PAYDAYS UBI studies. Previous attempts did not result in any studies that moved into implementation. The Nov. 19, 2014, solicitation seeks to facilitate public-private partnerships (PPPs) by offering to provide eligible applicants (state departments of transportation) interested in testing PAYDAYS insurance with

contacts at insurance companies that, also having responded to the solicitation, have informed the FHWA that they would like to participate. By helping to forge strong PPPs, the FHWA is seeking to overcome the kinds of relationship weakness that were significantly responsible for past failures.

Actuarial Study to Encourage PAYDAYS Insurance Premiums

The second topic area, bolstering actuarial knowledge to facilitate companies in pricing PAYDAYS UBI products, stemmed from many sessions and discussions at insurance conferences and meetings, including an event sponsored by the NAIC's CIPR, where this need has been highlighted. According to the related federal solicitation: "FHWA is strongly promoting creativity and innovation … and is interested in developing and identifying new, different and improved methods and techniques in the area of PAYDAYS car insurance actuarial analysis to inform and support the competitive insurance marketplace. … Cutting edge actuarial research, especially if the results were made public, could lead to broader market penetration of PAYDAYS insurance and greater consumer, economic and societal benefits."

The solicitation continued: "A key barrier companies face in offering PAYDAYS insurance is in figuring out how to price it in a way that is actuarially accurate. This is harder to do than commonly thought, since insurance companies typically do not have accurate information about their customers' driving mileages. A number of companies have tried, with some success, to get such data on their own, but even when these companies acquire some such data and use it to begin to figure out the PAYDAYS insurance pricing puzzle, companies rarely succeed at getting most of the data they would like, thereby limiting their related pricing acumen. Additionally, the data they obtain and analysis they perform are not disseminated throughout the industry.

"An additional barrier companies face in offering PAYDAYS insurance is that, while the resulting initial costs and reduced premium revenues may be fairly transparent, the claims' reduction benefits from customers who take advantage of the new opportunity to save money by reducing their risk exposure are likely much less well understood."

The solicitation concluded regardless of whatever firm or company was to be chosen to complete the work, "Federally supported actuarial research that produces publicly-available, high-quality results, where such results are shared with insurance companies, state insurance commissions, and consumer group, would likely facilitate companies to begin offering PAYDAYS insurance. Additionally, helping companies quantify the reduced loss costs resulting from offering PAYDAYS insurance could encourage an expansion of PAYDAYS insurance offerings."

The FHWA awarded funding to a partnership including the SmarTrek app creator, Metropia, Inc., an expert in mobile data collection and analysis, and Illinois State University, Department of Finance Insurance, and Law, which has substantial actuarial expertise. While currently in its early stages, the intent of the study is to gather data without cost from the SmarTrek app, discern likely crash events from the data, and financially reward those believed to have crashed for answering follow-up injury and insurance claims survey questions.

For surveys that are not completed, claims will be estimated based on what the data from the app indicates about crash severity (analyzed using expertise garnered by having previously used similar data to find claims fraud). Driver exposure factors—e.g., trip distances, time of day, weather, traffic, and hard braking and other indicators of aggressive or inattentive driving—will be compared against the claims data to enable the appropriate weighing of each relevant factor within the PAYDAYS premium structure.

Insurance Competitive Price Quotes

The market today for insurance products using telematics technologies and services has technology and data providers selling services and products directly to insurance companies, and the data is not in turn offered back to consumers in a format that would enable them to solicit competitive PAYDAYS prices as they are able to solicit competitive prices for traditionally structured car insurance products. The result is that the dominant insurance company products including usage-based elements offer rates informed by driver data, but such data generally remains in a black box to consumers who might otherwise want to share it with competitors to secure lower premiums. The public policy benefits of having consumers appreciate how their driving affects their rates (including the number of miles driven in congested conditions) and then being provided an opportunity to change behavior to save on premiums is lost because of how the market is developing. Therefore, there is a need to create a marketplace that would enable consumers to collect and share their own portable driving data linked to crash risk—including mileage, conditions (e.g., related to congestion, time of day and weather), and vehicle performance and handling (e.g., prevalence of hard braking)—which would enable multiple insurance carriers to offer competitive and comparable PAYDAYS rates.

The products available today in the marketplace offer premiums that either do not vary at all after having been adjusted once reflective of baseline driving data or are less variable than actuarially justified. In either case, if instead of individual insurance companies owning the data collected for PAYDAYS UBI pricing, the consumer would, this would propel the market to respond to consumers shopping their own data for better prices by offering PAYDAYS UBI premiums that are more variable and competitive.

In order to stimulate a competitive marketplace for PAYDAYS insurance, funds have been awarded under the U.S. Department of Transportation (DOT) Small Business Innovative Research (SBIR) Program to enlist small and mid-size businesses—including vendors of in-vehicle telematics equipment—to work with personal lines insurance companies and environmental and consumer groups to gather data from willing insurance customers to enable competitive PAYDAYS UBI pricing. Two teams led by two small businesses—Vehicle Sciences Data Corp. and Agnik, Inc.—were awarded SBIR funding to in turn solicit volunteer drivers and multiple insurance companies to gather the necessary data for participating drivers to be offered at least three competitive PAYDAYS insurance rate quotes.

Outcomes expected from Phase I of the SBIR awards include detailed concepts demonstrating the viability of consumer telematics products and systems from which at least three insurance companies agree to accept the data to offer competitive premiums. Phase II of the projects is expected to include demonstrations of working prototypes of in-vehicle telematics devices, linked to data integration and warehousing systems, that would gather and inform consumers of their driving data and enable consumers to share such data with insurance companies in exchange for competitive price quotes and guidance on reducing future crash risks and the premiums that link to them.

Conclusion

Insurance companies today have compelling reasons to use telematics for market segmentation, as companies failing to do so face fairly extreme adverse selection risk. Thus, companies are offering consumers some incentives to gain their cooperation (e.g., “PAYDAYS insurance lite” policies where some minor discounts are offered in exchange for drivers sharing telematics data). These firms, however, experience little market pressure to use the data to offer genuine PAYDAYS UBI premiums.

The benefits of having consumers appreciate how their driving affects their rates and then being provided an opportunity to change behavior to save on premiums may be lost if black box pricing becomes the norm. (Black box pricing refers to an insurance company gathering and applying usage-based data in premium setting primarily for improved market segmentation—to offer the most attractive rates to the lowest-risk drivers within any rate class—but without the consumer having any detailed knowledge as to how their usage characteristics affect their rates.) This concern is not just theoretical since the majority of the more than 2 million people who have signed up for telematics-enabled insurance products are not provided by their insurance carriers significant personalized guidance about reducing their crash exposure and earning premium savings as a result.

The three FHWA-funded initiatives discussed above—demonstrating the public policy benefits of PAYDAYS UBI, learning about its actuarial underpinnings and facilitating consumers in getting competitive PAYDAYS UBI price quotes—together will help facilitate bringing competitively priced PAYDAYS UBI products with highly-variable premiums into the marketplace.

Study Conclusion

Conclusion

By NAIC Staff

The mature and highly competitive U.S. auto insurance industry is undoubtedly undergoing a fundamental change aided by technological innovations, promising a more efficient pricing of risks and widespread benefits accruing to insurers, consumers and society in general. The telematics-supported UBI programs, offered by an increasing number of insurers, are eagerly embraced by consumers seeking discounts in return of improved driving behavior.

The many societal benefits that can result from the adoption of telematics UBI PAYD programs—such as less congestion, lower vehicle emissions and enhanced roadway safety—has moved the FHWA to engage in the funding of multiple efforts to demonstrate and help realize the benefits of UBI through the development of a competitive marketplace.

Insurance companies, employing a variety of technological platforms and tools, are able to capture multiple data points on vehicle usage and operational characteristics, as well as driver behavior, to better understand and adequately model risky behavior. Using causal risk factors, rather than simply correlated variables, allows insurers to calculate premiums that accurately reflect true risks and thus offer significant discounts to those policyholders who consent to operate their vehicles within prescribed risk-minimizing parameters. Insurers also benefit from the superior fraud detection telematics can provide. This allows them to significantly reduce accident- and vehicle theft-related costs, passing a percentage of the savings along to their policyholders.

Increasing consumer acceptance of telematics technology and insurer UBI products, as evidenced by a number of surveys, is critical for mainstreaming these programs and, thus, harnessing the full benefits they can offer. Consumers primarily benefit by having lower premiums, while they also can materialize gains from their improved driving behavior mainly in the form of reduced fuel and maintenance costs. However, before ripping the benefits, a number of concerns by consumers and insurance state regulators regarding the use of telematics-based UBI programs need to be overcome. Consumers are concerned about the realization of the promise of transparency in auto insurance pricing held by telematics and instead are worried telematics would turn to a system such as credit scoring but absent any of the protections afforded to consumers. Regulators are equally concerned about consumer privacy and data misuse, as well as transparency regarding what type of data is collected, how it is stored, who has access to it and how it is used in pricing. Telematics should not become another opaque black box understood by few and trusted by even fewer.

It is critical all information about data collection, use, ownership, storage, protection and dissemination is made available to state insurance regulators when a filing incorporates telematics-based UBI. Regulators need to understand how recorded driving information is predictive of loss and reflected in the insurer's rates to make sure that insurance companies do not consider any factors prohibited by statute or that result in rates that are inadequate, excessive or unfairly discriminatory.

In addition, issues such as affordability and availability are important to both consumers and regulators, especially as it relates to underrepresented and low-income consumers, who tend to operate older vehicles.

As the CIPR survey of state DOIs suggests, state regulators are keenly aware of the potential benefits, as well as the implications, of the new telematics technology as applied in UBI policies. State regulators are very active in providing an appropriate legal and regulatory environment for telematics UBI based on the specific needs of their respective states, in the interest of a dynamic, fair and competitive marketplace but first and foremost in the service of their policyholders.

APPENDIX
CIPR Telematics State DOI Survey

CIPR Telematics UBI State DOI Survey

By NAIC Staff

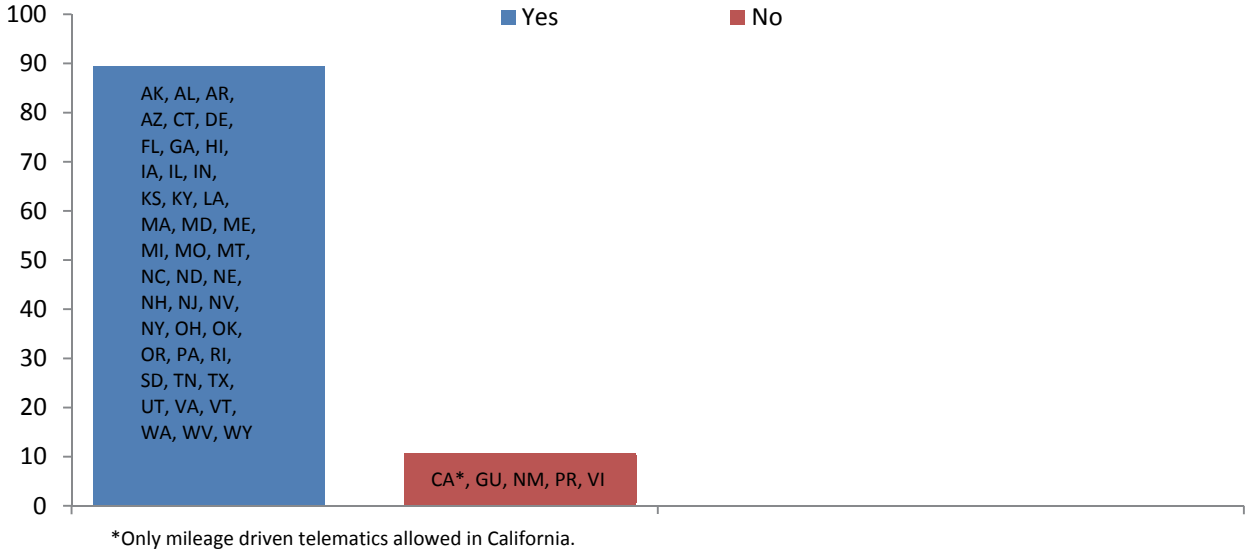
Introduction

In order to find out more about what actions states may have taken or contemplated related to the use of telematics UBI in auto insurance, CIPR developed a 10-question Web-based survey inviting in May of 2014 all U.S. jurisdictions to participate. The high response rate in the survey, with 47 jurisdictions providing answers, allowed for a comprehensive assessment of the growth of telematics and the readiness of the state regulatory system to ensure a viable, fair and dynamic auto insurance market.

Survey Results

Approximately 89 percent of the responders answered telematics-based UBI auto insurance is available in their states, closely reflecting recent market studies (Figure 1.) Eight of the jurisdictions noted they have 12 or more companies offering telematics UBI programs to their consumers. Another 15 states responded they have at least five but less than 12 domiciled insurers with a telematics UBI program. Ten states noted the number of companies offering telematics UBI programs in their jurisdiction were less than five. The remaining nine jurisdictions could not provide a precise number of companies active in telematics because legislation permitting such programs was only recently passed in their state and/or they do not have systems in place to accurately track how many companies offer telematics.

Figure 1: Telematics UBI Program State Availability
Source: CIPR



*Only mileage driven telematics allowed in California.

The follow-up to the first question was an open-ended inquiry seeking to explore the reasons a telematics program may not be available in a specific jurisdiction. Smaller jurisdictions—such as Guam, Puerto Rico and the Virgin Islands—noted the lack of interest by their domiciled insurers to make telematics-based UBI policies available in their local markets.

However, the California DOI pointed to the state's legal mandate to preserve drivers' privacy and control of their vehicles' data[85] and to the need for transparency and stability in premium rating factors behind the DOI's restrictive approach to telematics programs. At this point in time, only rating factors specified in statute or regulation are allowed in California and currently, none of the common telematics UBI PAYD behaviors, other than mileage, are among these factors. The only data telematics UBI programs available to California can use is mileage driven.

The third question in the survey asked state regulators to provide information of any specific legislation introduced relating to the usage of telematics and/or dealing with privacy concerns and rating issues. Six states responded affirmatively, noting the passage or introduction of unique legislation intended to establish a regulatory framework for telematics-based UBI.

During the 2006 legislative session, the legislature of the commonwealth of Virginia passed a bill addressing the use of recording devices in vehicles for the purpose of pricing auto insurance.[86] Two new statutes, §46.2-1088.6 and §38.2-2213.1, were introduced defining what a telematics is and how it can be used and specifying the pricing of a policy with or without telematics. In the event an insurer chooses to not allow access to his data to an insurer, the legislation prohibits retaliatory action by the insurer, such as reducing coverage, raising premium, applying surcharges and placing in a less favorable tier.

The legislature of the state of Washington in its 2012 session passed House Bill 2361 dealing with automobile UBI and exempting certain UBI information from public inspection. The legislation covers the usage of the data captured by a telematics device as defined in statute RCW 46.35.010 and the usage-based determination of rates or premiums. In addition, it ensures that all information about the UBI methods and/or processes of the insurer remains confidential.

[85] Existing California regulation restricts insurer use of a technological device for the collection of driving data, such as mileage.

[86] HB 816: Recording devices in motor vehicles; access to recorded data. Amending § 38.2-2212; adding §§ 38.2-2213.1, 46.2-1088.6, and 46.2-1532.2.* (Patron–May, CH 851). Commonwealth of Virginia.
SB 90: Recording devices in motor vehicles; agent cannot refuse to renew insurance if owner denies access. thereto. Amending § 38.2-2212; adding §§ 38.2-2213.1, 46.2-1088.6, and 46.2-1532.2.* (Patron–Watkins, CH 889). Commonwealth of Virginia.

The state of Illinois passed legislation in the 2011 session relating to trade secrets and commercial or financial information.[87] The 5 ILCS 140/7 statute provided protection to insurer proprietary trade secrets, allowing insurers to make their telematics solution available to consumers.

The General Assembly of the state of Delaware passed House Bill 56w/SA3 in the 2014 session enacted into law in May 2014.[88] The legislation prescribes certain regulations for telematics devices prohibiting the use by insurers of vehicle personal data for anything other than consideration for premium discounts. The law also requires disclosure to the insured of others who may gain access to their data, and otherwise prohibits insurance companies from releasing such data to others.[89]

The state of Montana noted its legislature will consider legislation in the 2015 session. The senate in North Carolina has passed SB 180, allowing enhancements to auto insurance, but it has not been enacted to date. Also, California pointed again the existence of legislation specifically restricting insurer use of a telematics device.

Eight jurisdictions (Arizona, Arkansas, Iowa, Kansas, Maine, Missouri, Nebraska and Texas) responded that their existing legal and regulatory framework adequately covers telematics UBI programs providing guidance on ratings and confidentiality protection for insurers' UBI solutions.

The fourth question inquired if the existing laws affect the development, availability and use of telematics-based UBI. Ten jurisdictions that had given a negative answer in the previous question responded their legal requirements may potentially hinder insurers' efforts to offer telematics solutions.

The state of Maryland pointed to the Insurance Article §11-307(a)[90], which requires all auto insurers to file with the Commissioner all rates and supplementary rating information for use in the state. The Maryland Insurance Administration is responsible for reviewing the rating criteria to ensure no insurer has rating criteria that would otherwise amount to a violation of the Insurance Article. The rating criteria and supporting documentation is subject to public disclosure pursuant to §11-307(c) of the Article.[91] According to the Maryland DOI, the public disclosure requirements for the telematics rating criteria have been a point of contention with some insurers. At the same time, there is no indication it has actually deterred any insurer from filing a telematics plan.

[87] 5 ILCS 140/7(1)(g), Illinois General Assembly.
[88] House Bill # 56 w/SA 3. State of Delaware 147th General Assembly.
[89] House Bill # 56 w/SA 3. State of Delaware 147th General Assembly.
[90] Maryland Insurance Article 11-307. General Assembly of Maryland.
[91] Ibid.

Similarly, the state of Iowa's Insurance Division noted complete rating information is required under Iowa Code §515F.5 on rate filings.[92] The state law requires all insurers to file their rates or rating plans, every manual, minimum premium, class rate, rating schedule and all relevant factors. Furthermore, all filings and supporting information should be open to public inspection.

The Office of Insurance Regulation of the state of Florida added that public disclosure requirements and review of all aspects of auto insurance rates are required in accordance with statute §627.0651.[93] The state of New York DOI referred to state Insurance Laws §2305[94] and §2307[95] on rates and ratings plans and policy forms, respectively. The laws require prior approval for all forms, rates and rating rules, and public disclosure of the filing and supporting information following approval. Also, New York's Freedom of Information Act means that no specific protection is guaranteed or afforded to any filed algorithms by insurers offering telematics UBI.

Hawaii revised statutes §431:10C-207 regarding discriminatory practices and §431:14-103(a)(1) dealing with the making of rates are the legal questions facing insurers offering telematics-based UBI, according to the Hawaii DOI.[96] Discriminatory practices are prohibited, so no insurer can base any standard or rating plan, directly or indirectly, on a person's driving experience, physical handicap and other factors like age, race, creed or ethnicity. Also, rates cannot be excessive, inadequate or unfairly discriminatory.

The state of Michigan's DOI pointed to a set of statutes in chapter 500 of the Insurance Code of 1956 that could affect the availability and use of telematics UBI in the state. Statute §500.2109 requires rates not be excessive, inadequate or unfairly discriminatory. Statute §500.2110a allows insurers to use factors for rating if universally applied, and statute §500.2111 lists factors such as miles driven, vehicle characteristics relating to automobile theft prevention devices and major driving hazards that can applied by an insurer only on a uniform basis throughout the state. Statute §500.2403 deals with the use of the rate that has or will have the effect of destroying competition among insurers, creating a monopoly or causing a kind of insurance to be unavailable to a significant number of applicants who are in good faith entitled to procure the insurance through ordinary methods.[97]

The Bureau of Insurance of the state of Maine noted the revised statute §2303 of Maine's Insurance Code that prescribes the establishment of classifications or modifications of classifications or risks based on such factors as individual experience is not prohibited provided

[92] Casualty Insurance Chapter 515. Iowa General Assembly.
[93] Chapter 627, s. 627.0651. Florida Legislature.
[94] Insurance Law §2305. New York Department of Financial Services.
[95] Insurance Law §2307. New York Department of Financial Services.
[96] Chapter 431 Insurance Code. Hawaii Department of Commerce and Consumer Affairs, Insurance Division.
[97] The Insurance Code of 1956, Chapter 500. The Michigan Legislature.

such classifications and modifications apply to all risks under the same or substantially similar circumstances or conditions. Also, revised statute §2304-A was referred regarding public disclosure of any filing and any other supporting information after the filing becomes effective.[98]

The Nevada DOI responded by noting the state is a prior approval state for all personal lines of insurance, meaning all UBI models have to be filed with the state and receive prior approval.

California DOI points to the state's Insurance Code 1861.02, where the mandatory rating factors are identified, and to the California Code of Regulations, Title 10, Chapter 5, Subchapter 4.7, Section 2632.5, where the allowable optional rating factors are listed. (None of the common PAYD factors are included.)[99] Section 2632.5 also specifies the use of a technological device is strictly limited for the purpose of collecting vehicle mileage information.[100]

The next open-ended question to state regulators asked how state DOIs monitor and supervise the ratemaking process for auto insurance, particularly in the presence of telematics UBI plans.

Almost all the jurisdictions have a requirement for filing of rates and rating systems. Rates also must be actuarially supported and not excessive, inadequate or unfairly discriminatory. Prior approval is a requirement shared by most jurisdictions. A number of jurisdictions have an exemption to prior approval requirement except when a flex rate method is used. However, telematics-based UBI programs generally cannot use the flex rate filing and must seek prior approval.

Guam responded by noting the existence of a tariff system for auto insurance in the territory. Any admitted insurer in the jurisdiction of Guam must file for any rate adjustment that deviates from the tariff.

The survey's sixth question inquired how states evaluate the level of competition in the presence of UBI programs in their jurisdictions.

The DOI of the commonwealth of Massachusetts in its response recognized UBI has the potential to create an uneven playing field in competitive markets due to the holding of telematics patents by insurers. However, it was noted that because annual mileage is already easily tracked in Massachusetts, the use of telematics-based UBI becomes less compelling as a competitive tool. The DOI reiterated rate filings are carefully reviewed to understand the type and extent of discounts offered in the market for UBI policies.

[98] Title 24-A: Maine Insurance Code. The Maine Legislature.
[99] State of California, Department of Insurance. Title 10, California Code of Regulations, Chapter 5, Subchapter 4.7, Section 2632.5. Pay-Drive (Usage Based Auto Insurance.)
[100] Ibid.

The Bureau of Insurance of Virginia emphasized it is purely consumers' decision to participate in a telematics plan, and there is no indication the presence of telematics in the state has had any adverse effects in Virginia's competitive insurance market.

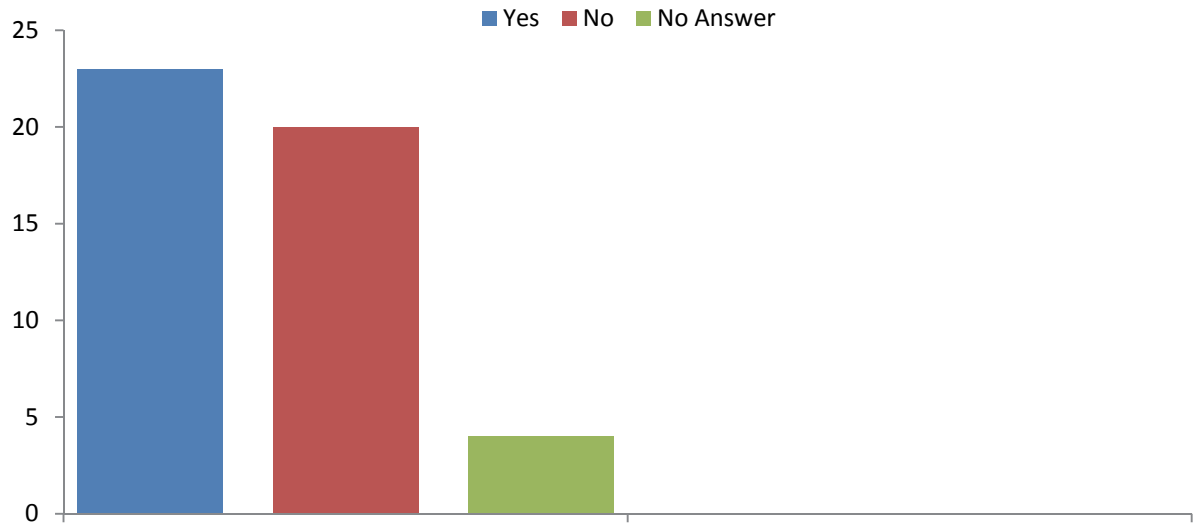
New York's Department of Financial Services said state regulators work with insurance companies in implementing their individual telematics UBI programs. Pursuant to New York Insurance Law, all such programs are required to meet certain standards which must be approved by the Department prior to their implementation. Montana's DOI in its response stressed the fact the telematics UBI market is still in its early development. Because UBI is relatively new in Montana and the interest for UBI by consumers is not known, it is difficult, noted the DOI, to accurately assess how competition has changed in the presence of telematics UBI. Ultimately, the personal auto insurance market in the state is greatly driven by rate levels, said the DOI, and concluded by underscoring that while privacy is valued by a great number of consumers in the state, the better drivers in the state will likely try a telematics plan at some point in the future.

Michigan's DOI, in its response, highlighted the high degree of competition in the state's insurance market, with more than 100 insurers offering auto insurance plans. Therefore, consumers can choose the auto insurance plan with the best price and best service for their varying situations. The DOI noted Michigan law does not require insurers offering telematics UBI programs be competitive beyond this scenario. For example, regulators would not mandate any of the insurers to offer such programs nor consider telematics UBI are not acceptable rating plans because only one or a handful of insurers use them.

To our question if a state has any specific concerns regarding the marketing and use of telematics UBI products, 23 jurisdictions answered in the affirmative, listing their concerns, while 20 jurisdictions responded they presently have no particular concerns. Four jurisdictions provided no answer (Figure 2.)

The survey listed four reasons for concern, thought to be more common according to prior research, for regulators to choose and an option to add on that, expand or elaborate. The four concerns listed were: 1) claims management; 2) pricing fairness between UBI consumers and those who wish to not participate; 3) privacy issues; and 4) data ownership and portability. While the issue of privacy figured prominently in most of the responses, states' answers varied in their nuance and choice of concerns that often went beyond the four listed issues.

Figure 2: State Concerns with Telematics UBI Maketing and Use
Source: CIPR



The Delaware DOI stated its concerns regarding telematics span all four choices, but more time is needed following the implementation of HB 56[101] in May 2014 to see if any particular issues emerge and/or consumers submit any complaints. The state of New Hampshire also noted all four issues are of concern, with a particular emphasis on privacy. Furthermore, the state DOI stressed that telematics programs are monitored to make sure they all strictly voluntary.

The Insurance Division of the Department of Business Regulation of the state of Rhode Island pointed to all four issues as equally concerning and added that currently, telematics programs are offered solely as an option to consumers. Insurers may offer discounts only and may not surcharge risks or use to non-renew. Similarly, the DOI of the state of Indiana responded all four are concerns shared by Indiana regulators, adding another concern is the issue of transparency to the policyholders. The Maryland DOI also said all four issues are regulatory concerns, adding that equally concerning are if appropriate disclosures regarding how the program works to consumers are made and the accuracy of the data transmitted to the insurer via the device. All four issues were also concerns noted by the DOI of the state of Arizona.

The Georgia DOI answered that when telematics UBI programs were first introduced, there were some privacy concerns, but because the use of UBI is strictly voluntary, these concerns are reduced as the consumers have to consent to participate in the program.

The Florida DOI added the accuracy of the algorithms used to create UBI scores as a serious regulatory concern in addition to the concerns about privacy, data ownership, and portability and claims management. The New York DOI shared its main concerns were with claims

[101] House Bill # 56 w/SA 3. State of Delaware 147th General Assembly.

management and data ownership and portability, while the Connecticut DOI pointed to privacy and data concerns.

The State of Montana's DOI stressed concerns regarding disclosure of how the data collected may be used, privacy issues, underwriting and renewal. The Department of Insurance and Financial Services of Michigan noted it is concerned about classifications used are not unfairly discriminatory. The DOI of the state of Hawaii, the Bureau of Insurance of the state of Maine and the Washington DOI noted concerns with pricing fairness, privacy, and data ownership, and portability. Finally, the North Dakota expressed concerns with rebating issues with telematics UBI plans.

To the question if a jurisdiction has enacted or proposed any legislation regarding any of the concerns with telematics UBI, state DOIs responded either by noting the same telematics-related legislation discussed earlier or by saying that no additional legislation is required. Only the state of New Hampshire pointed to new state statutes whose main intent is to deal with privacy issues. The DOI added that although these statutes[102] did not specifically address UBI devices, they did encompass them.

The last question of the survey inquired if any of the jurisdictions has received a consumer complaint connected with a telematics UBI program. Two state DOIs, Maryland and New Jersey, answered in the affirmative. The Maryland DOI has received two complaints with regard to UBI programs. The first complaint was directly related to advertisement of the UBI program. Here, the insured felt the insurer failed to disclose the program required a subscription to an outside service (i.e., OnStar, Ford SYNC, In-Drive). The second complaint alleged the insurer did not properly inform the insured how long the device was required to be installed in the vehicle in order to receive a discount. The DOI of New Jersey said it received two complaints, one related to the applicable rating discount and the other related to the mechanics of using the telematics device.

The National Association of Insurance Commissioners (NAIC) is the U.S. standard-setting and regulatory support organization created and governed by the chief insurance regulators from the 50 states, the District of Columbia and five U.S. territories. Through the NAIC, state insurance regulators establish standards and best practices, conduct peer review, and coordinate their regulatory oversight. NAIC staff support these efforts and represent the collective views of state regulators domestically and internationally. NAIC members, together with the central resources of the NAIC, form the national system of state-based insurance regulation in the U.S. For more information, visit *www.naic.org*.

Reinsurance Commutation

By Jim Klann, FCAS, MAAA

When an insurer and a reinsurer enter into a contract, they expect a lengthy relationship. The contract may cover policies written by the primary insurer over (for example) a 12-month period, but it may be years before the last claim covered under such policies has closed and final reimbursement has been made from the reinsurer to the insurer.

Sometimes, as this process unfolds, one party or the other will want to terminate the relationship early. When this happens, the parties have the option of executing a *commutation agreement.* The International Risk Management Institute defines a commutation agreement as "an agreement between a ceding insurer and the reinsurer that provides for the valuation, payment, and complete discharge of all obligations between the parties under a particular reinsurance contract".[1] The reinsurer typically makes an immediate payment to the primary insurer. In return, the reinsurer is absolved from all future involvement with the claims or policies covered by the agreement.

Commutations present challenges to the actuary in the areas of pricing, reserving, and accounting. This study note will focus on the accounting for, and taxation of, commutations. However, in order to understand the accounting, we will need to look at least briefly at the motivations of the parties to a commutation, and at pricing and reserving.

Motivations of the Parties

Commutations arise for many reasons:

(1) Either the primary insurer or the reinsurer may wish to exit a particular line of business. The reinsurer exits at once by commuting. For the primary insurer, commuting may be a first step, followed by a *loss portfolio transfer* to a third party. Loss portfolios may be easier to transfer without the uncertainty of a reinsurance overlay.

(2) Either the primary insurer or the reinsurer may have concerns about one another's solvency. If the reinsurer is shaky, commutation eliminates credit risk to the primary insurer. If the primary insurer is shaky, commutation provides an immediate cash infusion, and allows the reinsurer to avoid potential future problems with a liquidator who may take over the primary insurer.

(3) The relationship between the primary insurer and reinsurer may have frayed over time. There may have been disputes over claim resolution, or over contract provisions. The parties may prefer a single negotiation over commutation price, followed by termination of the relationship, to protracted argument over other issues.

(4) Even in the absence of acrimony, the primary insurer and reinsurer may have different ideas about loss development under the underlying policies. If actuaries for the two parties are setting drastically different loss reserves, a commutation at an intermediate price may leave each side convinced that it is getting a good deal.

[1] http://www.irmi.com/online/insurance-glossary/terms/c/commutation-agreement.aspx

In some cases, the original contract executed between a primary insurer and a reinsurer may provide for commutation under given terms, after a given period of years. These provisions are typically found in reinsurance for long-tailed lines such as accident and health and workers compensation.

Pricing

The process of pricing a commutation begins with each side estimating the claim payments which would occur in the absence of commutation. To the reinsurer, these anticipated payments are loss reserves. To the primary insurer, they are reinsurance recoverables. The reserves and recoverables will most likely include case reserves, claims incurred but with not enough reported, and claims incurred but not yet reported at all. (The latter two amounts will be classed as IBNR for the remainder of this note.) Given normal uncertainty, it is unlikely that the two parties' estimates will be identical.

Next, each party will attempt some estimate of *when* the anticipated payments will occur, and apply a discount factor to account for risk and for the time value of money. Neither the time estimate nor the discount factor will likely be identical for the two parties. One factor likely to generate different discount factors is that the reserves represent a risky liability to the reinsurer, whereas the recoverables represent a risky asset (or contra-liability) to the primary insurer.

Losses are booked on a nominal basis, but valued for purposes of pricing a commutation on a discounted basis. Discounting can be significant for long-tailed lines and (especially) for excess of loss reinsurance. It will thus sometimes happen that the price of a commutation is significantly lower than *either* party's booked estimate of nominal loss.

Each party must consider the effect of taxation on the value of a commutation. Taxation will be addressed more fully later in this note.

Finally, each party must consider unique factors relating to the motives for the commutation. For example, when solvency is an issue, the parties must consider the possible distribution of future claims as well as the expected value. The healthy party may be willing to commute at a price which generates a small expected economic loss, in return for avoiding the possibility of a major loss if claims prove larger than expected and the counterparty becomes insolvent.

Ultimately, the two parties must agree on a commutation price, or the commutation will not take place. Typically each side will have a range of acceptable prices, and negotiating skill and leverage will determine where within the range of overlap that the settlement falls.

Accounting and Reserving

The following example concerns two insurance companies, Primary and Re. Primary has been writing a book of business for the past three years, and ceding a portion of it to Re. We will assume that all Primary policies have an effective date of January 1, so that policy and accident years are the same. We will further suppose, after three years, that losses have developed as follows:

Primary:

			@ 12 mos	@24 mos	@36 mos
Paid losses	Gross	2013	1000	2000	2500
		2014	1000	2000	
		2015	1000		
	Ceded	2013	500	1000	1250
		2014	500	1000	
		2015	500		
	Net	2013	500	1000	1250
		2014	500	1000	
		2015	500		
			@ 12 mos	@24 mos	@36 mos
Reserves	Gross	2013	2000	1500	1000
(case+IBNR)		2014	2000	1500	
		2015	2000		
	Ceded	2013	1000	750	500
		2014	1000	750	
		2015	1000		
	Net	2013	1000	750	500
		2014	1000	750	
		2015	1000		
			@ 12 mos	@24 mos	@36 mos
Ultimate loss	Gross	2013	3000	3500	3500
		2014	3000	3500	
		2015	3000		
	Ceded	2013	1500	1750	1750
		2014	1500	1750	
		2015	1500		
	Net	2013	1500	1750	1750
		2014	1500	1750	
		2015	1500		

Note that this example follows the SAP convention of offsetting ceded recoverables against losses.

Now we will examine how Re accounts for its portion (the portion ceded by Primary) of the same book of business. We will assume, somewhat simplistically, that Re consistently reserves its portion of the book at 10% higher than Primary. This may be because of differences of opinion about the future of the claims outstanding, or it may simply reflect differences in reserving philosophy or methodology.

Re:

			@ 12 mos	@24 mos	@36 mos
Paid losses	Gross	2013	500	1000	1250
		2014	500	1000	
		2015	500		
			@ 12 mos	@24 mos	@36 mos
Reserves	Gross	2013	1100	825	550
(case+IBNR)		2014	1100	825	
		2015	1100		
			@ 12 mos	@24 mos	@36 mos
Ultimate loss	Gross	2013	1600	1825	1800
		2014	1600	1825	
		2015	1600		

Now we will suppose, at the end of the year 2015, that Primary and Re choose to negotiate a commutation applying to all claims within the 2013 policy year. As seen above, Primary believes that future reimbursement from Re will equal 500. Re believes that its future payments to Primary, for the 2013 policy year, will equal 550. The commutation price negotiated between Primary and Re will quite possibly be lower than either number, because of the time value of money.

We will suppose the parties agree on a price of 400. Note that Primary is considered the buyer in this transaction, and Re the seller, even though money moves from Re to Primary, because the item being sold is a liability (responsibility for future claim payments). We will assume this transaction closes before the end of 2015, and reexamine each company's triangles thereafter.

For clarity we will show the original triangles without the commutation, copied from above, alongside the adjusted triangles after the commutation, side by side:

Primary without commutation:

		2015	1100		
			@ 12 mos	**@24 mos**	**@36 mos**
Ultimate loss	Gross	2013	1600	1825	1650
		2014	1600	1825	
		2015	1600		

Primary's gross paid losses and reserves are unchanged, as the decision to commute the claims should not affect Primary's assessment of what the gross ultimate cost of these claims will be. The commutation payment is booked as a recovery of paid losses, and ceded reserve recoverables for 2013 are set to zero.

Re experiences the commutation as an increase in paid loss, with reserves again set to zero. Re's ultimate losses decline to the extent that the commutation payment (400) was less than Re's previously booked loss reserves (550).

Note that the commutation is severely distorting to Primary's ceded and net loss triangles. Primary shows downward development in 2013 net paid losses, which would be very unusual in the absence of a commutation. Primary's ceded 2013 reserves drop to zero, and 2013 net incurred (ultimate) losses develop upward (from 1,750 to 1,850) even though there has been no change in Primary's estimate of gross ultimate loss (which remains at 3,500).

Re's loss triangles also show the effects of the commutation. Re's 2013 paid losses ratchet sharply upward between 24 and 36 months. Re's 2013 incurred (ultimate) loss develops downward, not due to any change in estimates of the ultimate number or severity of 2013 claims but only due to the commutation price (400) being lower than previously booked loss reserves (550).

Distortions to net incurred loss will show up in the loss triangles in Schedule P, Part 2 of each company's Annual Statement. Distortions to net paid loss will show up in Schedule P, Part 3.

In addition, a commutation will distort the claim closure rates in Part 5 of the reinsurer's Schedule P, since from the reinsurer's standpoint a commuted claim is considered to be closed.

Actuaries must take such distortions into account when calculating loss development factors, when assessing reserve adequacy, or when using Schedule P to review claim severity or closure trends. For this reason, commutations must be disclosed by the ceding (buying) company in Section E of the reinsurance note in the Note to Financial Statements. The disclosure must include a list of reinsurers and the amount of loss, loss adjustment expense, and earned premium commuted from each to the ceding company during the year.

The disclosure, however, does not break down the amounts commuted by accident year or line of business, and therefore will not suffice to properly adjust loss triangles. Actuaries will require more detailed internal information if and when they need to do so. Also, there is no disclosure requirement for the reinsuring (selling) company.

Consider also the effect of the commutation on Primary and Re's statutory income statements and statutory surplus. Primary has replaced an offset to liabilities booked at 500 with an asset (cash) of 400. This results in a drop of 100 in pretax income and a drop of 100 in statutory surplus (assuming the recoverables were authorized or secured and counted in statutory surplus). Re has replaced a liability of 550 with a cash payment of 400. This results in an increase of 150 in pretax income and in statutory surplus. (Tax considerations will likely have further effects on statutory surplus.)

Finally, consider that this example has been simplistic in that it involved the commutation of an entire policy year within an entire book, and examined the impact on that book as a whole. In practice, commutations may cut across lines of business and policy years. Statutory accounting principles require that "commuted balances shall be written off through the accounts, exhibits, and schedules in which they were originally recorded"[2].

In practice, this means that the single commutation price may need to be allocated among multiple lines and multiple years, and ultimately down to individual policies so that insurers can make an accurate assessment of profitability among various cuts of their book. This can be especially challenging when excess of loss reinsurance is being commuted, since the commutation payment should logically be applied only to those claims—some known and some still unknown—which ultimately pierce the excess layer.

Accounting and Taxation

For tax purposes, unpaid losses are valued on a discounted basis, as discussed elsewhere in the syllabus.[3] Companies determine the appropriate discount factor by accident year and line of business, by using either their own or IRS payment patterns and IRS published discount rates.

In the case of a commutation, note that the buying and selling company need not, and probably will not, have applied the same discount factor to the relevant unpaid losses. First, in the case of nonproportional reinsurance, the reserves will be classified according to the originating line of business by the ceding (buying) entity, but as "nonproportional assumed liability" reinsurance by the reinsuring (selling) entity.

In the case of quota share (proportional) reinsurance, the ceding and reinsuring entities will classify the business the same. However, one company may elect to use its own historical payment patterns, and the other may use IRS payment patterns. Or, both companies may use their own payment patterns, which will inevitably be different.

For our example, we will assume that Primary applies a discount factor of 0.875, and Re applies a discount factor of 0.85. We will further assume that both companies are facing an effective marginal tax rate of 35%, although tax rates also need not be equal, as there are a myriad of factors that may influence a company's marginal tax rate.

[2] National Association of Insurance Commissioners, *Accounting Practices and Procedures Manual*, 2012, Statement of Statutory Accounting Principles 62R, "Property and Casualty Reinsurance," paragraph 63.
[3] Odomirok, K.C.; McFarlane, L.M.; Kennedy, G.L; and Brenden, J., *Financial Reporting Through the Lens of a Property/Casualty Actuary*, Casualty Actuarial Society, 2012, pages 248-251

As a result of the commutation, Primary therefore experiences a taxable income gain of:

400 – (500 * 0.875) = -37.5

and a tax decrease of 37.5 * 35% = 13.13.

Re experiences a taxable income gain of

(550 * 0.85) – 400 = 67.5

and a tax increase of 67.5 * 35% = 23.63. Note the asymmetry in results, caused by both the differing reserve amounts and the difference in discounting. The calculated tax increases and decreases apply over and above whatever other income taxes the two companies may have incurred during the year; they represent the result of the commutation itself. Each company should of course consider the tax impact of commutation at various prices as part of the process of negotiating the commutation price.

AMERICAN ACADEMY *of* ACTUARIES

NAIC PUBLIC HEARING ON CREDIT-BASED INSURANCE SCORES

APRIL 30, 2009

My name is Jeff Kucera. I am here today representing the Casualty Practice Council of the American Academy of Actuaries.[1] I am employed as a senior consultant with EMB America LLC, an actuarial consulting firm. I am a fellow of the Casualty Actuarial Society and a member of the American Academy of Actuaries. I will be addressing actuarial practice applicable to risk classification and specifically, the use of credit-based insurance scores for rating and underwriting purposes. I am also here to offer the assistance of the Casualty Practice Council in your continued exploration of credit-based insurance scores.

In particular, my comments will demonstrate that the use of credit-based insurance scores allows the insurer to better segment insurance risks for the purpose of charging appropriate rates. I will address the following items:

- Current economic circumstances;
- Definition of what constitutes a credit-based insurance score;
- Evaluation of how insurers use credit-based insurance scores; and
- Discussion of how current economic conditions have affected policyholder premiums related to credit-based insurance scores.

Most companies now use credit-based insurance scores in the rating of personal lines such as private-passenger automobile or homeowners' insurance. The use of credit-based insurance scores helps insurance companies charge those risks that are likely to generate greater costs higher premiums, while those likely to generate lower costs get lower premiums. The removal of such insurance scores will not lower overall insurance premium; rather, it will redistribute the premium charges so that those risks with lower expected costs will pay more than is actuarially fair, while those with greater expected costs will pay less than is actuarially fair.

[1] The American Academy of Actuaries is a 16,000-member professional association whose mission is to serve the public on behalf of the U.S. actuarial profession. The Academy assists public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

Current Economic Circumstances

As we are all aware, the United States is suffering from a major economic crisis, which has imposed considerable hardship on both individuals and businesses. A significant aspect of the current economic crisis is the severe tightening of the credit markets. This may suggest that credit standards are being tightened by banks and other sources of commercial credit. This comes at a time when increasing numbers of Americans are experiencing loss of income, including decreases in the value of many of their assets and unemployment. These problems are significant and ongoing, and they raise questions regarding the use of credit rating in insurance. These issues span multiple lines of insurance, but for individuals, they have the greatest impact on private-passenger auto and homeowners' insurance.

The American Academy of Actuaries is the public policy organization for actuaries practicing in all specialties within the United States. A major purpose of the Academy is to act as the voice of the profession on public policy issues. The Academy regularly prepares testimony for Congress, provides information to federal elected officials, comments on proposed federal regulations, and works closely with state officials on issues related to insurance.

The purpose of my presentation on behalf of the Casualty Practice Council today is to assist the NAIC in its analysis of these questions and to offer to work with the NAIC in its continuing study of these issues. The Casualty Practice Council has a history of working with the NAIC on this and many other topics. In fact, the Risk Classification Subcommittee of the Academy's Products, Pricing, and Market Committee presented the NAIC with a report, "The Use of Credit History for Personal Lines of Insurance,"[2] in November 2002, which is still relevant today.

The NAIC has identified three issues to serve as a basis for discussion. Our comments will provide an actuarial context for each of these issues.

Definition of What Constitutes a Credit-Based Insurance Score

An insurance score is a numerical score or ranking assigned to an insurance risk (i.e., a prospective insured) based on that risk's underlying characteristics. A common purpose of insurance scoring is to generate useful information in underwriting and pricing insurance for the individual risk being scored. The score provides a relative measure of the expected cost to the insurance company associated with the risk.

A credit-based insurance score utilizes various attributes found in a typical individual's credit report. There are several different scoring models currently in use to calculate credit-based insurance scores, including models developed by third-party vendors and proprietary models built by individual insurance companies. The type of credit attributes generally having the

[2] http://www.actuary.org/pdf/casualty/credit_dec02.pdf (last visited on Apr. 24, 2009).

greatest effect on an individual's insurance score include: number of inquiries into opening new accounts, accounts 30 days or more past due. While the attributes and relative values are not identical for all companies, generally the higher the credit-based insurance score, the better an individual's credit rating.

The importance of credit-based insurance scores is that there is a strong correlation between them and the expected costs associated with the risk. In other words, in a group of insureds who are identical in every other way, insureds with favorable insurance scores are significantly more likely to have better loss experience than insureds with unfavorable insurance scores. Consequently, credit-based insurance scores are a statistically reliable tool for segmenting risks into different groups with different expected cost levels. This has been demonstrated in a number of studies and reports, some of which we have listed in Appendix A.

Evaluation of How Insurers Use Credit-Based Insurance Scores

Most state insurance laws prohibit the use of insurance rates that are excessive, inadequate, or unfairly discriminatory. Principle 4 of the Casualty Actuarial Society's *Statement of Principles Regarding Property and Casualty Insurance Ratemaking* states that, "A rate is reasonable and not excessive, inadequate, or unfairly discriminatory if it is an actuarially sound estimate of the expected value of all future costs associated with an individual risk transfer."[3] Thus, the overall average rate level should be set so that the total premium collected from all risks is sufficient to cover the total expected costs. Additionally, the individuals' rates should be set such that the premium collected from each individual risk, or group of similar risks, reflects the expected costs for that individual risk (or group of similar risks).

In a 2001 survey, 90 percent of the responding insurers (from the top 100 personal lines companies) indicated that they were using credit data.[4] According to the survey, the use of credit data is a relatively recent trend; more than half of the responding insurers using credit said that they began using credit in 1998 or later. Today, the number of companies using credit is likely even greater. Some insurers use insurance scores simply to determine whether a prospective insured qualifies to be written by the company. More typically, insurers also use insurance scores to help segment risks into different groups with similar expected costs for the purpose of rating. In such cases, the insurer may use the insurance score directly as a rating factor, also called a "risk classification factor," similar to an amount of insurance for homeowners' insurance or prior violations for private-passenger auto insurance. Alternatively, an insurer with multiple "tiers" representing different levels of expected cost may use the insurance score to help assign risks to the appropriate tier. Whether insurance scores are being used as a risk classification or

[3] http://www.casact.org/standards/princip/sppcrate.pdf (last visited on Apr. 22, 2009), *Statement of Principles Regarding Property and Casualty Insurance Ratemaking*, Casualty Actuarial Society, May 1988.
[4] "Insurance Scoring in Personal Automobile Insurance—Breaking the Silence," Conning & Company, 2001.

tiering factor, the impact is the same: insurance scores are being used to segment risks into homogenous groups so that appropriate premiums can be charged.

With respect to insurance scores as a risk classification or tiering factor, the actuary is guided by Actuarial Standard of Practice (ASOP) No. 12, *Risk Classification*.[5] Rating plans for individual lines of insurance generally include several different risk classifications. For example, private-passenger auto lines use such risk classifications as the make and model of the car, age of the driver, prior traffic violations and accidents, etc. For homeowners' insurance, examples of risk classification include amount of insurance, type of home construction, prior loss history, etc. The key section of ASOP No. 12 that is applicable to the use of insurance scores is section 3.2.1., which reads in part as follows:

> Relationship of Risk Characteristics and Expected Outcomes—The actuary should select risk characteristics that are related to expected outcomes. A relationship between a risk characteristic and an expected outcome, such as cost, is demonstrated if it can be shown that the variation in actual or reasonably anticipated experience correlates to the risk characteristic. In demonstrating a relationship, the actuary may use relevant information from any reliable source, including statistical or other mathematical analysis of available data. The actuary may also use clinical experience and expert opinion.
>
> Rates within a risk classification system would be considered equitable if differences in rates reflect material differences in expected cost for risk characteristics. In the context of rates, the word *fair* is often used in place of the word *equitable*.
>
> The actuary should consider the interdependence of risk characteristics. To the extent the actuary expects the interdependence to have a material impact on the operation of the risk classification system, the actuary should make appropriate adjustments.

The summary of articles on credit in Appendix A includes several studies that have shown that credit scores reflect significant differences in expected loss costs. Thus, credit scores are appropriate tools for risk differentiation. Rates based on groups differentiated by insurance score are not excessive, inadequate, or unfairly discriminatory.

The removal of such insurance scores will not lower overall premium collected; it will only redistribute the premium collected such that risks with lower expected costs will pay more, and those with greater expected costs will pay less.

While the evidence may only be anecdotal, most companies report that the use of insurance scores, along with multivariate rating and other new rating factors, have allowed them to write more risks from the general population than before these features were introduced.

---

If the NAIC determines that further studies may be appropriate, the Casualty Practice Council would be pleased to assist the NAIC in such studies.

Discussion of How Current Economic Conditions Have Affected Policyholder Premiums Related to Credit-Based Insurance Scores

While our current economic condition is certainly on everyone's mind, it is still uncertain exactly how this will affect overall insurance costs and, therefore, overall insurance prices. Some regulators or other public officials may be concerned that if the current economic crisis causes insurance scores to worsen, it will lead to unwarranted premium increases. It is important to consider both the impact on the aggregate premium and on individuals' premium.

First, it is important to consider the impact on the aggregate premium. Insurers use insurance scores to determine appropriate rate relationships between risk classes, not to determine overall premium need. Assume for a moment that insurers continue to maintain the same rate relationships for different insurance score ranges, and that the current economic crisis causes every insureds' insurance score to worsen. The actuary would observe this distributional shift or change and adjust overall rate levels so that the total premium collected by the insurance company remains the same and the integrity of the rate relationships among risks remains intact.

This is no different than any other distributional shift, such as an increase in the average value of homes, which an actuary has to consider when setting the overall rate level. Part of a typical actuarial rate review is an analysis of any shifts in distributions that affect the premium level. The actuary would adjust for these shifts in determining appropriate future rates. As a result of this standard ratemaking practice, any shift in insurance scores due to the current adverse economic conditions will not result in any long-term impact on overall premium collected.

Second, it is important to consider the impact on the individuals' premium.[6] As stated earlier, studies have demonstrated that insurance scores are an effective means of segmenting risks. Because of this, many companies now vary the rates charged to risks with different insurance scores. Some regulators or other public officials may be concerned that a dramatic shift in credit scores could disrupt the current relative rates among risks with insurance scores; in other words, perhaps the difference in expected cost levels among insureds with favorable and unfavorable scores will be less significant.

This, too, is not a problem that is unique to insurance scores. The gender and age of drivers have long been recognized as important rating characteristics for personal automobile insurance. There have been, and still are, very significant differences between the rates charged to young

[6] It is important to remember that any distribution shift is likely to have a smaller effect on renewal business than on new business, because some states and/or companies only permit the use of such scores for renewals if it results in a more favorable rate for the individual insured.

males and young females, reflecting the higher cost of auto insurance for young male drivers compared to young female drivers. However, over time, the driving habits of young males and young females have become more similar, and while the difference in risk is still significant, it is not nearly as large as it was in the past. As this trend has developed, insurers adjusted classification plans to reduce the rate differentials to reflect it. If the actuary regularly analyzes the indicated rate differentials for different insurance score ranges, the rate differentials will be changed if more recent data suggests it. This potential shift in group differentials, and motivation or intent to be competitive, provide incentives for companies to regularly review their rate differences.

One of the other roles of an actuary is to regularly review the data to decide whether the overall average rate level is appropriate and whether the rate differentials for risks with different insurance scores need to be adjusted. By doing this, the actuary can ensure that the rates are actuarially sound,[7] regardless of the effect the current economic crisis has on personal insurance scores.

It is possible that a sudden or immediate distribution shift could result from the current economic conditions, and that, by the time it works its way into the actuary's data, many insureds will have already been harmed. While we have been suffering through the current economic conditions for approximately six months, we are unaware of any quantifiable evidence that has surfaced to demonstrate that such a dramatic shift has been occurring. It is our opinion, based on anecdotal evidence, that any shift thus far has been minor. This could be because renewal business, which makes up the majority of any company's business, is less likely to be affected by a shift. Ascertaining whether an actual shift of any significance has occurred would require a study to look at the distribution of insurance scores of several companies over a period of time. The Casualty Practice Council is willing to assist the NAIC should it decide to pursue such a study.

On behalf of the Academy and the Casualty Practice Council, I thank you for the opportunity to speak to you today. To the extent that we can further assist the NAIC in its endeavors on this topic, the Casualty Practice Council volunteers its services. We look forward to working with you.

If time permits, I am happy to answer any questions you may have.

Appendix A – Summary of Additional Articles on Credit Scoring

Several studies have already been conducted on the use of credit for rating and underwriting for both homeowners' and private-passenger auto insurance. In particular, the following studies may warrant review:

- *Predictiveness of Credit History for Insurance Loss Ratio Relativities* by Isaac Fair, (1999).
- *Use of Credit Reports in Underwriting* by the Commonwealth of Virginia, State Corporation Committee, Bureau of Insurance (1999).
- *The Impact of Personal Insurance Credit History on Loss Performance in Personal Lines* by James D. Monaghan (2000).
- *Insurance Scoring in Personal Automobile Insurance – Breaking the Silence* by Conning & Company (2001).
- *Use of Credit Information by Insurers in Texas* by the Texas Department of Insurance (December 2004).
- *Use of Credit Information by Insurers in Texas – the Multivariate Analysis* by the Texas Department of Insurance (January 2005).
- *Credit-Based Insurance Scores: Impact on Consumers of Automobile Insurance* by the Federal Trade Commission (July 2007).
- *Report to the Congress on Credit Scoring* by the Board of Governors of the Federal Reserve System (2007).

Testimony of
Kevin M. McCarty, Florida Insurance Commissioner,
Florida Office of Insurance Regulation
And Representing the
National Association of Insurance Commissioners

Before the
Subcommittee on Oversight and Investigations
Of the
House Committee on Financial Services

Regarding:
"The Impact of Credit-Based Insurance Scoring on the Availability and Affordability of Insurance"

May 21, 2008
Room 2128
Rayburn House Office Building

Kevin M. McCarty
Florida Insurance Commissioner
National Association of Insurance Commissioners

Testimony of Kevin McCarty
Florida Insurance Commissioner
National Association of Insurance Commissioners

Chairman Watt, Ranking Member Miller, and members of the Subcommittee, thank you for the opportunity to testify here today on the use of credit based insurance scores in the provision of personal lines insurance. I would also like to thank you for your leadership on this important issue.

My name is Kevin McCarty, and I am the Insurance Commissioner for the State of Florida. I am also here as the chair of the Property & Casualty Committee of the National Association of Insurance Commissioners. Empirical studies, including the 2007 Federal Trade Commission (FTC) Report, indicate the use of credit-based insurance scores, while accurate predictors of claims activity, disparately impacts certain classes of people.

In my testimony, I will share the State of Florida's actions and the role of credit-based insurance scores in Florida today. I will also provide my thoughts and concerns regarding the 2007 FTC Report. Likewise, I will report on actions by other states on this issue. As appendix one shows, different states have taken different approaches to the issue.

The Use of Credit-Based Insurance Scores in Personal Insurance Lines

Proponents argue that credit-based insurance scores are predictive of an insured's future claims experience, and is a necessary tool for underwriting and/or rating. Critics argue that the use of credit-based scores is merely another example of imposed discrimination against lower income individuals and protected classes of people. That is the heart of the debate: studies do show that credit scores can be predictors of future claim activity, but the same studies also show that the use of these scores disparately impacts certain classes of people, and thus has a discriminatory effect. A *National Underwriter* survey concluded that 14% of insurance professionals believed the use of credit scoring was ethical, 10% believed it was unethical, and the vast majority – 66% - were undecided.

The use of credit scoring forces us to examine the fundamental purpose of insurance, and the acceptability of factors used to determine underwriting and rates. In its simplest form, insurance is a contract that allows an individual or company to spread risk to avoid a catastrophic loss. For illustrative purposes, I will utilize auto insurance as my example. To accurately price this risk, insurance companies have historically used such factors as vehicle type, miles driven, marital status, moving violations and car accidents, among other factors, to assess the risk fully and charge premiums fairly.

We have now entered a new information age. By using an interconnecting network of databases, a dizzying myriad of information may be obtained about an individual through health provider visits, sex offender databases, insurance claims histories, consumer purchase preferences, internet usage, DNA/gene-testing, and credit scoring. It is important to understand that although many of these tools may show mathematical correlations with insurance claims, this does not necessarily make them fair and valid criteria for insurance purposes.

Other Rating Factors Considered to Be Inappropriate

The most notable example of this is the historical use of race in the rating of life insurance products. In 2002, the NAIC concluded several multi-state examinations of companies that rated life insurance differently based on the race of the applicant during the period from the 1930s to the 1970s. Even today, according to U.S. Census Bureau data, a Caucasian born in the United States has a life expectancy of 78 years, while an African-American has the life expectancy of 73 years. Based purely on actuarial rates, this could be used to justify a higher charged rate for life insurance.

While this outcome (African-Americans pay more for life insurance) might be technically correct from a purely actuarial perspective, it is counter to equal protection for consumers and not sound public policy. This is not an isolated example. In the 1990s insurance companies began considering the use of genetic testing for predisposition of inherited diseases as a means to evaluate risk more precisely when offering health insurance. Although this certainly would have produced worthy actuarial correlations justifying higher insurance rates for unlucky individuals

with a proclivity for inherited diseases, the United States Congress began to outlaw this practice in 1996 through the Health Insurance Portability and Accountability Act (HIPAA). Clearly legislators and regulators must weigh the benefits of simplistic claims prediction with sound public policy.

I must admit, the State of Florida has a checkered past of allowing the use of race-based premiums which were used prevalently in the life insurance industry during the period of the 1930s through the early 1970s. Therefore, as Insurance Commissioner, I am particularly sensitive to any rating factors that are highly correlated with race, ethnicity, religious background, or income level as are my fellow commissioners at the NAIC. A year ago, on February 9, 2007 in Tallahassee, I held a public hearing to review the use of occupation and education as underwriting or rating factors for private passenger auto insurance and its potential impact on Floridians. The hearing intended to answer the question of whether the use of occupation and/or education, either intentionally or unintentionally, is acting as a proxy for race. While the use of race as a rating factor was outlawed in Florida, we must remain vigilant of the use of any factors that appear to be highly correlated to race and income level. The findings stemming from this public hearing are detailed in a written report, *The Use of Occupation and Education as Underwriting/Rating Factors for Private Passenger Automobile Insurance*, March 2007, See Appendix 2.

The Credit Reporting System

Other problems with the use of credit scoring are inherent weaknesses in the credit reporting system. Although Congress has taken strides to improve the process, most notably through the Fair and Accurate Credit Transactions Act of 2003, a 2000 study by *Consumer Reports* magazine showed that 50% of credit reports contained errors. This is further exacerbated by identity theft, and also by the proliferation of access to credit as evidenced by the problems in the mortgage industry. Thus, even if this methodology were correct, it is possible that inaccuracies in the underlying data (credit reports) may invalidate their use. Credit reports also disproportionately negatively affect recent divorcees, recently naturalized citizens, the elderly, the disabled, those

with certain religious convictions, and younger individuals who have not established credit histories.

While the use of credit reports may always be problematic, the use of this tool may become increasingly salient given our nation's current economic conditions. Historically, rising unemployment rates, rising home foreclosures, and rising inflation in the costs of goods and services have contributed to a deterioration in credit histories. A downturn in the economy could potentially magnify differences in credit scores among vulnerable populations.

It is also important to note that empirical studies show no significant difference in the magnitude of claims that are filed, but only of the frequency of the claims. This is a subtle but important distinction. The studies show only that consumers with lower credit scores file more claims, not that they have greater loss events. It is quite possible the frequency of insured loss events is the same across populations, but those with higher scores are less likely to file a claim. This may be because wealthier individuals (with higher credit scores) may not file a legitimate insurance claim for a broken window or for minor fender bender, instead electing to pay the repairs themselves so as not to impact their claims history. Conversely, those with lower credit scores may be unable to pay out-of-pocket expenses based on their limited financial resources.

The empirical studies do not focus on this distinction, which leads to another important facet of the debate that has been overlooked. None of the studies to date, including the 2007 FTC study, suggests that the claims being filed are not legitimate, and moreover, that the rates being charged, absent credit-based insurance scores, are not actuarially sound.

Finally, the methodology used to create credit scores and credit-based insurance scores is opaque to consumers, varies from company to company, and can be negatively impacted by sound financial decisions that cannot possibly be linked to automobile or homeowners insurance risks. Not using credit cards, having too few credit cards, or having an installment loan -- all may negatively impact a credit-based insurance score. Consumers' decisions to finance their purchases using a Visa card, a home equity loan, or a department store credit card could negatively impact their credit-based insurance score and their insurance premiums.

Disproportionate Impact of Credit-Based Insurance Scores

The clear problem with the use of credit scoring is the relationship of credit scores to race, ethnicity and income status. The 2007 FTC Report asked and answered its own innocuous question: is credit scoring solely a proxy for race? This "straw man" question was not deserving of this report. Certainly we can all think of African-American and Hispanic acquaintances with excellent credit scores and conversely Caucasians with poor credit scores. If the phrase "solely a proxy" is intended to mean "direct substitute" than clearly credit scoring is not a proxy for race.

A more valid question is to ask whether there is a relationship between credit scoring and race/ethnicity and income status, and whether this relationship is strong enough to prohibit its use given the American values of equal protection and nondiscrimination. The analysis summarized by the FTC Report clearly demonstrates strong correlations between credit scoring and race/ethnicity that are statistically significant.

A Texas Insurance Department's 2004 report showed that African-Americans have an average credit score 10-35% below that of Caucasians, while Hispanics had scores roughly 5-25% worse. Quantifying this to percentile scores, the FTC's Report concluded that African-Americans average credits scores are in the 23rd percentile, while Hispanics were in the 32nd percentile.

Less publicized, but equally important, is the disparate impact on other segments of society. Credit-based insurance scores, because they are based on credit scores, have a negative impact on young people and the elderly. In testimony provided during a hearing in Florida on the use of credit-based insurance scores, an industry actuary admitted that average scores in the 25 to 30 year old age group are disproportionately lower than in older age groups. Other research has demonstrated that the elderly, because they tend to use credit less often and thus have fewer or no credit relationships, frequently have lower or no credit scores. Credit-based insurance scores penalize them as well.

Another consideration is that certain religions and those with certain religious beliefs do not use credit. Thus, some individuals following their religious beliefs will have low or no credit scores

and would be negatively impacted by the use of credit-based standards for rating insurance policies.

It is clear the use of credit-based insurance scores has a disparate impact on consumers of select racial, age, and religious groups. The predictive power of these scores is very likely not measuring any event risk, but rather indirectly measuring socioeconomic status. Some may disagree, but I believe this information is not necessary for proper underwriting and rating of the risks being insured.

I do not doubt that when initially adopted by the industry, there was no intent to use credit scores to impact minorities in a disparate manner or to discriminate. Yet, empirical studies indicate a negative impact on these groups, and the industry's attempt to ignore this issue shows a failure to treat its consumers fairly and equitably.

Florida Actions Regarding Credit-Based Insurance Scores

Based on the preponderance of evidence and after lengthy deliberation and hearings, the 2003 Florida Legislature enacted legislation to limit the use of credit-based scores in the provision of private automobile and personal residential insurance. The law (626.9741, F.S.) is modeled after the National Conference of Insurance Legislators (NCOIL) Model Law, but does differ in some areas to provide stronger consumer protections. Part of that law allows the Florida Financial Services Commission to adopt rules to ensure the spirit and intent of the law is met.

During the rule development process, the insurance industry has vigorously opposed the implementation with four separate legal challenges claiming: the Office did not have the authority to prevent the use of credit scoring as an underwriting/rating tool; the Office did not have the authority to define the term "unfairly discriminatory" as used in the statute; insurers did not have the necessary data to demonstrate the effect of credit scoring on the protected classes; and the definition of "disproportionate impact" was too vague.

The administrative law judge found the Office did have the authority to prevent the use of credit scores, and had the authority to define the term unfairly discriminatory. Moreover, the judge found that the insurers' lack of data was irrelevant. The judge did find that the definition of disparate impact needed to be defined more comprehensively, which the Office is correcting.

Conclusion and 2007 FTC Report

Based on the empirical evidence and the objective facts, I am of the opinion that the negative impact on classes of people based on race, age, and religion outweighs any suggested enhanced accuracy in pricing and underwriting, although the broader regulatory community has differing views.

In addition to credit-based insurance scores, I am also concerned about other tools currently being adopted for use in underwriting and rating that share many of the same characteristics of credit-based insurance scores. I am specifically troubled by the growing use of occupational ratings and education levels, and would encourage this Subcommittee to broaden the scope of its investigation to consider these rating factors as well.

Although there have been numerous academic studies of this issue, I eagerly anticipated the FTC Report mandated by the Fair and Accurate Credit Transactions Act (FACTA) of 2003 for delivery by December 24, 2005. The 2007 FTC Report was disappointing to me and many of my colleagues, as we expected an objective independent analysis. I agree with many of the sentiments expressed by FTC Commissioner Harbour in her dissenting statement.

I am particularly concerned that the data supplied by a handful of firms may have been selected to show the best case for the use of credit-based insurance scores. Despite these best-case scenarios provided by industry, the FTC still ultimately found that using credit scores disparately impacted ethnic minorities.

I am also concerned that no premium data were used, and the narrative appeared one-sided in support of the predictive power of the scores while simultaneously downplaying the negative

impacts. I was also troubled by the alleged economic advantages of using credit-based scores which are often featured as conjectures derived from industry assertions, but without any underlying analysis.

Finally, I am troubled by the process used in this report. I cannot understand why the insurance industry trade associations were privileged with advance copies of the report, while the insurance regulatory community was not. In addition, it is my understanding the regulatory actuaries involved in this project had no prior knowledge of the report's major findings or release.

State Involvement

I did agree with one section of the FTC Report especially as it pertains to Federal involvement in this issue: The state insurance regulatory community has focused on credit scoring problems, and has taken action. Forty-eight states have taken some form of legislative or regulatory action limiting the usage of credit scoring in the provision of insurance products.

Many have adopted model legislation on this issue; some states, like Florida, have adopted variations of this model. Many of these legal provisions pertain to the notification and transparency of the use of credit scoring including giving regulatory bodies access to the scoring model, notifying consumers about its use, and restricting insurance decisions based solely on this model.

Other states have gone further to restrict the use of credit history including the disallowance of credit history information as the sole basis for making underwriting or rating decisions, prohibiting the use of credit history information to cancel or nonrenew existing customers or increase their rates, or banning the use of credit history when underwriting or rating existing customers. Finally, four states have effectively banned the use of credit history information in underwriting or rating for automobile insurance.

The implication of the states' actions is clear. While I support potential action taken by this Subcommittee to limit the use of credit scoring, it is essential that federal action not preempt or

diminish consumer protection efforts already enacted by state legislatures. As state regulators, it is our sincere desire that the Federal government assist, not detract, from the states' regulatory efforts to address this important issue.

While the NAIC has not yet reviewed H.R. 5633, from the perspective of the State of Florida, the proposed bill contains several favorable provisions. Most notably, this legislation would require a more in-depth and objective study by the FTC on the relationship between credit scores and race/ethnicity to determine if there is in fact a "proxy effect" that shows a demonstrable correlation between credit scores and race/ethnicity. However, the FTC should not necessarily be the definitive report. Instead, I envision that other state and federal agencies be allowed to research this issue, and add their data analysis and expertise to substantively affect this debate.

Finally, while the NAIC has not had an opportunity to review H.R. 6062, I am also in favor of this legislation, sponsored by Representative Maxine Waters, which would exempt personal lines insurance from the Fair Credit Reporting Act. This bill implicitly recognizes that the 2007 FTC Report already found that credit scores disparately impacts minorities. Thus, we should initially eliminate the use of credit scoring as a starting point. If the FTC Report and other reports show unequivocally that credit scoring does not disparately impacts ethnic minorities, this issue could be revisited.

Furthermore, by addressing this issue from the perspective of the Fair Credit Reporting Act – not insurance – this is consistent with the federal-state relationship for insurance regulation first established through the McCarran-Ferguson Act of 1945.

However, since I am also here representing the NAIC, I must note that other state commissioners have differing views on this issue. Some states do not perceive credit scoring as a concern if it is one of many rating factors. In addition, some states believe that the process itself is not intended to be discriminatory, and any disparate impact based on race or ethnicity is coincidental. Some regulators believe that a majority of policyholders actually benefit from the use of credit scoring. Finally, other states may not agree for the need to expand this issue to other areas such as rating based on occupation and education.

Thank you for holding this hearing, for inviting me here today to participate, and for your continued interest and leadership on this critically important consumer protection issue. I am pleased to answer any questions you may have.

Appendix 1

NAIC Compendium on State Laws Regarding the Use

Of Credit Reports/Scoring in Underwriting

USE OF CREDIT REPORTS/SCORING IN UNDERWRITING

2/08

The date following each state indicates the last time information for the state was reviewed/changed.

STATE	REFERENCE	LINE OF BUSINESS	SUMMARY OF PROVISIONS
AL (2/08)	Reg. 482-1-127-.01 to 482-1-127-.11	Personal lines	Make procedures used to obtain credit reports and insurance scores available to commissioner. If use credit scoring, file the scoring model with the commissioner. May not calculate score based on lack of credit history. May not use credit score as sole reason to deny coverage or refuse to renew.
AK (2/08)	§§ 21.36.460; 21.39.035	Personal lines	If use credit information in underwriting or rating, disclose that fact at the time the application is taken. Must consider in combination with other factors. May not consider absence of credit history or medical accounts. File credit scoring model with commissioner.
	Bulletin B04-11		Use departments' consumer brochures to inform the public about credit scoring.
AZ (2/08)	§ 44-1692	All lines	Consumer reporting agency may furnish credit report where the insurer intends to use it for underwriting.
	§§ 20-2102; 20-2109 to 20-2110	Property and casualty	Must provide specific reasons for adverse decision based on credit history or credit score.
	§ 20-1652	Property and casualty	Must get credit information promptly; cannot cancel or decline coverage more than 30 days after date of application based on credit report.
	§ 20-2113.01	All lines	A consumer reporting agency shall not sell data that includes information about an insurance score.
	§ 20-2110		In the event of an adverse underwriting decision, provide the specific reasons. If based on credit-related information, must decide factors that were primary cause. May not use the following credit-related factors for property or casualty premiums: absence of credit history, credit history based on collection of medical bills, total available credit, etc.
AR (2/08)	§§ 23-67-401 to 23-67-415	Personal lines property and casualty	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Must recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model)
	Bulletin No. 14-2004	Personal lines property and casualty	Form for report on number of policies with increase/decrease in premium due to credit scoring.

USE OF CREDIT REPORTS/SCORING IN UNDERWRITING

2/08

STATE	REFERENCE	LINE OF BUSINESS	SUMMARY OF PROVISIONS
CA (2/08)	Civ. §§ 1785.10 to 1785.11	All lines	Consumer reporting agency may furnish credit report where the insurer intends to use it for underwriting. Agency must notify consumer of rights and provide copy of file, including any credit score used.
	Civ. § 1786.18	All lines	May not include specified information in an investigative report except when used in underwriting life insurance expected to amount to $250,000 or more.
	Bulletin 76-3; Civ. §§ 1785.20,;1786.40	All lines	Users of credit reports who deny insurance or increase the prices charged on the basis of information contained in the reports must disclose the information that was the basis for the adverse decision.
CO (2/08)	§ 12-14.3-103	All lines	Consumer reporting agency may furnish credit report where the insurer intends to use it for underwriting. Must notify consumers that will be using credit report for determination of eligibility for coverage or to determine premiums.
	§ 12-14.3-105.3	Life	May use credit report in underwriting life insurance expected to amount to $150,000 or more.
	§ 10-4-116	Personal lines property and casualty insurance	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Must recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model)
	§ 10-4-616	Personal lines property and casualty insurance	Must notify consumers that new or updated credit information will be used in insurance underwriting or rating.
	§ 10-4-110.7	Homeowners	An insurer is required to provide notice to an applicant if the insurer uses credit scoring, claims history of the property, or clams history of the applicant in determining whether to insure the applicant's property.

USE OF CREDIT REPORTS/SCORING IN UNDERWRITING

2/08

STATE	REFERENCE	LINE OF BUSINESS	SUMMARY OF PROVISIONS
CT (2/08)	Guidelines for the Examination of Financial History Measurement Programs for Personal Risk Insurance Underwriting and Rating Plans	All lines	File measurement tools with the department. May only be used for new business. May not consider lack of credit history. Demonstrate coordination with expected risk of loss. Disclosure to customer.
DE (2/08)	18-900-906 Del. Code Reg §§ 1.0 to 12.0	Personal lines	May not use credit report or score unless the company has obtained authority to do so in its rate filing. File supporting information showing it is actuarially supported and is not the sole basis for denying coverage or assigning the consumer to a premium class. May not assign a higher rate because the consumer has no credit history. May consider insufficient credit history or no available credit history in setting a premium or rate, or underwriting an insurance policy, to the extent such us is actuarially justified and consistent with the rate filing. Models filed with the commissioner shall be considered as confidential proprietary information.
DC (2/08)	No provision		
FL (2/08)	Rule 69O-125.004	All lines	An insurer shall notify an insurance applicant in writing, or in the same medium as the application, that a credit report will or may be requested as part of the application process. If the application is denied, the insurer must tell the applicant in the notice of the denial how a copy of the credit report can be obtained so the applicant can identify the items that resulted in the denial.
	§ 626.9741	Personal lines Auto and homeowners	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Must recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model)

2/08

STATE	REFERENCE	LINE OF BUSINESS	SUMMARY OF PROVISIONS
GA (2/08)	§§ 33-24-90 to 33-24-98	Personal lines property and casualty	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Must recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model)
	Reg. 120-2-15-.01 to 120-2-15-.06	Private passenger auto, residential property	Insurer may cancel, nonrenew or decline a policy based on an individual's credit report. Insurer shall file this information quarterly with the commissioner. Insurer shall provide notice and the specific reason for the decision to the insured.
	Reg. 120-2-65-.01 to 120-2-65-.07	Private passenger auto	An insurer shall not use underwriting criteria or guidelines that result in the fictitious grouping of risks and results in unfair discrimination. The use of credit reports in determining an applicant's or insured's acceptability for coverage may create fictitious grouping and unfair discrimination.
HI (2/08)	§ 431:10C-207	Auto	Insurer shall not base standard or rating plan upon a person's credit bureau rating.
ID (2/08)	Bulletin 91-9	All lines	Consumer reporting agency may furnish credit report where the insurer intends to use it for underwriting.
	§ 41-1843	Property or casualty	May not charge a higher rate or cancel coverage based primarily on a credit rating or credit history.
	Ins. Reg. 18.01.19	Personal lines property and casualty	Aggregate weight given to noncredit factors must be at least as great as the aggregate weight given to credit factors. Items identified as trade secrets are not subject to public disclosure. Insurers must retain documentation for 5 years.
IL (2/08)	215 ILCS 157/1 to 157/55	Personal lines property and casualty	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Must recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model) A certification that the treatment is actuarially justified is required.
	215 ILCS 157/22	All lines	Shall review and consider an exception to the risk score based on extraordinary life events, such as a catastrophic illness, divorce, death of a spouse, child or parent, involuntary loss of employment for three months or more, or identity theft.

USE OF CREDIT REPORTS/SCORING IN UNDERWRITING

2/08

STATE	REFERENCE	LINE OF BUSINESS	SUMMARY OF PROVISIONS
IN (2/08)	Bulletin 111 (July 1, 2002); Bulletin 130 (May 26, 2005)	Personal lines property and casualty	Submit to insurance department information on how credit information is utilized in underwriting, including the factors from a credit report that are included in a credit score, the computer model used to determine a credit score, any underwriting guidelines related to the use of credit scores and documentation to demonstrate the correlation between credit information and expected risk of loss. May not use credit scores after 10/1/02 unless the information is filed with the department.
	§§ 27-2-21-1 to 27-2-21-23	Personal lines property and casualty	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Must recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model).
IA (2/08)	§ 515.103	Personal lines Property and casualty	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Must recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model).
KS (2/08)	§§ 40-5101 to 40-5114	Personal lines property and casualty	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Must recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model).
	Bulletin 2004-10 and 2005-1		Answer questions about above legislation.
	Reg. 40-1-50	Personal lines, property and casualty	Document factors considered in addition to credit score. Maintain evidence to support adverse action. Provide an explanation to an insured adversely affected.
KY (2/08)	§ 304.20-040	Auto	May not refuse to issue or renew a policy solely because of credit history, or lack of credit history of the applicant.

USE OF CREDIT REPORTS/SCORING IN UNDERWRITING

2/08

STATE	REFERENCE	LINE OF BUSINESS	SUMMARY OF PROVISIONS
LA (2/08)	§ 22:1214	Auto liability	Prohibits an insurer from terminating, refusing to renew or refusing to issue insurance because the insured has declared bankruptcy.
	§§ 22:1481 to 22:1494	Personal lines property and casualty	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Must recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model)
	Directive No. 181 (2004)	Personal lines property and casualty	Directive addresses issues that have arisen in above statute.
	Directive No. 196 (2006)	Personal lines	Right of an insured to be exempt from the use of adverse credit information directly or indirectly caused by Hurricane Katrina and/or Hurricane Rita. All insurers writing personal lines are advised and directed to ignore all unfavorable entries entered into an individual's credit record beginning with entries posted on August 26, 2005, and all entries posted thereafter related to Hurricane Katrina and/or Hurricane Rita.
ME (2/08)	tit. 10 § 1313-A	All lines	Consumer reporting agency may furnish credit report where the insurer intends to use it for underwriting.
	tit. 24-A § 2917	All lines	Insurer must notify policyholder of reason intend to nonrenew, such as "credit report."
	tit. 24-A § 2169-B	Personal lines auto, property and casualty	May not use an insurance score calculated using income, gender, ZIP code, religion, etc. or raise rates based solely on credit score. Provide notice to consumer.
	tit. 10 § 1315	Credit reporting agencies	Disclose procedures to consumers to correct inaccurate credit reports.
	Bulletin 329 (2004)	Personal lines	Guidance on issues that have arisen.

USE OF CREDIT REPORTS/SCORING IN UNDERWRITING

2/08

STATE	REFERENCE	LINE OF BUSINESS	SUMMARY OF PROVISIONS
MD (2/08)	Ins. § 27-501	Private auto and Homeowners	May not refuse to underwrite based solely on credit history.
	Commercial § 14-1202	All lines	Consumer reporting agency may furnish credit report where the insurer intends to use it for underwriting.
	COMAR 31.15.11.01 to 31.15.11.11	Personal lines property and casualty and private auto	Insurers that use credit reports or credit scores must provide the commissioner with underlying information so the commissioner can ensure that reports are used in accordance with the law. Must notify consumers of actual reason for an adverse action.
	Ins. § 27-501	Personal lines property and casualty	May not use credit history to rate or refuse to underwrite homeowners coverage. May not use credit history to refuse to renew an auto policy or increase its premium. May use credit history to rate a new auto policy. Advise applicant that credit history is being used. May not consider the absence of a credit history as a factor.
	Ins. § 11-317	Private auto	Must provide a policyholder statement on rating factors. If use credit scoring, explain how it may cause an increase in premiums.
	Bulletin 02-14; 02-16	Personal lines property and casualty	Address questions in implementation.
MA (2/08)	93 § 51	All lines	Consumer reporting agency may furnish credit report where the insurer intends to use it for underwriting.
	93 § 62	Personal lines	If coverage is denied or price increased because of credit report, must notify consumer of right to receive a credit report.
MI (2/08)	Bulletin 2003-01-INS	Personal lines	File formula used to compute credit score with the department. Must recalculate credit score at least yearly.
	Bulletin 2003-02-INS	Personal lines	Revises 2003-01-INS to require rescoring only at the request of the policyholder. Notify consumers of their score and the discount tier they are in.
	Reg. 500.2151 to 500.2155	Personal lines	Beginning 7/1/05, insurers may not use credit scores as a rating factor.

USE OF CREDIT REPORTS/SCORING IN UNDERWRITING

2/08

STATE	REFERENCE	LINE OF BUSINESS	SUMMARY OF PROVISIONS
MN (2/08)	§ 72A.20 subd. 36	Private passenger auto and homeowners	May not reject, cancel or nonrenew a policy solely on the basis of credit information. If will use credit information, must notify consumer. If use a credit scoring system, must have methodology on file with the commissioner.
	§ 72A.501 subd. 2	Property and casualty	Code sections limiting collection of information do not apply to credit scoring, as long as the agent informs the policyholder.
MS (2/08)	Reg. 2003-1.1 to 2003-1.13	Personal lines	Disclose to consumer that insurer may gather and consider credit information. File scoring models with department. Must inform applicant if credit score or report adversely affected him.
MO (2/08)	Reg. tit. 20 § 500-9.100	Homeowner	Insurer must inform the Dept. of Insurance that it is using credit history as an underwriting guideline.
	§ 375.918	Personal lines property and casualty	May not use credit report or credit score as the sole rating factor. Must disclose the fact that will gather credit information. Must inform applicant if credit score or report adversely affected him.
MT (2/08)	*§ 31-3-111*	All lines	Consumer reporting agency may furnish credit report where the insurer intends to use it for underwriting.
	§§ 33-18-601 TO 33-18-611	Personal lines	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Most recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model)
	Advisory Memorandum Dated 9/7/01	Property and casualty	Montana law requires notification to consumers when their credit history adversely affects their ability to obtain or renew insurance.

USE OF CREDIT REPORTS/SCORING IN UNDERWRITING

2/08

STATE	REFERENCE	LINE OF BUSINESS	SUMMARY OF PROVISIONS
NE (2/08)	§ 44-7516.01	Private passenger auto	Policy must be accompanied by disclosure stating if any credit-based rating was used to determine rate charged for coverage.
	§§ 44-7701 to 44-7712	Personal lines	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider solely the absence of a credit history. Most recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model)
NV (2/08)	§§ 686A.600 to 686A.730	Personal lines	May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Must recalculate credit score after 3 years. May not consider medical history codes. (NCOIL model)
	NAC 686A § 3		At renewal of a policy, the consumer credit report or insurance score used on the policy with the earliest effective date may be used, provided that the credit information is not more than 36 months old.
NH (2/08)	§ 359-B:4	All lines	Consumer reporting agency may furnish credit report where the insurer intends to use it for underwriting.
	§ 359-B:5	Life	May use credit report in underwriting life insurance expected to amount to $50,000 or more.
	Reg. Ins. 3301.01 to 3310.02	Auto and homeowners	If use credit scoring, must establish written standards to prevent discrimination and submit scoring model to the insurance department for review. Update credit score at least every 3 years. Submit to commissioner information on the factors considered and the statistical validation.
NJ (2/08)	§ 56:11-31	All lines	Consumer reporting agency may furnish credit report where the insurer intends to use it for underwriting.
	Bulletin No. 04-05	Property and casualty	Insurance scoring is permitted, provided that consumer protections are maintained. Submit model to department for review; credit score may be considered as only one of factors in determining rates; provide specific information if the insurer takes an adverse action.

STATE	REFERENCE	LINE OF BUSINESS	SUMMARY OF PROVISIONS
NC (2/08)	§ 58-36-90 Bulletin 03-B-3	Private passenger auto	*May not use credit reports as sole rating factor. Must notify consumer if will be used. File scoring models with insurance department.* *Requirements for insurers who have trade secret pages in their credit scoring models*
ND (2/08)	§§ 26.1-25.1-01 to 26.1-25.1-11	Personal lines	*May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score. May not consider absence of a credit history unless insurer treats the consumer as otherwise approved by the Insurance Commissioner if insurer presents information that such absence relates to the risk for insurer, if consumer is treated as through the credit information is neutral, or if credit information is excluded as a factor. Must recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model)*
OH (2/08)	Bulletin 2002-2	Property and casualty	Insurers must establish that credit history and credit scores are valid risk characteristics. May not use for discriminatory purposes.
OK (2/08)	Guidelines adopted by Oklahoma State Board for Property and casualty Rates 6/15/2000 Bulletin No. PC 2001-07 *tit. 36 §§ 950 to 959*	Property and casualty Personal lines	Insurers that use credit history or credit scores must provide the board with underlying information to show they are using the information in accordance with OK law. Notify the insured of any adverse action taken as a result of the credit history or credit score. Revised credit scoring guidelines. May not include income, gender, race, religion, marital status, ZIP code, nationality, etc. as factors. May not base rates solely on credit score or consider absence of a credit history. Must recalculate credit score after 3 years. May not consider medical history codes. File scoring models with department. (NCOIL model)

USE OF CREDIT REPORTS/SCORING IN UNDERWRITING

2/08

STATE	REFERENCE	LINE OF BUSINESS	SUMMARY OF PROVISIONS
OR (2/08)	§ 746.635	All lines	Insurer, agent or insurance support organization may not prepare or request an investigative consumer report about a person involving an insurance transaction unless the insurer or agent informs the person that he may request to be interviewed in connection with the preparation of the report and that the person may request a copy of the report.
	Reg. §§ 836-080-0425 to 836-080-0440	Personal lines property and casualty	Prior to use, must notify consumer that credit history will be used. Must notify consumers during the application process that consumer may request information about the use of credit histories or insurance scores. Notice may be either in writing or in the same medium as the medium in which the application is made. The statement must address the following items: (a) Why the insurer uses credit history or insurance scores, (b) How the insurer uses credit histories or insurance scores, (c) What kinds of credit information are used by the insurer, (d) Whether a consumer's lack of credit history will affect the insurer's consideration of an application, (e) Where the consumer may go with questions. An insurer that uses credit history or insurance score in connection with a renewal shall notify consumer of that use when renewal offer is made. Notice shall address the items above. In addition, insurer shall inform consumer that consumer has a right annually to request the insurer use current credit information in the renewal process and that insurer will update the credit information used upon receiving such a request.
	§§ 746.600 to 746.686	Personal lines	*If adverse underwriting decision, provide consumer with specific reasons. If based on credit score, include specifics of no more than 4 reasons for score. Provide information on how to dispute. May use credit history only in combination with other factors to decline coverage. May not consider absence of history, number of inquiries, total available credit, etc. Consumer may request yearly re-rating. File scoring models with dept. Prohibits an insurer from rerating the policy or consumer when the consumer's marital status changes because of death or divorce. Allows an insurer to consider the last five years of claim history when rating a policy, however a insurer can use a longer claim history for the purpose of providing a discount. Allows insurer to consider the second or any subsequent claims in the last 5 years to determine whether to issue or renew a policy.*

The Use of Occupation and Education as Underwriting/Rating Factors for Private Passenger Automobile Insurance

March 2007

Report of commissioner, Kevin m. mccarty

Florida office of insurance regulation

The use of Occupation and Education as underwriting/rating factors for private passenger automobile insurance

March 2007

Executive summary

The Office of Insurance Regulation ("Office") held a public hearing on February 9, 2007 in Tallahassee to review the use of occupation and education as underwriting or rating factors for private passenger auto insurance and its potential impact on Floridians.

In Florida, as well as nationally, the insurance industry has had a checkered past in its use of race and other proxy factors that intentionally or unintentionally negatively impact minorities and low-income individuals. While the use of race as a rating factor was outlawed in Florida, the two factors mentioned above, occupation and education, have emerged in the rating and underwriting of auto insurance and appear to be highly correlated to race and income-level.

Under some rating plans, consumers with more professional occupations (doctors, lawyers, architects), and advanced college degrees are being offered preferred driver rates. Conversely, individuals with blue-collar jobs, and a high school education or less are paying higher premiums for similar risk factors, as exhibited by several online quotes for auto insurance requested by the Office from one of the major auto insurance writers in Florida. With all other factors remaining equal, except for changes to the online applicant's education and occupation, the results were startling. One online quote comparison demonstrated a significant difference in the quoted auto insurance rate when the two factors are adjusted, accounting in that instance in a 300% higher rate for the less educated and less skilled applicant.

Testimony at the public hearing on February 9, 2007, and documents received and reviewed prior, during and after the hearing reveal:

- ***There is a demonstrable correlation between occupation, education and income-level and ethnicity, which was not disputed by the insurance industry.***

- ***Insurance industry representatives all claim ignorance of the relationship between occupation, education and income-level and race despite the existence of publicly available U.S. Census Bureau Data***

- ***Insurers do not collect data from consumers on race or income-level, and refuse to study the impact of underwriting practices on minority and low-income consumers.***

- ***The insurance industry does not believe that corporate responsibility extends to ensuring its practices do not disparately impact minority or low-income Floridians; but instead maintains that it is the Florida Legislature's responsibility to define public policy on this matter in the insurance marketplace.***

- ***It appears that wealthier individuals are more likely to pay small claims out-of-pocket, and avoid making insurance claims, giving some occupations better loss ratios despite higher accident rates.***

- ***As measured by one company's use of occupation and education the magnitude of the premium difference can be very significant.***

- ***Companies that do not use occupation and education as rating factors may potentially be at a competitive disadvantage because they may lose the wide range of business offered by higher income policyholders. Foregoing whatever predictive value these factors may have might also put these companies at a disadvantage. Thus, from an economic point of view, this practice is likely to proliferate regardless of its negative effects on policyholders struggling to overcome disadvantages.***

- ***While the prohibition of the use of these factors, much like in the prohibition of the use of race, could lead to some economic inefficiencies in insurance markets, it may be beneficial to the overall economy and citizenry to prohibit use of these factors as a matter of public policy***

- ***At least one major auto insurer that currently uses education and occupation as part of its underwriting, asserts it would absolutely not use these factors if it were determined the factors had a disparate impact on protected classes.***

- ***A national insurance organization whose members write 56 percent of the private passenger auto insurance market in Florida stated that a public policy concern can override the use of these factors even if there is an actuarial basis for it.***

The transcript of the public hearing held on February 9, 2007, consisting of two volumes, is attached to this Report as **Exhibits 1 and 2**.

Background on the Use of Education & Occupation as Rating Factors

One of Florida's greatest strengths is its rich culture and ethnically diverse population. Regrettably, Florida has another history: one of slavery, Jim Crow laws, as well as discrimination that led to the modern civil rights era. This willful discrimination was pervasive and permeated the institutions of education, government, and commerce --- even the insurance industry. While Florida leaders have since prohibited the use of factors such as race in determining employment and housing decisions, some vestiges of discrimination remain.

In 2000, the National Association of Insurance Commissioners ("NAIC") initiated a Race-Based Premium Working Group to examine the use of race-based premiums for life insurance. The Office was an active participant in this endeavor, which included a questionnaire to all life insurance companies nationwide about past practices. This ultimately resulted in several multi-state market conduct examinations, and multi-million dollar settlements to correct past wrongdoing.

The review period varied based on the company, but usually encompassed 1900-1970, although many policies were still "on the books." The findings were disturbing. Historically several life insurance companies bifurcated rate tables for "Caucasian" and "not-Caucasian," charging higher rates for non-Caucasians. Company documents offered a very interesting defense for this policy: they claimed this was not discriminatory, but merely reflected the statistical differences between life expectancies for Caucasians versus non-Caucasians. Although there may have been some validity to this statement, the insurance industry does not exist in a moral, ethical, or historical vacuum. Despite this "actuarial justification," legislatures around the country banned the use of race regardless of the statistical reasoning.

In reaction to these changes, some companies adjusted their underwriting standards in an unexpected manner: they began to use other factors that served as proxies for race and income status. The two most notable factors included education and occupation.

According to one multi-state examination report concluded by Maryland[1], after the race question was deleted from the application in the 1960s, several companies "appeared to use occupation as a substitute for race." ***Occupations subject to substandard rating included maids, bootblacks, busboys, car wash workers, garbage or ash collectors and janitors.*** The multi-state reported noted, "Non-Caucasian workers were disproportionately represented in the [these] disadvantaged occupations."

The report further compared rating books before and after race was removed from the application and noted:

1) The rating books removed race from the rating methodology, and
2) Occupational Rating Classification replaced the use of race, and
3) No other changes were made.

Both the company and regulators agreed the company engaged in "socio-economic underwriting." All four states involved in the examination, Maryland, Florida, Pennsylvania and Virginia believed there was enough evidence to conclude that the use of occupation in this instance violated all four states' statutes regarding non-discriminatory practices.

In a similar examination conducted by the State of Ohio a rating book for Cooperative Life Insurance Company[2] (CLIC), not only was there ***a substandard rating for occupations like butlers, barbers, valets, cooks, elevator operators and waiters --- but the rating book warned against, "low-grade industrial or illiterate types."***

The Use of Occupation and Education as Rating Factors Continues

The presumption that the use of occupation and education as rating factors ended with the conclusion of the aforementioned life insurance industry multi-state examinations is erroneous.

[1] The State of Florida, Pennsylvania, and Virginia also joined this examination. Monumental Multi-State Exam Report # 789-00 (Maryland).
[2] Actuarial Report – Race Based Pricing Activities with Respect to the Life Insurance Business of Nationwide Life Insurance Company, July 6, 2004 – State of Ohio.

The venue, however, has changed --- to the underwriting and rating of private passenger auto policies.

On March 20, 2006, the Consumer Federation of America ("CFA") issued a press release warning that the nation's fourth largest auto insurer, GEICO, was using occupation and educational attainment to rate auto insurance policies, and that Liberty Mutual Insurance and Allstate Insurance were beginning to use these rating factors as well. J. Robert Hunter, Director of Insurance for CFA, and the former Insurance Commissioner for the State of Texas, challenged state insurance regulators to ban the use of education and occupation for rating policies as these factors are highly correlated with race and income level.

In response, The Property Casualty Insurers Association of America (PCI), a trade association that represents 1,000 member companies that write roughly 40% of the nation's property & casualty business issued its own press release on March 21, 2006. The PCI defended GEICO's use of education and occupation as "valid factors for insurers to use in the marketplace."

As early as 2004, the Office began taking active measures to have auto insurers remove the occupation and education variables from the insurers' underwriting/rating plans used in Florida. In 2004, as a condition of "approving" a filing, those auto insurers using either occupation or education, or both factors, in their underwriting plans were advised to cease doing so within 1 year.

In response to these measures taken by the Office, AIG, in a letter dated May 5, 2004, expressed that AIG "is amiable to remove this factor [occupation] from our scoring models contingent on the following conditions: The [Office] promulgate a Regulation that requires all personal automobile writers to stop using the occupation factors at the same time, or, all carriers using this factor have agreed to remove the factor within the same time frame."

While Florida law specifically outlaws the use of race for rating insurance policies, there is no specific statutory prohibition against using potential proxy factors that are highly correlated to

race, such as educational attainment and occupation that would create a disparate impact on racial minorities and low income Floridians.

Section 627.917, Florida Statutes, states that the Financial Services Commission can establish a uniform statewide risk classification reporting system for auto policies provided it does not discriminate based upon race, creed, color or national origin. Pursuant to this private passenger auto risk classification reporting system statute: "The classification system may include any difference among risks that can be demonstrated to have a probable effect upon losses or expenses …"

The insurers that have begun to use occupation and/or education as rating factors claim these factors are predictive of losses, and thus are not prohibited by Florida Statute, regardless of the potential impact. The auto rating statute states that rates are not unfairly discriminatory with respect to a group even though they are lower (and, by implication, higher) than rates for nonmembers of the group. Rates are only unfairly discriminatory if they clearly fail to reflect equitably the difference in expected losses and expenses or if they are not actuarially measurable and credible and sufficiently related to actual or expected loss and expense experience of the group to assure that nonmembers of the group are not unfairly discriminated against. It is this definition that governs the Office's determination of whether a rate is unfairly discriminatory.

The Public hearing on the use of occupation and education as rating factors for private passenger auto insurance

The Florida Insurance Commissioner, through a Notice of Hearing to the industry, as well as subpoenas directed to auto insurers currently using occupation and education as rating factors, compelled testimony from the industry, consumer advocacy groups, and from the public to explore this issue, and the rationalization underlying the use of these factors. Members from four insurance groups testified including GEICO, Liberty Mutual, the AIG Insurance Group, and New Jersey CURE Auto Insurance. In addition, members from insurance trade organizations including the Property and Casualty Insurance Association of America (PCI), the

Consumer Federation of America, the National Association of Mutual Insurance Companies (NAMIC), the Insurance Information Institute (III), the Florida Insurance Council, the Florida Justice Association, and Florida's Consumer Advocate also testified.

The issue is simple: allowing the use of occupation and education as rating factors appear to disproportionately favor non-minorities and higher-income individuals while negatively impacting minorities and low-income individuals by charging these groups, albeit somewhat indirectly, higher auto-insurance rates relative to others with similar risk characteristics.

Following the Office's attempts in 2004 to have automobile insurance carriers in the state remove the two factors, the Office began monitoring this trend, and has recently been very specific in not "approving" the rate filings that use the two factors at issue, but instead, warning companies that although the Office is concerned about the impact of these practices, it does not have statutory authority to deny these practices. While the Office has not "approved" these plans, it had no other recourse under current statutes and rules but to allow them to come into effect due to the deemer provisions of the law.

This issue also has gained national attention following the Consumer Federation of America's letter to all insurance commissioners explaining its research regarding GEICO's practices. In 2006, Commissioner McCarty commissioned an internal study of the correlation between education/occupation and ethnicity and income, which found strong correlations, ultimately concluding that logically any plan that utilized these factors would negatively impact minorities and low-income individuals.

Prior to the public hearing, the Office identified eight main investigatory questions to understand these issues:

1. Is there a correlation between occupation/education and race and/or income status?
2. Is the insurance industry aware of such correlation between occupation/education and race or income?
3. Does the insurance industry believe its corporate responsibility extends to ensuring its policies do not negatively impact people due to race or income-level?
4. Has the insurance industry researched the impact of its practices on Floridians as it relates to minority or low-income individuals?

5. Is there a correlation between occupation/education and loss ratios and or accident statistics?
6. If it is demonstrated the use of occupation and education negatively impact protected classes, what is the magnitude of this impact?
7. If the Florida Legislature does not change the laws, and this practice is allowed to proliferate, what will be the potential impact on the auto insurance industry?
8. If these factors were not allowed for underwriting factors, would the auto insurance industry still be competitive?

The Current use of occupation and education as rating factors

Even before the eight investigatory questions are explained, it is important to understand how the industry is currently using occupation and education. Although a few industry representatives stated broadly, "they have been using these factors for years," the current incarnation of the usage of these factors is a relatively new phenomenon, and is utilized in different forms by three auto insurers in Florida that collectively write approximately 17.1% of the auto insurance market in Florida, insuring over 1.9 million vehicles.

The testimony elicited the forms of current use, and revealed several critical facts. It is important to understand that these factors can be used in two different phases: (1) Underwriting --- which is to determine whether to insure the individual; and (2) Rating – which is to determine the actual premium paid by the customer. During this investigation, the Office learned about another practice, which is a blending of underwriting and rating, the practice of "tiering"

GEICO utilized "tiering" most directly, and this report will use this company's experience as an example. Currently GEICO has four companies that operate in the State of Florida: Government Employees Insurance Company (which is the origin of the name "GEICO" but does not technically incorporate that acronym), GEICO General, GEICO Indemnity, and GEICO Casualty. During the underwriting phase, a customer will apply for coverage on-line or via a telephone operator, and believes they are applying for coverage from "GEICO." Based on the underwriting criteria (including occupation and education), customers are placed into different companies. The preferred-risk customers are placed into Government Employees

Insurance Company or GEICO General (with the lowest rates), the intermediate-risk customers are placed into GEICO Indemnity, while the sub-standard risk customers are placed into GEICO Casualty. Based on GEICO's placement statistics, it appears that customers gaining the preferred status (and lowest premiums) are far more common:

GEICO Coverage in Florida, 2006

Company	# of Insured Vehicles	Avg. Annual Premium
GEICO /GEICO General	990,262	$938.70
GEICO Indemnity	174,823	$1,183.70
GEICO Casualty	110,613	$1,474,90

It also appears that GEICO is not equally receptive to all segments of the population (favoring those with higher education and better occupational status). During the testimony, the Office learned that customers are usually not informed they were rejected for the preferred company (Government Employees Insurance Company or GEICO General), and placed into another company.[3]

Liberty Mutual has two companies writing auto insurance in Florida, Liberty Mutual Insurance Co. (the preferred company with lower rates), and Liberty Insurance Co. (sub-standard risks and higher rates). In the initial determination, occupation, employment status, and education are determinants for being offered coverage from Liberty Mutual Ins. Co. In response to direct questioning during the public hearing, Christopher Cunniff, VP of Personal Marketing, stated, "Yes, it is possible that some small segment of customers, the use of that variable [education and occupation] does push their slotting decision from one company to another."[4] However, once in the insurance companies, education and occupation are not used as rating factors by the

[3] GEICO is currently defending itself against a lawsuit filed in 2006 in federal court by several African-Americans who were either former or current GEICO policyholders, alleging that the use of education and occupation factors are discriminatory or have a discriminatory impact, Patricia Amos, et al. v. GEICO, U.S. District Court for the District of Minnesota, Case # 06-cv-1281. Transcript of public hearing, Volume 1, page 81, lines 2 – 14; Vol. 1, page 88, lines 8 – 13. GEICO states the allegations are "absolutely baseless".

[4] Transcript of public hearing, Volume 1, page 97, lines 14 – 17.

Liberty Mutual Companies. This contrasts with GEICO, where further tiering decisions are made within each company.

One potential problem of this "slotting" technique is that individuals may be "parked" in the substandard risk company. Even if a person achieves a higher level of education, or changes to a more preferred occupation, they can only switch companies after three years, "if they are clean," remarked VP Cunniff.[5]

The American International Group, Inc. ("AIG") Companies use occupation, but do not use education in their underwriting and premium practices. While AIG does have three auto insurers writing in Florida, AIG does not use the same type of "tiering" techniques used by GEICO and Liberty Mutual, but places customers based on their distribution channels. However, within their underwriting tiers (which ultimately affects rating and premiums), occupation is used as a determining factor.

The Office is vested with the responsibility to ensure rates are not "excessive, inadequate, or unfairly discriminatory,"[6] and it appears that these underwriting and rating factors will *prima facie* result in higher premiums for those who can least afford it: lower-income, and less educated individuals.

I. Is there a correlation between these factors and race and/or income status?

Although racial differences between education and occupation have narrowed since the "Jim Crow" period examined during the race-based life insurance premiums initiative --- a wide gap still exists.

The U.S. Census Bureau conducted a comprehensive study of race/ethnicity and occupation in for its *Selected Occupational Groups by Race and Hispanic Origin for the United States, 2000*.

---

[5] Vol. 1, page 97, lines 23 – 25.
[6] Section 627.0651, Florida Statutes.

The table below, based on U.S. Census Bureau Data, shows disparities among the types of jobs by different races & ethnicities:

Category	Management, Professional, & Related Occupations
Caucasian & Asian*	37%
Black/African American	25%
Hispanic or Latino**	18%
American Indians, Native Alaskans, Hawaiians, & Pacific Islanders	24%

* *Non-Hispanic*
** *Any Race*

Although this is national data, we can still observe dramatic differences: Caucasians and Asians are twice as likely as Hispanics to have management or professional jobs.

The chart below, based on data from he U.S. Census Bureau, shows educational attainment also has large disparities across ethnic and racial groups in Florida:

Bachelor's Degree or Higher
Florida, 2005

Category	Percent with Degrees
Caucasian & Asian*	29%
Black/African American*	13%
Hispanic or Latino**	21%

* *Non-Hispanic*
** *Any Race*

Source: U.S. Census Bureau: Educational Attainment of the Population 18 Years and Over, by Age, Sex, Race Alone, and Hispanic Origin, for the 25 Largest States: 2005

Unlike the occupational data, this is Florida specific data, and also shows large disparities: Caucasian and Asian non-Hispanics are more than twice as likely to have a college degree as Blacks/African Americans.

For both occupation and education, as a group, Caucasians and Asians are more likely to have professional and managerial jobs, as well as college degrees. Not only would utilizing these factors negatively impact minorities (as a group), but also using a combination of these factors may magnify the "inequality effect."

II. Is the insurance industry aware of such correlation between occupation/education and race or income?

Although one may think it is "common knowledge," that there are inequalities in America that contribute to minorities being less likely to obtain college degrees, or have higher incomes, shockingly the representatives of the insurance industry claim to be oblivious of such a relationship. In fact, at times the public hearing was reminiscent of hearings involving the tobacco industry where tobacco lobbyists claimed there were no studies proving tobacco use caused cancer.

Asked pointedly by Commissioner McCarty whether the use of occupation and education would disparately impact protected classes of minorities, Hank Nayden, VP and General Counsel for the GEICO group answered, "…to our knowledge, there is no credible data and no credible study reflecting that."[7] Later in the testimony, Commissioner McCarty asked the same witness if he has looked at the U.S. Census Bureau data on this relationship between occupation and race, Mr. Nayden conceded, "I have not."[8]

The Commissioner again emphasized this question with representatives testifying on behalf of Liberty Mutual. Asking whether the company had looked at U.S. Census Bureau data regarding the relationship between occupation, education, and race and/or income, Christopher Cunniff, VP of Liberty Mutual's Personal Marketing admitted, "I have not, and I'm not aware of anyone at Liberty who has."[9]

Similarly, during the questioning of AIG company representatives, when asked by Deputy Commissioner Belinda Miller about studies showing relationships between occupation and income or race, Mr. Fedak VP of AIG Direct's Southeast Region, answered, "I'm not aware of any studies, other than analyzing our own book of business."[10] Further questioning revealed

[7] Vol. 1, page 38, lines 7 - 10.
[8] Vol. 1, page 50, line 24.
[9] Vol. 1, page 101, lines 23 – 24.
[10] Vol. 2, pages 160 – 11, lines 25 and 1.

that since AIG does not collect data regarding ethnicity or income, no such relationship studies could be performed based on their book of business.

The industry's denial of knowing about the statistical correlations between education, occupation and race and/or income strained credulity, Steve Parton, General Counsel for the Office asked rhetorically whether this was "willful blindness" by the industry. However, it should be noted that CFO Eric Poe of New Jersey CURE Auto Insurance Company committed to not using this factors stated:

> ***"…for an entire industry that is predicated on how smart we are, we would be probably the dumbest industry in the world not to know that those statistical correlations exist."***[11]

III. Does the insurance industry believe its corporate responsibility extends to ensuring its policies do not negatively impact people due to race or income-level?

Based on the testimony presented February 9, 2007, the simple answer appears to be "no."

During his testimony at the public hearing, Alex Hageli of the Property & Casualty Insurance Association of America (PCI) stressed that as long as the outcomes are actuarially based, the insurance company should be allowed to use it. Moreover, when asked about disparities in outcomes and whether that should be allowed he stated, "I believe that's a question the Legislature needs to address."[12]

When asked to contemplate hypothetical variables like eye color, cell phone usage, the number of plasma TVs in the household or birth order, Mr. Hageli answered plaintively, "If there's an actuarial basis for it, it should be used unless there is some overriding public policy concern"[13]

---

[11] Vol. 1, page 33, lines 14 – 17.
[12] Vol. 2, page 128, lines 15 –18.
[13] Vol. 2, page 135, lines 17 – 21.

Later when asked pointedly about the use of race in rating life insurance (as it was conceded African-American's have lower life expectancies than Caucasians), Mr. Hageli implied it could be used, "Except for the fact that it's prohibited by law."[14]

Other industry representatives did not go this far. Commissioner McCarty asked GEICO representatives, "If, in fact, it were determined, hypothetically, that it [using occupation and education as rating factors] had a disparate impact on protected classes, would GEICO continue to use it?"[15] Mr. Nayden of GEICO responded, "absolutely not."[16] However, after presented with U.S. Census data showing disparities, Mr. Nayden seemed unconvinced of the relationship: "And to our knowledge, there is no credible data and no credible study reflecting that [disparate impact]."[17]

When Commissioner McCarty asked the same question of Liberty Mutual's representatives: "If education and occupation criteria used in underwriting or rating were shown to have a disparate impact on protected classes of people …would your company continue to use it?"[18] Mr. Cunniff of Liberty Mutual waffled: "Well that's a hypothetical question which I can't answer, and certainly we wouldn't comment in advance on business plans with our company."[19]

While they too did not specifically state it is the companies' responsibility to understand these relationships, the AIG companies were less vociferous in defense of this practice. Mr. John Fedak, VP of AIG Direct's Southeast Region summarized their companies' position: "…if the OIR requires insurance carriers to remove occupation from the rating process, our tiering model will be revised and will become less accurate in predicting losses."[20]

In summary, the industry does not seem to believe that it is within their corporate responsibility to ensure that rating and underwriting practices do not negatively impact society, as long as the

[14] Vol. 2, page 141, lines 13 – 14.
[15] Vol. 1, page 37, lines 20 – 23.
[16] Vol. 1, page 37, line 24.
[17] Vol. 1, page 38, lines 7 – 8.
[18] Vol. 1, page 101, lines 3 – 8.
[19] Vol. 1, page 101, lines 9 – 12.
[20] Vol. 2, page 155, lines 1 – 4.

practices have actuarial justification. Instead, it is the perception of the industry that this is a public policy question, and it is the responsibility of the Florida Legislature and regulators --- not the insurance industry to ensure these practices do not negatively impact society.

IV. Has the insurance industry researched the impact of its practices on Floridians as it relates to minority or low-income individuals?

The insurance industry professes ignorance as to the relationship between occupation, education and income-status or race, and believes it is the Florida Legislature's responsibility, not that of the industry, to determine what factors are inappropriate. Given these facts, it should not be surprising the industry has not researched this question. It has not.

Yet what is surprising is the industry has established a mechanism that makes it impossible for any auditor to research this specific information by intentionally never collecting any relevant data. While the industry portrays this as the moral high road because policyholders may be offended by being asked information about income or race, it uses the resulting ignorance to claim that anything it may do cannot possibly be discriminatory because it does not even have race or income information. The argument confuses intent with results but sounds appealing at first.

The State of Florida application for employment asks the ethnicity and age of the applicant on a voluntary basis for information purposes (to ensure non-discrimination), while mortgage companies and credit card companies routinely request income information. Insurers make hyperbolic statements such as, "No study has shown our policies have a disparate impact". Such statements are true by tautology --- no study can be conducted without the information of the race and income level of the applicant.

This opinion was most passionately advocated by Mr. Nayden of GEICO who stated, "There is no study that finds that the use of education or occupation as a risk selection characteristic has

an adverse impact on minorities or low income individuals."[21] Yet, when asked whether GEICO could collect and/or analyze this data to determine potentially negative impacts, Mr. Nayden responded emphatically, "We have no interest in collecting or analyzing any data on race."[22] This comment was echoed by Mr. Cunniff of Liberty Mutual: "Liberty does not ask or measure or track either income or race, so we have no internal studies …"[23] We may observe that no external studies are possible either, given that the entities in control of the information desire to remain blissfully ignorant.

To demonstrate the nexus between occupation groups and income level, Eric Poe of the CURE New Jersey Auto Insurance showed that GEICO's rating manual offered the worst (highest premium) category for military personnel in Pay Grade E-4 or lower, which equates to someone earning less than $24,000 a year.[24] Based on GEICO's 2004 rating manual filed with the Office of Insurance Regulation – this is correct.

In response Mr. Nayden remarked the Office has "an old underwriting guideline," but the newer guidelines do not use military pay grades.[25] However, upon further questioning by Susan Dawson, Assistant General Counsel with the Office, Mr. Nayden admitted GEICO currently uses military rank, which is highly correlated to income level within the military.[26]

The industry's position is that using education and/or occupation is "blind" based on race or income. Yet, without collecting any data on this issue, the impact itself must remain invisible. Some of the occupations in GEICO's preferred auto group include doctors, lawyers, and engineers while those in the lowest rating categories include blue and gray-collar workers, service and long-haulers, it is difficult to fathom how their policies could not produce a negative impact on disadvantaged groups.

---

[21] Vol. 1, page 46, lines 5- 8.
[22] Vol. 1, page 38, lines 20 – 22.
[23] Vol. 1, page 113, lines 17 – 21.
[24] Vol. 1, page 22, lines 9 – 23.
[25] Vol. 1, pages 41 - 42.
[26] Vol. 1, page, 42, lines 22 – 25, and page 43.

While the Office agreed that collecting information about race and income could be perceived as offensive, minorities and low-income individuals may be equally offended to learn much larger proportions of them are paying higher rates than the majority racial group and higher income white-collar professionals, and are being rejected by the preferred companies within an insurance group without their knowledge.

V. Is there a correlation between occupation/education and loss ratios and or accident statistics?

Underlying the industry's entire argument is a statistical correlation between occupation, education and auto loss ratios. Representatives from AIG were even more specific, in that by using multivariate regression analysis, there is an *independent* relationship between occupation and auto loss ratios, which can be demonstrated when other factors are held constant. Regrettably, these data cannot be reviewed in this report as some of this involves proprietary information.

During the public hearing, Attorney Susan Dawson elicited testimony from representatives from GEICO regarding a 2003 study completed by Quality Planning Corporation, a division of Insurance Services Office, Inc. (ISO). This study showed that several white-collar careers had higher risk for an accident:

2004 Quality Planning Corporation Study
Accidents Per 1,000 Per Year

Rank	Occupation	Accidents per 1,000
# 1	Student	152
# 2	Medical Doctor	109
# 3	Attorney	106
# 4	Architect	105
# 5	Real Estate Broker	102
# 6	Enlisted Military	99
# 7	Social Worker	98
# 8	Manual Laborer	96
# 9	Analyst	95
# 10	Engineer	94

Many of these occupations including medical doctor, attorney, architect, and engineer appear in GEICO's most preferred rating class.

When asked to explain this apparent discrepancy, Mr. Hageli of PCI speculated that certain jobs may require travel at unusual hours, or be subject to greater distractions (including cell phone usage) causing a greater risk of accident.[27] When pressed for an example, he gave a real estate broker. Yet, Mr. Hageli's explanation seemed unconvincing, as high cell phone usage by attorneys, doctors, and real estate brokers should make their premiums higher --- not lower.

A better explanation was presented by Eric Poe of New Jersey CURE Auto Insurance who stated, "Studies have shown up to 50 percent of eligible claims are not even reported to insurance companies because of the fear that their rates will go up. Unfortunately, lower income individuals do not have the ability to make that choice."[28] For evidence, Mr. Poe cited a report by the 1998 Joint Economic Committee from the U.S. Congress.

Paul Lavrey, actuary for GEICO, agreed stating that "our experience would be based on what we know about, which is the losses that are reported." Moreover, "I'm sure some claims aren't

[27] Vol. 2, page 126, lines 21 – 25.
[28] Vol. 1, page 14, lines 7 – 9.

reported and we don't know about them so we wouldn't have that."[29] Regarding the number of claims that are not reported Mr. Nayden added, "We're not aware of a study, but we would certainly like to review it, if you have one."[30] Mr. Cunniff, of Liberty Mutual, did try to offer a better defense of this stating that many auto claims are third party claims that would be difficult to nonreport, moreover, there are some legal requirements that require multi-car accidents to be reported.[31]

Yet the end result is the same, assuming both the industry studies showing preferred white-collar jobs like doctors, lawyers and architects, have lower loss ratios, yet according to Quality Planning's study have greater amounts of car accidents, it does appear there is some "self-insurance." Basically, wealthier consumers are paying lower-amount claims out-of-pocket rather than filing claims.

VI. If it is demonstrated that the use of occupation and education negatively impact protected classes, what is the magnitude of this impact?

Another factor is the amount of the effect. Even assuming occupation and education are accurate predictors of auto loss ratios, and that industry data has roughly similar experience in this regard, it does seem odd that the variations among insurers are of such a significant magnitude, especially given its actuarial basis.

AIG Company representatives (which use only occupation, not education) assert the differences are not significant: "There's a potential in certain extreme circumstances for a person's tier that they're assigned to move by two tiers based on the occupation variables, and that would result in approximately a 30 percent rate difference."[32] When asked specifically whether it could be higher, Mr. Fedak stated, "That would be a maximum."[33]

---

[29] Vol. 1, page 77, lines, 16 – 22.
[30] Vol. 1, page 78, lines 8 – 12.
[31] Vol. 1, page 109, lines 11 – 20.
[32] Vol. 2, page 168, Mr. Bowman's testimony.
[33] Vol. 2, page 168, line 6.

While the Liberty Mutual testimony focused on other areas, the GEICO testimony elucidated several interesting numbers regarding differences in occupation, education, and its affect on premiums. One of the reasons GEICO is easy to analyze is that it has an interactive rate estimator on its website which can be used to see the effect of specific occupations and education levels while holding other demographic information constant. The Office of Insurance Regulation presented three comparisons:

	High School/ Blue-Collar	Advanced Degree/ Professional	% Difference
Comparison 1[34]	$4,225.36	$1,403.59	201%
Comparison 2[35]	$884.84	$714.04	24%
Comparison 3[36]	$1,027.29	$1,280.79	25%

Eric Poe of New Jersey CURE Auto Insurance stated the differences varied by as much as 50-70%, although in some cases the difference could be as much as 200% as in Commissioner McCarty's example.[37]

While GEICO representatives seem to imply these were isolated incidents, interestingly a reporter from the St. Petersburg Times conducted his own research on his vehicle, comparing the rates for "Bob" --- a 50 year-old janitor with no high school education, and "Joe" a Ph.D. computer executive attempting to insure the same 2002 Toyota Camry in the Tampa area.[38] His results: Bob the janitor would be pay premiums 66% higher for the exact same vehicle.

[34] Example included a single male, age 23, living in Hialeah, with a 2000 Chevrolet Malibu LS, 4 door sedan, Drives up to 15,000 miles a year, one speeding ticket, no accidents within 3 years. BI limits $15,000/$30,000; PD $10,000; PIP $10,000 with $250 deductible; UM: $15,000/$30,000; non-stacked, Comprehensive $500 deductible, Collision $500 deductible. Six-month policy.

[35] Example included a single male, age 25, living in Jacksonville, with a 2005 Honda Accord, 4-door sedan, Drives up to 15,000 miles a year, one speeding ticket, no accidents within 5 years. BI limits $25,000/$50,000; PD $25,000; PIP $10,000 with $0 deductible; UM: $25,000/$50,000; non-stacked, Comprehensive $500 deductible, Collision $500 deductible. Six-month policy.

[36] Example included a single male, age 24, living in West Palm Beach, with a 2002 Buick Park Avenue, 4-door sedan, Drives up to 15,000 miles a year, one speeding ticket, no accidents within 3 years. BI limits $15,000/$30,000; PD $10,000; PIP $10,000 with $250 deductible; UM: $15,000/$30,000; non-stacked, Comprehensive $500 deductible, Collision $500 deductible. Six-month policy.

[37] Vol. 1, page 12, lines 7 – 11.

[38] "GEICO Gives Different Rates for Drivers Depending on their Jobs," St. Petersburg Times, Robert Trigaux, February 12, 2007.

While GEICO claims their models incorporate up to 27 factors, it does appear that some factors are given greater weight than others --- and that education and occupation factors may be more important than miles driven, marital status or age in calculating an insurance premium.

VII. If the Florida Legislature does not change the laws, and this practice is allowed to proliferate, what will be the potential impact on the auto insurance industry?

The problem is simple: if occupation and education are truly predictors of loss, the companies that do not adopt these practices are at a competitive disadvantage vis-à-vis insurance companies that do adopt this practice.

The most pervasive use of this practice is currently that of GEICO, which is the third largest private passenger auto writer in Florida, and the fourth largest writer in the United States.[39] In a statement to the Commissioner and the panel, Mr. Cunniff of Liberty Mutual observed, "I would say that as a general rule we are aware of what competitors are doing."[40]

In their defense, Mr. Nayden of GEICO used as evidence GEICO's double-digit growth and that "the company's growth across all occupations and educational levels give the lie to any notion that certain individuals are being harmed by our underwriting practices."[41] The fact that nearly 1 million policyholders are in GEICO's preferred company, while less than 300,000 have policies with the substandard companies casts serious doubt on this assumption --- while all companies may be growing, GEICO companies appealing to those with higher occupation and more professional occupations seem to have achieved greater market penetration.

In his testimony, Eric Poe stated about CURE New Jersey Auto, "…we [the insurance community & state government] have to make moves to ban the use of this or we are going to be compelled to adopt this rating practice."[42] The Consumer Federation of America voiced its agreement, "…GEICO's continued use of the education and occupation criteria will lead to negative competition in the insurance marketplace and that it will encourage GEICO's

[39] Vol. 1, page 35, lines 15 – 17.
[40] Vol. 1, page 119, lines 23 – 25.
[41] Vol. 1, page 48, lines 9 – 15.
[42] Vol. 1, page 10, lines 7 – 18.

competitors to follow suit, because those competitors will see that GEICO is taking away their more affluent clients."[43]

Based on the testimony provided, it would appear that auto insurer's use of these factors is poised to increase. These factors, could lead proliferate within the auto insurance industry, in much the same way that the use of race as an underwriting factor became pervasive throughout the life insurance industry between 1900 to 1970.

VIII. If these factors were not allowed for underwriting factors, would the auto insurance industry still be competitive?

Other than having predictive value, the main argument for the inclusion of education and occupation as rating factors is the concept of competition. Perhaps best articulated by Dr. Robert Hartwig of the Insurance Information Institute, "…a system of rates that accurately reflects risk and costs is fair and it is equitable. States that restrict actuarially valid underwriting criteria implicitly subsidized drivers with relatively poor records at the expense of the state's better drivers."[44]

Even more dramatically, representatives from PCI stated this will lead to overall price increases: "When you have less competition, you have less market forces forcing prices down," Mr. Hageli continued, "If you begin, as regulators, to tell them what they can and cannot do, they're going to be more conservative. I mean that to me seems to be pretty commonsensical."[45] NAMIC also agreed, "… limitations and restrictions on underwriting freedom stifle innovation and thereby hamper competition, ultimately harming consumers and society in general."[46]

These arguments do have some merit. However, this can be applied to all types of regulation --- as regulation, whether it be standardizing forms that people can understand, prohibiting use

[43] Vol 2, page 149, lines 7 – 12.
[44] Vol. 2, page 193.
[45] Vol. 2, page 131, lines 14 – 20.
[46] Vol. 2, page 185, lines 4 – 14.

of specific language in advertising, or creating solvency requirements to ensure against bankruptcy --- all regulation implicitly limits freedom of insurance companies in exchange for a perceived societal benefit.

The one statement that remained unanswered was posed by the Insurance Commissioner Kevin McCarty during the testimony of PCI: "Certainly the life insurance business is as robust today as it's ever been and we don't allow race-based rates."[47] Moreover, in the same vein, disallowing the use of a factor by all companies (in this instance race) creates a level playing-field for all insurance companies to compete based on factors that are allowed. Based on information received as part of the Office's investigation of this matter, companies that use the factors view the college-educated population as a more profitable group. Companies that do not use occupation and education as rating factors may potentially be at a competitive disadvantage because they may lose the wide range of business offered by higher income policyholders.

[47] Vol. 2, page 131, lines 8 – 13.

Florida's Office of Consumer Advocate also agrees, "I believe that if a particular rating variable has an extraordinary disparate impact on a particular prohibited class or group of prohibited classes, that that variable in effect is a proxy for prohibited classes and should be prohibited."[48] Thus, even though some inefficiencies in the auto insurance market may be created by disallowing the use of factors such as race, income level, or factors that may be intentional or unintentional proxies for race and income levels such as credit scores, occupation and education --- the prohibition of such use may be in the public interest, despite modest insurance sector inefficiencies. The relationship between race and income is illustrated by data from the U.S. Census' "Income, Earnings, and Poverty From the 2004 American Community Survey," issued August 2005:

Median Incomes by Race

Race and Hispanic Origin	Men	Women
Caucasian alone	$42,707	$32,034
Caucasian alone, not Hispanic	$45,573	$32,678
African-American alone	$32,686	$28,581
American Indian	$32,113	$25,752
Asian alone	$46,888	$36,137
Hawaiian and Pacific Islander	$32,403	$27,989
Other Race	$26,679	$23,565
Two or More Races	$37,025	$30,729
Hispanic Any Race	$26,749	$24,030

Median Incomes by Education

Education	Men	Women
Less than High School	$21,760	$13,280
High School Graduate	$31,183	$19,821
Some College or Associates Degree	$37,883	$25,235
Bachelor's Degree	$52,242	$35,195
Graduate or Professional Degree	$68,239	$46.004

[48] Vol. 2, page 217, lines 16 – 21.

Median Incomes by Occupation

Occupational Fields	Men	Women
Management	$65,393	$48,118
Business and Financial Operations	$57,922	$42,256
Computers and Math	$66,130	$56,585
Architecture	$64,496	$51,581
Health Care Practitioner	$69,124	$45,380
Health Care Support	$25,774	$22,658
Farming, Fishing	$22,124	$17,098
Construction	$33,064	$29,289
Transportation	$31,840	$22,434
Personal Care and Service	$27,258	$19,789
Educational	$47,963	$36,891
Office and Admin Support	$35,216	$29,006

One of Florida's greatest strengths is its rich culture and ethnically diverse population, and it would be unfortunate if the insurance industry, through its practices, either intentionally or unintentionally, engaged in discriminatory practices based on a person's ethnicity or income status. Similar to credit scoring, it is possible that clear legislation with rule making authority will be needed to restrict the use of education and occupation as underwriting and rating factors.

An Overview for P/C Insurers' Audit Committees: Effective Use of Actuarial Loss Reserves Expertise 179

IV. SSAPs 192

1. Introduction

This practice note is not a promulgation of the Actuarial Standards Board, is not an actuarial standard of practice, is not binding upon any actuary and is not a definitive statement as to what constitutes generally accepted practice in the area under discussion. Events occurring subsequent to the publication of this practice note may make the practices described in this practice note irrelevant or obsolete.

This practice note was prepared by the Committee on Property and Liability Financial Reporting (COPLFR) of the Casualty Practice Council of the American Academy of Actuaries (Academy).

1.1 What are practice notes?

The Academy's Guidelines for Developing Practice Notes[1] states:

> *"The purpose of practice notes is to provide information to actuaries on current or emerging practices in which their peers are engaged. They are intended to supplement the available actuarial literature, especially where the practices addressed are subject to evolving technology, recently adopted external requirements, or advances in actuarial science and other applicable disciplines.*
> *...*
> *Practice notes are not interpretations of actuarial standards of practice nor are they meant to be a codification of generally accepted actuarial practice. Actuaries are not bound in any way to comply with practice notes or to conform their work to the practices described in practice notes."*[2]

1.1.1 Discussion

Practice notes provide discussion and illustration on areas of common practice among actuaries. Each practice note focuses on a specific topic or application of practice.

As noted in the Academy's guidelines, practice notes are not intended to be an interpretation of the actuarial standards of practice, nor are practice notes meant to be a codification of generally accepted or appropriate actuarial practice. Actuaries are not in any way bound to comply with practice notes or to conform their work to the practices they describe.

1.2 Purpose of this practice note

1. The purpose of this practice note is to provide information to actuaries on current practices in which their peers are engaged related to signing a Property and Casualty Statement of Actuarial Opinion (SAO) and Actuarial Opinion Summary (AOS) as required by the National Association of Insurance Commissioners (NAIC).

[1] Adopted by the Academy's Board of Directors in September 2006.
[2] Id. See http://www.actuary.org/content/guidelines-developing-practice-notes.

1.2.1 *Discussion*

Each year COPLFR is charged with the task of updating the practice note for SAOs on property and casualty loss reserves. The updates typically include discussion around changes implemented by the NAIC to the SAO Instructions (NAIC SAO Instructions). Significant changes in this year's practice note from last year's version are highlighted in yellow.

FAQ: Are actuaries required to comply with this practice note or follow the illustrations provided herein?

A: No. The practice note provides information to actuaries on current and emerging practices in which their peers are engaged. Actuaries are not bound in any way to comply with practice notes or to conform their work to the practices described in practice notes.

1.2.2 *Terms of construction*

There are certain terms used throughout this practice note that are integral to an informed reading. These include "must", "should," and "may". Although this practice note is not binding on any actuary and does not purport to interpret any actuarial standard of practice (ASOP), rather than paraphrase these definitions, we will quote the definitions as provided in ASOP No. 1, *Introductory Standard of Practice*, section 2:

> "Must/Should—*The words "must" and "should" are used to provide guidance in the ASOPs. "Must" as used in the ASOPs means that the ASB does not anticipate that the actuary will have any reasonable alternative but to follow a particular course of action. In contrast, the word "should" indicates what is normally the appropriate practice for an actuary to follow when rendering actuarial services. Situations may arise where the actuary applies professional judgment and concludes that complying with this practice would be inappropriate, given the nature and purpose of the assignment and the principals'*[3] *needs, or that under the circumstances it would not be reasonable or practical to follow the practice.*
>
> *Failure to follow a course of action denoted by either the term "must" or "should" constitutes a deviation from the guidance of the ASOP. In either event, the actuary is directed to ASOP No. 41,* Actuarial Communications.
>
> *The terms "must" and "should" are generally followed by a verb or phrase denoting action(s), such as "disclose," "document," "consider," or "take into account." For example, the phrase "should consider" is often used to suggest potential courses of action. If, after consideration, in the actuary's professional judgment an action is not appropriate, the action is not required and failure to take this action is not a deviation from the guidance in the standard.*
>
> May—"*May" as used in the ASOPs means that the course of action described is one that would be considered reasonable and appropriate in many circumstances. "May" in ASOPs is often used when providing examples (for example, factors the actuary may consider; methods that may be appropriate). It is not intended to indicate that a course of action is reasonable and appropriate in all circumstances, nor to imply that alternative courses of action are impermissible."*[4]

[3] Principal is defined in the Code of Professional Conduct and ASOP No. 1 as "a client or employer of the actuary".
[4] Actuarial Standards Board, ASOP No. 1, *Introductory Actuarial Standard of Practice*, Section 2.1. See

Additionally, this practice note uses the term "required" when the course of action is required by a particular body (e.g., the NAIC through the Annual Statement Instructions), as specified.

1.3 Scope of practice note

According to the NAIC SAO Instructions,

> *"There is to be included with or attached to Page 1 of the Annual Statement, the statement of a Qualified Actuary, entitled "Statement of Actuarial Opinion" (Actuarial Opinion), setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and required Exhibits, shall be in the format of and contain the information required by this Section of the Annual Statement Instructions Property and Casualty."*[5]

FAQ: Does the scope of this practice note include title insurance opinions?

A: While the NAIC Instructions for Title opinions are included in Appendix I, there is no explicit discussion around title opinions. However, actuaries may look to this practice note for discussion around many topics that are similar.

This practice note is intended to assist actuaries by describing practices that COPLFR believes are commonly employed in issuing SAOs and AOSs on loss and loss adjustment expense (LAE) reserves in compliance with the Property and Casualty Annual Statement Instructions (Annual Statement Instructions) for 2018 issued by the NAIC. Actuaries may also find this information useful in preparing statements of actuarial opinion for other audiences or regulators.

1.3.1 Discussion

Approaches other than the ones described within this practice note may also be in common use. The information contained in this practice note is not binding on any actuary and is not a definitive statement of what constitutes generally accepted or appropriate practice in this area.

http://www.actuarialstandardsboard.org/asops/introductoryactuarialstandardpractice/.

[5] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

Note:

- Information taken from NAIC materials has been reproduced with the NAIC's permission. Unauthorized replication or distribution of NAIC materials is strictly prohibited.

COPLFR appreciates the comments it has received since the issuance of the prior year's practice note and has incorporated a number of suggestions in this update. COPLFR also welcomes any suggested improvements for future updates of this practice note. Suggestions may be sent to the current chairperson of COPLFR through the Academy's casualty policy analyst at *casualty@actuary.org*.

1.4 Overview of resources

The *Code of Professional Conduct* (the Code) requires actuaries to "be familiar with, and keep current with, not only the Code, but also applicable Law and rules of professional conduct for the jurisdictions in which the Actuary renders Actuarial Services."[6]

Appendix I of this practice note provides the NAIC Instructions with respect to the property and casualty SAO and AOS. The NAIC Instructions for Title Insurance SAOs are also included for informational purposes only. No discussion is included.

Individual states may have requirements that modify or supplement the NAIC Annual Statement Instructions. The Appointed Actuary is encouraged to refer to the Academy's 2018 P/C Loss Reserve Law Manual for guidance on these points. The 2018 P/C Loss Reserve Law Manual is available for purchase from the Academy.

Additionally, actuaries are encouraged to carefully read and consider regulatory guidance provided by the NAIC's Actuarial Opinion (C) Working Group (AOWG) of the Casualty Actuarial and Statistical (C) Task Force (CASTF) and included in Appendix II, the Statements of Principles adopted by the Casualty Actuarial Society (CAS)[7], and other resources detailed in Chapter 9 of this practice note. Chapter 9 provides a listing of the most relevant Actuarial Standards of Practice (ASOPs) and Statements of Statutory Accounting Principles (SSAPs) that apply to the material covered by this practice note. It also provides resources to actuaries providing opinions other than those covered by the scope of this practice note. The AOWG Regulatory Guidance pertains to the 2018 SAO and the AOS and supplements the NAIC Annual Statement Instructions. The purpose is to provide timely regulatory guidance and clarity to companies and Appointed Actuaries regarding regulatory expectations with respect to the SAO and AOS. The Regulatory Guidance is not binding.

References to the Regulatory Guidance are included throughout this practice note.

[6] American Academy of Actuaries, Code of Professional Conduct, January 1, 2001, Purpose section, last paragraph.
[7] http://www.casact.org/professionalism/standards/princip/

Definitions

ASB - As explained in ASOP No. 1, "*The Actuarial Standards Board (ASB) promulgates actuarial standards of practice (ASOPs) for use by actuaries when rendering actuarial services in the United States. The ASB is vested by the U.S.-based actuarial organizations[8] with the responsibility for promulgating ASOPs for actuaries rendering actuarial services in the United States. Each of these organizations requires its members, through its Code of Professional Conduct[9] (Code), to satisfy applicable ASOPs when rendering actuarial services in the United States."*[10]

CASTF - According to the NAIC website, the mission of the NAIC CASTF "*is to identify, investigate and develop solutions to actuarial problems and statistical issues in the P/C insurance industry."* The Task Force's goals "*are to maintain the financial health of P/C insurers and to ensure that appropriate data regarding P/C insurance markets are available."*[11]

AOWG – According to the NAIC website, in 2018 the AOWG will: "*Propose revisions to the following, as needed, especially to improve actuarial opinions, actuarial opinion summaries and actuarial reports, as well as the regulatory analysis of these actuarial documents and loss and premium reserves.*

- *Financial Analysis Handbook.*
- *Financial statement instructions.*
- *Regulatory guidance to Appointed Actuaries"*[12]

ASOPs - According to the ASB website, ASOPs "*identify what the actuary should consider, document, and disclose when performing an actuarial assignment"* and "*set standards for appropriate practice for the U.S."*[13]

SSAPs – "*Statements of Statutory Accounting Principles (SSAPs) are published by the NAIC in its Accounting Practices and Procedures Manual. The manual includes more than 100 SSAPs, which serve as the basis for preparing and issuing statutory financial statements for insurance companies in the U.S. in accordance with, or in the absence of, specific statutes or regulations promulgated by individual states."*[14]

FAQ: Are ASOPs binding on members of the U.S.-based actuarial organizations when rendering actuarial services in the U.S.?

A: Yes. According to ASOP No. 1, Section 1: "ASOPs are binding on members of the U.S.-based actuarial organizations when rendering actuarial services in the U.S. While these ASOPs are binding, they are not the only considerations that affect an actuary's work. Other considerations may include legal and regulatory requirements, professional requirements promulgated by employers or actuarial organizations, evolving actuarial practice, and the actuary's own professional judgment informed by the nature of the engagement. The ASOPs provide a basic framework that is intended to accommodate these additional considerations."

1.5 Organization of this practice note

Each chapter in this practice note begins with an opening paragraph describing the contents and includes an excerpt of the actual Instructions pertaining to the chapter. Separate sections within the chapter provide details on the topic, including further quoted instruction, definitions, discussion, and illustrative language. The FAQs reside with the relevant chapter/section for ease of use.

The chapters are organized to facilitate use of the practice note and to align it with the structure of the SAO. Chapter 1 introduces the practice note. It is followed by four chapters (Chapter 2 through Chapter 5) that line up with the four required sections of the SAO: IDENTIFICATION, SCOPE, OPINION, and RELEVANT COMMENTS (sections 3 through 6 of the Instructions). As described in the NAIC Instructions,

> *"The Statement of Actuarial Opinion must consist of an IDENTIFICATION paragraph identifying the Appointed Actuary; a SCOPE paragraph identifying the subjects on which an opinion is to be expressed and describing the scope of the Appointed Actuary's work; an OPINION paragraph expressing his or her opinion with respect to such subjects; and one or more additional RELEVANT COMMENTS paragraphs. These four Sections must be clearly designated."*[15]

Chapter 6 provides additional considerations around the SAO, including filing requirements and considerations when the Appointed Actuary becomes aware of errors in the SAO. Chapter 7 covers the AOS and Chapter 8 covers the Actuarial Report, which is considered to be the culmination of the SAO process. Finally Chapter 9 provides resources for the Appointed Actuary.

The four appendices have been organized to make it easier to locate pertinent information. Appendix I provides the NAIC SAO and AOS Instructions, along with the NAIC Data Testing Requirements. Appendix II provides the 2018 AOWG Regulatory Guidance. Appendix III contains more detailed information about specific topics that may not be common to all SAOs. Appendix IV provides the SSAPs from NAIC's Accounting Practices and Procedures Manual deemed to be particularly applicable to actuaries signing NAIC property and casualty SAOs.

In the Annual Statement Instructions and in this practice note, the term "loss reserves" includes LAE reserves unless specified otherwise. This follows the terminology in the NAIC Instructions.

1.6 Changes from the 2017 practice note

COPLFR has made enhancements to the 2018 practice note based on feedback from users and a thorough review by the committee. These changes were relatively minor, and intended to provide more clarity through illustrative language, improve readability, and fix minor errors. COPLFR also reflected all changes to NAIC SAO and AOS Instructions and considered the updates to AOWG's Regulatory Guidance document. Significant changes in this year's practice note are highlighted in yellow.

[15] *2018 NAIC Annual Statement Instructions Property/Casualty*. Section I.1.2

The 2018 NAIC SAO Instructions include changes regarding Accident & Health (A&H) Long Duration Contracts but otherwise have not had any substantive changes since 2017. Noteworthy changes to the NAIC Instructions for 2018 include:

- A definition has been introduced for A&H Long Duration Contracts as "A&H contracts in which the contract term is greater than or equal to 13 months and contract reserves are required."[16] We note that this is different from the definition of Property and Casualty (P&C) Long Duration Contracts.
- Exhibit B: Disclosures have changed with the addition of Item 13: Net Reserves for A&H Long Duration Contracts.
- The prior term "Long Duration Contracts" was revised to "Property and Casualty (P&C) Long Duration Contracts". There was no change in procedures for these types of contracts. COPLFR understands that this was a clarifying change to make clear the distinction between P&C Long Duration Contracts (i.e., those subject to the three tests of SSAP No. 65) and the new term "A&H Long Duration Contracts."

Regulatory Guidance includes context for the addition of A&H Long Duration Contracts to the Instructions and regulatory expectations of Appointed Actuaries regarding these contracts. There were also other minor edits to the sections for Unearned Premium for P&C Long Duration Contracts and Other Premium Reserve items in the AOWG Regulatory Guidance for 2018. These edits included the revision and addition of clarifying language on the type of commentary regulators expect to see in the opinion regarding these topics.

2. IDENTIFICATION section

This, the IDENTIFICATION chapter, is the first of four chapters (i.e., Chapter 2 through Chapter 5) in this practice note that discuss each of the four required sections of the Statement of Actuarial Opinion: IDENTIFICATION, SCOPE, OPINION, and RELEVANT COMMENTS (sections 3 through 6 of the NAIC SAO Instructions).

The SAO starts with an identification paragraph, which according to the NAIC SAO Instructions should:

> *"…specifically indicate the Appointed Actuary's relationship to the company, qualifications for acting as Appointed Actuary, date of appointment, and specify that the appointment was made by the Board of Directors."*[17]

[16] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[17] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

2.1 Appointment of the Qualified Actuary

According to the NAIC SAO Instructions,

> *"Upon initial engagement, the Qualified Actuary must be appointed by the Board of Directors by December 31 of the calendar year for which the opinion is rendered. The Company shall notify the domiciliary commissioner within five business days of the initial appointment with the following information:*
>
> *a. Name and title (and, in the case of a consulting actuary, the name of the firm).*
>
> *b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).*
>
> *c. A statement that the person meets the requirements of a Qualified Actuary.*
>
> *Once this notification is furnished, no further notice is required with respect to this person unless the Board of Directors takes action to no longer appoint or retain the actuary or the actuary no longer meets the requirements of a Qualified Actuary."*[18]

FAQ: Do actuaries need to be re-appointed each year?

A: NAIC Instructions do not necessarily require the Appointed Actuary to be re-appointed every year.

However, when the appointment is specific to the year-end in question, then reappointment would normally be necessary.

The most recent date of appointment (if there is more than one) may be quoted in the identification paragraph.

The Appointed Actuary should consider obtaining and retaining documentation of his or her appointment, including the date of the appointment, as support for this statement. For this purpose, the Appointed

Actuary may wish to retain materials such as minutes of the Board of Directors' meeting indicating the appointment or written confirmation by a company officer.

The term "Board of Directors" is used broadly throughout the 2018 Instructions and separately defined *"to include the designated Board of Directors, its equivalent, or an appropriate committee directly reporting to the Board of Directors."*[19] For example, an actuary may be appointed by the Audit Committee of the Board of Directors.

2.1.1 *Illustrative language*

In the case where the Appointed Actuary is a consultant, the following may be appropriate:

[18] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[19] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

I, Jane Actuary, am associated with ABC Consulting. I am a member of the American Academy of Actuaries and meet its qualification standards for issuing Statements of Actuarial Opinion included with NAIC Property and Casualty Annual Statements. I am a Fellow of the Casualty Actuarial Society. I was appointed by the Board of Directors of XYZ Insurance Company on November 3, 2018 to render this opinion.

2.1.2 *Definition of a Qualified Actuary*

Paragraph 1A of the NAIC SAO Instructions sets out the requirements for an actuary to be qualified to sign SAOs:

> *"Qualified Actuary" is a person who meets the basic education, experience and continuing education requirements of the Specific Qualifications Standard for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement, as set forth in the* Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States, *promulgated by the American Academy of Actuaries, and is either:*
>
> *(i). A member in good standing of the Casualty Actuarial Society, or*
>
> *(ii). A member in good standing of the American Academy of Actuaries who has been approved as qualified for signing casualty loss reserve opinions by the Casualty Practice Council of the American Academy of Actuaries.*[20]

[20] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

Special Situations:

- NAIC SAO Instructions state that members of the Academy qualifying under paragraph 1A (ii) of the NAIC must attach, each year, a copy of the approval letter by the Casualty Practice Council (CPC) to the SAO.
- As set out in paragraph 3 of the NAIC SAO Instructions, insurance regulatory officials of the domiciliary state may approve individuals who do not meet the definition of Qualified Actuary in paragraph 1A (i) or (ii) to sign SAOs. In these cases, NAIC SAO Instructions state that the company must attach, each year, a letter from that official stating that the individual meets the state's requirements for rendering the SAO.

2.2 Qualifications

The identification paragraph contains the Appointed Actuary's statement that he or she is qualified to sign the SAO. Before taking on or renewing an Appointed Actuary assignment, actuaries are advised to review the applicable qualification standards and ensure compliance.

Actuaries are reminded that the Academy promulgated amended *Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States Including Continuing Education Requirements, effective January 1, 2008 (the "US Qualification Standards")*. This practice note refers to NAIC SAOs as contemplated in Section 3 of the US *Qualification Standards.* The Appointed Actuary must meet the general and specific qualification standards, basic and continuing education (CE) requirements, and other requirements described therein.

The following table summarizes the applicable Qualification Standards.

NAIC SAOs—Overview of Applicable Qualification Standardsverview of Applicable Qualification Standards	
U.S. Qualification Standards – General	• MAAA, FCAS, ACAS, or fully qualified member of another IAA-member organization • Three years of responsible actuarial experience, defined as workthat requires knowledge and skill in solving actuarial problems

(cont.)

NAIC SAOs—Overview of Applicable Qualification Standards

U.S. Qualification Standards – General

- Knowledge of the applicable law through examination or documented professional development
- And either:
  - Have attained highest possible level of membership in an IAA full- member organization and have one year responsible actuarial experience in the relevant area under the review of an actuary qualified to issue the SAO at the time the review took place under standards in effect at that time
  - Have a minimum of three years of responsible actuarial experience in the relevant area under the review of an actuary qualified to issue the SAO at the time the review took place under standards in effect at that time
- 30 hours of "relevant" continuing education (CE)
  - >= 6 organized
  - >=3 professionalism
  - <=3 general business
  - Refer to http://actuary.org/qualstandards/

U.S. Qualification Standards – Specific

In addition to the requirements of the General Qualification Standard:

- Successfully complete relevant examinations administered by the Academy or the CAS on (a) policy forms and coverages, underwriting, and marketing; (b) principles of ratemaking; (c) statutory insurance accounting and expense analysis; (d) premium, loss, and expense reserves; and (e) reinsurance; OR obtain a signed statement from another actuary who is qualified to issue the SAO, NAIC P/C Annual Statement, indicating that the writer is familiar with the actuary's professional history and that the actuary has obtained sufficient alternative education to satisfy the basic education requirement for the specific qualification standard. This statement should be obtained before issuing an SAO.
  - Three years of responsible experience relevant to the subject of the SAO under the review of an actuary qualified to issue the SAO at the time the review took place under standards in effect at that time
  - Obtain 15 CE hours per year related directly to the particular topic
  - Minimum of 6 CE hours of "organized" activities related directly to the particular topic

Refer to http://actuary.org/qualstandards/

NAIC SAOs—Overview of Applicable Qualification Standards	
NAIC	• Meet U.S. Qualification Standards' Specific Qualification Standard for NAIC SAOs • Member in good standing of the CAS, or of the Academy (and approved as qualified by the Academy's Casualty Practice Council (CPC)) • State requirements may vary • Refer to NAIC Annual Statement Instructions and the Academy's 2018 P/C Loss Reserve Law Manual
CAS	• The CAS Continuing Education Policy requires actuaries providing SAOs in the U.S. to comply with the U.S. Qualification Standards • Refer to http://www.casact.org/education/index.cfm?fa=ceinfo

Note:

- The NAIC began an Educational Standards and Assessment Project in March 2018. The outcome of this project could include a change to the NAIC's definition of a Qualified Actuary, among other items, but if so, would not be expected to be implemented until at least the NAIC 2019 Statement of Actuarial Opinion Instructions. Thus, there is no change for 2018 Opinions.
- CAS CE requirements changed for Actuarial Services rendered on or after January 1, 2016, with Alternative Compliance Provisions being eliminated. The applicable requirements from the most relevant recognized organization must be followed – typically the Academy for SAOs – whether the CAS member is a member of that organization or not.
- The Actuary should be prepared to provide evidence of compliance with the relevant continuing education requirements on a timely basis. Several templates, as well as an online tool, are available from the CAS and Academy.
  - The Academy has developed and made available to its members a voluntary U.S. Qualification Standards Attestation Form, a tool which is intended to respond to regulators' concerns about transparency on actuarial qualifications necessary for signing statutory statements of opinion. The form is available to Academy members at http://attest.actuary.org/.
- Certification of compliance with CAS CE requirements for services to be provided in year 2019 is due by December 31, 2018.

2.3 Change in Appointed Actuary

NAIC SAO Instructions require a formal process for changing Appointed Actuaries. The steps are set out in paragraph 1 of the NAIC SAO Instructions. The process involves actions by the company and prior Appointed Actuary and is set into motion by the formal Board of Directors action replacing the Appointed Actuary. NAIC SAO Instructions state that:

1. ***Within five days of the action***, the company must advise the relevant domiciliary insurance department in writing of the change.

2. ***Within 10 days of the notification***, the company must write to the domiciliary Commissioner stating whether in the 24 months preceding the change "*there were any disagreements with the former Appointed Actuary regarding the content of the opinion on matters of the risk of material adverse deviation, required disclosures, scopes, procedure, type of opinion issued, substantive wording of the opinion or data quality. The disagreements required to be reported… include both those resolved to the former Appointed Actuary's satisfaction and those not resolved to the former Appointed Actuary's satisfaction.*"[21]

   The letter should list and describe such disagreements, as well as the nature of the resolution, or that the items were not resolved, as applicable.

   The letter must be accompanied by a response from the former Appointed Actuary addressed to the company "*stating whether the Appointed Actuary agrees with the statements contained in the Insurer's letter and, if not, stating the reasons for which he or she does not agree.*"[22]

   The 2018 AOWG Regulatory Guidance states "*While regulators are interested in material disagreements regarding differences between the former Appointed Actuary's final estimates and the insurer's carried reserves, they do not expect notification on routine discussions that occur during the course of the Appointed Actuary's work.*"[23]

FAQ: Could an actuary be appointed after year-end?

A: Under extraordinary circumstances (e.g., illness of prior Appointed Actuary), the appointment of a new actuary may occur after year-end. Companies would typically communicate with the regulator about the reasons for the late change.

[21] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[22] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[23] 2018 AOWG Regulatory Guidance, page 3 (Appendix II).

Note:

- It may be appropriate to also consider any disagreements related to the AOS, although the Instructions do not state this explicitly.
- Newly Appointed Actuaries would typically obtain and review this correspondence as part of their pre-work.

3. SCOPE section

This, the SCOPE chapter, is the second of four chapters (i.e., Chapter 2 through Chapter 5) in this practice note that discuss each of the four required sections of the Statement of Actuarial Opinion: IDENTIFICATION, SCOPE, OPINION, and RELEVANT COMMENTS (sections 3 through 6 of the NAIC SAO Instructions).

The SCOPE section identifies both the reserve items upon which the Appointed Actuary is providing an opinion and also the basis for the presentation of those reserve items. The SCOPE section also identifies the *"review date."* The *"review date"* is defined in ASOP No. 36 as *"the date (subsequent to the valuation date) through which material information known to the actuary is included in forming the reserve opinion."*[24]

The NAIC SAO Instructions also indicate that the SCOPE should include a paragraph regarding the data relied upon in forming the opinion, including who provided the data and that the Appointed Actuary reconciled the data to Schedule P, Part 1 of the Company's Annual Statement.

Additionally, if the Company participates in intercompany pooling, the Appointed Actuary discloses this in the SCOPE. This disclosure should include a description of the pool, an identification of the lead company, a listing of all companies with their state of domicile and pooling percentages. It should also discuss how the data used in the Appointed Actuary's analysis was reconciled to Schedule P (either on a pooled basis or for each company on its own).

FAQ: Is the Appointed Actuary required to opine on all of the reserve items listed in section 3.1 of this chapter?

A: No. The Appointed Actuary should identify those items that will be included within the scope of the opinion.

3.1 Scope of SAO

The SCOPE section identifies the reserve items upon which the Appointed Actuary is providing an opinion. The reserve items can include:

[24] Actuarial Standards Board, "ASOP No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*," http://www.actuarialstandardsboard.org/asops/statements-actuarial-opinion-regarding- propertycasualty-loss-loss-adjustment-expense-reserves/, December 2010, Section 2.10.

- Loss and LAE reserves;
- Retroactive reinsurance assumed reserves;
- Unearned premium reserves for P&C Long Duration Contracts;
- Unearned premium reserves for extended reporting endorsements, including, but not necessarily limited to those items included in Schedule P Interrogatory No. 1 of the company's Annual Statement; and,
- Other reserve items for which the Appointed Actuary is providing an opinion.

These items, and their corresponding amounts, are listed in Exhibit A: Scope. Exhibit A: Scope and Exhibit B: Disclosures are two exhibits that are required to be attached to the Statement of Actuarial Opinion.

3.1.1 Discussion

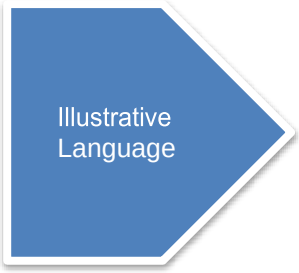
The Appointed Actuary should state that the SCOPE items included in the SAO reflect the Disclosure items (8 through 14) in Exhibit B.

Note:

- If the Appointed Actuary is not opining on certain items in Exhibit A: SCOPE (or a subset of those items), then the Appointed Actuary should clearly state this in the SCOPE section of the SAO. In this case, if the Appointed Actuary believes the excluded items could be material, the SAO would be "Qualified" and noted as such in item 4 of Exhibit B. (For further discussion on Qualified SAOs, please refer to section 4.5 of this practice note.)

3.1.2 Illustrative Language

The following language may be appropriate:



I have examined the actuarial assumptions and methods used in determining the reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 2018. The reserves listed in Exhibit A, where applicable, include provisions for Disclosure items (disclosures 8 through 14) in Exhibit B.

3.2 Stated basis of presentation

The SCOPE of the SAO should identify the basis upon which the reserves are stated. ASOP No. 36 explains that the stated basis of reserve presentation is:

> *"a description of the nature of the reserves, usually found in the financial statement and the associated footnotes and disclosures. The stated basis often depends upon regulatory or accounting requirements. It includes, as appropriate, the following:*
>
> *a. whether reserves are stated as being nominal or discounted for the time value of money and, if discounted, the items discounted (for example, tabular reserves only) and the stated basis for the interest rate (for example, risk-free rate, portfolio rate, or fixed rate of x%);*
>
> *b. whether the reserves are stated to include an explicit risk margin and, if so, the stated basis for the explicit risk margin (for example, stated percentile of distribution, or stated percentage load above expected);*
>
> *c. whether the reserves are gross or net of specified recoverables (for example, deductibles, ceded reinsurance, and salvage and subrogation);*
>
> *d. whether the potential for uncollectible recoverables is considered in the reserves, when recoverables are involved and, if so, the categories of such uncollectible recoverables considered and whether those categories reflect currently known collectibility concerns or potential ultimate collectibility concerns. Possible categories of uncollectibles include those related to disputes and those related to counterparties in financial difficulty (credit default);*
>
> *e. the types of unpaid loss adjustment expenses covered by the reserve (for example, coverage dispute costs, defense costs, and adjusting costs);*
>
> *f. when the opinion is only for a portion of a reserve, the claims exposure to be covered by the opinion (for example, type of loss, line of business, year, and state); and*
>
> *g. any other items that, in the actuary's professional judgment, are needed to describe the reserves sufficiently for the actuary's evaluation of the reserves."*[25]

FAQ: What is an accounting basis?

A: An accounting basis refers to the reporting principles underlying the presentation of the financial report. Two common examples are SAP (Statutory Accounting Principles) and GAAP (Generally Accepted Accounting Principles).

[25] Actuarial Standards Board, "ASOP No. 36, Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves," http://www.actuarialstandardsboard.org/asops/statements-actuarial-opinion-regarding- propertycasualty-loss-loss-adjustment-expense-reserves/, December 2010, section 3.4.

3.2.1 *Illustrative Language*

The following language may be appropriate:

I have reviewed the December 31, 2018 loss and loss adjustment expense reserves recorded under U.S. Statutory Accounting Principles.

3.3 Intercompany pooling

For companies participating in an intercompany pool, the Appointed Actuary is required to include a description of the intercompany pool in the SAO. This could be included in the SCOPE. The following section discusses intercompany pooling and offers information regarding what may be included in this description.

According to the NAIC SAO Instructions,

> *"For each company in the pool, the Appointed Actuary shall include a description of the pool, identification of the lead company and a listing of all companies in the pool, their state of domicile and their respective pooling percentages.*
>
> *Exhibits A and B for each company in the pool should represent the company's share of the pool and should reconcile to the financial statement for that company."*[26]

FAQ: Is there a difference between intercompany pooling and intercompany reinsurance among affiliated carriers?

A: Yes! Please see the "Definition" section (3.3.1) below.

For companies that have a zero percent share and zero net reserves, the information for the lead company in the pool should be provided.

3.3.1 *Definitions*

Intercompany Reinsurance refers to a transaction whereby one company (the reinsurer), for a consideration, agrees to indemnify the other (ceding company) against all or part of the loss that the latter may sustain under the policy or policies that it has issued.

Intercompany Pooling in this context refers to business that is pooled among affiliated insurance companies who are party to a pooling agreement in which the participants receive a fixed and predetermined share of all business written by the pool. Intercompany pooling arrangements involve establishment of a conventional quota share reinsurance agreement under which all the pooled business is ceded to the lead entity and then retroceded back

[26] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

to the pool participants in accordance with their stipulated shares.

In addition to the discussion below, pooling is discussed in Appendix III.2 as well as in the AOWG Regulatory Guidance included as Appendix II. The reader is referred in particular to the AOWG Regulatory Guidance related to pooling arrangements in the Opinion paragraph (section 1C of the NAIC SAO Instructions).

Section 1C of the NAIC SAO Instructions was expanded in 2014 to apply to all companies that operate in an intercompany pooling agreement. Companies participating in intercompany pooling arrangements,

regardless of their participation percentage, are required to include a description of the pool, identification of the lead company, and a listing of all companies in the pool. This listing is to include their state(s) of domicile and their respective pooling percentages in each of the SAOs.

Additionally, regardless of the company's participation percentage in the intercompany pool, each company is required to include in the Statement of Actuarial Opinion Exhibits A and B information reflective of their share. Companies having a zero (0) percent share are required to include relevant comments that relate to the risks of the lead pool member and are required to file Exhibits A and B of the lead company as an addendum to their SAO.

One of the following situations may present itself to the Appointed Actuary:

1. *An intercompany pooling agreement applies, the lead company retains 100 percent of the pooled business, and the other pool participants each retain 0 percent.*
   Schedule P for the lead company will contain the total gross and net reserves for the pool. The gross and net reserves in Schedule P for the other companies will be zero. Section 1C of the NAIC SAO Instructions and section 6 of the NAIC AOS Instructions apply.

2. *An intercompany pooling agreement applies, more than one pool participant retains a non-zero share of the pooled business, and other pool participants each retain 0 percent.*
   Schedule P, for each company that retains a non-zero share of the pooled business, will show its share of the gross and net reserves. The gross and net reserves in Schedule P for the other companies will be zero. Section 1C of the NAIC SAO Instructions and section 6 of the NAIC AOS Instructions apply.

3. *A reinsurance agreement applies, and the company (or companies) cedes 100 percent of its reserves under a quota share reinsurance agreement.*
   Schedule P for the company (or companies) ceding 100 percent of its reserves shows gross reserves but zero net reserves. Paragraph 1C of the NAIC SAO Instructions and paragraph 6 of the NAIC AOS Instructions do not apply.

If it is unclear whether section 1C of the NAIC SAO Instructions applies, refer to the Financial Statement Note entitled "*Intercompany Pooling Arrangements*", read the contract itself, and/or contact the regulator for the company's domiciliary state. The Appointed Actuary may refer to Appendix III.2 of this practice note for more information.

Note:

- Note the distinction between pooling to a 100 percent lead company with no retrocession and ceding 100 percent via a quota share reinsurance agreement. Any proportional reinsurance agreement with affiliates must be approved by the regulator as either an intercompany pooling arrangement or a quota share reinsurance agreement. The financial reporting depends on the approved filing, regardless of how a company views the contract.

3.3.2 *Illustrative Language*

The following language may be appropriate:

The Company is the lead member of an intercompany pooling agreement with its subsidiaries, DEF Insurance Company and GHI Insurance Company. Premiums and losses are allocated to the Company based on its assigned percentage to the total pool, XX%. Analysis of the reserve items identified in Exhibit A has been performed for all pool companies combined and allocated to the pool companies based on their pooling percentages. Any favorable or adverse development will affect pool members in a manner commensurate with their pool participation. The following is a listing of all companies in the pool, their respective pooling percentages, and their state of domicile:

ABC Insurance Company: 80%, New York DEF Insurance Company: 15%, New York GHI Insurance Company: 5%, New York

3.4 Review date

The SCOPE of the SAO also identifies the "review date." This section defines and discusses this topic.

FAQ: Is the "review date" the same date that the Appointed Actuary issues the Opinion?

A: The "review date" is the date through which the Appointed Actuary considers material information in forming the reserve opinion. While it can be the date the Appointed Actuary signs the Opinion, it may in fact precede the signature date.

3.4.1 *Definitions*

Review date is defined in ASOP No. 36 as:

> *"the date (subsequent to the valuation date) through which material information known to the actuary is included in forming the reserve opinion."*[27]

[27] Actuarial Standards Board, "ASOP No. 36, Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves," http://www.actuarialstandardsboard.org/asops/statements-actuarial-opinion-regarding- propertycasualty-loss-loss-

Note "review date" is a specific disclosure required for SAOs. "Information date" is a disclosure required for any Actuarial Communication, as discussed in ASOP No. 41, however, we believe the two terms are conceptually similar. According to ASOP No. 41:

> *"The actuary should communicate to the intended user the date(s) through which data or other information has been considered in developing the findings included in the report."*[28]

3.4.2 Discussion

The 2018 AOWG Regulatory Guidance, which can be found in Appendix II, notes that when the Appointed Actuary is silent regarding the review date, this can indicate either a review date that is the same as the date the SAO is signed or that the Appointed Actuary overlooked this disclosure. In instances in which the Appointed Actuary's review date is the same date that the SAO is signed, regulators suggest actuaries clarify that in the SAO. Such language may include, "*…and reviewed information provided to me through the date of this opinion."*[29][28]

3.4.3 Illustrative Language

The following language may be appropriate:

My review considered information provided to me through ([date] OR [the date of this opinion]).

adjustment-expense-reserves/, December 2010, Section 2.10.

[28] Actuarial Standards Board, "ASOP No. 41, Actuarial Communications, http://www.actuarialstandardsboard.org/asops/actuarial-communications/, December 2010, Section 3.4.5.

[29] 2018 AOWG Regulatory Guidance, page 5 (Appendix II).

3.5 Provider of data relied upon by the Appointed Actuary

The NAIC SAO Instructions require that the SCOPE paragraph include a paragraph such as the following regarding the data used by the Appointed Actuary in forming the opinion:

> *"In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by____ _(officer name and title at the Company). I evaluated that data for reasonableness and consistency. I also reconciled that data to Schedule P, Part 1 of the Company's current Annual Statement. In other respects, my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary."*[30]

FAQ: What if the data is provided by a third party administrator rather than by an officer of the company?

A: According to AOWG Regulatory Guidance, while it is informative to identify the third-- party in the SCOPE, the regulated entity will be ultimately responsible for the data. Regulators expect that a company official will be identified in the SCOPE paragraph.

3.5.1 Discussion

The Appointed Actuary should disclose the title of the officer of the Company responsible for the data used by the Appointed Actuary in his/her analysis, in addition to the name of the officer. One or two officers of the regulated entity will usually be named in the SAO. The Appointed Actuary may also be the person responsible for the data.

3.5.2 Illustrative Language

The following language may be appropriate:

Illustrative Language

In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by_____(officer name and title at the Company).

3.6 Evaluation of data for reasonableness and consistency

The NAIC SAO Instructions require the Appointed Actuary to evaluate the data relied upon in the analysis underlying the SAO. This statement normally means that the Appointed Actuary reviewed the data triangles, etc., used in the course of forming the SAO. During this review, the Appointed Actuary observes whether data points were found to be either outside the range of reasonable possibilities or internally inconsistent to a significant

[30] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

degree (or that appropriate adjustments have been reflected in the Appointed Actuary's analysis).

3.6.1 Discussion

The objective of the evaluation for reasonableness and consistency is to identify significant data errors that would ordinarily be observed by the Appointed Actuary in the course of analyzing the reserves.

Note ASOP No. 23, *Data Quality*, provides guidance on this issue; the Appointed Actuary is to comply with ASOP No. 23 when evaluating data.

For purposes of compliance with the NAIC SAO Instructions, the following discussion is provided:

FAQ: Is the actuary required to attest that no errors exist in the data examined?

A: No.

4. The key question in reviewing a specific, unusual data point is normally whether the data point is so unusual that it may indicate a possible data error of significance to the Appointed Actuary's SAO on the reserves or whether special attention should be taken with unusual but valid data. Data points that could reasonably result from random variations in claim experience or from normal coding errors (e.g., a small downward development in the number of claims reported for a particular accident year and line of business) generally need not be questioned. (Note: The Appointed Actuary may well inquire about the causes of unusual data points for purposes of evaluating the reserves.)

5. Generally, prudent actuaries watch for inconsistencies in the data compilations used directly in the actuarial analysis. For example, if the Appointed Actuary is using a paid loss development method, the Appointed Actuary may choose to investigate significant atypical accelerations or decelerations in the development.

6. If data initially appeared to be unreasonable or inconsistent, but were either explained or adjusted satisfactorily, then the data does comport with a finding of reasonableness and consistency. There may be discussion within the Actuarial Report addressing these circumstances.

Note:

- If the Appointed Actuary identified the data as being unreasonable or inconsistent to a significant degree (relative to the Appointed Actuary's opinion on the reserves), and the apparent data problem was not resolved satisfactorily, some possible alternatives are as follows:
  - Do not rely on the data in question: If, in the Appointed Actuary's judgment, this causes a significant increase in the uncertainty inherent in the Appointed Actuary's opinion on the reserves, then the situation would usually be described in the Statement of Actuarial Opinion and would usually be elaborated upon in the Actuarial Report, or
  - Conclude that an actuarial opinion cannot be formed based on the available data.

3.6.2 Illustrative Language

The following language may be appropriate:

Illustrative Language

I evaluated the data for reasonableness and consistency.

3.7 Reconciliation to Schedule P

The NAIC SAO Instructions require the Appointed Actuary to make a statement regarding the reconciliation of data relied upon in the analysis underlying the opinion to Schedule P of the Company's Annual Statement. This statement is intended to mean the following:

A. Each of the following types of data, if relied upon significantly in forming the actuarial opinion (on a net or a direct plus assumed basis), were reconciled to Schedule P, Parts 1, 1A,..., 1R (referred to collectively as Schedule P below): paid losses, incurred (case basis) losses, paid defense and cost containment expenses, incurred (case basis) defense and cost containment expenses, paid adjusting and other expenses, salvage and subrogation received, and earned premiums.

FAQ: Should the reconciliation be performed at a level of detail and refinement identical to that displayed in the Statutory Annual Statement?

A: Not necessarily. See the discussion below.

B. The reconciliation of paid data consisted of comparing either (a) cumulative paid amounts, or (b) current calendar-year paid amounts obtained from the actuarial data to the analogous data from Schedule P, Part 1; the reconciliation of case basis reserves consisted of comparing the current year-end case basis reserves from the actuarial analysis to Schedule P, Part 1; the comparisons were completed in detail by line of business and year in which losses were incurred, to the extent that such detail was relied upon significantly and is provided in Schedule P.

C. The differences, if any, were deemed by the Appointed Actuary to be either insignificant or explainable by known causes that did not represent errors in the data relied upon by the Appointed Actuary (e.g., the case basis reserves for LAE were based on formulas that differed between the two sources.).

3.7.1 Discussion

The following discussion points are relevant with respect to the Appointed Actuary's statement regarding the reconciliation of data to Schedule P:

1. The Appointed Actuary may use types of data that are not included in the above reconciliation (e.g., numbers of units of exposure, numbers of claims, policy limits distributions, and loss data for older years adjusted to reflect subsequent years' reinsurance retentions). Salvage and subrogation received would normally be reconciled if the losses are reviewed gross of salvage and subrogation and/or a separate analysis is performed for salvage and subrogation. Additionally, the Appointed Actuary may consider reconciling claim counts, if the method of counting claims is consistent between the reserve analysis data and Schedule P (e.g., per claim vs. per occurrence).

2. If data used by the Appointed Actuary are subdivided more finely than that in Schedule P (e.g., lines of business are subdivided, accident quarter detail is used, or the data are subdivided between pools and associations and other business), then the data relied upon can be aggregated to the level shown in Schedule P. Similarly, if the Appointed Actuary chooses to combine some Schedule P lines of business for purposes of the actuarial study, then the Schedule P data can be aggregated as needed for comparison.

3. If the data used by the Appointed Actuary are grouped in such a manner (e.g., by type of policyholder, with each type including subsets of two or more Schedule P lines of business) that those data and the Schedule P data require aggregation before being compared, then the data can be compared after minimal necessary aggregation. Alternatively, more finely detailed data may be compiled that, when aggregated in different ways, reproduce both the data used by the Appointed Actuary and the Schedule P data. A brief comment indicating the inability to compare data directly (i.e., before some aggregation of both the data used by the Appointed Actuary and Schedule P data) and the level at which the comparison was performed may be included in the Statement of Actuarial Opinion and may be elaborated upon in the Actuarial Report.

4. If adjustments were made to the data for purposes of the actuarial analysis (e.g., to put older years on a basis more similar to recent years or for purposes of projecting the recent years), the data before adjustment often can be compared against Schedule P.

5. If, as is common, the adjusting and other loss expense data used by the Appointed Actuary were grouped by payment year, not subdivided by accident year, then it typically would be appropriate for the latest calendar year's payments (not in detail by accident year) to be compared by line of business, allowing variations in line-of-business groupings as discussed above.

6. If any paid or case-incurred loss or LAE data that were relied upon significantly cannot be compared in detail by line of business and year for reasons other than those in notes (2) through (5) above (e.g., if the data used in the actuarial analysis were grouped by policy year), then this may be indicated in the Statement of Actuarial Opinion and may be elaborated upon in the Actuarial Report. If it is not possible to compare the data with Schedule P by year, the data may be compared with Schedule P on an all-years-combined basis. This may be appropriate for calendar-year paid losses, calendar-year defense and cost containment expenses, current year- end case basis loss reserves, and current year-end case basis defense and cost containment expense reserves.

7. If any loss or LAE data corresponding to the prior year's line of Schedule P were relied upon significantly, such data may be compared to Schedule P on an all-years combined basis. This comparison may include calendar-year paid losses, calendar-year paid defense and cost containment expenses, current year-end case basis loss reserves, and current year-end case basis defense and cost containment expense reserves. This may be the case for a discontinued line of business.

8. As with other aspects of the work underlying the Statement of Actuarial Opinion, if the reconciliation was performed by someone other than the Appointed Actuary, the Appointed Actuary may review the methodology used in the reconciliation and its results but need not have personally done or checked the calculations.

9. The Appointed Actuary's analysis may be based primarily on data evaluated earlier than year-end (e.g., Oct. 31). If actual year-end data are not used as the base for projection of the outstanding amounts then, in forming the opinion on year-end reserves, the Appointed Actuary would typically compare the actual year-end data against expected year-end values based on the earlier evaluation. The data source used for the analysis would typically still be reconciled to Schedule P.

10. The Actuarial Report ordinarily contains a description of the comparison performed and of any data that were relied upon significantly but could not be compared against Schedule P.

11. If, after attempting to resolve the differences, significant, unexplained differences remain between the data used by the Appointed Actuary and those shown in Schedule P, the Appointed Actuary may choose to do the following:

a. Confirm that the person(s) responsible for the data used by the Appointed Actuary and the person(s) responsible for the data in Schedule P are aware of the differences. (They ordinarily will have learned of the differences in the course of the Appointed Actuary's efforts to resolve them.)

b. Recommend that the Company inform its outside auditors of the unexplained differences.

c. Discuss the situation in the Statement of Actuarial Opinion and elaborate on it in the Actuarial Report.

3.7.2 Illustrative Language

The following language may be appropriate:

I also reconciled that data to Schedule P – Part 1 of the Company's current Annual Statement.

OR

I also reconciled that data to Schedule P – Part 1 of the Company's current Annual Statement. The data generally reconciled with one exception: The total amount of Company XXX's paid loss differs by $21,000. This difference results from rounding and is not material.

3.8 Data testing requirement

The data testing requirement has been in effect for several years and is specified in the Annual Audited Financial Reports section of the NAIC Annual Statement Instructions. This is included in Appendix I.4 of this practice note. According to this requirement, "through inquiry of the Appointed Actuary, the auditor should obtain an understanding of the data identified by the Appointed Actuary as significant."[31]. The auditor's responsibility is to determine which data elements are to be included in the testing procedures within the scope of the financial statement audit.

Note that a similar data testing paragraph can be found in the NAIC Annual Statement Instructions for title insurance companies.

[31] 2018 NAIC Data Testing Requirement (Appendix I.4)

3.8.1 Discussion[32]

As noted above, the 2018 NAIC SAO Instructions include a data testing paragraph in the Annual Audited Financial Reports section. This statutory guidance is included in Appendix I.4 and referred to as *the data testing requirement* in this document. The NAIC Annual Statement Instructions further address the auditor's review of data used by the Appointed Actuary. For purposes of this discussion, the term *"loss reserves"* is intended to include LAE reserves and any other items within the scope of the statutory Statement of Actuarial Opinion.

The data testing requirement ensures that the auditor will become aware of the data and/or data elements that the Appointed Actuary identifies as being significant.

The term *significant* is not defined within the data testing requirement; the opining actuary should determine a meaning of *significant* that is best suited for the situation that is the subject of the SAO. COPLFR believes that a data item or attribute would normally be considered to be *significant* to an analysis of loss and LAE reserves if, in the Appointed Actuary's professional judgment, the correctness of the data item or attribute in the loss and LAE reserve analysis is likely to have a material effect on the SAO. Examples of a *material effect* might include a change in the type of SAO rendered (reasonable, qualified, redundant, deficient, or no opinion) or the presence or absence of a risk of material (RMAD) adverse deviation. (Note: The ASB has not adopted a specific definition of *significant* as it pertains to this data testing requirement, hence the meaning of *significant* suggested by COPLFR in this paragraph is not binding on any actuary.)

Once the auditor has obtained an understanding of the data identified by the Appointed Actuary as being significant, the auditor will determine the scope of testing procedures for purposes of assessing "whether the data tested is fairly stated in all material respects in relation to the statutory financial statement taken as a whole."[33]

As an accommodation, Appointed Actuaries often provide a letter addressed to company management, with a copy to the company's financial statement auditors, identifying the data that the Appointed Actuary deems significant to his/her analysis of loss and LAE reserves. An example of such letter is included in the illustrative language section below. While there is no requirement to this effect, written communication among the Appointed Actuary, the company's management, and the company's auditor, to be retained for a reasonable time period, may help clarify information and create a documentation trail.

FAQ: What data are in scope vs. out of scope of the data testing requirement?

A: Upon request from the auditor, the Appointed Actuary identifies the data they have deemed significant to the analysis in support of the SAO. However, it is the auditor's responsibility to determine which data elements are to be included in the testing procedures within the scope of the financial statement audit.

In practice, Appointed Actuaries meet with the company's management and its financial statement auditors to

[32] Note that COPLFR generated this section after discussions with the American Institute of Certified Public Accountants (AICPA), the NAIC/AICPA Working Group and the NAIC Casualty Actuarial and Statistical Task Force (CASTF). Actuaries are not normally trained to define or specify audit procedures and therefore look to insurance companies and their auditors as having the ultimate responsibility for determining how to comply with the data testing requirement. Questions about the data testing requirement as it relates to specific companies should be directed to the companies' domiciliary regulators.

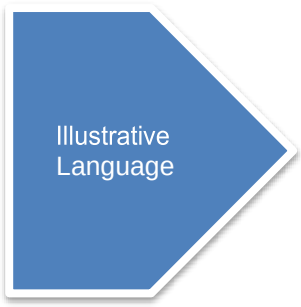
[33] 2018 NAIC Data Testing Requirement (Appendix I.4)

discuss the data in greater depth. Note, ASOP No. 21, *Responding to or Assisting Auditors or Examiners in Connection with Financial Audits, Financial Reviews and Financial Examinations,* provides guidance to actuaries on responding to or assisting auditors in connection with financial statements.

Actuaries may also wish to consult ASOP No. 23, *Data Quality,* regarding the nature and boundaries of the Appointed Actuary's responsibilities regarding data quality.

3.8.2 Illustrative Language

The following provides one possible example of a letter the Appointed Actuary may wish to issue to company management (typically with a copy to the auditor) regarding items significant to the analysis of loss and LAE reserves supporting the SAO. Significant data and attributes will vary depending on the circumstances of a particular assignment and may call for varying approaches to compliance with the NAIC's requirements. There is no requirement that the Appointed Actuary use this letter or any of the specific language or provisions it contains, or to identify the lines of business or attributes used as examples as significant. If the Appointed Actuary chooses to issue such a letter, consideration will be made of the facts and circumstances of a particular company; entirely different language may be used. The Appointed Actuary may wish to consult with legal counsel on the contents of such a letter and/or concerning the specific provisions of the NAIC's data testing requirements.



Dear CFO:

I understand that ABC CPA has been appointed to audit XYZ Insurance Company's financial statements for the year ended December 31, 2018. I understand that the NAIC Annual Statement Instructions direct insurers to require that the auditor subject the data used by the Appointed Actuary to testing procedures. As the Appointed Actuary of XYZ, I am providing this letter to communicate what data and attributes I believe to be significant to my analysis in support of the XYZ Statement of Actuarial Opinion (SAO).

In this letter, a data item or attribute would normally be considered to be "significant" to my analysis of loss reserves if, in my professional judgment, the correctness of the data item or attribute in the loss reserve analysis is likely to have a material effect on the opinion. Examples of "material effect" might include a change in the type of opinion rendered (reasonable, qualified, redundant, deficient, or no opinion) or the presence or absence of a risk of material adverse deviation.

As of the date of this letter, I expect my analysis of loss and loss adjustment expense reserves to be based on the following data:

12. *Direct and Ceded Paid Loss and Defense and Cost Containment Expense (DCC) byreviewed line of business and by accident year, at annual evaluations as of XX/XX/2018. For Workers' Compensation,*

these data are also split to Medical vs. Indemnity. For Commercial Multi-Peril, these data are also split to Property vs. Liability.

13. *Direct and Ceded Case Reserves for Loss by reviewed line of business and by accident year, at annual evaluations as of XX/XX/2018. For Workers' Compensation, this data is also split to Medical vs. Indemnity. For Commercial Multi-Peril, these data are also split to Property vs. Liability.*
14. *Direct and Ceded Earned premium by reviewed line of business by calendar year as of XX/XX/2018.*
15. *Reported Claim Counts by reviewed line of business and by accident year, at annual evaluations as of XX/XX/2018, for the following lines of business: Workers' Compensation and Personal Auto Liability. For Workers' Compensation, these data are also split to Medical vs. Indemnity.*
16. *Direct Paid Adjusting and Other Expense (AOE) by calendar year as of XX/XX/2018. I believe the Workers' Compensation and Commercial Multi-Peril lines of business to be most significant with respect to the SAO.*

The attributes that are significant with respect to the above items are as follows:

a. *For items 1 through 4, the assignment to line of business and accident year.*
b. *For items 1, 3 and 4, the annual amounts of premiums, payments or reported claims.*
c. *For item 2 the amount of reserves at XX/XX/2018.*
d. *For items 1, 2 and 4, the split for Workers' Compensation of Medical vs. Indemnity.*
e. *For items 1, 2 and 4, the split for Commercial Multi-Peril of Property vs. Liability.*

The data used in support of the SAO come to me from the Analyst of XYZ and are generally provided on the 10th workday following the close of the year. Direct AOE is provided by the Controller of XYZ. I have attached an extract of last year's data files, highlighted to show the data fields that I used for last year's review.

The decision to designate the items listed in this letter as "significant" was based upon my professional judgment and my understanding of XYZ's operations at this time as represented to me by XYZ's management. This listing is intended solely for the use of XYZ and its auditors, and should not be used or relied upon by any other party or for any other purpose. This listing does not indicate in any way that all of these items will, in fact, prove to be significant to the Company's reserves or that additional items not specified here will not be identified at some time in the future as having been a significant influence on the Company's reserves. The above list was based on my work for XYZ in prior years, and is subject to change during the course of my review. If I become aware of additional data items that are significant to my review of reserves as of December 31, 2018, I will notify you and, with your concurrence, inform ABC accordingly.

I will rely upon the data identified in this letter when performing my analysis. Any significant discrepancies discovered in the data identified in this letter should be communicated to me by XYZ as soon as possible so that my analysis can be amended accordingly.

I would be happy to meet with you and ABC and answer any questions you may have. Please contact me after you have had a chance to review this letter.

Yours truly,
The Actuary

cc: The Partner, ABC CPA

3.9 Methodology

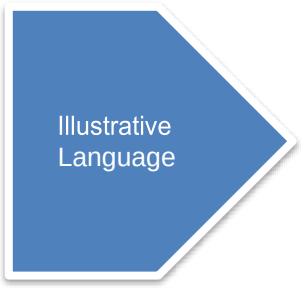
The NAIC SAO Instructions state that the SCOPE paragraph should include a statement regarding the examination of the assumptions and methodology underlying the Company's recorded reserves.

3.9.1 Discussion

Certain states may interpret the NAIC SAO Instructions literally and expect the Appointed Actuary to have examined the Company's methodology for determining its reserves. The Appointed Actuary may need to perform additional work to comply with that state's interpretation, particularly when not an employee of the Company.

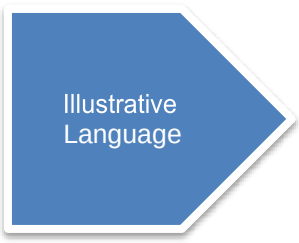
3.9.2 Illustrative Language

If the Appointed Actuary examined the assumptions and methodology underlying the Company's recorded reserves, the following wording is generally appropriate, absent any circumstances that may warrant the use of alternative language:



I have examined the actuarial assumptions and methods used in determining reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 2018, and reviewed information provided to me through XX/XX/2019 …my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary.

If the Appointed Actuary did not review the methods and assumptions used in determining the reserves but rather performed independent tests to evaluate the reserves, wording similar to the following may be appropriate in place of the last sentence shown in the SCOPE paragraph of the NAIC SAO Instructions (above):



I have examined the reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 2018, and reviewed information provided to me through XX/XX/2019…my examination included the use of such actuarial assumptions and methods and such tests of the calculations as I considered necessary.

If there is some segment of the associated reserve amounts for which the Appointed Actuary is not giving an opinion, such qualification may be stated here. This would be a qualified SAO in accordance with ASOP No. 36, which requires the Appointed Actuary to indicate the segment of business and the associated reserve amounts. The Appointed Actuary is referred to section 4.5 for a detailed discussion of what constitutes a qualified SAO.

4. OPINION section

This, the OPINION chapter, is the third of four chapters (i.e., Chapter 2 through Chapter 5) in this practice note that discuss each of the four required sections of the Statement of Actuarial Opinion: IDENTIFICATION, SCOPE, OPINION, and RELEVANT COMMENTS (sections 3 through 6 of the NAIC SAO Instructions).

According to NAIC SAO Instructions,

> *The OPINION paragraph should include a sentence that at least covers the points listed in the following illustration:*
>
> > *"In my opinion, the amounts carried in Exhibit A on account of the items identified:*
> >
> > *A. Meet the requirements of the insurance laws of (state of domicile).*
> >
> > *B. Are computed in accordance with accepted actuarial standards and principles.*
> >
> > *C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements."*
>
> *If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts or Other Loss Reserve items on which the Appointed Actuary is expressing an opinion, the Actuarial Opinion should contain language such as the following:*
>
> > *D. "Make a reasonable provision for the unearned premium reserves for long duration contracts and/or <insert Other Loss Reserve item on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements."*
>
> *If there is any aggregation or combination of items in Exhibit A, the opinion language should clearly identify the combined items.*[34]

Each of these items is discussed in detail in this chapter.

When the reserve estimate is subject to an exceptionally high degree of variability, or when a reasonable fluctuation in reserves can have a material effect on surplus, the Appointed Actuary may choose to discuss this in the SAO. More discussion is in the RELEVANT COMMENTS chapter of this practice note.

[34] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.1 Meet the relevant state laws

Section 5(A) of the NAIC SAO Instructions requires an opinion that the reserves meet the requirements of the insurance laws of the state of domicile.

4.1.1 *Discussion*

The insurance laws of the states are generally interpreted to include statutory accounting requirements. Thus, to comply with insurance law, reserves ordinarily represent management's best estimate.

Insurance laws and regulations take precedence over the actuarial standards and principles at all times.

Management is required to record its best estimate of reserves by line of business and in total in the statutory accounts. The Appointed Actuary may wish to consider that management's obligations in this regard may be different than the Appointed Actuary's. The Appointed Actuary is required in sections 5(B) and 5(C) of the NAIC SAO Instructions to opine on the reasonableness of the reserves in the aggregate.

FAQ: How can I find the relevant state laws?

A: There are several resources that may be used to find relevant state laws. The American Academy of Actuaries' 2018 P/C Loss Reserve Law Manual is one resource (see note below). In addition, state insurance laws are often available on the website of the particular state regulatory authority. One can also contact the applicable state regulator directly to obtain that state's insurance laws. The responsibility to identify all relevant state laws rests with the individual actuary and legal counsel should be consulted where the actuary is unable to identify all relevant state laws.

Note:

- The Academy's 2018 P/C Loss Reserve Law Manual provides a compilation of state regulatory requirements concerning property and casualty loss and LAE reserves. The Law Manual is updated annually and available for purchase from the Academy.

The following language may be appropriate:

In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).

B. Are computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements

4.2 Accepted actuarial standards and principles

The NAIC SAO Instructions state that the OPINION paragraph should include a sentence that the amounts identified in Exhibit A are computed in accordance with accepted actuarial standards and principles.

4.2.1 *Discussion*

As discussed in section 3.9, *Methodology*, the ability to make this statement depends on the Appointed Actuary's role in reviewing the reserves. The Appointed Actuary may instead perform an independent analysis of the reserves.

If a state were to interpret the Instructions literally it might expect the Appointed Actuary to have examined the company's methodology for determining its reserves. The Appointed Actuary would need to perform additional work if required to comply with the relevant state's interpretation.

Note:

- Insurance laws and regulations take precedence over the actuarial standards and principles. The Code of Professional Conduct states, for example: "Laws impose obligations upon an Actuary. Where requirements of Law conflict with the Code, the requirements of Law shall take precedence."

4.2.2 *Illustrative language*

The following wording is generally appropriate in situations where the Appointed Actuary reviewed the assumptions and methods used in setting the recorded reserves, assuming it is factually correct:

In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).

B. Are computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements.

In situations in which the Appointed Actuary performs an independent analysis of the reserves, the opinion statement in 5(B) of the NAIC SAO Instructions may read:

In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).

B. Are consistent with reserves computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements

4.3 Reasonable opinion

There are five possible types of SAOs: Reasonable, Inadequate/deficient, Redundant/excessive, Qualified, or No opinion. The type of SAO must be explicitly identified in item 4 of Exhibit B as follows:

- R if Reasonable
- I if Inadequate or Deficient Provision
- E if Excessive or Redundant Provision
- Q if Qualified, including the situation when part of the OPINION is Qualified
- N if No Opinion

This section of Chapter 4 discusses the reasonable type of SAO. Sections 4.4 through 4.6 discuss the other types of SAOs.

The NAIC SAO Instructions explain the determination of a reasonable SAO as follows:

> *"When the carried reserve amount is within the Appointed Actuary's range of reasonable reserve estimates, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves."*[35]

FAQ: What if the Appointed Actuary concludes that the net loss and LAE reserves and the direct-plus-assumed loss and LAE reserves make reasonable provisions for the unpaid loss and LAE obligations of the company, but amounts booked for certain subsets of the carried reserves do not, in isolation, make reasonable provisions for the associated portions of the company's obligation?

A: The determination of whether to issue a deficient/inadequate opinion is based upon the overall evaluation of the loss and LAE reserves as disclosed in the SCOPE paragraph of the SAO, as discussed in Chapter 3. For this purpose, it may not be relevant whether the actuary believes that each subset of the reserves makes a reasonable provision for the associated obligations, as long as the carried reserve amount is reasonable in the aggregate.
However, the Actuary would still need to assess whether the reserves are stated in accordance with the laws of the state of domicile and accepted actuarial standards and principles.

[35] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.3.1 *Definitions*

ASOP No. 36, section 3.7, states that an actuary should consider a reserve to be reasonable if it is within a range of estimates that could be produced by an unpaid claim estimate analysis that is, in the actuary's professional judgment, consistent with both ASOP No. 43, *Property/Casualty Unpaid Claim Estimates*, and the identified stated basis of reserve presentation.

4.3.2 *Discussion*

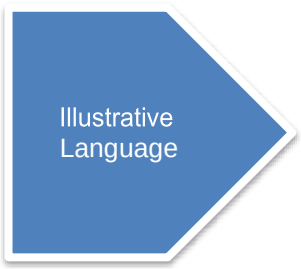
If the Appointed Actuary reaches different conclusions regarding the SCOPE items, e.g., the determination of a reasonable provision for net reserves versus a determination of a redundant provision for gross reserves (direct plus assumed reserves), then the SAO would usually include language that explicitly conveys the intended category of SAO for each of the SCOPE items.

Note:

- If the Appointed Actuary reaches different conclusions regarding net reserves versus gross reserves (direct plus assumed reserves), then item 4 in Exhibit B ordinarily would reflect the SAO category for net reserves. In this situation the Appointed Actuary would be expected to include discussion about both gross and net in the SAO.
- The range of reasonable estimates typically is narrower, perhaps considerably, than the range of possible outcomes of the ultimate settlement value of the reserve.
- A reserve booked outside the bounds of the range of reasonable estimates would not normally make a reasonable provision for all unpaid loss and LAE obligations. The Appointed Actuary will be guided by ASOP No. 36.

4.3.3 *Illustrative language*

The following language may be appropriate:



In my opinion, the amounts carried in Exhibit A on account of the items identified:

B. Meet the requirements of the insurance laws of [state of domicile].
C. Are consistent with reserves computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements.

In situations in which the Appointed Actuary reaches different conclusions regarding the SCOPE items, e.g., the determination of a reasonable provision for net reserves versus a determination of a redundant or deficient provision for gross reserves (direct plus assumed reserves), the opinion statement in 5(C) of the NAIC SAO Instructions may read:

In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of [state of domicile].
B. Are consistent with reserves computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all net unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements, but a deficient [or redundant] provision on a gross of reinsurance basis. The provision for all gross unpaid losses and loss adjustment expenses is $X less than [or greater than] the minimum [or maximum] amount I consider necessary to be within the range of reasonable estimates.

4.4 Inadequate/deficient opinion or excessive/redundant opinion

The NAIC SAO Instructions explain the determination of an inadequate/deficient SAO as follows:

> *"When the carried reserve amount is less than the minimum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the minimum amount that the Appointed Actuary believes is reasonable."*[36]

In addition, the determination of an excessive/redundant SAO is explained in the NAIC SAO Instructions as follows:

> *"When the carried reserve amount is greater than the maximum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the maximum amount that the Appointed Actuary believes is reasonable."*[37]

Further, ASOP No. 36 contains specific disclosure requirements for deficient or inadequate SAOs.

[36] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[37] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.4.1 *Definitions*

To determine whether the reserves make a reasonable provision for all unpaid loss and LAE obligations, the Appointed Actuary can refer to ASOP No. 36.

4.4.2 *Discussion*

ASOP No. 36, section 4.2.b requires disclosure of the minimum amount the Appointed Actuary believes is reasonable, if the actuary determines the reserve amount is deficient or inadequate; section 4.2.c requires disclosure of the maximum amount the Appointed Actuary believes is reasonable, if the actuary determines the reserve amount is redundant or excessive. NAIC SAO Instructions are consistent with these requirements.

Note:

- As noted in section 3.7.1 of ASOP No. 43, Property/Casualty Unpaid Claim Estimates, the reasonableness of an unpaid claim estimate should be determined based on facts known to and circumstances known to or reasonably foreseeable by the Appointed Actuary at the time of the evaluation.
- The minimum amount the Appointed Actuary believes is reasonable is not synonymous with the lowest possible amount. Likewise, the maximum amount the Appointed Actuary believes is reasonable is not synonymous with the highest possible amount.
- If the opinion is that reserves are anything other than "reasonable," the Appointed Actuary may want to reconsider whether the carried amounts being opined on meet the first two points of the OPINION paragraph, namely that they meet the requirements of the insurance laws and are consistent with reserves computed in accordance with accepted actuarial standards and principles.

4.4.3 *Illustrative language*

The following language may be appropriate:

In my opinion, the amounts carried in Exhibit A on account of the items identified:

D. Meet the requirements of the insurance laws of (state of domicile).
E. Are consistent with reserves computed in accordance with accepted actuarial standards and principles.
C. Make an inadequate [or excessive] provision for the unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements. The provision for unpaid losses and loss adjustment expenses is $X less [greater] than the minimum amount I consider necessary to be within the range of reasonable estimates.

4.5 Qualified opinion

The NAIC SAO Instructions explain the determination of a qualified SAO as follows:

> *"When, in the Appointed Actuary's opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated or the Appointed Actuary is unable to render an opinion on those items, the Appointed Actuary should issue a qualified Statement of Actuarial Opinion. The Appointed Actuary should disclose the item (or items) to which the qualification relates, the reason(s) for the qualification and the amounts for such item(s), if disclosed by the Company. Such a qualified opinion should state whether the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, except for the item (or items) to which the qualification relates. The Appointed Actuary is not required to issue a qualified opinion if the Appointed Actuary reasonably believes that the item (or items) in question are not likely to be material."*[38][36]

ASOP No. 36 contains specific disclosure requirements for qualified SAOs.

4.5.1 *Discussion*

According to ASOP No. 36, the Appointed Actuary is to issue a qualified SAO when, in the Appointed Actuary's opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated, or the Appointed Actuary is unable to render an opinion on those items[39]. Examples of situations in which this may occur are as follows:

1. An actuary identifies a portion of the business that may be material to loss reserves, but there is insufficient information with which to perform a quantitative review or draw a conclusion about materiality. The actuary discloses this in the opinion and the supporting report. The opinion is qualified to exclude this portion of the business.

2. An actuary identifies a portion of the business that is material to loss reserves, but there is insufficient information with which to perform a review. The actuary discloses this in the opinion and the supporting report. The opinion is qualified to exclude this portion of the business.

FAQ: How would an opining actuary treat a situation in which there is a portion of reserves for which he or she did not perform an independent analysis? Does this necessarily mean that the opinion is qualified?

A: Often, the phrase "independent analysis" is construed as a quantitative analysis. In addressing this question, it is important to distinguish between "quantitative analysis" and "review." In the course of a review of reserves, actuaries generally use quantitative methods to analyze most reserve segments. However, for certain segments the actuary may, relying on professional judgment, conclude that the reserves for the segment are likely to be too small to be material to the total,
– and a quantitative analysis is not needed. This professional judgment would typically reflect information such as the number of open claims, dollars of total case loss reserves, and types of policies written. The use of such professional judgment does not necessarily require a qualified opinion. We note that the actuary's review process should be well-documented in the Actuarial Report.

[38] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[39] Section 3.11(d) of ASOP No. 36.

3. A portion of the business is deemed to be outside the scope of the actuary's review. For example, a different actuary reviews and opines on reserves for the accident and health line of business. The actuary discloses this in the opinion and supporting report. The opinion is qualified to exclude this portion of the business. If the actuary has information regarding the materiality of the business, it is typically helpful to disclose this information in the opinion.

If the SAO is qualified, the Appointed Actuary is required to explicitly state in the OPINION paragraph that it is a qualified opinion and properly disclose it as such in Exhibit B, item 4. Additionally, the OPINION paragraph should provide the item or items to which the qualification relates, the reasons for the qualification, and the amounts for such items, if disclosed by the entity, that are included in the stated reserve amount. A qualified SAO normally will state whether the stated reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, except for the item, or items, to which the qualification relates.

Actuaries typically are careful to avoid language that may imply the SAO is qualified when in fact it is not. There are a number of situations in which the Appointed Actuary may issue an unqualified opinion even though the actuary did not review all of the reserves. Examples of these situations are as follows:

1. The Appointed Actuary reviews information regarding a portion of the company's business, concludes based on professional judgment that loss reserves for this portion are likely to be immaterial to the overall reserves, and decides not to perform a quantitative analysis of that business. The actuary may or may not disclose this in the opinion. The actuary may wish to address this professional judgment in the report supporting the opinion. In this instance, because loss reserves for that business are deemed immaterial, there is no need to qualify the opinion.

2. The Appointed Actuary reviews a quantitative analysis performed by another regarding a material portion of the company's business, concludes based on professional judgment that the analysis for this portion produces reasonable results, and decides not to perform an independent quantitative analysis of that business. In this situation, according to paragraph 4.2.f of ASOP No. 36, the actuary should disclose (a) whether he/she reviewed the other's underlying analysis and (b) if a review was performed, the extent of the review. In this instance, there is no need to qualify the opinion. Refer to section 4.10 for further details on making use of the work of another.

Note:

- ASOP No. 36, section 4.2.d, requires disclosure of the item(s) to which the qualification(s) relate, the reason(s) for the qualification(s), and the amounts of such item(s), if disclosed by the reporting entity, that are included in the reserve. The 2014 NAIC SAO Instructions were revised to include this requirement as well. Further, ASOP No. 36 states that, if the amounts for such items are not disclosed by the entity, the Appointed Actuary should disclose that the reserve includes unknown amounts for such items.
- A qualified SAO does not carry a negative connotation; it merely identifies a component of reserves not covered by the SAO.
- The company's regulator is likely to follow up with the company to understand the qualification and how the company is satisfied with the adequacy of the reserves related to it.

4.5.2 Illustrative language

The following language may be appropriate:

In my opinion, ***with the qualification that it does not include the [identify the item(s) to which the qualification(s) relate(s)]****, the amounts carried in Exhibit A on account of the items identified:*

F. Meet the requirements of the insurance laws of (state of domicile).
G. Are consistent with reserves computed in accordance with accepted actuarial standards and principles.
H. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements.

The Company's management has informed me that the reserves listed in Exhibit A include $X (x.x%) on a net of reinsurance basis, and $Y (y.y%) on a direct and assumed basis, for [item(s) to which the qualification(s) relate(s)]. I did not include in my review an evaluation of the reserves related to [item(s) to which the qualification(s) relate(s)] because there was not sufficient information available for me to assess the reasonableness of those reserves. Thus, this is a qualified statement of actuarial opinion.

4.6 No opinion

The NAIC SAO Instructions explain the determination of "no opinion" as follows:

> *"The Appointed Actuary's ability to give an opinion is dependent upon data, analyses, assumptions, and related information that are sufficient to support a conclusion. If the Appointed Actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions, or related information, then the Appointed Actuary may issue a statement of no opinion. A statement of no opinion should include a description of the reasons why no opinion could be given."*[40]

ASOP No. 36, Section 3.11(e) states: *"A statement of no opinion should include a description of the reasons no opinion could be given."*

4.6.1 Discussion

In situations in which there is a lack of historical data (e.g., new companies, change in book of business for mature companies, or general lack of data), the Appointed Actuary may find it useful to consider the following:

- Whether there exists adequate data to evaluate the reserves;
- If industry data or another company's data were used, whether there is reason to believe that these data are likely to be reasonably similar to the data patterns of the company for which the Appointed Actuary is rendering an SAO;
- Whether to provide disclosures concerning the data used; and
- Whether to provide disclosures concerning the resulting variability and uncertainty.

4.6.2 Illustrative language

The following language may be appropriate:

The ABC Insurance Co. commenced operations in 20XX. Therefore, the Company has only been in business for Y years and, as a result, does not, in my opinion, have sufficient historical experience upon which to base a reliable actuarial estimate of the loss and loss adjustment expense reserves as of Dec. 31, 20XX. I am not aware of appropriate external data upon which to base an estimate.

[40] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.7 Other Loss Reserve items

The opinion statement in 5(D) of the NAIC SAO Instructions is usually appropriate for the situation in which the Scope includes material Other Loss Reserve items on which the Appointed Actuary is expressing an opinion. These items would be listed separately in Exhibit A, item 6.

4.7.1 Definitions

Other Loss Reserve items may include a specific loss reserve item for which an opinion is required by state regulation. Based on discussion of COPLFR members with AOWG, we understand that some regulators have seen the following included in item 6 of Exhibit A:

- The accrual for Death, Disability, or Retirement provisions in claims-made insurance policies if recorded as a loss reserve rather than Unearned Premium Reserve (UPR);
- The amount of discount for workers' compensation loss reserves;
- Retroactive reinsurance ceded loss and LAE reserves; and
- Contingent liabilities

4.7.2 Discussion

Whether Other Loss Reserve items are included within the scope of the SAO depends on materiality. According to the NAIC SAO Instructions,

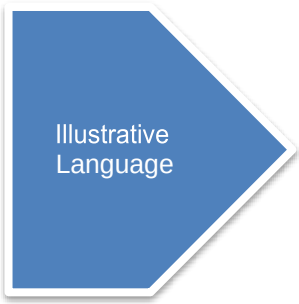
> *If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts or Other Loss Reserve items on which the Appointed Actuary is expressing an Opinion, the Opinion should contain language such as the following:*
>
> *I. "Make a reasonable provision for the unearned premium reserves for P&C Long Duration contracts and/or <insert Other Loss Reserve item on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements."*[41]

If there is any aggregation or combination of items in Exhibit A, NAIC SAO Instructions require the OPINION paragraph to clearly identify the combined items.

[41] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.7.3 Illustrative language

If the SCOPE includes Other Loss Reserve items as a write-in item in the Exhibit A, SCOPE, line 6, the Appointed Actuary may wish to add a statement in the OPINION paragraph, item "D" (or "E," if appropriate), such as:



In my opinion, the amounts carried in Exhibit A on account of the items identified:

D. (or E.) Make a reasonable provision for the <insert Other Loss Reserve item(s) on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements.

4.8 UPR for P&C Long Duration Contracts

The amounts recorded by the company for unearned premium reserves for P&C Long Duration Contracts are identified in Exhibit A: SCOPE, items 7 and 8 on direct plus assumed and ceded bases, respectively. If the company has material amounts for these reserves, then the Actuary should opine on the reasonableness of the balances. Note that these requirements are specific to P&C Long Duration Contracts. Further disclosures specific to A&H Long Duration Contracts that are identified in Exhibit B item 13 are included in the Relevant Comments as discussed in section 5.15, *Accident and Health Long Duration Contracts*.

As discussed in section 4.7, *Other Loss Reserve items*, the opinion statement in 5(D) is usually appropriate when the Appointed Actuary is opining on unearned premium reserves for extended losses and expenses or Other Loss Reserve items, as separately identified in Exhibit A: SCOPE.

There is further discussion on disclosures for UPR for P&C Long Duration Contracts in section 5.14, *Property & Casualty Long Duration Contracts*, of this practice note.

4.8.1 Definitions

P&C Long Duration Contracts for the purposes of the SAO are defined in the NAIC SAO Instructions as:

> *"…contracts (excluding financial guaranty contracts, mortgage guaranty contracts and surety contracts) that fulfill both of the following conditions: (1) the contract term is greater than or equal to thirteen months; and (2) the insurer can neither cancel the contract nor increase the premium during the contract term. These contracts are subject to the three tests of SSAP No. 65-Property and Casualty Contracts of the NAIC Accounting Practices and Procedures Manual"*[42]

[42] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

4.8.2 Discussion

Unearned premium reserves related to direct and assumed P&C long duration contracts are covered by the section 4 and Exhibit A: SCOPE (items 7 and 8) requirements of the NAIC SAO Instructions. The following specific contract types are excluded: financial guaranty, mortgage guaranty, and surety. While the primary focus of SCOPE items 7 and 8 is extended warranty contracts, companies may write other contracts with durations greater than 13 months with fixed premiums that the insurer cannot cancel, such as residual value contracts or directors' and officers' liability insurance. These may fall within the SCOPE of this section of the NAIC SAO Instructions.

SSAP 65 establishes methodology for determining a minimum level of unearned premium reserves for single or fixed premium policies with coverage periods of 13 months or greater. The accounting rule is found in the NAIC *Accounting Practices and Procedures Manual* and is reprinted in the Academy's 2018 P/C Loss Reserve Law Manual.

Further discussion of this topic can be found in Appendix III.1.

Section 4 and Exhibit A: SCOPE (items 7 and 8) of the NAIC SAO Instructions request disclosure of the unearned premium reserve amounts. The following entries are to be included on Exhibit A: SCOPE:

Premium Reserves:

(7) Reserve for Direct and Assumed Unearned Premium for P&C Long Duration Contracts

(8) Reserve for Net Unearned Premium for P&C Long Duration Contracts

If there is any aggregation or combination of items in Exhibit A, NAIC SAO Instructions require the OPINION paragraph to clearly identify the combined items.

Note:

- For SAOs that cover the contracts described in this section, the Appointed Actuary may choose to edit language throughout the SAO to keep it consistent with the fact that loss, LAE, and unearned premium reserves are included. Some of the places in a SAO where an Appointed Actuary typically uses the phrase "loss and loss adjustment expense" to refer to what is covered in the SAO are in the IDENTIFICATION paragraph, the SCOPE paragraph, the OPINION paragraph, the description of reconciliation issues, and the RELEVANT COMMENTS section. The Appointed Actuary may choose to refer throughout the SAO to the unearned premium reserves by some description such as "the unearned premium reserves related to single or fixed premium policies with coverage periods of 13 months or greater which are non-cancellable and not subject to premium increase (excluding financial guaranty contracts, mortgage guaranty contracts, and surety contracts)" or may define it once along with an abbreviation such as "P&C long duration unearned premium reserves".
- Exhibit A, items 7 and 8 require disclosure of the amount of the reserve for unearned premium for P&C Long Duration Contracts, and the NAIC SAO Instructions further require the Appointed Actuary to include a paragraph (D) regarding the reasonableness of the unearned premium reserve in the OPINION paragraph when these reserves are material. However, regulators have noted that some SAOs include paragraph (D) regardless of materiality. The AOWG expects that actuaries either add paragraph (D) if they can and are indeed expressing an opinion on the reasonableness of this reserve and/or add an explanatory paragraph about theseunearned premium reserves in RELEVANT COMMENTS and state whether the amounts are material or immaterial.

4.8.3 Illustrative language

If the SCOPE of the SAO includes material unearned premium reserves for P&C Long Duration Contracts, the NAIC SAO Instructions require that, the SAO cover the following illustration as item (D) of the OPINION paragraph of the SAO:

Make a reasonable provision for the unearned premium reserves for P&C Long Duration Contracts of the Company under the terms of its contracts and agreements.

4.9 Other Premium Reserve items

If the company has Other Premium Reserve items which the Appointed Actuary has listed separately in Exhibit A, item 9, and are included within the scope of the opinion, then the Actuary should conclude on the reasonableness of these balances if they are material.

The opinion statement in 5(D), as noted in the Instructions, is usually appropriate for this situation.

4.9.1 Definitions

Other Premium Reserve items may include a specific premium reserve item for which an Opinion is required by state regulation, or the accrual for Death, Disability, or Retirement (DDR) provisions if recorded as an unearned premium reserve.

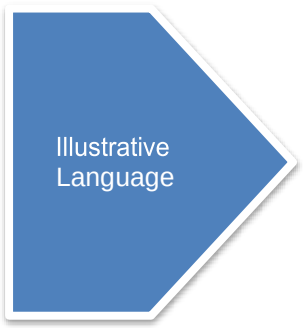
There is further discussion on disclosures for DDR provisions in the RELEVANT COMMENTS section of this practice note (section 5.13, *Extended reporting endorsements*).

4.9.2 Discussion

If there is any aggregation or combination of items in Exhibit A, NAIC Instructions require the opinion language to clearly identify the combined items.

4.9.3 Illustrative language

If the SCOPE includes Other Premium Reserve items as a write-in item in the Exhibit A, SCOPE, line 6, the actuary may wish to add an additional statement in the OPINION paragraph, item “D” (or “E,” if appropriate), such as:



In my opinion, the amounts carried in Exhibit A on account of the items identified:

D. (or E.) Make a reasonable provision for the unearned premium reserves for <insert other premium reserve item(s) on which the Appointed Actuary is expressing an Opinion> under the terms of its contracts and agreements.

4.10 Use of the work of another

According to the NAIC Instructions,

> *If the Appointed Actuary has made use of the analysis of another actuary not within the Appointed Actuary's control (such as for pools and associations, for a subsidiary or for special lines of business) for a material portion of the reserves, the other actuary must be identified by name, credential and affiliation within the OPINION paragraph. If the Appointed Actuary has made use of the work of a non-actuary (such as for modeling) for a material portion of the reserves, that individual must be identified by name and affiliation and a description of the type of analysis performed must be provided.*[43]

4.10.1 Discussion

Section 5 of the Instructions also requires that, if an actuary has used the work of another actuary for a material portion of the reserves, he or she must provide that other actuary's name, credentials and affiliation in the opinion. In 2016 the Instructions were expanded to include the use of the work of a non- actuary, which is consistent with the phraseology in ASOP No. 36.[44]

ASOP No. 36 takes this disclosure requirement several steps further. ASOP No. 36 states that the actuary should make use of another's supporting analyses or opinions only when it is reasonable to do so. According to section 3.7.2 of ASOP No. 36, in determining whether it is reasonable to use the work of another, the Appointed Actuary should consider the following:

a. The amount of the reserves covered by another's analyses or opinions in comparison to the total reserves subject to the actuary's opinion;
b. The nature of the exposures and coverage;
c. The way in which reasonably likely variations in estimates covered by another's analyses or opinions may affect the actuary's opinion on the total reserves subject to the actuary'sopinion; and
d. The credentials of the individual(s) that prepared the analyses oropinions.

[43] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

[44] ASOP No. 36 refers to making use of "another's" work. According to section 3.7 of ASOP No. 36, "The actuary may develop estimates of the unpaid claims for all or a portion of the reserve or make use of another's unpaid claims estimate analysis or opinion for all or a portion of the reserve. For purposes of this section, 'another' refers to one not within the actuary's control."

In situations where the work was done by someone not under the actuary's control, and after considering these items, the actuary determines that it is reasonable to use the work of another without performing any independent analysis, and the actuary uses another's work for a material portion of the reserves, the actuary should disclose (a) whether he/she reviewed the other's analysis and (b) if a review was performed, the extent of the review (see paragraph 4.2.f). Where, in the opinion of the actuary, the analyses or opinions of another need to be modified or expanded, the actuary should perform such analyses as necessary to issue the opinion on the total reserves. Please refer to ASOP No. 36 for additional requirements in this area. If the actuary is unable to determine that it is reasonable to use the work of another, it may be necessary to issue a qualified opinion. Refer to section 4.5 for further details on qualified opinions.

4.10.2 Illustrative Language

If the work of another was used, whether an actuary or not, (such as for pools and associations, for a subsidiary, or for special lines of business) for a material portion of the reserves, the other person must be identified by name and affiliation within the OPINION paragraph. The following provides sample wording that could be included in the OPINION section in the situation where the Appointed Actuary makes use of the work of the actuary for an underwriting pool that the company participates in:

The Company participates in the [name of underwriting pool] ("the Pool"). In forming my opinion, I made use of the analysis and opinion issued by Mr. Joe Actuary, FCAS, MAAA, Chief Actuary for the Pool, regarding reserves held by the Company for the Pool.

This wording would follow items A. through E. of the OPINION.

5. RELEVANT COMMENTS section

This, the RELEVANT COMMENTS chapter, is the last of four chapters (i.e., Chapter 2 through Chapter 5) in this practice note that discuss each of the four required sections of the Statement of Actuarial Opinion: IDENTIFICATION, SCOPE, OPINION, and RELEVANT COMMENTS (sections 3 through 6 of the NAIC SAO Instructions).

According to the NAIC SAO Instructions,

> *"The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address the following topics of regulatory importance.*
>
> *a. Company-Specific Risk Factors…*
> *b. Risk of Material Adverse Deviation….*
> *c. Other Disclosures in Exhibit B…*
> *d. Reinsurance…*
> *e. IRIS Ratios…*
> *f. Methods and Assumptions…"*[45]

In addition, the NAIC SAO Instructions state the comments should describe the significance of the Other Disclosures in Exhibit B:

> *"RELEVANT COMMENT* paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact."[46]

In addition to the disclosures on Exhibit B, COPLFR encourages the Appointed Actuary to be familiar with the disclosure requirements of sections 4.1 and 4.2 of ASOP No. 36, which include the following, among others:

- The intended user(s) of the SAO
- The intended purpose of the SAO
- The stated basis of reserve presentation
- Whether any material assumption or method was prescribed by applicable law

Whether the Appointed Actuary disclaims responsibility for any material assumption or method selected by another party.

[45] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[46] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

The following sections discuss each of the RELEVANT COMMENT paragraphs in further detail.

5.1 Materiality standard

The NAIC SAO Instructions require the Appointed Actuary to include RELEVANT COMMENT paragraphs that specifically address material adverse deviation. These paragraphs would contain the following:

- A description of the major factors or particular conditions underlying the significant risks or uncertainties that the Appointed Actuary considers relevant to the statutory entity;
- The amount of adverse deviation in U.S. dollars that the Appointed Actuary judges to be material with respect to the SAO (i.e., materiality standard disclosed as item 5 in Exhibit B) and an explanation of how that amount was determined; and
- An explicit statement of whether the Appointed Actuary reasonably believes that there are significant risks or uncertainties that could result in material adverse deviation.

In this section, 5.1, we discuss the materiality standard. In section 5.2 we discuss company specific risk factors. Section 5.3 rounds out the discussion, addressing the determination of Risk of Material Adverse Deviation.

5.1.1 Definitions

Materiality: The Appointed Actuary may refer to section 3.6 of ASOP No. 36, which pertains to materiality.

5.1.2 Discussion

According to the NAIC SAO Instructions,

> *"The Appointed Actuary must identify the materiality standard and the basis for establishing this standard. The materiality standard must also be disclosed in U.S. dollars in Exhibit B: Disclosures."*[47]

Examples of considerations in the choice of a materiality standard are:

- Percentage of surplus
- Percentage of reserves
- The amount of adverse deviation that would cause surplus to

FAQ: If a company is a 0% pool participant, what is the company's materiality standard?

A: According to the NAIC Instructions, a 0% pool participant should enter a materiality standard of zero dollars for Question 5 on Exhibit B of the SAO. Furthermore, the response to Question 6 of Exhibit B regarding whether there are significant risks that could result in material adverse deviation should be "not applicable".

[47] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

fall below minimum capital requirements

- The amount of adverse deviation that would cause Risk-Based Capital (RBC) to fall to the next action level
- Multiples of net retained risk
- Reinsurance considerations, such as levels of ceded reserves compared to surplus or concerns about solvency or collectibility of reinsurance
- The upper limit of a company's reinsurance protection on reserve development, if any

Other bases for establishing the standard may be acceptable as well.

Note:

- No matter how the materiality standard is determined, ASOP No. 36, section 3.2 requires the Appointed Actuary to consider the purpose and intended uses for which the Appointed Actuary prepares the SAO.

5.1.3 Illustrative language

The following provide examples of appropriate language; note however that there are additional possibilities for the choice of the materiality standard (examples of which are provided above):

My Materiality Standard for purposes of addressing the risk of material adverse deviation of the Company's reserves for unpaid losses and loss adjustment expenses has been established as xx% of the Company's net loss and LAE reserves, or $X million.

OR

My Materiality Standard for purposes of addressing the risk of material adverse deviation of the Company's reserves for unpaid losses and loss adjustment expenses has been established as yy% of the Company's policyholders surplus, or $Y million.

OR

My Materiality Standard for purposes of addressing the risk of material adverse deviation of the Company's reserves for unpaid losses and loss adjustment expenses has been established as $Y million. This represents the reduction in surplus that would result in additional action based on the NAIC RBC formula. A reduction in surplus of $Y would result in the Company moving into the [state which RBC level, e.g., Company] Action Level.

5.2 Company-specific risk factors

According to the NAIC SAO Instructions:

> *"The Appointed Actuary should include an explanatory paragraph to describe the major factors, combination of factors or particular conditions underlying the risks and uncertainties the Appointed Actuary considers relevant. The explanatory paragraph should not include general, broad statements about risks and uncertainties due to economic changes, judicial decisions, regulatory actions, political or social forces, etc., nor is the Appointed Actuary required to include an exhaustive list of all potential sources of risks and uncertainties."*[48]

In this section we will discuss required commentary on major factors or particular conditions underlying the significant risks or uncertainties that the Appointed Actuary considers relevant to the statutory entity.

5.2.1 Discussion

The 2018 NAIC SAO Instructions require the Appointed Actuary to comment on the risks and other factors considered, even when no risk of material adverse deviation is judged to exist. COPLFR has prepared a list of

[48] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

possible risk factors; these are not meant to be all-inclusive and certainly are not meant to apply to every company. For example, one would not expect to see discussion of the risk of A&E losses for a personal lines company. The list below is meant to provide some suggestions for the types of risk factors and underlying loss exposures for which comment may be appropriate:

- A&E losses
- Other emerging mass torts
- Construction defects
- Catastrophic weather events
- Exposure related to mortgage defaults
- Exposure to cyber liability
- High excess layers
- Impact of soft market conditions
- Large deductible workers' compensation claims
- Medical professional liability legislative issues
- New products or new markets
- Rapid growth in one or more lines of business or segments
- Lack of data or unexpected and unexplained changes in data
- Operational changes that are not objectively quantified
- Sudden unexplained changes in frequency or severity of reported data for a line of business or segment
- Changes in adequacy of known case reserves

The NAIC SAO Instructions direct the Appointed Actuary to address the potential that a combination of factors or particular conditions that the Appointed Actuary considers relevant could develop, increasing the entity's risk of material adverse deviation. The list below is meant to provide some suggestions for the types of combinations of risk factors and conditions about which comment may be appropriate:

- Rapid growth during a soft market in a line of business in which the company has limited historical experience
- Risk of adverse medical inflation on a large book of excess workers' compensation business
- Risk of increased sustained unemployment, along with reductions in home prices on a mortgage insurance book of business
- Significant shifts upward in policy limits and attachment points sold, along with a reduction in reinsurance protection purchased

Note:

- The Appointed Actuary may refer to section 4.2.e of ASOP No. 36, which pertains to Significant Risks and Uncertainties, for further guidance about the explanatory paragraph.

5.2.2 Illustrative language

The following language may be appropriate. Note that the 2018 AOWG Regulatory Guidance requires this section of the SAO to go beyond the mention of general risk factors, such as the first three sentences of the following illustrative language. Including only these first three sentences would not satisfy the regulatory requirement around risk factors; the subsequent sentences would be necessary:
