Actuarial estimates of property and casualty loss and loss adjustment expense reserves are inherently uncertain because they are dependent on future contingent events. Also, these reserve estimates are generally derived from analyses of historical data, and future events or conditions may differ from the past. The actual amount necessary to settle the unpaid claims may therefore be significantly different from the reserve amounts listed in Exhibit A.

The following provides major factors and/or particular conditions underlying the risks and uncertainties that I consider relevant to the Company's estimates of unpaid losses and loss adjustment expenses at December 31, 2018:

1. _____
2. _____
3. _____

5.3 Risk of Material Adverse Deviation

The NAIC SAO Instructions require the Appointed Actuary to explicitly state whether he or she reasonably believes that there are significant risks or uncertainties that could result in material adverse deviation. This determination is also disclosed in item 6 of Exhibit B. The previous two sections on materiality standard and major risk factors aid the Appointed Actuary in reaching this conclusion.

5.3.1 *Discussion*

> ***FAQ: What percentage of SAOs conclude an RMAD exists?***
>
> *A: Approximately one-third of SAOs reach this conclusion.*

The NAIC Financial Analysis Handbook provides a Bright Line Indicator Test in regards to the Risk of Material Adverse Deviation for those companies subject to RBC reporting requirements. If the Appointed Actuary does not address material adverse deviation, yet ten percent (10%) of the company's net loss and LAE reserves is greater than the difference between the Total Adjusted Capital and the Company Action Level capital, then comments from the Appointed Actuary should be pursued by the Financial Analyst. In situations where the test is triggered, the Appointed Actuary may consider disclosing why he/she does not feel there is a RMAD, if that is the conclusion. The Appointed Actuary may also wish to consider this test in the selection of the materiality standard.

The Five Year Historical Data Exhibit of the Annual Statement is a convenient source for these RBC values. Total Adjusted Capital and Authorized Control Level Risk Based Capital are shown on this Annual Statement exhibit:

Company Action Level Capital = 2 * Authorized Control Level Risk Based Capital

In addition, the 2018 AOWG Regulatory Guidance includes the following:

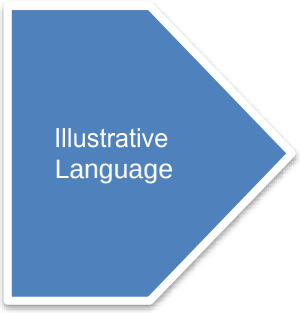
"*When deciding whether RMAD exists, the Appointed Actuary should consider the materiality standard in relation to the range of reasonable estimates and the carried reserves. For example, RMAD should likely exist when the sum of the materiality standard plus the carried reserves is within the range of reasonable estimates. Regardless, the Appointed Actuary should support the conclusion of whether RMAD exists."*[49]

The Appointed Actuary may consider including a discussion of steps the company has taken to mitigate the risk factors discussed in the explanatory paragraph.

5.3.2 *Illustrative language*

Because of the nature of the NAIC's request regarding discussion of the risk of material adverse deviation, each individual situation will call for its own wording. However the following provides illustrative wording in a situation where there is a RMAD:

[49] 2018 AOWG Regulatory Guidance, page 7 (Appendix II).



I believe there are significant risks and uncertainties associated with the Company's net loss and loss adjustment expense reserves that could result in material adverse deviation. I have identified those risk factors as_____, ___, and___. These risk factors are described in greater detail in the preceding paragraph and in the report supporting this opinion. The absence of other risk factors from this commentary is not meant to imply that additional factors cannot be identified in the future as having had a significant influence on the Company's reserves.

There may be situations where mitigating factors reduce or eliminate the risk of material adverse deviation. An example of illustrative language for a situation where retroactive reinsurance is a mitigating factor is as follows:

It should be noted, however, that the company has entered into a retroactive reinsurance contract which would serve to eliminate the impact of any adverse deviation in loss and LAE reserves on the company's statutory surplus if recoverables from that contract were considered as a reduction in net loss and LAE reserves.

Relevant comments on retroactive reinsurance are discussed in section 5.8 below.

The following provides illustrative wording in a situation where there is no RMAD:

In my analysis I considered [the aforementioned risk factors and] the implications of uncertainty in estimates of unpaid losses and loss adjustment expenses in determining a range of reasonable unpaid claim estimates. I have also observed that the difference between the high end of my range of reasonable unpaid claim estimate and the Company's carried reserve for losses and loss adjustment expense is less than my materiality standard. I further considered whether there are significant risks and uncertainties that could result in material adverse deviation. In light of the materiality considerations within this analysis, and after considering the potential risks and uncertainties that could bear on the Company's reserve development, I concluded that those risks and uncertainties would not reasonably be expected to result in material adverse deviation in the Company's carried reserves for unpaid losses and loss adjustment expenses.

5.4 Anticipated salvage and subrogation

In item 8 of Exhibit B, the Appointed Actuary is required to disclose the amount of anticipated net salvage and subrogation included as a reduction to loss reserves as reported in Schedule P. The Appointed Actuary is expected to comment on this disclosure within the RELEVANT COMMENTS section of the SAO. This section provides discussion and illustrative wording around this disclosure item.

5.4.1 Discussion

SAOs are expected to be prepared on the same basis with regard to anticipated salvage and subrogation as the disclosed basis for the carried loss reserves.

The NAIC SAO Instructions require the Appointed Actuary to state whether reserves are stated net or gross of future salvage and subrogation. The amount of anticipated salvage and subrogation, if any,is disclosed in Schedule P, Part 1.

The Appointed Actuary is reminded that states' regulations may differ in the required treatment of anticipated salvage and subrogation recoveries.

Note:

- The amount of anticipated salvage and subrogation reported in item 8 of Exhibit B should reconcile to Schedule P, Part 1, column 23. Column 23 is a memorandum column (i.e., it is not used to calculate other columns).

The Appointed Actuary may choose to use wording similar to the following:

The Company's reserves listed in Exhibit A are established net of anticipated salvage and subrogation. Anticipated salvage and subrogation disclosed in item 8 of Exhibit B is X% of the Company's policyholders surplus.

OR

The Company's reserves listed in Exhibit A are established gross of anticipated salvage and subrogation.

OR

The Company does not explicitly provide for anticipated salvage and subrogation, although cedant data, and ultimate liabilities derived from that data, include an implicit provision for anticipated salvage and subrogation.

5.5 Discounting

In item 9 of Exhibit B, the Appointed Actuary is required to disclose the amount of non-tabular (item 9.1) and tabular (item 9.2) discount included as a reduction to loss and LAE reserves as reported in Schedule P. The Appointed Actuary is expected to comment on this disclosure within the RELEVANT COMMENTS section of the SAO. This section provides discussion and illustrative wording around this disclosure item.

5.5.1 Definition

According to SSAP 65, paragraph 11, tabular reserves are indemnity reserves that are calculated using discounts determined with reference to actuarial tables which incorporate interest and contingencies such as mortality, remarriage, inflation, or recovery from disability applied to a reasonably determinable payment stream. Tabular reserves shall not include medical loss reserves or LAE reserves.

5.5.2 Discussion

SAOs are expected to be prepared on the same basis with regard to discounting as the disclosed basis for the carried loss reserves.

The amount of discount is required by the NAIC SAO Instructions to be disclosed separately for tabular and non-tabular reserves. The amount of non-tabular discount, if any, is disclosed in Schedule P, Part 1 and in the Notes to the Financial Statements.

If the Appointed Actuary is providing an SAO for discounted loss and LAE reserves, the Appointed Actuary can find guidance in ASOP No. 36 and ASOP No. 20, *Discounting of Property/Casualty Unpaid Claim Estimates*. The insurance laws of the state of domicile will provide information on whether discounting is allowed. Further, inquiry can be made about whether the state insurance regulator has allowed the company to discount reserves by authorizing a permitted practice.

Note:

- If discounting causes a reconciling difference between the reserves listed in Exhibit A and the AOS, an explanation of this difference should be disclosed in the AOS. Exhibit A, item 4 is comprised of Schedule P Part 1, columns 17, 19, and 21 which are gross of non-tabular discounting. If the direct and assumed reserves in the AOS are net of discounting, this may create a reconciling difference.
- Schedule P, Part 2 is gross of all discounting, including tabular discounts.

The Appointed Actuary may choose to use wording similar to the following:

The Company discounts its liabilities for certain workers' compensation claims and certain other liability claims related to annuity obligations from Structured Settlements. Note 32 contains details for the amounts disclosed in item 9. The amount of discount is X% of the Company's net loss and LAE reserves and Y% of the Company's policyholders surplus.

OR

The Company does not discount its reserves listed in Exhibit A for the time value of money.

5.6 Voluntary and/or involuntary underwriting pools and associations

In item 10 of Exhibit B, the Appointed Actuary is required to disclose the amount of net reserves for losses and expenses for the company's share of voluntary and involuntary underwriting pools and associations' unpaid losses and expenses that are included in reserves shown on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines. The Appointed Actuary is expected to comment on this disclosure within the RELEVANT COMMENTS section of the SAO. This section provides discussion and illustrative wording around this disclosure item.

FAQ: What if I didn't review another's work supporting the reserve balance for an underwriting pool? Does this mean that my opinion should be qualified?

A: No, not if the pool reserves are immaterial. Section 4.10 provides further details on making use of the work of another.

5.6.1 Discussion

Some key considerations for the SAO for a company that participates in voluntary and/or involuntary underwriting pools and associations are:

1. Are pool reserves material?

2. Does the company book what the pool reports with no independent analysis, perform independent actuarial analysis and in some instances adjust the pool's reported reserves, make use of the pool Appointed Actuary's SAO, or some combination of the above?

3. If there is a lag in the booking of pool losses, does the company accrue for this or not? Are premiums treated similarly? Are these items material?

4. How does your ceded reinsurance program treat business that comes in from these pools?

Appendix III.3 contains further guidance, including commentary from the CASTF regarding SAOs for pools and associations.

The Appointed Actuary is reminded that unless the SAO is qualified, the Appointed Actuary is generally responsible for opining on the reasonableness of the loss and LAE reserves in aggregate and may therefore consider clearly stating his/her level of review of and use of others' SAOs for any material reserves related to pools, and/or explaining their immateriality.

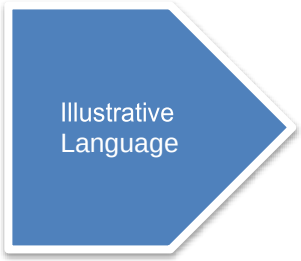
Note:

- The amount disclosed in item 10 of Exhibit B represents the reserve for the company's net participation in the pool, net of reinsurance purchased by the pool.

5.6.2 Illustrative language

The Appointed Actuary may choose to use wording similar to the following:

Situation1: Material reserves; adjustment for booking lag



The Company participates in a number of voluntary and involuntary pooling arrangements. The booked reserves and earned premiums for some pools reflect losses incurred and premiums earned by the pools through various dates prior to year-end. Company practice is to record the loss and loss adjustment expense reserves reported to it by the pools with accrual for any reporting lag.

Situation 2: Material reserves; independent review of significant pools or use of pool SAO; balance of non-reviewed reserves immaterial; adjustment for lag

The Company participates in a number of voluntary and involuntary pooling arrangements. Company practice is to review the reserves for the larger pools, which account for $ABC of pool reserves, independently. Based on this review, the Company has increased the reserves reported by these pools by_____percent. The Company has made use of actuarial opinions prepared by (insert name and affiliation of opining actuary) for other pools, which account for $DEF of pool reserves. I have reviewed the analysis underlying these actuarial opinions and have concluded that the analysis is reasonable. I have not performed an independent analysis for these pools. The remaining non- reviewed pool reserve ($JKL) is immaterial. Aggregate reserves held for all pools are $XYZ. Company practice is to accrue for the reporting lag for these pools.

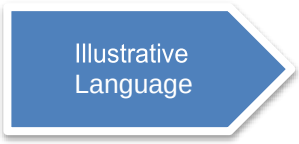
As a reminder, when the Appointed Actuary makes use of the work of another for a material portion

of reserves, this needs to be disclosed in the OPINION paragraph.

Situation 3: Immaterial pool exposure

The Company participates in a small number of voluntary and involuntary pools. Company practice is to record the loss and loss adjustment expense reserves reported to it by the pools. Reserve exposure with respect to pools is considered immaterial.

Situation 4: No adjustment for booking lag



Company practice is to record the loss and loss adjustment expense reserves reported to it by the pools. Any adjustment to these reserves for reporting lag is considered immaterial.

5.7 A&E liabilities

In item 11 of Exhibit B, the Appointed Actuary is required to disclose the amount of net reserves for losses and LAE that the company carries for asbestos (item 11.1) and environmental (item 11.2) liabilities included on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines.

> *"RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact."*[50]

This section provides discussion and illustrative wording around this particular disclosure item.

Note this section addresses only the required discussion of A&E liabilities and no other possible masstort exposures. However, while not directly applicable, the ideas presented within this Section 5.7 may also be useful for disclosure of other possible mass torts when relevant to the disclosure of major riskfactors.

[50] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

5.7.1 Definition

Asbestos exposures – *"any loss or potential loss (including both first party and third party claims) related directly or indirectly to the manufacture, distribution, installation, use, and abatement of asbestos-containing material, excluding policies specifically written to cover these exposures."*[51]

Environmental exposures – *"any loss or potential loss, including third party claims, related directly or indirectly to the remediation of a site arising from past operations or waste disposal. Examples of environmental exposures include but are not limited to chemical waste, hazardous waste treatment, storage and disposal facilities, industrial waste disposal facilities, landfills, superfund sites, toxic waste pits, and underground storage tanks."*[52]

For the purposes of what is disclosed in Exhibit B, A&E exposures *"should exclude amounts related to contracts specifically written to cover asbestos and environmental exposures. Contracts specifically written to cover these exposures include Environmental Impairment Liability (post 1986), Asbestos Abatement, Pollution Legal Liability, Contractor's Pollution Liability, Consultant's Environmental Liability, and Pollution and Remediation Legal Liability."*[53]

FAQ: Do all asbestos & environmental (A&E) claim liabilities of an insurer get reported in the A&E Note in the statutory annual statement?

A: Not necessarily. The statutory Note does not include liabilities from policies clearly designed to cover A&E, such as asbestos abatement policies and many claims-made pollution policies.

5.7.2 Discussion

While mass torts in general have significant uncertainties associated with claim liability estimation, asbestos liabilities and the environmental liabilities associated with hazardous waste sites have been especially problematic. Over the years mass torts arising from these sources have resulted in material levels of adverse development for the industry, hence the special attention they have received in the SAO and in both statutory and GAAP disclosures.

Traditional actuarial methods (i.e., squaring triangles and other accident year development approaches) are typically not applied to the estimation of these liabilities. This is because such claims often attach multiple accident/policy years, and because new claim filings continue to arise for several decades after the policies were issued. Various methodologies have been developed over the years to address these situations, yet the resulting indications have historically still been subject to significant uncertainty and risk of adverse deviation.

In most cases, one of the following situations will present itself to the Appointed Actuary:

1. The company has not provided any coverage that could reasonably be expected to produce material levels of asbestos and/or environmental liability claims activity.

[51] SSAP 65, paragraph 41 (Appendix IV).
[52] SSAP 65, paragraph 41 (Appendix IV).
[53] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

2. The company has provided coverage that can reasonably be expected to produce materiallevels of asbestos and/or environmental liability claims activity that may rise to the level of a RMAD or combined with other risks significantly contribute to the determination of a RMAD.

3. The company has provided coverage that can reasonably be expected to produce material levels of asbestos and/or environmental claims activity, but it is believed unlikely to rise to the level of a RMAD alone or in combination with other risks of the company.

Note that knowledge of any A&E claims (other than those immediately denied due to asbestos or environmental exclusions) may create such uncertainty regarding ultimate liability for this category that further investigation may be warranted. Such investigation may benefit from study of prior A&E disclosures in the statutory statement Notes, as well as required disclosure in SEC filings (10-K, 10-Q). (These GAAP disclosures are required where the A&E exposures are material for companies filing SEC statements. Note, however, that SEC filings are generally done only on a consolidated basis for groups, and not by legal entity, hence the SEC disclosure may pertain to companies within the group other than the one being opined upon.)

Generally, companies writing no commercial liability coverage, whether on a primary, excess, or assumed basis, would be candidates for the first situation above. Companies that have written commercial liability coverage in the past without sufficient exclusions would normally be candidates for the second and third situations.

The third situation could arise in a variety of situations, such as

- A predominately personal lines company that historically wrote only a small amount of commercial liability on a direct or assumed basis whereby there exists material but limitedlevels of exposure relative to the materiality criteria for a RMAD

- A company that has retroactive ceded reinsurance protection such that its gross exposureis sufficiently ceded and, on a net basis, is unlikely to rise to the level of a RMAD[54]

- A company that has already reserved up to policy limits on all such policies

In rare cases the Appointed Actuary might make a determination that these exposures were not reasonably estimable. This will usually result in a qualified SAO under ASOP No. 36 if the items are likely to be material. There is no requirement to issue a qualified opinion if the Appointed Actuary reasonably believes the items to be immaterial.

The Appointed Actuary may believe that a reasonable estimate of this liability can be made, but that the

[54] Note that a contract accounted for as retroactive reinsurance will have no impact on the loss reserves reported in Schedule P, per SSAP 62R, paragraph 29 (Appendix IV). Instead, the reserves assumed or ceded for contracts under retroactive reinsurance accounting are reported in write-in lines of the annual statement. Surplus is impacted by such contracts, but not loss reserve schedules of the annual statement. For more discussion of this topic, see Section 5.8 and Appendix III.4.

booked reserve for this liability is not reasonable, and this results in an inadequate *overall* reserve. The decision to issue a deficient/inadequate SAO is typically based upon *overall* reserve adequacy, not just reserve adequacy for this or any other isolated reserve segment. Note the company is required to disclose A&E reserves in the Notes to the Financial Statements.

The Appointed Actuary may want to comment on the following issues:

1. Whether there appears to be a material exposure
2. The aggregate dollar amount of reserves held for this exposure
3. Significant variability and uncertainties inherent in the estimate of these liabilities

Additionally, the Appointed Actuary may choose to comment on some of the following related items (assuming that the Appointed Actuary finds the liability to be material and reasonably estimable):

- The difficulties attendant in providing an actuarial estimate of these liabilities
- Whether these liabilities are being handled by a dedicated experienced claim/legal unit
- Any other factors the Appointed Actuary may have considered in forming his or her SAO

FAQ: The Company whose reserves I'm opining on has bought a retroactive cover that assumes all asbestos losses. Do I still have to discuss A&E in my opinion?

A: Retroactive reinsurance accounting does not impact booked loss reserves on either a gross or net basis. But the benefit from such cover does show up in surplus. Hence you may still have to discuss the impact on a gross basis, and the impact on net reserves.

5.7.3 Illustrative language

Illustrative Language

The following language may be appropriate:

The Appointed Actuary may consider using wording similar to the following:

Situation 1: No material A&E exposure

I have reviewed the Company's exposure to asbestos and environmental claims. In my opinion, the chance of material liability is remote, since reported claim activity levels are minimal [or, that there have been no claims reported in the annual statement A&E Note], and the Company has never written commercial liability coverages on a primary, excess, or assumed basis.

Situation 2: Material A&E exposure, possible or likely RMAD

I have reviewed the Company's exposure to asbestos and environmental claims, and I have concluded that this exposure is material. The Company currently holds $XYZ million of reserves for losses and loss adjustment expenses for asbestos and environmental claims. Estimation of liabilities for these claims is unusually difficult due to the extreme latency of claim activity, issues related to allocation of claim costs (including defense costs) across policy years and insurers, and the potential for coverage disputes with insureds and other insurers (regarding allocation of such costs). Therefore, any estimation of these liabilities is subject to significantly greater than normal variation and uncertainty.

An Appointed Actuary that uses language such as above may want to pay particular attention to A&E in the RMAD evaluation. If the Appointed Actuary in this circumstance concludes that the A&E uncertainty creates or significantly contributes to a RMAD, then the above language may be appropriate to include in the discussion of risk factors and the RMAD, rather than in the RELEVANT COMMENTS section, including the following addition to the above illustration.

In my opinion, this uncertainty in asbestos and environmental claim liabilities rises to the level of a risk of material adverse deviation, given my materiality standard of $XXX.

If this is included in the RMAD section, then the RELEVANT COMMENTS section might include the following wording:

I have reviewed the Company's exposure to asbestos and environmental claims, and concluded that this exposure creates a significant risk of material adverse deviation. Please see the above RMAD discussion for more details.

Situation 3: Material exposure but RMAD unlikely due to a mitigating factor or relative size

I have reviewed the Company's exposure to asbestos and environmental claims, and I have concluded that this exposure is material. The Company currently holds $XYZ million of reserves for losses and loss adjustment expenses for asbestos and environmental claims. Estimation of liabilities for these claims is unusually difficult due to the extreme latency of claim activity, issues related to allocation of claim costs (including defense costs) across policy years and insurers, and the potential for coverage disputes with insured and other insurers (regarding allocation of such costs). Therefore, any estimation of these liabilities is subject to significantly greater than normal variation and uncertainty.

Although this uncertainty in asbestos and environmental claim liabilities rises to the level of a risk of material adverse deviation, given my material standard of $XXX, it should be noted that the Company has a retroactive reinsurance contract with {Name of Reinsurer}. This retroactive reinsurance agreement would limit the impact of any adverse deviation in loss and loss adjustment expense reserves on the Company's statutory surplus. Therefore, if considered on the basis of surplus impact and not reserve impact, then I do not believe that this asbestos and environmental risk could result in material adverse deviation.

Note that the first paragraph of Situation 3 is the same as the first paragraph in Situation 2, however the conclusion regarding RMAD differs.

The last paragraph of Situation 3 is for the situation where the RMAD is mitigated. The following is an illustrative paragraph for the situation where RMAD is unlikely due to relative size:

Despite the uncertainty associated with asbestos and environmental claim liabilities, my opinion is that it is unlikely to rise to the level of a risk of material adverse deviation due to the limited number of policies with this exposure (and the potential loss on those policies) relative to my materiality standard of $XXX.

Note that where material A&E exposure exists for a company that files with the SEC, the Appointed Actuary may want to evaluate their final wording for consistency with pertinent GAAP disclosures.

5.8 Retroactive reinsurance

According to the NAIC SAO Instructions,

> *RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance.*[55]

This section discusses retroactive reinsurance, while section 5.9 covers financial reinsurance and section 5.10 covers reinsurance collectibility. Note the requirement to discuss retroactive reinsurance only pertains to those treaties following retroactive reinsurance accounting, not those following prospective reinsurance accounting. This issue is discussed more in the definitions section below.

5.8.1 Definitions

According to the NAIC SAO Instructions:

> *Retroactive reinsurance refers to agreements referenced in SSAP No. 62R, Property and Casualty Reinsurance, of the NAIC* Accounting Practices and Procedures Manual.[56]

FAQ: Is all reinsurance entered into after policy expiration accounted for as retroactive reinsurance?

A: No. SSAP 62R makes exceptions for certain retroactive reinsurance contracts between affiliates, such as those undertaken to reconfigure a quota share reinsurance pool within a group.

The SAO requirement regarding retroactive reinsurance applies only to contracts given retroactive reinsurance accounting treatment. Per SSAP 62R, retroactive reinsurance accounting does not apply to all retroactive reinsurance contracts. SSAP 62R paragraph 31 lists the types of retroactive reinsurance contracts that qualify for prospective reinsurance accounting treatment. A common example of a retroactive reinsurance
contract that qualifies for prospective reinsurance accounting treatment is an intercompany reinsurance agreement among companies 100% owned by a common parent (provided certain other criteria are met). See Appendix III.4 for more discussion of these exceptions.

5.8.2 Discussion

Comment on this item is always required by the NAIC SAO Instructions.

[55] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[56] SSAP No. 62R (Appendix IV).

The Instructions require that any write-in retroactive reinsurance assumed reserves that are reported on the Annual Statement balance sheet also be listed in the SAO's Exhibit A: SCOPE. Retroactive reinsurance assumed reserves (and retroactive reinsurance ceded reserves) are reported as a write-in line of the balance sheet and are not included in any loss reserve schedules of the annual statement such as Schedule P or the Underwriting & Investment Exhibit. Even though retroactive reinsurance ceded reserves are not specifically reported in Exhibit A, they are subject to the discussion requirement in the RELEVANT COMMENT section of the NAIC SAO Instructions.

Annual Statement General Interrogatories, Part 2, No. 7 and No. 9, which disclose certain aspects of the company's use of ceded reinsurance, will ordinarily provide the Appointed Actuary with necessary information. Any positive response to Interrogatory No. 9.1 or 9.2 will require the company to file a reinsurance summary supplement. In addition, the CEO and CFO must provide a reinsurance attestation with the Annual Statement, which may contain additional valuable information about the company's ceded reinsurance contracts.

FAQ: Can I find disclosure of retroactive reinsurance in GAAP statements?

A: Not necessarily. GAAP treats retroactive reinsurance differently from statutory accounting, as GAAP does allow a deduction for net loss reserves for retroactive reinsurance that contains sufficient risk transfer.

For accounting purposes, the company is required to determine whether a particular contract constitutes retroactive reinsurance (e.g., loss portfolio transfer). If the company accounted for any contract as retroactive reinsurance, it may be appropriate for the Appointed Actuary to give it similar treatment in evaluating the reserves. It may also be appropriate for the Appointed Actuary to indicate in the SAO whether any contract was accounted for in this way and, if so, whether the Appointed Actuary's evaluation of the reserves is consistent with that treatment.

The Appointed Actuary may choose to be familiar with the important aspects of the reinsurance coverage but can rely on summaries of the reinsurance coverage prepared by others, rather than reading and evaluating each contract. However, if the Appointed Actuary is aware of a determination that he or she believes to be clearly incorrect, the Appointed Actuary ordinarily would indicate this in the SAO and describe his or her treatment of the contract(s) in question and the impact of this adjustment on the Appointed Actuary's SAO.

It typically is not necessary to identify specific reinsurers or contracts in this comment.

Note:

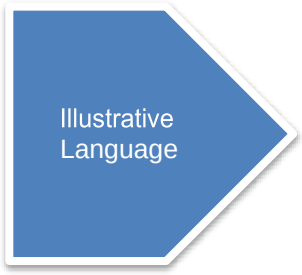
- Retroactive reinsurance is a contra-liability for the ceding company and a liability for the assuming company. Exhibit A: SCOPE items 1, 2, 3, and 4 typically are not reduced by the retroactive reinsurance reserve ceded and thus are gross of retroactive reinsurance. Exhibit A: SCOPE items 1, 2, 3, and 4 generally exclude retroactive reinsurance assumed, as such assumed reserves are recorded on a write-in line on Page 3 of the Annual Statement. The Page 3 write-in item reserve, "Retroactive Reinsurance Reserve Assumed" is disclosed in item 5 of Exhibit A: Scope and included in the Appointed Actuary's SAO.

- Just like prospective reinsurance contracts, it is possible for cessions under retroactive reinsurance contracts to be overstated. The Appointed Actuary may want to be aware of this possibility if consideration is made of the ceded retroactive reinsurance in a supporting analysis.

5.8.3 Illustrative language

The Appointed Actuary may choose to use wording similar to one of the following examples.

If there are no contracts of these types:



Based on discussions with Company management (or [identify other appropriate sources]) and its description of the Company's ceded (and/or assumed) reinsurance, I am not aware of any reinsurance contract (having a material effect on the loss or loss adjustment expense reserves) that either has been or should have been accounted for as retroactive reinsurance.

If a similar conclusion occurs with regard to financial reinsurance (discussed in the next section), the Appointed Actuary may want to combine the two conclusions by adding the words "*or financial reinsurance"* to the above illustration.

If a contract was appropriately accounted for as retroactive reinsurance:

One ceded reinsurance contract was accounted for by the Company as retroactive reinsurance. As a result, my evaluation of the net reserves was performed on a gross basis with regard to that contract. Based on discussions with Company management [or identify appropriate sources] and its description of the Company's ceded (and/or assumed) reinsurance, I am not aware of any other reinsurance contract (having a material effect on the loss or loss adjustment expense reserves) that either has been or should have been accounted for as retroactive reinsurance.

If a contract was appropriately accounted for as retroactive reinsurance, and the materiality standard used was based solely on surplus impact (and the risk of a RMAD impact on surplus was materially affected by this retroactive reinsurance and this was considered in the RMAD assessment):

A ceded reinsurance contract was accounted for by the Company as retroactive reinsurance, covering [describe the ceded losses] up to a limit of [limit], with [remaining amount] remaining. My evaluation of the net reserves was performed on a gross basis with regard to that contract, but given that the basis of my materiality standard was surplus, my evaluation as to whether a RMAD exists did consider the impact of this contract.

The above illustrative language implies that this ceded retroactive contract would also be mentioned in the earlier RMAD discussion.

5.9 Financial reinsurance

According to the NAIC SAO Instructions,

> *"RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance."*[57]

This section discusses financial reinsurance, while section 5.8 covers retroactive reinsurance and section 5.10 covers reinsurance collectibility.

5.9.1 Definitions

According to the NAIC SAO Instructions:

> *"Financial reinsurance refers to contracts referenced in SSAP No. 62R in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance."*[58]

5.9.2 Discussion

Comment on this item is always required by the NAIC SAO Instructions.

[57] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[58] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

For accounting purposes, the company is required to determine whether a particular contract constitutes financial reinsurance. If the company accounted for any contract as financial reinsurance, it may be appropriate for the Appointed Actuary to give it similar treatment in evaluating the reserves. It may also be appropriate for the Appointed Actuary to indicate in the SAO whether any contract was accounted for in this way and, if so, whether the Appointed Actuary's evaluation of the reserves is consistent with that treatment.

Reinsurance contracts that constitute financial reinsurance are required to be accounted for using deposit accounting, per SSAP 62R, and are disclosed in Note 23G "Reinsurance Accounted for as a Deposit."[59]

If the Appointed Actuary is reviewing contracts accounted for as financial reinsurance, the Appointed Actuary may want to review more than just the loss and loss adjustment expense portion of that contract. That is because the risk transfer requirements provide for analysis of the entire contract, including possible loss sensitive features such as sliding scale commissions that may negate any risk transfer occurring from just the loss provisions of the contract.

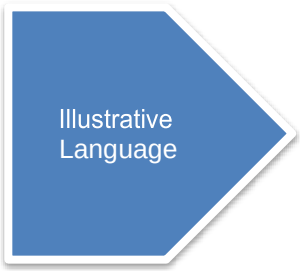
The determination of whether a particular contract is financial reinsurance is sometimes a matter of judgment, and, customarily, that judgment is made by the company's accounting experts (but likely with substantial assistance from actuaries, as many insurers rely on actuaries to perform the technical risk transfer analysis). The scope of the SAO does not include an evaluation of risk transfer or an assessment of the appropriateness of the accounting treatment of the reinsurance contracts of a company.

Note:

- The NAIC has previously investigated certain "Risk Limiting" reinsurance contracts due to concerns that the level of risk transfer is not clear as a result of certain loss sensitive features. If the Appointed Actuary does perform an analysis of such contracts, the Appointed Actuary may want to investigate any loss sharing features (such as sliding scale commissions) in the analysis.

5.9.3 Illustrative language

The Appointed Actuary may choose to use wording similar to one of the following examples. If there are no contracts accounted for as financial reinsurance:



Based on discussions with Company management {or [identify other appropriate sources]} and its description of the Company's ceded {and/or assumed} reinsurance, I am not aware of any reinsurance contract {having a material effect on the loss or loss adjustment expense reserves} that either has been or should have been accounted for as financial reinsurance.

[59] SSAP No. 62R, paragraph 35 (Appendix IV).

If the Appointed Actuary has a similar conclusion with regard to retroactive reinsurance, the Appointed Actuary may want to combine the two discussions. (See the section 5.8.3 for an illustration of how this might be done.)

If a contract was appropriately accounted for as financial reinsurance:

One ceded reinsurance contract was accounted for by the Company as financial reinsurance. As a result, my evaluation of the net reserves was performed on a gross basis with regard to that contract. Based on discussions with Company management {or identify appropriate sources} and its description of the Company's ceded {and/or assumed} reinsurance, I am not aware of any other reinsurance contract {having a material effect on the loss or loss adjustment expense reserves} that either has been or should have been accounted for as financial reinsurance.

5.10 Uncollectible reinsurance

As noted in the previous section, the RELEVANT COMMENTS section of the SAO should comment on reinsurance collectibility.

According to the NAIC SAO Instructions,

> *"The Appointed Actuary's comments on reinsurance collectability should address any uncertainty associated with including potentially-uncollectable amounts in the estimate of ceded reserves. Before commenting on reinsurance collectability, the Appointed Actuary should solicit information from management on any actual collectability problems, review ratings given to reinsurers by a recognized rating service, and examine Schedule F for the current year for indications of regulatory action or reinsurance recoverable on paid losses over ninety (90) days past due. The comment should also reflect any other information the Appointed Actuary has received from management or that is publicly available about the capability or willingness of reinsurers to pay claims. The Appointed Actuary's comments do not imply an opinion on the financial condition of any reinsurer."*[60]

[60] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

5.10.1 Discussion

Ceded reinsurance recoverable balances are shown in several places in the annual statement:

- Schedule F, Part 3 lists all ceded reinsurance recoverable balances in one place. These balances include amounts billed but unpaid (labelled "paid loss" in Schedule F[61]), ceded case reserves, ceded incurred but not reported (IBNR) reserves, ceded unearned premiums and even ceded contingent commissions. (Presumably the last two items are not relevant to the SAO as they are not "loss" items.)
- Page 2 (Assets) contains ceded recoverable amounts on paid losses.
- Page 3 (Liabilities) includes ceded case reserves and ceded IBNR reserves in the net loss reserves shown.
- The Underwriting & Investment Exhibit and Schedule P show ceded case reserves and IBNR reserves, although these may be on a pool basis in Schedule P.
- Note 23 of the statutory annual statement also includes discussion of various reinsurance topics, including Note 23D Uncollectible Reinsurance).

Collectibility of ceded unpaid loss and LAE (and ceded billed but uncollected loss and LAE when material) will generally have an effect of the future development of reserves as well as surplus. The NAIC requires commentary on reinsurance collectibility.

The Appointed Actuary may choose to discuss the materiality of amounts ceded to troubled reinsurers (e.g., those in liquidation or rehabilitation) if the overall amount is material. The Appointed Actuary may also choose to discuss the materiality of major ceded reinsurance concentrations, either concentrations to a single reinsurer or pertaining to a single (or a select few) event(s).

This discussion may be aided by investigation into GAAP disclosures of ceded reinsurance concentration (for SEC filers), or by analysis of ceded reinsurance write-offs found in Note 23.D. In addition, Schedule F, Part 3 provides detail on the amount of reinsurance recoverable by reinsurer (where the total recoverable from the reinsurer is over $100,000). Beginning with year-end 2015 the confidential RBC filing will also include a summarization of the Schedule F, Part 3 ceded balances by reinsurer credit rating.

FAQ: Don't I only have to look at the collectibility of ceded loss reserves and not ceded paid?

A: Not necessarily. Reinsurance collectibility issues include the collectibility of amounts billed to reinsurers but not yet collected. These billed but uncollected balances are included in Schedule F-Part 3, Column 16, and can also be found on Page 2, Line 16. If those billed amounts are not collected then the original ceded paid entry is reversed, which could impact reported loss development.

If any issues are raised by the above considerations, the Appointed Actuary may choose to provide some discussion as to amounts already set up to cover this risk (e.g., uncollectible reinsurance reserve, Schedule F

[61] When an insurer bills its reinsurer under a ceded reinsurance contract for a paid loss, this is recorded under statutory and US GAAP accounting as a ceded paid amount when billed, even if it hasn't been collected yet. Statutory accounting also requires the ceded paid entry to be reversed if the bill is ultimately written off as uncollectible, which results in an increase in paid and incurred losses unless offset by a reserve change at the time of the write-off.

penalty). The Appointed Actuary would also normally consider the effects of any existing collateral. If the amounts already set up are deemed by the Appointed Actuary to be inadequate, the Appointed Actuary may choose to indicate how the shortfall is being treated in the SAO. For example, is the shortage in these amounts being added to the otherwise indicated liabilities? Is the reserve being evaluated net of the indicated and held amounts for reinsurance uncollectibility?

At various times, publicly available information materially affects the perceived value of ceded reinsurance. The NAIC SAO Instructions provide that the Appointed Actuary's comments should also reflect any such information. For example, the Appointed Actuary would ordinarily comment on large cessions to a company recently placed under regulatory control, if the Appointed Actuary has knowledge of such cessions.

In some cases, other parties may already perform the above analysis. When the Appointed Actuary is relying on other parties for the reinsurance collectibility analysis, the Appointed Actuary may consider to so state and to discuss the qualifications of these parties.

Section 3.4 of ASOP No. 36 contains other provisions relating to other disclosures about uncollectible recoverables.

The Appointed Actuary would generally consider whether potential uncollectible cessions create risksand uncertainties to be disclosed and contribute to risk of material adverse deviation. Whether such a situation leads to a qualified opinion should also be considered.

Note:

- Reinsurance uncollectibility can be caused by both inability to pay (sometimes called credit default risk) and unwillingness to pay (dispute risk). It can also be caused by overly aggressive estimates of ceded loss potential or by overly aggressive billing of the reinsurer by the cedant.
- In some situations, it may be very unclear what the proper ceded amounts should be under a contract.

5.10.2 Illustrative language

The Appointed Actuary may choose to use wording similar to one of the following examples.

Situation 1: Immaterial ceded reinsurance levels

Use of ceded reinsurance is minimal, resulting in an immaterial risk of reinsurance uncollectibility relative to loss and loss adjustment expense reserves and surplus. (In addition, the Company's ceded billed but uncollected balances are not material.)

Situation 2: Material amounts of ceded reinsurance, with none to troubled reinsurers

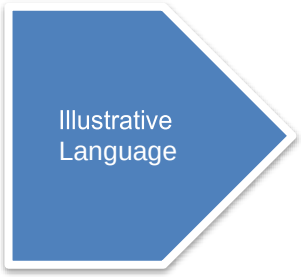
Ceded loss reserves are all with residual market pools, with companies rated XX or better by A.M. Best Co. (or its substantive equivalent), or fully collateralized. Past uncollectibility levels and current amounts in dispute have been reviewed and found to be immaterial relative to surplus. My opinion on the loss and loss adjustment expense reserves net of ceded reinsurance assumes that all ceded reinsurance is valid and collectible.

Note that even if reinsurance is with strong reinsurers, it is possible that reinsurance credits are overstated. If such credits were overstated in the past, an analysis of past uncollectible levels or of amounts currently in dispute could discover such an overstatement.

Situation 3: Potentially inadequate reserves for collectibility problems

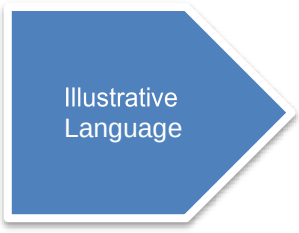
According to the Company's Schedule F disclosures, the Company cedes $XX million of loss and LAE reserves to currently insolvent reinsurers. Provisions for uncollectible reinsurance account for $YY million of this amount. In forming my opinion of the net reserves, I have recognized this $YY million as uncollectible.

Situation 4: Miscellaneous – Public information



The Company has a high portion of its reinsurance recoverable with the XYZ Corporation, whose financial difficulties have been publicized. I have reviewed the Company's exposure to this reinsurer, the ability to offset recoveries with amounts payable, and the Company's reserves for uncollectible reinsurance and found… {Note: The Appointed Actuary could go on to discuss a need to adjust the indicated net reserves, or state that the situation has been adequately addressed.}

Situation 5: Miscellaneous – Public information – material ceded reserves



The Company has a large ceded reserve with regard to {event X}, with a public dispute with its reinsurers with regard to that cession. The inability of the Company to collect on that cession would be material to its {surplus and/or reserves}. My analysis assumes that such cession will {be collectible, uncollectible, partially collectible, etc.}.

5.11 IRIS Ratios

According to the NAIC SAO Instructions,

> *"If the Company's reserves will create exceptional values under the NAIC IRIS Tests for One-Year Reserve Development to Policyholders' Surplus, Two-Year Reserve Development to Policyholders' Surplus or Estimated Current Reserve Deficiency to Policyholders' Surplus, the Appointed Actuary must include RELEVANT COMMENT on the factors that led to the unusual value(s)."*[62]

5.11.1 Definitions

IRIS Test 11 One-Year Reserve Development to Surplus measures the development of net loss and LAE reserves over the past calendar year, relative to prior year surplus. The usual range for the ratio includes results less than 20 percent.

IRIS Test 12 Two-Year Reserve Development to Surplus measures the development of net loss and LAE reserves over the past two calendar years, relative to surplus at the end of the second prior year. The usual range for the ratio includes results less than 20 percent.

IRIS Test 13 Estimated Current Reserve Deficiency to Surplus takes the net outstanding loss and LAE reserves for the most recent prior two calendar years relative to the calendar year earned premium for those years and adds to the reserves the development that has emerged over that period (one-year development for the first prior calendar year; two-year development for the second prior calendar year). The average of the resulting two "adjusted" loss reserve ratios is applied to earned premium for the most recent calendar year to determine what the outstanding loss reserve should be according to this estimate. The difference between this reserve estimate and the recorded loss and LAE reserve is related to current year surplus. A calculated deficiency in recorded loss and LAE reserves of 25 percent or more is deemed to be unusual.

[62] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

A link to the NAIC Insurance Regulatory Information System (IRIS) Ratios Manual is below. This manual contains calculation details along with annual statement source references for all of the IRIS Ratios.

http://www.naic.org/documents/prod_serv_fin_receivership_uir_zb.pdf

5.11.2 Discussion

The Appointed Actuary is required to provide commentary on the factors underlying exceptional values calculated under the NAIC IRIS Tests for One-Year Reserve Development to Surplus, Two-Year Reserve Development to Surplus, and Estimated Current Reserve Deficiency to Surplus. If one or more of these tests' calculations result in exceptional value(s), the Appointed Actuary must include a RELEVANT COMMENT paragraph to explain in detail the primary reasons for the exceptional value(s). The Appointed Actuary may want to consider potential responses in the AOS section E for consistency with commentary in the SAO on IRIS test exceptional values.

An explanatory paragraph is not required unless the calculations of the IRIS tests create exceptional values. However, even when there are no exceptional values, the Appointed Actuary may want to include wording indicating that he/she reviewed the calculations of the IRIS tests and noted no exceptional values.

Note:

- Part E of Paragraph 5 of the AOS addresses persistent adverse development. The NAIC AOS Instructions are included as Appendix I.2.

5.11.3 Illustrative language

The Appointed Actuary may choose to use wording similar to one of the following examples, to the extent they apply:

During the past year, the Company strengthened net reserves for prior accident years by $100,000,000. Most of the increase was for asbestos and environmental claims included in the prior year row. This extraordinary loss reserve strengthening caused exceptional values for the NAIC IRIS Tests regarding One-Year Reserve Development to Surplus, Two-Year Reserve Development to Surplus, and/or Estimated Current Reserve Deficiency to Surplus.

or

During the past year, the Company booked significant amounts of additional premiums in long-tail lines from various loss-sensitive programs. These additional premiums caused an exceptional value for the IRIS test regarding Estimated Current Reserve Deficiency to Surplus. These lines have also shown some non-substantial upward reserve development.

When the IRIS test calculations produce no exceptional values, the Appointed Actuary may still choose to include an explanatory paragraph, with wording similar to the following:

I have examined the NAIC IRIS tests for One-Year Reserve Development to Surplus, Two-Year Reserve Development to Surplus, and Estimated Current Reserve Deficiency to Surplus, and no exceptional values were observed.

5.12 Changes in methods and assumptions

According to the NAIC SAO Instructions,

> *"If there has been any significant change in the actuarial assumptions and/or methods from those previously employed, that change should be described in a RELEVANT COMMENT paragraph. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this."*[63]

5.12.1 Discussion

The NAIC requirement is similar to that in ASOP No. 36, section 4.2.a required disclosure of changes in the Appointed Actuary's assumptions, procedures, or methods from those employed in the most recent prior opinion prepared in accordance with ASOP No. 36 if the Appointed Actuary believes that such changes are likely to have a material effect on the Appointed Actuary's estimate(s) of liabilities for which reserves the Appointed Actuary is opining. The Appointed Actuary is obliged to comment only onchanges that are, in the Appointed Actuary's professional judgment, material to the actuary's unpaid claim estimate.

Pursuant to ASOP No. 36, section 3.8, neither the use of assumptions, procedures, or methods for new reserve segments that differ from those used previously, nor periodic updating of experience data, factors, or weights constitute a change in assumptions, procedures, or methods for this disclosure.

According to the NAIC SAO Instructions, when an Appointed Actuary is changing assumptions and/or methods from the prior year, and the impact of the change is not known, the Appointed Actuary should disclose the change. It is advisable in most instances to describe
briefly the change itself and the reason for it.

[63] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

If there is a change in Appointed Actuary, the new Appointed Actuary is not expected to calculate the year-end unpaid claim estimates using a predecessor's methodology. Given each actuary's varying comfort level with different techniques, and the use of custom reserve review packages by various reserve practitioners, it is impractical to expect an Appointed Actuary to always copy a predecessor's methodology. However, the new Appointed Actuary may choose to become familiar with his or her predecessor's basic methodology and conclusions. If the changes in assumptions, procedures or methods are likely to have a material impact on unpaid claim estimates, the new Appointed Actuary may choose to note the difference(s) in the SAO.

FAQ: I changed the methods and assumptions from the prior year; do I need to disclose the changes?

A: Per the Instructions and ASOP No. 36, if the effect of the change is material, then you should disclose the change; if the effect of the change is not material, disclosure can be made at your discretion.

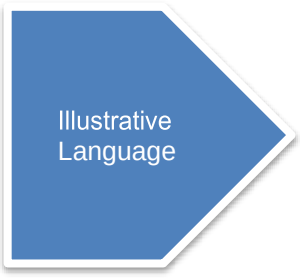
If the newly Appointed Actuary is able to review the prior opining actuary's work, section 3.8 of ASOP No. 36 states that the actuary should determine whether the current assumptions, procedures, or methods differ from those employed in providing the most recent prior opinion. In the event that the current assumptions, procedures, or methods differ from those of the prior opinion, then the actuary should consider whether the changes are likely to have had a material effect on the actuary's unpaid claim estimate.

ASOP No. 36 requires disclosure of instances in which the Appointed Actuary is not able to review the prior Appointed Actuary's work. In this event, according to section 4.2.a, the Appointed Actuary should disclose that the prior assumptions, procedures, and methods are unknown.

5.12.2 Illustrative language

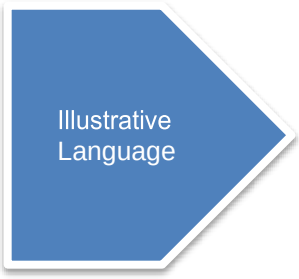
The Appointed Actuary may choose to use wording similar to one of the following examples.

Situation 1: Material change due to distortions affecting old method



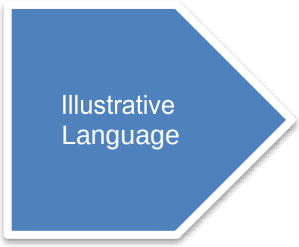
A material change in actuarial methods was made in the analysis supporting this opinion. The change entailed using a reported loss development procedure in place of the paid loss development procedure used last year. This change was necessitated by the implementation of a new claim payment system, distorting the paid data but leaving unchanged the case incurred.

Situation 2: Change made, materiality unknown



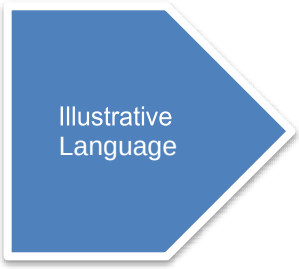
A change in actuarial methods was made in the supporting reserve analysis (versus the prior year). The materiality of this change could not be determined. The change, developing auto liability losses with bodily injury and property damage combined rather than separated, was necessitated due to the implementation of a new claim system. The new system did not contain the data in the same detail as was available last year.

Situation 3: Not possible to quantify impact of changes from the prior Appointed Actuary



The Appointed Actuary has changed from the prior year. A comparison of my estimates to the prior Appointed Actuary's estimates is not possible because [explain why: for example, the analysis done by the prior Appointed Actuary was performed using a different aggregation of the data]. Therefore, I am unable to determine whether there has been a material change in actuarial assumptions or methodology.

Situation 4: Not able to review the work of the prior Appointed Actuary



The Appointed Actuary has changed from the prior year. I was not able to review the work of the prior Appointed Actuary. Therefore, the prior assumptions, procedures, and methods are unknown and I am unable to determine whether there has been a material change in actuarial assumptions or methodology.

5.13 Extended reporting endorsements

In item 12 of Exhibit B, the Appointed Actuary is required to disclose the total claims-made extended loss and expense reserve (greater than or equal to Schedule P interrogatories) that the company carries as a loss reserve (item 12.1) and/or unearned premium reserve (item 12.2).

"*RELEVANT COMMENT paragraphs should describe the significance of each of the remaining*

Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact."[64]

This section provides discussion and illustrative wording around this particular disclosure item.

5.13.1 Definitions

Extended Reporting Endorsements – "*Endorsements to claims-made policies covering insured events reported after the termination of a claims-made contract but subject to the same retroactive dates where applicable."*[65]

There are essentially two types of extended reporting endorsements, those that extend reporting of claims-made policies for a defined period, such as one or two years, and those that extend reporting for an indefinite period.

Where extended reporting endorsements provide coverage for only a fixed reporting period, the premium is earned over that period, with an unearned premium reserve recorded for the unexpired portion of the premium. Associated losses are recorded as reported, with incurred but not reported (IBNR) loss recorded in the loss reserves as the coverage is provided. Where the endorsements provide coverage for an indefinite reporting period, premium is fully earned and the liability associated with associated IBNR claims is recognized immediately.[66]

Additionally, certain claims-made policies include provisions such as Death, Disability, or Retirement (DDR) provisions. DDR provisions generally extend reporting under a claims-made policy for an indefinite period, at no additional cost, in the event that the insured dies, becomes disabled or retires during the policy period. Because coverage is extended at no additional charge, a portion of the claims-made premium should be recorded as a policy reserve for liability stemming from this coverage provision. This is an example of what is being requested in Exhibit B, item 12. According to SSAP No. 65,

the amount of the reserve should be adequate to pay for all future claims arising from these coverage features, after recognition of future premiums to be paid by current insureds for these benefits…When anticipated losses, loss adjustment expenses, and maintenance costs anticipated to be reported during the extended reporting period exceed the recorded unearned premium reserve for a claims-made policy, a premium deficiency reserve shall be recognized in accordance with SSAP No. 53 – Property Casualty Contracts – Premiums.[67]

5.13.2 Discussion

The scope of the Appointed Actuary's SAO includes the total claims-made extended loss and expense reserves

[64] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[65] SSAP 65, paragraph 3c (Appendix IV).
[66] SSAP 65, paragraph 7 (Appendix IV).
[67] SSAP 65, paragraphs 8 and 9 (Appendix IV).

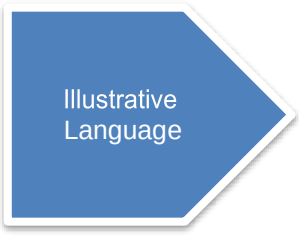
reported in Exhibit B, item 12. While these provisions are often found in Medical Professional Liability policies, the Appointed Actuary is reminded that the RELEVANT COMMENT paragraphs, as well as the corresponding entries in Exhibit A and Exhibit B, item 12 should include all of the company's extended loss and expense reserves, not just the Medical Professional Liability portion of these reserves reported in the Schedule P Interrogatory #1. Where values are reported for that interrogatory, the Appointed Actuary may want to confirm that the value reported in Exhibit B, Disclosure 12 is at least as high as those interrogatory values.

Note:

- Some Directors & Officers Liability (D&O) policies may also have similar provisions that cover suits against past directors and officers after they leave the company (albeit possibly only for a limited time after the claims-made policy expiration).
- Schedule P Interrogatory #1 asks for the amount of the DDR reserve that is reported as an unearned premium reserve (per SSAP No. 65) separately from the amount reported as loss or LAE reserve, if any. This is consistent with the NAIC SAO reporting requirement of Other Premium Reserve items in Exhibit A, item 9, and Other Loss Reserve items in Exhibit A, item6.
- References to "activated tail" and "paid tail" relate to "triggered" or "issued" reporting endorsements, and, therefore, any related loss reserves are not considered to be "extended loss and expense reserves."

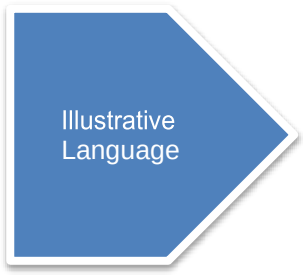
5.13.3 Illustrative language

If there are contracts of this type with material levels of reserves, the Appointed Actuary may choose to use wording similar to the following:



The Company writes extended loss and expense contracts on claims- made professional liability policies, which provide extended reporting coverage in the event of death, disability, or retirement at no additional premium charge. The Company's accrual for this liability is included in its unearned premium reserves and is shown in item 9 on Exhibit A.

Alternatively, if the material accrual for these contracts is recorded as loss reserves, the Appointed Actuary may choose to use wording similar to the following:



The Company writes extended loss and expense contracts on claims- made professional liability policies, which provide extended reporting coverage in the event of death, disability, or retirement at no additional premium charge. The Company's accrual for this liability is included in its loss and loss adjustment expense reserves and is shown in item 6 on Exhibit A.

5.14 Property and Casualty (P&C) Long Duration Contracts

This section addresses the situation of material levels of P&C Long Duration Unearned Premium Reserves subject to special reporting rules in SSAP 65, and the required SAO comment on such reserves. Note there are requirements for Accident and Health (A&H) Long Duration Contracts which are discussed in section 5.15.

> *If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts … the Actuarial Opinion should cover the following illustration:*[68]

This means that if lines 7 and/or 8 of Exhibit A of the SAO include material levels of unearned premium reserves for P&C Long Duration Contracts, the NAIC expects the Appointed Actuary to opine on the level of such P&C Long Duration Unearned Premium Reserves.

5.14.1 Definitions

Special rules for calculating unearned premium "*shall apply to all direct and assumed contracts … excluding financial guaranty contracts, mortgage guaranty contracts, and surety contracts, that fulfill both of the following conditions:*

> a. *The policy or contract is greater than or equal to 13 months; and*
>
> b. *The reporting entity can neither cancel the contract, nor increase the premium during the policy or contract term."*[69]

FAQ: Are all policies of duration over 12 months considered P&C Long Duration for the purposes of this requirement?

A: No. SSAP 65 specifies certain criteria for the policies that are subject to this requirement. Surety policies are explicitly excluded from this requirement. Policies that are cancellable under certain conditions may also be exempted, such as a D&O policy that can be cancelled upon a major change in the insured (such as a major acquisition).

5.14.2 Discussion

Note that "long duration" in this section refers only to those policies subject to the special unearned premium rules alluded to in the above definitions ("These contracts are subject to the three tests of SSAP No.

[68] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[69] SSAP 65, paragraph 23 (Appendix IV).

65 – *Property and Casualty Contracts* of the NAIC *Accounting Practices and Procedures Manual*"[70]). More details on these special rules are provided in Appendix III.1.

The company for which the SAO is being written may be in any of these three situations:

1. The company does not write P&C Long Duration Contracts.

2. The unearned premium reserve for P&C Long Duration Contracts is immaterial in relation to the aggregate of the loss, LAE, and P&C Long Duration unearned premium reserves.

3. The P&C Long Duration unearned premium reserve is material in relation to the aggregate of the loss, LAE, and P&C Long Duration unearned premium reserves.

If the Appointed Actuary is unsure which of these conditions apply, he/she may analyze the disclosure of unearned premium for policies over 12 months in the Underwriting & Expense Exhibit, Part 1A, column 2. Note that that column may include both amounts subject to the SSAP 65 requirements and amounts that are exempted from those requirements; hence material values in that column may require further analysis to determine whether the SSAP 65 requirements apply.

5.14.3 Illustrative language

Situation 1: The Company does not write P&C Long Duration Contracts (of the type specified in SSAP 65 for the special unearned premium reserve calculation).

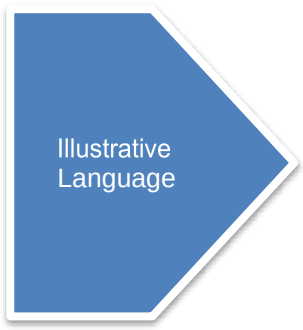
When the company does not write P&C Long Duration Contracts, the Appointed Actuary may choose to use the SAO format that makes no allusion to the P&C Long Duration unearned premium reserves in the SCOPE or OPINION sections. A brief disclosure in the RELEVANT COMMENTS section of the SAO may be worded along the following lines:

The Company does not write policies or contracts related to single or fixed premium policies with coverage periods of 13 months or greater that are non-cancellable and not subject to premium increase (excluding financial guaranty contracts, mortgage guaranty contracts, and surety contracts).

Situation 2: The unearned premium reserve for P&C Long Duration Contracts is immaterial in relation to the aggregate of the loss, LAE, and P&C Long Duration unearned premium reserves. When the company writes an amount of P&C Long Duration Contracts that develop an unearned premium reserve that is immaterial when combined with the loss and LAE reserves, the Appointed Actuary would be prudent to include the

[70] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

amounts in Exhibit A: SCOPE (items 7 and 8) but need not include item (D) in the OPINION paragraph. A brief disclosure in the RELEVANT COMMENTS section of the SAO may be worded along the following lines:



Total net unearned premium for the Company as recorded on the Liabilities, Surplus and Other Funds page, Unearned premiums line of the Annual Statement is $_____. The unearned premium for P&C Long Duration Contracts subject to the SSAP 65 unearned premium reserve "three tests", to which this opinion applies, is_____, representing _percent of the total net unearned premium for the Company. This component of the unearned premium is not material to the Company when combined with the loss and loss adjustment expense reserves. I therefore relied on the Company for its representation of the reasonableness of the unearned premium reserves.

Situation 3: The unearned premium reserve for P&C Long Duration Contracts is material in relation to the aggregate of the loss, LAE, and P&C Long Duration unearned premium reserves. When the P&C Long Duration contract unearned premium reserve is material, the Appointed Actuary would likely include the amounts in Exhibit A: SCOPE (items 7 and 8) and also include item (D) in the OPINION paragraph. The Appointed Actuary may choose to apply language similar to the language described in section 4.9.3 and may choose to include further discussion in the RELEVANT COMMENTS section.

5.15 Accident and Health Long Duration Contracts

In item 13 of Exhibit B, the Appointed Actuary is required to disclose the net reserves for Accident and Health ("A&H") Long Duration contracts. Specifically items for losses, loss adjustment expense reserves, unearned premium reserves, and each write-in item need to be listed.

A&H Long Duration contracts are defined in the SAO instructions to be:

> *"A&H contracts in which the contract term is greater than or equal to 13 months and contract reserves are required. See Schedule H instructions for a description of categories of contract reserves as well as policy features that give rise to contract reserves. Two specific examples of contracts that typically require contract reserves are long-term care and disability income insurance.*

The Schedule H instructions state:

> *"Companies must carry a reserve for any block of contracts for which future gross premiums when reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims or services."*

As with other items listed in this section of Exhibit B, the SAO instructions require some discussion of any non-zero amounts in item 13:

> *"RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in*

combination when commenting on a material impact."[71]
For most property-casualty companies with A&H Long Duration contracts, these relevant comments would be all that is required from the opining actuary.

The Appointed Actuary is not required to opine on the reasonableness of these reserves in isolation. The 2018 AOWG Regulatory Guidance states:

"The Appointed Actuary is not asked to opine on the reasonableness of the reserves associated with A&H Long Duration Contracts except to the extent that the reserves are included within the amounts reported on Exhibit A of the Actuarial Opinion."[72]

However, for companies with over 10,000 inforce lives covered by long-term care (LTC) contracts as of the valuation date, the Appointed Actuary is required to perform an additional asset adequacy analysis for those contracts per Actuarial Guideline LI ("AG 51"). Per the SAO instructions, *"[t]he Actuarial Report and workpapers summarizing the results, assumptions and testing procedures for the asset adequacy testing of LTC business must be in compliance with AG 51 requirements*". It is COPLFR's understanding that only a small number of property-casualty companies are currently subject to these requirements.

5.15.1 Illustrative language

If there are contracts of this type with material levels of reserves, the Appointed Actuary may choose to use wording similar to the following:

The Company writes A&H Long Duration Contracts where the contract term is greater than or equal to 13 months and contract reserves are required. The Company's accrual for this liability is shown in item 13 on Exhibit B.

5.16 Other Items

Item 14 of Exhibit B provides a place for disclosure of "Other items on which the Appointed Actuary is providing relevant comment…"

> *"RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact"*

This means that if item 14 of Exhibit B of the SAO includes a non-zero value (or values), then the SAO should

[71] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1)
[72] 2018 AOWG Regulatory Guidance, page 10 (Appendix II).

include RELEVANT COMMENT paragraph(s) with discussion of the item(s) individually and within context of the other disclosure items in Exhibit B.

5.16.1 Discussion

Item 14 of Exhibit B serves as a "catch-all" for other items the Appointed Actuary is discussing in RELEVANT COMMENTS section of the SAO, that are not otherwise already disclosed within Exhibit B. While the majority of SAOs do not contain anything under item 14, if the Appointed Actuary believes it is appropriate to disclose an item within the RELEVANT COMMENTS section it should also be disclosed, along with the source of the figure, in Exhibit B.

The listing of potential risk factors in section 5.2.1 of this document may provide some instances of items that could be disclosed within item 14 of Exhibit B.

5.16.2 Illustrative language

Situation 1: The Company's reserves include an explicit risk margin and are discounted. The Appointed Actuary discusses each of these items individually and combined in RELEVANT COMMENT paragraphs and uses item 14 of Exhibit B to identify the amount of risk margin.

The Company has represented that the carried reserves include an explicit risk margin. The amount of risk margin as of December 31, 2018 is $x.x million on a net of reinsurance basis and is shown as item 14 on Exhibit B. The amount of discount is X% of the Company's net loss and LAE reserves and Y% of the Company's policyholders surplus.

The combined effect of the Company's discount and risk margin is to decrease the carried net loss and loss adjustment expense reserve by $y.y million (or approximately z.z%) if compared to the implied undiscounted reserve with no risk margin.

Situation 2: The Company's reserves are stated net of policyholder deductibles, and the Appointed Actuary has identified the collectibility of such as a company specific risk factor.

The Company's carried net loss and loss adjustment expense reserve is stated net of outstanding policyholder deductibles. The amount of outstanding policyholder deductibles is $x.x million, shown as item 14 on Exhibit B, and represents X% of the Company's net loss and LAE reserves and Y% of the Company's policyholders surplus. Due to the significance of this amount, I have identified the collectibility and/or timing of reimbursement as a company specific risk factor.

6. Additional considerations

In this chapter we discuss the additional details regarding the format of the SAO and actions that are required when an error in the SAO has been uncovered.

6.1 Formatting requirements

There are specific requirements in terms of the format of the signature of the Appointed Actuary, the presentation of Exhibits A and B, and the technical specifications of the electronic format of Exhibits A and B. Each of these is discussed in detail in the following sections.

6.1.1 *Signature of the Appointed Actuary*

The SAO concludes with the dated signature of the Appointed Actuary. The NAIC SAO Instructions are quite clear in terms of the presentation of the Appointed Actuary's signature.

> *The signature and date should appear in the following format:*
>
> _____
> *Signature of Appointed Actuary*
> *Printed name of Appointed Actuary*
> *Employer's name*
> *Address of Appointed Actuary Telephone number of Appointed Actuary Email address of Appointed Actuary Date opinion was rendered*[73]

FAQ: Is an original signature required?

A: This depends on the requirements of each state. Suggested resources for these requirements include the 2018 P/C Loss Reserve Law Manual and state statutes, regulations and bulletins. Knowledge of and compliance with legal and regulatory requirements rests with the individual actuary. Legal counsel should be consulted where the actuary is unable to identify all relevant legal requirements.

6.1.2 *Presentation of Exhibit A*

Exhibit A should follow the same format outlined in the NAIC SAO Instructions. Every item in Exhibit A will typically contain a value, even if the company's value for an individual item is $0. Write-in lines should be inserted into Exhibit A if applicable. Also, if the Appointed Actuary

FAQ: What types of reserves may be included in Exhibit A, items 6 and 9?

A: If an actuary opines on a particular reserve segment that is not included in items 1-4 or 7-8, e.g., DDR, this may be handled in item 6 and/or 9.

[73] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

is including a value, or multiple values if needed, in items 6 and/or 9, then the SAO is expected to include an explanation in the RELEVANT COMMENTS of why that value or values are being included in the Exhibit A disclosure.

6.1.3 Presentation of Exhibit B

Exhibit B should follow the same format outlined in the NAIC SAO Instructions with no items deleted and write-in lines included if applicable.

According to NAIC SAO Instructions,

> *Exhibit B should be completed for Net dollar amounts included in the SCOPE. If an answer would be different for Direct and Assumed amounts, identify and discuss the difference within RELEVANT COMMENTS.*[70]

The information obtained in Exhibit B items 1 through 4 and 6 is normally disclosed elsewhere in the SAO. It has been added to Exhibit B in order to facilitate the capture of certain information in the company's electronic data filing.

According to AOWG Regulatory Guidance, the regulator expects the response to Exhibit B item 4 to reflect the SAO on net reserves. Therefore, if the Appointed Actuary reaches different conclusions regarding net reserves versus gross reserves (direct plus assumed reserves), then item 4 should reflect the SAO category for net reserves.

Regulators expect the answer to Exhibit B item 6 to be consistent with the disclosure in the RELEVANT COMMENTS of the SAO of whether there are significant risks or uncertainties that could result in material adverse deviation. The response *"Not Applicable"* for item 6 is intended to only be used in the situation of a company with 0 percent participation under an intercompany pooling agreement in which the lead company retains 100 percent of the pooled reserves.

In addition, as directed by section 1C of the NAIC SAO Instructions, Exhibits A and B for each company in the pool should represent the company's share of the pool and reflect values specific to the individual company. If a company is a 0 percent pool participant, then Exhibits A and B of the lead company should be attached as an addendum to the SAO of the 0 percent company.

Exhibit B item 10 is a disclosure of the sum of voluntary and involuntary participation in underwriting pools and associations. A zero entry would be unusual for workers' compensation or automobile insurers. The Appointed Actuary may choose to show the voluntary and involuntary participation separately in the body of the SAO. Note: Refer to section 5.6 of this practice note for more information on the specifics of underwriting pools and

associations.

Exhibit B Item 13 is a new disclosure item in the 2018 SAO. For property-casualty insurers with over 10,000 in-force lives from long-term care (LTC) contracts, there are additional requirements for the opining actuary. (See Chapter 5 of this practice note for further discussion).

For all other property-casualty insurers with no LTC coverage—or fewer than 10,000 insured lives for LTC—there are no additional requirements for the opinion, except for the item 13 disclosure. Actuaries for insureds with any volume of A&H Long Duration Contracts are required to complete this item 13 disclosure. Normally any active life reserves on these A&H Long Duration Contracts would be included in item 13.

Exhibit B would typically contain information and amounts for all of items 1 through 14, even if the company's value for an individual item is $0. Also, if the Appointed Actuary is including a non-zero value or values in item 14, then the SAO would normally include, within a RELEVANT COMMENT paragraph, an explanation of why each value is being included in the Exhibit B disclosure.

6.1.4 *Technical specifications of filing (i.e., data capture format of Exhibits A & B)*

According to the NAIC SAO Instructions,

> *"Data in Exhibits A and B are to be filed in both print and data capture format."*[74]

In addition to filing the Annual Statement, the company is required to file certain information reported in the Annual Statement in electronic format. The information reported in Exhibit A: SCOPE and Exhibit B: DISCLOSURES of the SAO will be included in the company's electronic filing. This underscores the importance of preparing Exhibits A and B in the exact format shown in the NAIC SAO Instructions.

Note:

- For companies participating in an intercompany pool with a zero percent (0%) share, Exhibits A and B of the lead company must be attached as an addendum to the company's SAO.

6.2 Errors in SAOs

The NAIC SAO Instructions and the AOWG Regulatory Guidance include information on reissuing SAOs when the Appointed Actuary determines that the SAO submitted to the domiciliary Commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually

[74] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

incorrect. This includes instruction on timing, format, and content of the revised submission.

6.2.1 Definitions

According to the NAIC SAO Instructions,

> *"The Actuarial Opinion shall be considered to be in error if the Actuarial Opinion would have not been issued or would have been materially altered had the correct data or other information been used. The Actuarial Opinion shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected."*[75]

6.2.2 Discussion

NAIC SAO Instructions specify a formal process when an SAO is considered to be in error. The process involves notifications to the Board, as well as the domiciliary commissioner, as described below:

1. According to NAIC SAO Instructions, the insurer "*shall require its Appointed Actuary to notify its Board of Directors or its audit committee in writing within five (5) business days after any determination by the Appointed Actuary that the Actuarial Opinion submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect*"[76] and meets the definition above.

   The Appointed Actuary should include a summary of the finding of the error and an amended SAO.

2. Within five (5) business days of receipt from the Appointed Actuary, the company is required to forward a copy of the amended SAO to the domiciliary commissioner, with notification to the Appointed Actuary of doing so.

   If the Appointed Actuary does not receive such

FAQ: What if the actuary cannot determine what, if any, changes are needed to the SAO within the required timeline?

A: *The actuary and insurer should perform the necessary procedures to determine the impact of the SAO as soon as reasonably practical. If the insurer does not provide the necessary data and/or support within ten (10) business days, the actuary should notify the domiciliary Commissioners that the original SAO should no longer be relied upon.*

[75] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[76] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

notification, the Appointed Actuary is required to notify the domiciliary Commissioner within the next five (5) business days that an amended actuarial opinion has been finalized.

3. According to the NAIC SAO Instructions, "*if the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the Actuarial Opinion, the Appointed Actuary and the company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.*"[77]

There are other situations in which the SAO may need to be revised and reissued. An example of such a situation is a request from a regulator for expanded wording in the SAO. In these situations, the Appointed Actuary may wish to discuss the timing/format/content of the revised SAO with the regulator in consultation and conjunction with the company to which the SAO relates.

Note:

- If an error is discovered between the issuance of the SAO and December 31 of that year, the domiciliary commissioner must be notified.
- According to the NAIC SAO Instructions, "No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs."[†]

[†] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

[77] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

7. Actuarial Opinion Summary

The AOS is identified by the NAIC as a supplemental filing, separate from the Annual Statement and the SAO. NAIC Instructions for preparation of the AOS are provided separately from the SAO Instructions to emphasize the supplemental nature of the AOS filing.

Of particular importance is that the AOS is a confidential document. As stated in the NAIC AOS Instructions,

> *The AOS contains significant proprietary information. It is expected that the AOS be held confidential; it is not intended for public inspection. The AOS should not be filed with the NAIC and should be kept separate from any copy of the Statement of Actuarial Opinion (Actuarial Opinion) in order to maintain confidentiality of the AOS. The AOS can contain a statement that refers to the Actuarial Opinion and the date of that opinion.*[78]

The AOWG Guidance repeats this information and adds

> *The AOS is a confidential document and should be clearly labeled and identified prominently as such.*

We expect by the actuary will transmit the AOS to the Company department responsible for filing this document by e-mail (with the AOS as an attachment) or by delivery of a hard copy with an attached cover letter or by some similar means. Based on the AOWG Guidance, Appointed Actuaries commonly repeat these instructions in the transmittal e-mail or the cover letter:

f. This attached document should not be filed with the NAIC;
g. This attached document should be filed with the domiciliary state's regulator; and
h. This attached document should not be filed with any other state's regulators, unless specifically requested by the regulators.

The following provides discussion and illustrative language for consideration when issuing an AOS.

FAQ: I have completed the Statement of Actuarial Opinion and Actuarial Opinion Summary at the same time and provided them to the Company. Does the Company file them with its domiciliary state insurance department together?

A: No, the SAO and AOS should be filed separately. The AOS is not included with the Company's Annual Statement and other documents that are filed with the NAIC due to its confidential nature. The CASTF Regulatory Guidance advises that, in order to avoid confusion, the Appointed Actuary should provide the AOS to company personnel separately from the SAO.

7.1 Filing the AOS

This section provides discussion around the filing requirements of the AOS. According to the NAIC AOS Instructions,

> *For all Companies that are required by their domiciliary state to submit a confidential document entitled Actuarial Opinion Summary (AOS),*

[78] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

such document shall be filed with the domiciliary state by March 15 (or by a later date otherwise specified by the domiciliary state). This AOS shall be submitted to a non-domiciliary state within fifteen days of request, but no earlier than March 15, provided that the requesting state can demonstrate, through the existence of law or some similar means, that it is able to preserve the confidentiality of the document.

7.1.1 Discussion

The AOS is to be filed with the company's domiciliary state insurance department separately from the Annual Statement and the SAO. The AOS generally must be filed by March 15, unless the state's insurance department has specified a different date. The Appointed Actuary may want to refer to the Academy's *2018 P/C Loss Reserve Law Manual* to find the state-specific due date. A non- domiciliary state may also request the AOS, but only if that state can demonstrate its ability to preserve the confidentiality of the AOS, in accordance with item 1 of the NAIC AOS Instructions provided in Appendix I.2.

Note:

- The AOS is not included with the company's Annual Statement and other documents filed directly with the NAIC.
- The AOS is filed separately from the SAO, but the wording of the AOS may make reference to the SAO.
- The Appointed Actuary is not required to submit a copy of the SAO with the AOS, since that SAO will have been submitted along with the company's Annual Statement.
- The AOS should be consistent with applicable Actuarial Standards of Practice (ASOPs) and the CAS Statements of Principles.
- Exemptions for filing the SAO apply equally to the filing requirements of the AOS.

7.1.2 Illustrative language

Because it is sent separately from the SAO, the Appointed Actuary may wish to consider including some basic information along with the AOS. Sample wording is presented below:

Date: March 13, 2019 Actuarial Opinion Summary
Company: *THE Insurance Company*
NAIC#: *####*
Appointed Actuary: *Janet Actuary*

I have signed the Company's Statement of Actuarial Opinion on Feb. 23, 2019. These two documents are closely linked; the Actuarial Opinion Summary is an extension of the Statement of Actuarial Opinion.
Therefore, all limitations, caveats, and reliances in the Statement of Actuarial Opinion should also be applied to the Actuarial Opinion Summary. Moreover, it is my understanding that, consistent with the Annual Statement Instructions, the Actuarial Opinion Summary will be kept confidential by state regulators and is not intended for public inspection, subject to applicable law.

7.2 Content of the AOS

The principal content of the AOS is provided in five items, A through E. The first four items provide figures pertaining to the Appointed Actuary's unpaid claim estimates on both a point and range basis when calculated, the company's carried reserve, and differences between them on both a net and gross of reinsurance basis. In item E the Appointed Actuary is required to state whether the company has experienced one-year adverse development in excess of five percent of the respective prior year-end's policyholders' surplus in three or more of the past five years, and if so, provide explanation for the adverse experience.

This section provides discussion and illustrative language around the content of the AOS, with illustrative language for item E. Following this section are sample AOSs containing illustrations of items A through E (section 7.3).

7.2.1 Definitions

Section 3.7 of ASOP No. 36 states "*The actuary should consider a reserve to be reasonable if it is within a range of estimates that could be produced by an unpaid claim analysis that is, in the actuary's professional judgment, consistent with both ASOP No. 43, Property/Casualty Unpaid Claim Estimates, and the identified stated basis of reserve presentation."*[79]

7.2.2 Discussion

The AOS requires the Appointed Actuary to disclose, on a gross and net basis, the Appointed Actuary's point estimate and/or the Appointed Actuary's range, and compare this to the carried reserves.

[79] Actuarial Standard of Practice No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*, http://www.actuarialstandardsboard.org/asops/statements-actuarial-opinion-regarding-propertycasualty-loss-loss-adjustment-expense-reserves/, effective May 1, 2011, Section 3.7.

Items 5 (A) through 5 (D) in the NAIC AOS Instructions clarify that there is no requirement to produce both a range and a point estimate. However, the reserve estimates presented in the AOS must follow the Appointed Actuary's analysis (i.e., if the Appointed Actuary prepares both a point estimate and a range in the analysis, then both the point estimate and the range must be disclosed in the AOS).

If the Appointed Actuary produces a range of estimates for a portion of total liabilities and a pointestimate for the remaining liabilities, then the AOS should include both. The Appointed Actuary should show how the point estimate and the range combine to form the Appointed Actuary's SAO, which can be categorized as reasonable, deficient, redundant, qualified, or no opinion. The AOS Exhibit should be consistent with the type of opinion provided in the SAO.

If one-year development has been adverse by at least five percent of the respective prior year's surplus in at least three of the last five calendar years, the AOS also requires explicit discussion of reserve elements and/or management decisions to which such adverse development can be attributed. Each year's one- year development, on a net basis, is compared to the prior period's surplus, and a ratio is developed. The one-year development test is the same calculation as that which underlies the IRIS Ratio regarding One- Year Reserve Development to Surplus. The calculation of the company's one-year reserve development to surplus for each of the prior five years is disclosed in the five-year historical exhibit of the company's Annual Statement.

Note:

- NAIC AOS Instructions *state "the net and gross reserve values reported by the Appointed Actuary in the AOS should reconcile to the corresponding values reported in the Insurer's Annual Statement, the Appointed Actuary's Actuarial Opinion, and the Actuarial Report. Ifnot, the Appointed Actuary shall provide an explanation of the difference."*[†]
- The Appointed Actuary may want to consider potential responses in the AOS section Efor consistency with commentary in the SAO on IRIS test exceptional values.
- NAIC SAO Instructions indicate that the Actuarial Report should include detailed descriptions and calculations that support the point estimate and/or range of estimates.

[†] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

7.2.3 Illustrative language

If, for example, reserve strengthening for A&E was one of the causes for one-year development to exceed five percent of the respective prior year's surplus in at least three of the last five calendar years, then the Appointed Actuary would usually consider language like the following in item E of the AOS. This language would be in addition to explanations of any other causes of adverse development for those years:

The company's one-year development exceeded 5 percent of surplus in three of the five most recent years. During this period the Company was evaluating its asbestos exposures using a ground up evaluation. These evaluations included input from claims, legal, and actuarial personnel. These evaluations resulted in several increases in the Company's net asbestos liabilities, which in turn resulted in the adverse one-year developments in those three prior years.

NAIC AOS Instructions require "*an explicit description of the reserve elements or management's decisions which were the major contributors,*"[80] which may be more detailed than comments in the RELEVANT COMMENTS section of the SAO. Recall, for example, the illustrative language provided in the RELEVANT COMMENTS section pertaining to exceptional values for IRIS Ratios (section 5.11) was as follows:

> *During the past year, the Company strengthened net reserves for prior accident years by $100,000,000. Most of the increase was for asbestos and environmental claims for prior accident years. This extraordinary loss reserve strengthening caused exceptional values for the NAIC IRIS Tests regarding One-Year Reserve Development to Surplus, Two- Year Reserve Development to Surplus, and/or Estimated Current Reserve Deficiency to Surplus.*

If one-year development has been adverse by at least five percent of the respective prior year's surplus in at least three of the last five calendar years, but the Appointed Actuary has not issued the SAO in each of those five years, the Appointed Actuary may wish to begin the required commentary with language such as the following:

The Company had one-year adverse development in excess of five percent of the prior year-end's policyholders' surplus in three or more of the last five calendar years. I became the Appointed Actuary on [date] and have issued the Statement of Actuarial Opinion on the Company's loss and loss adjustment expense reserves, beginning with year-end [year]. The Company's management has represented to me that the one-year adverse developments in prior years were due to . . .

OR

The Company had one-year adverse development in excess of five percent of the prior year-end's policyholders' surplus in three or more of the last five calendar years. I became the Appointed Actuary on [date] and have issued the Statement of Actuarial Opinion on the Company's loss and loss adjustment expense reserves, beginning with year-end [year]. I have reviewed the Actuarial Reports for the years prior to my appointment, and I have determined that the one-year adverse developments in prior years were due to . . .

If fewer than three years fail the test, then the Appointed Actuary is not required to comment but may wish to include a sentence such as the following for clarity:

[80] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

The calculations of one-year development of the Company's reserves yielded results in excess of five percent of prior year-end's policyholders' surplus in only one of the last five years.

7.3 Sample formats of the AOS

Sample formats for the AOS are provided below. These sample formats are intended to be illustrative only, and they may not apply in every situation. The Appointed Actuary is not required to adopt them.

SAMPLE FORMAT FOR THE AOS
[Name] Insurance Company December 31, 2018

Sample # 1: If the Appointed Actuary provides a range without a point estimate:

		Net Reserves			Gross Reserves		
		Low	Point	High	Low	Point	High
A	Actuary's range of estimates	9,000		11,000	10,000		12,000
B	Actuary's point estimate		NA			NA	
C	Company carried reserves		10,000			11,000	
D	Difference between company carried and actuary's estimate	1,000		(1,000)	1,000		(1,000)

Sample # 2: If the Appointed Actuary provides a point estimate without a range:

		Net Reserves			Gross Reserves		
		Low	Point	High	Low	Point	High
A	Actuary's range of estimates	NA		NA	NA		NA
B	Actuary's point estimate		10,500			11,600	
C	Company carried reserves		10,000			11,000	
D	Difference between company carried and actuary's estimate		(500)			(600)	

Sample # 3: If the Appointed Actuary provides both a range and a point estimate:

		Net Reserves			Gross Reserves		
		Low	Point	High	Low	Point	High
A	Actuary's range of estimates	9,000		11,000	10,000		12,000
B	Actuary's point estimate		10,500			11,600	
C	Company carried reserves		10,000			11,000	
D	Difference between company carried and actuary's estimate	1,000	(500)	(1,000)	1,000	(600)	(1,000)

Sample # 4: If the Appointed Actuary provides a qualified opinion – point estimate without a range:

		Net Reserves			Gross Reserves		
		Low	Point	High	Low	Point	High
A	Actuary's range of estimates	NA		NA	NA		NA
B	Actuary's point estimate		9,500			10,000	
C1	Company carried reserves - TOTAL		10,000			11,000	
C2	Company carried reserves - portion excluded by opinion		1,000			1,600	
C3	Company carried reserves covered by opinion		9,000			9,400	
D	Difference between company carried and actuary's estimate (C3-B)		(500)			(600)	

Following items A through D in each of the above samples would be item E. The following provides an illustration of item E for the situation where the Company has not experienced one-year adverse development by more than five percent of surplus in three or more of the last five calendar years:

E. *The Company has not had one-year adverse development, as measured by Schedule P, Part 2 Summary, in excess of five percent of the prior year-end's policyholders' surplus in three or more of the last five calendar years.*

NAIC AOS instructions indicate that the Appointed Actuary is required to sign and date the Actuarial Opinion Summary. The Appointed Actuary may choose to use a signature similar to the signature line of the Actuarial Opinion. A sample format is shown below.

- Signature of Appointed Actuary
- Printed name of Appointed Actuary
- Employer's name
- Address of Appointed Actuary
- Telephone number of Appointed Actuary
- Email address of Appointed Actuary
- Date AOS was rendered

The following are examples of illustrative wording that may be included within the AOS to note that the information provided is expected to be kept confidential. See important note below to assist in determining the

appropriate language for each situation.

This Actuarial Opinion Summary was prepared solely for the Company for filing with regulatory agencies and is not intended for any other purpose. Furthermore, it is my understanding that, consistent with the Annual Statement Supplemental Filing Instructions, the information provided in this Actuarial Opinion Summary will be kept confidential by those regulatory agencies and will not be made available for public inspection, subject to applicable law.

OR

This Actuarial Opinion Summary was prepared solely for the Company for filing with regulatory agencies and is not intended for any other purpose. Furthermore, it contains information that is a trade secret and therefore, if disclosed, would cause substantial injury to ABC Insurance Company's competitive position. Therefore, I request that this Summary and information contained therein be maintained confidential and I request an exception from disclosure under the Freedom of Insurance Act/Laws of your state.

Note:

- Because the confidentiality laws differ from state to state, Appointed Actuaries are encouraged to reference the Academy's 2018 P/C Loss Reserve Law Manual to assist them in identifying differences among the states. Knowledge of and compliance with legal and regulatory requirements rests with the individual actuary. Legal counsel should be consulted where the actuary is unable to identify all relevant legal requirements.

7.4 AOS for pooled companies

According to the NAIC AOS Instructions,

> *The AOS for a pooled Company … shall include a statement that the Company is a xx% pool participant. For a non-0% Company, the information provided for paragraph 5 should be numbers after the Company's share of the pool has been applied; specifically, the point or range comparison should be for each statutory Company and should not be for the pool in total. For any 0% pool participant, the information provided for paragraph 5 should be that of the lead company.*[81]

[81] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

7.4.1 Discussion

Paragraph 6 of the NAIC AOS Instructions requires the AOS to include the participation percentage for companies participating in an intercompany pooling agreement, as discussed in paragraph 1C of the NAIC SAO Instructions. For those companies whose participation percentage is zero, the information provided in paragraph 5 of the AOS should be that of the lead company.

For those companies whose pooling is other than 0%, AOWG Regulatory Guidance (Appendix II) encourages actuaries to display both the consolidated pool amounts in addition to the statutory entity's amounts. This can be accomplished with two separate tables.

7.4.2 Illustrative language

The following language may be appropriate when a company is a 0% pool participant in an intercompany pooling arrangement:

XYZ Insurance Company is a member of an intercompany pooling arrangement, with zero percent participation. The lead company is ABC Insurance Company with an XX% share of the consolidated pool amount. The following information is that of the lead company, ABC Insurance Company.

7.5 Errors in the AOS

If an amended SAO is required that impacts AOS results, filing an amended AOS is also necessary. The 2018 AOWG Regulatory Guidance, included as Appendix II, discusses regulatory expectations in cases where an error is discovered by the Appointed Actuary, the company, or the regulator.

7.5.1 Definitions

According to the NAIC AOS Instructions,

> *"The AOS shall be considered to be in error if the AOS would have not been issued or would have been materially altered had the correct data or other information been used. The AOS shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected."*[82]

[82] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

7.5.2 Discussion

When an AOS is in error, as defined above, AOWG Regulatory Guidance indicates the revised Summary should

- be submitted to the regulator
- clearly state that it is an amended document
- contain or accompany an explanation for the revision and
- include the date of the revision.

NAIC AOS Instructions added the following language to expand the requirements in the case where an AOS is considered to be in error:

> *"The Insurer required to furnish an AOS shall require its Appointed Actuary to notify its Board of Directors in writing within five (5) business days after any determination by the Appointed Actuary that the AOS submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect…Notification shall be required when discovery is made between the issuance of the AOS and Dec. 31 of that year. Notification should include a summary of such findings.*
>
> *If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the AOS, the Appointed Actuary and the Company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.*
>
> *An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the amended AOS to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the letter and amended AOS submitted to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that an amended AOS has been finalized."*[83]

Note:

- According to the NAIC AOS Instructions, "No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs."[†]

[†] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

[83] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.2).

8. Actuarial Report

This chapter provides discussion related to the Actuarial Report and underlying actuarial work papers supporting an SAO. The NAIC Instructions include specific requirements for the technical component of the Actuarial Report and various disclosures, as discussed within this chapter. These requirements are in addition to following documentation and disclosure requirements of ASOP No. 41, *Actuarial Communications*, in particular section 3.2:

> *An actuarial report may comprise one or several documents. The report may be in several different formats (such as formal documents produced on word processing, presentation or publishing software, e-mail, paper, or web sites). Where an actuarial report for a specific intended user comprises multiple documents, the actuary should communicate which documents comprise the report.*
>
> *In the actuarial report, the actuary should state the actuarial findings, and identify the methods, procedures, assumptions, and data used by the actuary with sufficient clarity that another actuary qualified in the same practice area could make an objective appraisal of the reasonableness of the actuary's work as presented in the actuarial report.*[84]

8.1 Actuarial Report requirements per the NAIC SAO Instructions

According to the NAIC Instructions,

> *The Actuarial Opinion must include assurance that an Actuarial Report and underlying actuarial work papers supporting the Actuarial Opinion will be maintained at the Company and available for regulatory examination for seven (7) years. The Actuarial Report contains significant proprietary information. It is expected that the Actuarial Report be held confidential and not be intended for public inspection….*
>
> *The technical component must show the analysis from the basic data (e.g., loss triangles) to the conclusions.*[85]

The Instructions go on to include a discussion on long-term care and A&H Long Duration Contracts as well as provide a list of six bulleted items Actuarial Reports must also include. The long-term care and A&H Long Duration Contracts are discussed in section 8.2, while the six bulleted items in the Instructions correspond to sections 8.3 to 8.8 of this chapter, respectively.

[84] Actuarial Standards Board, ASOP No. 41, *Actuarial Communications*, http://www.actuarialstandardsboard.org/asops/actuarial-communications/ December 2010, section 3.2.
[85] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

8.1.1 Definitions

According to the NAIC Instructions,

> *"Actuarial Report" means a document or other presentation, prepared as a formal means of conveying to the state regulatory authority and the Board of Directors the Appointed Actuary's professional conclusions and recommendations, of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the Appointed Actuary's opinion or findings and of documenting the analysis underlying the opinion.*[86]

8.1.2 Discussion

The requirements for the Actuarial Report per the Instructions are much more specific than those contained in ASOP No. 41. The NAIC Instructions require the Actuarial Report show the analysis from the basic data to the conclusions, and contain six additional listed items (these are discussed in more detail in sections 8.2 through 8.7). Additionally, the NAIC Instructions require that the reconciliation papers in section 3.7.1 (*Reconciliation to Schedule P, Discussion*) become a part of the report.

FAQ: What is the due date of the Actuarial Report supporting an SAO?

A: According to NAIC Instructions, Actuarial Reports "…must be available by May 1 of the year following the year- end for which the Opinion was rendered or within two (2) weeks after a request from an individual state commissioner." However, requirements may vary by state. For example, Colorado requires the Actuarial Report to be issued within 30 days of the Actuarial Opinion if the carried reserves are less than the Appointed Actuary's best estimate (Statute Title 10, 3-1-3 § 6).

The Appointed Actuary is encouraged to refer to the Academy's 2018 P/C Loss Reserve Law Manual and relevant statutes for specific guidance.

The definition of the Actuarial Report in paragraph 7 of the Instructions includes a company's Board of Directors as part of the intended audience to be consistent with paragraph 1, which states that the Actuarial Report should be made available to the Board. This clarification is not intended to change the content of the Actuarial Report as described in paragraph 7. The Appointed Actuary may still elect to present findings to the board in any suitable manner (for example, an oral report or executive summary). In this event, the full Actuarial Report as defined in paragraph 7 must still be made available to the board upon request. The NAIC Instructions further state that the minutes of the Board of Directors' meeting should indicate that a presentation was made. The Instructions further state that the minutes should identify the form of presentation (e.g., webinar, in-person, written) in the minutes.

The Appointed Actuary usually includes within the Actuarial Report commentary on all material items covered in the SAO, including some detail on how the materiality threshold was chosen and commentary on what items were considered in choosing the threshold. In addition, regulators further expect the Actuarial Report to address the risk factors identified in the SAO, with descriptions of alternate outcomes that could result in

[86] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

adverse development in excess of the materiality threshold.

According to the NAIC Instructions for year-end 2018 the Actuarial Report should conclude with the signature of the Appointed Actuary and the date when the Actuarial Report was finalized in a format consistent with what is required on the SAO.

Signature of Appointed Actuary
Printed name of Appointed Actuary
Employer's name
Address of Appointed Actuary
Telephone
Number of Appointed Actuary Email
Address of Appointed Actuary
Date report was issued

The 2018 AOWG Regulatory Guidance supplements the NAIC P&C Instructions with regulatory expectations on Actuarial Reports.

Note:

- The Appointed Actuary would typically consider the requirements of the NAIC Instructions and ASOP No. 41 when developing the Actuarial Report, as well as guidance provided by the AOWG (see 2018 AOWG Regulatory Guidance).
- The Actuarial Report and the AOS show company carried reserves along with the Appointed Actuary's estimate(s). Exhibit A of the SAO and the company's Annual Statement show the company carried reserves. Reconciliation of the net and gross reserve figures among these various related documents is expected to be a straightforward process. Exceptions should be noted and explained in the Actuarial Report.

8.2 Long-Term Care and A&H Long Duration Contracts

The Instructions reference Actuarial Guideline LI related to certain long-term care contracts:

> *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) in the NAIC Accounting Practices and Procedures Manual requires a company to perform a stand-alone asset adequacy analysis for its in force long-term care (LTC) contracts with over 10,000 in force lives as of the valuation date. The Actuarial Report and workpapers summarizing the results, assumptions and testing procedures for the asset adequacy testing of LTC business must be in compliance with AG 51 requirements. When referring to AG 51, the term "Actuarial Memorandum" is synonymous with Actuarial*

Report and workpapers. [87]

In addition, the Instructions include the following requirement of Actuarial Reports:

> *The Actuarial Report should contain disclosure of all reserve amounts associated with A&H Long Duration Contracts reported by the Company; the reserve amounts in the Actuarial Report should tie to the Annual Statement.* [88]

8.3 Description of Appointed Actuary's relationship to the company

The Instructions include the following requirement of Actuarial Reports:

> *A description of the Appointed Actuary's relationship to the Company, with clear presentation of the Actuary's role in advising the Board and/or management regarding the carried reserves. The Actuarial Report should identify how and when the Appointed Actuary presents the analysis to the Board and, where applicable, to the officer(s) of the Company responsible for determining the carried reserves.* [89]

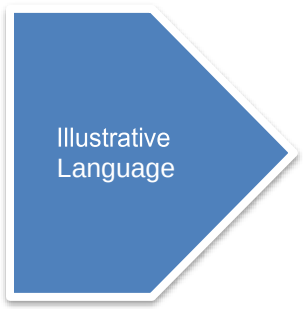
8.3.1 Discussion

The Appointed Actuary is required to include in the Actuarial Report a clear description of the Appointed Actuary's role in advising the board and/or management regarding the carried reserves, including a disclosure of how and when the actuarial analysis is presented to the board and/or management.

8.3.2 Illustrative language

The following sample wording is provided to illustrate the level of detail and nature of information intended to be included in the Report to fulfil each element of this requirement. Please note that these examples are not meant to represent all potential situations.

The Appointed Actuary's relationship to the company:



- *I am the Chief Actuary of the Company.*
- *[Alternative] I am an independent consultant to the Company.*
- *[Alternative] I am an independent consultant retained by the insurance department.*

[87] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[88] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[89] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

The Appointed Actuary's role in advising the board and/or management:

- *I provide input to management and the board of directors in the reserve setting process.*
- *[Addition] I establish a range of reasonable reserve estimates and understand that Company management selects the carried reserves based on my range of reasonable reserve estimates.*
- *[Alternative or Addition] My role is to evaluate the reasonableness of the carried reserves. I do not explicitly advise management or the board of directors in the reserve setting process.*

How and when the Appointed Actuary presents the analysis to the board:

- *The Appointed Actuary is required to present to the Board of Directors on ABC's carried reserves. This report constitutes this presentation, and the minutes of ABC's Board of Directors should indicate that the report was made available to the Board.*
- *[Alternative] A summary of the findings of my analysis was/will be presented to the Board of Directors on (Date).*

8.4 Exhibit comparing Appointed Actuary's conclusions to carried amounts in Annual Statement

The Instructions include the following requirement of Actuarial Reports:

> *"An exhibit that ties to the Annual Statement and compares the Appointed Actuary's conclusions to the carried amounts consistent with the segmentation of exposure or liability groupings used in the analysis. The Appointed Actuary's conclusions include the Appointed Actuary's point estimate(s), range(s) of reasonable estimates or both."*[90]

8.4.1 Discussion

The Instructions require the Actuarial Report to include an exhibit that ties to the Annual Statement and compares the Appointed Actuary's conclusions to the carried amounts. This exhibit is to be consistent with the

[90] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

segmentation used in the Appointed Actuary's analysis, and conclusions must include the Appointed Actuary's point estimate(s), range(s) of reasonable estimates, or both.

Further, AOWG guidance includes additional commentary based on the regulator's interpretation of the requirement:

> *"The Actuarial Opinion Summary already provides this information at the highest level of aggregation; this information should still be presented in the Actuarial Report…* [The Actuarial Report is] *intended to capture the comparisons at a more detailed level consistent with how the reserves were analyzed, to the extent these comparisons are possible."*[91]

8.4.2 Illustrative language

An exhibit similar to the below may be appropriate:

Analysis Segment	Actuary Estimated *(1)*	Actuarial Report Exhibit *(2)*	Company Carried *(3)*	Source of Company Carried *(4)*	Difference *(5) = (3) - (1)*
Homeowners	$XX,XXX	Exhibit B	$YY,YYY	Schedule P, Part 1A	$ZZ,ZZZ
Private Passenger Auto	XXX,XXX	Exhibit C	YYY,YYY	Schedule P, Part 1B	ZZZ,ZZZ
All Other LOB - State A	X,XXX	Exhibit D	Y,YYY	Company workpaper	Z,ZZZ
All Other LOB - All Other States	X,XXX	Exhibit E	Y,YYY	Company workpaper	Z,ZZZ
Total	$XXX,XXX	Exhibit A	$YYY,YYY	AS, Page 3	$ZZZ,ZZZ

8.5 Reconciling and mapping data in the Actuarial Report to Schedule P

The Instructions include the following requirement of Actuarial Reports:

> *"An exhibit that reconciles and maps the data used by the Appointed Actuary, consistent with the segmentation of exposure or liability groupings used in the Appointed Actuary's analysis, to the Annual Statement Schedule P line of business reporting. An explanation should be provided for any material differences."*[92] [90]

8.5.1 Discussion

The Schedule P reconciliation is intended to be consistent with the segmentation used in the Appointed Actuary's analysis.

[91] 2018 AOWG Regulatory Guidance, page 6 (Appendix II).
[92] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

The 2018 AOWG Regulatory Guidance provides extended commentary on the topic, which the Appointed Actuary may wish to consider. The Guidance notes that regulators expect the Schedule P reconciliation to include at least a mapping of the data groupings used in the analysis to Schedule P lines of business, along with detailed reconciliation of the data at the lowest possible/practical level of segmentation. The data should be compared after minimal necessary aggregation between the analysis and/or Schedule P lines of business. The AOWG Regulatory Guidance goes on to state that, if the reconciliation cannot be performed, the reasons should be noted in the Report.

According to AOWG Regulatory Guidance, all data elements material to the analysis should be included in the reconciliation:

> *"The Appointed Actuary should reconcile all data material to the analysis, including claim counts and earned premium if appropriate.*[93]*"*

There are the nuances that the Appointed Actuary may decide to take into consideration with respect to the Schedule P reconciliation. For example,

- The 2018 AOWG Regulatory Guidance specifies a number of circumstances such as "mergers, acquisitions, changes in claim systems, and the use of underwriting year data in the analysis"[94] that present challenges to Appointed Actuaries, and "encourages Appointed Actuaries to disclose reconciliation issues in the Actuarial Report."[95]

- The 2018 AOWG guidance also encourages Appointed Actuaries to consider whether a calendar year reconciliation of total paid losses (all accident years combined) "provides sufficient assurance of the integrity of the data used in the analysis…"[96]

- COPLFR further recognizes there may be issues in the way in which claims are counted (e.g., per claim versus per occurrence, the availability of assumed claim counts, etc.) and notes that there is no requirement to audit the claim counts presented in Schedule P.

The NAIC Instructions are explicit that material differences arising from the Schedule P reconciliation must be explained by the Appointed Actuary.

[93] 2018 AOWG Regulatory Guidance, page 8 (Appendix II).
[94] 2018 AOWG Regulatory Guidance, page 7 (Appendix II).
[95] 2018 AOWG Regulatory Guidance, page 7 (Appendix II).
[96] 2018 AOWG Regulatory Guidance, page 8 (Appendix II).

Note:

- The mapping between analysis segments and Schedule P lines of business may also be used for the comparison of Actuary's conclusions to the carried amounts as discussed in section 8.3.
- AOWG Regulatory Guidance highlights the relationship between the reconciliation performed by the Appointed Actuary, which generally entails the reconciliation of the actuarial data to that shown in Schedule P, and that performed by the independent auditors, focused on the consistency between Schedule P and the data in the company's claims system.

For further discussion, please see Chapter 3 and the AOWG Regulatory Guidance.

8.6 Exhibit and discussion on change in Appointed Actuary's estimates

In addition to comparing estimates and reconciling data to the company's Annual Statement, the Instructions also include a requirement to compare the Actuary's estimates to the prior Actuarial Report:

> *An exhibit or appendix showing the change in the Appointed Actuary's estimates from the prior Actuarial Report, including extended discussion of factors underlying any material changes. The exhibit or appendix should illustrate the changes on a net basis, but should also include the changes on a gross basis, if relevant. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.*[97]

FAQ: My analysis of the Company includes interim reserve evaluations in addition to the analysis supporting the SAO. What should be included in the exhibit showing the change in actuary's estimates?

A: While a comparison to interim analysis estimates may be instructive, the requirement is for the change in estimates and relevant discussion be relative to the Actuarial Report that supported the prior SAO.

8.6.1 Discussion

The Instructions require the Appointed Actuary to include in the Actuarial Report an exhibit that summarizes changes in the Appointed Actuary's estimates from the prior analysis, with extended discussion of significant factors underlying the changes. These requirements seem to be intended to apply to the change in the Appointed Actuary's prior period estimates since the previous Actuarial Report. This exhibit or appendix is to show the change in the Appointed Actuary's estimates, not the company's.

The requirement was clarified in the year-end 2016 NAIC Instructions to include illustration of the changes on a net basis, and on a gross basis if relevant.

NAIC SAO Instructions require discussion of significant changes. The level of detail used to describe the significant factors underlying material changes in estimates is left to the discretion of the Appointed Actuary. The AOWG

[97] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

Regulatory Guidance suggests that an explanation be provided for any significant fluctuations in estimates among accident years or segments, or possibly in even more granular detail. Further, the amount of change that constitutes a significant amount is left to the Appointed Actuary's judgment. *"Significant"* in this context would typically be lower than the materiality standard used in consideration of the risk of material adverse deviation in the SAO.

To meet the requirements of this part of the Instructions, and in accordance with the spirit in which COPLFR believes these Instructions are intended, the Appointed Actuary may wish to consider including the following in the Actuarial Report (gross and net of reinsurance):

1) Exhibit(s) and discussion related to significant changes in point estimates from the prior Actuarial Report (if a point estimate is included in the Actuarial Report), categorized by reviewed segment, accident year, and in total.

   Exhibit(s) and discussion related to significant changes in the range of estimates from the prior year (if a range is included in the Actuarial Report), if meaningful and practical, including discussion of any significant expansion or contraction of the range relative to the prior Actuarial Report.

When there is a change in Appointed Actuary, the new Appointed Actuary is encouraged to discuss material changes in estimates in the Report, to the extent that it is reasonably possible to do so. If no such comparison is practical or meaningful, the Appointed Actuary should make a disclosure consistent with that reported in the SAO.

Note:

- If the Appointed Actuary estimated ultimate amounts (losses and/or LAE) in the previous Actuarial Report, then, in this Actuarial Report, the change in estimates would be calculated as the change in estimated ultimate amounts, for prior periods. If the Appointed Actuary estimated reserves directly in the previous Actuarial Report (e.g., because of the specific methodology used or because a complete history of paid losses was not available), then the change in estimates would be calculated as the incremental paid amounts plus the change in the estimated unpaid amounts between Actuarial Reports, again for prior periods.

8.7 Extended comments on risks and uncertainties

The Instructions also include a requirement for the Actuary to expand on certain items that are included in the SAO:

Extended comments on trends that indicate the presence or absence of risks and uncertainties

that could result in material adverse deviation.[98]

8.7.1 Discussion

As noted in the Instructions, the Actuarial Report is expected to be held confidential and not intended for public inspection. Thus, the extended comments about risks and uncertainties may include details that may not be in the public domain. At a minimum, the Actuarial Report should support the Actuary's conclusion about whether RMAD exists and this often will require more detail than is included in the SAO.

Extended comments could include additional discussion on the major factors discussed in the SAO and how they are (or are not) applicable to the company, how the risk factors could lead to adverse deviation in excess of the materiality threshold (a sensitivity analysis for example), or any other commentary or analyses that the Actuary believes would be helpful to the company and/or the Regulator in support of the conclusion about the existence of RMADs.

FAQ: Is this still a requirement if the Opinion states there are not significant risks that could result in material adverse deviation?

A: Yes. Section 4.1.3d of ASOP 41 states that the actuary should disclose "any cautions about risks and uncertainty" in any actuarial report, unless the actuary determines it is inappropriate to do so. In addition, the 2018 NAIC Instructions state that a discussion of risk factors is to be included in the SAO even when the actuary concludes there is no material risk of adverse deviation, and this requirement would similarly extend to the Actuarial Report.

Note:

- Despite the Instructions requiring "Extended comments on trends that indicate the presence or absence of risks and uncertainties that could result in material adverse deviation,"[†] the Appointed Actuary may wish to comment on sources of risk and uncertainty that are not trends, such as significant, one-time events.

[†] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

8.8 Extended comments on unusual values for IRIS Ratio 11, 12, and/or 13

The Instructions also include a requirement for the Actuary to include additional discussion in the Actuarial Report if the company triggers an unusual result on one of the reserve-based IRIS Ratios:

Extended comments on factors that led to unusual IRIS ratios for One-Year Reserve Development to Policyholders' Surplus, Two-Year Reserve Development to Policyholders' Surplus, or Estimated Current Reserve Deficiency to Policyholders' Surplus, and how these factors were addressed in prior and current analyses. [99]

[98] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[99] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

8.8.1 Discussion

As noted in the *Instructions*, the Actuarial Report is expected to be held confidential and not intended for public inspection. Thus, the extended comments may include detail such as operational details or information on specific claims that may not be appropriate for the SAO document, which rests in the public domain. The Actuary may wish to further provide sensitivity analyses and/or exhibits supporting the expanded discussion on this topic.

9. Resources

This chapter provides a listing of the ASOPs and SSAPs that apply to the material covered by this practice note. It also provides resources to actuaries providing opinions other than those covered by the scope of this practice note.

9.1 Applicable ASOPs

> *ASOPs are binding on members of the U.S.-based actuarial organizations when rendering actuarial services in the U.S. While these ASOPs are binding, they are not the only considerations that affect an actuary's work. Other considerations may include legal and regulatory requirements, professional requirements promulgated by employers or actuarial organizations, evolving actuarial practice, and the actuary's own professional judgment informed by the nature of the engagement. The ASOPs provide a basic framework that is intended to accommodate these additional considerations.*[100]

According to the ASB, the ASOPs "*identify what the actuary should consider, document, and disclose when performing an actuarial assignment.*"[101]

While all ASOPs are binding, per a COPLFR review the following appear to be particularly relevant to actuaries signing NAIC property and casualty SAOs:

- ASOP No.1, *Introductory Actuarial Standard of Practice*
- ASOP No. 20, *Discounting of Property/Casualty Unpaid Claim Estimates*
- ASOP No. 21, *Responding to or Assisting Auditors or Examiners in Connection with Financial Audits, Financial Reviews, and Financial Examinations*
- ASOP No. 23, *Data Quality*
- ASOP No. 36, *Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves*
- ASOP No. 38, *Using Models Outside the Actuary's Area of Expertise (Property and Casualty)*
- ASOP No. 41, *Actuarial Communications*
- ASOP No 43, *Property/Casualty Unpaid Claim Estimates*

The above can be found at the ASB website: http://www.actuarialstandardsboard.org/

[100] Actuarial Standards Board, ASOP No. 1, *Introductory Actuarial Standard of Practice*, http://www.actuarialstandardsboard.org/asops/introductoryactuarialstandardpractice/, Section 1.
[101] Ibid.

9.2 Applicable SSAPs

According to the NAIC,

> **The Statutory Accounting Principles (E) Working Group is responsible for developing and adopting substantive, nonsubstantive and interpretation revisions to the NAIC Accounting Practices and Procedures Manual (AP&P Manual). The AP&P Manual provides the basis for insurers to prepare financial statements for financial regulation purposes. Substantive statutory accounting revisions introduce original or modified accounting principles. SSAPs are considered the highest authority (Level 1) in the statutory accounting hierarchy.**[102]

There are over 100 SSAPs and they are published in the NAIC's *Accounting Practices and Procedures Manual,* available for sale from the NAIC at:

https://www.naic.org/prod_serv_publications_for_sale.htm#app_manual.

COPLFR has received permission to reproduce SSAPs particularly applicable to actuaries signing NAIC property and casualty SAOs per a COPLFR review. We have included these in Appendix IV of this practice note.

These SSAPs are as follows:

SSAP 5R: *Liabilities, Contingencies and Impairment of Assets*

SSAP 9: *Subsequent Events*

SSAP 29: *Prepaid Expenses*

SSAP 53: *Property Casualty Contracts - Premiums*

SSAP 55: *Unpaid Claims, Losses and Loss Adjustment Expenses*

SSAP 57: *Title Insurance*

SSAP 58: *Mortgage Guaranty Insurance*

SSAP 62R: *Property and Casualty Reinsurance*

SSAP 63: *Underwriting Pools and Associations Including Intercompany Pools*

SSAP 65: *Property and Casualty Contracts*

SSAP 66: *Retrospectively Rated Contracts*

The NAIC adopted codification of statutory accounting principles effective January 1, 2001 to serve as a common set of principles for individual states to follow. The SSAPs promote consistency and ease regulatory burden. However, individual state regulation is still permissible, and individual states may have specific statutes or regulations that supersede SSAPs. The NAIC publishes a summary of state differences available free of charge online at https://www.naic.org/prod_serv/SPD-OPS-18.pdf.

Note that the SSAPs are subject to change every year and have seen numerous changes since they were

[102] http://www.naic.org/cmte_e_app_sapwg.htm

originally issued in 2001.

9.3 Available resources for opinions not covered by this practice note

As noted in the Introduction to this document,

> This practice note is intended to assist actuaries by describing practices that COPLFR believes are commonly employed in issuing SAOs and AOSs on loss and loss adjustment expense (LAE) reserves in compliance with the Property and Casualty Annual Statement Instructions (Annual Statement Instructions) for 2018 issued by the NAIC. Actuaries may also find this information useful in preparing statements of actuarial opinion for other audiences or regulators.

While property and casualty actuaries may also find the information contained in this practice note useful in preparing statements of actuarial opinion for other audiences or regulators (other than in accordance with the NAIC SAO Instructions), there are other resources available. Generally, actuaries will look to the regulatory authority for specific requirements pertaining to the type of opinion being prepared. These requirements are often found on the website of the regulatory authority. The Academy's *2018 P/C Loss Reserve Law Manual* may also provide guidance on these points. Some examples include:

Type of opinion	Regulatory authority	Website
Bermuda opinion of the Loss Reserve Specialist	Bermuda Monetary Authority	http://www.bma.bm/SitePages/Home.aspx
Cayman captive Statement of Actuarial Opinion	Cayman Islands Monetary Authority	http://www.cimoney.com.ky/
Hawaii captive Statement of Actuarial Opinion	State of Hawai'i Insurance Division, Department of Commerce & Consumer Affairs	http://cca.hawaii.gov/captive/
Vermont captive Statement of Actuarial Opinion	Vermont Department of Financial Regulation	http://www.dfr.vermont.gov/captives/annual-filing-instructions-vermont-domestic-captives

The Appointed Actuary may wish to contact the regulatory authority directly to obtain the specific opinion requirements.

APPENDICES

I. 2018 NAIC Instructions

This appendix to the practice note provides the 2018 NAIC Instructions with respect to the property and casualty SAO (Appendix I.1) and AOS (Appendix I.2). The NAIC Instructions for Title Insurance SAOs (Appendix I.3) are also included for informational purposes only. Appendix 1.4 provides the 2018 NAIC Annual Statement Instructions section on Annual Audited Financial Reports, including auditor data testing requirements. No discussion is included.

I.1 2018 NAIC Property and Casualty SAO Instructions

ACTUARIAL OPINION

1. There is to be included with or attached to Page 1 of the Annual Statement the statement of a Qualified Actuary, entitled "Statement of Actuarial Opinion" (Actuarial Opinion), setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and required Exhibits, shall be in the format of and contain the information required by this section of the *Annual Statement Instructions – Property and Casualty*.

   Upon initial engagement, the Qualified Actuary must be appointed by the Board of Directors by Dec. 31 of the calendar year for which the opinion is rendered. The Company shall notify the domiciliary commissioner within five business days of the initial appointment with the following information:

   a. Name and title (and, in the case of a consulting actuary, the name of the firm).
   b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).
   c. A statement that the person meets the requirements of a Qualified Actuary.

   Once this notification is furnished, no further notice is required with respect to this person unless the Board of Directors takes action to no longer appoint or retain the actuary or the actuary no longer meets the requirements of a Qualified Actuary.

   If an actuary who was the Appointed Actuary for the immediately preceding filed Actuarial Opinion is replaced by an action of the Board of Directors, the Insurer shall within five (5) business days notify the Insurance Department of the state of domicile of this event. The Insurer shall also furnish the domiciliary commissioner with a separate letter within ten (10) business days of the above notification stating whether in the twenty-four (24) months preceding such event there were any disagreements with the former Appointed Actuary regarding the content of the opinion on matters of the risk of material adverse deviation, required disclosures, scope, procedures, type of opinion issued, substantive wording of the opinion or data quality. The disagreements required to be reported in response to this paragraph include both those resolved to the former Appointed Actuary's satisfaction and those not resolved to the former Appointed Actuary's satisfaction. The letter should include a description of the disagreement and the nature of its resolution (or that it was not resolved). Within this same ten (10) business days, the Insurer shall in writing also request such former Appointed Actuary to furnish a letter addressed to the Insurer stating whether the Appointed Actuary agrees with the statements contained in the Insurer's letter and, if not, stating the reasons for which he or she does not agree. The former Appointed Actuary shall provide a written response to the insurer within ten (10) business days of such request, and the Insurer shall furnish

such responsive letter from the former Appointed Actuary to the domiciliary commissioner together with its own responses.

The Appointed Actuary must report to the Board of Directors each year on the items within the scope of the Actuarial Opinion. The Actuarial Opinion and the Actuarial Report must be made available to the Board of Directors. The minutes of the Board of Directors should indicate that the Appointed Actuary has presented such information to the Board of Directors and identify the manner of presentation (e.g., webinar, in-person presentation, written). A separate Actuarial Opinion is required for each company filing an Annual Statement. When there is an affiliated company pooling arrangement, one Actuarial Report for the aggregate pool is sufficient, but there must be addendums to the Actuarial Report to cover non-pooled reserves for individual companies.

The Actuarial Opinion and the supporting Actuarial Report and workpapers should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including, but not limited to, ASOP No. 23, ASOP No. 36, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board, and Statements of Principles adopted by the Casualty Actuarial Society.

1A. Definitions

"Appointed Actuary" for purposes of these instructions is a Qualified Actuary appointed by the Board of Directors in accordance with Section 1 of these instructions.

"Board of Directors" for purposes of these instructions can include the designated Board of Directors, its equivalent or an appropriate committee directly reporting to the Board of Directors.

"Qualified Actuary" is a person who meets the basic education, experience and continuing education requirements of the Specific Qualification Standard for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement, as set forth in the *Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States*, promulgated by the American Academy of Actuaries, and is either:

(i) A member in good standing of the Casualty Actuarial Society; or

(ii) A member in good standing of the American Academy of Actuaries who has been approved as qualified for signing casualty loss reserve opinions by the Casualty Practice Council of the American Academy of Actuaries.

"Insurer" or "Company" means an insurer or reinsurer authorized to write property and/or casualty insurance under the laws of any state and who files on the Property and Casualty Blank.

"Actuarial Report" means a document or other presentation prepared as a formal means of conveying to the state regulatory authority and the Board of Directors the Appointed Actuary's professional conclusions and recommendations of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the Appointed Actuary's opinion or findings, and of documenting the analysis underlying the opinion. The required content of the Actuarial Report is further described in paragraph 7. (Note that the inclusion of the Board of Directors as part of the intended audience for the Actuarial Report does not change the content of the Actuarial Report as described in paragraph 7. The Appointed Actuary should present findings to the Board of Directors in a manner deemed suitable for such audience.)

"Property and Casualty (P&C) Long Duration Contracts" refers to contracts (excluding financial guaranty contracts, mortgage guaranty contracts and surety contracts) that fulfill both of the following conditions: (1) the contract term is greater than or equal to 13 months; and (2) the insurer can neither cancel the

contract nor increase the premium during the contract term. These contracts are subject to the three tests of *SSAP No. 65—Property and Casualty Contracts* of the NAIC *Accounting Practices and Procedures Manual*.

"Accident and Health (A&H) Long Duration Contracts" refers to A&H contracts in which the contract term is greater than or equal to 13 months and contract reserves are required. See Schedule H instructions for a description of categories of contract reserves, as well as policy features that give rise to contract reserves. Two specific examples of contracts that typically require contract reserves are long-term care and disability income insurance.

1B. Exemptions

An insurer who intends to file for one of the exemptions under this Section must submit a letter of intent to its domiciliary commissioner no later than December 1 of the calendar year for which the exemption is to be claimed. The commissioner may deny the exemption prior to December 31 of the same year if he or she deems the exemption inappropriate.

A copy of the approved exemption must be filed with the Annual Statement in all jurisdictions in which the company is authorized.

Exemption for Small Companies

An insurer that has less than $1,000,000 total direct plus assumed written premiums during a calendar year, and less than $1,000,000 total direct plus assumed loss and loss adjustment expense reserves at year-end, in lieu of the Actuarial Opinion required for the calendar year, may submit an affidavit under oath of an officer of the insurer that specifies the amounts of direct plus assumed written premiums and direct plus assumed loss and loss adjustment reserves.

Exemption for Insurers under Supervision or Conservatorship

Unless ordered by the domiciliary commissioner, an insurer that is under supervision or conservatorship pursuant to statutory provision is exempt from the filing requirements contained herein.

Exemption for Nature of Business

An insurer otherwise subject to the requirement and not eligible for an exemption as enumerated above may apply to its domiciliary commissioner for an exemption based on the nature of business written.

Financial Hardship Exemption

An insurer otherwise subject to this requirement and not eligible for an exemption as enumerated above may apply to the commissioner for a financial hardship exemption. Financial hardship is presumed to exist if the projected reasonable cost of the Actuarial Opinion would exceed the lesser of:

(i) One percent (1%) of the insurer's capital and surplus reflected in the insurer's latest quarterly statement for the calendar year for which the exemption is sought; or

(ii) Three percent (3%) of the insurer's direct plus assumed premiums written during the calendar year for which the exemption is sought as projected from the insurer's latest quarterly statements filed with its domiciliary commissioner.

1C. Reporting Requirements for Pooled Companies

For each company in the pool, the Appointed Actuary shall include a description of the pool, identification of the lead company and a listing of all companies in the pool, their state of domicile and their respective pooling percentages.

Exhibits A and B for each company in the pool should represent the company's share of the pool and should reconcile to the financial statement for that company.

The following paragraph applies to companies that have a 0% share of the pool (no reported Schedule P data). The company shall submit an Actuarial Opinion that reads similar to that provided for the lead company. For example, the IRIS ratio and risk of material adverse deviation discussions, and other relevant comments shall relate to the risks of the lead company in the pool. The Exhibit B responses to question 5 should be $0 and to question 6 should be "not applicable." Exhibits A and B of the lead company should be attached as an addendum to the PDF file and/or hard copy being filed (but would not be reported by the 0% companies in their data capture).

2. The Actuarial Opinion must consist of an IDENTIFICATION paragraph identifying the Appointed Actuary; a SCOPE paragraph identifying the subjects on which an opinion is to be expressed and describing the scope of the Appointed Actuary's work; an OPINION paragraph expressing his or her opinion with respect to such subjects; and one or more additional RELEVANT COMMENTS paragraphs. These four sections must be clearly designated.

3. The IDENTIFICATION paragraph should indicate the Appointed Actuary's relationship to the Company, qualifications for acting as Appointed Actuary and date of appointment, and specify that the appointment was made by the Board of Directors.

A member of the American Academy of Actuaries qualifying under paragraph 1A(ii) must attach, each year, a copy of the approval letter from the Academy.

These Instructions require that a Qualified Actuary prepare the Actuarial Opinion. Nevertheless, if a person who does not meet the definition of a Qualified Actuary has been approved by the insurance regulatory official of the domiciliary state, the Company must attach, each year, a letter from that official stating that the individual meets the state's requirements for rendering the Actuarial Opinion.

4. The SCOPE paragraph should contain a sentence such as the following:

"I have examined the actuarial assumptions and methods used in determining reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 20__, and reviewed information provided to me through XXX date."

Exhibit A should list those items and amounts with respect to which the Appointed Actuary is expressing an opinion.

The Appointed Actuary should state that the items in the SCOPE, on which he or she is expressing an opinion, reflect Disclosure items 8 through 13.2 in Exhibit B.

The SCOPE paragraph should include a paragraph such as the following regarding the data used by the Appointed Actuary in forming the opinion:

"In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by _____ (officer name and title at the Company). I evaluated that data for reasonableness and consistency. I also reconciled that data to Schedule P, Part 1 of the Company's current Annual Statement.

In other respects, my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary."

5. The OPINION paragraph should include a sentence that at least covers the points listed in the following illustration:
"In my opinion, the amounts carried in Exhibit A on account of the items identified:

   A. Meet the requirements of the insurance laws of (state of domicile).

   B. Are computed in accordance with accepted actuarial standards and principles.

   C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements."

If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts or Other Loss Reserve items on which the Appointed Actuary is expressing an opinion, the Actuarial Opinion should contain language such as the following:

   D. Make a reasonable provision for the unearned premium reserves for P&C Long Duration Contracts and/or <insert Other Loss Reserve item on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements.

If there is any aggregation or combination of items in Exhibit A, the opinion language should clearly identify the combined items.

Insurance laws and regulations shall at all times take precedence over the actuarial standards and principles.

If the Appointed Actuary has made use of the analysis of another actuary not within the Appointed Actuary's control (such as for pools and associations, for a subsidiary or for special lines of business) for a material portion of the reserves, the other actuary must be identified by name, credential and affiliation within the OPINION paragraph. If the Appointed Actuary has made use of the work of a non-actuary (such as for modeling) for a material portion of the reserves, that individual must be identified by name and affiliation and a description of the type of analysis performed must be provided.

A Statement of Actuarial Opinion should be made in accordance with one of the following sections (1 through 5). The Appointed Actuary must explicitly identify in Exhibit B which type applies.

1. Determination of Reasonable Provision. When the carried reserve amount is within the Appointed Actuary's range of reasonable reserve estimates, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves.

2. Determination of Deficient or Inadequate Provision. When the carried reserve amount is less than the minimum amount that the Appointed Actuary believes is reasonable, the Appointed Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the minimum amount that the Appointed Actuary believes is reasonable.

3. Determination of Redundant or Excessive Provision. When the carried reserve amount is greater than the maximum amount that the Appointed Actuary believes is reasonable, the Appointed

Actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the Appointed Actuary should disclose the maximum amount that the Appointed Actuary believes is reasonable.

4. Qualified Opinion. When, in the Appointed Actuary's opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated or the Appointed Actuary is unable to render an opinion on those items, the Appointed Actuary should issue a qualified Statement of Actuarial Opinion. The Appointed Actuary should disclose the item (or items) to which the qualification relates, the reason(s) for the qualification and the amounts for such item(s), if disclosed by the Company. Such a qualified opinion should state whether the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, *except for* the item (or items) to which the qualification relates. The Appointed Actuary is not required to issue a qualified opinion if the Appointed Actuary reasonably believes that the item (or items) in question are not likely to be material.

5. No Opinion. The Appointed Actuary's ability to give an opinion is dependent upon data, analyses, assumptions, and related information that are sufficient to support a conclusion. If the Appointed Actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions, or related information, then the Appointed Actuary may issue a statement of no opinion. A statement of no opinion should include a description of the reasons why no opinion could be given.

6. The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address the following topics of regulatory importance.

A. Company-Specific Risk Factors

The Appointed Actuary should include an explanatory paragraph to describe the major factors, combination of factors or particular conditions underlying the risks and uncertainties the Appointed Actuary considers relevant. The explanatory paragraph should not include general, broad statements about risks and uncertainties due to economic changes, judicial decisions, regulatory actions, political or social forces, etc., nor is the Appointed Actuary required to include an exhaustive list of all potential sources of risks and uncertainties.

B. Risk of Material Adverse Deviation

The Appointed Actuary must provide specific RELEVANT COMMENT paragraphs to address the risk of material adverse deviation. The Appointed Actuary must identify the materiality standard and the basis for establishing this standard. The materiality standard must also be disclosed in U.S. dollars in Exhibit B: Disclosures. The Appointed Actuary should explicitly state whether or not he or she reasonably believes that there are significant risks and uncertainties that could result in material adverse deviation. This determination is also to be disclosed in Exhibit B.

C. Other Disclosures in Exhibit B

RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact.

D. Reinsurance

RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance.

The Appointed Actuary's comments on reinsurance collectability should address any uncertainty associated with including potentially-uncollectable amounts in the estimate of ceded reserves. Before commenting on reinsurance collectability, the Appointed Actuary should solicit information from management on any actual collectability problems, review ratings given to reinsurers by a recognized rating service, and examine Schedule F for the current year for indications of regulatory action or reinsurance recoverable on paid losses over ninety (90) days past due. The comment should also reflect any other information the Appointed Actuary has received from management or that is publicly available about the capability or willingness of reinsurers to pay claims. The Appointed Actuary's comments do not imply an opinion on the financial condition of any reinsurer.

Retroactive reinsurance refers to agreements referenced in *SSAP No. 62R—Property and Casualty Reinsurance* of the NAIC *Accounting Practices and Procedures Manual*.

Financial reinsurance refers to contracts referenced in SSAP No. 62R in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance.

E. IRIS Ratios

If the Company's reserves will create exceptional values under the NAIC IRIS Tests for One-Year Reserve Development to Policyholders' Surplus, Two-Year Reserve Development to Policyholders' Surplus or Estimated Current Reserve Deficiency to Policyholders' Surplus, the Appointed Actuary must include RELEVANT COMMENT on the factors that led to the unusual value(s).

F. Methods and Assumptions

If there has been any significant change in the actuarial assumptions and/or methods from those previously employed, that change should be described in a RELEVANT COMMENT paragraph. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

7. The Actuarial Opinion must include assurance that an Actuarial Report and underlying actuarial workpapers supporting the Actuarial Opinion will be maintained at the Company and available for regulatory examination for seven (7) years. The Actuarial Report contains significant proprietary information. It is expected that the Actuarial Report be held confidential and not be intended for public inspection. The Actuarial Report must be available by May 1 of the year following the year-end for which the Actuarial Opinion was rendered or within two (2) weeks after a request from an individual state commissioner.

The Actuarial Report should be consistent with the documentation and disclosure requirements of ASOP No. 41, Actuarial Communications. The Actuarial Report must contain both narrative and technical components. The narrative component should provide sufficient detail to clearly explain to Company management, the Board of Directors, the regulator or other authority the findings, recommendations and conclusions, as well as their significance. The technical component should provide sufficient documentation and disclosure for another actuary practicing in the same field to evaluate the work. This technical component must show the analysis from the basic data (e.g., loss triangles) to the conclusions.

Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves (AG 51) in the NAIC *Accounting Practices and Procedures Manual* requires a company with over 10,000 in force lives covered by long-term care (LTC) insurance contracts as of the valuation date to perform a stand-alone asset adequacy analysis for its in force long-term care (LTC) contracts. The Actuarial Report and workpapers summarizing the results, assumptions and testing procedures for the asset adequacy testing of LTC business must be in compliance with AG 51 requirements. When referring to AG 51, the term "Actuarial Memorandum" is synonymous with Actuarial Report and workpapers.

The Actuarial Report should contain disclosure of all reserve amounts associated with A&H Long Duration Contracts reported by the Company; the reserve amounts in the Actuarial Report should tie to the Annual Statement.

The Actuarial Report must also include:

A. A description of the Appointed Actuary's relationship to the Company, with clear presentation of the Appointed Actuary's role in advising the Board of Directors and/or management regarding the carried reserves. The Actuarial Report should identify how and when the Appointed Actuary presents the analysis to the Board of Directors and, where applicable, to the officer(s) of the Company responsible for determining the carried reserves.

B. An exhibit that ties to the Annual Statement and compares the Appointed Actuary's conclusions to the carried amounts consistent with the segmentation of exposure or liability groupings used in the analysis. The Appointed Actuary's conclusions include the Appointed Actuary's point estimate(s), range(s) of reasonable estimates or both.

C. An exhibit that reconciles and maps the data used by the Appointed Actuary, consistent with the segmentation of exposure or liability groupings used in the Appointed Actuary's analysis, to the Annual Statement Schedule P line of business reporting. An explanation should be provided for any material differences.

D. An exhibit or appendix showing the change in the Appointed Actuary's estimates from the prior Actuarial Report, including extended discussion of factors underlying any material changes. The exhibit or appendix should illustrate the changes on a net basis, but should also include the changes on a gross basis, if relevant. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

E. Extended comments on trends that indicate the presence or absence of risks and uncertainties that could result in material adverse deviation.

F. Extended comments on factors that led to unusual IRIS ratios for One-Year Reserve Development to Policyholders' Surplus, Two-Year Reserve Development to Policyholders' Surplus or Estimated Current Reserve Deficiency to Policyholders' Surplus, and how these factors were addressed in prior and current analyses.

8. Both the Actuarial Opinion and the Actuarial Report should conclude with the signature of the Appointed Actuary responsible for providing the Actuarial Opinion and the respective dates when the Actuarial Opinion was rendered and the Actuarial Report finalized. The signature and date should appear in the following format:

_____
Signature of Appointed Actuary
Printed name of Appointed Actuary

Employer's name
Address of Appointed Actuary
Telephone number of Appointed Actuary
Email address of Appointed Actuary
Date opinion was rendered

9. The Insurer required to furnish an Actuarial Opinion shall require its Appointed Actuary to notify its Board of Directors or its audit committee in writing within five (5) business days after any determination by the Appointed Actuary that the Actuarial Opinion submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect. The Actuarial Opinion shall be considered to be in error if the Actuarial Opinion would have not been issued or would have been materially altered had the correct data or other information been used. The Actuarial Opinion shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected. Notification is required when discovery is made between the issuance of the Actuarial Opinion and Dec. 31 of that year. Notification should include a summary of such findings.

   If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the Actuarial Opinion, the Appointed Actuary and the Company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.

   An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the amended Actuarial Opinion to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the letter and amended Actuarial Opinion submitted to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that an amended Actuarial Opinion has been finalized.

   No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs.

10. Data in Exhibits A and B are to be filed in both print and data capture format.

Exhibit A: SCOPE
DATA TO BE FILED IN BOTH PRINT AND DATA CAPTURE FORMATS

Loss and Loss Adjustment Expense Reserves:	Amount
1. Unpaid Losses (Liabilities, Surplus and Other Funds page, Col 1, Line 1)	$ _____
2. Unpaid Loss Adjustment Expenses (Liabilities, Surplus and Other Funds page, Col 1, Line 3)	$ _____
3. Unpaid Losses – Direct and Assumed (Should equal Schedule P, Part 1, Summary, Totals from Cols. 13 and 15, Line 12 * 1000)	$ _____
4. Unpaid Loss Adjustment Expenses – Direct and Assumed (Should equal Schedule P, Part 1, Summary, Totals from Cols. 17, 19 and 21, Line 12 * 1000)	$ _____

5. The Page 3 write-in item reserve, "Retroactive Reinsurance Reserve Assumed" $ _____
6. Other Loss Reserve items on which the Appointed Actuary is expressing an Opinion (list separately, adding additional lines as needed) $ _____

Premium Reserves:

7. Reserve for Direct and Assumed Unearned Premiums for P&C Long Duration Contracts $ _____
8. Reserve for Net Unearned Premiums for P&C Long Duration Contracts $ _____
9. Other Premium Reserve items on which the Appointed Actuary is expressing an Opinion (list separately, adding additional lines as needed) $ _____

Exhibit B: DISCLOSURES

DATA TO BE FILED IN BOTH PRINT AND DATA CAPTURE FORMATS

NOTE: Exhibit B should be completed for Net dollar amounts included in the SCOPE. If an answer would be different for Direct and Assumed amounts, identify and discuss the difference within RELEVANT COMMENTS.

1. Name of the Appointed Actuary Last _____ First _____ Mid _____

2. The Appointed Actuary's relationship to the Company
   Enter E or C based upon the following:
   - E if an Employee of the Company or Group
   - C if a Consultant _____

3. The Appointed Actuary has the following designation (indicated by the letter code):
   - F if a Fellow of the Casualty Actuarial Society (FCAS)
   - A if an Associate of the Casualty Actuarial Society (ACAS)
   - M if not a member of the Casualty Actuarial Society, but a Member of the American Academy of Actuaries (MAAA) approved by the Casualty Practice Council, as documented with the attached approval letter.
   - O for Other _____

4. Type of Opinion, as identified in the OPINION paragraph. Enter R, I, E, Q, or N based upon the following:
   - R if Reasonable
   - I if Inadequate or Deficient Provision
   - E if Excessive or Redundant Provision
   - Q if Qualified. Use Q when part of the OPINION is Qualified.
   - N if No Opinion _____

5. Materiality Standard expressed in U.S. dollars (used to Answer Question #6) $ _____

6. Are there significant risks that could result in Material Adverse Deviation? Yes [ ] No [ ] Not Applicable [ ]
7. Statutory Surplus (Liabilities, Surplus and Other Funds page, Col 1, Line 37) $ _____
8. Anticipated net salvage and subrogation included as a reduction to loss reserves as reported in Schedule P (should equal Part 1 Summary, Col 23, Line 12 * 1000) $ _____
9. Discount included as a reduction to loss reserves and loss adjustment expense reserves as reported in Schedule P
   - 9.1 Nontabular Discount [Notes, Line 32B23, (Amounts 1, 2, 3 & 4)], Electronic Filing Cols 1, 2, 3, & 4 $ _____
   - 9.2 Tabular Discount [Notes, Line 32A23, (Amounts 1 & 2)], Electronic Filing Col 1 & 2 $ _____
10. The net reserves for losses and loss adjustment expenses for the Company's share of voluntary and involuntary underwriting pools' and associations' unpaid losses and loss adjustment expenses that are included in reserves shown on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines $ _____
11. The net reserves for losses and loss adjustment expenses that the Company carries for the following liabilities included on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines *
    - 11.1 Asbestos, as disclosed in the Notes to Financial Statements (Notes, Line 33A03D, ending net asbestos reserves for current year) Electronic Filing Col 5 $ _____
    - 11.2 Environmental, as disclosed in the Notes to Financial Statements (Notes, Line 33D03D, ending net environmental reserves for current year), Electronic Filing Col 5 $ _____
12. The total claims made extended loss and loss adjustment expense, and unearned premium reserves (Greater than or equal to Schedule P Interrogatories)
    - 12.1 Amount reported as loss and loss adjustment expense reserves $ _____
    - 12.2 Amount reported as unearned premium reserves $ _____
13. The net reserves for the A&H Long Duration Contracts that the Company carries on the following lines on the Liabilities, Surplus and Other Funds page:
    - 13.1 Losses $ _____
    - 13.2 Loss Adjustment Expenses $ _____
    - 13.3 Unearned Premium $ _____
    - 13.4 Write-In (list separately, adding additional lines as needed, and identify (e.g., "Premium Deficiency Reserves", "Contract Reserves other than Premium Deficiency Reserves" or "AG 51 Reserves")) $ _____

14. Other items on which the Appointed Actuary is providing relevant comment (list separately, adding additional lines as needed) $ _____
_____

* The reserves disclosed in item 11 above, should exclude amounts relating to contracts specifically written to cover asbestos and environmental exposures. Contracts specifically written to cover these exposures include Environmental Impairment Liability (post 1986), Asbestos Abatement, Pollution Legal Liability, Contractor's Pollution Liability, Consultant's Environmental Liability, and Pollution and Remediation Legal Liability.

1.2 2018 NAIC Property and Casualty AOS Instructions

ACTUARIAL OPINION SUMMARY SUPPLEMENT

1. For all Companies that are required by their domiciliary state to submit a confidential document entitled Actuarial Opinion Summary (AOS), such document shall be filed with the domiciliary state by March 15 (or by a later date otherwise specified by the domiciliary state). This AOS shall be submitted to a non-domiciliary state within 15 days of request, but no earlier than March 15, provided that the requesting state can demonstrate, through the existence of law or some similar means, that it is able to preserve the confidentiality of the document.

2. The AOS should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including but not limited to ASOP No. 23, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board, and Statements of Principles adopted by the Casualty Actuarial Society.

3. Exemptions for filing the AOS are the same as those for filing the Statement of Actuarial Opinion.

4. The AOS contains significant proprietary information. It is expected that the AOS be held confidential; it is not intended for public inspection. The AOS should not be filed with the NAIC and should be kept separate from any copy of the Statement of Actuarial Opinion (Actuarial Opinion) in order to maintain confidentiality of the AOS. The AOS can contain a statement that refers to the Actuarial Opinion and the date of that opinion.

5. The AOS should be signed and dated by the Appointed Actuary who signed the Actuarial Opinion and shall include at least the following:

    A. The Appointed Actuary's range of reasonable estimates for loss and loss adjustment expense reserves, net and gross of reinsurance, when calculated;

    B. The Appointed Actuary's point estimates for loss and loss adjustment expense reserves, net and gross of reinsurance, when calculated;

    C. The Company's carried loss and loss adjustment expense reserves, net and gross of reinsurance;

    D. The difference between the Company's carried reserves and the Appointed Actuary's estimates calculated in A and B, net and gross of reinsurance; and

E. Where there has been one-year adverse development in excess of 5% of the prior year-end's policyholders' surplus as measured by Schedule P, Part 2 Summary in three (3) or more of the past five (5) calendar years, an explicit description of the reserve elements or management decisions that were the major contributors.

6. The AOS for a pooled Company (as referenced in paragraph 1C of the instructions for the Actuarial Opinion) shall include a statement that the Company is a xx% pool participant. For a non-0% Company, the information provided for paragraph 5 should be numbers after the Company's share of the pool has been applied; specifically, the point or range comparison should be for each statutory Company and should not be for the pool in total. For any 0% pool participant, the information provided for paragraph 5 should be that of the lead company.

7. The net and gross reserve values reported by the Appointed Actuary in the AOS should reconcile to the corresponding values reported in the Insurer's Annual Statement, the Appointed Actuary's Actuarial Opinion and the Actuarial Report. If not, the Appointed Actuary shall provide an explanation of the difference.

8. The Insurer required to furnish an AOS shall require its Appointed Actuary to notify its Board of Directors in writing within five (5) business days after any determination by the Appointed Actuary that the AOS submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect. The AOS shall be considered to be in error if the AOS would have not been issued or would have been materially altered had the correct data or other information been used. The AOS shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected. Notification shall be required when discovery is made between the issuance of the AOS and Dec. 31 of that year. Notification should include a summary of such findings.

   If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the AOS, the Appointed Actuary and the Company should quickly undertake procedures necessary for the Appointed Actuary to make such determination. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the Appointed Actuary should proceed with the notification to the Board of Directors and the domiciliary commissioner.

   An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the amended AOS to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the letter and amended AOS submitted to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that an amended AOS has been finalized.

9. No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs.

1.3 2018 NAIC Title SAO Instructions

ACTUARIAL OPINION

1. There is to be included with or attached to Page 1 of the Annual Statement, the statement of a Qualified Actuary, entitled "Statement of Actuarial Opinion" (Actuarial Opinion) setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and **required** exhibits, shall be in the format of and contain the information required by this section of the *Annual Statement Instructions – Title*.

   The Qualified Actuary must be appointed by the Board of Directors or its equivalent, or by a committee of the Board, by December 31 of the calendar year for which the opinion is rendered. Upon initial appointment (or "retention"), the Company shall notify the domiciliary commissioner within five business days of the appointment with the following information:

   a. Name and title (and, in the case of a consulting actuary, the name of the firm).
   b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).
   c. A statement that the person meets the requirements of a Qualified Actuary.

   Once this notification is furnished, no further notice is required with respect to this person unless the actuary ceases to be appointed or retained or ceases to meet the requirements of a Qualified Actuary.

   If an actuary who was the Appointed Actuary for the immediately preceding filed Actuarial Opinion is replaced by an action of the Board of Directors, the Insurer shall within five (5) business days notify the Insurance Department of the state of domicile of this event. The Insurer shall also furnish the domiciliary commissioner with a separate letter within ten (10) business days of the above notification stating whether in the twenty-four (24) months preceding such event there were any disagreements with the former Appointed Actuary regarding the content of the opinion on matters of the risk of material adverse deviation, required disclosures, scope, procedures, type of opinion issued, substantive wording of the opinion or data quality. The disagreements required to be reported in response to this paragraph include both those resolved to the former actuary's satisfaction and those not resolved to the former actuary's satisfaction. The letter should include a description of the disagreements and the nature of its resolution (or that it was not resolved). The Insurer shall also request in writing such former actuary to furnish a letter addressed to the Insurer stating whether the actuary agrees with the statements contained in Insurer's letter and, if not, stating the reasons for which he or she does not agree; and the Insurer shall furnish such responsive letter from the former actuary to the domiciliary commissioner together with its own.

   The Appointed Actuary must report to the Board of Directors or the Audit Committee each year on the items within the scope of the Actuarial Opinion. The Actuarial Opinion and the Actuarial Report must be made available to the Board of Directors. The minutes of the Board of Directors should indicate that the Appointed Actuary has presented such information to the Board of Directors or the Audit Committee and that the Actuarial Opinion and the Actuarial Report were made available. A separate Actuarial Opinion is required for each company filing an Annual Statement. When there is an affiliated company pooling arrangement, one Actuarial Report for the aggregate pool is sufficient, but there must be addendums to the Actuarial Report to cover non-pooled reserves for individual companies.

   The Actuarial Opinion and the supporting Actuarial Report and workpapers, should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including but not limited to ASOP No. 23, ASOP No. 36, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board, and Statements of Principles adopted by the Casualty Actuarial Society.

1A. Definitions

"Qualified Actuary" is a person who is either:

(i) A member in good standing of the Casualty Actuarial Society; or

(ii) A member in good standing of the American Academy of Actuaries who has been approved as qualified for signing casualty loss reserve opinions by the Casualty Practice Council of the American Academy of Actuaries.

"Insurer" or "Company" means a reporting entity authorized to write title insurance under the laws of any state and who files on the Title Blank.

"Actuarial Report" means a document or other presentation, prepared as a formal means of conveying to the state regulatory authority and the Board of Directors, or its equivalent, the actuary's professional conclusions and recommendations, of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the actuary's opinion or findings and of documenting the analysis underlying the opinion. The expected content of the Actuarial Report is further described in paragraph 7. (Note that the inclusion of the Board of Directors as part of the intended audience for the Actuarial Report does not change the content of the Actuarial Report as described in paragraph 7. The Appointed Actuary should present findings to the Board of Directors in a manner deemed suitable for such audience.)

1B. Exemptions

An insurer who intends to file for one of the exemptions under this section must submit a letter of intent to its domiciliary commissioner no later than December 1 of the calendar year for which the exemption is to be claimed. The commissioner may deny the exemption prior to December 31 of the same year if the exemption is deemed inappropriate.

A copy of the approved exemption must be filed with the Annual Statement in all jurisdictions in which the company is authorized.

Exemption for Small Companies

An insurer that has less than $1,000,000 total direct plus assumed written premiums during a calendar year, and less than $1,000,000 total direct plus assumed loss and loss adjustment expense reserves at year-end, in lieu of the Actuarial Opinion required for the calendar year, may submit an affidavit under oath of an officer of the insurer that specifies the amounts of direct plus assumed written premiums and direct plus assumed loss and loss adjustment reserves.

Exemption for Insurers under Supervision or Conservatorship

Unless ordered by the domiciliary commissioner, an insurer that is under supervision or conservatorship pursuant to statutory provision is exempt from the filing requirements contained herein.

Exemption for Nature of Business

An insurer otherwise subject to the requirement and not eligible for an exemption as enumerated above may apply to its domiciliary commissioner for an exemption based on the nature of business written.

Financial Hardship Exemption

An insurer otherwise subject to this requirement and not eligible for an exemption as enumerated above may apply to the commissioner for a financial hardship exemption.

Financial hardship is presumed to exist if the projected reasonable cost of the opinion would exceed the lesser of:

(i) One percent (1%) of the insurer's capital and surplus reflected in the insurer's latest quarterly statement for the calendar year for which the exemption is sought; or

(ii) Three percent (3%) of the insurer's direct plus assumed premiums written during the calendar year for which the exemption is sought as projected from the insurer's latest quarterly statements filed with its domiciliary commissioner.

2. The Statement of Actuarial Opinion must consist of an IDENTIFICATION paragraph identifying the Appointed Actuary; a SCOPE paragraph identifying the subjects on which an opinion is to be expressed and describing the scope of the actuary's work; an OPINION paragraph expressing his or her opinion with respect to such subjects and one or more additional RELEVANT COMMENTS paragraphs. These four sections must be clearly designated.

3. The IDENTIFICATION paragraph should indicate the Appointed Actuary's relationship to the Company, qualifications for acting as Appointed Actuary, and date of appointment, and specify that the appointment was made by the Board of Directors (or its equivalent) or by a committee of the Board.

A member of the American Academy of Actuaries qualifying under paragraph 1A(ii) must attach, each year, a copy of the approval letter from the Academy.

These instructions require that a Qualified Actuary prepare the Actuarial Opinion. If a person who does not meet the definition of a Qualified Actuary has been approved by the insurance regulatory official of the domiciliary state, the Company must attach, each year, a letter from that official stating that the individual meets the state's requirements for rendering the Actuarial Opinion.

4. The SCOPE paragraph should contain a sentence such as the following:

> "I have examined the actuarial assumptions and methods used in determining reserves listed in Exhibit A, as shown in the Annual Statement of the Company as prepared for filing with state regulatory officials, as of December 31, 20__, and reviewed information provided to me through XXX date."

Exhibit A should list those items and amounts with respect to which the Appointed Actuary is expressing an opinion.

The Appointed Actuary should state that the items in the SCOPE paragraph, on which he or she is expressing an opinion, reflect the Disclosure items (8 through 14) in Exhibit B.

The SCOPE paragraph should include a paragraph such as the following regarding the data used by the Appointed Actuary in forming the opinion:

> "In forming my opinion on the loss and loss adjustment expense reserves, I relied upon data prepared by _____ (name, affiliation and relation to Company). I evaluated that data for reasonableness and consistency. I also reconciled that data to Schedule P, Parts 1 and 2 of the Company's current Annual Statement. In other respects, my examination included such review of the actuarial assumptions and methods used and such tests of the calculations as I considered necessary."

5. The OPINION paragraph should include a sentence that at least covers the points listed in the following illustration:

"In my opinion, the amounts carried in Exhibit A on account of the items identified:

A. Meet the requirements of the insurance laws of (state of domicile).

B. Are computed in accordance with accepted actuarial standards and principles.

C. Make a reasonable provision for all unpaid loss and loss adjustment expense obligations of the Company under the terms of its contracts and agreements."

If there is any aggregation or combination of items in Exhibit A, the opinion language should clearly identify the combined items.

Insurance laws and regulations shall at all times take precedence over the actuarial standards and principles.

If the actuary has made use of the work of another actuary (such as for pools and associations, for a subsidiary or for special lines of business) for a material portion of the reserves, the other actuary must be identified by name and affiliation within the OPINION paragraph.

A Statement of Actuarial Opinion should be made in accordance with one of the following sections (a through e). The actuary must explicitly identify in Exhibit B which type applies.

a. Determination of Reasonable Provision. When the carried reserve amount is within the actuary's range of reasonable reserve estimates, the actuary should issue a Statement of Actuarial Opinion that the carried reserve amount makes a reasonable provision for the liabilities associated with the specified reserves.

b. Determination of Deficient or Inadequate Provision. When the carried reserve amount is less than the minimum amount that the actuary believes is reasonable, the actuary should issue a statement of actuarial opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the actuary should disclose the minimum amount that the actuary believes is reasonable.

c. Determination of Redundant or Excessive Provision. When the carried reserve amount is greater than the maximum amount that the actuary believes is reasonable, the actuary should issue a Statement of Actuarial Opinion that the carried reserve amount does not make a reasonable provision for the liabilities associated with the specified reserves. In addition, the actuary should disclose the maximum amount that the actuary believes is reasonable.

d. Qualified Opinion. When, in the actuary's opinion, the reserves for a certain item or items are in question because they cannot be reasonably estimated or the actuary is unable to render an opinion on those items, the actuary should issue a qualified Statement of Actuarial Opinion. The actuary should disclose the item (or items) to which the qualification relates, the reasons for the qualification, and the amounts for such item(s), if disclosed by the Company. Such a qualified opinion should state whether the stated reserve amount makes a reasonable provision for the liabilities associated with the specified reserves, *except for* the item (or items) to which the qualification relates. The actuary is not required to issue a qualified opinion if the actuary reasonably believes that the item (or items) in question are not likely to be material.

e. No Opinion. The actuary's ability to give an opinion is dependent upon data, analyses, assumptions, and related information that are sufficient to support a conclusion. If the actuary cannot reach a

conclusion due to deficiencies or limitations in the data, analyses, assumptions, or related information, then the actuary may issue a statement of no opinion. A statement of no opinion should include a description of the reasons why no opinion could be given.

6. The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address the following topics of regulatory importance.

   a. Risk of Material Adverse Deviation.

      The Appointed Actuary must provide specific RELEVANT COMMENT paragraphs to address the risk of material adverse deviation. The Appointed Actuary must identify the materiality standard and the basis for establishing this standard with respect to the relevant characteristics of the Company. The materiality standard must also be disclosed in U.S. dollars in Exhibit B: Disclosures. The Appointed Actuary should include an explanatory paragraph to describe the major factors, combination of factors or particular conditions underlying the risks and uncertainties the actuary considers relevant. The explanatory paragraph should not include general, broad statements about risks and uncertainties due to economic changes, judicial decisions, regulatory actions, political or social forces, etc., nor is the Appointed Actuary required to include an exhaustive list of all potential sources of risks and uncertainties. The Appointed Actuary should explicitly state whether or not he or she reasonably believes that there are significant risks and uncertainties that could result in material adverse deviation. This determination is also to be disclosed in Exhibit B.

   b. Other Disclosures in Exhibit B

      RELEVANT COMMENT paragraphs should describe the significance of each of the remaining Disclosure items (8 through 14) in Exhibit B. The Appointed Actuary should address the items individually and in combination when commenting on a material impact.

      If the Company's reserves will cause the ratio of One-Year or Two-Year Known Claims Reserve Development (shown in Schedule P, Part 3) to the respective prior year's Policyholders' Surplus to be greater than 20%, the Appointed Actuary must include RELEVANT COMMENT on the factors that led to the exceptional reserve development.

   c. Reinsurance

      RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance .

      The Appointed Actuary's comments on reinsurance collectability should address any uncertainty associated with including potentially-uncollectable amounts in the estimate of ceded reserves. Before commenting on reinsurance collectability, the Appointed Actuary should solicit information from management on any actual collectability problems, review ratings given to reinsurers by a recognized rating service, and examine Schedule F for the current year for indications of regulatory action or reinsurance recoverable on paid losses over ninety (90) days past due. The comment should also reflect any other information the actuary has received from management or that is publicly available about the capability or willingness of reinsurers to pay claims. The Appointed Actuary's comments do not imply an opinion on the financial condition of any reinsurer.

      Retroactive reinsurance refers to agreements referenced in *SSAP No. 62R—Property and Casualty Reinsurance* of the *Accounting Practices and Procedures Manual*.

Financial reinsurance refers to contracts referenced in *SSAP No. 62R—Property and Casualty Reinsurance*, paragraph 35, of the *Accounting Practices and Procedures Manual* in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance.

d. Reserve Development

If the Company's reserves will cause the ratio of One-Year or Two-Year Reserve Development (shown in Schedule P, Part 2) to the respective prior year's Policyholders' Surplus to be greater than 20%, the Appointed actuary must include RELEVANT COMMENT on the factors that led to the exceptional reserve development.

e. Methods and Assumptions

If there has been any significant change in the actuarial assumptions and/or methods from those previously employed, that change should be described in a RELEVANT COMMENT paragraph. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

7. The Actuarial Opinion must include assurance that an Actuarial Report and underlying actuarial workpapers supporting the Actuarial Opinion will be maintained at the Company and available for examination for seven years. The Actuarial Report contains significant proprietary information. It is expected that the Actuarial Report be held confidential and not be intended for public inspection. The Actuarial Report must be available by May 1 of the year following the year-end for which the Opinion was rendered or within two (2) weeks after a request from an individual state commissioner.

The Actuarial Report should be consistent with the documentation and disclosure requirements of ASOP No. 41, Actuarial Communications. The Actuarial Report must contain both narrative and technical components. The narrative component should provide sufficient detail to clearly explain to company management, the Board of Directors, the regulator, or other authority the findings, recommendations and conclusions, as well as their significance. The technical component should provide sufficient documentation and disclosure for another actuary practicing in the same field to evaluate the work. This technical component must show the analysis from the basic data (e.g., loss triangles) to the conclusions.

The Actuarial Report must also include:

- A description of the Appointed Actuary's relationship to the Company, with clear presentation of the Appointed Actuary's role in advising the Board and/or management regarding the carried reserves. The Actuarial Report should identify how and when the Appointed Actuary presents the analysis to the Board and, where applicable, to the officer(s) of the Company responsible for determining the carried reserves.

- An exhibit that ties to the Annual Statement and compares the Appointed Actuary's conclusions to the carried amounts consistent with the segmentation of exposure or liability groupings used in the analysis. The Appointed Actuary's conclusions include the Appointed Actuary's point estimate(s), range(s) of reasonable estimates or both.

- An exhibit that reconciles and maps the data used by the Appointed Actuary, consistent with the segmentation of exposure or liability groupings used in the Appointed Actuary's analysis, to the Annual Statement Schedule P.

- An exhibit or appendix showing the change in the Appointed Actuary's estimates from the prior Actuarial Report, including extended discussion of factors underlying any material changes. If the Appointed Actuary is newly-appointed and does not review the work of the prior Appointed Actuary, then the Appointed Actuary should disclose this.

- Extended comments on trends that indicate the presence or absence of risks and uncertainties that could result in material adverse deviation.

- Extended comments on factors that led to exceptional reserve development, as defined in 6C and 6D, and how these factors were addressed in prior and current analyses.

8. The statement should conclude with the signature of the Appointed Actuary responsible for providing the Actuarial Opinion and the date when the Opinion was rendered. The signature and date should appear in the following format:

_____
Signature of Appointed Actuary
Printed name of Appointed actuary
Employer's name
Address of Appointed Actuary
Telephone number of Appointed Actuary
Email address of Appointed Actuary
Date opinion was rendered

9. The Insurer required to furnish an Actuarial Opinion shall require its Appointed Actuary to notify its Board of Directors or its audit committee in writing within five (5) business days after any determination by the Appointed Actuary that the Opinion submitted to the domiciliary commissioner was in error as a result of reliance on data or other information (other than assumptions) that, as of the balance sheet date, was factually incorrect. The Opinion shall be considered to be in error if the Opinion would have not been issued or would have been materially altered had the correct data or other information been used. The Opinion shall not be considered to be in error if it would have been materially altered or not issued solely because of data or information concerning events subsequent to the balance sheet date or because actual results differ from those projected.

Notification shall be required for any such determination made between the issuance of the Actuarial Opinion and the balance sheet date for which the next Actuarial Opinion will be issued. The notification should include a summary of such findings and an amended Actuarial Opinion.

An Insurer who is notified pursuant to the preceding paragraphs shall forward a copy of the summary and the amended Actuarial Opinion to the domiciliary commissioner within five (5) business days of receipt of such and shall provide the Appointed Actuary making the notification with a copy of the summary and amended Actuarial Opinion being furnished to the domiciliary commissioner. If the Appointed Actuary fails to receive such copy within the five (5) business day period referred to in the previous sentence, the Appointed Actuary shall notify the domiciliary commissioner within the next five (5) business days that the submitted Actuarial Opinion should no longer be relied upon or such other notification recommended by the actuary's attorney.

If the Appointed Actuary learns that the data or other information relied upon was factually incorrect, but cannot immediately determine what, if any, changes are needed in the Actuarial Opinion, the actuary and the Company should undertake as quickly as is reasonably practical those procedures necessary for the Appointed Actuary to make the determination discussed above. If the Insurer does not provide the necessary data corrections and other support (including financial support) within ten (10) business days, the actuary should proceed with the notification discussed above.

No Appointed Actuary shall be liable in any manner to any person for any statement made in connection with the above paragraphs if such statement is made in a good faith effort to comply with the above paragraphs.

10. Data in Exhibit A and Exhibit B are to be filed in both print and data capture format.

STATEMENT OF ACTUARIAL OPINION

Exhibit A: SCOPE
DATA TO BE FILED IN BOTH PRINT AND DATA CAPTURE FORMAT

LOSS AND LOSS ADJUSTMENT EXPENSE RESERVES:		Amount
1. Unpaid Losses and Loss Adjustment Expenses (Schedule P, Part 1, Total Column 24 or 34 if discounting is allowable under state law)	$	_____
2. Unpaid Losses and Loss Adjustment Expenses - Direct and Assumed (Should equal Schedule P, Part 1, Summary, Totals from Columns 17, 18, 20, 21, and 23, Line 12 x 1000)	$	_____
3. Other items on which the Appointed Actuary is expressing an Opinion (list separately, adding additional lines as needed)	$	_____

Exhibit B: DISCLOSURES

14. Other items on which the Appointed Actuary is providing relevant comment (list separately, adding additional lines as needed) $ _____

1.4 2018 NAIC Data Testing Requirement

ANNUAL AUDITED FINANCIAL REPORTS

All states have a statute or regulation that requires an annual audit of their insurance companies by an independent certified public accountant based on the NAIC *Annual Financial Reporting Model Regulation (#205)*. For guidance regarding this model, see Appendix G of the NAIC *Accounting Practices and Procedures Manual*.

The reporting entity shall require the independent certified public accountant to subject the current Schedule P – Part 1 (excluding those amounts related to bulk and IBNR reserves and claim counts) to the auditing procedures applied in the audit of the current statutory financial statements to determine whether Schedule P – Part 1 is fairly stated in all material respects in relation to the basic statutory financial statements taken as a whole. It is expected that the auditing procedures applied by the independent CPA to the claim loss and loss adjustment expense data from which Schedule P – Part 1 is prepared would be applied to activity that occurred in the current calendar year (e.g., tests of payments on claims for all accident years that were paid during the current calendar year). [Refer to American Institute of Certified Public Accountants Statement of Position 92-8.]

The reporting entity shall also require the independent certified public accountant to subject the data used by the appointed actuary to testing procedures. The auditor is required to determine what historical data and methods have been used by management in developing the loss reserve estimate and whether the auditor will rely on the same data or other statistical data in evaluating the reasonableness of the loss reserve estimate. After identifying the relevant data, the auditor should obtain an understanding of the controls related to the completeness, accuracy, and classification of loss data and perform testing as the auditor deems appropriate. Through inquiry of the Appointed Actuary, the auditor should obtain an understanding of the data identified by the Appointed Actuary as significant. It is recognized that there will be instances when data identified by the Appointed Actuary as significant to his or her reserve projections would not otherwise have been tested as part of the audit, and separate testing would be required. Unless, otherwise agreed among the Appointed Actuary, management and the auditor, the scope of the work performed by the auditor in testing the claims data in the course of the audit would be sufficient to determine whether the data tested is fairly stated in all material respects in relation to the statutory financial statement taken as a whole. The auditing procedures should be applied to the claim loss and defense and cost containment expense data used by the Appointed Actuary and would be applied to activity that occurred in the current calendar year (e.g., tests of payments on claims paid during the current calendar year).

II. 2018 AOWG Regulatory Guidance

This appendix to the practice note provides the 2018 AOWG Regulatory Guidance for the Property/Casualty Statement of Actuarial Opinion and Actuarial Opinion Summary

REGULATORY GUIDANCE on Property and Casualty Statutory Statements of Actuarial Opinion, Actuarial Opinion Summaries, and Actuarial Reports for the Year 2018

Prepared by the NAIC Actuarial Opinion (C) Working Group
of the Casualty Actuarial and Statistical (C) Task Force

The NAIC Actuarial Opinion (C) Working Group (Working Group) of the Casualty Actuarial and Statistical (C) Task Force believes that the Statement of Actuarial Opinion (Actuarial Opinion), Actuarial Opinion Summary (AOS), and Actuarial Report are valuable tools in serving the regulatory mission of protecting consumers. This Regulatory Guidance document supplements the NAIC *Annual Statement Instructions – Property/Casualty* (*Instructions*) in an effort to provide clarity and timely guidance to companies and Appointed Actuaries regarding regulatory expectations on the Actuarial Opinion, AOS, and Actuarial Report.

An Appointed Actuary has a responsibility to know and understand both the *Instructions* and the expectations of state insurance regulators. One expectation of regulators clearly presented in the *Instructions* is that the Actuarial Opinion, AOS, and supporting Actuarial Report and workpapers be consistent with relevant Actuarial Standards of Practice (ASOPs).

There are changes to the *Instructions* for 2018. The 2018 *Instructions*:

- Include a new definition for "Accident & Health (A&H) Long Duration Contracts" in order to draw a distinction between these contracts and the Property and Casualty (P&C) Long Duration Contracts whose unearned premium reserves are reported on Exhibit A, Items 7 and 8,
- Add a reference to SSAP No. 65 in the definition of P&C Long Duration Contracts,
- Include a new disclosure item on Exhibit B for net reserves associated with A&H Long Duration Contracts,
- State that the Actuarial Report should disclose all reserve amounts associated with A&H Long Duration Contracts, and
- State that the Actuarial Report and workpapers summarizing the asset adequacy testing of long-term care contracts must be in compliance with *Actuarial Guideline LI – The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51) of the *Accounting Practices and Procedures Manual*.

I. General comments

A. Reconciliation between documents

If there are any differences between the values reported in the Actuarial Opinion, AOS, Actuarial Report, and Annual Statement, the Working Group expects Appointed Actuaries to include an explanation for these differences in the appropriate document (Actuarial Opinion, AOS, or Actuarial Report). The use of a robust peer review process by the Appointed Actuary should reduce reporting errors and non-reconciling items.

One situation in which a legitimate difference might arise is in the case of non-tabular discounting: The direct and assumed loss reserves on line 3 of the Actuarial Opinion's Exhibit A come from Schedule P, Part 1, which is gross of non-tabular discounting, while the Actuarial Report and AOS might present the direct and assumed loss reserves on a net of discounting basis.

B. Role of illustrative language in the *Instructions*

While the *Instructions* provide some illustrative language, the Working Group encourages Appointed Actuaries to use whatever language they believe is appropriate to clearly convey their opinion and the basis for that opinion. In forming their opinion, Appointed Actuaries should consider company-specific characteristics such as intercompany pooling arrangements; recent mergers or acquisitions; and significant changes in operations, product mix, or reinsurance arrangements.

C. Replacement of an Appointed Actuary

The *Instructions* require two letters when the Board replaces an Appointed Actuary: one addressed from the insurer to the domiciliary commissioner, and one addressed from the former Appointed Actuary to the insurer. The insurer must provide both of these letters to the domiciliary commissioner.

The detailed steps are as follows:

1. Within 5 business days, the insurer shall notify its domiciliary insurance department that the former Appointed Actuary has been replaced.
2. Within 10 business days of the notification in step 1, the insurer shall provide the domiciliary commissioner with a letter stating whether in the 24 months preceding the replacement, there were disagreements with the former Appointed Actuary. The *Instructions* describe the types of disagreements required to be reported in the letter.
3. Within the same 10 business days referred to in step 2, the insurer shall, in writing, request that its former Appointed Actuary provide a letter addressed to the insurer stating whether the former Appointed Actuary agrees with the statements contained in the insurer's letter referenced in step 2.
4. Within 10 business days of the request from the insurer described in step 3, the former Appointed Actuary shall provide a written response to the insurer.
5. The insurer shall provide the letter described in step 2 and the response from the former Appointed Actuary described in step 4 to the domiciliary commissioner.

Regarding the disagreements referenced in step 2 above, regulators understand that there may be disagreements between the Appointed Actuary and the insurer during the course of the Appointed Actuary's analysis that are resolved by the time the Appointed Actuary concludes the analysis. For instance, the Appointed Actuary's analysis may go through several iterations, and an insurer's comments on the Appointed Actuary's draft Actuarial Report may prompt the Appointed Actuary to make changes to the report. While regulators are interested in material disagreements regarding differences between the former Appointed Actuary's final estimates and the insurer's carried reserves, they do not expect notification on routine discussions that occur during the course of the Appointed Actuary's work.

D. Reporting to the Board of Directors

The Appointed Actuary is required to report to the insurer's Board every year, and the *Instructions* were amended in 2016 to require the Board's minutes to specify the manner in which the Appointed Actuary presented the required information. This may be done in a form of the Appointed Actuary's choosing, including, but not limited to, an executive summary or PowerPoint presentation. The Working Group strongly encourages the Appointed Actuary to present his or her analysis in person so that the risks and uncertainties that underlie the exposures and the significance of the Appointed Actuary's findings can be adequately conveyed and discussed. Regardless of how the Appointed Actuary presents his or her conclusions, the Actuarial Report must be made available to the Board.

Management is limited to reporting single values on lines 1 and 3 of the Liabilities, Surplus, and Other Funds page of the balance sheet. However, actuarial estimates are uncertain by nature, and point estimates do not convey the variability in the projections. Therefore, the Board should be made aware of the Appointed Actuary's opinion regarding the risk of material adverse deviation, the sources of risk, and what amount of adverse deviation the Appointed Actuary judges to be material.

E. Requirements for pooled companies

Effective with the 2014 *Instructions*, requirements for companies that participate in intercompany pools are as follows:

For all intercompany pooling members:

- Text of the Actuarial Opinion should include the following:
  - Description of the pool
  - Identification of the lead company
  - A listing of all companies in the pool, their state of domicile, and their respective pooling percentages
- Exhibits A and B should represent the company's share of the pool and should reconcile to the financial statement for that company

For intercompany pooling members with a 0% share of the pooled reserves:

- Text of the Actuarial Opinion should be similar to that of the lead company
- Exhibits A and B should reflect the 0% company's values
  - Response to Exhibit B, Item 5 (materiality standard) should be $0
  - Response to Exhibit B, Item 6 (risk of material adverse deviation) should be "not applicable"
- Exhibits A and B of the lead company should be filed with the 0% company's Actuarial Opinion
- Information in the AOS should be that of the lead company

Note the distinction between pooling with a 100% lead company with no retrocession and ceding 100% via a quota share reinsurance agreement. The regulator must approve these affiliate agreements as either an intercompany pooling arrangement or a quota share reinsurance agreement. The proper financial reporting is dependent on the approved filings, regardless of how company management regards its operating platform.

For intercompany pooling members with a greater than 0% share of the pooled reserves, regulators encourage the Appointed Actuary to display values in the AOS on a pooled (or consolidated) basis in addition to the statutory entity basis. This can be accomplished by displaying two tables of information.

F. Explanation of adverse development

1. Comments on unusual Insurance Regulatory Information System (IRIS) ratios in the Actuarial Opinion

The Appointed Actuary is required to provide comments in the Actuarial Opinion on factors that led to unusual values for IRIS ratios 11, 12, or 13. The Working Group considers it insufficient to attribute unusual reserve development to "reserve strengthening" or "adverse development" and expects the Appointed Actuary to provide insight into the company-specific factors which caused the unusual value. Detailed documentation should be included in the Actuarial Report to support statements provided in the Actuarial Opinion.

2. Comments on persistent adverse development in the AOS

The Appointed Actuary is required to comment on persistent adverse development in the AOS. Comments can reflect common questions that regulators have, such as:

- Is development concentrated in one or two exposure segments, or is it broad across all segments?
- How does development in the carried reserve compare to the change in the Appointed Actuary's estimate?
- Is development related to specific and identifiable situations that are unique to the company?
- Does the development or the reasons for development differ depending on the individual calendar or accident years?

G. Revisions

When a material error in the Actuarial Opinion or AOS is discovered by the Appointed Actuary, the company, the regulator, or any other party, regulators expect to receive a revised Actuarial Opinion or AOS.

Regardless of the reason for the change or refiling, the company should submit the revised Actuarial Opinion in hard copy to its domiciliary state and electronically to the NAIC. The company should submit the revised AOS in hard copy to the domiciliary state but should not submit the document to the NAIC.

A revised Actuarial Opinion or AOS should clearly state that it is an amended document, contain or accompany an explanation for the revision, and include the date of revision.

II. Comments on Actuarial Opinion and Actuarial Report

A. Review date

The illustrative language for the Scope paragraph includes "… and reviewed information provided to me through XXX date." This is intended to capture the ASOP No. 36 requirement to disclose the date through which material information known to the Appointed Actuary is included in forming the reserve opinion (the review date), if it differs from the date the Actuarial Opinion is signed. When the Appointed Actuary is silent regarding the review date, this can indicate either that the review date is the same as the date the Actuarial Opinion is signed or that the Appointed Actuary overlooked this disclosure requirement. When the Appointed Actuary's review date is the same as the date the Actuarial Opinion is signed, regulators suggest the Appointed Actuary clarify this in the Actuarial Opinion by including a phrase such as "… and reviewed information provided to me through the date of this opinion."

B. Making use of another's work

If the Appointed Actuary makes use of the work of another not within the Appointed Actuary's control for a material portion of the reserves, the *Instructions* say that the Appointed Actuary must provide the following information in the Actuarial Opinion:

- The person's name;
- The person's affiliation;
- The person's credential(s), if the person is an actuary; and
- A description of the type of analysis performed, if the person is not an actuary.

Furthermore, Section 4.2.f of ASOP No. 36 says that the actuary should disclose whether he or she reviewed the other's underlying analysis and, if so, the extent of the review. Though this is not mentioned in the ASOP, the Working Group encourages the Appointed Actuary to consider discussing his or her conclusions from the review.

Section 3.7.2 of ASOP No. 36 describes items the actuary should consider when determining whether it is reasonable to make use of the work of another. One of these items is the amount of the reserves covered by the other's analyses or opinions in comparison to the total reserves subject to the actuary's opinion. The Working Group encourages the Appointed Actuary to disclose these items in the Actuarial Opinion by providing the dollar amount of the reserves covered by the other's analyses or opinions and the percentage of the total reserves subject to the Appointed Actuary's opinion that these other reserves represent.

C. Points A and B of the Opinion paragraph when opinion type is other than reasonable

Regulators encourage Appointed Actuaries to think about their responses to point A (meet the requirements of the insurance laws of the state) and point B (computed in accordance with accepted actuarial standards and principles) of the Opinion paragraph when they issue an Actuarial Opinion of a type other than "Reasonable."

D. Conclusions on a net versus a direct and assumed basis

Unless the Appointed Actuary states otherwise, regulators will assume that the Appointed Actuary's conclusion on the type of opinion rendered, provided in points C and D of the Opinion paragraph, applies to both the net and the direct and assumed reserves. If the Appointed Actuary reaches different conclusions on the net versus the direct and assumed reserves, the Appointed Actuary should include narrative comments to describe the differences and clearly convey a complete opinion. The response to Exhibit B, Item 4 should reflect the Appointed Actuary's opinion on the net reserves.

Similarly, the materiality standard in Exhibit B, Item 5 and the RMAD conclusion in Exhibit B, Item 6 should pertain to the net reserves. If the Appointed Actuary reaches a different conclusion on the risk of material adverse deviation in the net versus the direct and assumed reserves, the Appointed Actuary should include a Relevant Comments paragraph to address the differences. Regulators understand that a net versus a direct and assumed RMAD will have different meanings and, potentially, different materiality standards.

E. Unearned premium for P&C Long Duration Contracts

Exhibit A, Items 7 and 8 require disclosure of the unearned premium reserve for P&C Long Duration Contracts. The *Instructions* require the Appointed Actuary to include a point D in the Opinion paragraph regarding the reasonableness of the unearned premium reserve when these reserves are material.

The Working Group expects that the Appointed Actuary will include documentation in the Actuarial Report to support a conclusion on reasonableness whenever point D is included in the Actuarial Opinion. This documentation may include the three tests of SSAP No. 65 or other methods deemed appropriate by the Appointed Actuary to support his or her conclusion.

Regulators see many opinions where dollar amounts are included in Exhibit A, Items 7 and 8; some opinions include a Relevant Comments paragraph discussing these amounts and some do not. Regulators would prefer at a minimum that Appointed Actuaries include some discussion in Relevant Comments on these amounts including an explicit statement as to whether these amounts are material or immaterial.

F. Other premium reserve items

With regard to "Other Premium Reserve Items" in Exhibit A, Item 9, the Appointed Actuary should include an explanatory paragraph about these premium reserves in Relevant Comments and state whether the amounts are material or immaterial. If the amounts are material, and the Appointed Actuary states the amounts are reasonable in an Opinion paragraph, regulators would expect the actuarial documentation to support this conclusion in the Actuarial Report.

Typical items regulators see listed as "Other Premium Reserve Items" are Medical Professional Liability Death, Disability & Retirement (DD&R) unearned premium reserves (UPR) and Other Liability Claims DD&R UPR. Depending on the nature of these exposures, these items may be also listed on Exhibit B, Line 12.2 as claims made extended UPR.

G. The importance of Relevant Comments paragraphs

The Working Group considers the Relevant Comments paragraphs to be the most valuable information in the Actuarial Opinion. Relevant Comments help the regulator interpret the Actuarial Opinion and understand the Appointed Actuary's reasoning and judgment. In addition to the required Relevant Comments, the Appointed Actuary should consider providing information on other material items such as reinsurance with affiliates, mergers or acquisitions, other premium reserves, and catastrophe risk.

H. Risk of Material Adverse Deviation

The Relevant Comments paragraphs on the Risk of Material Adverse Deviation (RMAD) are particularly useful to regulators. The first two RMAD comments below respond to questions that Appointed Actuaries have posed to regulators. The second two stem from regulators' reviews of Actuarial Opinions.

1. No company-specific risk factors – The Appointed Actuary is asked to discuss company-specific risk factors regardless of the RMAD conclusion. If the Appointed Actuary does not believe that there are any company-specific risk factors, the Appointed Actuary should state that.

2. Mitigating factors – Regulators generally expect Appointed Actuaries to comment on significant company-specific risk factors that exist prior to the company's application of controls or use of mitigation techniques. The company's risk management behaviors may, however, affect the Appointed Actuary's RMAD conclusion.

3. Consideration of carried reserves, materiality standard, and reserve range when making RMAD conclusion – When deciding whether RMAD exists, the Appointed Actuary should consider the materiality standard in relation to the range of reasonable estimates and the carried reserves. For example, RMAD should likely exist when the sum of the materiality standard plus the carried reserves is within the range of reasonable estimates. Regardless, the Appointed Actuary should support the conclusion of whether RMAD exists.

4. Materiality standards for intercompany pool members – With the exception of intercompany pooling members that retain a 0% share, each statutory entity is required to have a separate Actuarial Opinion with its own materiality standard. Where there are no unusual circumstances to consider, it may be acceptable to determine a standard for the entire pool and assign each member its proportionate share of the total. It

is not appropriate to use the entire amount of the materiality threshold for the pool as the standard for each individual pool member.

I. Regulators' use of the Actuarial Report

Regulators should be able to rely on the Actuarial Report as an alternative to developing their own independent estimates. A well-prepared and well-documented Actuarial Report that complies with ASOP No. 41 can provide a foundation for efficient reserve evaluation during a statutory financial examination. This expedites the examination process and may provide cost savings to the company.

1. Schedule P reconciliation

The Working Group acknowledges that myriad circumstances (such as mergers, acquisitions, changes in claim systems, and the use of underwriting year data in the analysis) may make it difficult for the Appointed Actuary to reconcile the analysis data to Schedule P. The Working Group encourages Appointed Actuaries to disclose reconciliation issues in the Actuarial Report. If the data cannot be reconciled, the Appointed Actuary should document the reasons.

The Working Group believes that:

- A summary reconciliation that combines all years and all lines is an insufficient demonstration of data integrity. A reconciliation should include enough detail to reflect the segmentation of exposures used in the reserve analysis, the accident years of loss activity and the methods used by the Appointed Actuary.
- The Appointed Actuary should map the data groupings used in the analysis to Schedule P lines of business and should provide detailed reconciliations of the data at the finest level of segmentation that is possible and practical. The Working Group recognizes that the Appointed Actuary chooses the data segmentation for the analysis and that there is often not a direct correspondence between analysis segments and Schedule P lines of business.
- The Appointed Actuary should reconcile all data material to the analysis, including claim counts and earned premium if appropriate.

The Working Group draws a distinction between two types of data checks:

- The Schedule P reconciliation performed by the Appointed Actuary. The purpose of this exercise is to show the user of the Actuarial Report that the data significant to the Appointed Actuary's analysis ties to the data in Schedule P.
- Annual testing performed by independent CPAs to verify the completeness and accuracy of the data in Schedule P or the analysis data provided by the company to the Appointed Actuary.

One key difference is that independent CPAs generally apply auditing procedures to loss and loss adjustment expense activity that occurred in the current calendar year (for example, tests of payments on claims for all accident years that were paid during the current calendar year). Projection methodologies used by Appointed Actuaries, on the other hand, often use cumulative loss and loss adjustment expense data, which may render insufficient a testing of activity during the current calendar year alone.

Along similar lines, regulators encourage Appointed Actuaries to consider whether a reconciliation of incremental payments during the most recent calendar year for all accident/report years combined provides sufficient assurance of the integrity of the data used in the analysis, given that development factors are generally applied to cumulative paid losses by accident/report year.

2. Change in estimates

The Working Group expects the Appointed Actuary to discuss any significant change in the Appointed Actuary's total estimates from the prior Actuarial Report. However, an explanation should also be included for any significant fluctuations within accident years or segments. When preparing the change-in-estimates exhibits, the Appointed Actuary should choose a level of granularity that provides meaningful comparisons between the prior and current year's results.

3. Narrative

The narrative section of the Actuarial Report should clearly convey the significance of the Appointed Actuary's findings and conclusions, the uncertainty in the estimates, and any differences between the Appointed Actuary's estimates and the carried reserves.

4. Support for assumptions

Appointed Actuaries should support their assumptions. The use of phrases like "actuarial judgment," either in the narrative comments or in exhibit footnotes, is not sufficient. A descriptive rationale is needed.

The selection of expected loss ratios could often benefit from expanded documentation. When making their selection, Appointed Actuaries should consider incorporating rate changes, frequency and severity trends, and other adjustments needed to on-level the historical information. Historical loss ratio indications have little value if items such as rate actions, tort reform, schedule rating adjustments, or program revisions have materially affected premium adequacy.

5. Support for roll forward analyses

The Working Group recognizes that the majority of the analysis supporting an Actuarial Opinion may be done with data received prior to year-end and "rolled forward" to year-end. By reviewing the Actuarial Report, the regulator should be able to clearly identify why the Appointed Actuary made changes in the ultimate loss selections and how those changes were incorporated into the final estimates. A summary of final selections without supporting documentation is not sufficient.

J. Exhibits A and B

1. "Data capture format"

The term "data capture format" in Exhibits A and B of the *Instructions* refers to an electronic submission of the data in a format usable for computer queries. This process allows for the population of an NAIC database that contains qualitative information and financial data. Appointed Actuaries should assist the company in accurately completing the electronic submission.

2. Scope of Exhibit B, Item 12

Exhibit B, Item 12 requests information on extended loss and unearned premium reserves for all property/casualty lines of business, not just medical professional liability. The Schedule P Interrogatories referenced in the parenthetical only address reserves associated with yet-to-be-issued extended reporting endorsements offered in the case of death, disability, or retirement of an individual insured under a medical professional liability claims-made policy.

3. Exhibit B, Item 13

Exhibit B, Item 13 is a newly-added disclosure item that requests information on reserves associated with "A&H Long Duration Contracts," now defined in the 2018 *Instructions* as "A&H contracts in which the

contract term is greater than or equal to 13 months and contract reserves are required."
This disclosure item was added for several reasons:

- **A desire by regulators to gain a greater understanding of property and casualty insurers' exposure to A&H Long Duration Contracts.**
  - This guidance does not specify how P&C insurers should report the liabilities associated with A&H Long Duration Contracts on the annual statement. Through work performed on financial examinations, regulators have found that P&C insurers may include the liabilities in various line items of the Liabilities, Surplus and Other Funds page. SSAP No. 54R provides accounting guidance for insurers.
  - Regardless of where the amounts are reported on the annual statement, the materiality of the amounts, and whether the insurer is subject to AG 51, the Appointed Actuary should disclose the amounts associated with A&H Long Duration Contracts on Exhibit B, Item 13. The Appointed Actuary should provide commentary in a Relevant Comments paragraph in accordance with paragraph 6.C of the *Instructions*, which did not change for 2018. The Appointed Actuary should also disclose all reserve amounts associated with A&H Long Duration Contracts in the Actuarial Report.
- **The adoption of AG 51 in 2017.** On August 9, 2017, the NAIC's Executive (EX) Committee and Plenary adopted AG 51 requiring stand-alone asset adequacy analysis of long-term care (LTC) business. The effective date of AG 51 is December 31, 2017, and it applies to companies with over 10,000 inforce lives covered by LTC insurance contracts as of the valuation date. The 2018 *Instructions* state that the Actuarial Report and workpapers summarizing the asset adequacy testing of LTC business must be in compliance with AG 51 requirements.
- **Recent adverse reserve development in LTC business.** Regulators expect Appointed Actuaries to disclose company-specific risk factors in the Actuarial Opinion. Given the recent adverse experience for LTC business, Appointed Actuaries should consider whether exposure to A&H Long Duration Contracts poses a risk factor for the company.

The Appointed Actuary is not asked to opine on the reasonableness of the reserves associated with A&H Long Duration Contracts except to the extent that the reserves are included within the amounts reported on Exhibit A of the Actuarial Opinion. For example, Exhibit B, Item 13.1 asks the Appointed Actuary to disclose the reserves for A&H Long Duration Contracts that the company carries on the Losses line of the Liabilities, Surplus and Other Funds page. The Appointed Actuary is not asked to opine on the reasonableness of the reserves disclosed on Exhibit B, Item 13.1 in isolation, but these reserves are a subset of the amount included on Exhibit A, Item 1, and Exhibit A lists amounts with respect to which the Appointed Actuary is expressing an opinion.
A&H Long Duration Contracts are distinct from P&C Long Duration Contracts. There were no changes to the opinion requirements in 2018 regarding P&C Long Duration Contracts, but the Working Group added a reference to SSAP No. 65 in the definition of "P&C Long Duration Contracts" to clarify the difference between "A&H Long Duration Contracts" and "P&C Long Duration Contracts." The newly-added mention of SSAP No. 65 in the *Instructions* is not intended to change the Appointed Actuary's treatment of P&C Long Duration Contracts in the Actuarial Opinion or the underlying analysis, but insurers and Appointed Actuaries may refer to SSAP No. 65, paragraphs 21 through 33 for a description of the three tests, a description of the types of P&C contracts to which the tests apply, guidance on the minimum required reserves, and instructions on the Actuarial Opinion and Actuarial Report.

III. Comments on AOS

A. Confidentiality

The AOS is a confidential document and should be clearly labeled and identified prominently as such. The AOS is not submitted to the NAIC. The Working Group advises the Appointed Actuary to provide the AOS to

company personnel separately from the Actuarial Opinion and to avoid attaching the related Actuarial Opinion to the AOS.

B. Different requirements by state

Not all states have enacted the NAIC Property and Casualty Actuarial Opinion Model Law (#745), which requires the AOS to be filed. Nevertheless, the Working Group recommends that the Appointed Actuary prepare the AOS regardless of the domiciliary state's requirements, so that the AOS will be ready for submission should a foreign state – having the appropriate confidentiality safeguards – request it.

Most states provide the Annual Statement contact person with a checklist that addresses filing requirements. The Working Group advises the Appointed Actuary to work with the company to determine the requirements for its domiciliary state.

C. Format

The purpose of the AOS is to show a comparison between the company's carried reserves and the Appointed Actuary's estimates. Because the AOS is a synopsis of the conclusions drawn in the Actuarial Report, the content of the AOS should reflect the analysis performed by the Appointed Actuary. Therefore, all of the Appointed Actuary's calculated estimates, including actuarial central estimates and ranges, are to be presented in the AOS consistent with estimates presented in the Actuarial Report.

The American Academy of Actuaries' Committee on Property and Liability Financial Reporting provides illustrative examples in its annual practice note "Statements of Actuarial Opinion on Property and Casualty Loss Reserves" that show how the Appointed Actuary might choose to display the required information. These examples present the numerical data in an easy-to-read table format.

IV. AG 51

Included with permission, the following is the content of AG 51:

Actuarial Guideline LI
THE APPLICATION OF ASSET ADEQUACY TESTING TO LONG-TERM CARE INSURANCE RESERVES

Background

The *Health Insurance Reserves Model Regulation (#010)* and the *NAIC Valuation Manual (VM-25)* contain requirements for the calculation of long-term care insurance (LTC) reserves. Regulators have observed a lack of uniform practice in the implementation of tests of reserve adequacy and reasonableness of LTC reserves. The reserve adequacy testing required by Model #10 and VM-25 does not provide regulators comfort as to the reserve adequacy of companies with material blocks of LTC business. As such, regulators must rely upon asset adequacy analysis required by the *NAIC Valuation Manual* (*VM-30*) to evaluate the solvency position of companies with sizable blocks of LTC business. This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for the asset adequacy testing applied to a company's LTC block of contracts. In particular, this Guideline:

(1) Specifies that the appropriate form of asset adequacy analysis may be in the form of a gross premium valuation or in a more robust form, such as cash-flow testing, with Actuarial Standards of Practice providing guidance in this area;

(2) Clarifies the type of adequacy testing methods that must be used for aggregation with other blocks of business to be allowed for asset adequacy analysis purposes;

(3) Requires a uniform approach to supporting acceptable assumptions regarding future LTC premium rate increases;

(4) Provides requirements for documentation of assumptions associated with all key LTC risks; and

(5) Provides requirements for documentation of standalone LTC asset adequacy testing results.

Note: It is anticipated that the requirements contained in this Guideline will be incorporated into the *NAIC Valuation Manual* (VM-30) at a future date, effective for a future valuation year. This Guideline will cease to apply to annual statutory financial statements at the time the corresponding VM-30 requirements become effective.

1. **Effective Date**

This Guideline shall be effective for reserves reported with the December 31, 2017, and subsequent annual statutory financial statements.

2. **Authority**

Pursuant to Section 1, paragraph 3, of *VM-30* of the *NAIC Valuation Manual*, the commissioner shall have the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items.

3. **Scope**

This Guideline shall apply to a company with over 10,000 inforce lives covered by long-term care insurance contracts as of the valuation date. All long-term care insurance contracts, whether directly written or assumed through reinsurance are included. Accelerated death benefit products or other combination products where the substantial risk of the product is associated with life insurance or an annuity are not subject to this Guideline.

4. **Asset Adequacy Analysis of LTC Business**

A. As stated in Actuarial Standard of Practice (ASOP) No. 22, multiple asset adequacy analysis methods, including cash-flow testing and gross premium valuation, are available to actuaries for this analysis.

The method of analysis used for LTC shall conform with ASOP No. 22 in recognition of the typical significant asset and liability-related risks associated with LTC.

B. Asset adequacy analysis specific to all inforce LTC business, and without consideration of results for other block of business within the company, must be performed for valuations associated with the December 31, 2017, and subsequent annual statutory financial statements. The analysis shall comply with applicable Actuarial Standards of Practice, including standards regarding identification of key risks. Material assumptions associated with the LTC business shall be determined testing moderately adverse deviations in actuarial assumptions.

C. When determining whether additional reserves are necessary:

1. A reserve deficiency in the LTC block may be aggregated with sufficiencies in the company's other blocks of business for the purposes of developing an actuarial opinion, if

cash-flow testing is used for both the LTC business and for all significant blocks of non-LTC business within a company. If a reserve deficiency in the LTC block is not offset with sufficiencies in the company's other blocks of business, then additional reserves shall be established as required by section 2.C.2. of *VM-30*.

2. If cash-flow testing is not used for testing of the LTC business, then a reserve deficiency revealed from another method, e.g., a gross premium valuation, utilized for purposes of asset adequacy analysis of the LTC block under this Guideline shall not be offset with sufficiencies in the company's other blocks of business. The additional reserves under this Guideline shall be established based only upon the adequacy of the reserves in the LTC block.

D. When determining the effect of investment returns or the time value of money:

1. In the case where cash-flow testing is used, the company must allocate investment income to the LTC block of business consistently with the way investment income generated by the General Account is managed. If, however, a segment of the General Account is used to manage the investment risk for LTC business, the investment income generated by assets from that segment should be appropriately represented within the asset adequacy analysis.

2. In the case where a gross premium valuation method is used or asset cash flows are not explicitly modeled, the discount rate used by the actuary must reflect consideration of the yield on current assets held to support the liability as well as future yields on assets purchased with future premium income and reinvestments or anticipated divesture of existing assets.

E. The analysis shall only anticipate premium rate increases based upon a rate increase plan that is documented, is supported by and has been approved by management, is highly likely to be undertaken, and contains rate increase requests and timelines by jurisdiction. The assumptions used in the analysis should reflect a reasonable estimate of regulatory approved amounts and implementation timelines.

5. **Documentation Required**

The documentation requirements below are to be incorporated as a separate section of the appointed actuary's Actuarial Memorandum required by the *VM-30* or in a special Actuarial Memorandum containing LTC-specific information and shall be submitted to the commissioner of the company's state of domicile. The separate section of the companywide Actuarial Memorandum or the special Actuarial Memorandum shall be available to other state insurance commissioners in which the company is licensed upon request to the company. The confidentiality provisions regarding the Actuarial Memorandum contained in *VM-30* are applicable to the separate section of the Actuarial Memorandum and to the special Memorandum.

A. Results of the asset adequacy analysis of the LTC business shall be reported and documented in the separate section of the Actuarial Memorandum or the special Memorandum, as appropriate.

B. Assumptions on mortality shall be documented to state the reference standard valuation table, if applicable, and explicitly cite adjustments, select factors, and mortality improvement factors, where applicable. If a reference standard valuation table is not used in setting the mortality assumption, then a table of rates and comparison of the applied rates to rates from an unmodified standard mortality table for sample issue ages shall be provided. A summary of experience or other actuarial support of assumptions used shall be documented.

C. Assumptions on voluntary lapse shall be documented in table format by duration band and by other factors such as gender, marital status, with versus without inflation rider, and length of benefit period impacting the lapse assumption, where applicable. A summary of experience or other support of assumptions shall be documented.

D. Assumptions on morbidity shall be documented and actuarial support of the assumption shall be provided. If an outside source is used as the basis for morbidity assumptions, then the rationale for the applicability of that source and any adjustments to the factors from that source shall be documented.

E. Assumptions on investment returns and interest rates shall be documented. If a simplified approach is applied, such as implicit reflection of projected investment returns through the use of discount rates in a gross premium valuation as contemplated in Section 4.D.2., then justification shall be provided.

F. Any rate increases already approved shall be documented by jurisdiction with approved implementation timelines. Assumptions on future rate increases shall be documented by policy form or policy grouping. Such documentation should adequately describe the way in which future rate increase assumptions are developed. Unless the appointed actuary has operational responsibility for carrying out the rate increase plan specified in Section 4.E., the Memorandum shall contain a signed and dated reliance statement from the person with operational responsibility for carrying out such actions that the rate increase plan(s) provided to the appointed actuary appropriately reflects management's plan.

G. Documentation of any other material assumptions shall be provided.

H. Documentation shall be provided for assumptions that have significantly changed from the prior year's analysis.

REGULATORY GUIDANCE
on the Property and Casualty Actuarial Opinion Summary for the Year 2016
Prepared by the NAIC Actuarial Opinion (C) Working Group of the Casualty Actuarial and Statistical (C) Task Force

The NAIC Actuarial Opinion (C) Working Group (AOWG) of the Casualty Actuarial and Statistical (C) Task Force believes that the Actuarial Opinion Summary (AOS) is a valuable tool in serving the regulatory mission of protecting consumers. This Regulatory Guidance document supplements the NAIC *Annual Statement Instructions – Property/Casualty* (*Instructions*) in an effort to provide clarity and timely guidance to Appointed Actuaries regarding regulatory expectations on the AOS.

There are two key additions to the AOS requirements in the 2016 *Instructions*:

- Paragraph 7 requires the Appointed Actuary to explain the discrepancies if any of the values reported in the AOS do not reconcile to the values reported in the Statement of Actuarial Opinion (Actuarial Opinion) Exhibits or the Annual Statement. One situation in which a difference between the Actuarial Opinion and the AOS might arise is in the case of non-tabular discounting: The direct and assumed loss reserves on line 3 of Exhibit A come from Schedule P, Part 1, which is gross of non-tabular discounting, while the AOS might present the direct and assumed loss reserves on a net of discounting basis.
- The *Instructions* were previously silent on required actions when the AOS is determined to be in error. Paragraph 8 of the 2016 *Instructions* states that similar requirements apply to the AOS as to the Actuarial Opinion in such a situation.

Form

The AOS is intended to be a **confidential** document separate from the Actuarial Opinion. The AOWG advises the Appointed Actuary to provide the AOS to company personnel separately from the Actuarial Opinion. The AOS should be clearly labeled and identified prominently as a confidential document.

The AOWG advises that, in order to avoid confusion, the Appointed Actuary not attach the related Actuarial Opinion to the AOS.

Not all states have enacted the NAIC *Property and Casualty Actuarial Opinion Model Law* (#745), which requires the AOS to be filed. Nevertheless, the AOWG recommends that the Appointed Actuary prepare the AOS regardless of the domiciliary state's requirements, so that the AOS will be ready for submission should a foreign state—having the appropriate confidentiality safeguards—request it. Most states provide the Annual Statement contact person with a checklist that addresses filing requirements. The AOWG advises the Appointed Actuary to work with the company in determining the requirements for each state.

The AOS is **not** submitted to the NAIC.

Substance

The entire substance of the AOS rests in paragraph 5. The American Academy of Actuaries' Property and Casualty Practice Note, *Statements of Actuarial Opinion on Property and Casualty Loss Reserves*, provides straightforward examples that show how the Appointed Actuary might choose to display the information required in Parts A–D of this paragraph.

Because the AOS is a synopsis of the conclusions drawn in the Actuarial Report, the content of the AOS should

reflect the analysis performed by the Appointed Actuary. Therefore, all of the Appointed Actuary's calculated estimates, including actuarial central estimates and ranges, are to be presented in the AOS consistent with estimates presented in the Actuarial Report.

Regulators expect that point or range estimates reported in the AOS be clearly supported and documented in the Actuarial Report. Without clarity, the documentation fails to meet Actuarial Standards of Practice and the expectation that another actuary can evaluate the work.

Part E of paragraph 5 of the *Instructions* addresses persistent adverse development. The Appointed Actuary is in a unique position to be able to comment on the nature of this development. This section requires the Appointed Actuary to do so. Comments can reflect common questions that regulators have, such as:

- Is development concentrated in one or two exposure segments, or is it broad across allsegments?
- How does development in the carried reserve compare to the change in the Appointed Actuary'sestimate?
- Is development related to specific and identifiable situations that are unique to thecompany?
- Does the development or the reasons for development differ depending on the individual calendar or accident years?

Paragraph 6 is relevant to all pooling situations as defined in paragraph 1C of the *Instructions* for the Actuarial Opinion. For non-0% companies, regulators expect that carried values reported in the AOS can be reconciled to values reported in the Annual Statement and the Actuarial Opinion, and that actuarial estimates can be reconciled to the Actuarial Report. For 0% pooled companies, the information in the AOS should be that of the lead company.

Regulators encourage the Appointed Actuary to display values on the pooled (or consolidated) basis in addition to the statutory entity basis. This can be accomplished by displaying two tables of information.

Adopted by the Actuarial Opinion (C) Working Group – Aug. 18, 2016.
Adopted by the Casualty Actuarial and Statistical (C) Task Force – Aug. 27, 2016.

III. Special interest topics

This appendix to the practice note contains more detailed information about specific topics that may not be common to all SAOs.

III.1 Unearned premium for P&C Long Duration Contracts

This section discusses the special rules that apply to the unearned premium reserve calculation for P&C long duration contracts.

According to the NAIC SAO Instructions,

> *"If the Scope includes material Unearned Premium Reserves for P&C Long Duration Contracts or Other Loss Reserve items on which the Appointed Actuary is expressing an opinion, the Actuarial Opinion should contain language such as the following:*
>
> *D. Make a reasonable provision for the unearned premium reserves for P&C long duration contracts and/or <insert Other Loss Reserve item on which the Appointed Actuary is expressing an Opinion> of the Company under the terms of its contracts and agreements."*[103]

The Appointed Actuary should opine on the unearned premium reserves for P&C long duration contracts if the amount of those reserves are material.

III.1.1 Definitions

According to the NAIC SAO Instructions,

> *"Property and Casualty (P&C) Long Duration Contracts" refers to contracts (excluding financial guaranty contracts, mortgage guaranty contracts and surety contracts) that fulfill both of the following conditions: (1) the contract term is greater than or equal to thirteen months; and (2) the insurer can neither cancel the contract nor increase the premium during the contract term. These contracts are subject to the three tests of SSAP No. 65-Property and Casualty Contracts of the NAIC Accounting Practices and Procedures Manual"*[104]

[103] *22018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[104] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

III.1.2 Discussion

For policies that meet the criteria provided in the above definition, SSAP 65 contains special rules for the calculation of the unearned premium reserves. These rules are found in SSAP 65, paragraphs 24-33, and consist of three UPR "tests" or steps. While not definitive, SSAP 65 does say that "*this guidance is primarily focused on home warranty and mechanical breakdown policies*".[105]

Given the complexity involved, the actuary may want to confirm whether certain policies meet the criteria for performing these calculations. In particular, the actuary may want to confirm that the policies in question do not have cancellation or repricing provisions that would exempt them from this calculation.

The three tests are essentially:

Test 1: The amount subject to refund to the contract holders as of the reporting date.

Test 2: The gross premium times the percentage of expected total gross losses and expenses under the contract that have yet to be incurred during the unexpired term of the contracts.

Test 3: "*[T]he projected future gross losses and expenses to be incurred during the unexpired term of the contracts [after specified adjustments], reduced by the present value of future guaranteed gross premiums, if any.*"[106] This is very similar to a premium deficiency calculation.

These tests are applied to the three most recent policy years individually, with the highest of the three values recorded for each of those policy years. For all earlier policy years, all Test 1 results are aggregated, all Test 2 results are aggregated, and all Test 3 results are aggregated, with the largest of those aggregated results being the amount booked for those earlier years on a combined basis.

The adjustments made for Test 3 are to reflect future investment income, but with several limitations. Only investment income related to future incurred losses is considered, not investment income on already incurred losses. The time period for the calculation of the investment income is from the valuation date to the date of incurred losses on the current unexpired portion of a policy, not to the date that those future losses are paid. The interest rate used for this calculation is capped based on the company's portfolio and on 5-year Treasury Bonds. An additional cap exists to the extent that this test implies more invested assets than a company actually holds.

For tests 2 and 3, the projected losses may be reduced for expected salvage and subrogation, but not for anticipated deductible recoveries unless the recoveries are properly secured. According to SSAP No. 65, "*Projected salvage and subrogation (net of associated expenses) shall be established based onreporting entity experience, if credible; otherwise, based on industry experience.*"[107] SSAP No. 65 goes on further to say, "*The actuarial report shall include a description of the manner in which the adequacy of the amount of security for*

[105] SSAP No. 65, paragraph 21 (Appendix IV).
[106] SSAP No. 65, paragraph 29 (Appendix IV).
[107] SSAP No. 65, paragraph 26 (Appendix IV).

deductibles and self-insured retentions is determined."[108]

The impact of ceded reinsurance is allowed to be reflected in the calculation of the net unearned premium reserves.

We refer the reader of this practice note to SSAP No. 65 for further details underlying the three Tests.

III.2 Intercompany pooling

It is a common practice for affiliated companies within an insurance group to pool business through an intercompany pooling agreement. Typically, one company in the pool assumes business from the other companies in the pool and then cedes the combined business (including its own business) back to the other companies, according to the percentage of their participation in the pool. This has a number of advantages, including simplified preparation of Annual Statements for the affiliated companies.

The NAIC Annual Statement Instructions for Schedule P require that direct plus assumed and ceded business be reported on a pooled basis. For companies within a group that pool all of their business, after external reinsurance, Schedule P is therefore identical for each company on a gross, ceded, and net basis, except that each company's Schedule P reflects its participation percentage. For a comprehensive example of how this works, the actuary may refer to the NAIC Instructions for Schedule P.

Since Schedule P gross and ceded premiums and losses reflect intercompany pooling transactions, gross and ceded premiums and losses for a pooled company are different in Schedule P as compared to the Underwriting and Investment Exhibits of the Annual Statement. For these companies, ceded reserves in Schedule P are also different from ceded reserves in Schedule F.

The Instructions provide that any retroactive change in intercompany pooling requires a restatement of Schedule P to reflect the current pooling agreement. A retroactive change in intercompany pooling among companies 100 percent owned by a common parent, which results in no gain in surplus, is not accounted for as retroactive reinsurance (see SSAP No. 63 and the *NAIC Accounting Practices and Procedures Manual*).

There are a number of impacts from intercompany pooling on reserve analyses and actuarial opinions. This section provides a discussion of these impacts in the order the impacts are addressed in the NAIC SAO Instructions.

III.2.1 Definitions

"Intercompany Pooling" in this context refers to business which is pooled among affiliated insurance companies who are party to a pooling agreement in which the participants receive a fixed and predetermined share of all business written by the pool. Intercompany pooling arrangements involve establishment of a conventional quota share reinsurance agreement under which all the pooled business is ceded to the lead entity and then retroceded back to the pool participants in accordance with their stipulated shares.

[108] SSAP No. 65, paragraph 33 (Appendix IV).

III.2.2 Discussion: Identification and disclosure of the pooling arrangement

Section 1C of the NAIC SAO Instructions was expanded in 2014 to apply to all companies that operate in an intercompany pooling agreement. Regardless of their participation percentage, companies participating in intercompany pooling arrangements are required to include a description of the pool, identification of the lead company, and a listing of all companies in the pool, their state(s) of domicile, and their respective pooling percentages in each of the SAOs.

If the composition of the pool, or a company's share of the pool, changed materially during the current year, the actuary may wish to comment on this by describing the change.

III.2.3 Discussion: Reserve analyses for pooled companies

For business that is part of a pooling agreement, the NAIC permits reserve analyses to be performed on a pooled basis, both gross and net of reinsurance. The following provides illustrative language that the actuary may wish to include in the SCOPE section of the SAO. We note that the first illustration is the same as that provided in section 3.3.2 of the practice note, repeated here for convenience.

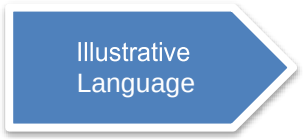
The Company is the lead member of an intercompany pooling agreement with its subsidiaries, DEF Insurance Company and GHI Insurance Company. Premiums and losses are allocated to the Company based on its assigned percentage to the total pool, XX%. Analysis of the reserve items identified in Exhibit A has been performed for all pool companies combined and allocated to the pool companies based on their pooling percentages. Any favorable or adverse development will affect pool members in a manner commensurate with their pool participation. The following is a listing of all companies in the pool, their respective pooling percentages, and their state of domicile: ….

OR

The Company is part of an intercompany pooling agreement with other affiliates of [name of group]. Premiums and losses are allocated to the Company based on its assigned percentage of the total pool. Analysis of the reserve items identified in Exhibit A has been performed for all pool companies combined and allocated to the pool companies based on their pooling percentages. The following is a listing of all companies in the pool, their respective pooling percentages, their state(s) of domicile, and an identification of the lead company: ….

III.2.3 Discussion: Reconciliation to Schedule P for pooled companies

If all business in the affiliated companies is part of the pooling agreement, the reconciliation of data to Schedule P, Part 1 can also be performed on a pooled basis. The actuary may wish to comment on this along the following lines when discussing reconciliation:



I also reconciled that data to a composite Schedule P – Part 1, comprising the total intercompany pool to which the Company belongs.

III.2.4 Discussion: Compilation of Exhibits A and B for pooled companies

Additionally, regardless of the company's participation percentage in the intercompany pool, each company is required to include Exhibits A and B reflecting its share. Companies having a zero percent share are required to include relevant comments that relate to the risks of the lead pool member and are required to file Exhibits A and B of the lead as an addendum to their SAOs.

III.2.5 Discussion: Actuarial Opinion Summary

The AOS Instructions pertaining to companies participating in intercompany pooling require the Appointed Actuary to state the company's intercompany pooling percentage.

In cases of intercompany pooling, the actuary often performs his or her analysis and draws his or her conclusions on the basis of total reserves. This information is usually described within the opinion. According to the AOS Instructions, for non-zero percent companies, the information provided for paragraph 5 of the AOS should be numbers after the company's share of the pool has been applied; specifically, the point or range comparison should be for each statutory company and should not be for the pool in total. However, for those companies whose participation percentage is zero, the information provided for paragraph 5 should be that of the lead company.

Note:

- Intercompany pooling agreements may create substantial cessions on Schedule F between members of the pool.
- A change in pooling percentage can cause a company to fail IRIS Tests, particularly the Estimated Current Reserve Deficiency to Surplus.

III.3 NAIC Guidance for Actuarial Opinions for Pools and Associations

The Casualty Actuarial and Statistical Task Force (CASTF) of the NAIC has provided guidance for a required SAO for Pools and Associations. This guidance document is reproduced for the convenience of the reader. Note that this document was last updated by the CASTF in September 2010 and, therefore, does not reflect the changes made by the NAIC in the 2018 Statement of Actuarial Opinion Instructions.

September 2010

NAIC Guidance for Actuarial Opinions for Pools and Associations

Prepared by the Casualty Actuarial & Statistical Task Force

A "Statement of Actuarial Opinion" (SAO) for Pools and Associations should be written in accordance with the NAIC Annual Statement Instructions Property and Casualty. The Casualty Actuarial & Statistical Task Force (CASTF) of the NAIC provides the following guidance to aid in writing a SAO for Pools and Associations. Note that the Actuarial Opinion Summary (AOS) does not apply to Pools and Associations.

The numbering in the following guidance corresponds to the numbering in the NAIC Annual Statement Instructions Property and Casualty.

1. The Board of Directors of the pool shall appoint a Qualified Actuary to write the SAO for the pool. The SAO shall be forwarded by the pool administrator to each pool member by January 31st of the succeeding year or as otherwise agreed by voluntary pool members.

1.A. Definitions

Pool member means an insurer authorized to write property and/or casualty insurance under the laws of any state, unless otherwise defined in state law, and includes but is not limited to fire and marine companies, general casualty companies, local mutual aid societies, statewide mutual assessment companies, mutual insurance companies other than farm mutual insurance companies and county mutual insurance companies, Lloyd's plans, reciprocal and interinsurance exchanges, captive insurance companies, risk retention groups, stipulated premium insurance companies, and nonprofit legal services corporations.

4. SCOPE Paragraph

The net reserves included in the SCOPE paragraph are net of reinsurance, other than cessions used to distribute the losses to pool members.

The SCOPE paragraph should indicate the accounting basis on which the entity isproviding its financial information, the valuation date of data used in support of the opinion, and whether this data has been adjusted to reflect expected values as of December 31 of the calendar year for which the SAO is provided. Alternatively, if data reported by the entity is on a lagged basis, the number of months by which data is lagged should be noted.

Exhibit A should be modified to provide only those items relevant to Pools and Associations.

6. RELEVANT COMMENTS paragraphs

The Appointed Actuary must provide RELEVANT COMMENT paragraphs to address issues such as collectibility of assessments, the mechanism for recovering any pool deficits, or the nature of member's liability as part of the pool.

b. Other Disclosures in Exhibit B

Exhibit B should be modified to provide only those items relevant to Pools and Associations.

d. IRIS Ratios

In lieu of comments about IRIS ratios, if the entity's current reserves indicate adverse development of greater than 20% on reserve valuations established at the same date one year and/or two years prior, the actuary must include RELEVANT COMMENT on the factors that led to the unusual value(s) along with explanation.

Exhibits

The exhibits required in the NAIC Annual Statement Instructions Property and Casualty should be modified to provide only those items relevant to Pools and Associations. The CASTF provides the following altered exhibits for reference.

Exhibit A: SCOPE

Loss Reserves:	Amount
1. Reserve for Unpaid Losses	$ _____
2. Reserve for Unpaid Loss Adjustment Expenses	$ _____
3. Reserve for Unpaid Losses – Direct and Assumed	$ _____
4. Reserve for Unpaid Loss Adjustment Expenses – Direct and Assumed	$_____
5. The Page 3 write-in item reserve, "Retroactive Reinsurance Reserve Assumed"	$ XXX
6. Other Loss Reserve items on which the Appointed Actuary is Expressing an Opinion (list separately)	$ _____

Premium Reserves:

7. Reserve for Direct and Assumed Unearned Premiums for Long Duration Contracts
8. Reserve for Net Unearned Premiums for Long Duration Contracts

9. Other Premium Reserve items on which the Appointed Actuary is expressing an Opinion (list separately) $ _____

Exhibit B: DISCLOSURES

1. Name of the Appointed Actuary Last_____First_____Mid _____

2. The Appointed Actuary's Relationship to the entity Enter E or C based upon the following:

E if an Employee
C if a Consultant

_____

3. The Appointed Actuary is a Qualified Actuary based upon what qualification? Enter F, A, M, or O based upon the following:

F if a Fellow of the Casualty Actuarial Society (FCAS)
A if an Associate of the Casualty Actuarial Society (ACAS)
M if not a member of the Casualty Actuarial Society, but a Member of the American Academy of Actuaries (MAAA) approved by the Casualty Practice Council, as documented with the attached approval letter.
O for Other

_____

4. Type of Opinion, as identified in the OPINION paragraph. Enter R, I, E, Q, or N based upon the following:

R if Reasonable
I if Inadequate or Deficient Provision
E if Excessive or Redundant Provision
Q if Qualified. Use Q when part of the OPINION is Qualified.
N if No Opinion

_____

5. Materiality Standard expressed in US dollars (Used to Answer Question #6)

$ _____

6. Is there a Significant Risk of Material Adverse Deviation?
Yes [ ] No [ ] Not Applicable [ ]

7. Statutory Surplus $ _____

8. Anticipated net salvage and subrogation included as a reduction to loss reserves

$ _____

9. Discount included as a reduction to loss reserves and loss expense reserves
9.1 Nontabular Discount $ _____

9.2 Tabular Discount $ _____

10. The net reserves for losses and expenses for the company's share of voluntary and involuntary underwriting pools' and associations' unpaid losses and expenses $ XXX

11. The net reserves for losses and loss adjustment expenses that the company carries for the following liabilities*

11.1	Asbestos, as disclosed in the Notes to Financial Statements	$ XXX
11.2	Environmental, as disclosed in the Notes to Financial Statements	$ XXX

12. The total claims made extended loss and expense reserve

12.1	Amount reported as loss reserves	$ XXX
12.2	Amount reported as unearned premium reserves	$ XXX

13. Other items on which the Appointed Actuary is providing Relevant Comment (list separately)

$ _____

* The reserves disclosed in item 11 above, should exclude amounts relating to contracts specifically written to cover asbestos and environmental exposures. Contracts specifically written to cover these exposures include Environmental Impairment Liability (post 1986), Asbestos Abatement, Pollution Legal Liability, Contractor's Pollution Liability, Consultant's Environmental Liability, and Pollution and Remediation Legal Liability.

III. 4 Retroactive and financial reinsurance

This section provides additional detail on the topics of retroactive and financial reinsurance, beyond that discussed in sections 5.8 and 5.9 of the practice note.

According to the NAIC SAO Instructions,

> "*RELEVANT COMMENT paragraphs should address reinsurance collectability, retroactive reinsurance and financial reinsurance."*[109]

The reference to retroactive reinsurance relates to contracts subject to retroactive reinsurance accounting, not to retroactive reinsurance contracts subject to prospective reinsurance accounting.

III.4. 1 Definitions

"*Retroactive reinsurance refers to agreements referenced in SSAP No. 62R, Property and Casualty Reinsurance, of*

[109] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

the NAIC Accounting Practices and Procedures Manual."[110]

For the purpose of the SAO this definition refers to retroactive reinsurance contracts subject to retroactive reinsurance accounting. Some retroactive reinsurance contracts instead are subject to prospective reinsurance accounting. Paragraph 31 of SSAP 62R lists those retroactive contracts subject to prospective reinsurance accounting:

- *Structured settlement annuities:* These are accounted for as reinsurance for GAAP purposes but as paid losses with contingent liabilities for statutory accounting purposes. See SSAP 65, paragraphs 17 through 19 for more information.
- *Novations*
- *The termination of, or reduction in participation in, reinsurance treaties entered into in the ordinary course of business*
- *Intercompany reinsurance agreements, and any amendments thereto, among companies 100% owned by a common parent or ultimate controlling person provided there is no gain in surplus as a result of the transaction*
- *Certain runoff agreements*: These are described in detail in paragraphs 80 through 83 of SSAP 62R.

"Financial reinsurance refers to contracts referenced in SSAP No. 62R [of the NAIC Accounting Practices and Procedures Manual] in which credit is not allowed for the ceding insurer because the arrangements do not include a transfer of both timing and underwriting risk that the reinsurer undertakes in fact to indemnify the ceding insurer against loss or liability by reason of the original insurance."[111]

III.4.2 Discussion: Retroactive Reinsurance

Retroactive reinsurance contracts discussed herein are only those subject to retroactive reinsurance accounting treatment.

Retroactive reinsurance contracts do not affect the losses reported in Schedule P or the Underwriting & Expense Exhibits, but they do affect the surplus of the parties involved. The loss reserves (ceded and assumed) for such contracts are reported separately as write-in liabilities (or contra-liabilities) on the balance sheet. For the ceding company, any surplus gain from the retroactive reinsurance is recorded as "special surplus" until (and to the extent that) it reflects actual reinsurance recoveries above reinsurance considerations paid. These "special surplus" amounts are recognized for RBC and other similar solvency evaluation purposes, but may not be available for dividend and similar purposes.

Since the contracts do not impact the loss schedules of the annual statement the financial impact of these contracts may not be readily apparent, requiring the use of different data sources or different reconciliation approaches. The contracts also will not impact reported loss development (and hence the risk of adverse loss development) that may be reported in Schedule P – Part 2, but do impact statutory surplus. As such, the actuary may want to evaluate and set the RMAD criteria in recognition of this situation. A RMAD focusing on changes to

[110] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).
[111] *2018 NAIC Annual Statement Instructions Property/Casualty* (Appendix I.1).

surplus will reflect the risk and impact of retroactive reinsurance, while one focusing on the risk to Schedule P reserves will not be impacted by retroactive reinsurance.

Note that retroactive reinsurance contracts have to pass risk transfer to qualify for reinsurance accounting treatment (prospective or retroactive). Contracts that don't meet risk transfer requirements will be accounted for as deposits.

An actuary that has access to both statutory and GAAP financial statements may benefit from knowing how GAAP accounting for such contracts differs from the statutory accounting. GAAP loss reserves will include the impact of retroactive reinsurance contracts, but any surplus gain that results will be amortized over time. Hence GAAP loss reserve disclosures will benefit from these contracts, but GAAP equity will have any benefit deferred.

III.1.2 Discussion: Financial Reinsurance

Financial reinsurance contracts are contracts that do not transfer sufficient risk so as to qualify for reinsurance accounting treatment. These contracts could be prospective or retroactive in nature (i.e., they could cover only claims incurred in the future, claims incurred in the past, or some combination of the two). The one constant is that these contracts are accounted for as deposits, with no impact on loss reserves and (normally) minimal impact on surplus.

These contracts were the subject of various investigations by both state insurance regulators and the SEC in the past due to the potential for such contracts to distort financial statements if not recorded as deposits. If recorded as deposits then these contracts should not impact the actuarial opinion analysis. If incorrectly

reported then these contracts may understate the risk associated with the company's balance sheet.

The risk transfer analysis to determine if reinsurance or deposit accounting applies is discussed in SSAP 62R. It says that determining whether risk transfer exists "*requires a complete understanding of that contract and other contracts or agreements between the ceding entity and related reinsurers. A complete understanding includes an evaluation of all contractual features….*"[112] These include cancellation provisions, loss-sensitive features and investment income potential, not just undiscounted losses that may result from that contract.

FAQ: This requirement violates the economics of these situations. Our company has paid another organization to assume these costs. Why should we now set up an additional liability?

A: Statutory Accounting is often more conservative than GAAP accounting, and is often more conservative than the economic fundamentals of a situation would indicate. Regulators have taken a conservative approach to pre-paid loss adjustment expenses.

III.5 Pre-paid Loss Adjustment Expense

Third-party administrators (TPAs) often provide loss adjustment services on a fixed price basis to their insurance company customers. For example, a TPA may agree to handle all claims from Accident Year 20XX arising from a specific line of business or from a specific program -- for a fee of X% of the line's 20XX earned premium. These agreements often are "cradle to grave", providing for loss adjustment services into the future until all claims covered by the agreement are closed.

SSAP 55, Paragraph 5 of the AP&P Manual states:

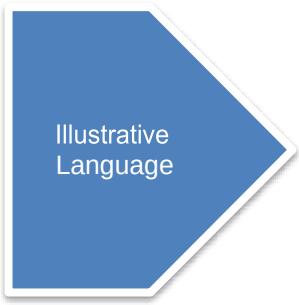
[112] SSAP No. 62R, paragraph 12 (Appendix IV).

"The liability for unpaid loss adjustment expenses shall be established regardless of any payments made to third-party administrators, management companies or other entities…"[113]

Thus, statutory accounting requires the Company to include a full reserve for these loss adjustment expenses, regardless of any amounts which have been pre-paid.

III.5.1 Illustrative language

Comments on pre-paid loss adjustment expenses may be included in the SAO when this item is material. In addition, regulators may expect an appropriate discussion of this topic in the Actuarial Report.



The Company has an agreement with {name of TPA} to adjust all claims from the 20XX accident year from the {name of program or line of business}, until all of these claims have been closed. A pre-payment for these services has been made by the Company to {name of TPA}.

Regardless of this pre-payment, the Company has established the liability for unpaid loss adjustment expenses and included this balance in the loss adjustment expenses reserves included in Exhibit A.

III. 6 Guidance for Audit Committee Members of P/C Insurers

The following document was first published by COPLFR in 2007 and was updated in 2014 to assist practicing actuaries in communicating with a company's board of directors or audit committee concerning uncertainties in the process of estimating unpaid loss and loss adjustment expense claims liabilities. In response to regulatory concerns about the need for more frequent and direct communication between the Appointed Actuary and the company's board of directors, we reproduce the updated 2014 document here for the convenience of the reader. COPLFR hopes this document will serve as a reference for the Appointed Actuary when assembling materials for a presentation to a board or audit committee.

[113] SSAP No. 55, paragraph 5 (Appendix IV).

A PUBLIC POLICY OVERVIEW

This document[1] is intended to provide members of boards of directors and audit committees of property/casualty insurance companies with a more complete understanding of the information and assistance that actuarial professionals can provide as such board/committee members perform their financial reporting oversight roles.

Summary

The reliability of financial statements for property/casualty insurance companies depends significantly on the accuracy of the recorded liabilities for unpaid claims, commonly referred to as "loss reserves." Unlike most balance-sheet liabilities common to other industries, the loss reserves of a property/casualty insurer are only estimates, not fixed known amounts. These estimates are based on the work of actuaries.

Loss reserve estimates are often subject to significant uncertainties. At times, property/casualty insurers have announced significant loss reserve increases for reasons that include but are not limited to: high growth in new business lines (where the company did not have preexisting experience), the impact of major court cases, unanticipated increases in loss trends (such as sustained higher trends in medical costs and utilization), asbestos litigation, and construction defect claims. For some companies, such loss reserve increases are large enough to impair their financial condition; for others, reported profitability is affected. Significant loss reserve decreases can also occur, e.g., due to declining auto claim frequency during a recession.

Property/casualty insurance companies' boards of directors and audit committees have a fiduciary responsibility and regulators' expectation for overseeing the financial reporting process. Since loss reserves are crucial to property/casualty insurers' financial statements, audit committees and boards of directors are advised to have direct discussions with their actuarial professionals to obtain a better understanding of the loss reserve estimation process and the policies related to that process. These discussions, via both periodic presentations and special workshops, help to increase boards of directors and audit committee members' appreciation for the uncertainty inherent in loss reserve estimates.

This document begins with a background on loss reserves and the roles of actuaries in setting them, followed by a discussion of oversight function considerations related to those reserves.

[1] The considerations contained herein are based on broad generalizations and are not intended to describe or establish actuarial standards of practice or requirements. The information presented is intended to reflect a large percentage of property/casualty insurers. Within the property/casualty insurance industry, there is wide diversity of actuarial practice. Each company and each situation must be evaluated on the basis of its own circumstances.

This document is offered primarily for members of audit committees and boards of directors of property/casualty insurers subject to regulation by the members of the National Association of Insurance Commissioners (NAIC). While most of the considerations apply as well to other insurance entities, including non-U.S. insurance companies, captive insurance companies, corporate self-insurers, etc., some of the references contained herein are specific to the NAIC's requirements regarding the recording of loss reserves in insurers' financial statements.

Appendix A Property/Casualty Insurance Loss Reserves

A property/casualty insurance policy is a promise to pay claims related to covered, or insured, events. Usually, covered events take place during the time the policy is in effect (e.g., auto accident, injury, or loss of property as a result of a loss covered under the terms of the policy). In some cases, the insurance company is not presented with a claim or demand for payment by the insured or a third party until years after the covered event has occurred. It can take many years for a claim, once made, to be investigated and settled.

When these claims are eventually settled, the insurance company must have the resources to pay the claim in accordance with the policy provisions. Therefore, until all claims are resolved and the related amounts are paid, insurance accounting rules require the insurer to establish a "loss reserve" as a liability on the company's balance sheet. (These loss reserves include a provision for loss adjustment expenses[2] (LAE) or settlement costs.) The loss reserve is based on the company management's best estimate of the amounts that will be paid in the future for losses and loss adjustment expenses related to claims arising from past events (i.e., events on or prior to the accounting "as of" date) pursuant to policies sold, whether or not all claims have been reported at that time.

The duration and the uncertainty of the claims-settlement process necessitate that loss reserves be based on estimates. A property/casualty insurer's loss reserves are typically the company's largest balance-sheet liability by a wide margin and its greatest source of financial statement uncertainty. Loss reserves can be difficult to estimate, and the amounts ultimately paid may be far less than, or greater than, amounts previously estimated.

A conclusion that prior years' loss reserves need to be revised, based on current facts and circumstances, affects both the company's reported surplus and its income during the period in which that conclusion is reached. As such, changes in loss reserve estimates have consequences both for the financial condition of the company and for its perceived ongoing operating profitability. It is therefore important that loss reserves be set as accurately as possible.

Role of Actuaries in the Reserving Process

Actuaries typically play an integral role in the loss-reserving process. The actuarial role is generally provided by one or more of the following sources:

- *Internal Actuaries* – Many insurance companies employ actuaries to aid in setting loss reserves. Typically an internal actuary provides periodic analyses of loss reserves and assist management in understanding underlying claim trends, the judgments and assumptions used in the analyses, and any material risk factors that might affect the loss reserves. The internal actuary may also lead presentations regarding estimated loss reserves to boards of directors and audit committees.

[2] LAE are discussed in greater detail in Actuarial Standard of Practice No. 43, *Property/Casualty Unpaid Claim Estimates*, promulgated by the Actuarial Standards Board (ASB), which can be found at http://www.actuarialstandardsboard.org/pdf/asops/asop043_159.pdf.

- *Audit Firms* – Often, insurance companies' external audit firms will assign actuaries to their engagement teams. The audit firms' actuaries evaluate the reasonableness of the recorded amounts. To assist them in this evaluation, they may develop an alternative point estimate and/or "range of reasonable estimates"[3] of the loss reserves. This range is usually much narrower than a range of possible outcomes, and it is intended to provide an independent view of whether the recorded loss reserve amounts are reasonable in light of the available information.

- *Consulting Actuaries* – Consulting actuaries may be engaged to take on the actuarial role in setting loss reserves (as described in the *Internal Actuaries* discussion above). Some companies also engage third-party actuarial consultants to perform independent analyses of the loss reserves. Such analyses can encompass the entire claim population or can be limited to some unusual or especially difficult to estimate portion of the exposures. The detailed analyses performed by consulting actuaries often include independent methodologies, judgments, and assumptions.

The boards of directors of all U.S.-domiciled insurers are also required to appoint a qualified actuary, or "appointed actuary," to render an opinion on the recorded loss reserves for the regulatory (or "statutory") year-end financial statements. This opinion is based on specifications described by the National Association of Insurance Commissioners (NAIC), and is contained in a formal, public document called the *Statement of Actuarial Opinion* (SAO).[4] The SAO is an important tool used by insurance regulators to assess insurer solvency. In addition to the actuarial opinion on the reasonableness of the recorded loss reserves, the SAO contains informative disclosures regarding the factors affecting the variability of the loss reserves and the appointed actuary's view as to whether there is a risk of "material adverse deviation[5]" from the recorded estimate.

Oversight Function Considerations – Loss Reserve Estimates

The following are some of the major considerations for those providing an oversight function on recorded loss reserves.

- Unavoidable use of judgment – input from multiple disciplines
- How actuarial estimates are considered
- Extensive public (and private) disclosure
- Loss reserve variability and uncertainty
- Data quality and the impact on loss reserve uncertainty
- Context of the reserves
- Ceded reinsurance
- Governance (control) structure underlying loss reserves

---

[3] The term "range of reasonable estimates" is defined and described later in the section labeled "Loss Reserve Variability and Uncertainty." The term is also discussed in a 2008 Academy paper, "P/C Actuarial Communication on Reserves Ranges and Variability of Unpaid Claim Estimates," available at http://www.actuary.org/files/range_septo8.4.pdf/range_septo8.4.pdf.

[4] In the United States, the SAO is prepared at the legal entity level, i.e., for each individual insurance company within a group rather than for the consolidated group of companies. (See the NAIC's Regulatory Guidance for Annual Statement Instructions for Property/Casualty Actuarial Opinions, available at http://www.naic.org/committees_c_catf.htm

[5] The SAO instructions require the appointed actuary to disclose their materiality standard"

Appendix B Unavoidable Use of Judgment – Input from Multiple Disciplines

As mentioned above, loss reserves are only estimates of the ultimate amounts payable and are not known with certainty. The amounts that will eventually be paid will be the result of numerous investigations, settlement negotiations, jury trials, court decisions, (possibly) contract interpretations, and other items not knowable with certainty in advance. Hence the use of judgment in the estimation process is inevitable.

The basis for these estimates is "past experience adjusted for current trends, and any other factors that would modify past experience."[6] This estimation process is often led by actuaries and requires the input of others from multiple disciplines. Those providing input typically include the claims department, legal counsel, underwriting, and relevant business units, with the final decision on the estimate to book being the responsibility of company management.
That said, actuarial input is vital to management's process, as the actuarial estimates typically consider and incorporate input from all involved disciplines.

Members of audit committees and boards of directors benefit from understanding the significant judgments and assumptions incorporated into the loss reserve estimates that are made by management and by the actuary. The significance of this understanding can extend beyond loss reserves, as the findings or observations that inform those judgments may also provide valuable input to decisions regarding pricing or marketing plans.

How Actuarial Estimates Are Considered

Actuarial estimates are not necessarily adopted by management as the booked loss reserves, as company management may record an amount that differs from the actuary's estimate. In such cases, members of audit committees and boards of directors should understand the differences between the actuarial and management estimates. In particular, members of audit committees and boards of directors may request management to provide clarity through answers to the following questions:

- Does management's process typically result in differences between the actuary's estimates and the recorded amounts, and, if so, why?
- How do management's estimates compare to a range of estimates that may be developed by the actuary?
- Has due diligence been performed to identify the potential impact, if any, on the loss reserve estimates of any significant recent changes in the company's operations (e.g., claims, underwriting, reinsurance)?
- If such changes exist, what adjustments or other considerations are made (by management and/or the actuary) to reflect the potential impact of the changes on the estimates of loss reserves?

Extensive Public (and Private) Disclosure

The loss reserves recorded by a U.S. property/casualty insurer are subject to extensive public and private disclosure, allowing many parties to view and potentially form their own view of the insurer's estimates.

[6] 2014 NAIC Accounting Practices & Procedures Manual – Statement of Statutory Accounting Practices (SSAP) No. 55, paragraph 10.

The Securities and Exchange Commission (SEC) requires each publicly-traded U.S. property/casualty insurance company to include a loss reserve development table as part of its annual Form 10-K filing. This table provides a comparison of the company's consolidated loss reserves (claim liabilities) recorded at each of the past 10 year-ends to updated estimates, including the most recent estimate, of those same liabilities. Additional (largely) qualitative disclosures are also required regarding loss reserves and related risk factors. These disclosures include information on the reasonably likely variation in the insurer's loss reserves and the effect of that variation on the financial condition of the company. The disclosures also contain explanation of the source of any recent changes in prior loss reserve estimates. In addition to the disclosures within the SEC filings, many public companies issue press releases and hold investor conference calls that incorporate information related to loss reserves.

For U.S. property/casualty insurers, a summary of similar loss development information is provided in Schedule P, Part 2 – Summary (Schedule P) of the NAIC Statutory Annual Statement, which is filed by each individual insurance company for regulatory purposes. Schedule P shows the annual development of ultimate losses and *Defense and Cost Containment loss adjustment expense* (DCC LAE) for each of the past 10 coverage years (often referred to as "accident years").

Both the SEC disclosures and the NAIC Schedule P filings provide 10 years of history showing the accuracy of management's loss reserve decisions over time. These schedules are used by analysts and other users[7] to assess the reliability of a company's current reserving practices and the accuracy of the balance sheet estimates relative to those of its competitors.

Members of audit committees and boards of directors can request the company actuary to provide the following information with regard to these disclosures:

- The specific reasons for past years' revisions to loss reserve estimates, including the lines of business, programs, and years affected.
- A comparison to industry trends for the same coverages during the same period.
- A comparison to the reserve activity of the company's closest competitors for the same coverages during the same period.

Besides the public SAO mentioned above, in which the appointed actuary is required by state law or regulation[8], to opine on the reasonableness of recorded loss reserves, the appointed actuary is also required to provide a private disclosure (the Actuarial Opinion Summary, or AOS) to insurance regulators every year. The private report discloses the actuary's estimate or range of estimates relative to management's recorded loss reserve estimates, and, where applicable, the causes of recent significant adverse reserve development. The appointed actuary documents the analysis underlying the SAO and AOS in the detailed Actuarial Report[9], which is made available to the insurance regulator upon request. The board or audit committee may wish to receive its own copy every year of the SAO and AOS (a relatively short document).

[7] The list of other users includes the Internal Revenue Service (IRS). The Schedule P filings are the basis for the loss reserve tax deduction under current tax losses, with the IRS and tax courts also making use of actuarial analyses in evaluating the reasonableness of these deductions. See *Acuity v. IRS* tax court decision, "T.C. Memo. 2013-209."

[8] Theses state laws or regulations are based on an NAIC model law on the topic of P&C insurer loss reserve opinions by appointed actuaries.

[9] The Actuarial Report is required and defined by the SAO instructions, and its purpose is to document the SAO findings.

Appendix C Loss Reserve Variability and Uncertainty

The management of a U.S. P/C insurer is required to include an analysis of variability and uncertainty in the loss reserve estimation process.[10] Actuaries are uniquely qualified to provide insights into the potential for this variability and uncertainty.

Estimating loss reserves involves predicting future loss payments based on historical and current information and knowledge, as well as judgment about future conditions. Actuaries typically employ several methods to estimate loss reserves in a given situation and may consider multiple reasonable assumptions regarding future conditions when applying the methods. The actuary may develop a "range of reasonable estimates"[11] of loss reserves based on various combinations of these methods and assumptions. This range is typically developed by the Appointed Actuary to assist in creating an opinion on the reasonableness of the recorded loss reserves. The range of reasonable estimates is not a broad range of potential outcomes; rather, it is a narrower range of estimates that the actuary considers to be appropriate for the carried reserve.

While the range of reasonable estimates may encompass multiple reasonable assumptions about future conditions, it typically will not include the possibility of sudden shifts in the statutory, judicial, and economic-reserving environments, nor will it include major unexpected changes in company operations. Nevertheless, such shifts can and do occur.

As part of the actuarial opinion, the actuary reports on events and circumstances that pose a significant risk to the company and that would result in a material adverse deviation from the carried reserves. Such events and circumstances could be systemic to the company's segment of the insurance industry or particular to the company. Historic examples of systemic events and circumstances include changes in the legal environment that led to significant asbestos and environmental losses long after policies had expired or the rapid unexpected inflation that led to mispricing and initial under-reserving in workers' compensation in the late 1990s. Systemic changes can be positive as well: medical professional liability lines, in addition to experiencing rapid increases, have also seen rapid decreases in claims costs (neither of which were reflected in the initial reserves). Examples of significant internal risks include mispricing of a block of business or, for smaller companies, even the emergence of more than the expected number of large losses. For some companies, particularly very large personal lines carriers, the risk of material adverse deviation in the carried reserves might be remote, while other companies could be subject to reserve deviation risk so great that the difference between the high and low ends of the actuary's range of reasonable estimates is material.

Members of audit committees and boards of directors should seek to understand the significant risks that threaten reserve development outside of the current range of estimates, both in terms of their potential magnitude and the actuary's estimation of the likelihood of such events. Strong oversight should include frank discussions of such risks among the parties responsible for estimating and recording the loss reserves with the audit committee or board of directors.

---

[10] 2014 NAIC Accounting Practices & Procedures Manual, SSAP No. 55, paragraph 12: "Management … shall include an analysis of the amount of variability in the estimate".

[11] As pointed out in footnote 3, this term is also discussed in http://www.actuary.org/files/range_septo8.4.pdf/range_septo8.4.pdf.

Appendix D Data Quality and the Impact on Loss Reserve Uncertainty

The actuarial analysis process is highly dependent upon data quality, which is often determined by each company's systems and processes for collecting, storing, and making available its historical data relative to losses, exposures, and premiums. Due to the evolving data processing environment, some companies have a blend of historical systems that provide the data used by the reserving actuary. In addition, for companies that have undergone a series of mergers in the past, the systems of each of the legacy companies may not be fully integrated.

The level of controls and granularity of the information around these systems can lead to concerns about the quality of the data used by the actuary or may hamper the efficiency of certain levels of detailed review. Limitations posed by less than perfect data may introduce new uncertainties to the estimation process.

Even in the absence of these legacy system issues, data quality problems at a company can impact the reliability of the actuary's projections. For this reason, the actuary is required to review the data for reasonableness and consistency[12].

The actuary will have a view related to the degree of uncertainty that any data issues add to the process. The audit committee should consider making inquiries if this is a concern for a particular company.

Context of the Reserves

Loss reserving issues and variability can vary drastically across product lines and companies within the insurance industry. Hence, members of audit committees and boards of directors will benefit in their oversight function from being aware of the context underlying the reserve estimates, including the company's areas of concentration, recent industry trends in those areas, and material developments within the company that might affect the estimation process. Knowing this context can help them ask more probing questions of management and the appointed actuary regarding the recorded loss reserve and associated risks.

Information they may want to obtain from senior management and/or the appointed actuary could include:

- The breakdown of the company's loss reserves by coverage or product line.
- Recent industry trends in those product lines (with regard to profitability, underwriting, claims, and reserving issues).
- Whether there have been any recent changes in the company's experience in those lines vis-à-vis profitability, claim handling, or reserve development.
- Major risk factors in the reserving for those lines.
- Whether competitors are experiencing the same risk factors, recent changes, etc., that the company has seen.
- The causes of recent changes in reserve estimates (favorable or unfavorable).
- Whether competitors have cited similar causes.
- Questions about the reserves raised by major outside stakeholders, including regulators, rating agencies, and, where relevant, investors or investment analysts.

[12] This is a requirement of both Actuarial Standard of Practice No. 23 – Data Quality, as well as the SAO instructions.

The feedback received should be consistent with (or at least not contradictory to) information available from publicly available sources, such as trade publications, competitor SEC filings, and investor analyst reports.

Ceded Reinsurance

Much of the focus on recorded loss reserves is on a net of reinsurance basis, or those reserves after the impact of reinsurance cessions. However, those loss reserves that are expected to be ceded under reinsurance agreements are also estimates. The reasonableness of both the estimated cessions, and, perhaps more importantly, the collectability of such cessions, are matters for board/audit committee oversight, as overstatement of ceded reinsurance or failure to collect such cessions has caused adverse impacts to financial statements and has even caused insurer insolvencies in the past.

The Statement of Actuarial Opinion requires the opining actuary to have a separate view on both gross loss reserves (i.e., before the impact of such cessions), and net loss reserves. As such, the board/audit committee should expect the appointed actuary to be conversant in this area. Issues that the audit committee might consider querying include:

- Possible concentrations by reinsurer
- Financial strength ratings of current reinsurers
- The policy regarding required financial strength for possible future reinsurers
- Reliability/variability of the ceded reserve estimates underlying the recorded reserves

Governance (Control) Structure Underlying Loss Reserves

Any material balance sheet estimate needs to have a strong governance process and system of controls supporting it, and the loss reserve estimate is no exception. The following are some of the typical controls, both internal and external, that exist for loss reserve estimates. The board/audit committee member might want to be familiar with the extent to which these controls exist or are followed for the insurance company.

Internal Controls

- *Segregation of duties.* While input from those responsible for pricing or developing business (e.g., underwriters, pricing actuaries) is often very useful to the loss reserving process, objectivity typically improves when different people perform the primary reserving and pricing roles. The perspectives provided by the pricing and reserving functions are often different, with the pricing function focusing on the profitability of current and future business. By contrast, the reserving function focuses on the potential outcomes connected with business written in the past (sometimes even in markets that the company has since left). As such, the reserving function acts to some extent as an early warning test or report card on past pricing and/or underwriting performance. This creates a potential conflict of interest when the same people perform both functions. Where resources do not allow separate staffing of these two functions, audit committee members should be aware of the potential conflict of interest that arises from the same people performing both functions.

- *Use of reserve committees*. Some insurance companies have reserve committees or an equivalent oversight management group, often organized at one or more management segment level(s) (e.g., legal entity, line of business, region). The committee might include the segment's executive management, the segment's internal reserving actuary or actuarial consultant, and heads of key operating functions (e.g., claims, underwriting, marketing).

  Having a reserve committee does not ensure objectivity, and members of audit committees and boards of directors may wish to inquire further to determine its effectiveness. The extent to which a reserve committee improves objectivity is partly a function of the quality and efforts of the reserve committee members. Members of audit committees and boards of directors should learn the identities and qualifications of reserve committee members. The audit committee and board of directors may find value in meeting separately with the lead actuary to obtain the actuary's view of the reserve committee's effectiveness and may also find value in obtaining certain summary information from the reserve committee meetings on a regular basis.

- *Internal audit*. Larger insurance companies typically have an internal audit function that includes in its scope the loss reserve process. This internal audit function can include testing of data quality used in the loss reserve analysis and monitoring any in- house reserving actuaries' compliance with professional practice standards.

- *Actuarial peer review*. Many actuarial firms and in-house actuarial departments have implemented peer review programs to provide an additional set of eyes on professional work product.

- *Report from the Appointed Actuary*. Each statutory insurer's appointed actuary is legally required to report to the board or audit committee each year on the items within the scope of the actuary's loss reserve opinion. Many of these are in-person, allowing for immediate response to questions the board/audit committee may have.

External Controls

- *External Audit*. As loss reserve estimates have a material impact on earnings and technical solvency, external auditors of public companies typically include a review of these estimates in every reporting cycle (although more attention may be paid to this issue at year-end than for interim periods). Many insurers' boards/audit committees include discussions with their external auditors on a regular basis in their agendas.
- *Attestations.* Through its Model Audit rule, the NAIC requires larger insurers to provide an attestation regarding the operating effectiveness of its control structure. This control structure will include controls related to the loss reserving process. For public companies, the Sarbanes-Oxley Act of 2002 requires not only internal attestations, but an attestation by the independent auditors related to controls. An audit committee or board may seek reports related to how well the controls are operating and request specific information related to the controls on actuarial processes in particular.
- *Financial Examinations by Insurance Regulators.* State insurance laws require each insurer to undergo a financial exam by the state at least once every three to five years. A review of previously-recorded loss reserves is a key part of this exam, with that review performed by either insurance departments or external actuarial consultants working on behalf of the insurance departments. As part of these exams, the state's examiners inquire about the oversight of the board and audit committees into the loss reserving process, indicating that the expectations of the regulators includes a strong awareness and involvement in oversight of the loss reserves.

- *Replacement of Appointed Actuary.* Whenever an appointed actuary is replaced, the NAIC requires both the company and the outgoing appointed actuary to provide letters to the domiciliary state regulator discussing any disagreements over loss and LAE reserves during the last 24 months. These disagreement letters are not public information, but audit committees benefit from review of these letters whenever an appointed actuary is replaced.

Executive Session with Actuaries

Members of boards of directors or audit committees should consider meeting in executive session with the appointed actuary and potentially other actuaries significantly involved during the reporting process. Including the audit firm actuary in the audit committee's executive session with the audit firm is also beneficial. Such executive sessions are particularly of value where management may have exercised undue influence on the reserve estimation process. While such undue influence is uncommon, its potential is a key focus of regulators, as it has been a factor in a number of past insolvencies. Possible signs of undue management influence that could be identified during executive session include (in increasing order of severity):

- The actuary is not provided with comprehensive information on emerging problem areas (e.g., newer coverages with adverse experience).
- Information is provided late to the actuary, leaving inadequate time for analysis.
- The actuary is denied access to certain individuals at the company.
- Management makes clear to the actuary that his/her continued employment is contingent upon agreement with management's reserve estimates.
- The opining actuary is replaced, and the new actuary immediately agrees with management's position.

* * * * * * * * *

Loss reserves are a major part of an insurer's reported balance sheet, subject to public (and private) disclosure and review, and, by their nature, require the use of judgment. As such, oversight of such reserves is a material part of the board or audit committee's responsibility. Actuarial input in this oversight process is inevitable and invaluable. This issue brief attempts to aid in audit committees' and boards of directors' understanding of the issues and resources related to this important oversight function.

IV. SSAPs

Statement of Statutory Accounting Principles No. 5 - Revised

Liabilities, Contingencies and Impairments of Assets

STATUS

Type of Issue	Common Area
Issued	Initial draft; Substantively revised October 18, 2010
Effective Date	January 1, 2001; Substantive revisions December 31, 2011
Affects	Nullifies and incorporates INT 04-01 and INT 08-06
Affected by	No other pronouncements
Interpreted by	No other pronouncements

Liabilities, Contingencies and Impairments of Assets

SCOPE OF STATEMENT

1. This statement defines and establishes statutory accounting principles for liabilities, contingencies and impairments of assets.

SUMMARY CONCLUSION

Liabilities

2. A liability is defined as certain or probable[1] future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable[1] future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

Joint and Several Liabilities

5. Joint and several liability arrangements for which the total obligation amount under the arrangement is fixed[2] at the reporting dates shall be measured and reported as the sum of:

a. The amount the reporting entity agreed to pay on the basis of the agreements among its co-obligors, and

b. Any additional amount the reporting entity expects to pay on behalf of its co-obligors. When an amount within management's estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be the additional amount included in the measurement of the obligation. If no amount within the range is a better estimate than any other amount, then the midpoint shall be used.

[1] *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements*, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

[2] Examples of items within the scope of this guidance include debt arrangements, other contractual obligations, and settled judicial litigation and judicial rulings. Loss contingencies, guarantees, pension and other postretirement benefit obligations and taxes are excluded from this guidance and shall be accounted for under the statutory accounting provisions specific to those topics.

Loss Contingencies or Impairments of Assets

6. For purposes of implementing the statutory accounting principles of loss contingency or impairment of an asset described below, the following additional definitions shall apply:

a. Probable—The future event or events are likely to occur;

b. Reasonably Possible—The chance of the future event or events occurring is more than remote but less than probable;

c. Remote—The chance of the future event or events occurring is slight.

7. A loss contingency or impairment of an asset is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible loss to an enterprise that will ultimately be resolved when one or more future event(s) occur or fail to occur (e.g., collection of receivables).

8. An estimated loss from a loss contingency or the impairment of an asset shall be recorded by a charge to operations if both of the following conditions are met:

a. Information available prior to issuance of the statutory financial statements indicates that it is probable that an asset has been impaired or a liability has been incurred at the date of the statutory financial statements. It is implicit in this condition that it is probable that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and

b. The amount of loss can be reasonably estimated.

9. This accounting shall be followed even though the application of other prescribed statutory accounting principles or valuation criteria may not require, or does not address, the recording of a particular liability or impairment of an asset (e.g., a known impairment of a bond even though the VOS manual has not recognized the impairment).

10. Additionally, in instances where a judgment, assessment or fine has been rendered against a reporting entity, there is a presumption that the criteria in paragraph 8.a. and 8.b. have been met. A judgment is considered "rendered" when a court enters a verdict, notwithstanding the entity's ability to file post-trial motions and to appeal. The amount of the liability shall include the anticipated settlement amount, legal costs, insurance recoveries and other related amounts and shall take into account factors such as the nature of the litigation, progress of the case, opinions of legal counsel, and management's intended response to the litigation, claim, or assessment.

11. When the condition in paragraph 8.a. is met with respect to a particular loss contingency, and the reasonable estimate of the loss is a range, which meets the condition in paragraph 8.b., an amount shall be accrued for the loss. When an amount within management's estimate of the range of a loss appears to be a better estimate than any other amount within the range, that amount shall be accrued. When, in management's opinion, no amount within management's estimate of the range is a better estimate than any other amount, however, the midpoint (mean) of management's estimate in the range shall be accrued. For purposes of this paragraph, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be used.

12. The use of the midpoint in a range will be applicable only in the rare instance where there is a continuous range of possible values, and no amount within that range is any more probable than any other. This guidance is not applicable when there are several point estimates which have been determined

as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine their best estimate of the liability.

Tax Contingencies

13. As directed by SSAP No. 101, tax loss contingencies (including related interest and penalties) for current and all prior years, shall be computed in accordance with this SSAP, with the following modifications:

a. The term "probable" as used in this standard shall be replaced by the term "more likely than not (a likelihood of more than 50 percent)" for federal and foreign income tax loss contingencies only.

b. For purposes of the determination of a federal and foreign income tax loss contingency, it shall be presumed that the reporting entity will be examined by the relevant taxing authority that has full knowledge of all relevant information.

c. If the estimated tax loss contingency is greater than 50 percent of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100 percent of the original tax benefit recognized.

As noted in SSAP No. 101, state taxes (including premium, income and franchise taxes) shall also be computed in accordance with this SSAP. These items (as detailed in SSAP No. 101) are not impacted by the modifications detailed in paragraphs 13.a.-13.c.

Gain Contingencies

14. A gain is defined as an increase in surplus which results from peripheral or incidental transactions of a reporting entity and from all other transactions and other events and circumstances affecting the reporting entity except those that result from revenues or investments by owners. If, on or before the balance sheet date, (a) the transaction or event has been fully completed, and (b) the amount of the gain is determinable, then the transaction or event is considered a gain, and is recognized in the financial statements. The definition of a gain excludes increases in surplus that result from activities that constitute a reporting entity's ongoing major or central operations or activities. Because investment activities are central to an insurer's operations, increases in surplus that result from such investment activities are excluded from the definition of gains. Revenues are inflows or other enhancements of assets of a reporting entity or settlements of its liabilities (or a combination of both) from providing products, rendering services, or other activities that constitute the reporting entity's ongoing major or central operations. Investments by owners include any type of capital infused into the surplus of the reporting entity.

15. A gain contingency is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible gain (as defined in the preceding paragraph) to an enterprise that will ultimately be resolved when one or more future events occur or fail to occur (e.g., a plaintiff has filed suit for damages associated with an event occurring prior to the balance sheet, but the outcome of the suit is not known as of the balance sheet date). Gain contingencies shall not be recognized in a reporting entity's financial statements. However, if subsequent to the balance sheet date but prior to the issuance of the financial statements, the gain contingency is realized, the gain shall be disclosed in the notes to financial statements and the unissued financial statements should not be adjusted to record the gain. A gain is generally considered realizable when noncash resources or rights are readily convertible to known amounts of cash or claims to cash.

Guarantees

16. A guarantee contract is a contract that contingently requires the guarantor to make payments (either in cash, financial instruments, other assets, shares of its stock, or provision of services) to the guaranteed party based on changes in the underlying that is related to an asset, a liability, or an equity security of the guaranteed party. Commercial letters of credit and loan commitments, by definition, are not considered guarantee contracts. Also excluded from the definition are indemnifications or guarantees of an entity's own performance, subordination arrangements or a noncontingent forward contract. This definition could include contingent forward contracts if the characteristics of this paragraph are met.

17. The following guarantee contracts are not subject to the guidance in paragraphs 20-25 and paragraphs 29-32:

a. Guarantees already excluded from the scope of SSAP No. 5R;

b. Guarantee contracts accounted for as contingent rent;

c. Insurance contract guarantees, including guarantees embedded in deposit-type contracts;

d. Contracts that provide for payments that constitute a vendor rebate by the guarantor based on either the sales revenue or the number of units sold by the guaranteed party;

e. A guarantee or indemnification whose existence prevents the guarantor from being able to either account for a transaction as the sale of an asset that is related to the guarantee's underlying or recognize in earnings the profit from that sale transaction;

f. Registration payment arrangements; and

g. A guarantee that is accounted for as a credit derivative instrument at fair value under SSAP No. 86, as described in paragraph ~~56~~57.e. of SSAP No. 86.

18. The following types of guarantees are exempted from the initial liability recognition in paragraphs 20-25, but are subject to the disclosure requirements in paragraphs 29-32:

a. Guarantee that is accounted for as a derivative instrument, other than credit derivatives within SSAP No. 86;

b. Guarantee for which the underlying is related to the performance of nonfinancial assets that are owned by the guaranteed party, including product warranties;

c. Guarantee issued in a business combination that represents contingent consideration;

d. Guarantee in which the guarantor's obligation would be reported as an equity item;

e. Guarantee by an original lessee that has become secondarily liable under a new lease that relieved the original lessee from being the primary obligator;

f. Guarantees (as defined in paragraph 16) made to/or on behalf of directly or indirectly wholly-owned insurance or non-insurance subsidiaries[3]; and

[3] The exclusion for wholly-owned subsidiaries includes guarantees from a parent to, or on behalf of, a direct wholly-owned insurance or non-insurance subsidiary as well as guarantees made from a parent to, or on behalf of, an indirect wholly-owned insurance or non-insurance subsidiary. The "wholly-owned" exclusion in paragraph 18.f. does not include guarantees issued from one subsidiary to another subsidiary, regardless if both subsidiaries are wholly-owned (directly or indirectly) by a parent company.

g. Intercompany and related party guarantees that are considered "unlimited" (e.g., typically in response to a rating agency's requirement to provide a commitment to support).

19. With the exception of the provision for guarantees made to/or on behalf of a wholly-owned subsidiaries in paragraph 18.f. and "unlimited" guarantees in 18.g., this guidance does not exclude guarantees issued as intercompany transactions or between related parties from the initial liability recognition requirement. Thus, unless the guarantee is provided on behalf of a wholly-owned subsidiary or considered "unlimited," guarantees issued between the following parties are subject to the initial recognition and disclosure requirements:

a. Guarantee issued either between parents and their subsidiaries or between corporations under common control;

b. A parent's guarantee of its subsidiary's debt to a third party; and

c. A subsidiary's guarantee of the debt owed to a third party by either its parent or another subsidiary of that parent.

20. At the inception of a guarantee, the guarantor shall recognize in its statement of financial position a liability for that guarantee. Except as indicated in paragraph 22, the objective of the initial measurement of the liability is the fair value[4] of the guarantee at its inception.

21. The issuance of a guarantee obligates the guarantor (the issuer) in two respects: (a) the guarantor undertakes an obligation to stand ready to perform over the term of the guarantee in the event that the specified triggering events or conditions occur (the noncontingent aspect) and (b) the guarantor undertakes a contingent obligation to make future payments if those triggering events or conditions occur (the contingent aspect). Because the issuance of a guarantee imposes a noncontingent obligation to stand ready to perform in the event that the specified triggering event occurs, the provisions of paragraph 8 should not be interpreted as prohibiting the guarantor from initially recognizing a liability for that guarantee even though it is not probable that payments will be required under that guarantee.

22. In the event that, at the inception of the guarantee, the guarantor is required to recognize a liability under paragraph 8 for the related contingent loss, the liability to be initially recognized for that guarantee shall be the greater of (a) the amount the satisfies the fair value objective as discussed in paragraph 20 or (b) the contingent liability amount required to be recognized at inception of the guarantee by paragraph 8. For many guarantors, it would be unusual for the contingent liability under (b) to exceed the amount that satisfies the fair value objective at the inception of the guarantee.

23. The offsetting entry pursuant to the liability recognition at the inception of the guarantee depends on the circumstances in which the guarantee was issued. Examples include:

a. If the guarantee was issued in a standalone transaction for a premium, the offsetting entry would the consideration received.

b. If the guarantee was issued in conjunction with the sale of assets, a product, or a business, the overall proceeds would be allocated between the consideration being remitted to the guarantor for issuing the guarantee and the proceeds from that sale. That allocation would affect the calculation of the gain or loss on the sale transaction.

[4] As practical expedients, when a guarantee is issued in a standalone arm's-length transaction, the liability recognized at the inception of the guarantee should be the premium received or receivable by the guarantor. When a guarantee is issued as part of a transaction with multiple elements, the liability recognized at the inception of the guarantee should be an estimate of the guarantee's fair value. In that circumstance, guarantors should consider what premium would be required by the guarantor to issue the same guarantee in a standalone arm's-length transaction.

c. If a residual value guarantee were provided by a lessee-guarantor when entering into an operating lease, the offsetting entry would be reflected as prepaid rent, which would be nonadmitted under SSAP No. 29.

d. If a guarantee were issued to an unrelated or related party for no consideration on a standalone basis, the offsetting entry would be to expense.

24. Except for the measurement and recognition of continued guarantee obligations after the settlement of a contingent guarantee liability described in paragraph 25, this standard does not describe in detail how the guarantor's liability for its obligations under the guarantee would be measured subsequent to initial recognition. The liability that the guarantor initially recognized in accordance with paragraph 20 would typically be reduced (as a credit to income) as the guarantor is released from risk under the guarantee. Depending on the nature of the guarantee, the guarantor's release from risk has typically been recognized over the term of the guarantee (a) only upon either expiration or settlement of the guarantee, (b) by a systematic and rational amortization method, or (c) as the fair value of the guarantee changes (for example, guarantees accounted for as derivatives). The reduction of liability does not encompass the recognition and subsequent adjustment of the contingent liability recognized under paragraph 8 related to the contingent loss for the guarantee. If the guarantor is required to subsequently recognize a contingent liability for the guarantee, the guarantor shall eliminate any remaining noncontingent liability for that guarantee and recognize a contingent liability in accordance with paragraph 8.

25. After recognition and settlement of a contingent guarantee liability in accordance with paragraph 8, a guarantor shall assess whether remaining potential obligations exist under the guarantee agreement. If the guarantor still has potential obligations under the guarantee contract, the guarantor shall recognize the remaining noncontingent guarantee that represents the current fair value of the potential obligation remaining under the guarantee agreement. This noncontingent guarantee liability shall be released in accordance with paragraph 24.

Disclosures

26. Disclose the following information for each joint and several liability arrangements accounted for under paragraph 5. If co-obligors are related parties, disclosure requirements in *SSAP No. 25—Affiliates and Other Related Parties* also apply.

a. The nature of the arrangement including: 1) how the liability arose, 2) the relationship with co-obligors, and 3) the terms and conditions of the arrangements.

b. The total outstanding amount under the arrangement, which shall not be reduced by the effect of any amounts that may be recoverable from other entities.

c. The carrying amount, if any, of the entity's liability and the carrying amount of a receivable recognized, if any.

d. The nature of any recourse provisions that would enable recovery from other entities of the amounts paid, including any limitations on the amounts that might be recovered.

e. In the period the liability is initially recognized and measured or in a period the measurement changes significantly: 1) the corresponding entry, and 2) where the entry was recorded in the financial statements.

27. If a loss contingency or impairment of an asset is not recorded because only one of the conditions in paragraph 8.a. or 8.b. is met, or if exposure to a loss exists in excess of the amount accrued pursuant to the provisions described above, disclosure of the loss contingency or impairment of the asset shall be made in the financial statements when there is at least a reasonable possibility that a loss or an additional

loss may have been incurred. The disclosure shall indicate the nature of the contingency and shall give an estimate of the possible loss or range of loss or state that such an estimate cannot be made. (Disclosures for tax contingencies as identified in paragraph 13 shall be completed as instructed within SSAP No. 101.)

28. Disclosure is not required of a loss contingency involving an unasserted claim or assessment when there has been no manifestation by a potential claimant of an awareness of a possible claim or assessment unless it is considered probable that a claim will be asserted and there is a reasonable possibility that the outcome will be unfavorable.

29. Certain loss contingencies, the common characteristic of each being a guarantee, shall be disclosed in financial statements even though the possibility of loss may be remote. Examples include (a) guarantees of indebtedness of others, and (b) guarantees to repurchase receivables (or, in some cases, to repurchase related properties) that have been sold or otherwise assigned. The disclosure of those loss contingencies, and others that in substance have the same characteristics, shall be applied to statutory financial statements. The disclosure shall include the nature and amount of the guarantee. Consideration shall be given to disclosing, if estimable, the value of any recovery that could be expected to result, such as from the guarantor's right to proceed against an outside party.

30. A guarantor shall disclose the following information about each guarantee, or each group or similar guarantees (except product warranties addressed in paragraph 32), even if the likelihood of the guarantor's having to make any payments under the guarantee is remote. In addition, the nature of the relationship to the beneficiary of the guarantee or undertaking (affiliated or unaffiliated) shall also be disclosed:

a. The nature of the guarantee, including the approximate term of the guarantee, how the guarantee arose, and the events and circumstances that would require the guarantor to perform under the guarantee, the ultimate impact to the financial statements (specific financial statement line item) after the settlement of the contract guarantee if action under the guarantee was required (e.g., increase to the investment, dividends to stockholder, etc) and the current status (that is, as of the date of the statement of financial position) of the payment/performance risk of the guarantee. For example, the current status of the payment/performance risk of a credit-risk-related guarantee could be based on either recently issued external credit ratings or current internal groupings used by the guarantor to manage its risk. An entity that uses internal groupings shall disclose how those groupings are determined and used for managing risk.

b. The potential amount of future payments (undiscounted) the guarantor could be required to make under the guarantee. That maximum potential amount of future payments shall not be reduced by the effect of any amounts that may possibly be recovered under recourse or collateralization provisions in the guarantee (which are addressed under (d) below). If the terms of the guarantee provide for no limitation to the maximum potential future payments under the guarantee, that fact shall be disclosed. If the guarantor is unable to develop an estimate of the maximum potential amount of future payments under its guarantee, the guarantor shall disclose the reasons why it cannot estimate the maximum potential amount.

c. The current carrying amount of the liability, if any, for the guarantor's obligations under the guarantee (including the amount, if any, recognized under paragraph 8), regardless of whether the guarantee is freestanding or embedded in another contract.

d. The nature of (1) any recourse provisions that would enable the guarantor to recover from third parties any of the amounts paid under the guarantee and (2) any assets held either as collateral or by third parties that, upon the occurrence of any triggering event or condition

under the guarantee, the guarantor can obtain and liquidate to recover all or a portion of the amounts paid under the guarantee. The guarantor shall indicate, if estimable, the approximate extent to which the proceeds from liquidation of those assets would be expected to cover the maximum potential amount of future payments under the guarantee.

31. An aggregate compilation of guarantee obligations shall include the maximum potential of future payments of all guarantees (undiscounted), the current liability (contingent and noncontingent) reported in the financial statements, and the ultimate financial statement impact based on maximum potential payments (undiscounted) if performance under those guarantees had been triggered.

32. As product warranties are excluded from the initial recognition and initial measurement requirements for guarantees, a guarantor is not required to disclose the maximum potential amount of future payments. Instead the guarantor is required to disclose for product warranties the following information:

a. The guarantor's accounting policy and methodology used in determining its liability for product warranties (Including any liability associated with extended warranties).

b. A tabular reconciliation of the changes in the guarantor's aggregate product warranty liability for the reporting period. That reconciliation should present the beginning balance of the aggregate product warranty liability, the aggregate reductions in that liability for payments made (in cash or in kind) under the warranty, the aggregate changes in the liability for accruals related to product warranties issued during the reporting period, the aggregate changes in the liability for accruals related to preexisting warranties (including adjustments related to changes in estimates), and the ending balance of the aggregate product warranty liability.

33. The financial statements shall contain adequate disclosure about the nature of any gain contingency. However, care should be exercised to avoid misleading implications as to the likelihood of realization.

34. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

35. This statement adopts *FASB Statement No. 5, Accounting for Contingencies* (FAS 5), *FASB Statement 114, Accounting by Creditors for Impairment of a Loan* only as it amends in part FAS 5 and paragraphs 35 and 36 of *FASB Statement of Financial Accounting Concepts No. 6—Elements of Financial Statements. FASB Interpretation No. 14, Reasonable Estimation of the Amount of a Loss, An Interpretation of FASB Statement No. 5* (FIN No. 14) is adopted with the modification to accrue the loss amount as the midpoint of the range rather than the minimum as discussed in paragraph 3 of FIN No. 14. This statement adopts with modification *ASU 2013-04, Obligations Resulting from Joint and Several Liability Arrangements for Which the Total Amount of the Obligation is Fixed at the Reporting Date* with the same statutory modification adopted for FIN 14.

36. This statement adopts with modification *FASB Interpretation No. 45: Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others, an interpretation of FASB Statements No. 5, 57, and 107 and rescission of FASB Interpretation No. 34* (FIN 45), *FASB Interpretation No. 45-3, Application of FASB Interpretation No. 45 to Minimum Revenue Guarantees Grated to a Business or Owner* (FSP FIN 45-3)*, and FASB Staff Position FAS 133-1 and FIN 45-4, Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No. 45* (FSP FAS 133-1 and FIN 45-4). Statutory Modifications to FIN 45 include initial liability recognition for guarantees issued as part of intercompany or related party

transactions, assessment and recognition of non-contingent guarantee obligations after recognition and settlement of a contingent obligation and revise the GAAP guidance to reflect statutory accounting terms and restrictions. Under this statement, intercompany and related party guarantees (including guarantees between parents and subsidiaries) should have an initial liability recognition unless the guarantee is considered "unlimited" or is made to/or on behalf of a wholly-owned subsidiary. (An example of an intercompany "unlimited" guarantee would be a guarantee issued in response to a rating agency's requirement to provide a commitment to support.) In instances in which an "unlimited" guarantee exists or a guarantee has been made to/or on behalf of a wholly-owned subsidiary, this statement requires disclosure, pursuant to the disclosure requirements adopted from FIN 45. The adoption of FIN 45 superseded the previously adopted guidance *in FASB Interpretation No. 34, Disclosure of Indirect Guarantees of Indebtedness of Others, An interpretation of FASB Statement No. 5.* This statement also adopts Accounting Principles Board Opinion No. 12, Omnibus Opinion—1967, paragraphs 2 and 3 with the modification that AVR, IMR and Schedule F Penalty shall be shown gross. Appropriation of retained earnings discussed in paragraph 15 of FAS 5 is addressed in *SSAP No. 72—Surplus and Quasi-Reorganizations.*

37. This statement adopts with modification the guidance in paragraphs 7-11 of *FSP EITF 00-19-2, Accounting for Registration Payment Arrangements*. This guidance specifies that the contingent obligation to make future payments or otherwise transfer consideration under a registration payment arrangement, whether issued as a separate agreement or included as a provision for a financial instrument, other agreement, should be separately recognized and measured in accordance with *FAS 5, Accounting for Contingencies*. The guidance in FSP EITF 00-19-2 is modified as follows:

a. Registration payment arrangements meet the definition of a loss contingency in accordance with paragraph 7.

b. Financial instruments shall be accounted for in accordance with the statutory accounting principles for that specific asset type. Registration payment arrangement obligations shall be separate from the measurement and recognition of financial instruments subject to such arrangements.

c. Transition revisions resulting from application of this guidance shall be accounted for as a change in accounting principle pursuant to *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). In accordance with SSAP No. 3, the cumulative effect of changes in accounting principles shall be reported as adjustments to unassigned funds in the period of change in the accounting principles.

Effective Date and Transition

38. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

39. The guidance in paragraph 10 related to when a judgment is considered rendered was originally contained in *INT 04-05: Clarification of SSAP No. 5R Guidance on when a Judgment is Deemed Rendered* and was effective September 12, 2004. The guidance for guarantees included within paragraphs 16-25 and 30-32 shall be applicable to all guarantees issued or outstanding as of December 31, 2011. Thereafter, disclosure of all guarantees shall be annually reported, with interim reporting required for new guarantees issued, and/or existing guarantees when significant changes are made. Guidance in paragraph 37 was previously reflected within *INT 08-06: FSP EITF 00-19-2, Accounting for Registration Payment Arrangements* and was effective September 22, 2008.

Subsequent Events

SCOPE OF STATEMENT

1. This statement defines subsequent events and establishes the criteria for recording such events in the financial statements and/or disclosing them in the notes to the financial statements. The conclusions in this statement apply to both quarterly and annual statement filings.

SUMMARY CONCLUSION

Key Terms

2. Subsequent events shall be defined as events or transactions that occur subsequent to the balance sheet date, but before the issuance of the statutory financial statements and before the date the audited financial statements are issued, or available to be issued. The issuance of the statutory financial statements includes not only the submission of the Quarterly and Annual Statement but also the issuance of the audit opinion by the reporting entity's certified public accountant.

3. Material subsequent events shall be considered either:

   a. Type I – Recognized Subsequent Events: Events or transactions that provide additional evidence with respect to conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements;

   b. Type II – Nonrecognized Subsequent Events: Events or transactions that provide evidence with respect to conditions that did not exist at the balance sheet date but arose after that date.

4. **Financial statements are issued:** Financial statements are considered issued when they are widely distributed to shareholders and other financial statement users for general use and reliance in a form and format that complies with SAP.

5. **Financial statements are available to be issued:** Financial statements are considered available to be issued when they are complete in a form and format that complies with SAP and all approvals necessary for issuance have been obtained, for example, from management, the board of directors, and/or significant shareholders. The process involved in creating and distributing the financial statements will vary depending on an entity's management and corporate governance structure as well as statutory and regulatory requirements. An entity that has a current expectation of widely distributing its financial statements to its shareholders and other financial statement users shall evaluate subsequent events through the date that the financial statements are issued. All other entities shall evaluate subsequent events through the date that the financial statements are available to be issued.

Recognition Guidance

6. An entity shall recognize in the financial statements the effects of all material Type I subsequent events that provide additional evidence about conditions that existed at the date of the balance sheet, including the estimates inherent in the process of preparing financial statements. Any changes in estimates resulting from the use of such evidence shall be recorded in the financial statements unless specifically prohibited, (e.g., subsequent collection of agents balances over 90 days due when determining nonadmitted agents balances as prohibited by *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*).

7. For material Type I subsequent events, the nature and the amount of the adjustment shall be disclosed in the notes to the financial statements only if necessary to keep the financial statements from being misleading.

8. Material Type II subsequent events shall not be recorded in the financial statements, but shall be disclosed in the notes to the financial statements. For such events, an entity shall disclose the nature of the event and an estimate of its financial effect, or a statement that such an estimate cannot be made.

9. An entity also shall consider supplementing the historical financial statements with pro forma financial data. Occasionally, a nonrecognized subsequent event may be so significant that disclosure can best be made by means of pro forma financial data. Such data shall give effect to the event as if it had occurred on the balance sheet date. In some situations, an entity also shall consider presenting pro forma statements. If an event is of such a nature that pro forma disclosures are necessary to keep the financial statements from being misleading, disclosure of supplemental pro forma financial data shall be made including the impact on net income, surplus, total assets, and total liabilities giving effect to the event as if it had occurred on the date of the balance sheet.

10. Identifying events that require adjustment of the financial statements under the criteria stated in the conclusion calls for the management of the entity to exercise judgment and accumulate knowledge of the facts and circumstances surrounding the event. For example, a loss on an uncollectible agent's balance as a result of an agent's deteriorating financial condition leading to bankruptcy subsequent to the balance sheet date would be indicative of conditions existing at the balance sheet date, thereby requiring the recording of such event to the financial statements before their issuance. On the other hand, a similar loss resulting from an agent's major casualty loss such as a fire or flood subsequent to the balance sheet date would not be indicative of conditions existing at the balance sheet date and recording of the event to the financial statements would not be appropriate. However, this is a Type II subsequent event which would require disclosure in the notes to the financial statements.

11. The following are examples of Type I recognized subsequent events:

a. If the events that gave rise to litigation had taken place before the balance sheet date and that litigation is settled, after the balance sheet date but before the financial statements are issued or are available to be issued, for an amount different from the liability recorded in the accounts, then the settlement amount should be considered in estimating the amount of liability recognized in the financial statements at the balance sheet date.

b. Subsequent events affecting the realization of assets, such as receivables and inventories or the settlement of estimated liabilities, should be recognized in the financial statements when those events represent the culmination of conditions that existed over a relatively long period of time. For example, a loss on an uncollectible trade account receivable as a result of a customer's deteriorating financial condition leading to bankruptcy after the balance sheet date but before the financial statements are issued or are available to be issued ordinarily will be indicative of conditions existing at the balance sheet date. Thus, the effects of the customer's bankruptcy filing shall be considered in determining the amount of uncollectible trade accounts receivable recognized in the financial statements at the balance sheet date.

12. The following are examples of Type II nonrecognized subsequent events:

a. Sale of a bond or capital stock issued after the balance sheet date but before financial statements are issued or are available to be issued

b. A business combination that occurs after the balance sheet date but before financial statements are issued or are available to be issued

c. Settlement of litigation when the event giving rise to the claim took place after the balance sheet date but before financial statements are issued or are available to be issued

d. Loss of plant or inventories as a result of fire or natural disaster that occurred after the balance sheet date but before financial statements are issued or are available to be issued

e. Losses on receivables resulting from conditions (such as a customer's major casualty) arising after the balance sheet date but before financial statements are issued or are available to be issued

f. Changes in the fair value of assets or liabilities (financial or nonfinancial) or foreign exchange rates after the balance sheet date but before financial statements are issued or are available to be issued

g. Entering into significant commitments or contingent liabilities, for example, by issuing significant guarantees after the balance sheet date but before financial statements are issued or are available to be issued

Disclosures

13. In addition to the disclosure of subsequent events as required throughout this statement, for annual and interim reporting periods, reporting entities shall disclose the dates through which subsequent events have been evaluated for statutory reporting and for audited financial statements along with the dates the statutory reporting statements and the audited financial statements were issued, or available to be issued. In the audited financial statements, reporting entities shall specifically identify subsequent events identified after the date subsequent events were reviewed for statutory reporting.

14. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

15. The above guidance was originally adopted to be consistent with the AICPA *Statement on Auditing Standards No. 1*, Section 560, *Subsequent Events*. In 2009, *FASB Statement No. 165, Subsequent Events* (FAS 165), was adopted for statutory accounting. The adoption of this guidance should not result in significant changes in the subsequent events that an entity reports, through either recognition or disclosure, in its financial statements. FAS 165 introduced the concept of available to be issued and requires additional disclosures on the dates for which an entity evaluated subsequent events as well as the date the financial statements were issued, or available to be issued. Guidance within ASU 2010-09 (modifications to Subtopic 855-10 in the FASB Codification) has been rejected for statutory accounting.

Effective Date and Transition

16. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Changes adopted as a result of FAS 165, are effective for years ending on and after December 31, 2009.

Prepaid Expenses

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the accounting for prepaid expenses. This statement does not address accounting for deferred policy acquisition costs and other underwriting expenses, income taxes, and guaranty fund assessments. This statement does not address nonrefundable advance payments for goods or services received for use in future research and development activities, which are addressed in *SSAP No. 17—Preoperating and Research and Development Costs.*

SUMMARY CONCLUSION

2. A prepaid expense is an amount which has been paid in advance of receiving future economic benefits anticipated by the payment. Prepaid expenses generally meet the definition of assets in *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4). Such expenditures also meet the criteria defining nonadmitted assets as specified in SSAP No. 4, (i.e., the assets are not readily available to satisfy policyholder obligations). Prepaid expenses shall be reported as nonadmitted assets and charged against unassigned funds (surplus). They shall be amortized against net income as the estimated economic benefit expires.

3. In accordance with the reporting entity's written capitalization policy, prepaid expenses less than a predefined threshold shall be expensed when purchased. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Disclosures

4. The financial statements shall disclose if the written capitalization policy and the resultant predefined thresholds changed from the prior period and the reason(s) for such change.

Relevant Literature

5. This statement rejects *AICPA Practice Bulletin No. 13, Direct-Response Advertising and Probable Future Benefits, AICPA Statement of Position 93-7, Reporting on Advertising Costs* and *FASB Emerging Issues Task Force No. 88-23, Lump-Sum Payments under Union Contracts*.

Effective Date and Transition

6. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Guidance reflected in paragraphs 3 and 4, incorporated from SSAP No. 87, was originally effective for years beginning on and after January 1, 2004.

Property Casualty Contracts—Premiums

SCOPE OF STATEMENT

1. This statement establishes general statutory accounting principles for the recording and recognition of premium revenue for property and casualty contracts as defined in *SSAP No. 50—Classifications of Insurance or Managed Care Contracts* (SSAP No. 50).

2. Specific statutory requirements for certain property and casualty premiums are addressed in the following statements: (a) *SSAP No. 57—Title Insurance*, (b) *SSAP No. 58—Mortgage Guaranty Insurance,* (c) SSAP *No. 60—Financial Guaranty Insurance,* (d) *SSAP No. 62R—Property and Casualty Reinsurance,* (e) *SSAP No. 65—Property and Casualty Contracts,* and (f) *SSAP No. 66—Retrospectively Rated Contracts and Contracts*.

SUMMARY CONCLUSION

3. Except as provided for in paragraph 4, written premium is defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract based on the expectation of risk, policy benefits, and expenses associated with the coverage provided by the terms of the insurance contract. Frequently, insurance contracts are subject to audit by the reporting entity and the amount of premium charged is subject to adjustment based on the actual exposure. Premium adjustments are discussed in paragraphs 10-13 of this statement.

4. For workers' compensation contracts, which have a premium that may periodically vary based upon changes in the activities of the insured, written premiums may be recorded on an installment basis to match the billing to the policyholder. Under this type of arrangement, the premium is determined and billed according to the frequency stated in the contract, and written premium is recorded on the basis of that frequency.

5. Premiums for prepaid legal expense plans shall be recognized as income on the gross basis (amount charged to the policyholder or subscriber exclusive of copayments or other charges) when due from policyholders or subscribers, but no earlier than the effective date of coverage, under the terms of the contract. Due and uncollected premiums shall follow the guidance in *SSAP No.6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers* (SSAP No. 6), to determine the admissibility of premiums and related receivables.

6. Written premiums for all other contracts shall be recorded as of the effective date of the contract. Upon recording written premium, a liability, the unearned premium reserve, shall be established to reflect the amount of premium for the portion of the insurance coverage that has not yet expired. Flat fee service charges on installment premiums[1] (fees charged to policyholders who pay premiums on an installment basis rather than in full at inception of contract) are reported in the Other Income section of the Underwriting and Investment Exhibit as Finance and Service Charges. Flat fee service charges on installment premiums, which do not meet the requirements outlined in footnote 1 (e.g., policy may be cancelled for non-payment of fee or fee is refundable), shall be recorded as written premium on the effective date of the contract and subject to the unearned premium guidelines included in paragraph 8.

[1] If the policyholder elects to pay an installment rather than the full amount or the full remaining balance, the policyholder is traditionally charged a flat fee service charge on the subsequent billing cycle(s). The amount charged is primarily intended to compensate the insurer for the additional administrative costs associated with processing more frequent billings and has no relationship to the amount of insurance coverage provided, the period of coverage, or the lost investment income associated with receiving the premium over a period of time rather than in a lump sum. As described, there is no underwriting risk associated with this service charge. If a policyholder does not pay the service charge, the policy is not cancelled (unlike non-payment of premium), but instead the policy is converted back to an annual pay plan. If a policyholder cancels coverage, the premium is returned but the service charge is not, as the service charge is not a part of premium. Clarification of finance and service charges as other income should not be construed as having any bearing on whether such charges are subject to premium taxation, which remains an issue of state law and regulation.

7. The exposure to insurance risk for most property and casualty insurance contracts does not vary significantly during the contract period. Therefore, premiums from those types of contracts shall be recognized in the statement of income, as earned premium, using either the daily pro-rata or monthly pro-rata methods as described in paragraph 8. Certain statements provide for different methods of recognizing premium in the statement of operations for specific types of contracts. For contracts not separately identified in specific statements where the reporting entity can demonstrate the period of risk differs significantly from the contract period, premiums shall be recognized as revenue over the period of risk in proportion to the amount of insurance protection provided.

8. One of the following methods shall be used for computation of the unearned premium reserve:

a. Daily pro rata method—Calculate the unearned premium on each policy—At the end of each period, the calculation is made on each item of premium to ascertain the unexpired portion and to arrive at the aggregate unearned premium reserve;

b. Monthly pro rata method—This method assumes that, on average, the same amount of business is written each day of any month so that the mean will be the middle of the month. For example, one-year premiums written during the first three months of the year have, at the end of the year, the following unearned fractions: January-1/24; February-3/24; March-5/24.

9. Additional premiums charged to policyholders for endorsements and changes in coverage under the contract shall be recorded on the effective date of the endorsement and accounted for in a manner consistent with the methods discussed in paragraphs 4-8. This is done so that, at any point in time, a liability is accrued for unearned premium related to the unexpired portion of the policy endorsement.

Earned but Unbilled Premium

10. Adjustments to the premium charged for changes in the level of exposure to insurance risk (e.g., audit premiums on workers' compensation policies) are generally determined based upon audits conducted after the policy has expired. Reporting entities shall estimate audit premiums, the amount generally referred to as earned but unbilled (EBUB) premium, and shall record the amounts as an adjustment to premium, either through written premium or as an adjustment to earned premium. The estimate for EBUB may be determined using actuarially or statistically supported aggregate calculations using historical company unearned premium data, or per policy calculations.

11. EBUB shall be adjusted upon completion of the audit and the adjustment shall be recognized as revenue immediately. Upon completion of an audit that results in a return of premiums to the policyholder, earned premiums shall be reduced.

12. Reporting entities shall establish all of the requisite liabilities associated with the asset such as commissions and premium taxes. These liabilities shall be determined based on when premium is earned, not collected[2].

13. Ten percent of EBUB in excess of collateral specifically held and identifiable on a per policy basis shall be reported as a nonadmitted asset. To the extent that amounts in excess of the 10% are not anticipated to be collected, they shall be written off against operations in the period the determination is made.

[2] If an entity feels comfortable enough in their ability to collect the premium that an asset is recorded, they should also book the associated liabilities. Once an estimate of the premium has been made and the entity feels certain that it will be collected, it should also book the liabilities that will be due when they receive the cash. If the premiums were unearned and the policyholder had the ability to cancel, the definition of a liability has not been met.

Earned but Uncollected Premium

14. Reporting entities may utilize a voluntary procedure whereby policies are not cancelled for non-payment of the premium until after an extended cancellation period (example 30 days), as opposed to the shorter statutory cancellation period. There are other instances when a reporting entity provides coverage for periods when the payment has not been received. Prior to the cancellation of the policy the reporting entity acknowledges it is "at risk" and subject to "actual exposure" for a valid claim despite the fact that the reporting entity may not have received payment of the premium for this exposure. Reporting entities shall record earned but uncollected premium as direct and assumed written premium since the reporting entity is "at risk" and subject to "actual exposure" for the extended period of time when the policy is still in force and effective, whether or not the reporting entity collects a premium for this time period. Earned but uncollected premium would be charged to expenses **"**net gain or (loss) from agents or premium balances charged off" when it is determined to be uncollectible.

Advance Premiums

15. Advance premiums result when the policies have been processed, and the premium has been paid prior to the effective date. These advance premiums are reported as a liability in the statutory financial statement and not considered income until due. Such amounts are not included in written premium or the unearned premium reserve.

Premium Deposits on Perpetual Fire Deposits

16. Premium deposits on perpetual fire insurance risks should be charged as a liability to the extent of at least 90% of the gross amount of such deposit.

Premium Deficiency Reserve

17. When the anticipated losses, loss adjustment expenses, commissions and other acquisition costs, and maintenance costs exceed the recorded unearned premium reserve, and any future installment premiums on existing policies, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency, with a corresponding charge to operations. Commission and other acquisition costs need not be considered in the premium deficiency analysis to the extent they have previously been expensed. For purposes of determining if a premium deficiency exists, insurance contracts shall be grouped in a manner consistent with how policies are marketed, serviced and measured. A liability shall be recognized for each grouping where a premium deficiency is indicated. Deficiencies shall not be offset by anticipated profits in other policy groupings.

18. If a premium deficiency reserve is established in accordance with paragraph 17, disclose the amount of that reserve. If a reporting entity utilizes anticipated investment income as a factor in the premium deficiency calculation, the reporting entity's disclosures shall include a statement that anticipated investment income was utilized; however, the dollar amount need not be included. Reporting entities need to disclose by statement only that anticipated investment income was utilized in the calculation of premium deficiency reserves whether a reserve is recorded or not (i.e., the use of anticipated investment income mitigated the need for recording a premium deficiency reserve).

Disclosures

19. Disclose the aggregate amount of direct premiums written through managing general agents or third party administrators. For purposes of this disclosure, a managing general agent means the same as in Appendix A-225. If this amount is equal to or greater than 5% of surplus, provide the following information for each managing general agent and third party administrator:

a. Name and address of managing general agent or third party administrator;

b. Federal Employer Identification Number;

c. Whether such person holds an exclusive contract;

d. Types of business written;

e. Type of authority granted (i.e., underwriting, claims payment, etc.); and

f. Total premium written.

20. Refer to the Preamble for further discussion regarding disclosure requirements.

21. This statement rejects *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises*.

Effective Date and Transition

22. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The guidance in paragraph 5 was originally contained within *INT 01-23: Prepaid Legal Insurance Premium Recognition* and was effective June 11, 2001. The guidance reflected in paragraph 12, incorporated from *INT 02-11: Recognition of Amounts Related to Earned but Unbilled Premium*, was effective September 10, 2002. The guidance reflected in paragraph 14, incorporated from *INT 05-06: Earned but Uncollected Premium*, was effective December 3, 2005. The guidance in paragraph 18 incorporated from *INT 99-23: Disclosure of Premium Deficiency Reserves* was effective December 6, 1999.

Unpaid Claims, Losses, and Loss Adjustment Expenses

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for recording liabilities for unpaid claims and claim adjustment expenses for life insurance contracts and accident and health contracts and unpaid losses and loss adjustment expenses for property and casualty insurance contracts. This guidance applies equally to those entities with direct and reinsurance-assumed obligations. This statement applies to all insurance contracts as defined in *SSAP No. 50—Classifications of Insurance or Managed Care Contracts* (SSAP No. 50).

2. This statement does not address policy reserves for life and accident and health policies. These reserves are addressed in *SSAP No. 51R—Life Contracts* (SSAP No. 51R), *SSAP No. 52—Deposit-Type Contracts* (SSAP No. 52), *SSAP No. 54R—Individual and Group Accident and Health Contracts* (SSAP No. 54R), and *SSAP No. 59—Credit Life and Accident and Health Insurance Contracts* (SSAP No. 59).

3. This statement does not address liabilities for punitive damages. These liabilities shall be recorded in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R).

SUMMARY CONCLUSION

4. Claims, losses, and loss/claim adjustment expenses shall be recognized as expenses when a covered or insured event occurs. In most instances, the covered or insured event is the occurrence of an incident which gives rise to a claim or the incurring of costs. For claims-made type policies, the covered or insured event is the reporting to the entity of the incident that gives rise to a claim. Claim payments and related expense payments are made subsequent to the occurrence of a covered or insured event, and in order to recognize the expense of a covered or insured event that has occurred, it is necessary to establish a liability. Liabilities shall be established for any unpaid claims and unpaid losses (loss reserves), unpaid loss/claim adjustment expenses (loss/claim adjustment expense reserves) and incurred costs, with a corresponding charge to income. Claims related extra contractual obligations losses and bad-faith losses shall be included in losses. See individual business types for the accounting treatment for adjustment expenses related to extra contractual obligations and bad-faith lawsuits.

5. The liability for unpaid LAE shall be established regardless of any payments made to third-party administrators, management companies or other entities except for capitated payments under managed care contracts. The liability for claims adjustment expenses on non-capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments made to third-party administrators, etc. The liability for claims adjustment expenses on capitated payments under managed care contracts shall be established in an amount necessary to adjust all unpaid claims irrespective of payments to third parties with the exception that the liability is established net of capitated payments to providers.

Property/Casualty

6. The following are types of future costs relating to property and casualty contracts, as defined in SSAP No. 50, which shall be considered in determining the liabilities for unpaid losses and loss adjustment expenses:

   a. Reported Losses: Expected payments for losses relating to insured events that have occurred and have been reported to, but not paid by, the reporting entity as of the statement date;

b. Incurred But Not Reported Losses (IBNR): Expected payments for losses relating to insured events that have occurred but have not been reported to the reporting entity as of the statement date. As a practical matter, IBNR may include losses that have been reported to the reporting entity but have not yet been entered to the claims system or bulk provisions. Bulk provisions are reserves included with other IBNR reserves to reflect deficiencies in known case reserves;

c. Loss Adjustment Expenses: Expected payments for costs to be incurred in connection with the adjustment and recording of losses defined in paragraphs 6.a. and 6.b. Examples of expenses incurred in these activities are estimating the amounts of losses, disbursing loss payments, maintaining records, general clerical, secretarial, office maintenance, occupancy costs, utilities, computer maintenance, supervisory and executive duties, supplies, and postage. Loss adjustment expenses can be classified into two broad categories: Defense and Cost Containment (DCC) and Adjusting and Other (AO):

i. DCC include defense[1], litigation, and medical cost containment expenses, whether internal or external. DCC include, but are not limited to, the following items:

(a) Surveillance expenses;

(b) Fixed amounts for medical cost containment expenses;

(c) Litigation management expenses;

(d) Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by accident year;

(e) Fees or salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in defense of a claim, and fees or salaries for rehabilitation nurses, if such cost is not included in losses;

(f) Attorney fees incurred owing to a duty to defend, even when other coverage does not exist; and

(g) The cost of engaging experts;

ii. AO are those expenses other than DCC as defined in (i) above assigned to the expense group "Loss Adjustment Expense". AO include, but are not limited to, the following items:

(a) Fees and expenses of adjusters and settling agents;

(b) Loss adjustment expenses for participation in voluntary and involuntary market pools if reported by calendar year;

(c) Attorney fees incurred in the determination of coverage, including litigation between the reporting entity and the policyholder;

[1] Legal defense costs incurred under the definition of covered damages or losses as the only insured peril would be accounted for as losses, while legal defense costs incurred under a duty to defend would be accounted for as Defense and Cost Containment (DCC). For policies where legal costs are the only insured peril, the insurer would record the legal costs that reimburse the policyholder as loss and, to the extent the insurer participated in the defense, would record its legal costs as DCC. This is not intended to change the classifications of legal expenses for existing long tailed lines of liability coverage, such as medical malpractice and workers' compensation insurance.

(d) Fees and salaries for appraisers, private investigators, hearing representatives, reinspectors and fraud investigators, if working in the capacity of an adjuster; and

(e) Adjustment expenses arising from claims related lawsuits such as extra contractual obligations and bad faith lawsuits.

Life, Accident and Health

7. The following future costs relating to life and accident and health indemnity contracts, as defined in SSAP No. 50, shall be considered in determining the liability for unpaid claims and claim adjustment expenses:

a. Accident and Health Claim Reserves: Reserves for claims that involve a continuing loss. This reserve is a measure of the future benefits or amounts not yet due as of the statement date which are expected to arise under claims which have been incurred as of the statement date. This shall include the amount of claim payments that are not yet due such as those amounts commonly referred to as disabled life reserves for accident and health claims. The methodology used to establish claim reserves is discussed in SSAP No. 54R.

b. Claim Liabilities for Life/Accident and Health Contracts:

i. Due and Unpaid Claims: Claims for which payments are due as of the statement date;

ii. Resisted Claims in Course of Settlement: Liability for claims that are in dispute and are unresolved on the statement date. The liability either may be the full amount of the submitted claim or a percentage of the claim based on the reporting entity's past experience with similar resisted claims;

iii. Other Claims in the Course of Settlement: Liability for claims that have been reported but the reporting entity has not received all of the required information or processing has not otherwise been completed as of the statement date;

iv. Incurred But Not Reported Claims: Liability for which a covered event has occurred (such as death, accident, or illness) but has not been reported to the reporting entity as of the statement date.

c. Claim Adjustment Expenses for Accident and Health Reporting Entities are those costs expected to be incurred in connection with the adjustment and recording of accident and health claims defined in paragraphs 7.a. and 7.b. Certain claim adjustment expenses reduce the number or cost of health services thereby resulting in lower premiums or lower premium increases. These claim adjustment expenses shall be classified as cost containment expenses.

d. Claim Adjustment Expenses for Life Reporting Entities: Costs expected to be incurred (including legal and investigation) in connection with the adjustment and recording of life claims defined in paragraph 7.b. This would include adjustment expenses arising from claims-related lawsuits such as extra contractual obligations and bad-faith lawsuits.

Managed Care

8. The following costs relating to managed care contracts as defined in SSAP No. 50 shall be considered in determining the claims unpaid and claims adjustment expenses:

a. Claims unpaid for Managed Care Reporting Entities:

i. Unpaid amounts for costs incurred in providing care to a subscriber, member or policyholder including inpatient claims, physician claims, referral claims, other medical claims, resisted claims in the course of settlement and other claims in the course of settlement;

ii. Incurred But Not Reported Claims: Liability for which a covered event has occurred (such as an accident, illness or other service) but has not been reported to the reporting entity as of the statement date;

iii. Additional unpaid medical costs resulting from failed contractors under capitation contracts and provision for losses incurred by contractors deemed to be related parties for which it is probable that the reporting entity will be required to provide funding;

b. Claim Adjustment Expenses for Managed Care Reporting Entities are those costs expected to be incurred in connection with the adjustment and recording of managed care claims defined in paragraph 8.a. Certain claim adjustment expenses reduce the number or cost of health services thereby resulting in lower premiums or lower premium increases. These claim adjustment expenses shall be classified as cost containment expenses.

c. Liabilities for percentage withholds ("withholds") from payments made to contracted providers;

d. Liabilities for accrued medical incentives under contractual arrangements with providers and other risk-sharing arrangements whereby the health entity agrees to share savings with contracted providers.

Managed Care and Accident and Health

9. Claim adjustment expenses for accident and health contracts and managed care contracts (identified in paragraphs 7.c. and 8.b.), including legal expenses, can be subdivided into cost containment expenses and other claim adjustment expenses:

a. Cost containment expenses: Expenses that actually serve to reduce the number of health services provided or the cost of such services. The following are examples of items that shall be considered "cost containment expenses" only if they result in reduced levels of costs or services:

i. Case management activities;

ii. Utilization review;

iii. Detection and prevention of payment for fraudulent requests for reimbursement;

iv. Network access fees to Preferred Provider Organizations and other network-based health plans (including prescription drug networks), and allocated internal salaries and related costs associated with network development and/or provider contracting;

v. Consumer education solely relating to health improvement and relying on the direct involvement of health personnel (this would include smoking cessation and disease management programs, and other programs that involve hands on medical education); and

vi. Expenses for internal and external appeals processes.

b. Other claim adjustment expenses: Claim adjustment expenses as defined in paragraph 7.c. or 8.b. that are not cost containment expenses. Examples of other claim adjustment expenses are:

i. Estimating the amounts of losses and disbursing loss payments;

ii. Maintaining records, general clerical, and secretarial;

iii. Office maintenance, occupancy costs, utilities, and computer maintenance;

iv. Supervisory and executive duties; and

v. Supplies and postage.

vi. This would include adjustment expenses arising from claims-related lawsuits such as extra contractual obligations and bad-faith lawsuits.

General

10. The liability for claim reserves and claim liabilities, unpaid losses, and loss/claim adjustment expenses shall be based upon the estimated ultimate cost of settling the claims (including the effects of inflation and other societal and economic factors), using past experience adjusted for current trends, and any other factors that would modify past experience. These liabilities shall not be discounted unless authorized for specific types of claims by specific SSAPs, including SSAP No. 54R and *SSAP No. 65—Property and Casualty Contracts*.

11. Various analytical techniques can be used to estimate the liability for IBNR claims, future development on reported losses/claims, and loss/claim adjustment expenses. These techniques generally consist of statistical analysis of historical experience and are commonly referred to as loss reserve projections. The estimation process is generally performed by line of business, grouping contracts with like characteristics and policy provisions. The decision to use a particular projection method and the results obtained from that method shall be evaluated by considering the inherent assumptions underlying the method and the appropriateness of those assumptions to the circumstances. No single projection method is inherently better than any other in all circumstances. The results of more than one method should be considered.

12. For each line of business and for all lines of business in the aggregate, management shall record its best estimate of its liabilities for unpaid claims, unpaid losses, and loss/claim adjustment expenses. Because the ultimate settlement of claims (including IBNR for death claims and accident and health claims) is subject to future events, no single claim or loss and loss/claim adjustment expense reserve can be considered accurate with certainty. Management's analysis of the reasonableness of claim or loss and loss/claim adjustment expense reserve estimates shall include an analysis of the amount of variability in the estimate. If, for a particular line of business, management develops its estimate considering a range of claim or loss and loss/claim adjustment expense reserve estimates bounded by a high and a low estimate, management's best estimate of the liability within that range shall be recorded. The high and low ends of the range shall not correspond to an absolute best-and-worst case scenario of ultimate settlements because such estimates may be the result of unlikely assumptions. Management's range shall be realistic and,

therefore, shall not include the set of all possible outcomes but only those outcomes that are considered reasonable. Management shall also follow the concept of conservatism included in the Preamble when determining estimates for claims reserves. However, there is not a specific requirement to include a provision for adverse deviation in claims.

13. In the rare instances when, for a particular line of business, after considering the relative probability of the points within management's estimated range, it is determined that no point within management's estimate of the range is a better estimate than any other point, the midpoint within management's estimate of the range shall be accrued. It is anticipated that using the midpoint in a range will be applicable only when there is a continuous range of possible values, and no amount within that range is any more probable than any other. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued. This guidance is not applicable when there are several point estimates which have been determined as equally possible values, but those point estimates do not constitute a range. If there are several point estimates with equal probabilities, management should determine its best estimate of the liability.

14. If a reporting entity chooses to anticipate salvage and subrogation recoverables (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), the recoverables shall be estimated in a manner consistent with paragraphs 10-12 of this statement. Estimated salvage and subrogation recoveries (net of associated expenses) shall be deducted from the liability for unpaid claims or losses. If a reporting entity chooses to anticipate coordination of benefits (COB) recoverables of Individual and Group Accident and Health Contracts, the recoverables shall be estimated in a manner consistent with paragraphs 10-12 of this statement and shall be deducted from the liability for unpaid claims or losses. A separate receivable shall not be established for these recoverables. In addition, all of these recoverables are also subject to the impairment guidelines established in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R) and an entity shall not reduce its reserves for any recoverables deemed to be impaired. Salvage and subrogation recoveries received (net of associated expenses) are reported as a reduction to paid losses/claims. Coordination of benefits (COB) recoveries received of Individual and Group Accident and Health Contracts (net of associated expenses) are reported as a reduction to paid claims.

15. Changes in estimates of the liabilities for unpaid claims or losses and loss/claim adjustment expenses resulting from the continuous review process, including the consideration of differences between estimated and actual payments, shall be considered a change in estimate and shall be recorded in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3). SSAP No. 3 requires changes in estimates to be included in the statement of operations in the period the change becomes known. This guidance also applies to the period subsequent to the March 1 filing deadline for annual financial statements through the filing deadline of June 1 for audited annual financial statements.

Disclosures

16. The financial statements shall include the following disclosures for each year full financial statements are presented. The disclosure requirement in paragraph 16.d. is also applicable to the interim financial statements if there is a material change from the amounts reported in the annual filing. Life and annuity contracts are not subject to this disclosure requirement.

a. The balance in the liabilities for unpaid claims and unpaid losses and loss/claim adjustment expense reserves at the beginning and end of each year presented;

b. Incurred claims, losses, and loss/claim adjustment expenses with separate disclosures of the provision for insured or covered events of the current year and increases or decreases in the provision for insured or covered events of prior years;

c. Payments of claims, losses, and loss/claim adjustment expenses with separate disclosures of payments of losses and loss/claim adjustment expenses attributable to insured or covered events of the current year and insured or covered events of prior years;

d. The reasons for the change in the provision for incurred claims, losses, and loss/claim adjustment expenses attributable to insured or covered events of prior years. The disclosure should indicate whether additional premiums or return premiums have been accrued as a result of the prior-year effects. (For Title reporting entities, "provision" refers to the known claims reserve included in Line 1 of the Liabilities page, and "prior years" refers to prior report years);

e. Information about significant changes in methodologies and assumptions used in calculating the liability for unpaid claims and claim adjustment expenses, including reasons for the change and the effects on the financial statements for the most recent reporting period presented;

~~e.~~ f. A summary of management's policies and methodologies for estimating the liabilities for losses and loss/claim adjustment expenses, including discussion of claims for toxic waste cleanup, asbestos-related illnesses, or other environmental remediation exposures;

~~f.~~ g. Disclosure of the amount paid and reserved for losses and loss/claim adjustment expenses for asbestos and/or environmental claims, on a direct, assumed and net of reinsurance basis (the reserves required to be disclosed in this section shall exclude amounts relating to policies specifically written to cover asbestos and environmental exposures). Each company should report only its share of a group amount (after applying its respective pooling percentage) if the company is a member of an intercompany pooling agreement; and

~~g.~~ h. Estimates of anticipated salvage and subrogation (including amounts recoverable from second injury funds, other governmental agencies, or quasi-governmental agencies, where applicable), deducted from the liability for unpaid claims or losses.

17. All reporting entity types are required to disclose the dollar amount of any claims/losses related to extra contractual obligation lawsuits or bad faith lawsuits paid during the reporting period on a direct basis. The number of such claims paid shall be disclosed in a note.

18. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

19. Although FASB *Statement No. 60, Accounting and Reporting by Insurance Enterprises* (FAS 60), is rejected in SSAP No. 50, this statement is consistent with the guidance provided for the recognition of claim costs in FAS 60 with the exception of the statutory requirement to accrue the midpoint of a range of loss or loss adjustment expense reserve estimates when no point within management's continuous range of reasonably possible estimates is determined to be a better estimate than any other point.

20. This statement also rejects *AICPA Statement of Position 92-4, Auditing Insurance Entities' Loss Reserves* and *ASU 2015-09, Disclosures about Short-Duration Contracts.* Although the disclosures in ASU 2015-09 are similar to existing statutory accounting disclosures on claims development, the U.S. GAAP disclosures would reflect consolidated information, with potential for different aggregations than what is used for a legal entity basis under statutory accounting. As such, ASU 2015-09 is rejected for statutory accounting, and reporting entities shall follow the established statutory accounting disclosures.

21. Guidance in paragraphs 7.c., 8.b. and 9 was incorporated from SSAP No. 85. SSAP No. 85 was issued in 2002 to amend SSAP No. 55 and provide clarification regarding what costs should be classified as claim adjustment expenses on accident and health contracts. In August 2011, SSAP No. 85 was nullified and the guidance was incorporated into this SSAP. *Issue Paper No. 116—Claim Adjustment Expenses, Amendments to SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* provides historical reference on the original guidance included in SSAP No. 55 as well as the revisions originally reflected in SSAP No. 85.

Effective Date and Transition

22. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. Guidance reflected in paragraphs 7.c., 8.b. and 9, incorporated from SSAP No. 85, is effective for years ending on and after December 31, 2003. The guidance incorporated into paragraphs 1, 3, 6.c.ii., 7.d. and 9.b.vi. was originally included in *INT 03-17: Classification of Liabilities from Extra Contractual Obligation Lawsuits*, and was initially effective March 10, 2004. The guidance in paragraph 5 was previously included in *INT 02-21: Accounting for Prepaid Loss Adjustment Expenses and Claim Adjustment Expenses* effective for reporting periods ending on or after December 31, 2002, for all contracts except for capitated managed care contracts and December 31, 2006, for capitated managed care contracts. The guidance in paragraph 12 related to conservatism and adverse deviation was originally contained in *INT 01-28: Margin for Adverse Deviation in Claim Reserve* and was effective October 16, 2001. The guidance in paragraph 14 related to coordination of benefits was originally contained within *INT 00-31: Application of SSAP No. 55 Paragraph 12 to Health Entities* and was effective December 4, 2000. The guidance reflected in footnote 1, incorporated from *INT 06-14: Reporting of Litigation Costs Incurred for Lines of Business in which Legal Expenses Are the Only Insured Peril*, was effective June 2, 2007.

Title Insurance

SCOPE OF STATEMENT

1. Title insurance insures that the policyholder has title to the property on the subject real estate as of the date of policy issuance, subject to exceptions and exclusions in the policy. When issued, a title policy has a one-time premium and reserves are established by the title insurance company. Title insurance differs from other lines of property and casualty insurance because its basic goal is risk elimination.

2. This statement establishes statutory accounting principles for title insurance and addresses areas where title insurance accounting differs from other lines of insurance. To the extent a topic is not covered by this statement, title insurance accounting shall comply with statutory accounting guidance for other lines of property and casualty insurance.

SUMMARY CONCLUSION

General

3. Title insurers perform many services in connection with the transfer of real estate; however, their principal function involves insuring, guaranteeing, or indemnifying owners of real property or the holders of liens or encumbrances thereon against loss or damage due to defective titles, liens, or encumbrances or, in most states, the unmarketability of the title.

4. In addition to insuring against defective records or examination of those records, an insurer insures against "non-record defects" such as:

a. Forgeries;

b. Fraud;

c. Confusion of name in change of title;

d. Incompetence (minors or persons of unsound mind);

e. Mistakes in public records;

f. Undisclosed or missing heirs;

g. Instruments executed under a fabricated or expired power of attorney;

h. Deeds delivered after death of grantor or grantee or without the consent of the grantor;

i. Deeds by persons supposedly single but actually married;

j. Wills not probated;

k. Liens against property (e.g., mechanics liens and tax liens);

l. Falsified records.

5. Before a title insurance policy is issued, the title insurer, or its agent, must search and examine public records concerning the ownership, liens, and encumbrances on the subject real estate together with information relating to persons having an interest in the real property as well as maps and other records to determine that title to the property is insurable, or defects can be overcome.

Premium Revenue and Loss Reserve Recognition

6. A variety of services are generally provided (either by the title insurance underwriter, its agent, or others) in connection with the transfer of title to real estate. Title insurance premiums frequently are determined in the rate-making process based on the bundle of services provided, including some or all of title search and examination and closing or escrow fees. By statute or custom, certain states exclude a combination of title search, examination and closing or escrow fees from the rate-making process for title insurance premiums. Premiums shall be recorded at the date of policy issuance, on a gross premium basis, consistent with the rate-making method used. The premium related to a title insurance policy is due upon the effective date of the insurance and is not refundable. The term of a title insurance policy is indefinite because the policyholder is insured for as long as he or his heirs or devisees have an interest in the property.

7. Amounts paid to or retained by agents shall be reported as an expense.

8. A liability shall be established for all known unpaid claims and loss adjustment expenses (known claims reserve) with a corresponding charge to income. The known claim reserve is further detailed in the Title Annual Statement Operations and Investment Exhibit on Unpaid Losses and Loss Adjustment Expenses. The known claims reserve should be the estimated costs to settle reported claims based upon the most current information available to the company as of the balance sheet date. This amount cannot be less than the aggregate of the individual case reserves.

9. Premium revenue shall be deferred to the extent necessary to maintain a Statutory or Unearned Premium Reserve (SPR or UPR) determined in accordance with the reserve section of Appendix A-628.

10. If the actuarially determined liability (the sum of the known claims reserve, IBNR claims reserve, and loss adjustment expense reserve) exceeds the sum of the known claims reserve and SPR or UPR, a supplemental reserve shall be established that is equal to the difference between these sums. This calculation is explicitly detailed in the Title Annual Statement Operations and Investment Exhibit for Unpaid Losses and Loss Adjustment Expenses.

11. The actuarially determined liability for the sum of known claims reserve required in paragraph 8 and the IBNR claims and loss adjustment expenses required in paragraph 10 of this statement shall be determined consistently with the guidance detailed in *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* and consistent with paragraph 13 of this statement.

12. Assets acquired in settlement of claims (e.g., mortgages and real estate) shall be accounted for consistent with the guidance related to the asset acquired. For example, an impaired loan shall be accounted for in accordance with *SSAP No. 37—Mortgage Loans*, and real estate acquired in foreclosure shall be accounted for in accordance with *SSAP No. 40R—Real Estate Investments*.

Salvage and Subrogation

13. Salvage and subrogation shall be reflected as follows:

a. Paid losses shall be reported net of realized, but not anticipated, salvage and subrogation. Case basis loss and loss adjustment expense reserves shall not be reduced for anticipated salvage and subrogation, nor shall an asset be established;

b. Paid salvage and subrogation is not realized until a salvage asset or an actual payment pursuant to a subrogation right is in the direct control of the insurer and admissible as an asset for statutory reporting purposes in its own right;

c. Salvage assets and payments pursuant to a subrogation right shall be recorded at current fair value. Current fair value of real estate shall be established through an appraisal conducted by a qualified independent appraiser;

d. If a salvage asset is sold or revalued by the insurer within twelve months of realization for an amount less than the value at which it was originally placed on the books of the insurer, then the loss on disposition shall be treated as a decrease in paid salvage (same effect as an addition to the paid loss) on the corresponding claim. After twelve months, such salvage revaluation will be treated as a loss on disposition or change in value of an asset, and shall not be deducted from the salvage on the corresponding claim;

e. If a salvage asset is sold or revalued by the insurer within twelve months of realization for an amount greater than the value at which it was originally placed on the books of the insurer, then the gain on disposition shall be treated as an increase in paid salvage (same effect as a deduction to the paid loss) on the corresponding claim. After twelve months, such salvage revaluation shall be treated as a gain on disposition or change in value of an asset and shall not be added to the salvage on the corresponding claim;

f. In completing Schedule P and Part 3B, IBNR reserves may make an actuarially determined provision for the expected value of future salvage and subrogation on open claims and IBNR claims.

Reinsurance

14. Although by their nature, title claims relate to errors or omissions that occurred prior to the inception of the reinsurance agreement, title reinsurance contracts shall be accounted for as prospective reinsurance agreements if they meet all of the other criteria established in *SSAP No. 62R—Property and Casualty Reinsurance*.

Allocation of Expenses

15. This statement establishes uniform allocation rules to classify title insurance expenses within prescribed principal groupings. It is necessary to allocate those expenses which may contain characteristics of more than one classification, which this statement will refer to as allocable expenses.

16. Allocable expenses for title insurance companies shall be classified into the following categories on the expense section of the Operations and Investment Exhibit of the annual statement.

a. Title and Escrow Operating Expenses—Title and escrow operating expenses consist of all expenses incurred in relation to engaging in the business of title insurance, including costs associated with the following: (i) issuing or offering to issue a title insurance policy; (ii) soliciting or negotiating the issuance of a title insurance policy; (iii) guaranteeing, warranting or otherwise insuring the correctness of title searches affecting title to real property; (iv) handling of escrows, settlements or closings; (v) executing title insurance policies, effecting contracts of reinsurance, and abstracting, searching or examining titles. Also included are specifically identifiable and allocated expenses relating to the following activities; (i) supervision and training of employees and agents; (ii) operating costs for branch offices or agencies; (iii) underwriting activities; (iv) receiving and paying of premiums and commissions; (v) maintaining general and detailed records; (vi) data processing, advertising, and publicity, clerical, secretarial, office maintenance, supervisory, and executive duties; (vii) postage and delivery; and (viii) all other functions reasonably associated with the business of title insurance. Title and escrow operating expenses do not include losses, loss adjustment expenses (allocated or unallocated), expense of other operations, or investment expenses. The expenses include only amounts

incurred directly by the insurer and do not include expenses incurred by any agents (regardless of ownership interest).

b. Title and Escrow Operating Expenses are further broken down in the annual statement by the distribution network that gives rise to the expense incurrence. Accordingly, expenses are specifically identified or allocated (in accordance with reasonable allocation procedures consistently applied) to either Direct Operations, Non-affiliated Agency Operations, or Affiliated Agency Operations.

c. Unallocated Loss Adjustment Expenses (ULAE)—ULAE are those indirect costs incurred by a title insurer, typically internal to the company, which are necessary to process claims or manage the claims settlement function and which are not incurred on a claim-specific basis. ULAE shall include all costs of outside parties involved in claims adjusting services, but shall not include any costs incurred by agents in settlement of title or other claims.

d. Investment Expenses—Investment expenses are those expenses incurred in the investing of funds and the pursuit of investment income, including specifically identifiable and allocated expenses related to such activities as: (i) initiating or handling orders and recommendations for investments; (ii) research, pricing, appraising, and valuing; (iii) disbursing funds and collecting income; (iv) safekeeping of securities and valuable papers; (v) maintaining general and detailed records; (vi) data processing; (vii) general clerical, secretarial, office maintenance, supervisory, and executive duties; (viii) supplies, postage, and the like; and (ix) all other functions reasonably attributable to the investment of funds. Real estate expenses and real estate taxes are attributable to the Investment Expenses group.

e. Other Operations—The amounts shown for this category represent the allocable expenses incurred by the company in operations other than title and escrow, unallocated loss adjustment, or investment activities.

17. Allocation to the above categories should be based on a method that yields the most accurate results. Specific identification of an expense with an activity that is represented by one of the categories above will generally be the most accurate method. Where specific identification is not feasible, allocation of expenses should be based upon pertinent factors or ratios such as studies of employee activities, salary ratios, or similar analyses.

18. Many companies operate within a group where personnel and facilities are shared. Shared expenses, including expenses under the terms of a management contract, shall be apportioned to the companies incurring the expense as if the expense had been paid solely by the incurring company. The apportionment shall be completed based upon specific identification to the company incurring the expense. Where specific identification is not feasible, apportionment shall be based upon pertinent factors or ratios. Any basis adopted to apportion expenses shall be that which yields the most accurate results and may result from special studies of employee activities, salary ratios, premium ratios or similar analyses. Expenses that relate solely to the operations of an insurance company, such as personnel costs associated with the adjusting and paying of claims, must be borne solely by the insurance company and are not to be apportioned to other companies within a group. Pertinent factors in making this determination shall include which entity has the ultimate obligation to pay the expense. Apportioned expenses are subject to presentation and allocation as provided in paragraphs 16 and 17.

Title Plant

19. Title plants are an integrated and indexed collection of title records consisting of documents, maps, surveys, or entries affecting title to real property or any interest in or encumbrance on the property,

which have been filed or recorded in the jurisdiction for which the title plant is established or maintained. They are tangible assets unique to the title insurance industry and are the principal productive asset used to generate title insurance revenue and to mitigate the risk of claims. Title plant shall be reported as an admitted asset, subject to the following valuation restrictions:

a. Costs incurred to construct a title plant, including the costs incurred to obtain, organize, and summarize historical information in an efficient and useful manner, shall be capitalized until the title plant can be used by the company to conduct title searches and issue title insurance policies. The capitalized costs shall be directly related to, and properly identified with, the activities necessary to construct the title plant;

b. Purchased title plants, including a purchased undivided interest in a title plant, shall be recorded at cost at the date of acquisition. For a title plant acquired separately, cost shall be measured by the fair value of the consideration given. For title plant acquired as part of a group of assets, cost shall be measured by the fair value of the consideration given and then cost shall be allocated to the title plant based on its fair value in relation to the total fair value of the group of assets acquired. For title plants acquired as part of a purchase of assets or in a business combination, cost shall be determined in accordance with *SSAP No. 68—Business Combinations and Goodwill*;

c. A backplant, i.e., a title plant that antedates the period of time covered by the existing title plant may be purchased or constructed. Costs to construct a backplant must be properly identifiable to qualify for capitalization;

d. Costs incurred after a title plant is operational to (i) convert the information from one storage and retrieval system to another, or (ii) modify or modernize the storage and retrieval system shall not be capitalized;

e. Costs incurred to maintain a title plant shall be expensed as incurred;

f. Costs incurred to perform title searches shall be expensed as incurred;

g. An investment in a title plant or plants in an amount equal to the actual cost shall be allowed as an admitted asset for title insurers. The aggregate carrying value of an investment in a title plant or plants shall not exceed the lesser of 20% of admitted assets or forty percent (40%) of surplus to policyholders, both as required to be shown on the statutory balance sheet of the insurer for its most recently filed statement with the domiciliary state commissioner; if the amount of the investment exceeds the above limits, the excess amount shall be recorded as a nonadmitted asset.

20. Certain circumstances may indicate that the value of the title plant may be impaired and, thus, the carrying value of the asset may not be recoverable. If there is an indication of possible impairment of value, the title plant shall be evaluated for impairment and recorded in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*. The following are examples of circumstances that may indicate impairment:

a. Effects of obsolescence, demand, and other economic factors;

b. A significant change in legal requirements or statutory practices in the jurisdiction for which the title plant is established and maintained;

c. A current period operating or cash flow loss combined with a history of such losses or projections that indicate continued losses associated with the revenue produced by the title plant;

d. Failure to maintain the title plant on a current basis and/or lack of appropriate maintenance to keep the title plant up to date; or,

e. Abandonment of a title plant.

21. A properly maintained title plant has an indeterminate life and does not diminish in value with the passage of time, and accordingly, shall not be depreciated.

22. A title insurer may (a) sell its title plant and relinquish all rights to its future use, (b) sell an undivided ownership interest in its title plant, or (c) sell a copy of its title plant or the right to use it. Accounting and presentation for each type of sale noted shall be as follows:

a. When a title insurer sells its title plant and relinquishes all rights to its future use, consideration received shall be presented as a separate component of revenue net of the carrying value of the title plant sold;

b. When a title insurer sells an undivided ownership interest in its title plant, consideration received shall be presented as a separate component of revenue net of the pro rata portion of the carrying value of the title plant;

c. When a title insurer sells a copy of its title plant or the right to use it, consideration received shall be presented as a separate component of revenue and the carrying value of the title plant shall not be reduced.

Disclosures

23. The financial statements shall disclose the following for each period presented:

a. The amount of the known claims reserve, SPR/UPR, and the supplemental reserve;

b. Whether the insurer uses discounting in the calculation of its supplemental reserve, the method and rate used to determine the discount, and the amount of such discount.

24. Any material individual component of the reported expense categories shall be presented either on the face of the Summary of Operations or within the footnotes or related exhibits to the financial statements.

25. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

26. This statement rejects *FASB Statement No. 60, Accounting and Reporting by Insurance Enterprises* (FAS 60); however, it is considered appropriate to use the factors to be considered in the determination of the ultimate cost of settling claims included in FAS 60 when establishing the reserves in accordance with paragraphs 8 and 10 of this statement.

27. This statement adopts *FASB Statement No. 61, Accounting for Title Plant*, with modification for carrying value restrictions. Restrictions on the total carrying value of an investment in a title plant or plants are determined by paragraph 19.g.

Effective Date and Transition

28. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

29. Additions to the SPR or UPR as a result of the provisions of paragraph 17.b.v. of Appendix A-628 shall be phased in pursuant to the provisions of paragraph 17.b.iv. of Appendix A-628.

Mortgage Guaranty Insurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for mortgage guaranty insurance and addresses areas where mortgage guaranty insurance accounting differs from other lines of insurance. To the extent a topic is not covered by this statement and Appendix A-630, mortgage guaranty insurance accounting shall comply with statutory accounting guidance for other lines of property and casualty insurance.

2. Mortgage guaranty insurance protects a lender against loss of all or a portion of the principal amount of a mortgage loan upon default of the mortgagor. Mortgage guaranty insurance differs from other types of property and casualty insurance in that coverage is long-term, and in most cases premiums are level and paid monthly. Most states require issuers of mortgage guaranty contracts to be monoline insurers and impose limitations on the aggregate amount of risk insured based on geographic territories. Additionally, states may require mortgage guaranty insurers to reinsure with only selected reinsurers.

SUMMARY CONCLUSION

General

3. Mortgage guaranty insurance is provided on residential loans (one to four family residences, including condominiums and townhouses). Coverage can range from as little as 5% on pool insurance to as much as 100% of the outstanding loan amount on individual policies. Most policies cover 10% to 30% of the loan amount and are written on first mortgage loans where the loan amount is a high percentage (generally 80% to 95%) of the value of the mortgaged property.

4. Lenders obtain mortgage guaranty insurance to facilitate sales of mortgage loans in secondary markets. It also enables lenders to make a greater number of high ratio (above 80%) loans and allows them to diversify their portfolio of loans.

5. Mortgage guaranty insurers market directly to mortgage lenders. Individual mortgage loans or pools of mortgage loans are insured under individual insurance certificates or policies; each loan, however, is separately underwritten.

6. Mortgage guaranty insurance companies generally offer the following premium payment plans: (a) monthly premiums, (b) a single premium which provides coverage for periods ranging from three to 15 years, (c) nonlevel annual premiums, and (d) level annual premiums. All policies are renewable at the discretion of the lender. The mortgage guaranty insurer does not have an option to cancel or nonrenew the policy, except for fraud or nonpayment of the premium.

7. Premiums are based upon: (a) the percentage of insurance coverage provided, (b) the ratio of the insured mortgage loan to the property value or sales price, and (c) the term and/or premium payment method selected by the lender. Premiums are quoted as a percentage of the total mortgage loan insured and increase as insurance coverage and loan-to-value ratio increases.

8. If a default occurs, the mortgage guaranty insurer generally requires the lender to foreclose and tender merchantable title to the mortgaged property in order to make a claim. The insurer may then, at its option: (a) purchase the property for the lender's cost (generally the entire remaining principal loan balance plus accumulated interest and allowable expenses), (b) pay the percentage of the lender's cost specified by the policy, or (c) arrange for the lender to sell the property and reimburse the lender for any loss up to an agreed amount. Under settlement option (a), the insurer intends to resell the property with the expectation of reducing the amount of loss which would have resulted if option (b) had been elected.

Insured Risk

9. The nature of the insured risk is influenced by certain factors which set mortgage guaranty insurance apart from other types of insurance. These factors are addressed in paragraphs 10-12.

Exposure Period

10. The exposure period is significantly longer for mortgage insurance than for most other property and casualty insurance products. The exposure period can run for the term of the mortgage; however, the average policy life is seven years. The policy is terminated when the mortgage obligation is satisfied or the lender elects to cancel or not renew the policy. In contrast to mortgage guaranty insurance, most property and casualty products need not be renewed by the insurer at the expiration of the policy. Mortgage insurance is renewable at the option of the insured at the renewal rate quoted when the policy commitment was issued.

Losses

11. Losses are affected by the following factors specific to mortgage guaranty insurance:

a. The insured peril—the default of a borrower arises from the credit risk associated with mortgage loans. The frequency of loss is strongly influenced by economic conditions. The likelihood of individual default is further increased if the property has deteriorated since a borrower in financial difficulty will be less able to sell the property at a price sufficient to discharge the mortgage;

b. Mortgage insurance losses can be divided into three categories:

i. Normal losses associated with regular business cycles, interruptions in the borrower's earning power, and errors made in evaluating the borrower's willingness or ability to meet mortgage obligations;

ii. Defaults caused by adverse local economic conditions;

iii. Widespread defaults caused by a severe depression in the U.S. economy.

Loss Incidence

12. Losses are incurred over the exposure period which runs for the term of the mortgage. However, loss incidence peaks in the earlier years. When a loan has been delinquent two to four months, the policy requires the lender to notify the insurer. The lender generally agrees to institute foreclosure proceedings six to nine months from the date of delinquency. Foreclosure can require an additional 18 months which means a considerable delay between the delinquency and the presentation of the claim. Without adverse economic conditions, most delinquencies do not result in a loss payment. Once a claim is presented, payment normally is made within one or two months and ultimate loss costs can be known relatively quickly.

Pool Insurance

13. Mortgage guaranty insurance may be provided on pools of mortgage loans. Typically, pool insurance supports mortgage-backed securities or group sales. Unlike other pool or group products, each loan is individually underwritten.

14. Pool insurance may be provided on loans that are already insured by primary insurance, in which case the pool insurance provides an additional level of coverage, or it may be provided on loans without primary insurance (usually loans with loan-to-value ratios below 80%). Generally, pool insurance

provides 100% coverage and includes a stop-loss limit of liability which may range from 5% to 20% of the initial aggregate principal balance. Because of regulatory requirements in some states, pool insurance usually uses participating reinsurance arrangements to limit the exposure of any one mortgage insurer of a pool of loans to 25% of each mortgage insured.

15. Pool insurance policies are not cancelable by the insurer except for nonpayment of premium. These policies may be written on mortgage pools having terms of up to 30 years. However, the average policy life is 8 to 12 years.

16. Upon default, the insurer has the same options as with individual insured mortgage loans. However, pool insurance loss payments are reduced by settlements under primary insurance and subject to the stop-loss limit.

17. Three kinds of mortgage-backed securities which use pool insurance are:

a. Mortgage-backed bonds—Issued by banks, savings and loan associations and other mortgage lenders as a general obligation of the issuing institution. These bonds are collateralized by a pool of mortgages and have a stated rate of return and maturity date;

b. Mortgage revenue bonds—Issued by state and local housing authorities to support housing affordability for targeted income groups;

c. Mortgage pass-through certificates—Issued by banks, savings and loan associations, mortgage bankers, and others providing an undivided interest in a pool of mortgages with principal and interest payment passed to the certificate holder as received.

Premium Revenue Recognition

18. Written premium shall be recorded in accordance with *SSAP No. 53—Property Casualty Contracts—Premiums*. Premium revenue shall be earned as follows:

a. For monthly premium plans, revenues shall be earned in the month to which they relate;

b. For annual premium plans, revenues shall be earned on a pro rata basis over the applicable year;

c. For single premium plans, revenues shall be earned over the policy life in relation to the expiration of risk;

d. Additional first year premiums or initial renewal premiums on nonlevel policies shall be deferred and amortized to income over the anticipated premium paying period of the policy in relation to the expiration of risk.

Unpaid Losses and Loss Adjustment Expense Recognition

19. Unpaid losses and loss adjustment expenses shall be recognized in accordance with *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (SSAP No. 55). For mortgage guaranty insurance contracts, the default shall be considered the incident that gives rise to a claim as discussed in SSAP No. 55. If a claim is ultimately presented, the date of default shall be considered the loss incurred date.

20. The process for estimating the liability shall include projections for losses that have been reported as well as those that have been incurred but not reported. The estimates shall be made based on historical data, trends, economic factors, and other statistical information including paid claims, reported losses, insurance in force statistics, and risk statistics.

21. Real estate and mortgages are acquired by mortgage guaranty insurers to mitigate losses. These assets shall be shown on the balance sheet at the lower of cost or net realizable value, net of encumbrances. Gains or losses from the holding or disposition of these assets shall be recorded as a component of losses incurred. Rental income or holding expenses shall be included in loss adjustment expenses.

Contingency Reserve

22. In addition to the unearned premium reserve, mortgage guaranty insurers shall maintain a liability referred to as a statutory contingency reserve. The purpose of this reserve is to protect policyholders against loss during periods of extreme economic contraction. The annual addition to the liability shall equal 50% of the earned premium from mortgage guaranty insurance contracts and shall be maintained for ten years regardless of the coverage period for which premiums were paid. With commissioner approval, when required by statute, the contingency reserve may be released in any year in which actual incurred losses exceed 35% of the corresponding earned premiums. Any such reductions shall be made on a first-in, first-out basis. Changes in the reserve shall be recorded directly to unassigned funds (surplus).

Premium Deficiency Reserve

23. When the anticipated losses, loss adjustment expenses, commissions and other acquisition costs, and maintenance costs exceed the recorded unearned premium reserve, contingency reserve, and the estimated future renewal premium on existing policies, a premium deficiency reserve shall be recognized by recording an additional liability for the deficiency with a corresponding charge to operations. Commissions and other acquisition costs need not be considered in the premium deficiency analysis to the extent they have been expensed. If an insurer utilizes anticipated investment income as a factor in the premium deficiency calculation, disclosure of such shall be made in the financial statements.

U.S. Mortgage Guaranty Tax and Loss Bonds

24. To obtain a current federal income tax benefit derived from annual additions to the statutory contingency reserve (for tax purposes, the mortgage guaranty account), mortgage guaranty insurers must purchase tax and loss bonds to the extent of the tax benefits. These bonds are noninterest bearing obligations of the U.S. Treasury and mature 10 years after issue. The usual purpose of tax and loss bonds is to satisfy taxes that will be due in 10 years when the tax benefit is reversed; however, the bonds may be redeemed earlier in the event of excess underwriting losses. These bonds are reported as admitted assets allowing mortgage insurers to conserve capital. In accordance with *SSAP No. 101—Income Taxes*, temporary differences (as defined in that statement) do not include amounts attributable to the statutory contingency reserve to the extent that "tax and loss" bonds have been purchased.

Contingency Reserve (for Tax Purposes, the Mortgage Guaranty Account)

25. Under IRS Code Section 832(e), mortgage guaranty insurers are permitted to deduct the annual addition to the contingency reserve from gross income. The tax deduction is generally an amount equal to (a) 50% of earned premium, or (b) taxable income as computed prior to this special deduction if less than 50% of earned premium. Annual deductions not utilized for tax purposes during the current period may be carried forward for eight years on a basis similar to net operating losses. The amount deducted must be restored to gross income after ten years; however, it may be restored to gross income at an earlier date in the event of a taxable net operating loss.

26. The tax deduction is permitted only if special U.S. Mortgage Guaranty Tax and Loss Bonds are purchased in an amount equal to the tax benefit derived from the deduction. Upon redemption the tax and loss bonds can be used to satisfy the additional tax liability that arises when the deduction is restored to income.

Disclosures

27. Mortgage guaranty insurers shall make all disclosures required by other statements within the *Accounting Practices and Procedures Manual*, including but not limited to the requirements of SSAP No. 55, and *SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures*.

28. Refer to the Preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

29. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Property and Casualty Reinsurance

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for property and casualty reinsurance. A wide range of methods for structuring reinsurance arrangements can be employed depending on the requirements of individual companies. This statement deals with the more commonly employed methods.

SUMMARY CONCLUSION

General

2. Reinsurance is the assumption by an insurer of all or part of a risk undertaken originally by another insurer. The transaction whereby a reinsurer cedes all or part of the reinsurance it has assumed to another reinsurer is known as a retrocession.

3. Reinsurance has many beneficial purposes. Among them are that it enables an insurance entity to (a) expand its capacity, (b) share large risks with other insurers, (c) spread the risk of potential catastrophes and stabilize its underwriting results, (d) finance expanding volume by sharing the financial burden of reserves, (e) withdraw from a line or class of business, and (f) reduce its net liability to amounts appropriate to its financial resources.

4. Reinsurance agreements are generally classified as treaty or facultative. Treaty reinsurance refers to an arrangement involving a class or type of business written, while facultative reinsurance involves individual risks offered and accepted.

5. Reinsurance coverage can be pro rata (i.e., proportional reinsurance) where the reinsurer shares a pro rata portion of the losses and premium of the ceding entity or excess of loss (i.e., non-proportional) where the reinsurer, subject to a specified limit, indemnifies the ceding entity against the amount of loss in excess of a specified retention. Most reinsurance agreements fall into one of the following categories:

a. Treaty Reinsurance Contracts—Pro Rata:

   i. Quota Share Reinsurance—The ceding entity is indemnified against a fixed percentage of loss on each risk covered in the agreement;

   ii. Surplus Share Reinsurance—The ceding entity establishes a retention or "line" on the risks to be covered and cedes a fraction or a multiple of that line on each policy subject to a specified maximum cession;

b. Treaty Reinsurance Contracts—Excess of Loss:

   i. Excess Per Risk Reinsurance—The ceding entity is indemnified, subject to a specified limit, against the amount of loss in excess of a specified retention with respect to each risk covered by a treaty;

   ii. Aggregate Excess of Loss Reinsurance—The ceding entity is indemnified against the amount by which the ceding entity's net retained losses incurred during a specific period exceed either a predetermined dollar amount or a percentage of the entity's subject premiums for the specific period subject to a specified limit;

c. Treaty Reinsurance Contracts—Catastrophe: The ceding entity is indemnified, subject to a specified limit, against the amount of loss in excess of a specified retention with respect to an accumulation of losses resulting from a catastrophic event or series of events;

d. Facultative Reinsurance Contracts—Pro Rata: The ceding entity is indemnified for a specified percentage of losses and loss expenses arising under a specific insurance policy in exchange for that percentage of the policy's premium;

e. Facultative Reinsurance Contracts—Excess of Loss: The ceding entity is indemnified, subject to a specified limit, for losses in excess of its retention with respect to a particular risk.

Characteristics of Reinsurance Agreements

6. Common contract provisions that may affect accounting practices include:

a. Reporting responsibility of the ceding entity—Details required and time schedules shall be established;

b. Payment terms—Time schedules, currencies intended, and the rights of the parties to withhold funds shall be established;

c. Payment of premium taxes—Customarily the responsibility of the ceding entity, a recital of nonliability of the reinsurer may be found;

d. Termination—May be on a cut-off or run-off basis. A cut-off provision stipulates that the reinsurer shall not be liable for loss as a result of occurrences taking place after the date of termination. A run-off provision stipulates that the reinsurer shall remain liable for loss under reinsured policies in force at the date of termination as a result of occurrences taking place after the date of termination until such time as the policies expire or are canceled; and

e. Insolvency clause—Provides for the survival of the reinsurer's obligations in the event of insolvency of the ceding entity, without diminution because of the insolvency.

7. Reinsurance contracts shall not permit entry of an order of rehabilitation or liquidation to constitute an anticipatory breach by the reporting entity, nor grounds for retroactive revocation or retroactive cancellation of any contracts of the reporting entity.

Required Terms for Reinsurance Agreements

8. In addition to credit for reinsurance requirements applicable to reinsurance transactions generally, no credit or deduction from liabilities shall be allowed by the ceding entity for reinsurance recoverable where the agreement was entered into after the effective date of these requirements (see paragraphs 108 and 109) unless each of the following conditions is satisfied:

a. The agreement must contain an acceptable insolvency clause;

b. Recoveries due the ceding entity must be available without delay for payment of losses and claim obligations incurred under the agreement, in a manner consistent with orderly payment of incurred policy obligations by the ceding entity;

c. The agreement shall constitute the entire contract between the parties and must provide no guarantee of profit, directly or indirectly, from the reinsurer to the ceding entity or from the ceding entity to the reinsurer;

d. The agreement must provide for reports of premiums and losses, and payment of losses, no less frequently than on a quarterly basis, unless there is no activity during the period.

The report of premiums and losses shall set forth the ceding entity's total loss and loss expense reserves on the policy obligations subject to the agreement, so that the respective obligations of the ceding entity and reinsurer will be recorded and reported on a basis consistent with this statement;

e. The agreement must include a proper reinsurance intermediary clause, if applicable, which stipulates that the credit risk for the intermediary is carried by the assuming insurance entity;

f. With respect to reinsurance contracts involving a certified reinsurer, the agreement must include a proper funding clause, which requires the certified reinsurer to provide and maintain security in an amount sufficient to avoid the imposition of any financial statement penalty on the ceding insurance entity for reinsurance ceded to the certified reinsurer. However, this does not preclude negotiation for higher contractual collateral amounts; and

g. With respect to retroactive reinsurance agreements, the following additional conditions apply:

i. The consideration to be paid by the ceding entity for the retroactive reinsurance must be a sum certain stated in the agreement;

ii. Direct or indirect compensation to the ceding entity or reinsurer is prohibited;

iii. Any provision for subsequent adjustment on the basis of actual experience in regard to policy obligations transferred, or on the basis of any other formula, is prohibited in connection with a retroactive reinsurance transaction, except that provision may be made for the ceding entity's participation in the reinsurer's ultimate profit, if any, under the agreement;

iv. A retroactive reinsurance agreement shall not be canceled or rescinded without the approval of the commissioner of the domiciliary state of the ceding entity.

Reinsurance Agreements with Multiple Cedents

9. Reinsurance agreements with multiple cedents require allocation agreements. The allocation agreement can be part of the reinsurance agreement or a separate agreement. If the agreement has multiple cedents:

a. The allocation must be in writing and

b. The terms of the allocation agreement must be fair and equitable.

Reinsurance Contracts Must Include Transfer of Risk

10. The essential ingredient of a reinsurance contract is the transfer of risk. The essential element of every true reinsurance agreement is the undertaking by the reinsurer to indemnify the ceding entity, i.e., reinsured entity, not only in form but in fact, against loss or liability by reason of the original insurance. Unless the agreement contains this essential element of risk transfer, no credit shall be recorded.(INT 02-22)

11. Insurance risk involves uncertainties about both (a) the ultimate amount of net cash flows from premiums, commissions, claims, and claims settlement expenses (underwriting risk) and (b) the timing of the receipt and payment of those cash flows (timing risk). Actual or imputed investment returns are not an

element of insurance risk. Insurance risk is fortuitous—the possibility of adverse events occurring is outside the control of the insured.

12. Determining whether an agreement with a reinsurer provides indemnification against loss or liability (transfer of risk) relating to insurance risk requires a complete understanding of that contract and other contracts or agreements between the ceding entity and related reinsurers. A complete understanding includes an evaluation of all contractual features that (a) limit the amount of insurance risk to which the reinsurer is subject (e.g., experience refunds, cancellation provisions, adjustable features, or additions of profitable lines of business to the reinsurance contract) or (b) delay the timely reimbursement of claims by the reinsurer (e.g., payment schedules or accumulating retentions from multiple years).

13. Indemnification of the ceding entity against loss or liability relating to insurance risk in reinsurance requires both of the following:

a. The reinsurer assumes significant insurance risk under the reinsured portions of the underlying insurance agreements; and

b. It is reasonably possible that the reinsurer may realize a significant loss from the transaction.

14. A reinsurer shall not have assumed significant insurance risk under the reinsured contracts if the probability of a significant variation in either the amount or timing of payments by the reinsurer is remote. Implicit in this condition is the requirement that both the amount and timing of the reinsurer's payments depend on and directly vary with the amount and timing of claims settled by the ceding entity. Contractual provisions that delay timely reimbursement to the ceding entity prevent this condition from being met.

15. The ceding entity's evaluation of whether it is reasonably possible for a reinsurer to realize a significant loss from the transaction shall be based on the present value of all cash flows between the ceding and assuming companies under reasonably possible outcomes, without regard to how the individual cash flows are described or characterized. An outcome is reasonably possible if its probability is more than remote. The same interest rate shall be used to compute the present value of cash flows for each reasonably possible outcome tested. A constant interest rate shall be used in determining those present values because the possibility of investment income varying from expectations is not an element of insurance risk. Judgment is required to identify a reasonable and appropriate interest rate.

16. Significance of loss shall be evaluated by comparing the present value of all cash flows, determined as described in paragraph 15, with the present value of the amounts paid or deemed to have been paid to the reinsurer. If, based on this comparison, the reinsurer is not exposed to the reasonable possibility of significant loss, the ceding entity shall be considered indemnified against loss or liability relating to insurance risk only if substantially all of the insurance risk relating to the reinsured portions of the underlying insurance agreements has been assumed by the reinsurer. In this narrow circumstance, the reinsurer's economic position is virtually equivalent to having written the insurance contract directly. This condition is met only if insignificant insurance risk is retained by the ceding entity on the retained portions of the underlying insurance contracts, so that the reinsurer's exposure to loss is essentially the same as the reporting entity's.

17. Payment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer's payment to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being

met. Therefore, any feature that may affect the timing of the reinsurer's reimbursement to the ceding entity shall be closely scrutinized.

Accounting for Reinsurance

18. Reinsurance recoverables shall be recognized in a manner consistent with the liabilities (including estimated amounts for claims incurred but not reported) relating to the underlying reinsured contracts. Assumptions used in estimating reinsurance recoverables shall be consistent with those used in estimating the related liabilities. Certain assets and liabilities are created by entities when they engage in reinsurance contracts. Reinsurance assets meet the definition of assets as defined by *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted to the extent they conform to the requirements of this statement.

19. Accounting for members of a reinsurance pool shall follow the accounting for the pool member which issued the underlying policy.(INT 03-02) Specific accounting rules for underwriting pools and associations are addressed in *SSAP No. 63—Underwriting Pools* (SSAP No. 63).

20. Reinsurance recoverable on loss payments is an admitted asset. Notwithstanding the fact that reinsurance recoverables on paid losses may meet the criteria for offsetting under the provisions of *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64), reinsurance recoverables on paid losses shall be reported as an asset without any available offset. Unauthorized reinsurance and reinsurance ceded to certified reinsurers is included in this asset and reflected separately as a liability to the extent required. Penalty for overdue authorized reinsurance shall be reflected as a liability.

21. Funds held or deposited with reinsured companies, whether premiums withheld as security for unearned premium and outstanding loss reserves or advances for loss payments, are admitted assets provided they do not exceed the liabilities they secure and provided the reinsured is solvent. Those funds which are in excess of the liabilities, and any funds held by an insolvent reinsured shall be nonadmitted.

22. Prospective reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for losses that may be incurred as a result of future insurable events covered under contracts subject to the reinsurance. Retroactive reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for liabilities incurred as a result of past insurable events covered under contracts subject to the reinsurance. A reinsurance agreement may include both prospective and retroactive reinsurance provisions.

23. The distinction between prospective and retroactive reinsurance agreements is based on whether the agreement reinsures future or past insured events covered by the underlying insurance policies. For example, in occurrence-based insurance, the insured event is the occurrence of a loss covered by the insurance contract. In claims-made insurance, the insured event is the reporting to the insurer, within the period specified by the policy, of a claim for a loss covered by the insurance agreement. A claims-made reinsurance contract that reinsures claims asserted to the reinsurer in a future period as a result of insured events that occurred prior to entering into the reinsurance agreement is a retroactive agreement. (However, a reinsurance agreement that reinsures claims reported to an insurer that are covered under currently effective claims-made insurance policies is a prospective reinsurance agreement.)

24. It is not uncommon for a reinsurance arrangement to be initiated before the beginning of a policy period but not finalized until after the policy period begins. Whether there was agreement in principle at the beginning of the policy period and, therefore, the agreement is substantively prospective shall be determined based on the facts and circumstances. However, except as respects business assumed by a U.S. reinsurer from ceding companies domiciled outside the U.S. and not affiliated with such reinsurer, or business assumed by a U.S. reinsurer where either the lead reinsurer or a majority of the capacity on the agreement is domiciled outside the U.S. and is not affiliated with such reinsurer, if an agreement entered into, renewed or amended on or after January 1, 1994 has not been finalized, reduced to a written form and signed by the parties within nine months after the commencement of the policy period covered by the

reinsurance arrangement, then the arrangement is presumed to be retroactive and shall be accounted for as a retroactive reinsurance agreement. This presumption shall not apply to: (a) facultative reinsurance contracts, nor to (b) reinsurance agreements with more than one reinsurer which are signed by the lead reinsurer (i.e., the reinsurer setting the terms of the agreement for the reinsurers) within nine months after the commencement of the policy period covered by the reinsurance agreement, nor to (c) reinsurance agreements with more than one reinsurer (whether signed by the lead reinsurer or not) which were entered into, renewed or amended on or before December 31, 1996, (and which were not renewed or amended after that date) if reinsurers representing more than 50% of the capacity on the agreement have signed cover notes, placement slips or similar documents describing the essential terms of coverage and exclusions within nine months after the commencement of the policy period covered by the reinsurance arrangement. Also exempt from this presumption are reinsurance agreements where one of the parties is in conservation, rehabilitation, receivership or liquidation proceedings.

25. Prospective and retroactive provisions included within a single agreement shall be accounted for separately. If separate accounting for prospective and retroactive provisions included within a single agreement is impracticable, the agreement shall be accounted for as a retroactive agreement provided the conditions for reinsurance accounting are met.

Accounting for Prospective Reinsurance Agreements

26. Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of written and earned premiums by the ceding entity and shall be earned over the remaining contract period in proportion to the amount of reinsurance protection provided or, if applicable, until the reinsurer's maximum liability under the agreement has been exhausted. If the amounts paid are subject to adjustment and can be reasonably estimated, the basis for amortization shall be the estimated ultimate amount to be paid. Reinstatement premium, if any, shall be earned over the period from the reinstatement of the limit to the expiration of the agreement.

27. Changes in amounts of estimated reinsurance recoverables shall be recognized as a reduction of gross losses and loss expenses incurred in the current period statement of income. Reinsurance recoverables on paid losses shall be reported as an asset, reinsurance recoverables on loss and loss adjustment expense payments, in the balance sheet. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be netted against the liability for gross losses and loss adjustment expenses.

Accounting for Retroactive Reinsurance Agreements

28. Certain reinsurance agreements which transfer both components of insurance risk cover liabilities which occurred prior to the effective date of the agreement. Due to potential abuses involving the creation of surplus to policyholders and the distortion of underwriting results, special accounting treatment for these agreements is warranted.

29. All retroactive reinsurance agreements entered into, renewed or amended on or after January 1, 1994 (including subsequent development of such transactions) shall be accounted for and reported in the following manner:

a. The ceding entity shall record, without recognition of the retroactive reinsurance, loss and loss expense reserves on a gross basis on the balance sheet and in all schedules and exhibits;

b. The assuming entity shall exclude the retroactive reinsurance from loss and loss expense reserves and from all schedules and exhibits;

c. The ceding entity and the assuming entity shall report by write-in item on the balance sheet, the total amount of all retroactive reinsurance, identified as retroactive reinsurance reserve ceded or assumed, recorded as a contra-liability by the ceding entity and as a liability by the assuming entity;

d. The ceding entity shall, by write-in item on the balance sheet, restrict surplus resulting from any retroactive reinsurance as a special surplus fund, designated as special surplus from retroactive reinsurance account;

e. The surplus gain from any retroactive reinsurance shall not be classified as unassigned funds (surplus) until the actual retroactive reinsurance recovered exceeds the consideration paid;

f. The special surplus from retroactive reinsurance account for each respective retroactive reinsurance agreement shall be reduced at the time the ceding entity begins to recover funds from the assuming entity in amounts exceeding the consideration paid by the ceding entity under such agreement, or adjusted as provided in paragraph 29.j.;

g. For each agreement, the reduction in the special surplus from retroactive reinsurance account shall be limited to the lesser of (i) the actual amount recovered in excess of consideration paid or (ii) the initial surplus gain resulting from the respective retroactive reinsurance agreement. Any remaining balance in the special surplus from retroactive reinsurance account derived from any such agreement shall be returned to unassigned funds (surplus) upon elimination of all policy obligations subject to the retroactive reinsurance agreement;

h. The ceding entity shall report the initial gain arising from a retroactive reinsurance transaction (i.e., the difference between the consideration paid to the reinsurer and the total reserves ceded to the reinsurer) as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Gain and included under Other Income;

i. The assuming entity shall report the initial loss arising from a retroactive reinsurance transaction, as defined in the preceding paragraph 29.g., as a write-in item on the statement of income, to be identified as Retroactive Reinsurance Loss and included under Other Income;

j. Any subsequent increase or reduction in the total reserves ceded under a retroactive reinsurance agreement shall be reported in the manner described in the preceding paragraphs 29.h. and 29.i., in order to recognize the gain or loss arising from such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry on the balance sheet shall be adjusted, upward or downward, to reflect such increase or reduction in reserves ceded. The Special Surplus from Retroactive Reinsurance Account write-in entry shall be equal to or less than the total ceded reserves under all retroactive reinsurance agreements in-force as of the date of the financial statement. Special surplus arising from a retroactive reinsurance transaction shall be considered to be earned surplus (i.e., transferred to unassigned funds (surplus)) only when cash recoveries from the assuming entity exceed the consideration paid by the ceding entity as respects such retroactive reinsurance transaction; and

k. The consideration paid for a retroactive reinsurance agreement shall be reported as a decrease in ledger assets by the ceding entity and as an increase in ledger assets by the assuming entity.

(For an illustration of ceding entity accounting entries see Question 33 in Exhibit A.)

30. Portfolio reinsurance is the transfer of an insurer's entire liability for in force policies or outstanding losses, or both, of a segment of the insurer's business. Loss portfolio transactions are to be accounted for as retroactive reinsurance.

31. The accounting principles for retroactive reinsurance agreements in paragraph 29 shall not apply to the following types of agreements (which shall be accounted for as prospective reinsurance agreements unless otherwise provided in this statement):

a. Structured settlement annuities for individual claims purchased to implement settlements of policy obligations;

b. Novations, (i.e., (i) transactions in which the original direct insurer's obligations are completely extinguished, resulting in no further exposure to loss arising on the business novated or (ii) transactions in which the original assuming entity's obligations are completely extinguished) resulting in no further exposure to loss arising on the business novated, provided that (1) the parties to the transaction are not affiliates (or if affiliates, that the transaction has the prior approval of the domiciliary regulators of the parties) and (2) the accounting for the original reinsurance agreement will not be altered from retroactive to prospective;

c. The termination of, or reduction in participation in, reinsurance treaties entered into in the ordinary course of business;

d. Intercompany reinsurance agreements, and any amendments thereto, among companies 100% owned by a common parent or ultimate controlling person provided there is no gain in surplus as a result of the transaction; or

e. Reinsurance/retrocession agreements that meet the criteria of property/casualty run-off agreements described in paragraphs 81-84.

32. Retroactive reinsurance agreements resulting in surplus gain to the ceding entity (with or without risk transfer) entered into between affiliates or between insurers under common control (as those terms are defined in Appendix A-440) shall be reported as follows:

a. The consideration paid by the ceding entity shall be recorded as a deposit and reported as a nonadmitted asset; and

b. No deduction shall be made from loss and loss adjustment expense reserves on the ceding entity's balance sheet, schedules, and exhibits.

33. The accounting and reporting provisions applicable to retroactive reinsurance apply to all transactions transferring liabilities in connection with a court-ordered rehabilitation, liquidation, or receivership. The requirement to include stipulated contract provisions in the reinsurance agreements shall not apply to these transactions, with written approval of the ceding entity's domiciliary commissioner.

34. Novations meeting the requirements of paragraph 31.b. shall be accounted for as prospective reinsurance agreements. The original direct insurer, or the original assuming insurer, shall report amounts paid as a reduction of written and earned premiums, and unearned premiums to the extent that premiums have not been earned. Novated balances (e.g., loss and loss adjustment expense reserves) shall be written off through the accounts, exhibits, and schedules in which they were originally recorded. The assuming insurer shall report amounts received as written and earned premiums, and obligations assumed as incurred losses in the statement of income.

Deposit Accounting

35. To the extent that a reinsurance agreement does not, despite its form, transfer both components of insurance risk, all or part of the agreement shall be accounted for and reported as deposits in the following manner:

a. At the outset of the reinsurance agreement, the net consideration paid by the ceding entity (premiums less commissions or other allowances) shall be recorded as a deposit by the ceding company and as a liability by the assuming entity. The deposit shall be reported as an admitted asset by the ceding company if (i) the assuming company is licensed, accredited or otherwise qualified in the ceding company's state of domicile as described in Appendix A-785 or (ii) there are funds held by or on behalf of the ceding company which meet the requirements of paragraph 18 of Appendix A-785;

b. At subsequent reporting dates, the amount of the deposit/liability shall be adjusted by calculating the effective yield on the deposit agreement to reflect actual payments to date (receipts and disbursements shall be recorded through the deposit/liability accounts) and expected future payments (as discussed below), with a corresponding credit or charge to interest income or interest expense;

c. The calculation of the effective yield shall use the estimated amount and timing of cash flows. If a change in the actual or estimated timing or amount of cash flows occurs, the effective yield shall be recalculated to reflect the revised actual or estimated cash flows. The deposit shall be adjusted to the amount that would have existed at the reporting date had the new effective yield been applied since the inception of the reinsurance agreement. Changes in the carrying amount of the deposit asset/liability resulting from changes in the effective yield shall be recorded as interest income or interest expense;

d. It shall be assumed that any cash transactions for the settlement of losses will reduce the asset/liability accounts by the amount of the cash transferred. When the remaining losses are revalued upward, an increase in the deposit liability shall be recorded as interest expense – by the assuming company. Conversely, the ceding company shall increase its deposit (asset) with an offsetting credit to interest income; and increase its outstanding loss liability with an offsetting charge to incurred losses;

e. No deduction shall be made from the loss and loss adjustment expense reserves on the ceding company's Statement of Financial Position, schedules, and exhibits;

f. The assuming company shall record net consideration to be returned to the ceding company as a liability.

(For an illustration of the provisions of paragraph 35, see Exhibit C)

Assumed Reinsurance

36. Reinsurance premiums receivable at the end of the accounting period are combined with direct business receivables and reported as agents' balances or uncollected premiums. Where the ceding entity withholds premium funds pursuant to the terms of the reinsurance agreement, such assets shall be shown by the assuming entity as funds held by or deposited with reinsured companies. Reporting entities shall record any interest earned or receivable on the funds withheld as a component of aggregate write-ins for miscellaneous income.

37. If the assuming entity receives reinsurance premium prior to the effective date of the reinsurance contract, consistent with *SSAP No. 53—Property Casualty Contracts-Premiums*, paragraph 15, advance premiums shall be reported as a liability in the statutory financial statement and not considered income until the effective date of the coverage. Such amounts are not included in written premium or the unearned premium reserve. If the assuming entity receives reinsurance premium after the effective date of the reinsurance contract but prior to the due date, the amount received shall be reported as a reduction of the asset for deferred but not yet due (earned but unbilled premiums).

38. Reinsurance premiums more than 90 days overdue shall be nonadmitted except (a) to the extent the assuming entity maintains unearned premium and loss reserves as to the ceding entity, under principles of offset accounting as discussed in SSAP No. 64, or (b) where the ceding entity is licensed and in good standing in assuming entity's state of domicile. Reinsurance premiums are due pursuant to the original contract terms (as the agreement stood on the date of execution). In the absence of a specific contract date, reinsurance premiums will be deemed due thirty (30) days after the date on which (i) notice or demand of premium due is provided to the ceding entity or (ii) the assuming entity books the premium (see *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*).

39. A lag will develop between the time of the entry of the underlying policy transaction on the books of the ceding entity and the transmittal of information and entry on the books of the assuming entity. Assuming companies shall estimate unreported premiums and related costs to the extent necessary to prevent material distortions in the loss development contained in the assuming entity's annual statement schedules where calendar year premiums are compared to accident year losses.

40. Proportional reinsurance (i.e., first dollar pro rata reinsurance) premiums shall be allocated to the appropriate annual statement lines of business in the Underwriting and Investment exhibits. Non-proportional assumed reinsurance premiums shall be classified as reinsurance under the appropriate subcategories.

41. Assumed retroactive reinsurance premiums shall be excluded from all schedules and exhibits as addressed in paragraph 29.

42. Amounts payable by reinsurers on losses shall be classified as unpaid losses. Assumed reinsurance payable on paid losses shall be classified as a separate liability item on the balance sheet. IBNR losses on assumed reinsurance business shall be netted with ceded losses on the balance sheet and listed separately by annual statement line of business in the Underwriting and Investment exhibits.

Ceded Reinsurance

43. Ceded reinsurance premiums payable (net of ceding commission) shall be classified as a liability. Consistent with SSAP No. 64, ceded reinsurance premiums payable may be deducted from amounts due from the reinsurer, such as amounts due on assumed reinsurance, when a legal right of offset exists.

44. With regard to reinsurance premium paid prior to the effective date of the contract, the ceding entity shall reflect the prepaid item as a write-in admitted asset and it should not be recognized in the income statement until the effective date of the coverage. Such amounts are not included in ceded written premiums or ceded unearned premium but should be subject to impairment analysis. With regard to reinsurance premium paid by ceding entity after the reinsurance contract is in effect but prior to the due date, the ceding entity shall treat this item as a reduction to the liability for ceded reinsurance premiums payable. That liability reflects not only premiums unpaid but also amounts booked but deferred and not yet due.

45. Amounts withheld by the ceding entity that would otherwise be payable under the reinsurance agreement shall be reported as funds held by entity under reinsurance treaties. Reporting entities shall

record any interest due or payable on the amounts withheld as a component of aggregate write-ins for miscellaneous income.

46. Ceded reinsurance transactions shall be classified in the annual statement line of business which relates to the direct or assumed transactions creating the cession or retrocession.

47. Ceded retroactive reinsurance premiums shall be excluded from all schedules and exhibits as addressed in paragraph 29.

48. Reinsurance accounting shall not be allowed for modeled trigger securitizations. Modeled trigger securitization transactions do not result in the kind of indemnification (in form and in fact) required by this SSAP, and are therefore not eligible for reinsurance accounting. Modeled trigger transactions should be evaluated as securitization transactions rather than as reinsurance transactions and should receive the accounting treatment recommended for securitization transactions.

Adjustable Features/Retrospective Rating

49. Reinsurance treaties may provide for adjustment of commission, premium, or amount of coverage, based on loss experience. The accounting for common examples is outlined in the following paragraphs:

Commission Adjustments

50. An accrual shall be maintained for the following adjustable features based upon the experience recorded for the accounting period:

a. Contingent or Straight Profit—The reinsurer returns to the ceding entity a stipulated percentage of the profit produced by the business assumed from the ceding entity. Profit may be calculated for any specified period of time, but the calculation is often based on an average over a period of years; and

b. Sliding Scale—A provisional rate of commission is paid over the course of the agreement, with a final adjustment based on the experience of the business ceded under the agreement.

Premium Adjustments

51. If the reinsurance agreement incorporates an obligation on the part of the ceding entity to pay additional premium to the assuming entity based upon loss experience under the agreement, a liability in the amount of such additional premium shall be recognized by the ceding entity during the accounting period in which the loss event(s) giving rise to the obligation to pay such additional premium occur(s). The assuming entity shall recognize an asset in a consistent manner. If the reinsurance agreement incorporates an obligation on the part of the assuming entity to refund to the ceding entity any portion of the consideration received by the assuming entity based upon loss experience under the agreement, an asset in the amount of any such refund shall be recognized by the ceding entity during the accounting period in which the loss event(s) giving rise to the obligation to make such refund occur(s). The initial provisional or deposit premium is recalculated retrospectively, based on loss experience under the agreement during a specified period of time; the calculation is often based on an average over a period of years. The assuming entity shall recognize a liability in a consistent manner.

Adjustments in the Amount of Coverage

52. The amount of coverage available for future periods is adjusted, upward or downward, based on loss experience under the agreement during a specified period of time. If the reinsurance agreement

incorporates a provision under which the reinsurance coverage afforded to the ceding entity may be increased or reduced based upon loss experience under the agreement, an asset or a liability shall be recognized by the ceding entity in an amount equal to that percentage of the consideration received by the assuming entity which the increase or reduction in coverage represents of the amount of coverage originally afforded. The asset or liability shall be recognized during the accounting period in which the loss event(s) (or absence thereof) giving rise to the increase or decrease in reinsurance coverage occur(s), and shall be amortized over all accounting periods for which the increased or reduced coverage is applicable. The term "consideration" shall mean, for this purpose, the annualized deposit premium for the period used as the basis for calculating the adjustment in the amount of coverage to be afforded thereafter under the agreement.

Impairment

53. Include as a nonadmitted asset, amounts accrued for premium adjustments on retrospectively rated reinsurance agreements with respect to which all uncollected balances due from the ceding company have been classified as nonadmitted.

Commissions

54. Commissions payable on reinsurance assumed business shall be included as an offset to Agents' Balances or Uncollected Premiums. Commissions receivable on reinsurance ceded business shall be included as an offset to Ceded Reinsurance Balances Payable.

55. If the ceding commission paid under a reinsurance agreement exceeds the anticipated acquisition cost of the business ceded, the ceding entity shall establish a liability, equal to the difference between the anticipated acquisition cost and the reinsurance commissions received, to be amortized pro rata over the effective period of the reinsurance agreement in proportion to the amount of coverage provided under the reinsurance contract.

Unauthorized Reinsurance

56. If the assuming reinsurer is not authorized, otherwise approved or certified to do business in the ceding entity's domiciliary state, the assumed reinsurance is considered to be unauthorized. A provision is established to offset credit taken in various balance sheet accounts for reinsurance ceded to unauthorized reinsurers. Credit for reinsurance with unauthorized reinsurers shall be permitted to the extent the ceding entity holds collateral in accordance with Appendix A-785. If the assuming reinsurer is not licensed or is not an authorized reinsurer in the domiciliary state of the ceding entity or if the reinsurance does not meet required standards, the ceding entity must set up a provision for reinsurance liability in accordance with the NAIC Annual Statement Instructions for Property and Casualty Insurance Companies Schedule F.

57. The provision defined in paragraph 56 shall never be less than zero for any particular reinsurer. The change in liability for unauthorized reinsurance is a direct charge or credit to surplus.

Reinsurance Ceded to a Certified Reinsurer

58. The term certified reinsurer shall have the same meaning as set forth in the Appendix A-785.

59. Credit for reinsurance ceded to a certified reinsurer is permitted if security is held by or on behalf of the ceding entity in accordance with the certified reinsurer's rating assigned by the domestic state of the ceding insurance entity, and in accordance with Appendix A-785 of this manual. However, nothing in this guidance would prohibit the parties to a reinsurance agreement from agreeing to provisions establishing security requirements that exceed the minimum security requirements established for certified reinsurers.

60. An upgrade in a certified reinsurer's assigned rating applies on a prospective basis, i.e., the revised collateral requirement applies only to contracts entered into or renewed on or after the effective date of the new rating (see A-785). A downgrade in a certified reinsurer's rating applies on a retroactive basis, i.e., the revised collateral requirement applies to all reinsurance obligations incurred by the assuming insurer under its certified reinsurer status. Notwithstanding a change in a certified reinsurer's rating or revocation of its certification, a reporting entity that has ceded reinsurance to such certified reinsurer is allowed a three (3)-month grace period before recording a provision for reinsurance due to collateral deficiency associated with such rating downgrade and increased collateral requirement for all reinsurance ceded to such assuming insurer under its certified reinsurer status, unless the reinsurance is found by the commissioner of the reporting entity's domestic state to be at high risk of uncollectibility.

61. A provision is established by the ceding entity to offset credit taken in various balance sheet accounts for reinsurance ceded to a certified reinsurer in an amount proportionate to any deficiency in the amount of acceptable security that is provided by the certified reinsurer as compared to the amount of security that is required to be provided in accordance with the certified reinsurer's rating. The calculation of the provision for a collateral shortfall is separate from the calculation of the provision for overdue reinsurance ceded to certified reinsurers and shall be calculated in accordance with the NAIC Annual Statement Instructions for Property and Casualty Insurance Companies.

62. The provision defined in paragraph 61 shall never be less than zero for any particular certified reinsurer. The change in liability for reinsurance with certified reinsurers is a direct charge or credit to surplus.

Funds Held Under Reinsurance Treaties

63. This liability is established for funds deposited by or contractually withheld from reinsurers or reinsurers.

Provision for Reinsurance

64. The NAIC Annual Statement Instructions for Property and Casualty Companies for Schedule F—Provision for Overdue Reinsurance, provide for a minimum reserve for uncollectible reinsurance with an additional reserve required if an entity's experience indicates that a higher amount should be provided. The minimum reserve Provision for Reinsurance is recorded as a liability and the change between years is recorded as a gain or loss directly to unassigned funds (surplus). Any reserve over the minimum amount shall be recorded on the statement of income by reversing the accounts previously utilized to establish the reinsurance recoverable.

65. The provision for reinsurance is calculated separately for unauthorized, authorized and certified reinsurers. An authorized reinsurer is licensed, accredited or approved by the ceding entity's state of domicile; a certified reinsurer is certified by the ceding entity's state of domicile; an unauthorized reinsurer is not so licensed, accredited, approved or certified.

Asbestos and Pollution Contracts – Counterparty Reporting Exception

66. Upon approval by the domiciliary regulator(s) of the ceding entity (either the original direct insurer in the case of a reinsurance agreement or the original assuming reinsurer in the case of a retrocession agreement), an exception may be allowed with respect to a retroactive reinsurance agreement providing substantially duplicate coverage as prior reinsurance agreements on asbestos and/or pollution exposures, including reinsurance provided through an affiliated reinsurer that retrocedes to the retroactive reinsurance counterparty. Under this exception, a reporting entity may aggregate reinsurers into one line item in Schedule F reflecting the counterparty under the retroactive agreement for the purposes of determining the Provision for Reinsurance regarding overdue amounts paid by the retroactive

counterparty (both authorized and unauthorized). This exception would allow the Provision for Reinsurance to be reduced by reflecting that amounts have been recovered by the reporting entity under the duplicate coverage provided by the retroactive contract, and that inuring balances from the original contract(s) are payable to the retroactive counterparty. In addition, such approval would also permit the substitution of the retroactive counterparty for authorized original reinsurers without overdue balances for purposes of reporting on the primary section of the annual statement Schedule F. An agreement must meet all of the requirements in paragraphs 66.a. through 66.e. in order to be considered for this exception.

a. The underlying agreement clearly indicates the credit risk associated with the collection of the reporting entity's inuring reinsurance recoverables and losses related to the credit risk will be covered by the retroactive reinsurance counterparty.

b. The retroactive reinsurance agreement must transfer significant risk of loss.

c. The assuming retroactive reinsurance counterparty must have a financial strength rating from at least two nationally recognized statistical rating organizations (NRSRO), the lowest of which is higher than or equal to the NRSRO ratings of the underlying third-party reinsurers.

d. The transaction is limited to reinsurance recoverables attributable to asbestos, and/or pollution.

e. The recoverables from the inuring reinsurers remain subject to credit analysis and contingent liability analysis.

67. With the approval of the reporting entity's domestic state commissioner pursuant to the applicable state credit for reinsurance law regarding the use of other forms of collateral acceptable to the commissioner, the reporting entity shall present the amount of other approved security related to the retroactive reinsurance agreement as an "Other Allowed Offset Item" with respect to the uncollateralized amounts recoverable from unauthorized reinsurers for paid and unpaid losses and loss adjustment expenses under the original reinsurance contracts. Amounts approved as "Other Allowed Offset Items" shall be reflected as amounts recoverable from the retroactive counterparty and aggregated reporting described in paragraph 66 shall also be applied for unpaid losses and loss adjustment expenses under the original reinsurance contracts. The security applied as an "Other Allowed Offset Item" shall also be reflected in the designated sub-schedule and disclosed as a prescribed or permitted practice. (See Appendix D illustration in this statement.)

68. The reporting entity will continue to detail the reporting of original reinsurers that were aggregated for one line reporting per paragraph 66 as provided in the annual statement instructions. The aggregation reporting in schedule F applies only to the extent that inuring balances currently receivable under original reinsurance contracts are also payable to the retroactive reinsurance counterparty, and additionally to reinsurance recoverable on unpaid losses if the domestic state commissioner has approved amounts related to the retroactive reinsurance contract as any other form of security acceptable under the applicable provisions of the state's credit for reinsurance law. This guidance is not intended to otherwise change the application of retroactive accounting guidance for the retroactive portions of the contract that are not duplicative of the original reinsurance. Other than measurement of the provision for reinsurance and presentation in Schedule F, the retroactive contracts should continue to follow guidance applicable to retroactive accounting and reporting.

Syndicated Letters of Credit

69. With a Syndicated Letter of Credit (Syndicated LC), the reinsurer enters into an agreement with a group of banks (the "Issuing Banks") and an agent bank (the "Agent"). Each Issuing Bank and the Agent is an NAIC-approved bank and a "qualified bank". This agreement requires the Agent to issue, on behalf

of the each of the Issuing Banks, letters of credit in favor of the ceding insurer. The credit is issued (as an administrative matter) only through the Agent's letter of credit department. Each issuing bank signs the Syndicated LC through the Agent, as its attorney-in-fact. Syndicated LCs are consistent with A-785, in that the Syndicated LC is the legal equivalent of multiple letters of credit separately issued by each of the issuing banks. Reporting entities shall take a reduction in the liability on account of reinsurance recoverables secured by the Syndicated LC if all of the following conditions are met:

a. All listed banks on the letter of credit are qualified and meet the criteria of the NAIC SVO approved bank listing;

b. Banks are severally and not jointly liable; and

c. Specific percentages for each assuming bank are listed in the letter of credit.

Disputed Items

70. Occasionally a reinsurer will question whether an individual claim is covered under a reinsurance agreement or may even attempt to nullify an entire agreement. A ceding entity, depending upon the individual facts, may or may not choose to continue to take credit for such disputed balances. A ceding entity shall take no credit whatsoever for reinsurance recoverables in dispute with an affiliate.

71. Items in dispute are those claims with respect to which the ceding entity has received formal written communication from the reinsurer denying the validity of coverage.

Uncollectible Reinsurance

72. Uncollectible reinsurance balances shall be written off through the accounts, exhibits, and schedules in which they were originally recorded.

Commutations

73. A commutation of a reinsurance agreement, or any portion thereof, is a transaction which results in the complete and final settlement and discharge of all, or the commuted portion thereof, present and future obligations between the parties arising out of the reinsurance agreement.

74. In commutation agreements, an agreed upon amount determined by the parties is paid by the reinsurer to the ceding entity. The ceding entity immediately eliminates the reinsurance recoverable recorded against the ultimate loss reserve and records the cash received as a negative paid loss. Any net gain or loss shall be reported in underwriting income in the statement of income.

75. The reinsurer eliminates a loss reserve carried at ultimate cost for a cash payout calculated at present value. Any net gain or loss shall be reported in underwriting income in the statement of income.

76. Commuted balances shall be written off through the accounts, exhibits, and schedules in which they were originally recorded.

National Flood Insurance Program

77. The National Flood Insurance Program was created by the Federal Emergency Management Agency (FEMA) and is designed to involve private insurers in a write-your-own (WYO) flood insurance program financially backed by FEMA at no risk to the insurer. To become a participating WYO entity, the entity signs a document with the Federal Insurance Administration (FIA) of the Federal Emergency Management Agency known as the Financial Assistance/Subsidy Arrangement.

78. Premium rates are set by FEMA. The WYO participating companies write the flood insurance coverage qualifying for the program on their own policies, perform their own underwriting, premium collections, claim payments, administration, and premium tax payments for policies written under the program.

79. Monthly accountings are made to FIA and participants draw upon FEMA letters of credit for deficiencies of losses, loss expenses, and administrative expenses in excess of premiums, subject to certain percentage limitations on expenses.

80. Policies written by the reporting entity under the National Flood Insurance Program are considered insurance policies issued by the reporting entity, with reinsurance ceded to FEMA. (Such policies are not considered uninsured plans under *SSAP No. 47—Uninsured Plans* (SSAP No. 47.) Balances due from or to FEMA shall be reported as ceded reinsurance balances receivable or payable. The commission and fee allowances received from FEMA shall be reported consistent with reinsurance ceding commission.

Accounting for the Transfer of Property and Casualty Run-Off Agreements

81. Property and casualty run-off agreements are reinsurance or retrocession agreements that are intended to transfer essentially all of the risks and benefits of a specific line of business or market segment that is no longer actively marketed by the transferring insurer or reinsurer. A property and casualty run-off agreement is not a novation as the transferring insurer or reinsurer remains primarily liable to the policyholder or ceding entity under the original contracts of insurance or reinsurance. Reinsurance agreements between affiliates or between insurers under common control (as those terms are defined in Appendix A-440) are not eligible for the exception for property and casualty run-off agreements in paragraph 31.e.

Criteria

82. The accounting treatment for property and casualty run-off agreements must be approved by the domiciliary regulators of the transferring entity (either the original direct insurer in the case of a reinsurance agreement or the original assuming reinsurer in the case of a retrocession agreement) and the assuming entity. If the transferring entity and assuming entity are domiciled in the same state, then the regulator of the state where the majority of the transferred liabilities is located shall be asked to approve the accounting treatment. In determining whether to approve an agreement for this accounting treatment, the regulators shall require the following:

a. Assuming Entity Properly Licensed – The entity assuming the run-off agreement must have the appropriate authority or license to write the business being assumed.

b. Limits and Coverages – The reinsurance or retrocession agreement shall provide the same limits and coverages that were afforded in the original insurance or reinsurance agreement.

c. Non-recourse – The reinsurance or retrocession agreement shall not contain any adjustable features or profit share or retrospective rating, and there shall be no recourse (other than normal representations and warranties that would be associated with a purchase and sale agreement) directly or indirectly against the transferring entity.

d. Risk Transfer – The reinsurance or retrocession agreement must meet the requirements of risk transfer as described in this statement.

e. Financial Strength of Reinsurer – The assuming reinsurer shall have a financial strength rating from at least two independent rating agencies (from NAIC credit rating providers

(CRP)) which is equal to or greater than the current ratings of the transferring entity. The lowest financial strength rating received from an NAIC acceptable rating organization rating agency will be used to compare the financial strength ratings of the transferring and assuming entities.

f. Assessments – The assuming reinsurer or retrocessionaire (if required in the original reinsurance contract) shall be financially responsible for any and all assessments, including guaranty fund assessments, that are assessed against the transferring entity related to the insurance business being assumed.

g. Applicable Only to "Run-off" Business – The reinsurance or retrocession agreement shall only cover liabilities relating to a line(s) of business or specific market segments no longer actively marketed by the transferring entity.

h. Non-cancelable Reinsurance – The reinsurance or retrocession agreement shall provide that the reinsurance or retrocessional coverage provided by the proposed agreement cannot be cancelable by either party for any reason. (However, this provision will not override standard contracts law and principles and will not prevent any remedies, including rescission or termination that might be available for breach, misrepresentation, etc.)

Statutory Schedules and Exhibits

83. At the inception of the transaction, the transferring entity shall record the consideration paid to the assuming entity as a paid loss. If the consideration paid by the transferring entity is less than the loss reserves transferred, the difference shall be recorded by the ceding entity as a decrease in losses incurred. The assuming entity shall record the consideration received as a negative paid loss. In addition, the transferring entity shall record an increase to ceded reinsurance recoverable for the amount of the transferred reserve. Journal entries illustrating these transactions, including situations in which the transaction includes an unearned premium reserve, are included in Exhibit B of this Statement.

84. The assuming entity will report the business in the same line of business as reported by the original insurer or reinsurer. The assuming entity will report the business at the same level of detail using the appropriate statutory schedules and exhibits.

Disclosures

85. Unsecured Reinsurance Recoverables:

a. If the entity has with any individual reinsurers, authorized, unauthorized, or certified an unsecured aggregate recoverable for losses, paid and unpaid including IBNR, loss adjustment expenses, and unearned premium, that exceeds 3% of the entity's policyholder surplus, list each individual reinsurer and the unsecured aggregate recoverable pertaining to that reinsurer; and

b. If the individual reinsurer is part of a group, list the individual reinsurers, each of its related group members having reinsurance with the reporting entity, and the total unsecured aggregate recoverables for the entire group.

86. Reinsurance Recoverables in Dispute—Reinsurance recoverable on paid and unpaid (including IBNR) losses in dispute by reason of notification, arbitration or litigation shall be identified if the amounts in dispute from any entity (and/or affiliate) exceed 5% of the ceding entity's policyholders surplus or if the aggregate of all disputed items exceeds 10% of the ceding entity's policyholders surplus. Notification means a formal written communication from a reinsurer denying the validity of coverage.

87. Uncollectible Reinsurance—Describe uncollectible reinsurance written off during the year reported in the following annual statement classifications, including the name(s) of the reinsurer(s):

a. Losses incurred;

b. Loss adjustment expenses incurred;

c. Premiums earned; and

d. Other.

88. Commutation of Ceded Reinsurance—Describe commutation of ceded reinsurance during the year reported in the following annual statement classifications, including the name(s) of the reinsurer(s):

a. Losses incurred;

b. Loss adjustment expenses incurred;

c. Premiums earned; and

d. Other.

89. Retroactive Reinsurance—The table illustrated in the NAIC Annual Statement Instructions for Property and Casualty Companies under Retroactive Reinsurance in the Notes to Financial Statements section shall be completed for all retroactive reinsurance agreements that transfer liabilities for losses that have already occurred and that will generate special surplus transactions. The insurer (assuming or ceding) shall assign a unique number to each retroactive reinsurance agreement and shall utilize this number for as long as the agreement exists. Transactions utilizing deposit accounting shall not be reported in this note.

90. Reinsurance Assumed and Ceded—The tables illustrated in the NAIC Annual Statement Instructions for Property and Casualty Companies under "Reinsurance Assumed and Ceded in the Notes to Financial Statements" section shall be completed as follows:

a. The financial statements shall disclose the maximum amount of return commission which would have been due reinsurers if all reinsurance were canceled with the return of the unearned premium reserve; and

b. The financial statements shall disclose the accrual of additional or return commission, predicated on loss experience or on any other form of profit sharing arrangements as a result of existing contractual arrangements.

91. A specific interrogatory requires information on reinsurance of risk accompanied by an agreement to release the reinsurer from liability, in whole or in part, from any loss that may occur on the risk or portion thereof.

92. Disclosures for paragraphs 93-98 represent annual statement interrogatories, which are required to be included with the annual audit report beginning with audit reports on financial statements as of and for the period ended December 31, 2006. The disclosures required within paragraphs 93-98 shall be included in accompanying supplemental schedules of the annual audit report beginning in year-end 2006. These disclosures shall be limited to reinsurance contracts entered into, renewed or amended on or after January 1, 1994. This limitation applies to the annual audit report only and does not apply to the statutory annual statement interrogatories and the reinsurance summary supplemental filing.

93. Disclose if any risks are reinsured under a quota share reinsurance contract with any other entity that includes a provision that would limit the reinsurer's losses below the stated quota share percentage (e.g. a deductible, a loss ratio corridor, a loss cap, an aggregate limit or any similar provisions)? If yes, indicate the number of reinsurance contracts containing such provisions and if the amount of reinsurance credit taken reflects the reduction in quota share coverage caused by any applicable limiting provision(s).

94. Disclose if the reporting entity ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates) for which during the period covered by the statement: (i) it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders; (ii) it accounted for that contract as reinsurance and not as a deposit; and (iii) the contract(s) contain one or more of the following features or other features that would have similar results:

a. A contract term longer than two years and the contract is noncancellable by the reporting entity during the contract term;

b. A limited or conditional cancellation provision under which cancellation triggers an obligation by the reporting entity, or an affiliate of the reporting entity, to enter into a new reinsurance contract with the reinsurer, or an affiliate of the reinsurer;

c. Aggregate stop loss reinsurance coverage;

d. A unilateral right by either party (or both parties) to commute the reinsurance contract, whether conditional or not, except for such provisions which are only triggered by a decline in the credit status of the other party;

e. A provision permitting reporting of losses, or payment of losses, less frequently than on a quarterly basis (unless there is no activity during the period); or

f. Payment schedule, accumulating retentions from multiple years or any features inherently designed to delay timing of the reimbursement to the ceding entity.

95. Disclose if the reporting entity during the period covered by the statement ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates) for which during the period covered by the statement it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders; excluding cessions to approved pooling arrangements or to captive insurance companies that are directly or indirectly controlling, controlled by, or under common control with (i) one or more unaffiliated policyholders of the reporting entity, or (ii) an association of which one or more unaffiliated policyholders of the reporting entity is a member, where:

a. The written premium ceded to the reinsurer by the reporting entity or its affiliates represents fifty percent (50%) or more of the entire direct and assumed premium written by the reinsurer based on its most recently available financial statement; or

b. Twenty–five percent (25%) or more of the written premium ceded to the reinsurer has been retroceded back to the reporting entity or its affiliates in separate reinsurance contract.

96. If affirmative disclosure is required for paragraph 94 or 95, provide the following information:

a. A summary of the reinsurance contract terms and indicate whether it applies to the contracts meeting paragraph 94 or 95;

b. A brief discussion of management's principal objectives in entering into the reinsurance contract including the economic purpose to be achieved; and

c. The aggregate financial statement impact gross of all such ceded reinsurance contracts on the balance sheet and statement of income.

97. Except for transactions meeting the requirements of paragraph 31, disclose if the reporting entity ceded any risk under any reinsurance contract (or multiple contracts with the same reinsurer or its affiliates) during the period covered by the financial statement, and either:

a. Accounted for that contract as reinsurance (either prospective or retroactive) under statutory accounting principles (SAP) and as a deposit under generally accepted accounting principles (GAAP); or

b. Accounted for that contract as reinsurance under GAAP and as a deposit under SAP.

98. If affirmative disclosure is required for paragraph 97, explain in a supplemental filing why the contract(s) is treated differently for GAAP and SAP.

99. Disclosures for the Transfer of Property and Casualty Run-off Agreements

a. Disclose if the reporting entity has entered into any agreements which have been approved by their domiciliary regulator and have qualified pursuant to paragraph 31.e. (also see paragraphs 81-84).

b. If affirmative, provide a description of the agreement and the amount of consideration paid and liabilities transferred.

100. The financial statements shall disclose the following with respect to reinsurance agreements which qualify for reinsurer aggregation in accordance with paragraphs 66-68:

a. A description of the significant terms of the reinsurance agreement, including established limits and collateral, and

b. The amount of unexhausted limit as of the reporting date.

c. To the extent that the domestic state insurance department approves the use of the retroactive contract as an acceptable form of security related to the original reinsurers under the applicable provisions of the state’s credit for reinsurance law, the use of such discretion shall be disclosed in the annual statement Note 1 as a prescribed or permitted practice. In addition, Note 1 shall disclose as part of the total impact on the provision for reinsurance the impact on the overdue aspects of the calculation if the reporting entity also receives commissioner approval pursuant to paragraph 66 related to overdue paid amounts (both authorized and unauthorized).

101. The financial statements shall disclose the following with respect to reinsurance agreements that have been accounted for as deposits:

a. A description of the reinsurance agreements.

b. Any adjustment of the amounts initially recognized for expected recoveries. The individual components of the adjustment (e.g., interest accrual, change due to a change in estimated or actual cash flow) shall be disclosed separately.

102. The financial statements shall disclose the impact on any reporting period in which a certified reinsurer's rating has been downgraded or its certified reinsurer status is subject to revocation and additional collateral has not been received as of the filing date. The disclosure should include the following:

a. Name of certified reinsurer downgraded or subject to revocation of certified reinsurer status and relationship to the reporting entity;

b. Date of downgrade or revocation and jurisdiction of action;

c. Collateral percentage requirements pre and post downgrade or revocation;

d. Net ceded recoverable subject to collateral;

e. As of the end of the current quarter, the estimated impact of the collateral deficiency to the reporting entity as a result of the assuming entity's downgrade or revocation of certified reinsurer status. (At year-end the actual impact of the collateral deficiency on the provision for reinsurance shall be disclosed.)

103. U.S. domiciled reinsurers are eligible for certified reinsurer status. If the reporting entity is a certified reinsurer, the financial statements shall disclose the impact on any reporting period in which its certified reinsurer rating is downgraded or status as a certified reinsurer is subject to revocation. Such disclosure shall include information similar to paragraphs 102.b., 102.c. and 102.d. and the expectation of its certified reinsurer's ability to meet the increased requirements.

104. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

105. This statement adopts with modification *FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113) and FASB *Emerging Issues Task Force No. 93-6, Accounting for Multiple-Year Retrospectively Rated Contracts by Ceding and Assuming Enterprises* for the following:

a. Reinsurance recoverables on unpaid case-basis and incurred but not reported losses and loss adjustment expenses shall be reported as a contra-liability netted against the liability for gross losses and loss adjustment expenses;

b. Amounts paid for prospective reinsurance that meet the conditions for reinsurance accounting shall be reported as a reduction of unearned premiums;

c. The gain created by a retroactive reinsurance agreement because the amount paid to the reinsurer is less than the gross liabilities for losses and loss adjustment expenses ceded to the reinsurer is reported in the statement of income as a write-in gain in other income by the ceding entity and a write-in loss by the assuming entity. The gain created by a

retroactive reinsurance agreement is restricted as a special surplus account until the actual retroactive reinsurance recovered is in excess of the consideration paid;

d. This statement requires that a liability (provision for reinsurance) be established through a provision reducing unassigned funds (surplus) for unsecured reinsurance recoverables from unauthorized or certified reinsurers and for certain overdue balances due from authorized reinsurers;

e. Some reinsurance agreements contain adjustable features that provide for adjustment of commission, premium or amount of coverage, based on loss experience. This statement requires that the asset or liability arising from the adjustable feature be computed based on experience to date under the agreement, and the impact of early termination may only be considered at the time the agreement has actually been terminated;

f. Structured settlements are addressed in *SSAP No. 65—Property and Casualty Contracts*. Statutory accounting and FAS 113 are consistent in accounting for structured settlement annuities where the reporting entity is the owner and payee and where the claimant is the payee and the reporting entity has been released from its obligation. FAS 113 distinguishes structured settlement annuities where the claimant is the payee and a legally enforceable release from the reporting entity's liability is obtained from those where the claimant is the payee but the reporting entity has not been released from its obligation. GAAP requires the deferral of any gain resulting from the purchase of a structured settlement annuity where the reporting entity has not been released from its obligation; and

g. This statement requires that reinsurance recoverables on unpaid losses and loss adjustment expenses be presented as a contra-liability. Requirements for offsetting and netting are addressed in SSAP No. 64.

106. This statement adopts American Institute of Certified Public Accountants (AICPA*) Statement of Position 98-7, Deposit Accounting: Accounting for Insurance and Reinsurance Contracts That Do Not Transfer Insurance Risk* (SOP 98-7) paragraphs 10-12 and 19 (subsection b only). This statement rejects AICPA SOP 98-7 paragraphs 13-17 and 19 (subsections a and c).

107. This statement rejects AICPA *Statement of Position No. 92-5, Accounting for Foreign Property and Liability Reinsurance*. This statement incorporates Appendix A-785 as applicable.

Effective Date and Transition

108. This statement shall apply to:

a. Reinsurance agreements entered into, renewed, or amended on or after January 1, 1994. An amendment is any revision or adjustment of contractual terms. The payment of premiums or reimbursement of losses recoverable under the agreement shall not constitute an amendment; and

b. Reinsurance agreements in force on January 1, 1995, which cover losses occurring or claims made on or after that date on policies reinsured under such agreements.

109. The guidance shall not apply to:

a. Reinsurance agreements which cover only losses occurring or claims made before January 1, 1994, and which were entered into before January 1, 1994, and were not subsequently renewed or amended; and

b. Reinsurance agreements that expired before and were not renewed or amended after January 1, 1995.

110. The guidance in paragraphs 49-53 shall be effective for all accounting periods beginning on or after January 1, 1996, and shall apply to reinsurance agreements entered into, renewed or amended on or after January 1, 1994.

111. This statement, including the guidance in paragraph 35 incorporated from SSAP No. 75, is effective for years beginning January 1, 2001. Changes resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

a. Revisions to paragraph 31.e., related to paragraphs 81-84, and disclosures in paragraph 99 documented in *Issue Paper No. 137—Transfer of Property and Casualty Reinsurance Run-off Agreements* are effective for contracts entered on or after January 1, 2010.

b. The guidance in paragraphs 35, 101 and 106 was previously included within *SSAP No. 75—Reinsurance Deposit Accounting—An Amendment to SSAP No. 62R, Property and Casualty Reinsurance* (SSAP No. 75) and was also effective for years beginning January. 1, 2001. In 2011, the guidance from SSAP No. 75 was incorporated within this statement, with SSAP No. 75 nullified. The original guidance included in this statement for deposit accounting, as well as the original guidance adopted in SSAP No. 75, are retained for historical purposes in Issue Paper No. 104. The guidance in paragraph 48 was originally contained within *INT 02-06: Indemnification in Modeled Trigger Transactions* and was effective June 9, 2002. The guidance in paragraph 69 was originally contained within *INT 02-09: A-785 and Syndicated Letters of Credit* and was effective September 12, 2004.

c. The guidance related to certified reinsurers is applicable only to cedants domiciled in states that have enacted/promulgated the new collateral framework and only for their cessions to reinsurers certified under that domestic law/rule. The requirements applicable to contracts with certified reinsurers shall be effective for all reporting periods beginning on or after December 31, 2012.

112. The guidance in paragraphs 66-68 and 100 which allowed retroactive reinsurance exceptions for asbestos and pollution contracts was effective for all accounting periods beginning on or after January 1, 2014, for paid losses. This guidance was revised to also allow for unpaid losses effective for reporting periods ending on and after December 31, 2015.

CLASSIFYING REINSURANCE CONTRACTS

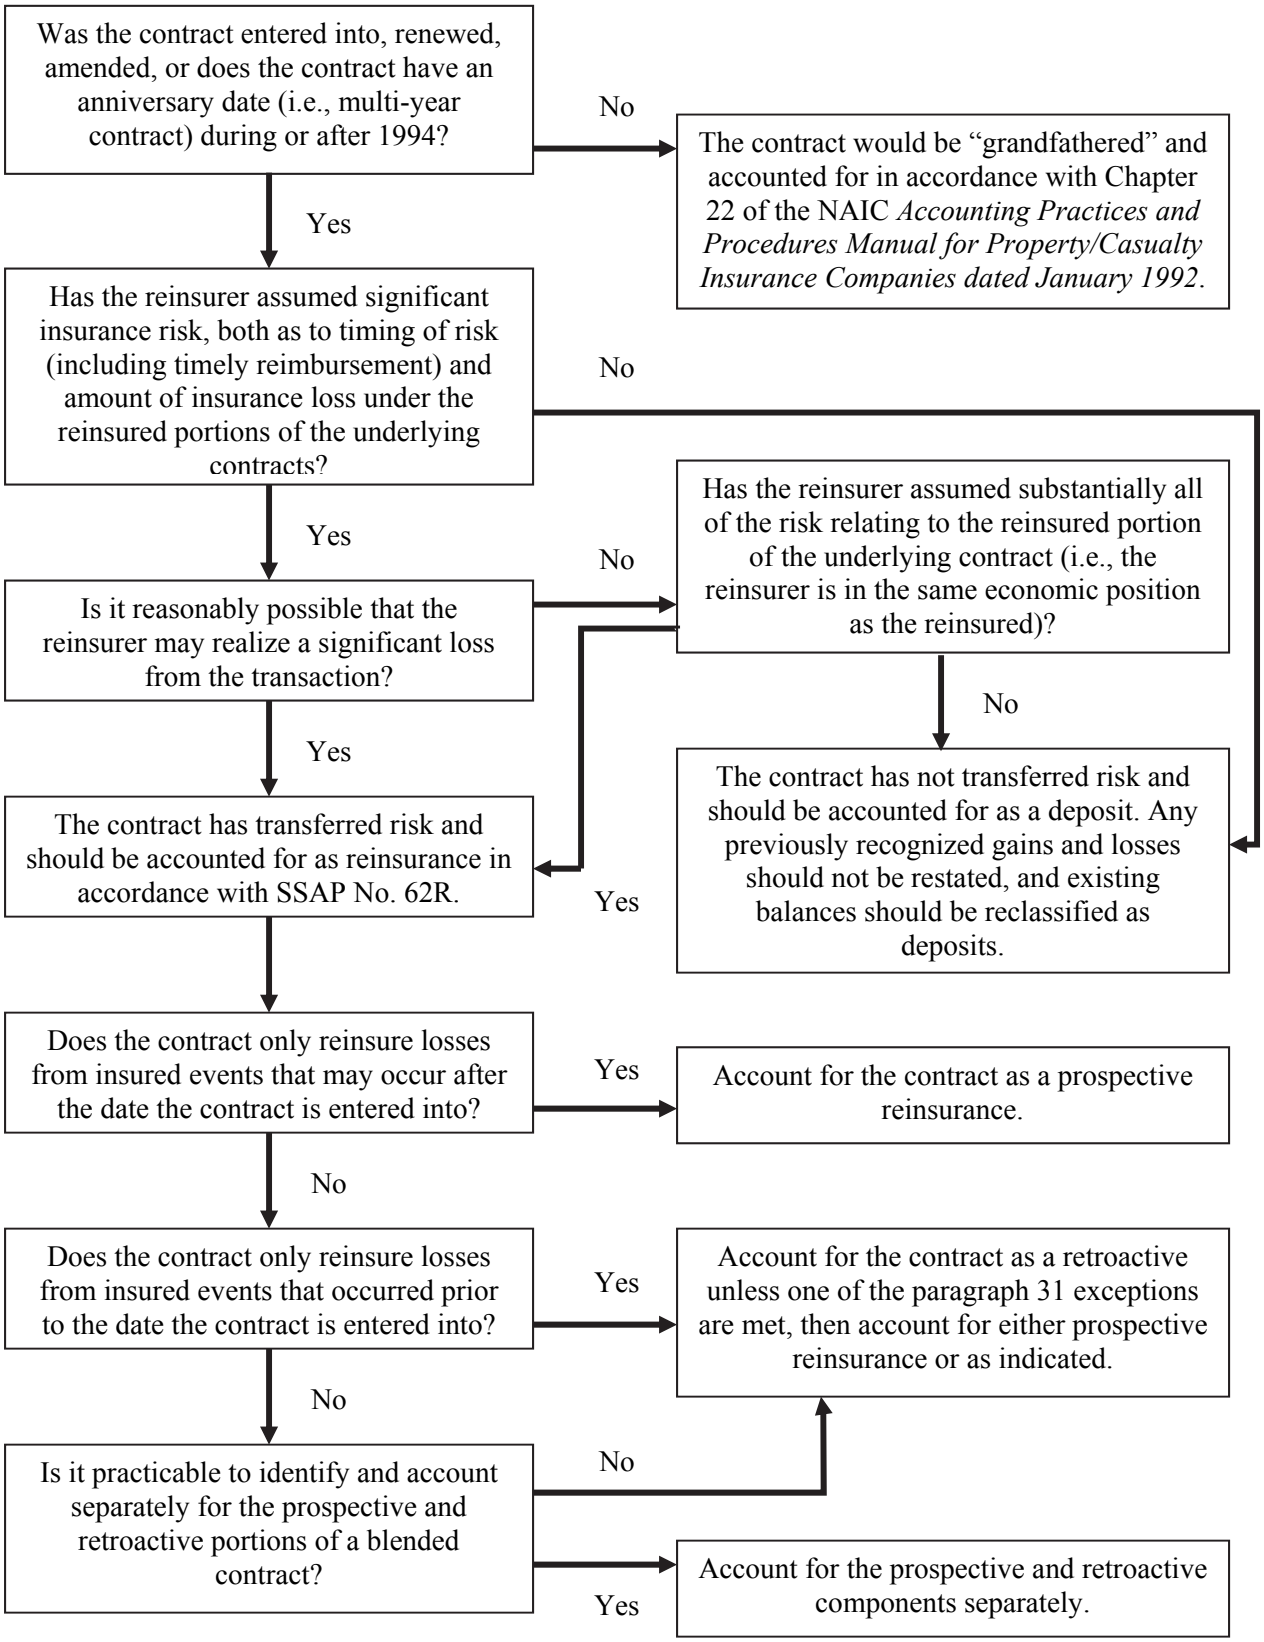

EXHIBIT A – IMPLEMENTATION QUESTIONS AND ANSWERS

Applicability

1. Q: The accounting practices in SSAP No. 62R specify the accounting and reporting for reinsurance contracts. What contracts are considered reinsurance contracts for purposes of applying these accounting practices?

   A: Any transaction that indemnifies an insurer against loss or liability relating to insurance risk shall be accounted for in accordance with the accounting practices included in SSAP No. 62R. Therefore, all contracts, including contracts that may not be structured or described as reinsurance, shall be accounted for as reinsurance when those conditions are met.

2. Q: The provisions of this statement will apply to (a) reinsurance contracts entered into, renewed or amended on or after January 1, 1994, and (b) any other reinsurance contracts that are in force on January 1, 1995 and cover insurable events on the underlying insurance policies that occur on or after that date. What contracts would be exempt from the new accounting rules included in SSAP No. 62R?

   A: The only exempt contracts are:

      1) Purely retroactive reinsurance contracts that cover only insured events occurring before January 1, 1994, provided those contracts were entered into before that date and are not subsequently amended and

      2) Contracts that expired before January 1, 1995 and are not amended after that date.

3. Q: This statement is to be applied to contracts which are amended on or after January 1, 1994. What if the change in terms is not significant, or the terms changed have no financial effect on the contract?

   A: In general, the term amendment should be viewed broadly to include all but the most trivial changes. Examples of amendments include, but are not limited to, replacing one assuming entity with another (including an affiliated entity), or modifying the contract's limit, coverage, premiums, commissions, or experience-related adjustable features. No distinction is made between financial and non-financial terms.

4. Q: Must the accounting provisions of SSAP No. 62R be applied to an *otherwise exempt* contract if the ceding entity pays additional premiums under the contract on or after January 1, 1994?

   A: The answer depends on why the additional premiums are paid. If the additional premiums are the result of a renegotiation, adjustment, or extension of terms, the contract is subject to the accounting provisions of SSAP No. 62R. However, additional premiums paid without renegotiation, adjustment, or extension of terms would not make an otherwise exempt contract subject to those provisions.

5. Q: Prospective and retroactive portions of a reinsurance contract are allowed to be accounted for separately, if practicable. Can the retroactive portion of an existing contract be segregated and, therefore, exempted with other retroactive contracts covering insured events occurring prior to January 1, 1994?

   A: No. The transition provisions apply to an entire contract, which is either subject to or exempt from the revised provisions of SSAP No. 62R. A ceding entity may bifurcate a contract already subject to the new accounting rules in SSAP No. 62R and then account for both the prospective and retroactive portions in accordance with the new accounting standard.

Risk Transfer

6. Q: Do the new risk transfer provisions apply to existing contracts?

   A: Yes, the new risk transfer provisions apply to some existing contracts. SSAP No. 62R applies in its entirety only to existing contracts which were renewed or amended on or after January 1, 1994, or which cover losses occurring or claims made after that date. Therefore, those contracts must be evaluated to determine whether they transfer risk and qualify for reinsurance accounting. For accounting periods commencing on or after January 1, 1995, balances relating to such contracts which do not transfer insurance risk shall be reclassified as deposits and shall be accounted for and reported in the manner described under the caption Reinsurance Contracts Must Include Transfer of Risk.

   SSAP No. 62R does not apply to existing contracts which were entered into before, and were not renewed or amended on or after, January 1, 1994, and which cover only losses occurring or claims made before that date, nor to contracts which expired before, and were not renewed or amended on or after, January 1, 1995. Those contracts will continue to be accounted for in the manner provided by SSAP No. 62R before these revisions.

7. Q: How does the effective date affect the assessment of whether a significant loss to the reinsurer was reasonably possible?

   A: The risk transfer assessment is made at contract inception, based on facts and circumstances known at the time. Because that point in time has passed for existing contracts, some have suggested that the risk transfer provisions be applied as of the effective date. However, that approach to the risk transfer assessment would violate the requirement to consider all cash flows from the contract. Therefore, the test must be applied from contract inception, considering the effect of any subsequent contract amendments. Careful evaluation and considered judgment will be required to determine whether a significant loss to the reinsurer was reasonably possible at inception.

8. Q: Should risk transfer be reassessed if contractual terms are subsequently amended?

   A: Yes. When contractual terms are amended, risk transfer should be reassessed. For example, a contract that upon inception met the conditions for reinsurance accounting could later be amended so that it no longer meets those conditions. The contract should then be reclassified and accounted for as a deposit.

9. Q: How should the risk transfer assessment be made when a contract has been amended?

   A: No particular method is prescribed for assessing risk transfer in light of a contract amendment. Whether an amended contract in substance transfers risk must be determined considering all of the facts and circumstances in light of the risk transfer requirements. Judgment also will be required to determine whether an amendment in effect creates a new contract.

10. Q: For purposes of evaluating whether a contract with a reinsurer transfers risk, what constitutes a contract?

    A: A contract is not defined, but is essentially a question of substance. It may be difficult in some circumstances to determine the boundaries of a contract. For example, the profit-sharing provisions of one contract may refer to experience on other contracts and, therefore, raise the question of whether, in substance, one contract rather than several contracts exist.

    The inconsistency that could result from varying interpretations of the term *contract* is limited by requiring that features of the contract or other contracts or agreements that directly or indirectly

compensate the reinsurer or related reinsurers for losses be considered in evaluating whether a particular contract transfers risk. Therefore, if agreements with the reinsurer or related reinsurers, in the aggregate, do not transfer risk, the individual contracts that make up those agreements also would not be considered to transfer risk, regardless of how they are structured.

11. Q: If the assessment of risk transfer changes after the initial assessment at contract inception, how should the ceding entity account for the change?

    A: The status of a contract should be determinable at inception and, absent amendment, subsequent changes should be very rare. If the risk of significant loss was not deemed reasonably possible at inception, and a significant loss subsequently occurred, the initial assessment was not necessarily wrong, because remote events do occur. Likewise, once a reasonable possibility of significant loss has been established, such loss need not occur in order to maintain the contract's status as reinsurance.

12. Q: SSAP No. 62R requires that reasonably possible outcomes be evaluated to determine the reinsurer's exposure to significant loss. What factors should be considered in determining whether a scenario being evaluated is reasonably possible?

    A: The term *reasonably possible* means that the probability is more than remote. The test is applied to a particular scenario, not to the individual assumptions used in the scenario. Therefore, a scenario is not reasonably possible unless the likelihood of the entire set of assumptions used in the scenario occurring together is reasonably possible.

13. Q: In determining the amount of the reinsurer's loss under reasonably possible outcomes, may cash flows directly related to the contract other than those between the ceding and assuming companies, such as taxes and operating expenses of the reinsurer, be considered in the calculation?

    A: No. The evaluation is based on the present value of all cash flows *between the ceding and assuming enterprises* under reasonably possible outcomes and, therefore, precludes considering other expenses of the reinsurer in the calculation.

14. Q: In evaluating the significance of a reasonably possible loss, should the reasonably possible loss be compared to gross or net premiums?

    A: Gross premiums should be used.

15. Q: How does a commutation clause affect the period of time over which cash flows are evaluated for reasonable possibility of significant loss to the reinsurer?

    A: All cash flows are to be assessed under reasonably possible outcomes. Therefore, unless commutation is expected in the scenario being evaluated, it should not be assumed in the calculation. Further, the assumptions used in a scenario must be internally consistent and economically rational in order for that scenario's outcome to be considered reasonably possible.

16. Q: What interest rate should be used in each evaluated scenario to make the present value calculation?

    A: A reasonable and appropriate rate is required, which generally would reflect the expected timing of payments to the reinsurer and the duration over which those cash flows are expected to be invested by the reinsurer.

17. Q: SSAP No. 62R refers to payment schedules and accumulating retentions from multiple years as features that delay timely reimbursement of claims. Does the presence of those features generally prevent a contract from meeting the conditions for reinsurance accounting?

    A: Yes. Payment schedules and accumulating retentions from multiple years are contractual features inherently designed to delay the timing of reimbursement to the ceding entity. Regardless of what a particular feature might be called, any feature that can delay timely reimbursement violates the conditions for reinsurance accounting. Transfer of insurance risk requires that the reinsurer's payments to the ceding entity depend on and directly vary with the amount and timing of claims settled under the reinsured contracts. Contractual features that can delay timely reimbursement prevent this condition from being met. Therefore, any feature that may affect the timing of the reinsurer's reimbursement to the ceding entity should be closely scrutinized.

18. Q: What if a contract contains a feature such as a payment schedule or accumulating retention but could still result in the reasonable possibility of significant loss to the reinsurer?

    A: Both of the following conditions are required for reinsurance accounting:

    a. Transfer of significant risk arising from uncertainties about both (i) the ultimate amount of net cash flows from premiums, commission, claims, and claim settlement expenses paid under a contract (underwriting risk) and (ii) the timing of the receipt and payment of those cash flows (timing risk); and

    b. Reasonable possibility of significant loss to the reinsurer.

    Because both condition (a) and condition (b) must be met, failure to transfer significant timing and underwriting risk is not overcome by the possibility of significant loss to the reinsurer.

19. Q: Is it permissible to evaluate timely reimbursement on a present value basis?

    A: No. The word timely is used in the ordinary temporal sense to refer to the length of time between payment of the underlying reinsured claims and reimbursement by the reinsurer.

    While the test for reasonable possibility of significant loss to the reinsurer provides for a present value-based assessment of the economic characteristics of the reinsurance contract, the concept of timely reimbursement relates to the transfer of insurance risk (condition a. above), not the reasonable possibility of significant loss (condition b. above). Accordingly, timely reimbursement should be evaluated based solely on the length of time between payment of the underlying reinsured losses and reimbursement by the reinsurer.

20. Q: Are there any circumstances under which the conditions for risk transfer need not be met?

    A: Yes. An extremely narrow and limited exemption is provided for contracts that reinsure either an individual risk or an underlying book of business that is inherently profitable. When substantially all of the insurance risk relating to the reinsured portions of the underlying insurance contracts has been assumed by the reinsurer, the contract meets the conditions for reinsurance accounting. To qualify under this exception, no more than trivial insurance risk on the reinsured portions of the underlying insurance contracts may be retained by the ceding entity. The reinsurer's economic position must be virtually equivalent to having written the relevant portions of the reinsured contracts directly.

21. Q: In determining whether a reinsurance contract qualifies under the exception referred to in the preceding question, how should the economic position of the reinsurer be assessed in relation to that of the ceding entity?

A: The assessment should be made by comparing the net cash flows of the reinsurer under the reinsurance contract with the net cash flows of ceding entity on the reinsured portions of the underlying insurance contracts. This may be relatively easy for reinsurance of individual risks or for unlimited-risk quota-share reinsurance, because the premiums and losses on these types of reinsurance generally are the same as the premiums and losses on the reinsured portions of the underlying insurance policies.

In other types of reinsurance, determining the reinsurer's net cash flows relative to the insurer is likely to be substantially more difficult. For example, it generally would be difficult to demonstrate that the ceding entity's premiums and losses for a particular layer of insurance are the same as the reinsurer's premiums and losses related to that layer. If the economic position of the reinsurer relative to the insurer cannot be determined, the contract would not qualify under the exception.

Accounting Provisions

22. Q: An existing contract that was accounted for as reinsurance no longer qualifies for reinsurance accounting under the new accounting rules included in SSAP No. 62R. How should the ceding and assuming companies account for the contract in future periods?

A: Because the statement of income cannot be restated, previously recognized gains and losses are not revised. If the contract was entered into before, and not renewed or amended on or after, January 1, 1994 and covers only losses occurring or claims made before that date, or the contract expired before January 1, 1995 and was not renewed or amended on or after that date, it would continue to be accounted for in the manner provided before these revisions.

For accounting periods commencing on or after January 1, 1995, existing balances relating to contracts which do not transfer insurance risk and which were entered into on or after January 1, 1994 (covering losses occurring or claims made after that date) would be reclassified as deposits.

Premium payments to a reinsurer would be recorded as deposits. Likewise, losses recoverable from a reinsurer would not be recognized as receivables. Rather, any reimbursement for losses would be accounted for upon receipt as a refund of a deposit.

23. Q: What is the definition of past insurable events that governs whether reinsurance coverage is prospective or retroactive? For example, could a reinsurance contract that covers losses from asbestos and pollution claims on occurrence-based insurance policies effective during previous periods be considered prospective if the reinsurance coverage is triggered by a court interpretation that a loss is covered within the terms of the underlying insurance policies?

A: The distinction between prospective and retroactive reinsurance is based on whether a contract reinsures future or past insured events covered by the underlying reinsurance contracts. In the example above, the insured event is the occurrence of loss within the coverage of the underlying insurance contracts, not the finding of a court. Therefore, the fact that the asbestos exposure or pollution is covered under insurance policies effective during prior periods makes the reinsurance coverage in this example retroactive.

24. Q: Would the answer to the above question change if the reinsurance were written on a claims-made basis?

A: No. The form of the reinsurance—whether claims-made or occurrence-based—does not determine whether the reinsurance is prospective or retroactive. A claims-made reinsurance contract that reinsures claims asserted to the reinsurer in a future period as a result of insured events that occurred prior to entering into the reinsurance contract is a retroactive contract.

25. Q: What is the effect of adjustments to future premiums or coverage in determining whether reinsurance is prospective or retroactive?

    A: Adjustments to future premiums or coverage may affect the accounting for a reinsurance contract. Whenever an adjustment results in a reinsurer providing new or additional coverage for past insurable events, that coverage is retroactive. For example, if subsequent years' premiums under a multiple accident year contract create additional coverage for previous accident years, the additional coverage is retroactive, even if the original coverage provided in the contract for those accident years was prospective. Likewise, if current losses under a multiple-year contract eliminate coverage in future periods, some or all of the premiums to be paid in those future periods should be charged to the current period.

26. Q: A reinsurance contract is entered into after the contract's effective date. Is the coverage between the contract's effective date and the date the contract was entered into prospective or retroactive?

    A: The portion of the contract related to the period of time between the effective date of the contract and the date the contract was entered into is retroactive because it covers insured events that occurred prior to entering into the reinsurance contract.

27. Q: How is the date the reinsurance contract was entered into determined?

    A: It is not uncommon for a reinsurance arrangement to be initiated before the beginning of a policy period but not finalized until after the policy period begins. Whether there was agreement in principle at the beginning of the policy period and, therefore, the contract is substantively prospective must be determined based on the facts and circumstances. For example, a contract may be considered to have been substantively entered into even though regulatory approval of that contract has not taken place.

    The absence of agreement on significant terms, or the intention to establish or amend those terms at a later date based on experience or other factors, generally indicates that the parties to the contract have not entered into a reinsurance contact, but rather have agreed to enter into a reinsurance contract at a future date. If contractual provisions under a contract substantively entered into at a future date covered insurable events prior to that date, that coverage is retroactive.

    In any event, SSAP No. 62R provides that if a contract (except facultative contracts and contracts signed by the lead reinsurer and certain cover notes or similar documents signed by reinsurers representing more than 50% of the capacity on the contract) has not been finalized, reduced to written form and signed by the parties within 9 months after its effective date, it is presumed to be retroactive.

28. Q: Are contracts to reinsure calendar-year incurred losses considered blended contracts that have both prospective and retroactive elements?

    A: Yes. Most reinsurance contracts covering calendar-year incurred losses combine coverage for insured events that occurred prior to entering into the reinsurance contract with coverage for future insured events and, therefore, include both prospective and retroactive elements.

    In any event, SSAP No. 62R provides that if a contract (except facultative contracts, contracts signed by the lead reinsurer and certain cover notes or similar documents signed by reinsurers representing more than 50% of the capacity on the contract) has not been finalized, reduced to written form and signed by the parties within 9 months after its effective date it is presumed retroactive.

29. Q: When the prospective and retroactive portions of a contract are being accounted for separately, how should premiums be allocated to each portion of the contract?

    A: No specific method for allocating the reinsurance premiums to the risks covered by the prospective and retroactive portions of a contract is required. However, separate accounting for the prospective and retroactive portions of a contract may take place only when an allocation is practicable.

    Practicability requires a reasonable basis for allocating the reinsurance premiums to the risks covered by the prospective and retroactive portions of the contract, considering all amounts paid or deemed to have been paid regardless of the timing of payment. If a reasonable basis for allocating the premiums between the prospective and retroactive coverage does not exist, the entire contract must be accounted for as a retroactive contract.

30. Q: A retroactive reinsurance contract contains a cut-through provision that provides the ceding entity's policyholders and claimants with the right to recover their claims directly from the reinsurer. May the ceding entity immediately recognize earned surplus associated with this type of contract?

    A: No. SSAP No. 62R states that earned surplus may not be recognized "until the actual retroactive reinsurance recovered exceeds the consideration paid."

31. Q: A ceding entity enters into a retroactive reinsurance agreement that gives rise to segregated surplus. If the reinsurer prepays its obligation under the contract, may the ceding entity recognize earned surplus at the time the prepayment is received?

    A: Segregated surplus arising from retroactive reinsurance transactions is earned as actual liabilities that have been transferred are recovered or terminated. Therefore, earned surplus is based on when the reinsurer settles its obligations to the ceding entity, and it may be appropriate to recognize earned surplus at the time the prepayment is received.

    However, all of the facts and circumstances must be considered to determine whether the ceding entity has substantively recovered the liabilities transferred to the reinsurer. For example, if the ceding entity agrees to compensate the reinsurer for the prepayment, such as by crediting the reinsurer with investment income on prepaid amounts or balances held, the ceding entity has not, in substance, recovered its transferred liabilities but rather has received a deposit from the reinsurer that should be accounted for accordingly.

32. Q: If the ceding entity does not expect to receive any recoveries because the reinsurer has agreed to reimburse claimants under the reinsured contracts directly, would the ceding entity be considered to have recovered or terminated its transferred liabilities?

    A: No. In the example given, the reinsurer is substantively acting as disbursing agent for the ceding entity. Therefore, the ceding entity cannot be said to have recovered amounts due from the reinsurer before payment is made to the claimant.

33. Q: What accounting entries would a ceding entity make to report a retroactive reinsurance contract?

    A: Accounting Entries for a Ceding Entity to Report a Retroactive Reinsurance Contract:

Entry 1		
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)	10,000	
Retroactive Reinsurance Gain (I/S)		2,000
Cash		8,000

To record initial portfolio transfer see items #3 and #8. The ceding entity must establish the segregated surplus per item #4.

Entry 1A		
Retro. Reins. Gain	2,000	
Profit/Loss Account		2,000

To close gain from retroactive transaction.

Entry 1B		
Profit/Loss Account	2,000	
Special Surplus from Retro. Reins.		2,000

To close profit from retroactive reinsurance to special surplus.

Entry 2		
Cash	2,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		2,000

To record recovery of paid losses from the reinsurer. Outstanding ceded reserves after this recovery equals $8,000, and special surplus from retroactive reinsurance account equals $2,000; therefore, segregated surplus account is not changed per item #10.

Entry 3		
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)	3,000	
Retroactive Reinsurance Gain (I/S)		3,000

To record subsequent revision of the initial reserves ceded per item #10. The segregated surplus account is increased to $5,000 as a result of this upward development.

Entry 3A		
Retro. Reinsurance Gain	3,000	
Profit/Loss Account		3,000

To close profit from retroactive reinsurance.

Entry 3B		
Profit/Loss (I/S)	3,000	
Special Surplus from Retro. Reins.		3,000

To close profit and loss account to special surplus. (Retroactive reinsurance reserves ceded or assumed account balance equals $11,000. Special Surplus from retroactive reinsurance balance equals $5,000.)

Entry 4		
Cash	4,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		4,000

To record recovery of paid losses from the reinsurer. Outstanding ceded reserves after this recovery equals $7,000, therefore segregated surplus account is not changed per item #10.

Entry 5		
Cash	3,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		3,000

To record recovery of paid losses from reinsurer. Outstanding ceded reserves after recovery equals $4,000, therefore the following entry is needed per items #6 and #10.

Entry 5A		
Special Surplus—Retro. Reins.	1,000	
Unassigned Funds		1,000

Retroactive Reinsurance reserves ceded or assumed after this entry equals $4,000.

Entry 6		
Retroactive Reinsurance Loss (I/S)	1,000	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		1,000

To record subsequent revision of the initial reserves ceded per item #10. The segregated surplus account is decreased as a result of this downward development to $3,000. The following entry is needed per items #6 and #10.

Entry 6A		
Profit/Loss Account	1,000	
Retro. Reins. Loss		1,000

To close loss to profit and loss account.

Entry 6B		
Special Surplus from Retro. Reins.	1,000	
Profit/Loss Account		1,000

To close profit and loss account to special surplus. (Remaining balance of retroactive reinsurance reserve ceded or assumed account equals $3,000.) (Special surplus from retro. reins. account balance equals $3,000.)

Entry 7		
Cash	2,500	
Retroactive Reinsurance Gain (I/S)	500	
Retroactive Reinsurance Reserves Ceded or Assumed (B/S)		3,000

Entry 7A		
Profit and Loss Account	500	
Retro. Reins. Gain		500

To close other income to profit and loss account.

Entry 7B		
Special Surplus from Retro. Reins.	500	
Profit/Loss Account		500

To close profit and loss account to special surplus. (Remaining balance of special surplus from retro. reins. account equals $2,500.) (Remaining balance of retroactive reinsurance reserve ceded or assumed account -0-.)

Entry 7C		
Special Surplus from Retro. Reins.	2,500	
Unassigned Funds		2,500

To close remaining special surplus account to unassigned surplus.

34. Q: How should the parties account for an adverse loss development reinsurance contract where, as of the statement date, the attachment level of the contract exceeds the ceding company's current case and IBNR reserves for the covered accident years (i.e. no surplus gain and no reinsurance recoverable as of the statement date), and the ceding company transferred cash to the reinsurer at the inception of the contract?

A: An adverse loss development reinsurance contract covering prior accident years meets the definition of "retroactive reinsurance" set forth in paragraph 22 of SSAP No. 62R:

> ….reinsurance in which a reinsurer agrees to reimburse a ceding entity for liabilities incurred as a result of past insurable events covered under contracts subject to the reinsurance….

Paragraph 29.k. of SSAP No. 62R specifically provides that the consideration paid for a retroactive reinsurance contract is to be recorded as a decrease in ledger assets by the ceding entity and an increase in ledger assets by the assuming entity.

Question 33 illustrates the accounting entries for retroactive reinsurance contracts.

If the retroactive reinsurance contract transfers both components of insurance risk then, pursuant to paragraph 29 of SSAP No. 62R, the ceding company would record the consideration paid as a decrease in ledger assets, recognize an expense for the reinsurance ceded through Other Income or Loss accounts as a write-in item identified as "Retroactive Reinsurance Ceded", and record the recoverable from the reinsurer as a contra liability.

No contra liability is established until and unless (and then only to the extent that) the ceding company establishes reserves which exceed the attachment point.

For the contract described, at inception no contra liability is recorded to offset current liability for the business ceded, since the ceded retroactive reinsurance premium relates to coverage in excess of the current liabilities recorded by the ceding company.

Once the ceding company's recorded liabilities exceed the attachment point of the adverse loss development reinsurance contract and triggers reinsurance recoverable from the reinsurer, a contra liability is established by the ceding company for the amount of the reinsurance recoverable. Any surplus resulting from the retroactive reinsurance is carried as a write-in item on the balance sheet designated as "Special Surplus from Retroactive Reinsurance Account." The surplus gain may not be classified as unassigned funds (surplus) until the actual retroactive reinsurance recovered exceeds the consideration paid.

If any portion of a retroactive reinsurance contract does not transfer insurance risk, then the portion which does not transfer risk is accounted for as a deposit pursuant to paragraph 35. The deposit is reported as an admitted asset of the ceding company if the reinsurer is licensed, accredited, certified or otherwise qualified in the ceding company's state of domicile as described

in Appendix A-785, or if there are funds held by or on behalf of the ceding company as described in that appendix. Receipts and disbursements under the contract are recorded through the deposit/liability accounts. Amounts received in excess of the deposit made are recognized as a gain in the Other Income or Loss account.

Accounting entries for a ceding entity to report a retroactive reinsurance contract at the inception of which the cedent's reserves are lower than the attachment point of the reinsurance coverage:

Assume the company pays $16m to purchase adverse development coverage of $50m, above an attachment point.

Entry 1: Payment of Retrospective Reinsurance Premium

Retrospective Reinsurance Expense*	$16m	
Cash		$16m

The company pays $16m premium for the retrospective reinsurance contract.
*This is an Other Expense item, it does not flow through Schedule F or Schedule P.

Entry 2: Adverse Development Reaches the Attachment Point

Losses Incurred	$25m	
Gross Loss Reserve		$25m
Recoverable on Retro Reinsurance Contract**	$25m	
Other Income*		$9m
Contra – Retro Reinsurance Expense*		$16m
Surplus***	$9m	
Segregated Surplus***		$9m

The company incurs $25m development on reserves related to the contract.
*These are Other Income/Expense items do not flow through Schedule F or Schedule P.
**A contra-liability write-in item, not netted against loss reserves.
***Surplus is segregated in the amount of [$25m - $16m = $9m] recoverables less consideration paid.

Entry 3: Cash is Recovered on Paid Losses

Cash	$20m	
Recoverable on Retrospective Reinsurance Contract		$20m
Segregated Surplus	$4m	
Surplus		$4m

The company recovers $20m cash from reinsurer on this retro contract. Segregated Surplus decreases in the amount of [$20m - $16m = $4m] (decreases for amount recovered in excess of consideration paid).

35. Q: How should a ceding company account for payment of the premium for a retroactive reinsurance contract by the ceding company's parent company or some other person not a party to the reinsurance contract (for example, adverse loss development reinsurance contracts purchased by the parent company in the context of the purchase or sale of the ceding company)?

A: If the reinsurance premium is not paid directly by the ceding company but is instead paid on behalf of the ceding company by the ceding company's parent company or some other entity not a party to the reinsurance contract, then the ceding company should (1) record an increase in gross paid in and contributed surplus in the amount of the reinsurance premium to reflect the contribution to surplus by the parent or third party payor, and (2) record an expense in the amount of the reinsurance premium and account for the contract as provided in Questions 33 and 34.

EXHIBIT B – P&C RUNOFF REINSURANCE TRANSACTIONS

The following provides illustrative journal entries for P&C Runoff Reinsurance Transactions.

Example 1: Transfer of existing block of runoff business **with no residual UPR** on books of Transferor

Cedent/Transferor		**DR**	**CR**
Day 1 – Cedent transfers 50,000 in reserves for 50,000			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	50,000	
Cash	Asset ↓		50,000
Losses Paid (U/W Part 2 & Sch. P)	I/S ↓	50,000	
Change in Reserves - Incurred Losses (U&I Part 2)	I/S ↑		50,000
Unlike novation, gross reserves stay on books of transferor			
Day 360 – Negative Development on Transferred Business - 3,000			
Reinsurance Recoverable on Unpaid Losses (Sch. F)	Contra Liab ↑	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserve			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	53,000	
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↓		53,000
Reinsurer/ Transferee			
Day 1 – Cedent transfers 50,000 in reserves for 50,000			
Cash	Asset ↑	50,000	
Reported Losses on Reins. Assumed (U&I Part 2A & Sch. P)	Liab ↑		50,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S ↓	50,000	
Losses Paid or Incurred (negative) (U&I Part 2 & Sch. P)	I/S ↑		50,000
Day 360 – Negative Development on Transferred Business - 3,000:			
Change in Reserves – Incurred Losses (U&I Part 2)	I/S↓	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	53,000	
Cash	Asset ↓		53,000

Comments:
Since the Transferor is ceding incurred losses neither party should have premium impacted. To do that would distort many financial ratios.

Example 2: Transfer of existing block of runoff business **with some residual UPR** of 10,000 on books of Transferor (this should be less common).

Cedent/Transferor		**DR**	**CR**
Day 1 – Cedent transfers 50k in reserves & 10k UPR for 60,000			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	50,000	
Unearned Premium Reserve (U&I Part 1 & 1A)	Liab ↓	10,000	
Cash	Asset ↓		60,000
Ceded Premium Written (U&I Part 1B)	I/S ↓	10,000	
Losses Paid (U&I Part 2 & Sch. P)	I/S ↓	50,000	
Change in Reserves - Incurred Losses (U&I Part 2)	I/S ↑		50,000
Change in UPR (U&I Part 1 & 1A)	I/S ↑		10,000
Unlike novation, gross reserves stay on books of transferor			
Day 180 – Premium is Fully Earned (Assumes 80% Loss Ratio)			
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↑	8,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		8,000
To mirror the increase in unpaid losses by the transferee			
Day 360 – Negative Development on Transferred Business - 3,000:			
Reinsurance Recoverable on Unpaid Losses (Sch. F)	Contra Liab ↑	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserves (50+8+3)			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	61,000	
Ceded Reinsurance Recoverable (U&I Part 2A & Sch. F)	Contra Liab ↓		61,000

Reinsurer/Transferee			
Day 1 – Cedent transfers 50k in reserves & 10k UPR for 60,000			
Cash	Asset ↑	60,000	
Reported Losses on Reins. Assumed (U&I Part 2A & Sch. P)	Liab ↑		50,000
Unearned Premium Reserve (U&I Part 1 & 1A)	Liab ↑		10,000
Assumed Premium Written (U&I Part 1B)	I/S ↑		10,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S ↓	50,000	
Change in UPR (U&I Part 1 & 1A)	I/S ↓	10,000	
Losses Paid or Incurred (negative) (U&I Part 2 & Sch. P)	I/S ↑		50,000
Day 180 – Premium is Fully Earned (Assumes 80% Loss Ratio)			
Unearned Premium Reserve (U&I Part 1 & 1A)	Liab ↓	10,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		8,000
Change In Reserves – Incurred Losses (U&I Part 2)	I/S↓	8,000	
Change in UPR (U&I Part 1 & 1A)	I/S ↑		10,000
To record the increase in unpaid losses by the transferee			
Day 360 – Negative Development on Transferred Business -3,000:			
Change In Reserves – Incurred Losses (U&I Part 2)	I/S↓	3,000	
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↑		3,000
Day 540 – Reinsurer Pays the Loss @ Reported Reserves (50+8+3)			
Reserves for Unpaid Losses (U&I Part 2A & Sch. P)	Liab ↓	61,000	
Cash	Asset ↓		61,000

Comments:
In this second example, the portion of the runoff business that has an UPR associated with it is essentially booked as prospective reinsurance. Other elements of the example are the same except that we assumed an 80% loss ratio on the unearned portion of the business.

EXHIBIT C – ILLUSTRATION OF A REINSURANCE CONTRACT THAT IS ACCOUNTED FOR AS A DEPOSIT USING THE INTEREST METHOD

Assumptions:

Premium = $1,000 (assumes no commissions or allowances)
Coverage Period = 1 year
Initial expected recoveries = $225 per year (at end of year) for five years
Initial Implicit rate = 4 percent*

*present value of $225 per year for five years at 4 percent = $1,000

At the end of Year 2, the timing of anticipated recoveries under the reinsurance contract changes. A reevaluation of the implicit interest rate produces a rate of 3.63 percent and an asset of $640 at the end of the year.

Description	Interest Income	Cash Recoveries	Deposit Balance
Initial payment			$1,000
Year 1 (4%)	$ 40		$1,040
End of Year 1		$ (225)	$ 815
Year 2 (4%)	$ 33		$ 848
End of Year 2		$ (200)	$ 648
Yield Adjustment	$ (8)		$ 640
Year 3 (3.63%)	$ 23		$ 663
End of Year 3		$ (175)	$ 488
Year 4 (3.63%)	$ 18		$ 506
End of Year 4		$ (175)	$ 331
Year 5 (3.63%)	$ 12		$ 343
End of Year 5		$ (175)	$ 168
Year 6 (3.63%)	$ 7		$ 175
End of Year 6		$ (175)	$ 0

At the inception of the contract, the ceding insurer records a deposit asset of $ 1,000 and the assuming company, a $1,000 deposit liability. The asset is admitted providing the conditions for credit for reinsurance are met.

At subsequent reporting dates, the deposit asset is adjusted by calculating the effective yield on the reinsurance agreement to reflect actual payments to date and expected future payments with a corresponding credit to interest income by the ceding company and interest expense by the assuming company.

At the end of year two, it is determined that the expected cash flows will differ from previous estimates, resulting in a lower effective yield on the deposit asset. The deposit asset is adjusted to the amount that would have existed at the reporting date had the new effective yield been applied from the inception of the reinsurance agreement. The adjustment is charged to interest income, i.e., as a reduction of interest income. Interest income during the remaining term of the agreement is reduced accordingly (i.e., the yield is reduced from 4.0% to 3.63%).

EXHIBIT D – ILLUSTRATION OF ASBESTOS AND POLLUTION COUNTERPARTY REPORTING EXCEPTION

Underwriting Pools

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for underwriting pools and associations.

SUMMARY CONCLUSION

2. Underwriting pools and associations can be categorized as follows: (a) involuntary, (b) voluntary, and (c) intercompany.

3. Involuntary pools represent a mechanism employed by states to provide insurance coverage to those with higher than average probability of loss who otherwise would be excluded from obtaining coverage. Reporting entities are generally required to participate in the underwriting results, including premiums, losses, expenses, and other operations of involuntary pools, based on their proportionate share of similar business written in the state. Involuntary plans are also referred to as residual market plans, involuntary risk pools, and mandatory pools.

4. Voluntary pools are similar to involuntary pools except they are not state mandated and a reporting entity participates in the pool voluntarily. In addition, voluntary pools are not limited to the provision of insurance coverage to those with higher than average probability of loss, but often are used to provide greater capacity for risks with exceptionally high levels of insurable values (e.g., aircraft, nuclear power plants, refineries, and offshore drilling platforms).

5. Intercompany pooling relates to business which is pooled among affiliated entities who are party to a pooling arrangement.(INT 03-02)

6. Participation in a pool may be on a joint and several basis, i.e., in addition to a proportional share of losses and expenses incurred by the pool, participants will be responsible for their share of any otherwise unrecoverable obligations of other pool participants. In certain instances, one or more entities may be designated as servicing carriers for purposes of policy issuance, claims handling, and general administration of the pooled business, while in other cases a pool manager or administrator performs all of these functions and simply bills pool participants for their respective shares of all losses and expenses incurred by the pool. In either case, liabilities arising from pooled business are generally incurred on a basis similar to those associated with non-pooled business, and should therefore be treated in a manner consistent with the guidelines set forth in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R).

7. Intercompany pooling arrangements involve establishment of a conventional quota share reinsurance agreement under which all of the pooled business is ceded to the lead entity and then retroceded back to the pool participants in accordance with their stipulated shares. Arrangements whereby there is one lead company that retains 100% of the pooled business and all or some of the affiliated companies have a 0% net share of the pool may qualify as intercompany pooling. In these arrangements, only the policy issuing entity has direct liability to its policyholders or claimants; other pool participants are liable as reinsurers for their share of the issuing entity's obligations. Although participants may use different assumptions (e.g., discount rates) in recording transactions, the timing of recording transactions shall be consistently applied by all participants.

8. Underwriting results relating to voluntary and involuntary pools shall be accounted for on a gross basis whereby the participant's portion of premiums, losses, expenses, and other operations of the pools are recorded separately in the financial statements rather than netted against each other. Premiums and losses shall be recorded as direct, assumed, and/or ceded as applicable. If the reporting entity is a direct writer of the business, premiums shall be recorded as directly written and accounted for in the same

manner as other business which is directly written by the entity. To the extent that premium is ceded to a pool, premiums and losses shall be recorded in the same manner as any other reinsurance arrangement. A reporting entity who is a member of a pool shall record its participation in the pool as assumed business as in any other reinsurance arrangement.

9. Underwriting results relating to intercompany pools shall be accounted for and reported as described in paragraph 8. While it is acceptable that intercompany pooling transactions be settled through intercompany arrangements and accounts, intercompany pooling transactions shall be reported on a gross basis in the appropriate reinsurance accounts consistent with other direct, assumed and ceded business.

10. Equity interests in, or deposits receivable from, a pool represent cash advances to provide funding for operations of the pool. These are admitted assets and shall be recorded separately from receivables and payables related to a pool's underwriting results. Receivables and payables related to underwriting results shall be accounted for in accordance with the guidance in paragraphs 6-8. If it is probable that these receivables are uncollectible, any uncollectible amounts shall be written off against operations in the period such determination is made. If it is reasonably possible a portion of the balance is uncollectible but is not written off, disclosure requirements outlined in SSAP No. 5R shall be followed.

Disclosures

11. If a reporting entity is part of a group of affiliated entities which utilizes a pooling arrangement under which the pool participants cede substantially all of their direct and assumed business to the pool, the financial statements shall include:

a. A description of the basic terms of the arrangement and the related accounting;

b. Identification of the lead entity and of all affiliated entities participating in the intercompany pool (include NAIC Company Codes) and indication of their respective percentage shares of the pooled business;

c. Description of the lines and types of business subject to the pooling agreement;

d. Description of cessions to non-affiliated reinsurers of business subject to the pooling agreement, and indication of whether such cessions were prior to or subsequent to the cession of pooled business from the affiliated pool members to the lead entity;

e. Identification of all pool members which are parties to reinsurance agreements with non-affiliated reinsurers covering business subject to the pooling agreement and which have a contractual right of direct recovery from the non-affiliated reinsurer per the terms of such reinsurance agreements;

f. Explanation of any discrepancies between entries regarding pooled business on the assumed and ceded reinsurance schedules of the lead entity and corresponding entries on the assumed and ceded reinsurance schedules of other pool participants;

g. Description of intercompany sharing, if other than in accordance with the pool participation percentage, of the Provision for Overdue Reinsurance (Schedule F, Part 8) and the write–off of uncollectible reinsurance;

h. Amounts due to/from the lead entity and all affiliated entities participating in the intercompany pool as of the balance sheet date.

12. Refer to the Preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

13. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

Property and Casualty Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for property and casualty insurance contracts. Topics not covered by this statement shall comply with the more general statutory accounting guidance.

2. Topics specific to title insurance, mortgage guaranty insurance, and financial guaranty insurance are not within the scope of this statement. These topics are addressed in *SSAP No. 57—Title Insurance*, *SSAP No. 58—Mortgage Guaranty Insurance*, and *SSAP No. 60—Financial Guaranty Insurance*.

SUMMARY CONCLUSION

3. Property and casualty insurance contracts can be written to cover insured events on the following reporting bases:

a. Occurrence—These policies cover insured events that occur within the effective dates of the policy regardless of when they are reported to the reporting entity. Liabilities for losses on these policies shall be recorded when the insured event occurs;

b. Claims-made—These policies cover insured events that are reported (as defined in the policy) within the effective dates of the policy, subject to retroactive dates when applicable. Liabilities for losses on these policies shall be recorded when the event is reported to the reporting entity; and

c. Extended reporting—Endorsements to claims-made policies covering insured events reported after the termination of a claims-made contract but subject to the same retroactive dates where applicable. See paragraphs 7 and 8 for guidance for when premium shall be earned and losses shall be recorded.

Claims-Made Policies

4. Normally, when claims-made coverage is obtained, existing coverage is being replaced. The existing coverage may have been a claims-made policy or an occurrence policy. In either case, in an effort to reduce premium costs, the insured may request that the claims-made coverage cover only claims reported within the effective dates of the policy that occur after a specified date. This specified date is referred to as the retroactive date of the claims-made policy and eliminates duplicate coverage when converting from occurrence coverage to claims-made coverage.

5. The liability for an insured event shall be determined in accordance with *SSAP No. 55—Unpaid Claims, Losses and Loss Adjustment Expenses* (SSAP No. 55).

6. Extended reporting endorsements, commonly referred to as tail coverage, allow extended reporting of insured events after the termination of a claims-made contract. Extended reporting endorsements modify the exposure period of the underlying contract and can be for a defined period (e.g., six months, one year, five years) or can be for an indefinite period.

7. When a reporting entity issues an extended reporting endorsement or contract and the preceding claims-made policy terminates, the reporting entity assumes liability for unreported claims and expense. This extended reporting coverage can be issued for an indefinite period or a fixed period. For indefinite reporting periods, premium shall be fully earned and loss and expense liability associated with unreported claims shall be recognized immediately. For coverage for a fixed period, premium shall be earned over the term of the fixed period, the reporting entity shall establish an unearned premium reserve for the unexpired portion of the premium and shall record losses as reported.

8. Some claims-made policies provide extended reporting coverage at no additional charge in the event of death, disability, or retirement of a natural person insured. In such instance, a policy reserve is required to assure that premiums are not earned prematurely. The amount of the reserve should be adequate to pay for all future claims arising from these coverage features, after recognition of future premiums to be paid by current insureds for these benefits. The reserve, entitled "extended reporting endorsement policy reserve" shall be classified as a component part of the unearned premium reserve considered to run more than one year from the date of the policy.

9. When the anticipated losses, loss adjustment expenses, and maintenance costs anticipated to be reported during the extended reporting period exceed the recorded unearned premium reserve for a claims-made policy, a premium deficiency reserve shall be recognized in accordance with *SSAP No. 53—Property Casualty Contracts—Premiums*.

Discounting

10. With the exception of fixed and reasonably determinable payments such as those emanating from workers' compensation tabular indemnity reserves and long-term disability claims, property and casualty loss reserves shall not be discounted. No loss adjustment expense reserves shall be discounted.

11. Tabular reserves are indemnity reserves that are calculated using discounts determined with reference to actuarial tables which incorporate interest and contingencies such as mortality, remarriage, inflation, or recovery from disability applied to a reasonably determinable payment stream. Tabular reserves shall not include medical loss reserves or loss adjustment expense reserves.

12. Due to several instances in which states have prescribed or permitted practices to allow discounting on a non-tabular basis, recommended guidelines for discounting non-tabular unpaid loss and LAE are provided within Exhibit A. If a state has a prescribed or permitted practice allowing the use of discounts, or if discounting is utilized in accordance with this SSAP, financial statement disclosures are required in accordance with paragraphs 13-16.

13. In accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3), a change in the discount rate used in discounting loss reserves shall be accounted for as a change in estimate. SSAP No. 3 requires changes in estimates to be included in the statement of income in the period the change becomes known.

14. The financial statements shall disclose whether or not any of the liabilities for unpaid losses or unpaid loss adjustment expenses are discounted, including liabilities for workers' compensation. The following disclosures, for each line of business, shall be made separately:

a. Table(s) used;

b. Rate(s) used;

c. The amount of discounted liability reported in the financial statement; ~~and~~

d. The amount of tabular discount, by the line of business and reserve category (i.e., case and Incurred But Not Reported (IBNR));

e. The amount of interest accretion recognized in the statement of income; and

f. The line item(s) in the statement of income in which the interest accretion is classified.

15. If the rate(s) used to discount prior accident years' liabilities have changed from the previous financial statement or if there have been changes in other key discount assumptions such as payout patterns, the financial statements shall disclose:

a. Amount of discounted current liabilities at current rate(s) and assumption(s) (exclude the current accident year);

b. Amount of discounted current liabilities at previous rate(s) and assumption(s) (exclude the current accident year);

c. Change in discounted liability due to change in interest rate(s) and assumption(s); and

d. Amount of non-tabular discount, by line of business and reserve category (i.e., case, defense and cost containment, adjusting and other).

16. Refer to the Preamble for further discussion regarding disclosure requirements.

Structured Settlements

17. Structured settlements are periodic fixed payments to a claimant for a determinable period, or for life, for the settlement of a claim. Frequently a reporting entity will purchase an annuity to fund the future payments. Reporting entities may purchase an annuity in which the entity is the owner and payee, or an annuity in which the claimant is the payee. When annuities are purchased to fund periodic fixed payments, they shall be accounted for as follows:

a. When the reporting entity is the owner and payee, no reduction shall be made to loss reserves. The annuity shall be recorded at its present value and reported as an other-than-invested asset. Income from the annuities shall be recorded as miscellaneous income. The present value of the annuity and the related amortization schedule shall be obtained from the issuing life insurance company at the time the annuity is purchased; and

b. When the claimant is the payee, loss reserves shall be reduced to the extent that the annuity provides for funding of future payments. The cost of the annuities shall be recorded as paid losses.

18. Statutory accounting and Generally Accepted Accounting Principles (GAAP) are consistent for the accounting of structured settlement annuities where the reporting entity is the owner and payee, and where the claimant is the owner and payee and the reporting entity has been released from its obligation. GAAP distinguishes structured settlement annuities where the owner is the claimant and a legally enforceable release from the reporting entity's liability is obtained from those where the claimant is the owner and payee but the reporting entity has not been released from its obligation. GAAP requires the deferral of any gain resulting from the purchase of a structured settlement annuity where the claimant is the owner and payee yet the reporting entity has not been released from its obligation. Statutory accounting treats these settlements as completed transactions and considers the earnings process complete, thereby allowing for immediate gain recognition.

19. The following information regarding structured settlements shall be disclosed in the financial statements:

a. The amount of reserves no longer carried by the reporting entity because it has purchased annuities with the claimant as payee, and the extent to which the reporting entity is contingently liable for such amounts should the issuers of the annuities fail to perform under the terms of the annuities; and

b. The name, location, and aggregate statement value of annuities due from any life insurer to the extent that the aggregate value of those annuities equal or exceed 1% of policyholders' surplus. This disclosure shall only include those annuities for which the reporting entity has not obtained a release of liability from the claimant as a result of the purchase of an annuity. The reporting entity shall also disclose whether the life insurers are licensed in the reporting entity's state of domicile.

20. Refer to the Preamble for further discussion regarding disclosure requirements.

Policies with Coverage Periods Equal to or in Excess of Thirteen Months

21. Some property and casualty insurance contracts are written for coverage periods that equal or exceed thirteen months. These contracts may be single premium or fixed premium policies, and generally are not subject to cancellation or premium modification by the reporting entity. The most common policies with such coverage periods are home warranty and mechanical breakdown policies. Accordingly, this guidance is primarily focused on home warranty and mechanical breakdown policies and does not apply to multiple-year contracts comprised of single-year policies, each of which have separate premiums and annual aggregate deductibles.

22. Revenues are generally not received in proportion to the level of exposure or period of exposure. In order to recognize the economic results of the contract over the contract period, a liability shall be established for the estimated future policy benefits while taking into account estimated future premiums to be received. Unearned premiums shall be recorded in accordance with paragraphs 23-33 of this statement.

23. Paragraphs 24-33 shall apply to all direct and assumed contracts or policies ("contracts"), excluding financial guaranty contracts, mortgage guaranty contracts, and surety contracts, that fulfill both of the following conditions:

a. The policy or contract term is greater than or equal to 13 months; and

b. The reporting entity can neither cancel the contract, nor increase the premium during the policy or contract term.

24. At any reporting date prior to the expiration of the contracts, the reporting entity is required to establish an adequate unearned premium reserve, to be reported as the unearned premium reserve. For each of the three most recent policy years, the gross (i.e., direct plus assumed) unearned premium reserve shall be no less than the largest result of the three tests described in paragraphs 27-29. For years prior to the three most recent policy years, the gross unearned premium reserve shall be no less than the larger of the aggregate result of Test 1 or the aggregate result of Test 2 or the aggregate result of Test 3 taken over all of those policy years.

25. Any reserve credit applicable for reinsurance ceded shall be appropriately reflected in the financial statements with the resulting net unearned premium reserve being established by the reporting entity.

26. The projected losses and expenses may be reduced for expected salvage and subrogation recoveries, but may not be reduced for anticipated deductible recoveries, unless the deductibles are secured by a letter of credit (LOC) or like security. Projected salvage and subrogation recoveries (net of associated expenses) shall be established based on reporting entity experience, if credible; otherwise, based on industry experience.

27. Test 1 is management's best estimate of the amounts refundable to the contractholders at the reporting date.

28. Test 2 is the gross premium multiplied by the ratio of paragraph 28.a. to paragraph 28.b.:

a. Projected future gross losses and expenses to be incurred during the unexpired term of the contracts; and

b. Projected total gross losses and expenses under the contracts.

29. Test 3 is the projected future gross losses and expenses to be incurred during the unexpired term of the contracts as adjusted below, reduced by the present value of the future guaranteed gross premiums, if any.

a. A provision for investment income is permitted in the unearned premium reserve only with respect to the projected future losses and expenses used to determine the unearned premium reserve, and not with respect to incurred but unpaid losses and expenses;

b. A provision for investment income on projected future losses and expenses may be calculated to the expected date the loss or expense is incurred, not from the expected date of payment;

c. The rate of interest used to calculate the provision for investment income shall be reviewed and changed as necessary at each reporting date and shall not exceed the lesser of the following two standards:

i. The reporting entity's future net yield to maturity on statutory invested assets as shown in Schedule D, less a 1.5% actuarial provision for adverse deviations; or

ii. The current yield to maturity on a United States Treasury debt instrument maturing in five (5) years as of the reporting date.

d. The reporting entity's statutory invested assets shall be reduced by the loss and loss adjustment expense reserves on unpaid losses and expenses to calculate "available invested assets." If the available invested assets are less than the result of Test 3, as calculated above, an "invested asset shortfall" exists. In this event, the Test 3 reserve shall be recalculated with the provision for investment income based on the restricted amount of available invested assets.

30. For the purposes of Tests 2 and 3 above, "expenses" shall include all incurred and anticipated expenses related to the issuance and maintenance of the policy, including loss adjustment expenses, policy issuance and maintenance expenses, commissions, and premium taxes.

31. The projected future losses and expenses are to be re-estimated for each reporting date, and the most recent estimate of these projected losses and expenses is to be used in these Tests. If a range is selected and no single point in the range is identified as being the most likely, then the midpoint of management's estimate of the range shall be used. For purposes of this statement, it is assumed that management can quantify the high end of the range. If management determines that the high end of the range cannot be quantified, then a range does not exist, and management's best estimate shall be accrued.

32. The reporting entity shall provide an Actuarial Opinion and Report in conformity with the NAIC *Annual Statement Instructions for Property and Casualty Insurers*. Exhibit A of the actuarial opinion shall include the following three items:the Reserve for Direct and Assumed Unearned Premiums, the Reserve for Net Unearned Premiums (as reported on Page 3), and any other premium reserve items on which an opinion is being expressed. If any of these three items are material, the material item(s) must also be covered in the opinion and relevant comments paragraphs of the actuarial opinion.

33. The actuarial report shall include a description of the manner in which the adequacy of the amount of security for deductibles and self-insured retentions is determined. The actuarial report need not assess the credit-worthiness of the specific securities (e.g. LOC's), but the actuarial opinion must report collectibility problems if known to the actuary.

High Deductible Policies

34. Certain policies, particularly workers' compensation coverage, are available under high deductible plans. High deductible plans differ from self insurance coupled with an excess of loss policy because state laws generally require the reporting entity to fund the deductible and to periodically review the financial viability of the insured and make an assessment of the suitability of the deductible plan to the insured.

35. The liability for loss reserves shall be determined in accordance with SSAP No. 55. Because the risk of loss is present from the inception date, the reporting entity shall reserve losses throughout the policy period, not over the period after the deductible has been reached. Reserves for claims arising under high deductible plans shall be established net of the deductible, however, no reserve credit shall be permitted for any claim where any amount due from the insured has been determined to be uncollectible.

36. If the policy form requires the reporting entity to fund all claims including those under the deductible limit, the reporting entity is subject to credit risk, not underwriting risk. Reimbursement of the deductible shall be accrued and recorded as a reduction of paid losses simultaneously with the recording of the paid loss by the reporting entity.

37. If the reporting entity does not hold specific collateral for the policy, amounts accrued for reimbursement of the deductible shall be billed in accordance with the provisions of the policy or the contractual agreement and shall be aged according to the contractual due date. In the absence of a contractual due date, billing date shall be utilized for the aging requirement. Deductible recoverables that are greater than ninety days old shall be nonadmitted. However, if the reporting entity holds specific collateral for the high deductible policy, ten percent of deductible recoverable in excess of collateral specifically held and identifiable on a per policy basis, shall be reported as a nonadmitted asset in lieu of applying the aging requirement; however, to the extent that amounts in excess of the 10% are not anticipated to be collected they shall also be nonadmitted. The collateral requirements of this paragraph may be satisfied when an insured provides one collateral instrument to secure amounts owed under multiple policies, provided that the reporting entity has the contractual right to apply the collateral to the high deductible policy. Collateral obtained at a group level that is not supported by an existing pooling agreement requires a written allocation agreement among all collateral beneficiaries. The terms of such agreement must be fair and equitable. Documentation supporting any allocation of collateral among reporting entities must be maintained to allow proper calculation of the nonadmitted amounts and prohibit double counting of collateral.

38. The financial statements shall disclose the following related to high deductible policies:

a. Gross (of high deductible) amount of loss reserves, unpaid by line of business.

b. ~~t~~The amount of reserve credit that has been recorded for high deductibles on unpaid claims and the amounts that have been billed and are recoverable on paid claims, by line of business and the total of these two numbers.

c. Related to the amounts that have been billed and are recoverable on paid claims,

i. paid recoverable amounts that are over 90 days overdue, and

ii. the amounts nonadmitted (per paragraph 37).

d. Total collateral pledged to the reporting entity related to deductible and paid recoverables:

i. the amount of collateral on balance sheet, and

ii. the amount of collateral off balance sheet.

e. The total amount of unsecured high deductible amounts related to unpaid claims and for paid recoverables and the total percentage that is unsecured.

f. Highest ten unsecured high deductible amounts by counterparty ranking. Note that the counterparty does not have to be named, just amount by counterparty 1, counterparty 2, etc. For this purpose, a group of entities under common control shall be regarded as a single customer.

39. Unsecured High Deductible Recoverables: If the individual obligor is part of a group under the same management or control, such as a professional employer organization (PEO), list the individual obligors, each of its related group members, and the total unsecured aggregate recoverables on high deductible policies for the entire group, which are greater than 1% of capital and surplus. For this purpose, a group of entities under common control shall be regarded as a single customer.

40. Refer to the Preamble for further discussion regarding disclosure requirements.

Asbestos and Environmental Exposures

41. Asbestos exposures are defined as any loss or potential loss (including both first party and third party claims) related directly or indirectly to the manufacture, distribution, installation, use, and abatement of asbestos-containing material, excluding policies specifically written to cover these exposures. Environmental exposures are defined as any loss or potential loss, including third party claims, related directly or indirectly to the remediation of a site arising from past operations or waste disposal. Examples of environmental exposures include but are not limited to chemical waste, hazardous waste treatment, storage and disposal facilities, industrial waste disposal facilities, landfills, superfund sites, toxic waste pits, and underground storage tanks.

42. Reporting entities that are potentially exposed to asbestos and/or environmental claims shall record reserves consistently with SSAP No. 55.

43. The financial statements shall disclose the following if the reporting entity is potentially exposed to asbestos and/or environmental claims:

a. The reserving methodology for both case and IBNR reserves;

b. The amount paid and reserved for losses and loss adjustment expenses for asbestos and/or environmental claims, on a direct, assumed and net of reinsurance basis. Each company should report only its share of a group amount (after applying its respective pooling percentage) if the company is a member of an intercompany pooling agreement;

c. Description of the lines of business written for which there is potential exposure of a liability due to asbestos and/or environmental claims, and the nature of the exposure(s);

d. The following for each of the five most current calendar years[1] on both a gross and net of reinsurance basis, separately for asbestos and environmental losses (including coverage dispute costs):

Beginning reserves	$_____
Incurred losses and loss adjustment expenses	_____
Calendar year payments for losses and loss adjustment expenses	_____
Ending reserves	$_____

44. Refer to the Preamble for further discussion regarding disclosure requirements.

Excess Statutory Reserve

45. This statement eliminates the requirement to record excess statutory reserves. Excess statutory reserves do not meet the definition of a liability established in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.*

Policyholder Dividends

46. Dividends to policyholders immediately become liabilities of the reporting entity when they are declared by the board of directors and shall be recorded as a liability. Incurred policyholder dividends are reported in the statement of income.

47. The financial statements shall disclose the terms of dividend restrictions, if any. Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

48. Structured settlements are addressed in *FASB Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113). FAS 113 is addressed in *SSAP No. 62R—Property and Casualty Reinsurance*. This statement rejects the AICPA *Audit and Accounting Guide—Audits of Property and Liability Insurance Companies.*

Effective Date and Transition

49. This statement is effective for years beginning January 1, 2001. To the extent that the requirements of paragraphs 23-33 produce a higher reserve than the reporting entity would have established through the use of their previous methodology, the reporting entity may phase in the additional reserve over a period not to exceed three years. Such a phase in period shall only be permitted if the reporting entity is able to demonstrate that it would not be operating in a hazardous financial condition and that there is not adverse risk to its insureds. The phase in shall be at least 60% of the difference between the reserve required by this statement and the reserve determined by the previous methodology during the first year, 80% in the second year, and 100% in the third year. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3. The guidance in the footnote of paragraph 43.d. was originally contained

[1] The requirement for five years of data is only applicable to the annual statement blank. The audited statutory financial report is only required to report two years. Additionally, the audited statutory financial statement shall include items not included in the notes to the annual statement blank where the blank's schedules and exhibits satisfy disclosure requirements that are not included in the audited statutory financial statement (i.e., Since the audited financial statements do not include Schedule P, all of the SSAP No. 55 disclosures shall be included in the audited notes to financial statements).

within *INT 02-10: Statutory Audit Report Notes and the Reporting Requirements Related to Discosures Containing Multiple Year Information* and was effective June 9, 2002.

EXHIBIT A – GUIDELINES FOR STATES WHO PRESCRIBE OR PERMIT DISCOUNTING ON A NON-TABULAR BASIS

As discussed in paragraph 10 of this statement, with the exception of fixed and reasonably determinable payments such as those emanating from workers' compensation tabular indemnity reserves and long-term disability claims, property and casualty loss reserves shall not be discounted. However, one of the most common prescribed or permitted state practices is to allow discounting of unpaid losses and unpaid loss adjustment expenses on a non-tabular basis. The recommendations in this exhibit are not requirements and therefore should only be viewed as a recommendation to those states that prescribe or permit non-tabular discounting.

Recommended Prescribed or Permitted Practice Guidelines

The state of XYZ office will permit [insert domestic companies if prescribed or insert insurance company name if prescribed] to discount its December 20XX unpaid loss (i.e., reported losses and incurred but not reported losses) and unpaid loss adjustment expense (LAE) reserves on an non-tabular basis subject to the following conditions:

1. The unpaid loss and LAE reserves shall be determined in accordance with *Actuarial Standard of Practice No. 20, Discounting of Property and Casualty Loss and Loss Adjustment Expense* (and as agreed to by an actuary) but in no event shall the rate used exceed the lesser of the following two standards:

   a. If the reporting entity's statutory invested assets are at least equal to the total of all policyholder reserves, the reporting entity's net rate of return on statutory invested assets, less 1.5%, otherwise, the reporting entity's average net portfolio yield rate less 1.5% as indicated by dividing the net investment income earned by the average of the reporting entity's current and prior year total assets; or

   b. The current yield to maturity on a United States Treasury debt instrument with maturities consistent with the expected payout of the liabilities.

2. Disclosure of the [insert either prescribed or permitted practice] in compliance with the requirements of the NAIC *Accounting Practices and Procedures Manual* and the *NAIC Annual Statement Instructions – Property and Casualty*, including but not limited to:

   Note 1 – Summary of Significant Accounting Policies

   A. Disclosure of permitted practice

      a. Disclose that the reporting entity employs a prescribed or permitted accounting practice that departs from the *Accounting Practices and Procedures Manual*; and

      b. Disclose the monetary effect on net income and statutory surplus of using the practice of discounting on a non-tabular basis rather than the NAIC statutory accounting practice of discounting fixed and reasonably determinable payments such as those emanating from workers' compensation tabular indemnity reserves and long-term disability claims.

   Note 32 – Discounting of Liabilities for Unpaid Losses or Unpaid Loss Adjustment Expenses
   XX. Non-tabular discounting

      a. Disclosure of whether the reporting entity is applying non-tabular discounting based upon a state prescribed or permitted practice. If permitted, provide further

disclosure as to the date domiciliary state issued permitted practice and the expiration date of such practice;

b. Rate(s) used and the basis for the rate(s) used;

c. Amount of non-tabular discount disclosed by line of business and reserve category (i.e., unpaid loss, incurred but not reported, defense and cost containment expense, and adjusting and other expense); and

d. The amount of non-tabular discount reported in the statement.

Non-tabular discounting illustration:

	(1) Case	(2) IBNR	(3) Defense & Cost Containment Expense	(4) Adjusting & Other Expense
1. Homeowners/Farmowners				
2. Private Passenger Auto Liability/Medical				
3. Commercial Auto/Truck Liability/Medical				
4. Workers' Compensation

17. Reinsurance Nonproportional Assumed Liability				
18. Reinsurance Nonproportional Assumed Financial Lines				
19. Products Liability – Occurrence				
20. Products Liability – Claims-Made				
21. Financial Guaranty/Mortgage Guaranty				
22. Total				

The rates used to discount Medical Malpractice unpaid losses at December 31, 20X2 have changed from the rates used at December 31, 20X1. At December 31, 20X2, the amount of discounted Medical Malpractice unpaid losses, excluding the current accident year, is $_____. Had these unpaid losses been discounted at the rates used at December 31, 20X1 the amount of discounted liabilities would be $_____. The reduction in the discounted liability due to the change in rates is $_____.

This illustration neither regulates, permits, nor prohibits the practice of discounting liabilities for unpaid losses or unpaid loss adjustment expenses.

Retrospectively Rated Contracts

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for retrospectively rated contracts. This statement applies to property and casualty contracts, life insurance contracts, and accident and health contracts.

2. Retrospective reinsurance contracts are not within the scope of this statement. They are addressed in *SSAP No. 62R—Property and Casualty Reinsurance* (SSAP No. 62R).

SUMMARY CONCLUSION

3. A retrospectively rated contract is one which has the final policy premium calculated based on the loss experience of the insured during the term of the policy (including loss development after the term of the policy) and the stipulated formula set forth in the policy or a formula required by law. The periodic adjustments may involve either the payment of return premium to the insured or payment of an additional premium by the insured, or both, depending on experience. Retrospective rating features are common in certain property and casualty contracts, group life, and group accident and health contracts. Some contracts have retrospective features required by law. Contracts with retrospective rating features are referred to as loss sensitive contracts.

4. Amounts due from insureds and amounts due to insureds under retrospectively rated contracts meet the definitions of assets and liabilities as set forth in *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets* (SSAP No. 5R), respectively. Amounts due from insureds and amounts due to insureds under retrospectively rated contracts are admitted assets to the extent they conform to the requirements of this statement.

5. Initial premiums shall be recognized in accordance with *SSAP No. 51R—Life Contracts, SSAP No. 53—Property Casualty Contracts—Premiums,* and *SSAP No. 54R—Individual and Group Accident and Health Contracts*.

6. Specific funds received by the prescription drug plan sponsor from either the Medicare Part D enrollee or the government as payment for standard coverage that will be subject to retrospective premium adjustments should be accounted for under this statement. These funds include 'Direct Subsidy', 'Low Income Subsidy (premium portion)', 'Beneficiary Premium (standard coverage portion)', 'Part D Payment Demonstration' and 'Risk Corridor Payment Adjustment'. The funds noted above have a final policy amount that is calculated based on the loss experience of the insured during the term of the policy, therefore should be treated as such. Refer to *INT 05-05: Accounting for Revenues Under Medicare Part D Coverage* for additional information and definitions of terms specifically related to Medicare Part D business.

7. Because policy periods do not always correspond to reporting periods and because an insured's loss experience may not be known with certainty until sometime after the policy period expires, retrospective premium adjustments shall be estimated based on the experience to date using one of the following methods:

a. Property and Casualty Contracts:

i. Use of actuarially accepted methods in accordance with filed and approved retrospective rating plans. This includes but is not limited to the application of historical ratios of retrospective rated developments to earned standard premium to develop a ratio which is then applied to those policies for which no retrospective calculation has been recorded or for which no modification to the

recorded calculation is needed. This method results in the calculation of one amount which is either a net asset or a net liability;

ii. Reviewing each individual retrospectively rated risk, comparing known loss development (including IBNR) with that anticipated in the policy contract to arrive at the best estimate of return or additional premium earned at that point in time. This method results in the calculation of an asset or a liability for each risk. The total of all receivables shall be recorded as an asset and the total of all return premiums shall be recorded as a liability.

b. Life and Accident & Health Contracts: Reporting entities offering group coverage have extensive underwriting procedures and complex individually negotiated benefits and contracts. Due to cost and reporting deadlines, these factors make it difficult to establish an exact valuation of retrospective premium adjustments. The method used to estimate the liability shall be reasonable based on the reporting entity's procedures and consistent among reporting periods. Common methods include a mathematical approach using a complex algorithm of the reporting entity's underwriting rules and experience rating practices, and an aggregate or group approach.

8. Assumptions used in estimating retrospective premium adjustments shall be consistent with the assumptions made in recording other assets and liabilities necessary to reflect the underwriting results of the reporting entity such as claim and loss reserves (including IBNR) and contingent commissions. Contingent commissions and other related expenses shall be adjusted in the same period the additional or return retrospective premiums are recorded.

9. Retrospective premium adjustments are estimated for the portion of the policy period that has expired and shall be considered an immediate adjustment to premium. Additional retrospective premiums and return retrospective premiums shall be recorded as follows:

a. Property and Casualty Reporting Entities:

i. Accrued additional retrospective premiums shall be recorded as a receivable with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed;

ii. Accrued return retrospective premiums shall be recorded as part of the change in unearned premium (detailed in the underwriting and investment exhibit) liability with a corresponding entry made either to written premiums or as an adjustment to earned premiums. Premiums not recorded through written premium when accrued shall be recorded through written premium when billed;

iii. Ceded retrospective premium balances payable shall be recorded as liabilities, consistent with SSAP No. 62R. Ceded retrospective premiums recoverable shall be recorded as an asset. Consistent with *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64), ceded retrospective premium balances payable may be deducted from ceded retrospective premiums recoverable when a legal right of setoff exists.

b. Life and Accident and Health Reporting Entities:

i. Accrued additional retrospective premiums shall be recorded as an asset, accrued retrospective premiums, with a corresponding entry to premiums;

ii. Accrued return retrospective premiums shall be recorded as a liability, provision for experience rating refunds, with a corresponding entry to premiums.

c. Managed Care/Accident and Health Reporting Entities

i. Accrued additional retrospective premiums shall be recorded as an asset, accrued retrospective premiums with a corresponding entry to premiums;

ii. Accrued return retrospective premiums shall be recorded as a liability, as part of Accident and Health Reserves (reserve for rate credits or experience rating refunds), with a corresponding entry to premiums.

10. The amount of accrued estimated retrospective premiums to be recorded as a nonadmitted asset for property and casualty insurers shall be determined as follows:

a. 100% of the amount recoverable from any person for whom any agents' balances or uncollected premiums are classified as nonadmitted, and item (b), plus item (c) or (d) below. Once an insurer has elected either (c) or (d) below, a change from one to the other requires approval from the insurer's domiciliary state and such change must be disclosed in the financial statements.

b. Retrospective premium adjustments shall be determined and billed or refunded in accordance with the policy provisions or contract provisions. If accrued additional retrospective premiums are not billed in accordance with the policy provisions or contract provisions, the accrual shall be nonadmitted.

c. 10% of any accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss adjustment expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (types of acceptable collateral vary from state to state) or by financial guaranty coverage issued by an insurer having an "A" or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit as described in Appendix A-785. Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to applying collateral by account. If the insurer is unable to allocate amounts by account, no credit may be taken for collateral.

d. An amount calculated using the factors below for accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss expense reserves), or collateral, not otherwise used. Collateral shall be of the same types and quality permitted for use in connection with reinsurance (types of acceptable collateral vary from state to state) or by financial guaranty coverage issued by an insurer having an "A" or better rating from a nationally recognized rating agency. The financial guaranty coverage must allow the insured under the financial guaranty policy the same degree of access to payments under that policy as a beneficiary has under a qualified letter of credit as described in Appendix A-785.

Accrued retrospectively rated premiums relating to bulk IBNR must be allocated to individual policyholder accounts prior to categorizing by Quality Rating.

Insured's Current Quality Rating*	Insured's Corporate Debt Equivalent to (S&P/Moody's)**	Percentage of Retro Premium to be Nonadmitted***
1	AAA, AA, A/Aaa, Aa, A	1%
2	BBB/Baa	2%
3	BB/Ba	5%
4	B/B	10%
5	CCC, CC, C/Caa, Ca	20%
6	CI, D/C, or insured in default on debt service payments, or insured's debt service payments are jeopardized upon filing of a bankruptcy petition	100%

* The Percentage of Retro Premium to be Nonadmitted is based upon the Insured's Current Quality Rating (i.e., if an insured's quality rating drops, the percentage relating to the lower quality rating is used in calculating the amount to be nonadmitted and vice versa).

** Insureds that do not have a debt rating issued by a publicly recognized rating agency are required to be rated by the NAIC's Securities Valuation Office (SVO).

*** In the event the insured has no debt rating (either from a publicly recognized rating agency or from the SVO) the insured's quality rating will be considered category 5 for purposes of this calculation (i.e., a factor of 20% shall be applied), unless the insurer is aware of conditions of the insured that would warrant a category 6 classification (i.e., a factor of 100%).

11. Once accrued retrospective premium is billed, the due date is governed by *SSAP No. 6—Uncollected Premium Balances, Bills Receivable for Premiums, and Amounts Due From Agents and Brokers*. Life and accident and health reporting entities shall nonadmit any accrued retrospective premium that is more than 90 days due. If a reporting entity has issued more than one policy to the same insured, retrospective balances shall be netted in accordance with SSAP No. 64.

12. If, in accordance with SSAP No. 5R, it is probable that the additional retrospective premium is uncollectible, any uncollectible additional retrospective premium shall be written off against operations in the period the determination is made. If it is reasonably possible a portion of the balance in excess of the nonadmitted portion determined in accordance with paragraph 10 is not anticipated to be collected, the disclosure requirements outlined in SSAP No. 5R shall be made.

Disclosures

13. The financial statements shall disclose the method used by the reporting entity to estimate retrospective premium adjustments. The amount of net premiums written that are subject to retrospective rating features, as well as the corresponding percentage to total net premiums written, shall be disclosed. In addition, disclose whether accrued retrospective premiums are recorded through written premium or as an adjustment to earned premium.

14. The financial statements shall disclose the calculation of nonadmitted retrospective premium. If a reporting entity chooses treatment described in paragraph 10.c. or 10.d., the appropriate exhibit must be

included in the notes to financial statements in the Annual Statement. Once a reporting entity has elected either 10.c. or 10.d., a change from one to the other requires approval from the reporting entity's domiciliary state and such change must be disclosed in the financial statements.

15. The financial statements shall disclose the following amounts for medical loss ratio rebates required pursuant to the Public Health Service Act for the current reporting period year-to-date and prior reporting period year: incurred rebates, amounts paid and unpaid liabilities segregated into the following categories: individual, small group employer, large group employer and other. In addition, the impact of reinsurance assumed, ceded and net on the total medical loss ratio rebate shall be disclosed.

16. Refer to the Preamble for further discussion of the disclosure requirements.

Relevant Literature

17. This statement rejects *FASB Emerging Issues Task Force No. 93-14, Accounting for Multiple Year Retrospectively Rated Insurance Contracts* (EITF 93-14) since it applies only to multiple-year retrospectively rated contracts. The statutory principles outlined in the conclusion above are consistent with the guidance provided for accounting and retrospectively rated contracts in *FASB Statement No. 60, Accounting and Reporting by Insurance Companies* (FAS 60) and EITF 93-14, with the exception of the requirement to record certain amounts as nonadmitted. Although FAS 60 is rejected in *SSAP No. 50—Classifications of Insurance or Managed Care Contracts* and EITF 93-14 is rejected in this statement, it is considered appropriate that the accounting for retrospectively rated contracts be consistent with those provisions of both FAS 60 and EITF 93-14 as they are consistent with the Statement of Concepts.

Effective Date and Transition

18. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

The NAIC is the authoritative source for insurance industry information. Our expert solutions support the efforts of regulators, insurers and researchers by providing detailed and comprehensive insurance information. The NAIC offers a wide range of publications in the following categories:

Accounting & Reporting
Information about statutory accounting principles and the procedures necessary for fi ling financial annual statements and conducting risk-based capital calculations.

Consumer Information
Important answers to common questions about auto, home, health and life insurance — as well as buyer's guides on annuities, long-term care insurance and Medicare supplement plans.

Financial Regulation
Useful handbooks, compliance guides and reports on financial analysis, company licensing, state audit requirements and receiverships.

Legal
Comprehensive collection of NAIC model laws, regulations and guidelines; state laws on insurance topics; and other regulatory guidance on antifraud and consumer privacy.

Market Regulation
Regulatory and industry guidance on market-related issues, including antifraud, product fi ling requirements, producer licensing and market analysis.

NAIC Activities
NAIC member directories, in-depth reporting of state regulatory activities and official historical records of NAIC national meetings and other activities.

Special Studies
Studies, reports, handbooks and regulatory research conducted by NAIC members on a variety of insurance related topics.

Statistical Reports
Valuable and in-demand insurance industry-wide statistical data for various lines of business, including auto, home, health and life insurance.

Supplementary Products
Guidance manuals, handbooks, surveys and research on a wide variety of issues.

Capital Markets & Investment Analysis
Information regarding portfolio values and procedures for complying with NAIC reporting requirements.

White Papers
Relevant studies, guidance and NAIC policy positions on a variety of insurance topics.

Additional Instructions and Information

The Financial Analysis Research and Development (E) Working Group meets via conference call to consider proposed changes to the NAIC Insurance Regulatory Information System (IRIS). Suggestions to the IRIS should be submitted by **June 1, 2019**. Send proposals via email to Ralph Villegas, Life/Health Financial Analysis Manager, rvillegas@naic.org, or fax to 816-460-7563; or send to Rodney Good, Property/Casualty Financial Analysis Manager, rgood@naic.org, or fax to 816-460-0176. Original copies may be sent to:

National Association of Insurance Commissioners
Financial Analysis & Examination Unit
Financial Regulatory Services Department
1100 Walnut Street, Suite 1500
Kansas City, MO 64106-2197

For questions, call the Financial Analysis & Examination Unit at (816) 842-3600.

Proposed Revisions

- During the Working Group's review, changes proposed via this form will be considered along with an analysis conducted by the NAIC Financial Analysis & Examination Unit of the effectiveness and usefulness of procedures, ratio limits and language.
- The Financial Analysis & Examination Unit also studies adopted changes to the Annual Statements and provides revision proposals to the Working Group. The Financial Analysis & Examination Unit automatically makes changes to the IRIS for minor changes, such as for page and line numbers.
- The IRIS ratios are automated on I-SITE. The IRIS is intended to be a dynamic tool. The Working Group is interested in feedback on both analytical and software features. Please contact the NAIC Help Desk at (816) 842-3600 before submitting a form. Many enhancements have been proposed which could not be implemented. Also, some proposals may relate to existing features that the Help Desk may be able to explain.

**** This section must be completed on all forms.**

I. THE SYSTEM

Introduction

The NAIC Insurance Regulatory Information System (IRIS) is a collection of analytical solvency tools and databases designed to provide state insurance departments with an integrated approach to screening and analyzing the financial condition of insurers operating within their respective states. IRIS, developed by state insurance regulators participating in NAIC committees, is intended to assist state insurance departments in targeting resources to those insurers in greatest need of regulatory attention. IRIS is not intended to replace each state insurance department's own in-depth solvency monitoring efforts, such as financial analyses or examinations. This IRIS Manual is designed to assist state insurance departments and the public in understanding the IRIS ratios.

One of the most difficult tasks facing state insurance regulators is to make effective use of limited resources. All insurers are required to file financial statements with all of the states in which they are licensed to operate. No state is able to thoroughly review the financial condition of all licensed insurers immediately upon receipt of the financial statements. IRIS helps by providing solvency tools and databases that highlight those insurers that merit the highest priority in the allocation of the state insurance regulators' resources, thus directing those resources to the best possible use.

IRIS Ratio Application

The IRIS Ratio Application generates key financial ratio results based on financial information obtained from insurers' statutory annual financial statements. The ratio results are used in determining the level of regulatory attention required. The NAIC Financial Analysis & Examination Unit of Financial Regulatory Services Department, under the direction of the NAIC Financial Analysis Research and Development Working Group, conducts annual reviews of the ratios to ensure that each ratio is current and is relevant to solvency monitoring.

IRIS Ratio Reports are made available to state insurance regulators and interested parties. The reports list insurers alphabetically by type of insurer and include ratio results, usual ranges and identification of unusual values.

A ratio that falls outside the usual range is not necessarily considered adverse. In some years, it may not be unusual for financially stable insurers to have several ratios with results outside the usual range. For example, a rise or decline in the equity markets may result in a significant change in policyholders' surplus. Because surplus is used as the divisor in many of the ratio formulas, certain ratios may fall outside of their usual range.

The ratios and trends are valuable in identifying insurers likely to experience financial difficulties. The ratios are not, in themselves, indicative of adverse financial conditions. The ratios and range comparisons are automatically generated upon data submission, if all data elements are present in the submission. If data elements are submitted with data validation failures or material accounting errors, these failures/errors will be reflected in

the results. If amended data is received after the results have been generated, the ratio results will be recalculated.

Limitations

The IRIS ratios depend on the accuracy and standardization of the annual financial statements and electronic filings of insurers. The tool cannot identify a misstatement of financial condition or a financial statement not prepared in the proper or complete format. Also, there exists the possibility of data-processing errors.

The IRIS ratios have been reasonably effective in distinguishing between troubled and financially stable insurers. As previously stated, the results are not, in themselves, determinative of the financial condition of an insurer. The results are subject to individual insurer circumstances. The following caveats apply:

1. No state can rely on the tools' results as the state's only form of surveillance.

2. Important decisions, such as licensing, should not be based on the tools' results without further analysis or examination of the insurer.

3. Valid interpretation of the tools' results depends, to a considerable extent, on the judgment of financial analysts and examiners. An insurer's ratios may be outside the usual range because of unusual accounting methods, changes in corporate structure, restatements of prior periods, correction of errors in prior periods or other circumstances.

4. The criteria for determining usual range values and the usefulness of the IRIS ratios, although based on the recent experience of insurers becoming insolvent, may not be valid for future experience in different economic periods. For this reason, the components of the ratios are reviewed annually.

5. While the information contained in the IRIS reports is compiled in a manner and from sources believed to be reliable, its accuracy is not guaranteed.

For Life Insurers and Fraternal Societies Only: The IRIS ratios do not include tests of reserve adequacy or strength; however, they do include a test of reserve consistency. The test of consistency may identify insurers that have problems with reserve calculation. However, the determination of reserve adequacy is one of the primary purposes of an on-site examination.

Merged Insurers

The IRIS ratio results of insurers that have entered into mergers during the previous year could be distorted. The distortion occurs if the prior year data used to calculate the ratios is obtained on a single-insurer basis. The ratios are calculated using prior year data obtained on the merged entity, if the merged data is provided by the insurer. Merged prior year data is obtained from insurers on a voluntary basis and is not subject to NAIC data-validation procedures or independent audit requirements.

Branded Risk Classifications

The IRIS manual contains the branded risk(s) associated with each ratio. The table below provides definitions of each branded risk classification.

Branded Risk Classifications		
Risk	**Symbol**	**Description**
Credit	CR	Amounts actually collected or collectible are less than those contractually due, or payments are not remitted on a timely basis.
Legal	LG	Nonconformance with laws, rules and regulations, prescribed practices, or ethical standards (in any jurisdiction in which the entity operates) will result in a disruption in business and financial loss.
Liquidity	LQ	Inability to meet contractual obligations as they become due because of an inability to liquidate assets and/or obtain adequate funding without incurring unacceptable losses.
Market	MK	Movement in market rates or prices, such as interest rates, foreign exchange rates or equity prices adversely affect the reported and/or market value of the investments.
Operational	OP	The risk of financial loss resulting from inadequate or failed internal processes, personnel and systems, as well as unforeseen external events.
Pricing/ Underwriting	PR/UW	Pricing and underwriting practices are inadequate to provide for risks assumed.
Reputation	RP	Negative publicity, whether true or not, causes a decline in the customer base, costly litigation and/or revenue reductions.
Reserving	RV	Actual losses and/or or other contractual payments reflected in reported reserves or other liabilities will be greater than estimated.
Strategic	ST	Inability to implement an appropriate business plan, to make decisions, to allocate resources or to adapt to changes in the business environment will adversely affect competitive position and financial condition.

II. PROPERTY/CASUALTY RATIOS

This chapter describes the financial ratios of the statistical phase of IRIS and offers suggestions for interpreting ratio results as well as for determining the types of further analysis that need to be performed. The purpose of IRIS is to assist state insurance departments in allocating resources to those insurers in greatest need of regulatory attention.

The suggestions for analysis included in the discussion of each financial ratio are intended to assist state regulators in the interpretation of ratio results. The financial analyst or examiner should adjust the depth and direction of their analysis in accordance with their knowledge of the insurer and its particular circumstances.

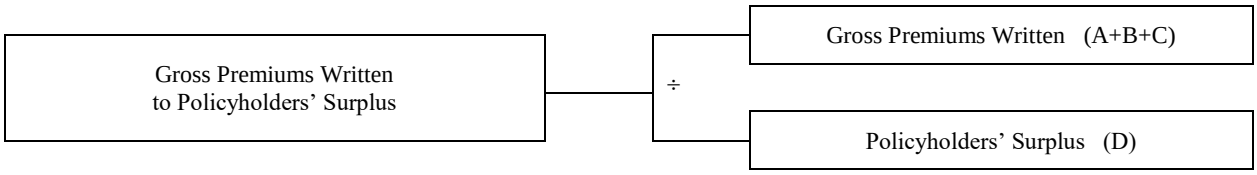
Analysis should begin with a review of the insurer's ratio results. The financial analyst or examiner should note the ratios reported outside the usual ranges and the amounts by which such values deviate from those ranges.

All ratios are reported as percentages, rounded to the nearest percent. For the Investment Yield ratio, results are rounded to the nearest tenth of one percent.

Ratio Ranges

	Ratio	Unusual Values Equal to or Over	Under
1.	Gross Premiums Written to Policyholders' Surplus	900	---
2.	Net Premiums Written to Policyholders' Surplus	300	---
3.	Change in Net Premiums Written	33	-33
4.	Surplus Aid to Policyholders' Surplus	15	---
5.	Two-Year Overall Operating Ratio	100	---
6.	Investment Yield	5.5	2.0
7.	Gross Change in Policyholders' Surplus	50	-10
8.	Change in Adjusted Policyholders' Surplus	25	-10
9.	Adjusted Liabilities to Liquid Assets	100	---
10.	Gross Agents' Balances (in collection) to Policyholders' Surplus	40	---
11.	One-Year Reserve Development to Policyholders' Surplus	20	---
12.	Two-Year Reserve Development to Policyholders' Surplus	20	---
13.	Estimated Current Reserve Deficiency to Policyholders' Surplus	25	---

P/C OVERALL RATIO 1 – GROSS PREMIUMS WRITTEN TO POLICYHOLDERS' SURPLUS



A. Direct Premiums Written	Page 8, Line 35, Column 1	
B. Reinsurance Assumed – Affiliates	Page 8, Line 35, Column 2	
C. Reinsurance Assumed – Non-Affiliates	Page 8, Line 35, Column 3	
D. Policyholders' Surplus	Page 3, Line 37, Column 1	

Result = 100 * (A+B+C) / D _____ %

- If D is zero or negative, result is 999.
- If D is positive and (A+B+C) is negative, result is zero.

Policyholders' surplus provides a cushion for absorbing losses. This ratio measures the adequacy of the cushion without the effect of premiums ceded to reinsurers. The higher the ratio, the more risk the insurer bears in relation to policyholders' surplus.

The usual range for the ratio includes results up to 900 percent.

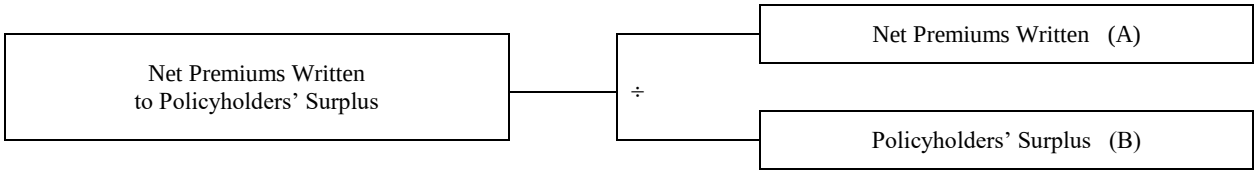
Problems could result from high gross premiums written in relation to policyholders' surplus. Consider the following:

1. An insurer's Gross Premiums Written to Policyholders' Surplus ratio reflects its policyholders' surplus exposure on all business written on a direct or assumed basis, without considering the effect of reinsurance. Therefore, it is important to review the result of this ratio with that of Ratio 2, Net Premiums Written to Policyholders' Surplus. If the disparity between the two ratios is large, the insurer may be relying heavily on reinsurance. To the extent that the reinsurers are financially sound and make prompt payments to the insurer, this may not be a problem. However, the insurer is liable to the policyholder whether or not the reinsurer makes good on its obligations to the insurer. Under a pooling arrangement, the results of the Gross Premiums Written to Policyholders' Surplus ratio may be skewed.
2. The distribution of premium between property and casualty lines of business should be reviewed when analyzing this ratio. Insurers with a larger portion of premium from long-tail lines, such as workers' compensation, should generally maintain a lower Gross Premiums Written to Policyholders' Surplus ratio, as it is more difficult to accurately estimate potential losses for these lines of business, resulting in a greater variability of losses.

3. The percentage of assumed business versus direct business should be reviewed to determine how the insurer generates business. In general, an insurer has less control over business it assumes. However, this does not mean that direct business is preferable to assumed business. Special consideration should be given to assumptions among affiliates that are not part of a pooling arrangement. Assumptions of this type should be investigated to determine the ceding entity's expertise in writing the line of business, its overall underwriting experience, the reason(s) for not retaining the business, and the reason(s) for not utilizing outside reinsurance.
4. Determine whether the insurer's business is profitable and whether profits are stable, increasing, or decreasing. Ratio 5, Two-Year Overall Operating Ratio, provides a measure of profitability for the preceding two years. In general, insurers with stable profits and adequate reinsurance coverage with financially sound reinsurers are better able to sustain a higher Gross Premiums Written to Policyholders' Surplus ratio than insurers with losses, unstable profits, or inadequate reinsurance coverage and/or financially unsound reinsurers.

Branded Risk(s): PR/UW, ST

P/C OVERALL RATIO 2 – NET PREMIUMS WRITTEN TO POLICYHOLDERS' SURPLUS



A. Net Premiums Written	Page 8, Line 35, Column 6	
B. Policyholders' Surplus	Page 3, Line 37, Column 1	

Result = 100 * (A / B) %

- If B is zero or negative, result is 999.
- If B is positive and A is negative, result is zero.

This ratio measures the adequacy of the policyholders' surplus cushion, net of the effects of premiums ceded to reinsurers. The higher the ratio, the more risk the insurer bears in relation to policyholders' surplus.

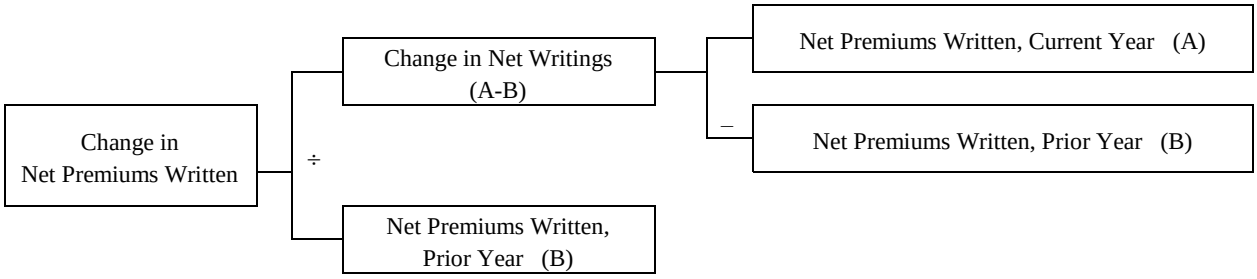
The usual range for the ratio includes results up to 300 percent.

Problems could result from high net premiums written in relation to policyholders' surplus. The following should be taken into consideration:

1. If the insurer is within a holding company system, consider reviewing this ratio on a consolidated basis. This consolidated approach provides a sense of the degree of group leverage.
2. Determine whether the insurer's business is profitable and whether profits are stable, increasing, or decreasing. Ratio 5, Two-Year Overall Operating Ratio, provides a measure of profitability for the preceding two years. In general, insurers with stable profits are better able to sustain a higher ratio of net writings to policyholders' surplus without undue risk than insurers with losses or unstable profits.
3. The distribution of premium between property and liability lines of business should be reviewed when analyzing this ratio. Insurers with a larger portion of premium from long-tail lines, such as workers' compensation, should generally maintain a lower Net Premiums Written to Policyholders' Surplus ratio. It is more difficult to accurately estimate potential losses for long-tailed business lines, resulting in greater variability of losses.
4. Determine the level of adequacy of the insurer's reinsurance protection against large losses. Review the reinsurance contracts that are in place to assess the level of retention.
5. Determine the quality of the reinsurers. For material cessions, review the reinsurers' financial statements to determine their financial stability. For those situations where collateral must be posted, ensure that the proper level and type of collateral is in place.

Branded Risk(s): PR/UW, ST

P/C OVERALL RATIO 3 – CHANGE IN NET PREMIUMS WRITTEN



A. Net Premiums Written, Current Year	Page 8, Line 35, Column 6	
B. Net Premiums Written, Prior Year	PY: Page 8, Line 35, Column 6	

Result = 100 * (A–B) / B %

- If A and B are both zero or negative, result is zero.
- If A is positive and B is zero or negative, result is 999.

Material changes in net premiums written could indicate a lack of stability in the insurer's operations and/or management. A large increase in premiums may indicate entry into new lines of business or geographic locations. In addition, such an increase in premiums may be a sign that the insurer is attempting to increase cash flow in order to meet current loss payments. A large decrease in premiums may indicate the discontinuance of certain lines of business, scaled back writings due to large losses in certain lines, loss of market share due to competition, or increased use of reinsurance.

The usual range for the ratio includes results from -33 percent to 33 percent.

Familiarity with the insurer's operations and history is useful in judging the importance of ratio results falling outside the range limits. Such results frequently indicate instability that may include dramatic shifts in product mix, marketing areas, or underwriting policy. When an unstable situation is apparent, further analysis or examination should be directed toward the following:

1. Determine whether the insurer's assets are properly valued and sufficient liquidity is available to meet cash demands. Consider the results of Ratio 9, Adjusted Liabilities to Liquid Assets, and review Schedules A through E.
2. Review the insurer's loss reserves and understand the level of adequacy by reviewing the reserve ratios (Ratios 11, 12, and 13) and Schedule P.

P/C OVERALL RATIO 3 – CHANGE IN NET PREMIUMS WRITTEN

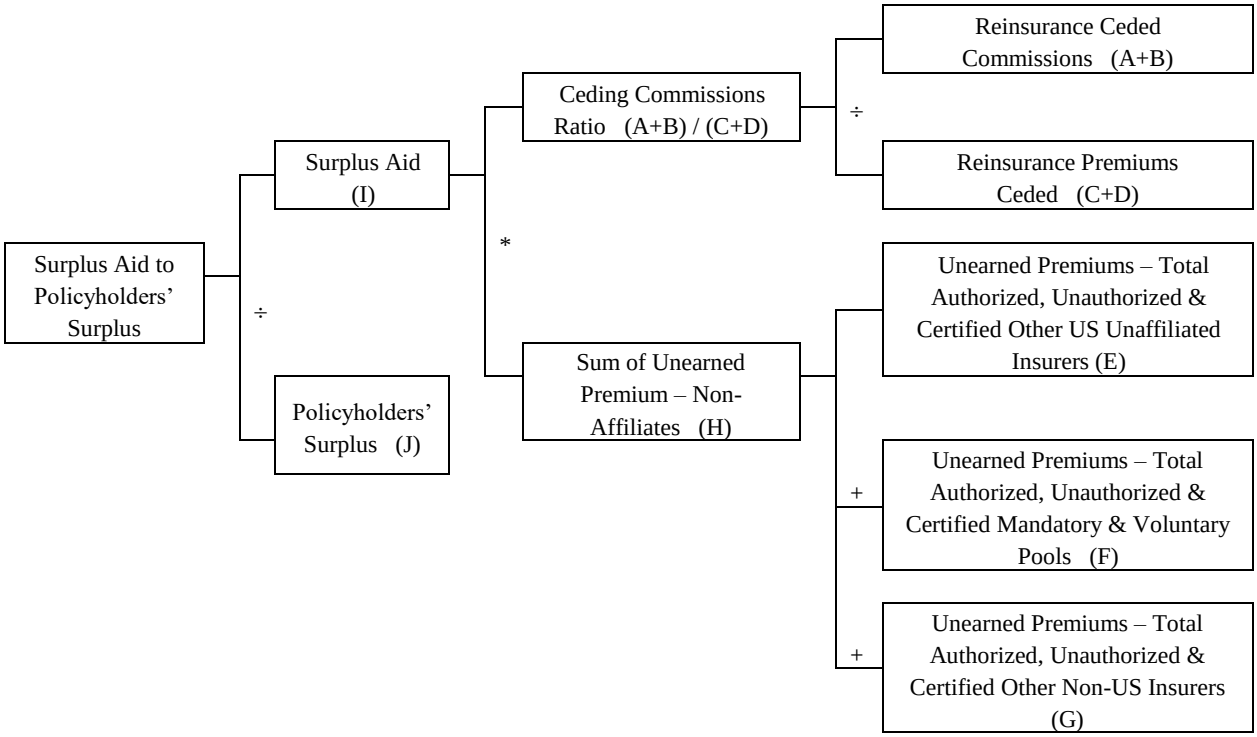
It is important to determine whether a notable increase in writings indicates that the insurer is increasing cash flow to pay current claims. This may be the case if the insurer's recent reserves were inadequate (see the one-year and two-year reserve development, Ratios 11 and 12). An increase in writings, particularly in the liability lines, to pay current claims provides a very short-term solution to underlying problems and quickly increases the risk of insolvency.

An increase in writings does not necessarily indicate difficulties that would threaten an insurer's solvency if they are accompanied by a reasonably low Net Premiums Written to Policyholders' Surplus ratio (Ratio 2), adequate reserving (Ratios 11, 12, and 13), profitable operations (Ratio 5), and a relatively stable product mix.

A decrease in net premiums written with stable gross writings may indicate that an insurer is attempting to increase cash flow related to ceding commissions from non-affiliated reinsurance. A review of Surplus Aid to Policyholders' Surplus ratio (Ratio 4) may help in understanding ratio results below the usual lower range.

Branded Risk(s): ST, PR/UW

P/C OVERALL RATIO 4 – SURPLUS AID TO POLICYHOLDERS' SURPLUS



A.	Reinsurance Ceded Commissions	Page 11, Line 2.3, Column 2	
B.	Reinsurance Ceded Contingent Commissions	Page 11, Line 2.6, Column 2	
C.	Reinsurance Premiums Ceded – Affiliates	Page 8, Line 35, Column 4	
D.	Reinsurance Premiums Ceded – Non-Affiliates	Page 8, Line 35, Column 5	
E.	Unearned Premiums – Total Authorized, Unauthorized & Certified Other US Unaffiliated Insurers	Page 22, Line (0999999 + 2399999 + 3799999), Column 13, * 1000	
F.	Unearned Premiums – Total Authorized, Unauthorized & Certified Mandatory and Voluntary Pools	Page 22, Line (1099999 + 1199999 + 2499999 + 2599999 + 3899999 + 3999999), Column 13, * 1000	
G.	Unearned Premiums – Total Authorized, Unauthorized & Certified Other Non-US Insurers	Page 22, Line (1299999 + 2699999 + 4099999), Column 13, * 1000	
H.	Sum of Unearned Premiums (E+F+G)		
I.	Surplus Aid = [(A+B) / (C+D)] * H		
J.	Policyholders' Surplus	Page 3, Line 37, Column 1	

Result = 100 * I / J _____ %

- If (C+D) or I is zero or negative, result is zero.
- If I is positive and J is zero or negative, result is 999.

The use of surplus aid reinsurance treaties may be an indication that company management believes policyholders' surplus to be inadequate. Additionally, the continued solvency of insurers with a large portion of policyholders' surplus resulting from surplus aid may depend on the continuing participation in the treaty with the reinsurer.

The usual range for the ratio includes results less than 15 percent.

P/C OVERALL RATIO 4 – SURPLUS AID TO POLICYHOLDERS' SURPLUS

The Surplus Aid to Policyholders' Surplus ratio is important for the following reasons:

1. The existence of significant amounts of surplus aid may be an indication that policyholders' surplus is inadequate.
2. Surplus aid could improve results on other ratios enough to conceal important areas of concern.

For the reasons previously stated, all insurers with ratios greater than 15 percent should be given careful scrutiny regardless of their scores on other ratios. The following ratio results should be recalculated with policyholders' surplus adjusted to remove surplus aid:

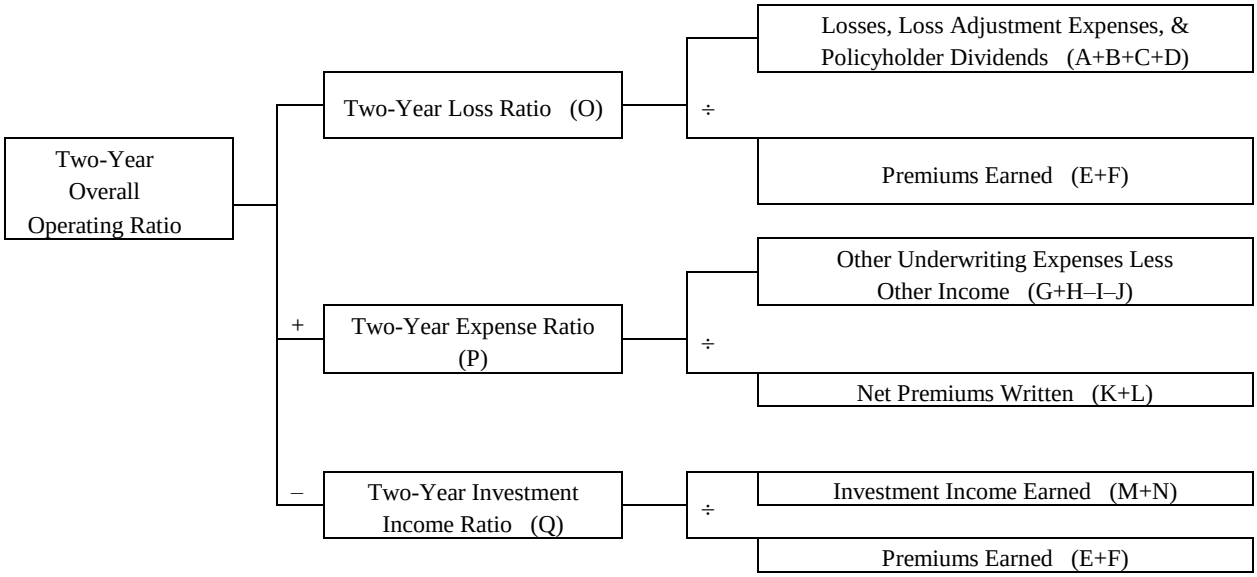
1. Gross and Net Premiums Written to Policyholders' Surplus (Ratios 1 and 2).
2. Gross Change in Policyholders' Surplus (Ratio 7). The previous year's policyholders' surplus should also be adjusted to remove surplus aid.
3. Gross Agents' Balances (in collection) to Policyholders' Surplus (Ratio 10).
4. Estimated Current Reserve Deficiency to Policyholders' Surplus (Ratio 13).

These adjustments can be made without recalculating the numerator. Divide the result for each ratio by the difference between one and the surplus aid ratio result expressed as a decimal.

If an insurer's IRIS value falls outside the usual range for several of the above ratios, they should be given higher priority. Reinsurance treaties of all insurers with a Surplus Aid to Policyholders' Surplus ratio of more than 15 percent should be reviewed. This analysis should determine the potential impact on the insurer's solvency should the treaty be cancelled.

Branded Risk(s): ST, PR/UW

P/C PROFITABILITY RATIO 5 – TWO-YEAR OVERALL OPERATING RATIO



A. Losses and LAE Incurred, Current Year	Page 4, Line 2 + 3, Column 1	
B. Losses and LAE Incurred, Prior Year	PY: Page 4, Line 2 + 3, Column 1	
C. Dividends to Policyholders, Current Year	Page 4, Line 17, Column 1	
D. Dividends to Policyholders, Prior Year	PY: Page 4, Line 17, Column 1	
E. Premiums Earned, Current Year	Page 4, Line 1, Column 1	
F. Premiums Earned, Prior Year	PY: Page 4, Line 1, Column 1	
G. Other Underwriting Exp & Write-ins, Current Year	Page 4, Line 4 + 5, Column 1	
H. Other Underwriting Exp & Write-ins, Prior Year	PY: Page 4, Line 4 + 5, Column 1	
I. Total Other Income, Current Year	Page 4, Line 15, Column 1	
J. Total Other Income, Prior Year	PY: Page 4, Line 15, Column 1	
K. Net Premiums Written, Current Year	Page 8, Line 35, Column 6	
L. Net Premiums Written, Prior Year	PY: Page 8, Line 35, Column 6	
M. Net Investment Income Earned, Current Year	Page 4, Line 9, Column 1	
N. Net Investment Income Earned, Prior Year	PY: Page 4, Line 9, Column 1	
O. Loss Ratio = 100 * [(A+B+C+D) / (E+F)]		%
P. Expense Ratio = 100 * [(G+H–I–J) / (K+L)]		%
Q. Investment Income Ratio =100 * [(M+N) / (E+F)]		%

Result = (O+P–Q) %

- If (A+B+C+D+G+H–I–J–M–N) is zero or negative, result is zero.
- If (E+F) or (K+L) is zero or negative, result is 999.

The Two-Year Overall Operating Ratio is a measure of the profitability of an insurance company. Ultimately, the profitability of the business is a principal determinant of the insurer's financial stability and solvency.

P/C PROFITABILITY RATIO 5 – TWO-YEAR OVERALL OPERATING RATIO

The usual range for the ratio includes results less than 100 percent. A Two-Year Overall Operating Ratio below 100 percent indicates an operating profit and a ratio result above 100 percent indicates an operating loss. Analysis of the Two-Year Overall Operating Ratio is helpful in determining the reasons behind the insurer's poor performance, whether it is due to a high loss ratio, a high expense ratio, or a low return on investments. When analyzing the result, consider the result of Ratio 11, One-Year Reserve Development to Policyholders' Surplus, and Ratio 13, Estimated Current Reserve Deficiency to Policyholders' Surplus, because prior year reserve development or current reserve deficiency may understate or overstate the true operating position of an insurer. For an insurer with a result outside the usual range on Ratio 11, the analyst should recalculate this ratio after eliminating the prior year development to obtain a more accurate picture of the insurer's current operating position.

A high loss ratio may be the result of large amounts of losses incurred on poorly developed lines of business and/or reserve strengthening on certain lines of business. Loss adjustment expenses may be high due to inflated claim adjustment fees on adverse business.

A high expense ratio may be due to high commission and brokerage fees, as well as excessive salaries and other operating expenses.

The subtraction of the investment income ratio allows insurers a credit for their investment earnings to offset underwriting losses. The investment income ratio should be reviewed to understand the components that impact the Two-Year Overall Operating Ratio.

Branded Risk(s): OP

P/C PROFITABILITY RATIO 6 – INVESTMENT YIELD

Investment Yield	÷	Net Investment Income Earned (G)
		Average Cash and Invested Assets, Current and Prior Year (A+B+C+D–E–F–G)

A. Total Cash and Invested Assets, Current Year	Page 2, Line 12, Column 3	
B. Total Cash and Invested Assets, Prior Year	PY: Page 2, Line 12, Column 3	
C. Investment Inc. Due & Accrd, Current Year	Page 2, Line 14, Column 3	
D. Investment Inc. Due & Accrd, Prior Year	PY: Page 2, Line 14, Column 3	
E. Borrowed Money, Current Year	Page 3, Line 8, Column 1	
F. Borrowed Money, Prior Year	PY: Page 3, Line 8, Column 1	
G. Net Investment Income Earned	Page 4, Line 9, Column 1	

Result = 200 * [G / (A+B+C+D–E–F–G)] %

- Limit result to a minimum of zero.

The Investment Yield ratio provides the percentage of annual income on an investment portfolio.

The usual range for the ratio includes results greater than 2.0 percent and less than 5.5 percent.

The analyst should review the types of investments reported in the annual financial statement, Schedules A through E, and the yield on each type of investment as reported on the Exhibit of Net Investment Income to determine the cause of a high or low investment yield.

Low yields may be caused by:

1. Speculative Investments
   These investments occasionally produce large capital gains over the long run but provide little income in the interim. Analysis should focus on the proper valuation of these investments and the determination of their stability and liquidity.
2. Large Investments in Affiliated Entities Under the Control of the Company
   Analysis should focus on the appropriateness of these investments, their value, and their liquidity.
3. Large Investments in Home Office Facilities
   Analysis should focus on the ability of the insurer to afford its facilities while maintaining liquidity. Also, review the adequacy of the amount of rent charged to underwriting expenses and credited to investment income.

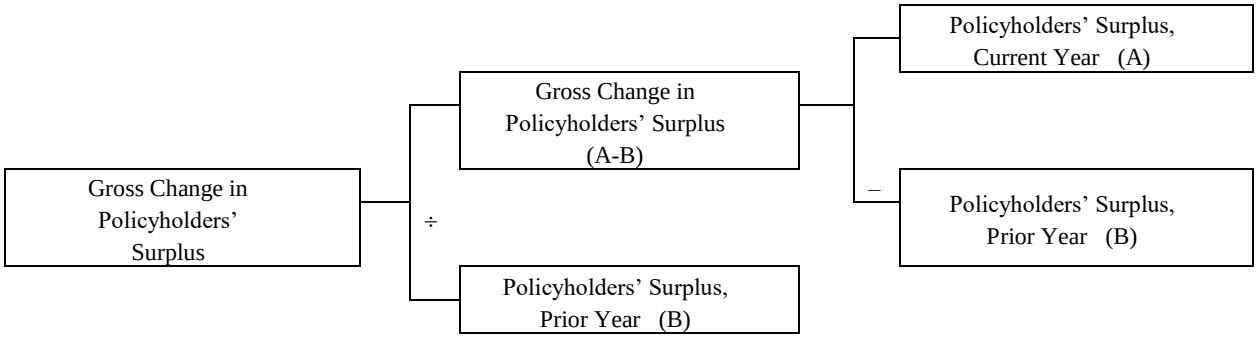
4. Considerable Investments in Tax-Exempt Bonds
   Analysis should focus on an estimate of the current fair value of these securities, which may be substantially less than the book/adjusted carrying value. If an insurer is currently paying federal income taxes and has large amounts of tax-exempt securities, its after-tax yield could be comparable to that of other insurers with a substantially higher before-tax yield derived from taxable securities. This type of investment philosophy is viewed as conservative.
5. Significant Interest Payments on Borrowed Money
   Large borrowings by an insurer may result in significant interest payments, which will reduce the insurer's investment yield. Some reinsurance contracts may also require interest payments, which will also reduce the yield. In either instance, apart from the reduction in investment yield, these situations should be investigated further to determine if they are symptomatic of other problems, such as lack of liquidity.
6. Extraordinarily High Investment Expenses
   Although an insurer may be investing in assets that would be expected to provide an adequate return, investment expenses and other deductions from investment income may be reducing the net investment yield.

High yields may be caused by:

1. Investments in High-Risk Instruments
   High-risk instruments could excessively leverage surplus and may fall outside statutory limitations.
2. Extraordinary Dividend Payments from Subsidiaries to the Parent
   Review dividend laws for the insurer's state of domicile.

Branded Risk(s): MK, LQ, ST

P/C PROFITABILITY RATIO 7 – GROSS CHANGE IN POLICYHOLDERS' SURPLUS



A. Policyholders' Surplus, Current Year	Page 3, Line 37, Column 1	
B. Policyholders' Surplus, Prior Year	PY: Page 3, Line 37, Column 1	

Result = 100 * [(A–B) / B] %

- If A is zero or negative, result is -99.
- If A is positive and B is zero or negative, result is 999.

The Gross Change in Policyholders' Surplus ratio is the ultimate measure of improvement or deterioration in the insurer's financial condition during the year.

The usual range for the ratio includes results less than 50 percent and greater than -10 percent.

The lower range (-10 percent) is set more conservatively since a decrease in policyholders' surplus is a cause for concern. The upper range (50 percent) is used because a number of insolvent insurers report dramatic increases in policyholders' surplus prior to insolvency. Large increases in policyholders' surplus may be an indication of instability and may sometimes be related to the shifting of capital from other companies within a group, significant growth, or mergers and acquisitions.

If the ratio result falls below -10 percent, further analysis should be directed at determining the reasons for the change and whether these factors will be repeated in future years. This analysis compares the changes to policyholders' surplus for the two years and identifies the major factors affecting increases or decreases in policyholders' surplus, including but not limited to:

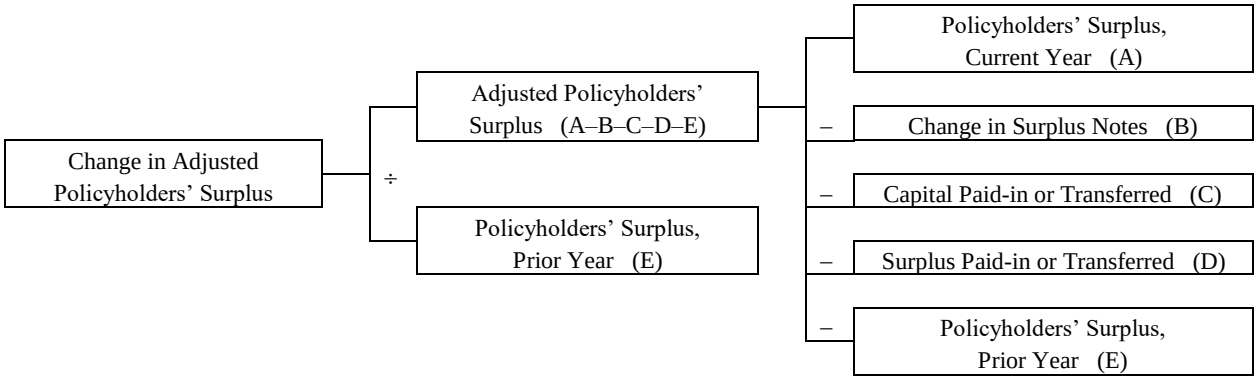
1. Net income (also review Ratio 5, Two-Year Overall Operating Ratio).
2. Unrealized capital gains or losses – Review the Exhibit of Capital Gains (Losses) in the annual financial statement and compare the current components to the prior year-end components to determine which categories of investments are responsible for the changes in unrealized capital gains or losses. Determine whether a change in common stock was caused by decreases in the value of subsidiaries. If so, analyze the subsidiary to determine any solvency concerns.

Review the insurer's investments and the supporting annual financial statement Schedules A through E. Determine whether changes in unrealized gains or losses were in line with changes experienced by other insurers investing in similar classes of assets during the same time period. If large unrealized losses have occurred, understand the steps the insurer took to protect it against further losses. If large unrealized gains have occurred, determine whether this was attributable to stock market increases, which could create a temporary rise in surplus.

3. To view the collective effects of a change in surplus notes, capital paid-in or transferred, and surplus paid-in or transferred, a review of Ratio 8, Change in Adjusted Policyholders' Surplus, is suggested.
4. Dividends to stockholders.
5. Changes in nonadmitted assets – Review the Exhibit of Nonadmitted Assets in the annual financial statement.
6. Changes in surplus aid from reinsurance (Ratio 4).
7. Accounting changes and corrections of errors – Review Notes to Financial Statement #2 to determine the nature of the changes. Determine whether the insurer's changes are consistent with changes experienced by other insurers with similar lines of business. Understand whether the changes will have a material impact on current year operations and/or future periods.
8. Change in net deferred income tax – Review Notes to Financial Statement #9 to obtain a greater understanding of the sources of the insurer's book/tax differences and the changes in these items during the current year.
9. Change in ownership or program direction.

Branded Risk(s): ST, OP

P/C PROFITABILITY RATIO 8 – CHANGE IN ADJUSTED POLICYHOLDERS' SURPLUS



A.	Policyholders' Surplus, Current Year	Page 3, Line 37, Column 1	
B.	Change in Surplus Notes	Page 4, Line 29, Column 1	
C.	Capital Paid-in or Transferred	Page 4, Line 32.1 + 32.2 + 32.3, Column 1	
D.	Surplus Paid-in or Transferred	Page 4, Line 33.1 + 33.2 + 33.3, Column 1	
E.	Policyholders' Surplus, Prior Year	PY: Page 3, Line 37, Column 1	

Result = [(A–B–C–D–E) / ABS(E)] * 100 _____ %

- If A is zero or negative, result is -99.
- If A is positive and E is zero or negative, result is 999.

This ratio measures the improvement or deterioration in the insurer's financial condition during the year based on operational results. The usual range for the ratio includes results less than 25 percent and greater than -10 percent.

Changes in surplus notes, capital changes, and surplus adjustments are removed from policyholders' surplus in order to highlight the insurer's actual operations. In some cases, insurers may use capital contributions as a method of masking changes in surplus directly tied to operational issues. By removing these contributions, a more accurate picture of changes in policyholders' surplus from operations is obtained.

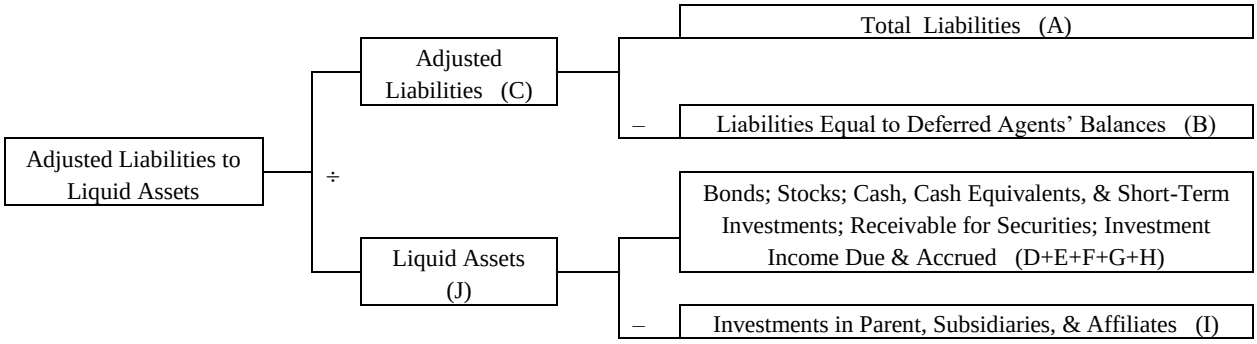
The lower range (-10 percent) is set more conservatively since a decrease in policyholders' surplus is a cause for concern. The upper range (25 percent) is used because a number of insolvent insurers have dramatic increases in policyholders' surplus prior to insolvency.

The following factors may contribute to increases or decreases in policyholders' surplus:

- Net income
- Net unrealized capital gains or losses
- Changes in nonadmitted assets
- Changes in provision for reinsurance
- Cumulative effect of changes in accounting principles
- Dividends to stockholders
- Changes in treasury stock
- Other gains or losses

Branded Risk(s): ST, OP

P/C LIQUIDITY RATIO 9 – ADJUSTED LIABILITIES TO LIQUID ASSETS



A. Total Liabilities	Page 3, Line 28, Column 1	
B. Liabilities Equal to Deferred Agents' Balances	Page 2, Line 15.2, Column 3	
C. Adjusted Liabilities = (A–B)		
D. Bonds	Page 2, Line 1, Column 3	
E. Stocks, Preferred & Common	Page 2, Line 2.1 + 2.2, Column 3	
F. Cash, Cash Equivalents & Short-Term Investments	Page 2, Line 5, Column 3	
G. Receivable for Securities	Page 2, Line 9, Column 3	
H. Investment Income Due & Accrued	Page 2, Line 14, Column 3	
I. Investments in Parent, Sub, & Affiliates	Page 17, Line 42 + 43 + 44 + 45, Column 1	
J. Liquid Assets = (D+E+F+G+H–I)		

Result = 100 * (C / J) _____ %

- If J is zero or negative, result is 999.

The Adjusted Liabilities to Liquid Assets ratio is a measure of the insurer's ability to meet short-term obligations. It also provides a rough indication of the possible implications for policyholders if liquidation becomes necessary. Total liabilities are adjusted to remove the amount of liabilities equal to deferred agents' balances. Agents' balances deferred and not yet due is not a liquid asset; therefore, an adjustment is made to remove the corresponding liability. Note that bonds are included in this ratio at their annual book/adjusted carrying value, which is not necessarily equal to their fair value.

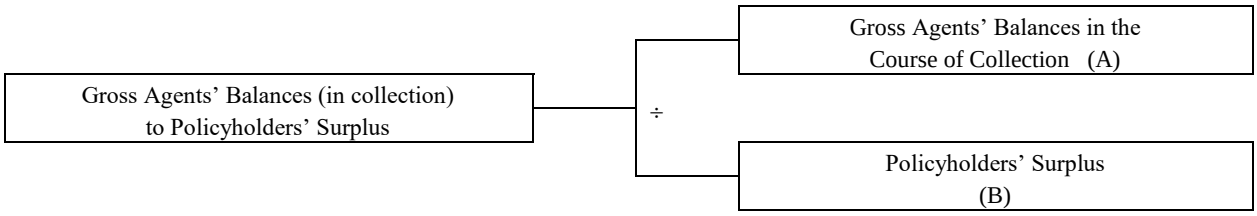
The usual range for the ratio includes results below 100 percent.

Analysis has shown that many insurers who become insolvent report increasing Adjusted Liabilities to Liquid Assets in their final years. Therefore, in interpreting the result of this ratio, it is important to consider its trend, as well as the current year result. Often, insurers maintaining large deposits with reinsured companies have unusually high ratio results. The deposits are excluded from liquid assets but the offsetting reinsurance liabilities are included in total liabilities.

Further analysis of an insurer with a high Adjusted Liabilities to Liquid Assets ratio should focus on the adequacy of reserves and on proper valuation, mix, and liquidity of assets to determine whether the insurer will be able to meet its obligations to policyholders.

Branded Risk(s): LQ

P/C LIQUIDITY RATIO 10 – GROSS AGENTS' BALANCES (IN COLLECTION) TO POLICYHOLDERS' SURPLUS



A. Gross Agents' Balances in the Course of Collection	Page 2, Line 15.1, Column 3	
B. Policyholders' Surplus	Page 3, Line 37, Column 1	

Result = 100 * (A / B) %

- If A is zero or negative, result is zero.
- If A is positive and B is zero or negative, result is 999.

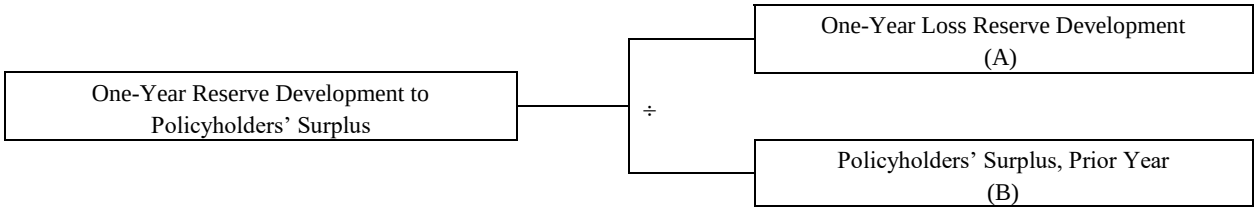
This ratio measures agents' balances booked as written and billed to agents in relation to the insurer's policyholders' surplus.

The usual range for the ratio includes results less than 40 percent.

If the amount of agents' balances is of concern, further analysis should determine whether agents' balances that are more than 90 days old may have been included as an admitted asset. With regard to reinsurance companies, agents' balances represent amounts due from reinsured companies that, in many cases, are subject to regulation. For reinsurers, premium amounts due may be offset against losses payable to the same insurer in the event of insolvency.

Branded Risk(s): CR

P/C RESERVE RATIO 11 – ONE-YEAR RESERVE DEVELOPMENT TO POLICYHOLDERS' SURPLUS



A. One-Year Loss Reserve Development	Page 34, Part 2, Line 12, Column 11 * 1000	
B. Policyholders' Surplus, Prior Year	PY: Page 3, Line 37, Column 1	

Result = 100 * (A / B) %

- If A is positive and B is zero or negative, result is 999.

This ratio measures the development of unpaid loss and loss adjustment expenses based on loss and loss adjustment expenses reported one year prior.

The estimate of losses outstanding a year prior and up to the current statement date is the sum of the current reserves for those losses still outstanding plus the payments on those losses made during the past year. The difference between this current estimate and the reserves that were established at the end of the prior year is the one-year reserve development. If the current estimate is greater than the prior year reserves, reserves are deficient. If the current estimate is less than the prior year reserves, reserves are redundant. A positive ratio result indicates a deficiency, while a negative result indicates a redundancy.

The usual range for the ratio includes results less than 20 percent.

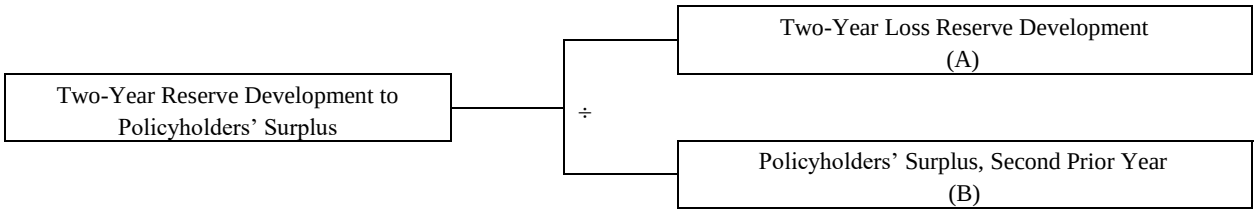
For insurers with reserves that appear to be deficient, further analysis should focus on determining which lines of business and which accident years resulted in the deficiency. The amount of deficiency for each line of business and accident year may be determined from Schedule P, Part 2.

If the insurer's ratio results consistently show adverse development and/or Ratio 12, Two-Year Reserve Development to Policyholders' Surplus, result is consistently worse than the One-Year Reserve Development to Policyholders' Surplus ratio, the insurer may be intentionally understating its reserves and deficiencies are appearing as losses paid. Significant increases in this ratio might also be indicative of reserve strengthening, while significant decreases might be indicative of current reserve understatements.

An analysis of Schedule P may assist in determining the reasons for reserve deficiencies, such as payments in excess of the amounts reserved. However, an on-site examination may be required to resolve any serious questions regarding the adequacy of reserves.

Branded Risk(s): RV

P/C RESERVE RATIO 12 – TWO-YEAR RESERVE DEVELOPMENT TO POLICYHOLDERS' SURPLUS



A. Two-Year Loss Reserve Development	Page 34, Part 2, Line 12, Column 12 * 1000	
B. Policyholders' Surplus, Second Prior Year	2nd PY: Page 3, Line 37, Column 1	

Result = 100 * (A / B) %

- If A is positive and B is zero or negative, result is 999.

This ratio measures the development of unpaid loss and loss adjustment expenses based on loss and loss adjustment expenses reported two years prior. The two-year reserve development is the sum of the current reserve for losses incurred more than two years prior, plus payments on those losses during the past two years, minus reserves established for those losses two years earlier.

Negative results indicate that reserves originally set were redundant and claims have been settled at less than their original estimate. Positive results indicate that reserves were deficient and have since developed adversely. If the insurer's ratio results consistently show adverse development and/or the two-year reserve development to policyholders' surplus ratio result is consistently worse than the one-year reserve development to policyholders' surplus, the insurer may be intentionally understating its reserves.

The following could cause adverse ratio results:

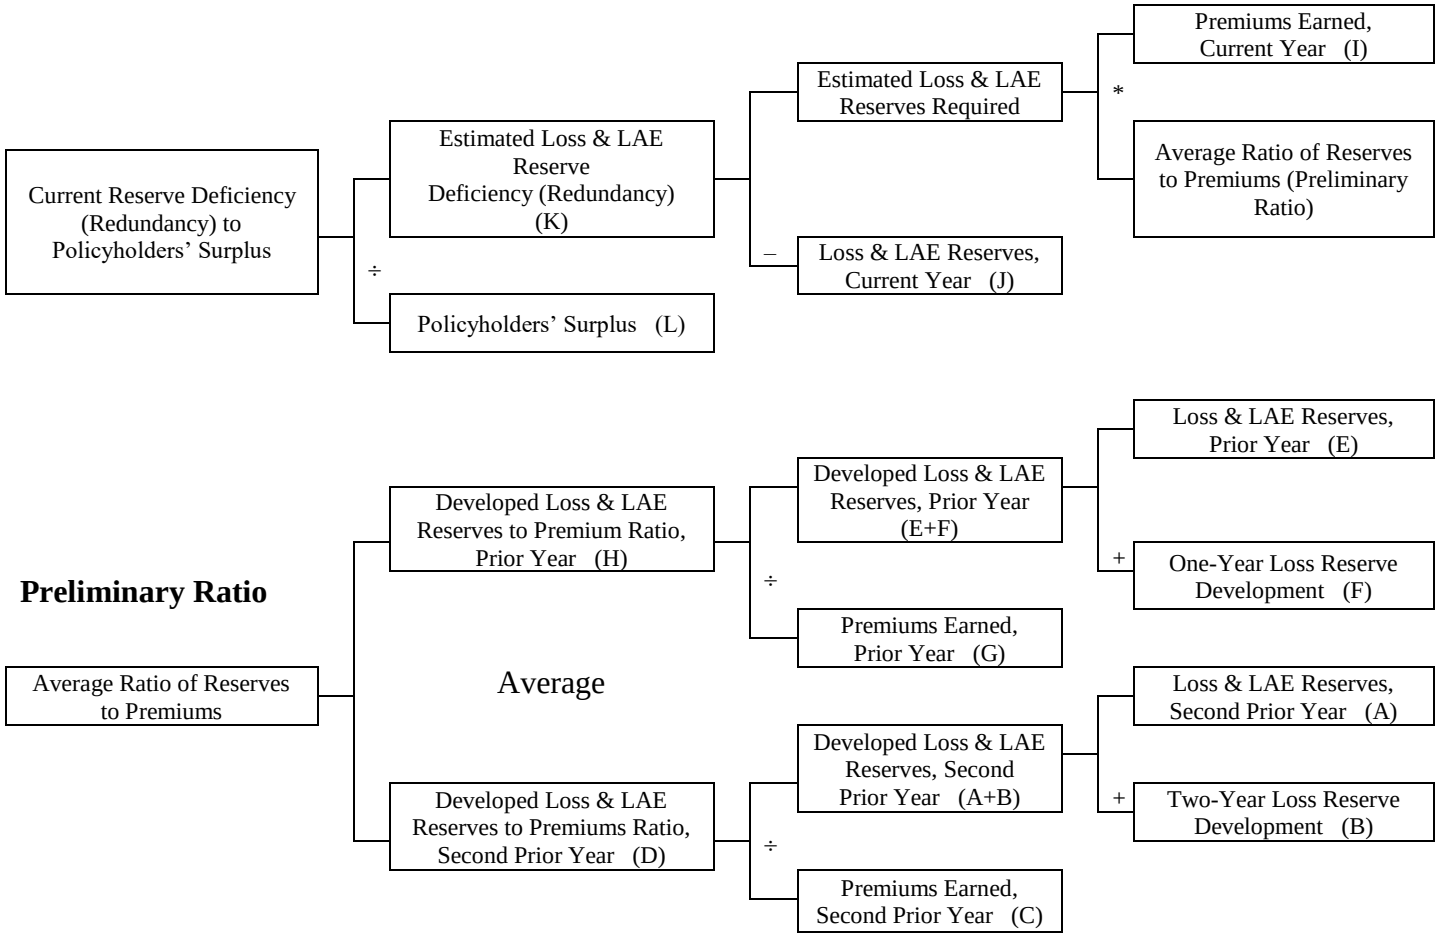
- Strengthening of deficient loss and LAE reserves held at the end of the second prior year-end
- Write-off of paid and unpaid losses for uncollectible reinsurance
- Commutation of ceded reinsurance
- Change in tabular reserve discounts

The usual range for the ratio includes results less than 20 percent.

For suggestions on interpreting ratio results and further analysis, refer to the comments on Ratio 11, One-Year Reserve Development to Policyholders' Surplus.

Branded Risk(s): RV

P/C RESERVE RATIO 13 – EST. CURR. RESERVE DEFICIENCY TO POLICYHOLDERS' SURPLUS



A. Loss & LAE Reserves, Second Prior Year	2nd PY: Page 3, Line 1 + 3, Column 1	
B. Two-Year Loss Reserve Development	Page 34, Part 2, Line 12, Column 12 * 1000	
C. Premiums Earned, Second Prior Year	2nd PY: Page 4, Line 1, Column 1	
D. Developed Loss & LAE Reserves to Premiums Ratio, Second Prior Year = [(A+B) / C]		%
• If C is zero, negative, or less than L/10, D = H		
E. Loss & LAE Reserves, Prior Year	PY: Page 3, Line 1 + 3, Column 1

K. Estimated Loss & LAE Reserve Deficiency (Redundancy) = {[1/2 * (D+H)] * I} – J		
• If G is zero, negative, or less than L/10, K = zero		
L. Policyholders' Surplus	Page 3, Line 37, Column 1	
Result = 100 * (K / L)		%
• If K is positive and L is zero or negative, result is 999.		
• If K and L are both zero or negative, result is zero.		

P/C RESERVE RATIO 13 – EST. CURR. RESERVE DEFICIENCY TO POLICYHOLDERS' SURPLUS

This ratio provides an estimate on the adequacy of current reserves. This estimated deficiency is the difference between the estimated reserves required by the insurer and the actual reserves maintained.

The usual range for the ratio includes results less than 25 percent.

The results of this ratio can be distorted by significant changes in premium volume. A major increase in premiums earned can produce ratio results that indicate a deficiency greater than the actual deficiency or vice versa. However, within the normal range of variations in premiums from year to year, the distortion from changes in premiums is not significant.

Ratio results can also be affected by changes in product mix, especially if there is a change in the balance between property and liability lines of business. A significant shift in premiums from property to liability lines may cause this ratio to reflect understated reserve deficiencies. For insurers that have major shifts in product mix, the estimated current reserve deficiency or redundancy should be calculated separately for the major product groups using the approach described above for each.

Within these limitations, the ratio provides a reasonable estimate of the adequacy of reserves and can be used to determine whether an insurer has corrected reserve deficiencies that may have existed in the past.

Branded Risk(s): RV

III. LIFE, ACCIDENT & HEALTH RATIOS

This chapter describes the financial ratios and offers suggestions for interpreting ratio results and for determining the types of further analysis that need to be performed. The purpose of IRIS is to assist state insurance departments in allocating resources to those insurers in the greatest need of regulatory attention.

The suggestions for analysis included in the discussion of each financial ratio are intended to assist state regulators in the interpretation of ratio results. The examiner or financial analyst should adjust the depth and direction of their analysis in accordance with their knowledge of the insurer and its particular circumstances.

Analysis should begin with a review of the insurer's ratio results. The analyst should note the ratios on which the insurer has values outside the usual ranges and the amounts by which such values deviate from those ranges.

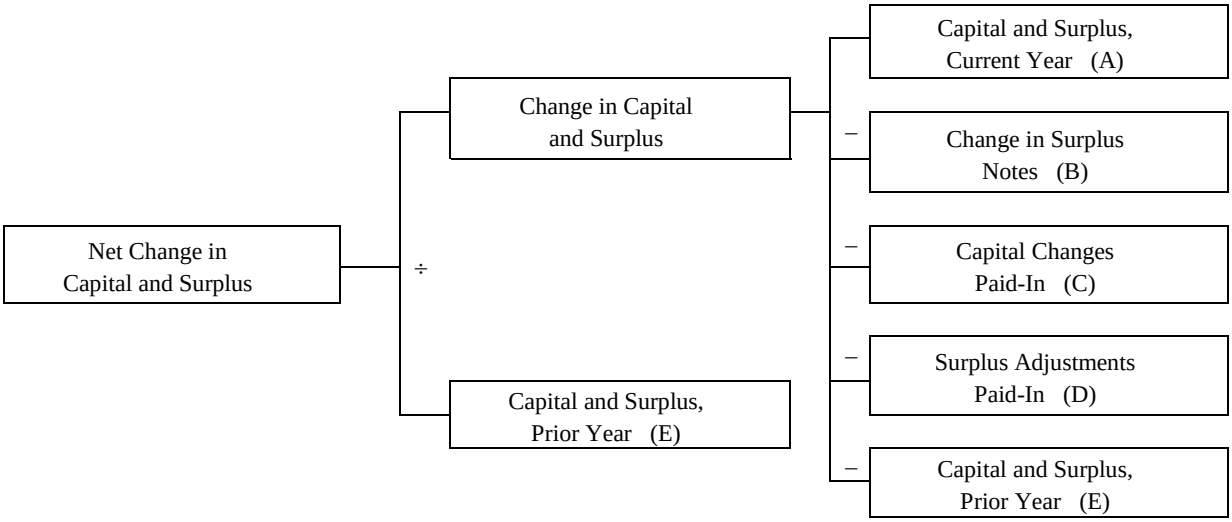
All ratios are reported as percentages, rounded to the nearest percent. For Ratios 10 and 11, results are rounded to the nearest tenth of one percent.

Ratio Ranges

	IRIS Ratio	Unusual Values Equal to or	
		Over	**Under**
1.	Net Change in Capital and Surplus	50	-10
2.	Gross Change in Capital and Surplus	50	-10
3.	Net Income to Total Income (Including Realized Capital Gains & Losses)	---	0
4.	Adequacy of Investment Income	900	125
5.	Nonadmitted to Admitted Assets	10	---
6.	Total Real Estate & Total Mortgage Loans to Cash & Invested Assets	30	---
7.	Total Affiliated Investments to Capital and Surplus	100	---
8.	Surplus Relief		
	(Over $5 Million Capital and Surplus)	30	-99
	($5 Million or Less Capital and Surplus)	10	-10
9.	Change in Premium	50	-10
10.	Change in Product Mix	5.0	---
11.	Change in Asset Mix	5.0	---
12.	Change in Reserving	20	-20

U indicates result is automatically considered unusual.
NR indicates no result is calculated.

LIFE/A&H OVERALL RATIO 1 – NET CHANGE IN CAPITAL AND SURPLUS



A. Capital and Surplus, Current Year	Page 3, Line 38, Column 1	_____
B. Change in Surplus Notes	Page 4, Line 48, Column 1	_____
C. Capital Changes Paid-In	Page 4, Line 50.1, Column 1	_____
D. Surplus Adjustments Paid-in	Page 4, Line 51.1, Column 1	_____
E. Capital and Surplus, Prior Year	PY: Page 3, Line 38, Column 1	_____

Result = (A–B–C–D–E) / E * 100 _____ %

- If A is zero or negative, result is -99.
- If E is zero or negative and A is positive, result is 999.
- If commenced business date is current year, no result is calculated (NR).

The Net Change in Capital and Surplus ratio is the most general measure of the improvement or deterioration in an insurer's financial condition during the year. It does not consider capital and surplus paid-in to reflect the impact of operations on capital and surplus.

The usual range includes all results greater than -10 percent and less than 50 percent. If the Change in Capital and Surplus ratio equals or falls below the -10 percent range limit or equals or goes above the 50 percent range limit, further analysis should be conducted to determine the reasons behind the decrease or increase in capital and surplus and whether a trend is developing.

Review the capital and surplus account on the Summary of Operations page of the annual financial statement. If the only significant change in capital and surplus resulted from operations (including capital gains and losses), refer to the suggestions discussed under Ratio 3, Net Income to Total Income.

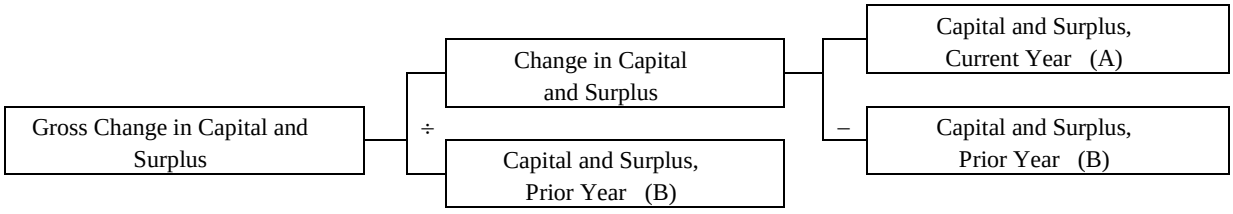
Factors other than operations likely to have a significant negative impact on capital and surplus include:

1. Stockholder dividends - Review the amount of dividends paid to stockholders to determine if it was appropriate, considering the insurer's net income (loss) and general financial condition. Evaluate the insurer's dividend policy to determine if over the past five years it has been consistent with protecting the insurer's ability to meet its financial obligations to policyholders.
2. Change in unrealized capital gains and losses on investments - Review the Exhibit of Capital Gains (Losses) in the annual financial statement. Compare the current year-end components to the prior year-end components to determine which categories of investments are responsible for the changes in unrealized capital gains and losses. Determine if unrealized capital losses on common stock were caused by decreases in the value of affiliates. Review the affiliate(s) for potential solvency issues. Review the Assets page of the annual financial statement and Schedules A through DB to gain an understanding of how the insurer's assets are currently invested. Compare changes in unrealized capital gains and losses to those experienced by other insurers investing in the same classes of assets during the same time period. If large decreases have occurred, review the annual financial statement investment schedules, the MD&A and other available information to determine if the insurer has taken any action to protect itself against further losses. If large increases have occurred, based on current stock market and economic information, determine if improvements in the stock market may have created a temporary increase to capital and surplus.
3. Increases in reserves due to valuation changes – Review Exhibit 5A and review the insurer's result on Ratio 12, Change in Reserving. Also, review the results of the Department's last reserve valuation. If the insurer appears to have been under-reserved, determine if the recent change in valuation basis corrected the problem, or if further decreases in surplus may be anticipated.
4. Losses from nonadmitted assets – Determine the source (or sources) of the losses from the Assets page and the Exhibit of Nonadmitted Assets page of the annual financial statement. Review the insurer's result on Ratio 5, Nonadmitted to Admitted Assets, and refer to the suggestions for further analysis under the section "Life/A&H Investment Ratios" later in this manual.
5. Change in accounting principle – Review Notes to financial statement #2 to determine the nature of the changes. Compare the insurer's changes for consistency with changes experienced by other insurers with similar lines of business. Evaluate if the changes are expected to have a material impact on current year operations and future periods.
6. Change in net deferred income tax – Review Notes to financial statement #9 to obtain a greater understanding of the sources of the insurer's book/tax differences and the changes in these items during the current year.

Also, determine the amount of any increases in capital and surplus from the capital and surplus account on the Summary of Operations page of the annual financial statement. Determine whether these increases partially masked other significant decreases in capital and surplus and whether the decreases are likely to be repeated in future years. Keep in mind that capital and surplus paid-in is netted out of the Net Change in Capital and Surplus ratio. See Ratio 2, Gross Change in Capital and Surplus, which does not exclude paid-in capital and surplus from the calculation of the ratio.

Branded Risk(s): OP, ST

LIFE/A&H OVERALL RATIO 2 – GROSS CHANGE IN CAPITAL AND SURPLUS



A. Capital and Surplus, Current Year	Page 3, Line 38, Column 1	
B. Capital and Surplus, Prior Year	PY: Page 3, Line 38, Column 1	

Result = (A–B) / B * 100 %

- If A is zero or negative, result is -99.
- If B is zero or negative and A is positive, result is 999.
- If commenced business date is current year, no result is calculated (NR).

The Gross Change in Capital and Surplus ratio is a measure of improvement or deterioration in the insurer's financial condition during the year. It does take into account capital and surplus, including surplus notes, paid-in during the year. The usual range includes all results greater than -10 percent and less than 50 percent.

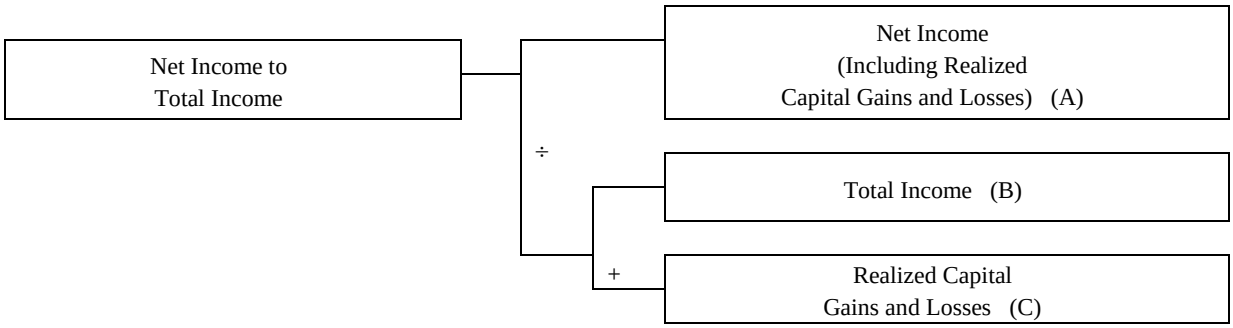
This ratio should be reviewed along with the review of Ratio 1, Net Change in Capital and Surplus. The interpretation comments that apply to Ratio 1 also apply to Ratio 2. However, if the insurer had paid-in capital and surplus during the year, the result for Ratio 2 may be significantly better than the result for Ratio 1. If capital and/or surplus were not paid-in during the year, the results of Ratios 1 and 2 should be the same.

If Ratio 2 is negative or reflects a result less than the lower limit of the range despite paid-in capital and surplus, the reasons for the decrease to capital and surplus should be analyzed to determine the causes of the decrease and if the causes represent a trend. Operational problems may be a possibility if the results are part of a trend over a period of years.

If the result of Ratio 2 is higher than the result of Ratio 1, it may indicate a strong parent willing to maintain an adequate level of capital and surplus in its subsidiary. In some instances, a review of the nature of the assets funding the additional capital and surplus paid-in may be appropriate. Factors such as the stability of the parent, whether the insurance group is publicly held and the parent's access to capital should be considered.

Branded Risk(s): OP, ST

LIFE/A&H OVERALL RATIO 3 – NET INCOME TO TOTAL INCOME
(INCLUDING REALIZED CAPITAL GAINS AND LOSSES)



A. Net Income	Page 4, Line 35, Column 1	
B. Total Income	Page 4, Line 9, Column 1	
C. Realized Capital Gains/Losses	Page 4, Line 34, Column 1	

Result = A / (B+C) * 100 %

- If (B+C) is zero or negative and A is positive, no result is calculated (NR).
- If (B+C) is zero or negative and A is zero or negative, result is automatically considered unusual (U).

Net income (including realized capital gains and losses) is a measure of the insurer's profitability. The usual range for this ratio includes all results greater than zero.

From the current and previous reports of financial ratio results, review the trend in the Net Income to Total Income ratio and review the income or loss by product line on the Analysis of Operations by Lines of Business page of the annual financial statement. Keep in mind that the insurer has considerable discretion in allocating expenses among product lines and that realized capital gains and losses are not allocated by line on the Analysis of Operations by Lines of Business page. If an insurer's losses result from a few product lines, the following analysis may be done for only those lines of business.

Five principal factors affect the insurer's net income, as reflected in this ratio:

1. Mortality and morbidity – Review the trend in benefits paid as a percentage of premiums by product line. If these ratios have increased, consider requesting supplemental information on mortality and morbidity experience and consult the department's actuary to determine the financial implications of the insurer's mortality and morbidity experience.
2. Adequacy of investment income – See Ratio 4, Adequacy of Investment Income. If investment income is significantly less than the interest required to maintain policy reserves and interest credited on deposit funds, the probability of financial difficulty is high and the increase in reserves understates the true expense associated with future benefit payments. On the other hand, if investment income is greater than the interest required to maintain policy reserves and interest credited on deposit funds, ultimately the business will probably be more profitable than indicated by the current net income or loss.

3. Commissions and expenses – High commissions and expenses could be caused by excessive spending or a high growth rate. Loose control over expenses, in general, may not pose an immediate threat to solvency. However, excessive spending may indicate that the insurer's management attitude and objectives are not consistent with the long-term financial security of policyholders.
4. Relationship of statutory reserve requirements to prevailing interest and mortality rates - When statutory reserve requirements are materially more conservative than prevailing interest and mortality rates, an insurer basing its rates for new business on prevailing rates will suffer an apparent loss from operations. This is particularly noticeable for insurers writing substantial amounts of annuity business when prevailing interest rates are materially higher than the maximum interest rate permitted for statutory reserves (6 percent for most states). Such insurers are exposed to the risk that interest rates may decline in the future to the point where their renewal premiums may prove to be inadequate. (See the results of Ratio 4, Adequacy of Investment Income).
5. Realized capital gains and losses – Life insurers are required to establish an interest maintenance reserve (IMR). The reserve captures the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses are amortized into investment income over the approximate remaining life of the investments sold. Realized capital gains are reported in the Summary of Operations net of transfers to the IMR.

Branded Risk(s): OP

LIFE/A&H INVESTMENT RATIOS

For life insurers, investments represent a particularly critical element in insurer performance and stability. Ratios 4, 5, 6 and 7 concern various investment aspects of significance in analyzing the financial condition of an insurer. Familiarize yourself with the insurer's investments on the Assets page of the annual financial statement and review the insurer's results on Ratio 11, Change in Asset Mix, to assist in determining the stability of the insurer's investment policy.

Review Ratio 5, Nonadmitted to Admitted Assets. For insurers with ratio results of 10 percent and above, review the Assets page and the Exhibit of Nonadmitted Assets page of the annual financial statement to determine the nature of the nonadmitted assets and the reasons for non-admission. Compare the amount of nonadmitted assets with capital and surplus to determine the impact of nonadmitted assets on the financial condition of the insurer.

Review the amount of investments in affiliated insurers and receivables from affiliates as a percentage of invested assets and as a percentage of capital and surplus (Ratio 7). If the amount is high, an insurer may experience illiquidity or a low yield. Large investments in affiliated insurers may also increase the overall risk to which an insurer is subject. Determine whether the insurer's investments in and amounts due from affiliates are consistent with protecting the interest of policyholders.

Review the insurer's investment in real estate and mortgages and the relationship of that investment to cash and invested assets (Ratio 6). A high result may indicate higher asset risk and possible liquidity concerns.

It is helpful to consider the insurer's investments from three points of view:

1. Risk – Certain classes of investments are generally more risky than others. For example, equity investments (such as stocks and real estate) tend to experience greater fluctuations in value than investments in debt (such as bonds and mortgage loans). Review the insurer's mix of assets. Compare the percentage of invested assets in equities with the ratios for similar insurers. Also, determine the percentage of each component of the asset valuation reserve to the appropriate investment in the various assets. Information provided in the annual financial statement with regard to derivative instruments should be reviewed carefully.

2. Return – Determine from the Exhibit of Net Investment Income the gross yield on each of the major classes of assets. Compare these to the interest requirements reflected in Exhibit 5 and the Interest Sensitive Life Insurance Products Report. This should show the degree of inadequacy of investment income resulting from large investments in assets that produce little or no current income. Some insurers may forego a certain amount of current income in the expectation of capital gains. Therefore, also compare

the insurer's capital gains and losses, by type of investment [from the Exhibit of Capital Gains (Losses)], with other insurers over a period of several years. If the insurer has experienced large gains or losses, review Schedules A through E and attempt to determine whether the insurer's investments may be unduly speculative.

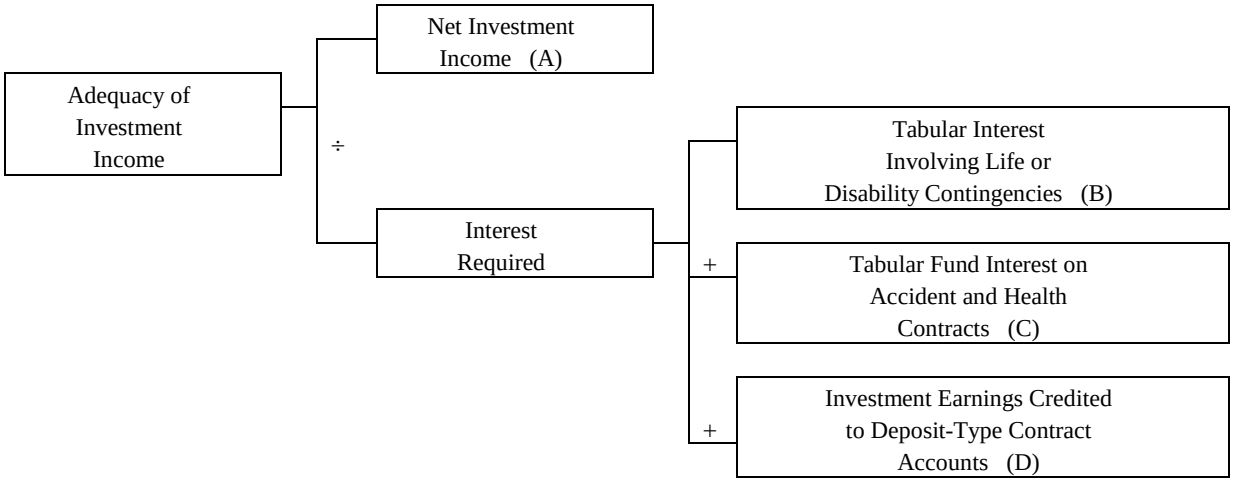
3. Liquidity – In the past, investment liquidity has been less important for life insurers than for accident and health and property/casualty insurers because of the long-term nature of the conventional life insurance contract. This has changed over the years. With many new products on the market, liquidity has become important to many life insurers. For any insurance company with a real and immediate potential for cash outflow, a problem arises if the realizable market value of investments is sufficiently below the statement value.

   Under the present system of statutory life insurance accounting, equity securities are carried at market value while other investments are generally valued at cost. Some cash outflow situations could arise from conditions such as a sudden large spurt of new issues involving considerable sales and issue expense, a slow attrition by a mature block of business with declining sales, or sudden demand for policy loans or cash surrenders.

   It is important when reviewing the distribution of an insurer's assets to consider 1) the possibility of cash outflow, as determined by the nature of the insurer's business; and 2) the ability of the insurer to withstand such a cash demand without undue deterioration of the asset portfolio. The summaries of the maturity distribution of bonds reported in Schedule D, Part 1A, short-term investment holdings reported in Schedule DA, Part 1 and the Cash Flow schedule of the annual financial statement are helpful in reviewing the insurer's liquidity.

   Because an asset adequacy analysis is required by the *Standard Valuation Law* and the accompanying *Actuarial Opinion and Memorandum Model Regulation*, the insurer's actuarial opinion and supporting actuarial memorandum (if requested) should be reviewed carefully.

LIFE/A&H INVESTMENT RATIO 4 – ADEQUACY OF INVESTMENT INCOME



A. Net Investment Income	Page 4, Line 3, Column 1	
B. Tabular Interest Involving Life or Disability Contingencies	Page 7, Line 4, Column 1	
C. Tabular Fund Interest on A&H Contracts	Page 14, Exhibit of Aggregate Reserve for A&H Contracts, Line 18, Column 1	
D. Investment Earnings Credited to Deposit-Type Contract Accounts	Page 15, Exhibit of Deposit-Type Contracts, Line 3, Column 1	

Result = A / (B+C+D) * 100 _____ %

- If (B+C+D) is zero, result is 999.
- If insurer has no beginning or ending reserves per page 7 of the annual financial statement and item B is zero, no result is calculated (NR).

This ratio indicates whether an insurer's investment income is adequate to meet the interest requirements of its reserves. The adequacy of investment income in meeting an insurer's interest obligations is a key element in an insurer's profitability.

The usual range includes all results greater than 125 percent and less than 900 percent.

A ratio of 125 percent or less may indicate that an insurer's investment yield is not adequate to meet its interest requirements. This may result from a low yield, or from interest guarantees or other interest requirements that may be too high for the investment environment of the insurer.

A ratio of 900 percent or more may indicate reporting errors concerning items of the interest required, as listed above, and should require an investigation concerning the method of determining interest required.

Analysis of the reasons for a low investment yield may reveal significant problems. Low yields may be caused by:

1. Speculative investments intended to produce large capital gains over the long run but providing little income in the interim – Analysis should focus on the proper valuation of these investments and a determination of their stability and liquidity. This includes a review of the hedging program and derivatives on Schedule DB, which may actually be speculative.
2. Large investments in affiliated companies or enterprises under the control of company management or owners – Analysis should focus on the propriety of these investments and their value and liquidity.
3. Large investments in home office facilities – Analysis should focus on the ability of the insurer to afford its facilities while maintaining liquidity and on the appropriateness of the amount of rent charged to underwriting expenses and credited to investment income.
4. Large investments in tax-exempt bonds – Analysis should focus on an estimate of the current market value of such securities, which might be substantially less than book/adjusted carrying value if the securities are long-term, tax-exempt bonds purchased many years ago. If an insurer is currently paying federal income taxes and has large amounts of tax-exempt securities, its after-tax yield would be comparable to that of other insurers with a substantially higher before-tax yield derived from taxable securities. Such an investment policy is often a sign of financial strength and stability.
5. Significant interest payments on borrowed money – Large borrowings by an insurer may result in significant interest payments, which will reduce the insurer's investment yield. Some reinsurance contracts may also require interest payments, which will also reduce the yield. In either instance, apart from the reduction in yield, these situations should be investigated further to determine if they are symptomatic of other problems, such as lack of liquidity.
6. Extraordinarily high investment expenses – Although an insurer may be investing in assets that would be expected to provide an adequate return, investment expenses and other deductions from investment income may be reducing the net investment yield below a point at which investment income is adequate.

While investment yields may be adequate, an insurer may have interest requirements that exceed the investment income received. This situation may be caused by:

1. Unreasonably high interest guarantees by the insurer – In order to sell its contracts, an insurer may have set guaranteed interest rates on its contracts at unreasonably high levels. If the guarantee period is too long, an insurer may be trapped in a period of declining interest rates with a guaranteed rate that is higher than the return it is able to realize on its investments.

2. Poor management of investments as they relate to the type of contracts an insurer may be writing – In the past, conventional life insurance products permitted long-term investments that matched the long-term nature of the contracts. Newer products require investments that match their particular requirements including cash flow.

See also the general comments on investments, "Life/A&H Investment Ratios," preceding this ratio.

Branded Risk(s): RV, MK, ST

LIFE/A&H INVESTMENT RATIO 5 – NONADMITTED TO ADMITTED ASSETS

Nonadmitted to Admitted Assets	÷	Nonadmitted Assets (A) / Admitted Assets (B)

A. Nonadmitted Assets	Page 2, Line 28, Column 2	
B. Admitted Assets	Page 2, Line 28, Column 3	
Result = A / B * 100		%

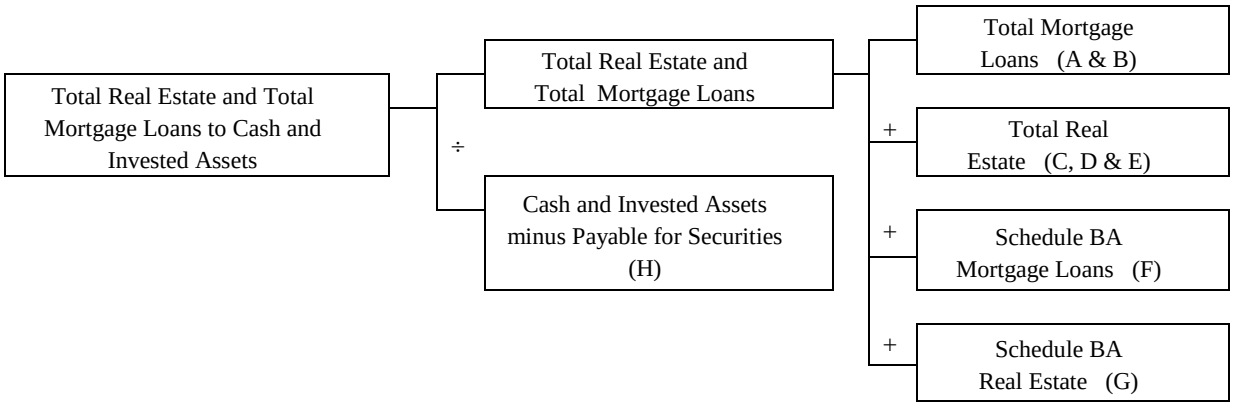
- If B is zero or negative and A is positive, result is 999.
- If A and B are both zero or negative, result is zero.

This ratio measures the degree to which an insurer has acquired nonadmitted assets that may represent either nonproductive assets or risky investments.

The usual range includes all results less than 10 percent. See the general comments on investments titled "Life/A&H Investment Ratios," preceding Ratio 4.

Branded Risk(s): CR, LQ

LIFE/A&H INVESTMENT RATIO 6 – TOTAL REAL ESTATE AND TOTAL MORTGAGE LOANS TO CASH AND INVESTED ASSETS



A. Mortgage Loans – First Liens	Page 2, Line 3.1, Column 3	
B. Mortgage Loans – Other	Page 2, Line 3.2, Column 3	
C. Real Estate – Properties Occupied by the Company	Page 2, Line 4.1, Column 3	
D. Real Estate – Properties Held for the Production of Income	Page 2, Line 4.2, Column 3	
E. Real Estate – Properties Held for Sale	Page 2, Line 4.3, Column 3	
F. Schedule BA – Mortgage Loans	Page E07, Line 0999999 + 1099999 + 1999999 + 2099999, Column 12	
G. Schedule BA – Real Estate	Page E07, Line 1799999 + 1899999, Column 12	
H. Cash and Invested Assets minus Payable for Securities	(Page 2, Line 12, Column 3) – (Page 3, Line 24.09, Column 1)	

Result = [(A+B+C+D+E+F+G) / H] * 100 ____ %

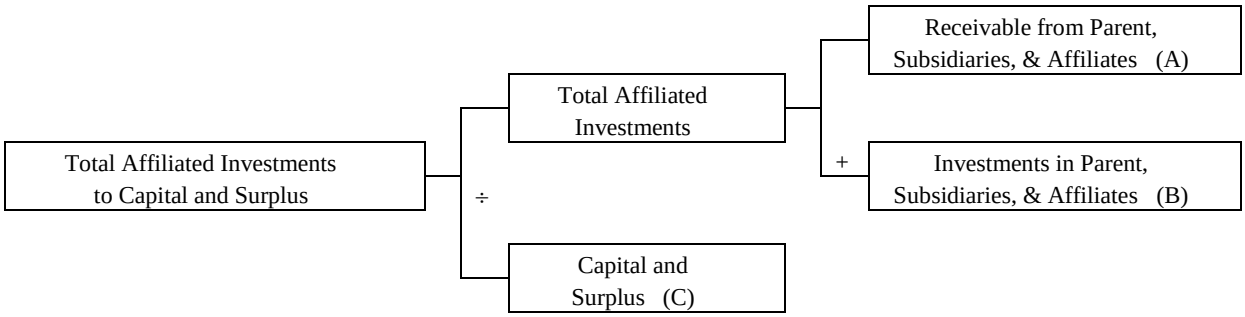
- If H is zero or negative and (A+B+C+D+E+F+G) is positive, result is 999.
- If (A+B+C+D+E+F+G) and H are both zero or negative, result is zero.

This ratio reflects the percentage of cash and invested assets that are invested in real estate and mortgage loans. Real estate and mortgage loans may be overstated. Excessive investment in real estate and mortgage loans, investment in non-income producing real estate, and overdue or restructured mortgage loans are relatively common sources of financial difficulty.

Results less than 30 percent are included in the usual range for all insurers. See the general comments on investments titled "Life/A&H Investment Ratios," preceding Ratio 4.

Branded Risk(s): CR, MK

LIFE/A&H INVESTMENT RATIO 7 – TOTAL AFFILIATED INVESTMENTS TO CAPITAL AND SURPLUS



A.	Receivable from Parent, Subs., & Affiliates	Page 2, Line 23, Column 3	_____
B.	Investments in Parent, Subs., & Affiliates	Page 23, Line 50, Column 1	_____
C.	Capital and Surplus	Page 3, Line 38, Column 1	_____

Result = (A+B) / C *100 _____ %

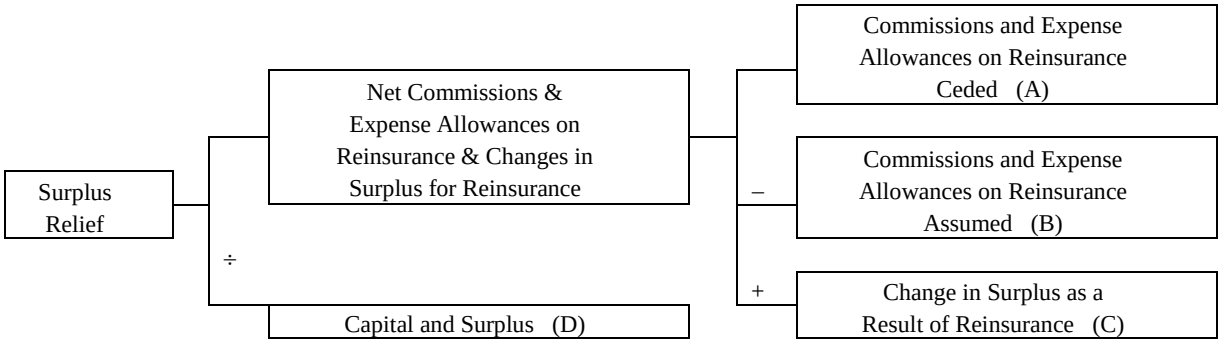
- If C is zero or negative and (A+B) is positive, result is 999.
- If (A+B) and C are zero or negative, result is zero.

This ratio is a measure of the amount of capital and surplus invested in affiliated investments and receivables that may not be liquid or available to meet policyholder obligations.

A relatively large value for this ratio should be questioned. The usual range includes all results less than 100 percent. See the general comments on investments titled "Life/A&H Investment Ratios," preceding Ratio 4.

Branded Risk(s): CR, LQ, MK

LIFE/A&H SURPLUS RELIEF RATIO 8 – SURPLUS RELIEF



A.	Comm. & Expense Allowances on Reinsurance Ceded	Page 6, Line 6, Column 1	
B.	Comm. & Expense Allowances on Reinsurance Assumed	Page 6, Line 22, Column 1	
C.	Change in Surplus as a Result of Reinsurance	Page 4, Line 51.4, Column 1	
D.	Capital and Surplus	Page 3, Line 38, Column 1	

Result = (A–B+C) / D * 100 %

- If D is zero or negative, result is 999.

A positive value for this ratio generally indicates a temporary increase to surplus because often no liability is established for the unearned portion of reinsurance commissions and expense allowances ceded. A large positive value for this ratio may indicate that company management believes its surplus is inadequate.

This ratio result will be negative for insurers with large amounts of reinsurance assumed in relation to direct business. An extreme negative value may indicate that the additional reserves required for reinsurance assumed are beginning to strain capital and surplus or that excessive commissions and expenses are being incurred by the insurer in acquiring this business.

Results greater than -10 percent and less than 10 percent are included in the usual range for those insurers with capital and surplus of $5 million or less. For insurers with capital and surplus in excess of $5 million, the usual range includes results which are greater than –99 percent and less than 30 percent.

Branded Risk(s): ST, PR/UW

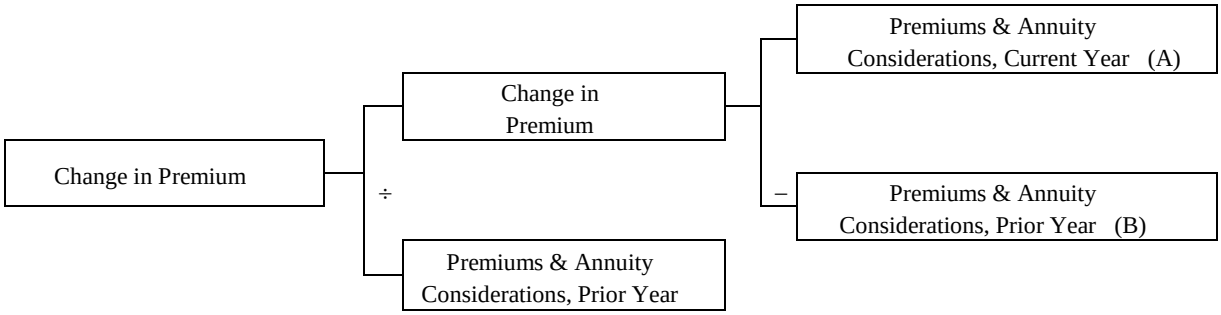
LIFE/A&H CHANGE IN OPERATIONS RATIOS

In evaluating the significance of the following ratios for a particular insurer, familiarity with the insurer's history, management and operations are of particular importance. If an insurer increases or decreases its premium rapidly, changes its mix of products or assets, or alters its ratio of reserve increases to premium, key areas should be reviewed: management's business plan, management's control of the situation, and knowledge and experience required to maintain financial strength while operations are changing dramatically.

The analyst should determine the reasons for the changes in operations. For example, rapid premium growth or a decision to cease writing one or more products may have been the result of changes in the sales and distributions systems, exiting or entering an insurance market, changes in the economic environment, product development, or changes in the insurer's business plan. A change in the business plan may be indicated by the following ratios and may result from a change in company ownership or management.

Changes in the asset mix may also be indicative of changes in ownership and management or changes in the business focus of the insurer. A review of the insurer's investment strategy would assist in understanding management's investment philosophy. Life and health insurers should be reviewed carefully during their first years under new ownership or management.

LIFE/A&H CHANGE IN OPERATIONS RATIO 9 – CHANGE IN PREMIUM



A.	Premiums & Annuity Considerations, Current Year	Page 49, Line 99, Column 2, 3, 4, 5, 7	
B.	Premiums & Annuity Considerations, Prior Year	PY: Page 49, Line 99, Column 2, 3, 4, 5, 7	

Result = (A–B) / B * 100 %

- If A and B are both zero or negative, result is zero.
- If B is zero or negative and A is positive, result is 999.
- If commenced business date is current year, no result is calculated (NR).

This ratio represents the percentage change in premium from the prior to the current year.

The usual range includes all results less than 50 percent and greater than -10 percent. See the general comments preceding this ratio, "Life/A&H Change in Operations Ratios."

Branded Risk(s): PR/UW

LIFE/A&H CHANGE IN OPERATIONS RATIO 10 – CHANGE IN PRODUCT MIX

		CURRENT YEAR AMOUNT (1)	CY % OF TOTAL (2)	PRIOR YEAR AMOUNT (3)	PY % OF TOTAL (4)	COL (2) LESS COL (4)% (5)
Premiums & Annuity Considerations Page 6, Line 1						
A.	Industrial Life, Column 2					
B.	Ordinary Life Ins., Column 3					
C.	Ind. Annuities, Column 4					
D.	Credit Life, Column 6					
E.	Group Life, Column 7					
F.	Group Annuities, Column 8					
G.	Group A&H, Column 9					
H.	Credit A&H, Column 10					
I.	Other A&H, Column 11					
J.	Total					
K.	Total of Ratio Column 5 Disregarding Sign					

Result = K / 9 _____ %

- If J for either current or prior year is zero or negative, no result is calculated (NR).
- Ratio is calculated as follows: First determine the percentage of premium from each product line for CY and PY. Next, determine the difference in the percentage of premium between the two years for each product line. Finally, the total of these differences, without regard to sign, is divided by the number of product lines to determine the change in the percentage of premium for the average product line.

The result of this ratio represents the average change in the percentage of total premium from each product line during the year. The product lines are those defined in the Analysis of Operations by Line of Business page of the annual financial statement.

The usual range includes results less than 5 percent. See the general comments titled "Life/A&H Change in Operations Ratios," preceding Ratio 9.

Branded Risk(s): PR/UW

LIFE/A&H CHANGE IN OPERATIONS RATIO 11 – CHANGE IN ASSET MIX

M. Other Invested Assets – Line 8					
N. Receivable for Securities – Line 9 minus Payable for Securities – Page 3, Line 24.09, Column 1					
O. Securities Lending Reinvested Collateral Assets – Line 10					
P. Aggregate Write-Ins for Invested Assets – Line 11					
Q. Total					
R. Total of Ratio Column 5 Disregarding Sign					

Result = R / 16 %

- If Q for either current or prior year is zero or negative, result is automatically considered unusual (U).
- Ratio is calculated as follows: First determine the percentage of total assets from each asset type for CY and PY. Next, determine the difference in the percentage of assets between the two years for each asset type. Finally, the total of these differences, without regard to sign, is divided by the number of asset types to determine the change in the percentage of assets for the average asset type.

LIFE/A&H CHANGE IN OPERATIONS RATIO 11 – CHANGE IN ASSET MIX

This ratio result represents the average change in the percentage of total cash and invested assets for the classes of assets listed above less payable for securities from the Liabilities, Surplus and Other Funds page of the annual financial statement.

The usual range includes all results less than 5 percent. See the general comments on investments titled "Life/A&H Investment Ratios," preceding Ratio 4 and the comments titled "Life/A&H Change in Operations Ratios," preceding Ratio 9.

Branded Risk(s): CR, MK, ST

LIFE/A&H CHANGE IN OPERATIONS RATIO 12 – CHANGE IN RESERVING

		CURRENT YEAR	PRIOR YEAR
A. Increase in Agg. Reserves – Industrial Life	Page 6, Line 19, Column 2		
B. Increase in Agg. Reserves – Ordinary Life Ins.	Page 6, Line 19, Column 3		
C. Net Single Premiums – Industrial Life	Page 9, Line 10.4, Column 2		
D. Net Renewal Premiums – Industrial Life	Page 9, Line 19.4, Column 2		
E. Net Single Premiums – Ordinary Life Ins.	Page 9, Line 10.4, Column 3		
F. Net Renewal Premiums – Ordinary Life Ins.	Page 9, Line 19.4, Column 3		

Result = [(CY (A+B) / (C+D+E+F)) – (PY (A+B) / (C+D+E+F))] * 100

_____ %

- If (A+B) and (C+D+E+F) for current or prior year are both zero or negative, (A+B) / (C+D+E+F) = 0 for that year.
- If (A+B) is positive and (C+D+E+F) is zero or negative for current or prior year, (A+B) / (C+D+E+F) = 100% for that year.
- This ratio represents the number of percentage points of difference between the reserving ratio for current and prior years. For each of these years, the reserving ratio is equal to the aggregate increase in reserves for individual life insurance taken as a percentage of renewal and single premiums for individual life insurance.

Positive ratio results indicate an increase in this ratio from the prior year. Negative results indicate a decrease. The usual range of the number of percentage points of difference between the reserving ratios for current and prior years includes all results less than 20 percent but greater than -20 percent. For insurers with no industrial or ordinary life lines of business, a ratio value of zero, which is within the range of acceptability for the ratio, will be reported. See the comments titled "Life/A&H Change in Operations Ratios," preceding Ratio 9.

Branded Risk(s): RV

IV. FRATERNAL RATIOS

This section describes the financial ratios and offers suggestions for interpreting ratio results and for determining the types of further analysis that need to be performed. The purpose of IRIS is to assist state insurance departments in allocating resources to those societies in the greatest need of regulatory attention.

The suggestions for analysis included in the discussion of each financial ratio are intended to assist state regulators in the interpretation of ratio results. The examiner or financial analyst should adjust the depth and direction of their analysis in accordance with their knowledge of the society and its particular circumstances.

Analysis should begin with a review of the society's ratio results. The analyst should note the ratios on which the society has values outside the usual ranges and the amounts by which such values deviate from those ranges.

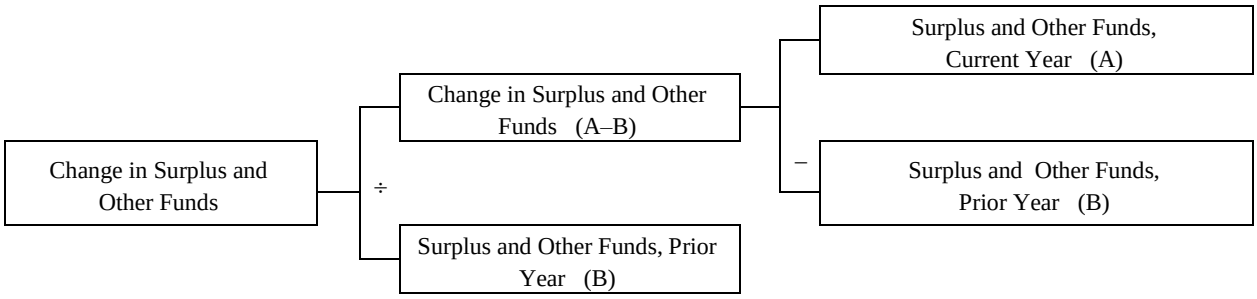
All ratios are reported as percentages, rounded to the nearest percent. For Ratios 9 and 10, results are rounded to the nearest tenth of one percent.

Ratio Ranges

IRIS Ratio		Unusual Values Equal to or	
		Over	Under
1.	Change in Surplus and Other Funds	50	-10
2.	Net Income to Total Income (Including Realized Capital Gains & Losses)	---	0
3.	Adequacy of Investment Income	900	125
4.	Nonadmitted to Admitted Assets	10	---
5.	Total Real Estate & Total Mortgage Loans to Cash & Invested Assets	30	---
6.	Total Affiliated Investments to Surplus and Other Funds	100	---
7.	Surplus Relief		
	(Over $5 Million Surplus and Other Funds)	30	-99
	($5 Million or Less Surplus and Other Funds)	10	-10
8.	Change in Premium	50	-10
9.	Change in Product Mix	5.0	---
10.	Change in Asset Mix	5.0	---
11.	Change in Reserving	20	-20

U indicates result is automatically considered unusual.
NR indicates no result is calculated.

FRATERNAL OVERALL RATIO 1 – CHANGE IN SURPLUS AND OTHER FUNDS



A. Surplus and Other Funds, Current Year	Page 3, Line 30, Column 1	
B. Surplus and Other Funds, Prior Year	PY: Page 3, Line 30, Column 1	

Result = (A–B) / B * 100 %

- If A is zero or negative, result is -99.
- If B is zero or negative and A is positive, result is 999.
- If commenced business date is current year, no result is calculated (NR).

The Change in Surplus and Other Funds ratio is the most general measure of the improvement or deterioration in the society's financial condition during the year.

The usual range includes all results greater than -10 percent and less than 50 percent. If the Change in Surplus and Other Funds ratio equals or falls outside the usual range limit, further analysis should be conducted to determine the reasons behind the decrease or increase in surplus and other funds and to determine whether a trend is developing. Review the surplus and other funds account on the Summary of Operations page of the annual financial statement. If the only significant change in surplus and other funds resulted from operations (including realized capital gains and losses), refer to the suggestions discussed under Ratio 2, Net Income to Total Income.

Factors other than operations likely to have a significant negative impact on surplus and other funds include:

1. Change in unrealized capital gains and losses on investments – Review the Exhibit of Capital Gains (Losses) in the annual financial statement, comparing the current components to the prior year-end components to determine which categories of investments are responsible for the changes in unrealized capital gains and losses. Determine if unrealized capital losses on common stock were caused by decreases in the value of affiliates. Review the affiliate(s) for potential solvency issues.

   Review the Assets page of the annual financial statement and Schedules A through DB to gain an understanding of how the society's assets are currently invested. Compare changes in unrealized capital gains and losses to those experienced by other societies investing in the same classes of assets during the same time period. If large decreases have occurred, review the annual financial statement investment schedules, the MD&A and other available information to determine if the society has taken any action to protect

itself against further losses. If large increases have occurred, based on current stock market and economic information, determine if improvements in the stock market may have created a temporary increase to capital and surplus.

2. Increases in reserves due to valuation changes – Review Exhibit 5A and review the society's result on Ratio 11, Change in Reserving. Also, review the results of the Department's last reserve valuation. If the society appears to have been under-reserved, determine if the recent change in valuation basis corrected the problem, or if further decreases in surplus may be anticipated.

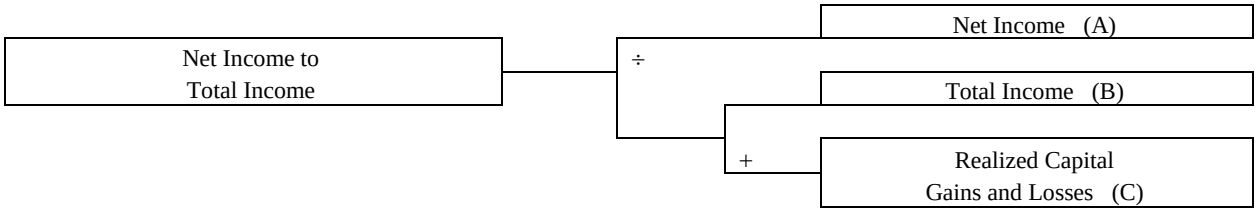
3. Losses from nonadmitted assets – Determine the source (or sources) of the losses from the Assets page and the Exhibit of Nonadmitted Assets page of the annual financial statement. Review the society's result on Ratio 5, Nonadmitted to Admitted Assets. Also, refer to the suggestions, for further analysis, under the section on investments, "Fraternal Investment Ratios," in this manual. Review Notes to financial statement #9 to obtain a greater understanding of the sources of the insurer's book/tax differences and the changes in these items during the current year.

4. Change in accounting principle – Review Notes to financial statement #2 to determine the nature of the changes. Compare the society's changes for consistency with changes experienced by other societies with similar lines of business. Evaluate if the changes are expected to have a material impact on current year operations and future periods.

Also, determine the amount of any increases in surplus and other funds from the surplus and other funds account on the Summary of Operations page of the annual financial statement. Determine whether these increases partially mask other significant decreases in surplus and other funds and whether the decreases are likely to be repeated in future years. Keep in mind that surplus and other funds paid-in is netted out of the Change in Surplus and Other Funds ratio.

Branded Risk(s): OP, ST

FRATERNAL OVERALL RATIO 2 – NET INC. TO TOT. INC. (INCL. REALIZED CAP. GAINS AND LOSSES)



A. Net Income	Page 4, Line 31, Column 1	
B. Total Income	Page 4, Line 9, Column 1	
C. Realized Capital Gains/Losses	Page 4, Line 30, Column 1	

Result = A / (B+C) * 100 %

- If (B+C) is zero or negative and A is positive, no result is calculated (NR).
- If (B+C) is zero or negative and A is zero or negative, result is automatically considered unusual (U).

Net income (including realized capital gains and losses) is a measure of the society's profitability. The usual range for this ratio includes all results greater than zero.

From the current and previous reports of financial ratio results, review the trend in the Net Income to Total Income ratio and review the income or loss by product line on the Analysis of Operations by Lines of Business page of the annual financial statement. Keep in mind that the society has considerable discretion in allocating expenses among product lines and that realized capital gains and losses are not allocated by line on the Analysis of Operations by Lines of Business page. If a society's losses result from a few product lines, the following analysis may be done for only those lines of business.

Five principal factors affect the society's net income, as reflected in this ratio:

1. Mortality and morbidity – Review the trend in benefits paid as a percentage of premiums by product line. If these ratios have increased, consider requesting supplemental information on mortality and morbidity experience and consult the department's actuary to determine the financial implications of the society's mortality and morbidity experience.
2. Adequacy of investment income – See Ratio 3, Adequacy of Investment Income. If investment income is significantly less than the interest required to maintain policy reserves and interest credited on deposit funds, the probability of financial difficulty is high and the increase in reserves understates the true expense associated with future benefit payments. On the other hand, if the investment income is greater than the interest required to maintain policy reserves and interest credited on deposit funds, the business may ultimately be more profitable than indicated by the current net income or loss.

3. Commissions and expenses – Excessive spending or a high growth rate could cause high commissions and expenses. Loose control over expenses, in general, may not pose an immediate threat to solvency. However, excessive spending may indicate that the society's management attitude and objectives are not consistent with the long-term financial security of policyholders.
4. Relationship of statutory reserve requirements to prevailing interest and mortality rates – When statutory reserve requirements are materially more conservative than prevailing interest and mortality rates, a society basing its rates for new business on prevailing rates will suffer an apparent loss from operations. This is particularly noticeable for societies writing substantial amounts of annuity business when prevailing interest rates are materially higher than the maximum interest rate permitted for statutory reserves (6 percent for most states). Such societies are exposed to the risk that interest rates may decline in the future to the point where their renewal premiums may prove to be inadequate. (See the results of Ratio 3, Adequacy of Investment Income).
5. Realized capital gains and losses – Fraternal societies are required to establish an interest maintenance reserve (IMR). The reserve captures the realized capital gains and losses resulting from changes in the general level of interest rates. These gains and losses are amortized into investment income over the approximate remaining life of the investments sold. Realized capital gains are reported in the Summary of Operations net of transfers to the IMR.

Branded Risk(s): OP

For fraternal societies, investments represent a particularly critical element in society performance and stability. Ratios 3, 4, 5, and 6 concern various investment aspects of significance in analyzing the financial condition of a society. Familiarize yourself with the society's investments on the Assets page of the annual financial statement and review the society's results on Ratio 10, Change in Asset Mix, to assist in determining the stability of the society's investment policy.

Review Ratio 4, Nonadmitted to Admitted Assets. For societies with ratio results of 10 percent and above, review the Assets page and the Exhibit of Nonadmitted Assets page to determine the nature of the nonadmitted assets and the reasons for non-admission. Compare the amount of nonadmitted assets with surplus and other funds to determine the impact of nonadmitted assets on the financial condition of the society.

Review the amount of investments in affiliated societies (Five-Year Historical Data page of the annual financial statement) and receivables from affiliates (Assets page) as a percentage of invested assets and as a percentage of surplus and other funds (Ratio 6). If the amount is high, a society may experience illiquidity and/or a low yield. Large investments in affiliated societies may also increase the overall risk to which a society is subject. Determine whether the society's investments in and amounts due from affiliates are consistent with protecting the interest of policyholders.

Review the society's investment in real estate and mortgages and the relationship of that investment to cash and invested assets (Ratio 5). A high result may indicate higher asset risk and possible liquidity concerns.

It is helpful to consider the society's investments from three points of view:

1. Risk – Certain classes of investments are generally more risky than others. For example, equity investments (such as stocks and real estate) tend to experience greater fluctuations in value than investments in debt (such as bonds and mortgage loans). Review the society's mix of assets. Compare the percentage of invested assets in equities with the ratios for similar societies. Also, determine the percentage of each component of the asset valuation reserve to the appropriate investment in the various assets. Information provided in the annual financial statement with regard to derivative instruments should be reviewed carefully.
2. Return – Determine from Exhibit of Net Investment Income the gross yield on each of the major classes of assets. Compare these to the interest requirements reflected in Exhibit 5 and the Fraternal Interest Sensitive Life Insurance Products Report. This should show the degree of inadequacy of investment income resulting from large investments in assets that produce little or no current income. Some societies may forego a certain amount of current income in the expectation of capital gains. Therefore, also compare the society's capital gains and losses, by type of investment [from the Exhibit of Capital Gains (Losses)], with other societies over a period of several years. If the society

has experienced large gains or losses, review Schedules A through E and attempt to determine whether the society's investments may be unduly speculative.

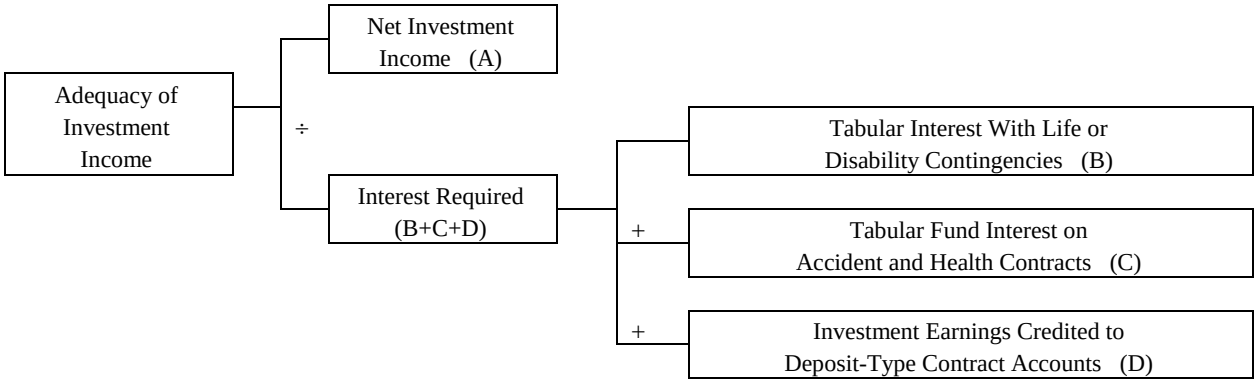
3. Liquidity – In the past, investment liquidity has been less important for life insurers and fraternal societies than for accident and health and property/casualty insurers because of the long-term nature of the conventional fraternal insurance contract. This has changed in recent years. With many new products on the market, liquidity has become important to many life insurers and some fraternals. For any society with a real and immediate potential for cash outflow, a problem arises if the realizable market value of investments is sufficiently below the book/adjusted carrying value.

   Under the present system of statutory fraternal insurance accounting, equity securities are carried at market value while other investments are generally valued at cost. Some cash outflow situations could arise from conditions such as a sudden large spurt of new issues involving considerable sales and issue expense, a slow attrition by a mature block of business with declining sales, or sudden demand for policy loans or cash surrenders.

   It is important in reviewing the distribution of a society's assets to consider 1) the possibility of cash outflow, as determined by the nature of the society's business; and 2) the ability of the society to withstand such a cash demand without undue deterioration of the asset portfolio. The summaries of the maturity distribution of bonds reported in Schedule D, Part 1A, short-term investment holdings reported in Schedule DA, Part 1 and the Cash Flow schedule of the annual financial statement are helpful in reviewing the society's liquidity.

   Because an asset adequacy analysis is required by the *Standard Valuation Law* and the *Actuarial Opinion and Memorandum Model Regulation*, the society's actuarial opinion and supporting actuarial memorandum (if requested) should be reviewed carefully.

FRATERNAL INVESTMENT RATIO 3 – ADEQUACY OF INVESTMENT INCOME



A.	Net Investment Income	Page 4, Line 3, Column 1
B.	Tabular Interest Involving Life or Disability Contingencies	Page 7, Line 4, Column 1
C.	Tabular Fund Interest on A&H Contract	Page 14, Exhibit of Aggregate Reserves for A&H Contracts, Line 17, Column 1
D.	Investment Earnings Credited to Deposit-Type Contracts Accounts	Page 14, Exhibit of Deposit-Type Contracts, Line 3, Column 1

Result = A / (B+C+D) * 100 _____ %

- If (B+C+D) is zero, result is 999.
- If Company has no beginning or ending reserves per page 7 of the annual financial statement and item B is zero, no result is calculated (NR).

This ratio indicates whether a society's investment income is adequate to meet the interest requirements of its reserves. The adequacy of investment income in meeting a society's interest obligations is a key element in a society's profitability. The usual range includes all results greater than 125 percent and less than 900 percent.

A ratio of 125 percent or less may indicate that a society's investment yield is not adequate to meet its interest requirements. This may result from a low yield or from interest guarantees or other interest requirements that may be too high for the investment environment of the society.

A ratio of 900 percent or more may indicate reporting errors concerning items of the interest required, as listed above, and should call for an investigation concerning the method of determining interest required.

Analysis of the reasons for a low investment yield may reveal significant problems. Low yields may be caused by:

1. Speculative investments intended to produce large capital gains over the long run but providing little income in the interim – Analysis should focus on the proper valuation of these investments and a determination of their stability and liquidity. This includes a review of the hedging program and derivatives on Schedule DB, which may actually be speculative.

2. Large investments in affiliated societies or enterprises under the control of society management or owners – Analysis should focus on the propriety of these investments and their value and liquidity.
3. Large investments in home office facilities – Analysis should focus on the ability of the society to afford its facilities while maintaining liquidity and on the appropriateness of the amount of rent charged to underwriting expenses and credited to investment income.
4. Significant interest payments on borrowed money – Large borrowings by a society may result in significant interest payments, which will reduce the society's investment yield. Some reinsurance contracts may also require interest payments, which will also reduce the yield. In either instance, apart from the reduction in yield, these situations should be investigated further to determine if they are symptomatic of other problems, such as lack of liquidity.
5. Extraordinarily high investment expenses – Although a society may be investing in assets that would be expected to provide an adequate return, investment expenses and other deductions from investment income may be reducing the net investment yield below a point at which investment income is adequate.

While investment yields may be adequate, a society may have interest requirements that exceed the investment income received. This situation may be caused by:

1. Unreasonably high interest guarantees by the society – In order to sell its contracts, a society may have set guaranteed interest rates on its contracts at unreasonably high levels. If the guarantee period is too long, a society may be trapped in a period of declining interest rates with a guaranteed rate that is higher than the return it is able to realize on its investments.
2. Poor management of investments as they relate to the type of contracts a society may be writing – In the past, conventional fraternal insurance products permitted long-term investments that matched the long-term nature of the contracts. Newer products require investments that match their particular requirements including cash flow. See the general comments on investments preceding this ratio, "Fraternal Investment Ratios."

Branded Risk(s): MK, RV, ST

FRATERNAL INVESTMENT RATIO 4 – NONADMITTED TO ADMITTED ASSETS

Nonadmitted to Admitted Assets		Nonadmitted Assets (A) / Admitted Assets (B)
	÷	

A. Nonadmitted Assets	Page 2, Line 28, Column 2	
B. Admitted Assets	Page 2, Line 28, Column 3	
Result = A / B * 100		%

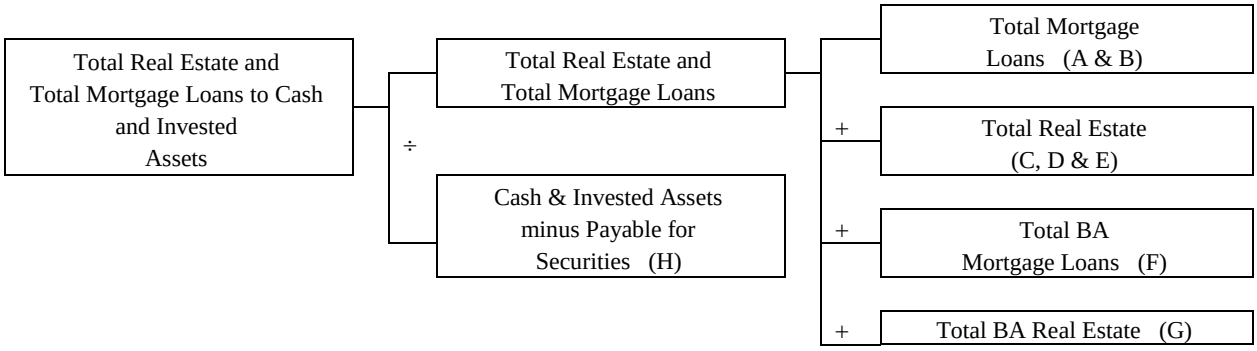
- If B is zero or negative and A is positive, result is 999.
- If A and B are both zero or negative, result is zero.

This ratio measures the degree to which a society has acquired nonadmitted assets that may represent either nonproductive assets or risky investments.

The usual range includes all results less than 10 percent. See the general comments on investments titled "Fraternal Investment Ratios," preceding Ratio 3.

Branded Risk(s): CR, LQ

FRATERNAL INV. RATIO 5 – TOT. REAL EST. & TOT. MORT. LOANS TO CASH & INV. ASSETS



A. Mortgage Loans – First Liens	Page 2, Line 3.1, Column 3	
B. Mortgage Loans – Other	Page 2, Line 3.2, Column 3	
C. Real Estate – Properties Occupied by the Society	Page 2, Line 4.1, Column 3	
D. Real Estate – Properties Held for the Production of Income	Page 2, Line 4.2, Column 3	
E. Real Estate – Properties Held for Sale	Page 2, Line 4.3, Column 3	
F. Schedule BA – Mortgage Loans	Page E07, Line 0999999 + 1099999 +1999999 + 2099999, Column 12	
G. Schedule BA – Real Estate	Page E07, Line 1799999 + 1899999, Column 12	
H. Cash and Invested Assets minus Payable for Securities	(Page 2, Line 12, Column 3) – (Page 3, Line 21.8, Column 1)	

Result = [(A+B+C+D+E+F+G) / H] * 100 %

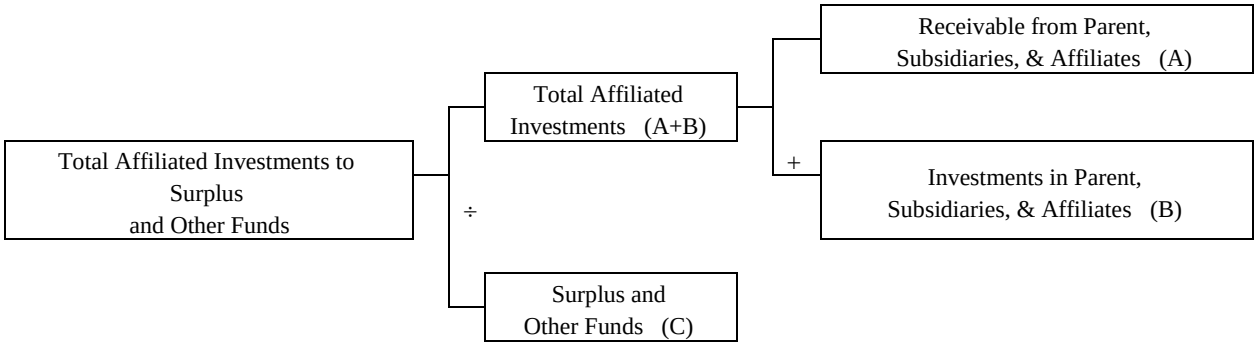
- If H is zero or negative and (A+B+C+D+E+F+G) is positive, result is 999.
- If (A+B+C+D+E+F+G) and H are both zero or negative, result is zero.

This ratio reflects the percentage of cash and invested assets that are invested in real estate and mortgage loans. Real estate and mortgage loan assets may be overstated. Excessive investment in real estate and mortgage loans, investment in non-income producing real estate, and overdue or restructured mortgage loans are relatively common sources of financial difficulty.

Results less than 30 percent are included in the usual range for all societies. See the general comments on investments titled "Fraternal Investment Ratios," preceding Ratio 3.

Branded Risk(s): CR, MK

FRATERNAL INVESTMENT RATIO 6 – TOT. AFFIL. INV. TO SURPLUS AND OTHER FUNDS



A. Receivable from Parent, Subs., & Affiliates	Page 2, Line 23, Column 3	
B. Investments in Subs., & Affiliates	Page 21, Line 37, Column 1	
C. Surplus and Other Funds	Page 3, Line 30, Column 1	

Result = (A+B) / C * 100 %

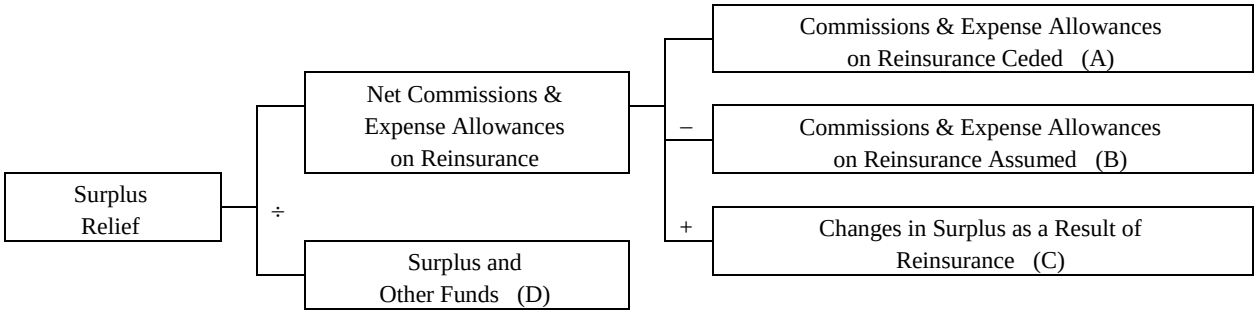
- If C is zero or negative and (A+B) is positive, result is 999.
- If (A+B), and C are zero or negative, result is zero.

This ratio is a measure of the amount of capital and surplus invested in affiliated investments and receivables that may not be liquid or available to meet policyholder obligations.

The usual range includes all results less than 100 percent. A relatively large value for this ratio should be questioned. See the general comments on investments titled "Fraternal Investment Ratios," preceding Ratio 3.

Branded Risk(s): CR, LQ, MK

FRATERNAL SURPLUS RELIEF RATIO 7 – SURPLUS RELIEF



A.	Comm. & Expense Allowances on Reinsurance Ceded	Page 6, Line 6, Column 1 _____
B.	Comm. & Expense Allowances on Reinsurance Assumed	Page 6, Line 20, Column 1 _____
C.	Change in Surplus as a Result of Reinsurance	Page 4, Line 44, Column 1 _____
D.	Surplus and Other Funds	Page 3, Line 30, Column 1 _____

Result = (A–B+C) / D * 100 _____ %

- If D is zero or negative, result is 999.

A positive value for this ratio generally indicates a temporary increase to surplus, because often no liability is established for the unearned portion of reinsurance commissions and expense allowances ceded. A large positive value for this ratio may indicate that society management believes its surplus is inadequate.

For societies with large amounts of reinsurance assumed in relation to direct business, this ratio will be negative. An extreme negative value may indicate that the additional reserves required for reinsurance assumed are beginning to strain surplus and other funds or that excessive commissions and expenses are being incurred by the society in acquiring this business.

Results greater than -10 percent and less than 10 percent are included in the usual range for those societies with surplus and other funds of $5 million or less. For societies with surplus and other funds in excess of $5 million, the usual range includes those results which are greater than -99 percent and less than 30 percent.

Branded Risk(s): ST, PR/UW

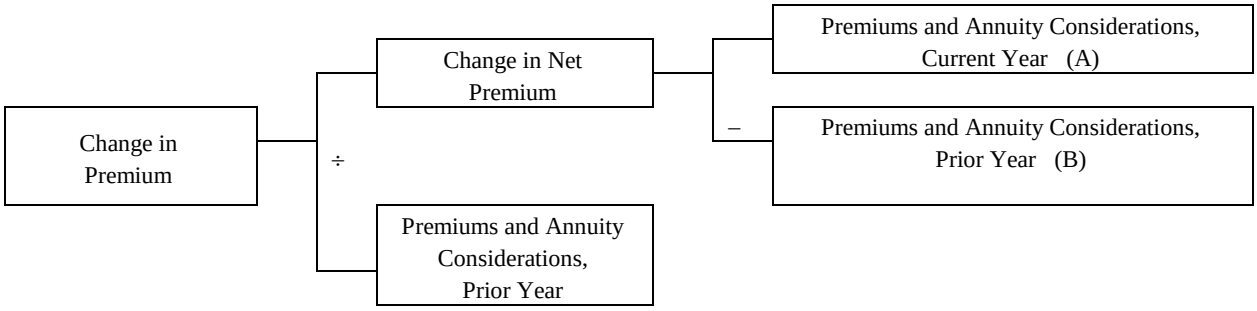
FRATERNAL CHANGE IN OPERATIONS RATIOS

In evaluating the significance of the following ratios for a particular society, familiarity with the society's history, management and operations are of particular importance. If a society increases or decreases its premium rapidly, changes its mix of products or assets, or alters its ratio of reserve increases to premium, key areas should be reviewed: management's business plan, management's control of the situation, and knowledge and experience required to maintain financial strength while operations are changing dramatically.

The analyst should determine the reasons for the changes in operations. For example, rapid premium growth or a decision to cease writing one or more products may have been the result of changes in the sales and distribution systems, exiting or entering an insurance market, changes in the economic environment, product development, or changes in the society's business plan. A change in business plan may be indicated by the following ratios and may result from a change in society ownership or affiliation.

Changes in the asset mix may also be indicative of changes in ownership and management or changes in the business focus of the society. A review of the society's investment strategy would assist in understanding management's investment philosophy. Fraternal societies should be reviewed carefully during their first years under new ownership or management.

FRATERNAL CHANGE IN OPERATIONS RATIO 8 – CHANGE IN PREMIUM



A. Premiums & Annuity Considerations, Current Year	Page 46, Line 99, Column 2, 3, 4, 5, 7	
B. Premiums & Annuity Considerations, Prior Year	PY: Page 46, Line 99, Column 2, 3, 4, 5, 7	

Result = 100 * (A-B) / B _____ %

- If A and B are both zero or negative, result is zero.
- If B is zero or negative and A is positive, result is 999.
- If commenced business date is current year, no result is calculated (NR).

This ratio represents the percentage change in net premium from the prior to the current year.

The usual range includes all results less than 50 percent and greater than -10 percent. See the general comments preceding this ratio, "Fraternal Change in Operations Ratios."

Branded Risk(s): PR/UW

FRATERNAL CHANGE IN OPERATIONS RATIO 9 – CHANGE IN PRODUCT MIX

	CURRENT YEAR AMOUNT (1)	CY % OF TOTAL (2)	PRIOR YEAR AMOUNT (3)	PY % OF TOTAL (4)	COL (2) LESS COL (4)% (5)
Premiums & Annuity Considerations Page 6, Line 1					
A. Life Insurance, Column 2					
B. Individual Annuities, Column 3					
C. Accident & Health, Column 5					
D. Total					
E. Total of Ratio Column 5 Disregarding Sign					
Result = E / 3					%

- If D for either current or prior year is zero or negative, no result is calculated (NR).
- Ratio is calculated as follows: First determine the percentage of premium from each product line for CY and PY. Next, determine the difference in the percentage of premium between the two years for each product line. Finally, the total of these differences, without regard to sign, is divided by the number of product lines to determine the change in the percentage of premium for the average product line.

The result of the Change in Product Mix ratio represents the average change in the percentage of total premium from each product line during the year. The product lines are those defined in the Analysis of Operations by Line of Business page of the annual financial statement.

The usual range includes all results less than 5 percent. See the general comments titled "Fraternal Change in Operations Ratios," preceding Ratio 8.

Branded Risk(s): PR/UW

FRATERNAL CHANGE IN OPERATIONS RATIO 10 – CHANGE IN ASSET MIX

Assets Page 2, Column 3		CURRENT YEAR AMOUNT (1)	CY % OF TOTAL (2)	PRIOR YEAR AMOUNT (3)	PY % OF TOTAL (4)	COL (2) LESS COL (4)% (5)
A.	Bonds – Line 1					
B.	Preferred Stock – Line 2.1					
C.	Common Stock – Line 2.2					
D.	Mortgage Loans – First Liens – Line 3.1					
E.	Mortgage Loans – Other – Line 3.2					
F.	Real Estate – Properties Occupied by Society – Line 4.1					
G.	Real Estate – Properties Held for the Production of Income – Line 4.2					
H.	Real Estate – Properties Held for Sale – Line 4.3					
I.	Contract Loans (including Premium Notes) – Line 6					
J.	Derivatives – Line 7					
K.	Cash, Cash Equivalents & Short Term – Line 5					
L.	Other Invested Assets – Line 8					
M.	Receivable for Securities – Line 9 minus Payable for Securities – Page 3, Line 21.8, Column 1					
N.	Securities Lending Reinvested Collateral Assets – Line 10					
O.	Aggregate Write-ins for Invested Assets – Line 11					
P.	Total					
Q.	Total of Ratio Column 5 Disregarding Sign					

Result = Q / 15 %

- If P for either current or prior year is zero or negative, result is automatically considered unusual (U).

- Ratio is calculated as follows: First determine the percentage of total assets from each asset type for CY and PY. Next, determine the difference in the percentage of assets between the two years for each asset type. Finally, the total of these differences, without regard to sign, is divided by the number of asset types to determine the change in the percentage of assets for the average asset type.

This ratio result represents the average change in the percentage of total cash and invested assets for the classes of assets listed above, less payable for securities from the Liabilities, Surplus and Other Funds page of the annual financial statement.

The usual range includes all results less than 5 percent. See the general comments on investments titled "Fraternal Investment Ratios," preceding Ratio 3 and the comments titled "Fraternal Change in Operations Ratios," preceding Ratio 8.

Branded Risk(s): CR, MK, ST

FRATERNAL CHANGE IN OPERATIONS RATIO 11 – CHANGE IN RESERVING

		CURRENT YEAR	PRIOR YEAR
A. Increase in Agg. Reserves – Life Insurance	Page 6, Line 17, Column 2		
B. Net Single Premiums – Life Insurance	Page 9, Line 10.4, Column 2		
C. Net Renewal Premiums – Life Insurance	Page 9, Line 19.4, Column 2		

Result = {[CY A / (B+C)] – [PY A / (B+C)] } * 100 _____ %

- If A and (B+C) for current or prior year are both zero or negative, [A / (B+C)] = 0 for that year.
- If A is positive and (B+C) is zero or negative for current or prior year, [A / (B+C)] = 100% for that year.

- The Change in Reserving ratio represents the number of percentage points of difference between the reserving ratio for current and prior years. For each of these years, the reserving ratio is equal to the aggregate increase in reserves for individual fraternal insurance taken as a percentage of renewal and single premiums for individual fraternal insurance.

Positive ratio results indicate an increase in this ratio from the prior year. Negative results indicate a decrease. The usual range of the number of percentage points of difference between the reserving ratios for current and prior years includes all results less than 20 percent but greater than -20 percent. For societies with no industrial or ordinary fraternal lines of business, a ratio value of zero, which is within the range of acceptability for the ratio, will be reported.

See the comments titled “Fraternal Change in Operations Ratios,” preceding Ratio 8.

National Association of Insurance Commissioners

The National Association of Insurance Commissioners (NAIC) is the U.S. standard-setting and regulatory support organization created and governed by the chief insurance regulators from the 50 states, the District of Columbia and five U.S. territories. Through the NAIC, state insurance regulators establish standards and best practices, conduct peer review, and coordinate their regulatory oversight. NAIC staff supports these efforts and represents the collective views of state regulators domestically and internationally. NAIC members, together with the central resources of the NAIC, form the national system of state-based insurance regulation in the U.S.

For more information, visit **www.naic.org**.

NOTES TO FINANCIAL STATEMENTS

Note 1 – Summary of Significant Accounting Policies and Going Concern

A. Accounting Practices

Effective January 1, 2001, and subject to any deviations prescribed or permitted by the Massachusetts Insurance Commissioner, the accompanying financial statements of Liberty Mutual Insurance Company (the "Company") have been prepared in conformity with the National Association of Insurance Commissioners ("NAIC") Accounting Practices and Procedures Manual ("APP Manual").

The Company does not have any prescribed or permitted accounting practices.

B. Use of Estimates in the Preparation of the Financial Statements

The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues, and expenses. It also requires estimates in the disclosure of contingent assets and liabilities. Actual results could differ from these estimates.

C. Accounting Policies

Premiums are earned over the terms of the related policies and reinsurance contracts. Unearned premium reserves are established to cover the unexpired portion of premiums written. Such reserves are computed by pro-rata methods. Expenses incurred in connection with acquiring new insurance business, including acquisition costs such as sales commissions, are charged to operations as incurred. Expenses incurred are reduced for ceding allowances received or receivable.

In addition, the Company applies the following accounting policies, where applicable:

1. Short term investments are carried at cost, adjusted where appropriate for amortization of premium or discount, or fair value as specified by the Purposes and Procedures Manual of the NAIC Investment Analysis Office (SVO Manual).

2. Bonds are carried at cost, adjusted where appropriate for amortization of premium or discount, or fair value as specified by the SVO Manual.

3. Common stocks are carried at fair value, except that investments in stocks of subsidiaries, controlled and affiliated ("SCA") companies are carried according to Note 1C(7).

4. Preferred stocks are carried at cost or fair value as specified by the SVO Manual. Preferred stocks of SCA companies are carried according to Note 1C(7).

5. Mortgage loans are carried at unpaid principal balances, less impairments as specified by the SVO Manual.

6. Mortgage backed/asset backed securities are carried at amortized cost or fair value based on guidance in the SVO Manual. Prepayment assumptions for mortgage backed/asset backed securities are based on market expectations. The retrospective adjustment method is used to value all mortgage backed/asset backed securities.

7. Investments in SCA companies are carried in accordance with SSAP No. 97, *Investments in Subsidiary, Controlled, and Affiliated Entities, A Replacement of SSAP No. 88* , and the SVO Manual.

8. Investments in joint ventures, partnerships, and limited liability companies are carried in accordance with SSAP No. 48, *Joint Ventures, Partnerships and Limited Liability Companies* , and the SVO Manual.

9. Derivative Securities, refer to Note 8.

10. Investment income is anticipated as a factor in the premium deficiency calculation, in accordance with SSAP No. 53, *Property Casualty Contracts - Premiums* . Refer to Note 30.

11. Unpaid losses and loss adjustment expenses include an amount determined from individual case estimates and an amount, based on past experience, for losses and loss adjustment expenses incurred but not reported. Such liabilities are necessarily based on assumptions and estimates, and while management believes the amount is adequate, the ultimate liability may be in excess of or less than the amount provided. The methods, for making such estimates and for establishing the resulting liability, are continually reviewed and follow current standards of practice. Any adjustments to the liability are reflected in the period that they are determined.

12. The Company did not change its capitalization policy in 2018.

13. The Company has no pharmaceutical rebate receivables.

D. Going Concern

The Company is not aware of any conditions that would impact its ability to continue as a going concern.

Note 2 – Accounting Changes and Corrections of Errors

There were no material changes in accounting principles and/or correction of errors.

NOTES TO FINANCIAL STATEMENTS

Note 3 - Business Combinations and Goodwill

A. Statutory Purchase Method

On May 1, 2017, the Company directly acquired a 100% ownership and all of the issued and outstanding voting shares of Ironshore Inc. ("Ironshore"), a holding company, which is the upstream parent of various subsidiaries that are engaged in insurance and non-insurance activity. The transaction was accounted for as a statutory purchase and the cost was $2,935,288,000, resulting in goodwill in the amount of $1,063,290,591. Goodwill amortization relating to the purchase of Ironshore was $106,329,059 for year ended December 31, 2018; goodwill is being amortized over ten years.

On June 9, 2010, the Company purchased LMFIC's 2.892% holdings of the shares of Liberty Insurance Holdings, Inc. ("LIH"), a non-insurance holding company, for $249,957,350 in cash and securities and EICOW's 4.048% holdings of shares of LIH for $349,871,398 in cash and securities. The purchase price represented the estimated fair value of the LIH shares. The transaction resulted in $288,195,370 of goodwill to LMIC. Goodwill amortization was $28,819,537 for year ended December 31, 2018; goodwill is being amortized over ten years.

On August 24, 2007, the Company and three affiliates (Liberty Mutual Fire Insurance Company ("LMFIC"), a Wisconsin insurance company; Peerless Insurance Company ("PIC"), a New Hampshire insurance company; and Employers Insurance Company of Wausau ("EICOW"), a Wisconsin insurance company) acquired all of the issued and outstanding voting shares of Ohio Casualty Corporation, a non-insurance holding company, which is the upstream parent of four property casualty insurance companies. The Company directly acquired a 78% ownership interest in Ohio Casualty Corporation, while the affiliates account for the remaining 22% (LMFIC 6%, PIC 8%, and EICOW 8%). The transaction was accounted for as a statutory purchase and the cost was $2,168,405,460, resulting in goodwill in the amount of $1,147,694,340. Goodwill was fully amortized as of December 31, 2017.

Purchased Entity	Acquisition Date	Cost of Acquired Entity	Original amount of admitted goodwill	Admitted goodwill as of the reporting date	Amount of goodwill amortized during the reporting period	Admitted goodwill as a % of SCA, BACV, gross of admitted goodwill
Ironshore Inc.	May 1, 2017	$2,935,288,000	$1,063,290,591	$886,075,493	$106,329,059	38.38%
Liberty Insurance Holdings, Inc.	June 9, 2010	$249,957,350	$288,195,370	$41,548,166	$28,819,537	0.72%

B. Statutory Mergers

The Company did not enter into any statutory mergers during the year.

C. Impairment Loss

The Company did not recognize an impairment loss during the period.

Note 4 – Discontinued Operations

The Company has no discontinued operations.

Note 5 - Investments

A. Mortgage Loans, including Mezzanine Real Estate Loans

1. The maximum and minimum lending rates for mortgage loans during 2018 were:

Farm mortgages	N/A
Residential mortgages	N/A
Commercial mortgages	3.620% and 5.500%
Mezzanine	N/A

2. The maximum percentage of any one loan to the value of security at the time of the loan, exclusive of insured or guaranteed or purchase money mortgages was: 75%

3. Taxes, assessments and any amounts advanced and not included in the mortgage loan total:

2018	2017

c. Other collateral recognized	-	-
d. Receivables recognized from a government guarantee of the foreclosed mortgage loan	-	-

9. Interest income on impaired commercial mortgage loans is recognized until the loans are more than 90 days delinquent. Interest income and accrued interest receivable are reversed when a loan is put on non-accrual status. Interest income on loans more than 90 days delinquent is recognized in the period the cash is collected. Interest income recognition is continued when the loan becomes less than 90 days delinquent and management determines it is probably that the loan will continue to perform.

B. Debt Restructuring

	2018	2017
1. The total recorded investment in restructured loans, as of year end	$ 4,201,540	$ 6,036,169
2. The realized capital losses related to these loans	$ -	$ -
3. Total contractual commitments to extend credit to debtors owning receivables whose terms have been modified in troubled debt restructurings	$ -	$ -

C. Reverse Mortgages

The Company has no reverse mortgages.

D. Loaned Backed Securities

1. Prepayment speed assumptions are updated monthly with data sourced from the Bloomberg data service.

2. All Loaned Backed Securities with a recognized other-than-temporary impairment disclosed in the aggregate as of December 31, 2018: None

NOTES TO FINANCIAL STATEMENTS

3. Each Loaned Backed Security with a recognized other-than-temporary impairment held by the company at December 31, 2018:

1	2	3	4	5	6	7
CUSIP	Book/Adj Carrying Value Amortized cost before current period OTTI	Projected Cash Flows	Recognized other-than-temporary impairment	Amortized cost after other-than-temporary impairment	Fair Value at time of OTTI	Date of Financial Statement Where Reported
05539TAR6	16,543	7,060	9,482	7,060	6,353	3/31/2018
05539TAR6	9,980	7,324	2,656	7,324	1,629	9/30/2018
Total	XXX	XXX	12,138	XXX	XXX	XXX

4. All impaired Loaned Backed Securities for which an other-than-temporary impairment has not been recognized in earnings as a realized loss as of December 31, 2018:

a. The aggregate amount of unrealized losses:

1. Less than 12 Months	$ (25,129,084)
2. 12 Months or Longer	$ (40,123,125)

b. The aggregate related fair value of securities with unrealized losses:

1. Less than 12 Months	$ 1,063,807,297
2. 12 Months or Longer	$ 1,472,980,515

5. The Company reviews fixed income securities for impairment on a quarterly basis. Securities are reviewed for both quantitative and qualitative considerations including, but not limited to: (a) the extent of the decline in fair value below book value, (b) the duration of the decline, (c) significant adverse changes in the financial condition or near term prospects of the investment or issuer, (d) significant change in the business climate or credit ratings of the issuer, (e) general market conditions and volatility, (f) industry factors, and (g) the past impairment of the security holding or the issuer. If the Company believes a decline in the value of a particular investment is temporary, the decline is recorded as an unrealized loss in policyholders' equity. If the decline is believed to be "other-than-temporary," and the Company believes it will not be able to collect all cash flows due on its fixed income securities, then the carrying value of the investment is written down to the expected cash flow amount and a realized loss is recorded as a credit impairment.

E. Dollar Repurchase Agreements and/or Securities Lending Transactions

1. On December 1, 2017, LMIC replaced its $1,000,000,000 repurchase agreement with a $250,000,000 repurchase agreement for a three-year period, which terminates December 1, 2020. As of December 31, 2018, no borrowings were outstanding under the agreement.

On November 29, 2017, the Company terminated its $1,000,000,000 committed repurchase agreement that was due to expire July 3, 2018.

On November 24, 2017, the Company entered into a $250,000,000 committed repurchase agreement, which terminates on November 24, 2020. As of December 31, 2018, no borrowings were outstanding under the agreement.

2. The Company has not pledged any of its assets as collateral as of December 31, 2018.

3. Collateral Received

a. Aggregate Amount Collateral Received

	Fair Value

(h) Total Collateral Received	-

b. The fair value of that collateral and of the portion of that collateral that it has sold or re-pledged $ 696,996,940

c. All collateral is received in the form of cash and/or securities equal to or in excess of 102% of the loaned value and are maintained in a separate custody account. Cash collateral is reinvested into short-term investments as outlined in the terms of the investment agreement. Per the terms of the investment agreement the Company has the right and ability to redeem any eligible securities on short notice.

4. Securities Lending Transactions Administered by an Affiliated Agent

The Company's security lending transactions are not administered by an affiliate agent.

5. Collateral Reinvestment

(l) Securities Received	-	-
(m) Total Collateral Reinvested	-	-

b. The reporting entity's sources of cash that it uses to return the cash collateral is dependent on the liquidity of the current market conditions. Under current conditions, the reporting entity could liquidate all or a portion of its cash collateral reinvestment securities in order to meet the collateral calls that could come due under a worst-case scenario.

6. The Company has not accepted collateral that it is not permitted by contract or custom to sell or re-pledge.

7. The Company has not accepted collateral that extends beyond one year from the reporting date for securities lending transactions.

F. Repurchase Agreements Transactions Accounted for as Secured Borrowing

Not applicable.

G. Reverse Repurchase Agreements Transactions Accounted for as Secured Borrowing

Not applicable.

H. Repurchase Agreements Transactions Accounted for as a Sales

Not applicable.

I. Reverse Repurchase Agreements Transactions Accounted for as a Sale

Not applicable.

J. Real Estate

1. The Company recognized an impairment on its commercial real estate property located in Hopkinton, MA in the amount of $7,350,589 during the year. The property was deemed held for sale during the year and the impairment reflects the difference between net book value and the estimated sales price. The impairment is in the "Net realized capital gains" caption on the Statement of Income.

2. During 2018, the Company recognized a loss of $39,129,715 on the disposal of leasehold improvements attributable to the 10 St. James and 75 Arlington Properties which were sold in January 2017. As part of the sale transaction the Company leased back space, transferring its existing lease with the Company's subsidiary, St. James/Arlington Real Estate Limited Partnership, to the new owner. When the sale was recorded, the leasehold improvements were excluded from the building's book value in the calculation of the gain, as the lease was still in place. Upon further review in 2018, it was determined the leasehold improvements should have been disposed of at the time of the sale.

3. The Company classified one commercial real estate property as held for sale during the year located in Hopkinton, MA. The Company sold one property during the year, a parcel of land located in Wausau, WI, and recognized a gain of $2,164,117. The gain is in the "Net realized capital gains" caption on the Statement of Income.

4. The Company has not experienced any changes to a plan of sale for investment in real estate.

5. The Company does not engage in retail land sale operations.

6. The Company does not hold real estate investments with participating mortgage loan features.

K. Investments in Low-Income Housing Tax Credits ("LIHTC")

1. There are thirteen years remaining of unexpired tax credits. The required holding period for the LIHTC investment is fifteen years.

2. There were $52,477,976 of LIHTC and other tax benefits recognized during the year.

3. The balance of the investment recognized in the statement of financial position for the current year is $195,051,972.

4. The Company's LIHTC property is required to meet regulatory benchmarks to comply with the LIHTC program which include the review of tenant files. Oversight of the projects is administered by the State Housing agencies.

5. The carrying value of the Company's investment in LIHTC did not exceed 10% of its admitted assets.

6. The Company did not recognize any impairment loss on its LIHTC investment during the year.

7. The Company did not write-down its LIHTC investment or reclassify the LIHTC during the year due to the forfeiture or ineligibility of tax credits.

Note 6 - Joint Ventures, Partnerships and Limited Liability Companies

A. Investments in joint ventures, partnerships and limited liability companies that exceed 10% of its admitted assets

The Company has no investments in joint ventures, partnerships, or limited liability companies that exceed 10% of its admitted assets

B. Impairments on joint ventures, partnerships or limited liability companies

The Company invests in limited partnerships that are reported in accordance with SSAP No. 48. These limited partnerships are valued by the equity method using traditional private equity valuation measures. Interim poor performance which indicates a probable inability to recover the carrying amount of the assets leads to impairment losses being recognized by management. Management may also engage to sell limited partnership interests which may also lead to impairment losses being recognized. The Company did not realize any impairment losses during the year.

Note 7 - Investment Income

A. Accrued Investment Income

The Company does not admit investment income due and accrued if amounts are over 90 days past due.

B. Amounts Nonadmitted

No amounts were excluded as of December 31, 2018.

Note 8 - Derivative Instruments

A, B, C. Derivative financial instruments utilized by the Company during 2018 and 2017 included foreign currency forward contracts, commodity swap agreements, commodity and equity option agreements, and interest rate futures contracts.

Market risk is defined as the risk of adverse financial impact due to fluctuations in market rates or prices. To mitigate this risk, the Company's senior management has established risk control limits for derivative transactions. Credit/counterparty risk is defined as the risk of financial loss if a counterparty is either unable or unwilling to repay borrowings or settle a transaction in accordance with the underlying contractual terms. The Company manages credit and counterparty risk by using highly rated counterparties and obtaining collateral, where appropriate. Collateral requirements are determined after a comprehensive review of the credit quality of each counterparty and the collateral requirements are monitored and adjusted as needed.

The Company uses derivatives for risk management and to increase investment portfolio returns through asset replication. The Company does not use derivatives for speculative purposes. The Company may also acquire derivatives as additions to bond, common stock, or preferred stock investments. These derivatives are ancillary to the overall investment and immaterial to the underlying investment portfolio.

The following summarizes the objectives and accounting policies for each type of derivative used:

NOTES TO FINANCIAL STATEMENTS

The Company uses foreign currency forward contracts to manage foreign currency risk associated with holding foreign currency denominated investments. Foreign currency forward contracts receive non-hedge accounting treatment and the change in fair value of open contracts is reported as net unrealized gains or losses in unassigned surplus. Cash settlement is required when the contract matures. Gains or losses at maturity are recorded as net realized capital gains or losses.

The Company uses swap agreements as well as purchased and written call and put options to manage price risk associated with oil and gas price indices. The swap agreements and options receive non-hedge accounting treatment and the change in fair value of open contracts is reported as net unrealized gains or losses in unassigned surplus. Periodic settlements of the swap agreements, which represent amounts receivable from or payable to the counterparty are based on the settlement terms of the agreement and any gains or losses are recorded as net realized capital gains or losses. Cash settlement for the options only occurs if the options are exercised. Gains at the exercise date are reported as net realized gains.

The Company uses purchased equity index call options to increase equity exposure through asset replication. Changes in fair value of the options are reported as net unrealized gains in unassigned surplus. Cash settlement only happens if the options are exercised. Gains at the exercise date are reported as net realized gains. Option premium paid or received at contract inception is amortized into investment income over the life of the derivative.

The Company uses interest rate futures contracts to manage interest rate risk associated with holding certain fixed income investments. Daily cash settlements of variation margins are required for futures contracts and is based on the changes in daily prices. The daily cash settlements of margin gains or losses for futures contracts that received non-hedged accounting treatment and have terminated are reported in net realized capital gains or losses. The daily cash settlements of margin gain or losses for open futures contracts that receive non-hedge accounting treatment are reported as net unrealized capital gains or losses within unassigned surplus.

D. The Company entered into commodity and equity options and futures contracts in 2018 and 2017 which required the payment/receipt of premiums at either the inception of the contracts or throughout the life of the contracts, depending on the agreement with counterparties and brokers.

E. The Company did not have gains or losses in net unrealized capital gains or losses that represented a component of any derivatives' gain or loss that was excluded from the assessment of hedge effectiveness in 2018 or 2017.

F. The Company did not have gains or losses in net unrealized gains or losses that resulted from derivatives that no longer qualify for hedge accounting treatment in 2018 and 2017.

G. The company did not have derivatives accounted for as cash flow hedges of a forecasted transaction

Note 9 - Income Taxes

A. The components of the net deferred tax asset/(liability) at December 31 are as follows:

1.

	12/31/2018		
	(1)	(2)	(3) (Col 1+2)

(2) Real estate	-	-	-

NOTES TO FINANCIAL STATEMENTS

(3) Other (including items <5% of total capital tax liabilities)	-	-	-
(99) Subtotal	326,600,000	324,316,000	2,284,000
(c) Deferred tax liabilities (3a99 + 3b99)	711,495,000	674,291,000	37,204,000
4. Net deferred tax assets/liabilities (2i – 3c)	$ 852,343,375	$ 1,201,277,541	$ (348,934,166)

D. Effective tax rates differ from the current statutory rate of 21% principally due to the effects of discounting of unpaid losses and loss adjustment expenses, charitable contributions, intercompany dividends, LP & LLC income, tax exempt income, limits on charitable contributions, limits on unearned premium reserve deductions, abandonments, compensation adjustments, impairments, fixed assets, tax free exchanges, foreign tax credits generated, foreign branch tax, and revisions to prior year estimates.

E. The Company has no net operating loss carry-forward available to offset future net income subject to Federal income tax.

The Company has foreign tax credit carry-forwards which expire as follows:

Year Generated	Amount	Expiration
2018	$ 2,042,000	2028

The Company has general business credit carry-forwards which expire as follows

Year Generated	Amount	Expiration
2017	$ 6,068,000	2037
2018	$ 42,438,000	2038

The Company recognizes $51,866,000 of AMT credit as a current-year recoverable. An AMT credit carry-forward DTA of $27,088,000 is expected to be utilized against regular tax or refunded in the future. The alternative minimum tax credit carry-forward does not expire. Ending carryforward balance is computed as follows:

AMT Credit Carryforward	
Beginning Balance	$ 84,451,000
Current Year AMT Credit Recovered	(51,866,000)
Other Current Year Adjustments to AMT Credit Carryforward	(5,497,000)
Sequestration	-
Total AMT Credit Ending Balance	27,088,000
AMT Credit Carryforward Non-Admitted	-
Total AMT Credit Carryforward subject to SSAP101 DTA admittance limitations	$ 27,088,000

The amount of Federal income taxes incurred and available for recoupment in the event of future losses are none from the current year and none from the preceding year.

F. The Company's Federal income tax return is consolidated with the following entities:

The method of federal income tax allocation is subject to a written agreement. Allocation is based upon separate return calculations with credit applied for losses as appropriate. The Company has the enforceable right to recoup prior year payments in the event of future losses.

G. The Company does not expect the Federal and Foreign income tax loss contingencies, as determined in accordance with SSAP No. 5R, Liabilities, Contingencies and Impairments of Assets, with the modifications provided in SSAP No. 101, Income Taxes – A Replacement of SSAP No. 10R and SSAP No. 10, to significantly increase within twelve months of the reporting date.

H. The Company's estimate of the one-time repatriation transition tax (RTT) is an expense of $1,610,981. The Company anticipates to remit full payment of the RTT with their 2018 tax return. Therefore, the Company is not anticipating to make the election to pay the RTT in installments.

Global intangible low-taxed income (“GILTI”) is treated by the Company as a period expense.

Note 10 - Information Concerning Parent, Subsidiaries, Affiliates, and Other Related Parties

A. All of the outstanding shares of capital stock of the Company are held by Liberty Mutual Group Inc. ("LMGI"), a Massachusetts company. The ultimate parent of LMGI is Liberty Mutual Holding Company Inc. (“LMHC”), a Massachusetts company.

B. Transactions between the Company and its affiliates are listed on Schedule Y Part 2.

C. As of December 31, 2018, the Company had the following capital transactions with its parent and subsidiaries:

1.	Received capital contributions of	$ 560,530,061
2.	Received return of capital distributions of	$ 1,329,400,093
3.	Contributed capital in the amount of	$ 2,134,547,081
4.	Received dividends in the amount of	$ 2,211,605,223

D. At December 31, 2018 the Company reported a net $156,941,230 due from affiliates.

E. The Company has entered into guarantees to or on behalf of the following affiliates, as described in Note 14A.

America First Insurance Company
Liberty Information Technology Limited
Liberty Citystate Holdings Pte. Ltd.
Liberty International Underwriters Limited (Hong Kong)

Under these Agreements, the Company may provide these subsidiaries with office space, supplies, equipment, telephone and wire services, the use of computers and similar machines and services of personnel employed by the Company and LMGI. Services provided include, but are not limited to, risk underwriting, claims processing, claims adjustments, policyholder services, contract management and administration. The Company is reimbursed for the cost of all services which it provides under these Agreements.

G. The Company is a member of a holding company structure as illustrated in Schedule Y Part 1.

H. The Company does not own shares of any upstream intermediate or ultimate parent, either directly or indirectly via a downstream subsidiary, controlled or affiliated company.

NOTES TO FINANCIAL STATEMENTS

I. The Company owns 100.00% of Liberty Insurance Holdings, Inc. (“LIH, Inc.”), a downstream holding company. LIH, Inc. is carried at audited U.S Generally Accepted Accounting Principles (“GAAP”) equity, adjusted for statutory basis of accounting in accordance with SSAP No 97.

At December 31, 2018, the Company’s ownership interest in LIH, Inc.’s assets, liabilities and results of operations are as follows:

	Assets	Liabilities	Results of Operations
Total LIH, Inc.	$ 5,768,612,705	$ -	$ 1,550
Total LMIC unamortized admitted goodwill	$ 41,548,166	$ -	$ -

J. The Company did not recognize any impairment write down for its SCA companies during the statement period.

K. The Company does not use CARVM in calculating its investment in its foreign subsidiaries.

L. The Company utilizes the look-through approach for the valuation of the following downstream non-insurance holding companies:

	Carrying Value
Berkeley/Columbus III, LLC	$ 346,846,584
Berkeley Management Corporation	$ 19,391,610
Ironshore Holdings (U.S.) Inc.	$ 381,409,604
Liberty Insurance Holdings Inc.	$ 5,768,612,705
Liberty International Holdings Inc.	$ 4,397,198,892
Liberty Mutual Captive Holdings LLC	$ 9,915,891
Liberty Mutual Mexico LLC	$ 60,753,890
Ohio Casualty Corporation	$ 1,434,491,299

The company has limited the value of its investment in these companies to the value contained in the audited financial statements. All liabilities, commitments, contingencies, guarantees or obligations of the downstream non-insurance holding company, which are required to be recorded as liabilities, commitments, contingencies, guarantees or obligations under applicable accounting guidance, are reflected in the company’s determination of the carrying value of the investment in the downstream non-insurance holding company.

N. Investment in Insurance SCAs

The Company does not hold investments in Insurance SCAs for which the audited statutory equity reflects a departure from the NAIC statutory accounting practices and procedures.

O. SCA Loss Tracking

The Company does not hold any material investments in SCAs which are in a deficit position.

Note 11 - Debt

A. Debt (Including Capital Notes)

The Company maintains two $250,000,000 committed repurchase agreements for general corporate purposes (See Note 5E). There were no outstanding borrowings as of December 31, 2018.

B. FHLB (Federal Home Loan Bank) Agreements

1. The Company is a member of the Federal Home Loan Bank (FHLB) of Boston. Through its membership, the Company has conducted business activity (borrowings) with the FHLB. On March 23, 2012, the Company borrowed $127,000,000 under the agreement with a maturity date of March 23, 2032. On April 2, 2012, the Company borrowed $23,000,000 under the agreement with a maturity date of April 2, 2032. The borrowings are fully collateralized. Interest on the March 23, 2012 borrowing accrues at an annual rate of 4.24%. Interest on the April 2, 2012 borrowing accrues at an annual rate of 4.25%. For December year-to-date, the Company has incurred and paid interest expense of $6,450,665. It is part of the Company's strategy to utilize these funds as backup liquidity. The Company has determined the actual maximum borrowing capacity as $2,000,000,000 per Board of Directors consent.

NOTES TO FINANCIAL STATEMENTS

c. FHLB - Prepayment Obligations

	Does the Company have prepayment obligations under the following arrangements (yes/no)?
Debt	NO
Funding Agreements	N/A
Other	N/A

C. The Company maintains a $450,000,000 revolving line with Liberty Mutual Fire Insurance Company ("LMFIC"), a $150,000,000 revolving line of credit with Employers Insurance Company of Wausau ("EICOW"), a $140,000,000 revolving line of credit with Ohio Casualty Insurance Company ("OCIC"), a $100,000,000 revolving line of credit with Safeco Insurance Company of America ("SICOA"), and a $650,000,000 revolving line of credit with Peerless Insurance Company ("PIC") (see Note 10F). For December year-to-date 2018, the Company has incurred and paid interest expense of $7,479,669 and $10,476,962, respectively. On May 2, 2018, LMIC repaid $146,994,494 of outstanding borrowings on the LMFIC agreement, $144,381,152 outstanding on the EICOW agreement, $78,352,852 outstanding on the SICOA agreement, $35,321,363 outstanding on the OCIC agreement, and $321,835,538 outstanding on the PIC agreement. At December 31, 2018, there were no outstanding borrowings.

The loans from ASIC and IIC were paid off on September 21, 2017, the loan from LMGI was paid off on September 28, 2017 and the loan from OCIC was paid off on October 25, 2017.

Note 12 – Retirement Plans, Deferred Compensation, Postemployment Benefits and Compensated Absences and Other Postretirement Benefit Plans

A. Defined Benefit Plan

Eligible employees may participate in the Liberty Mutual Retirement Benefit Plan for U.S. Employees, the Supplemental Income at Retirement Plan (SIRP) which has both a defined benefit component and defined contribution savings component, the Liberty Mutual 401(k) plan (defined contribution savings) and the U.S. postretirement health and life insurance benefit plans sponsored by the Holding Company, Liberty Mutual Group Inc. (LMGI). Accordingly, the plan assets and obligations are not included in the Company's summary of assets and obligations below.

The Company continues to sponsor non-contributory defined benefit pension and contributory defined contribution savings plans covering substantially all Canadian employees and certain U.S. employees. Also, the Company continues to provide certain health care and life insurance postretirement benefits for Canadian and certain U.S. employees. The pension and postretirement benefits and eligibility are based on age, years of service and the employee's compensation as more fully defined in the plan documents. In 2018, the Company announced a Canada pension plan freeze effective December 31, 2019. The impact is reflected as a curtailment in the Change in Benefit Obligation table below. As of December 31, the Company accrued pension and postretirement cost in accordance with actuarially determined amounts.

A summary of assets, obligations, and assumptions of the Company sponsored Pension Plans and Postretirement Benefit Plans are as follows as of December 31, 2018 and December 31, 2017.

1. Change in Benefit Obligation

a. Pension benefits

c. Net recognized gains and losses	$ 4,291,207	$ 6,126,034	$ 1,308,611	$ 2,603,877

7. Amounts in unassigned funds (surplus) that have not yet been recognized as components of net periodic benefit cost

	Pension Benefits		Postretirement Benefits	
	2018	2017	2018	2017
a. Net transition asset or obligation	$ 987,767	$ 1,666,087	$ 83,104,564	$ 89,040,605
b. Net prior service cost or credit	(1,499,954)	(1,851,751)	3,196,640	6,654,178
c. Net recognized gains and losses	$ 53,355,373	$ 73,238,463	$ 3,338,394	$ 29,478,856

8. Weighted-average assumptions used to determine net periodic benefit cost as of Dec. 31

	Pension Benefits		Postretirement Benefits	
	2018	2017	2018	2017
a. Weighted-average discount rate	4.00%	4.34%	4.36%	4.93%
b. Interest cost effective interest rate	3.71%	3.76%	4.07%	4.51%
c. Service cost discount rate	3.76%	4.15%	4.47%	5.03%
d. Expected return on plan assets	4.00%	4.00%	N/A	N/A
e. Rate of compensation increase	3.74%	3.63%	N/A	N/A

Weighted-average assumptions used to determine projected benefit obligations as of Dec. 31:

	Pension Benefits		Postretirement Benefits	
	2018	2017	2018	2017
d. Weighted-average discount rate	4.39%	3.77%	4.86%	4.23%
e. Rate of compensation increase	3.77%	3.74%	N/A	N/A

For measurement purposes, a 7.43% percent annual rate of increase in the per capita cost of covered health care benefits was assumed for 2018. The rate was assumed to decrease gradually to 4.50% percent for 2032 and remain at that level thereafter.

9. The amount of the accumulated benefit obligation for the defined benefit pension plans was $179,654,283 for the current year and $195,407,458 for the prior year.

10. Not applicable.

11. Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plans. A one-percentage-point change in assumed health care cost trend rates would have the following effects:

	1 Percentage Point Increase	1 Percentage Point Decrease
a. Effect on total of service and interest cost components	$ 299,092	$ (122,346)
b. Effect on postretirement benefit obligation	$ 1,617,439	$ (1,188,826)

NOTES TO FINANCIAL STATEMENTS

12. The following estimated future payments, which reflect expected future service, as appropriate, are expected to be paid in the years indicated:

	Year(s)	Amount
a.	2019	$ 14,728,987
b.	2020	$ 15,226,791
c.	2021	$ 16,102,262
d.	2022	$ 16,853,890
e.	2023	$ 17,735,880
f.	2024 to 2028	$ 101,722,910

13. The Company currently intends to make a contribution of $3,839,944 to the defined benefit pension plan in 2019 as required by regulation.

14-19. Not applicable.

20. See items 1-9.

21. The Company elected to apply the transition guidance to record the surplus impact of adopting SSAP No. 92 - Accounting for Postretirement Benefits Other Than Pensions, SSAP No. 102 Accounting for Pensions, and EITF 06-04 Accounting for Split-Dollar Life Insurance Arrangements in 2013. The full transition surplus impact as of January 1, 2018 was $42,388,474. During 2018, $38,617,047 was recognized resulting in an end of year transition liability of $3,771,427. It is expected that the remaining surplus impact will be recognized over the next four years.

B. Information about Plan Assets

The Company recognizes that, based on historical data, the asset classes most likely to produce the greatest return in excess of inflation over time are also likely to exhibit the most volatility. Conversely, the asset classes likely to be the least volatile are likely to produce the lowest return over time. Therefore, the investment philosophies and strategies must take into account both return and risk objectives

Based on the following considerations, the Company can tolerate a moderate amount of risk while striving to maximize investment returns:

i. The Company is responsible for financing any unfunded liabilities emerging because of poor investment returns. Therefore, the Company has a direct exposure to risk. While it is important to avoid excessive volatility in investment returns, the Company can tolerate some volatility risk;

ii. The Company contributes to the Plan in compliance with regulatory requirements and at a level sufficient to finance the defined benefits. The Company will establish these contributions based on the advice of an actuary. However, periodic increases in pension contributions, to finance unfunded liabilities emerging from poorer than expected investment performance, should not significantly affect the Company's overall cash flow. Therefore, the Company can tolerate some volatility of investment returns; and,

iii. The Plan is managed on a going concern basis, including management of the assets. In the foreseeable future, it is unlikely that there will be any special liquidity demands on the Plan. Thus, shorter-term fluctuations in security values will not have a significant adverse impact on the financial stability of the Plan. Therefore, the Company can tolerate some volatility of investment returns.

Taking into consideration the investment risk and philosophy of the Plan, the Canada Pension Plan weighted-average asset allocation and target allocation for each major category of plan assets is as follows:

	2018	2017	Target Allocation
Debt Securities	57%	54%	55%-80%
Equity Securities	35%	29%	20%-45%
Other	8%	7%	0%-10%
Total	100%	100%	

The investment strategy for each category of Plan assets is as follows:

Fixed maturities: To achieve superior performance against the FTSE TMX Universe Bond Index over a longer time horizon.

Canadian equities: To achieve superior performance against a composite benchmark of Standard & Poor's/Toronto Stock Exchange over a longer time horizon.

Global equities: To achieve superior performance against the MSCI World ex.- Canada Index over a longer time horizon.

The Plans' assets are administered by the Liberty Mutual Retirement Committee who has the fiduciary responsibility for management of the Plans' assets in accordance with the Liberty Mutual Retirement Benefit Plan for Canadian Employees Statement of Investment Policies and Procedures.

C. Fair Value of Plan Assets

All of the Plan's assets' fair value measurements are based on quoted prices in active markets for identical assets and deemed Level 1 or 2. Fair value measurements of the Plans' assets as of December 31, 2018 and 2017 are as follows:

1. Fair Value Measurements of Plan Assets at December 31, 2018

Description for each class of plan assets	(Level 1)	(Level 2)	(Level 3)	Total
Cash, Cash Equivalents and Short-term Investments	$ 407,150	$ 4,537,904	$ -	$ 4,945,054

Canadian Equities	17,559,817	-	-	17,559,817
Total Plan Assets	$ 26,535,261	$ 40,910,695	$ -	$ 67,445,956

NOTES TO FINANCIAL STATEMENTS

D. Narrative description of expected long term rate of return assumption

The expected long-term rate of return is estimated based on many factors including the expected forecast for inflation, risk premiums for each asset class, expected asset allocation, current and future financial market conditions, and diversification and rebalancing strategies.

E. Defined Contribution Plans

The Company continues to sponsor various contributory defined contribution savings plans for Canadian and certain U.S. employees. The Company's expense charged to operations amounted to approximately $494,092 and $285,543 in 2018 and 2017, respectively. The Company's contribution to the contributory defined contribution savings plans is based on the employee contribution amounts and company performance.

F. Multi-employer Plans

Not applicable.

G. Consolidated/Holding Company Plans

The Company participates in noncontributory defined benefit pension plans and contributory defined contribution savings plans sponsored by LMGI, a Holding Company. In addition, the Company provides certain other postretirement benefits to retired employees through a postretirement health and life insurance plan sponsored by LMGI. The Company has no legal obligation for benefits under these plans subsequent to September 24, 2003 except for the minimum required contributions described in Note 14.

The Holding Company allocates costs to the Company pursuant to the Employee Benefits Plans Cost-Sharing Agreement disclosed in Note 10. The Company's cost allocation for the noncontributory defined benefit pension plans was $45,160,725 and $428,972,110 for 2018 and 2017, respectively. The Company's cost allocation for the contributory defined contribution savings plans was $119,150,638 and $100,491,525 for 2018 and 2017, respectively. The Company's cost allocation for the other postretirement benefit plans was $15,558,769 and $26,399,456 for 2018 and 2017, respectively.

H. Postemployment benefits and Compensated Absences

The Company has no obligations to current or former employees for benefits after their employment but before their retirement other than for compensation related to earned vacation. The liability for earned but untaken vacation has been accrued.

I. Impact of Medicare Modernization Act on Postretirement Benefits (INT 04-17)

Not applicable.

Note 13 - Capital and Surplus, Dividend Restrictions and Quasi-Reorganizations

1. The Company has 100,000 shares authorized, issued and outstanding as of December 31, 2018. All shares have a stated par value of $100.

   The Company has 100,000 shares authorized of Series A Preferred Stock, 7,468 shares issued and outstanding as of December 31, 2018. All shares have a stated par value of $0.01.

2. On December 31, 2008, the Company issued 7,468 preferred shares, at an issuance price of $647,660,000, to its parent, LMGI. Dividends, based on the issuance price, are cumulative and payable on a quarterly basis.

3. There are no dividend restrictions.

4. The Company paid dividends to its parent in 2018 of:

	Ordinary
March	$ 16,191,500
June	$ 16,191,500
September	$ 16,191,500
December	$ 16,191,500
Total	$ 64,766,000

5. The maximum amount of dividends which can be paid by Massachusetts-domiciled insurance companies to shareholders without the prior approval of the Insurance Commissioner is the greater of (a) 10% of surplus or (b) net income, subject to the availability of accumulated undistributed earnings. The maximum dividend payout which may be made without prior approval in 2019 is $2,792,321,300.

6. As of December 31, 2018, the Company has pre-tax restricted surplus of $43,108,583 resulting from retroactive reinsurance contracts.

7. The Company had no advances to surplus.

8. The Company does not hold stock for special purposes.

9. The Company had changes in special surplus funds resulting from prior year's retroactive reinsurance contracts during 2018.

10. The portion of unassigned funds (surplus) represented by cumulative net unrealized losses is ($6,018,824,153) after applicable deferred taxes of $44,235,101.

11. Surplus Notes

Date Issued	Interest Rate	Par Value (Face Amount of Notes)	Carrying Value of Note	Interest And/Or Principal Paid Current Year	Unapproved Interest And/Or Principal	Date of Maturity
5/18/1995	8.50%	$ 140,000,000	$ 139,929,688	$ 11,900,000	$ -	5/15/2025
10/21/1996	7.88%	227,085,000	226,973,229	17,882,944	-	10/15/2026
10/15/1997	7.70%	260,233,000	256,721,113	20,030,134	-	10/15/2097
	Total	$ 627,318,000	$ 623,624,030	$ 49,813,078	$ -	

The 8.50% surplus debenture listed above was issued pursuant to Rule 144A under the Securities Act of 1993, underwritten by Merrill Lynch & Co., Goldman Sachs & Co. and Salomon Brothers Inc. and is administered by The Bank of New York Mellon as registrar/paying agent. The original amount outstanding was $150,000,000. In 2009, pursuant to approval from the Massachusetts Division of Insurance, the Company repurchased $10,000,000 of the outstanding notes. The surplus debenture has the following repayment conditions and restrictions: All interest and maturity payments must be approved by the Massachusetts Division of Insurance.

The 7.875% surplus debenture listed above was issued pursuant to Rule 144A under the Securities Act of 1993, underwritten by CS First Boston, Morgan Stanley & Co. and Salomon Brothers Inc. and is administered by The Bank of New York Mellon as registrar/paying agent. The original amount outstanding was $250,000,000. In 2009, pursuant to approval from the Massachusetts Division of Insurance, the Company repurchased $22,915,000 of the outstanding notes. The surplus debenture has the following repayment conditions and restrictions: All interest and maturity payments must be approved by the Massachusetts Division of Insurance.

The 7.697% surplus debenture listed above was issued pursuant to Rule 144A under the Securities Act of 1993, underwritten by CS First Boston, Goldman Sachs & Co. and Merrill Lynch & Co. and is administered by The Bank of New York Mellon as registrar/paying agent. The original amount outstanding was $500,000,000. In 2009 and 2012, pursuant to approval from the Massachusetts Division of Insurance, the Company repurchased $64,917,000 and $174,850,000, respectively, of the outstanding notes. The surplus debenture has the following repayment conditions and restrictions: All interest and maturity payments must be approved by the Massachusetts Division of Insurance.

12. Quasi-reorganization (dollar impact)

    Not applicable.

13. Quasi-reorganization (effective date)

    Not applicable.

NOTES TO FINANCIAL STATEMENTS

Note 14 - Contingencies

A. Contingent Commitments

1. The Company has made no material commitments or contingent commitments on behalf of affiliates.

2. The Company has made guarantees on behalf of its affiliates as follows:

1 Nature and circumstances of guarantee and key attributes, including date and duration of the agreement	2 Liability recognition of the guarantee	3 Ultimate financial statement impact if action under the guarantee is required	4 Maximum potential amount of future payments (undiscounted)	5 Current status of payment or performance risk of the guarantee

		Total:	$ 252,989,049	* Total should agree to Aggregate maximum potential of future payments line on following reconciliation.

3. Aggregate compilation of guarantee

a. Aggregate Maximum Potential of Future Payments of All Guarantees (undiscounted) the guarantor could be required to make under guarantees. (Should equal total of Column 4 for (2) above.)	$ 252,989,049
b. Current Liability Recognized in F/S:	
1. Noncontingent Liabilities	$ -
2. Contingent Liabilities	$ -
c. Ultimate Financial Statement Impact if action under the guarantee is required	
1. Investments in SCA	$ 252,989,049
2. Joint Venture	$ -
3. Dividends to Stockholders (capital contribution)	$ -
4. Expense	$ -
5. Other	$ -
6. Total (Should equal (3a.)	$ 252,989,049

B. Assessments

The Company is subject to guaranty fund and other assessments by the states in which it writes business. Guaranty fund assessments and premium-based assessments are presumed probable when the premium on which the assessments are expected to be based are written. In the case of loss-based assessments, the event that obligates the entity is an entity incurring the losses on which the assessments are expected to be based.

NOTES TO FINANCIAL STATEMENTS

The Company was subject to a North Carolina Fair Plan assessment of $3,745,440 and a Texas Wind Insurance Association assessment of $4,646,947.

The Company has accrued a liability for guaranty funds and other assessments of $54,759,507 that is offset by future premium tax credits of $1,594,272. Current guaranty fund assessments and assessments based on losses paid are expected to be paid out in the next two years, while premium tax offsets are expected to be realized over the period determined by each individual state once the guaranty fund assessment has been paid. The Company continues to remit payments relating to prior year insolvencies.

Reconciliation of paid and accrued premium tax offsets and policy surcharges at prior year-end to current year-end:

a.	Assets recognized from paid and accrued premium tax offsets and policy surcharges prior year-end	$ 2,026,673
b.	Decreases current year: Premium tax offset applied	$ 1,710,603
c.	Increases current year: Premium tax offset applied	$ 1,278,201
d.	Assets recognized from paid and accrued premium tax offsets and policy surcharges current year-end	$ 1,594,272

C. Gain Contingencies

Not applicable

D. Claims related extra contractual obligations and bad faith losses stemming from lawsuits

The Company paid the following amounts in the reporting period to settle claims related extra contractual obligations or bad faith claims stemming from lawsuits.

	Direct
Claims related to ECO and bad faith losses paid during the reporting period	$ 13,653,585

Number of claims where amounts were paid to settle claims related extra contractual obligations or bad faith claims resulting from lawsuits during the reporting period.

(a) 0-25 Claims	(b) 26-50 Claims	(c) 51-100 Claims	(d) 101-500 Claims	(e) More than 500 Claims
			X	

Indicate whether claim count information is disclosed per claim or per claimant
(f) Per Claim [X] (g) Per Claimant [ ]

E. Product Warranties

The Company does not write product warranty business.

F. Joint and Several Liabilities

The Company is not a participant in any joint and several liabilities.

G. All Other Contingencies

Lawsuits arise against the Company in the normal course of business. Contingent liabilities arising from litigation, income taxes, and other matters are not considered material in relation to the financial position of the Company.

As disclosed in Note 9 F, the Company is a member of a controlled group for federal income tax purposes, and that group includes Liberty Mutual Group Inc. ("LMGI"). LMGI is the plan sponsor of the Liberty Mutual Retirement Benefit Plan, a qualified plan under federal law. Pursuant to federal law, if LMGI has not made the minimum required contributions with respect to the Liberty Mutual Retirement Benefit Plan, the Company, jointly and severally with all other members of the controlled group, would be contingently liable to make such contributions.

The Company routinely assesses the collectability of its premium receivable balances. The Company does not believe the amounts in excess of non-admitted amounts are material.

The Company refunded all premium and interest held in an escrow fund to certain of its policyholders in accordance with North Carolina General Statutes § 58-36-25(b). These distributions represented the full disposition of the Company's escrow fund.

Note 15 - Leases

A. Lessee Leasing Arrangements

1. The Company leases office space, plant and equipment under various non-cancelable operating lease arrangements. The Company's minimum lease obligations, including sales-leaseback transactions, under these agreements are as follows:

Year Ending December 31	Operating Leases
2019	$ 65,080,779
2020	60,100,903
2021	45,222,235
2022	36,415,124
2023	29,846,736
2024 & thereafter	191,436,802
Total	$ 428,102,579

The amount of liability the Company recognized in its financial statements for lease agreements for which it is no longer using the leased property benefits is $16,556,372.

2. The Company's sales-leaseback transactions are included in the operating lease obligations.

B. Leasing as a Significant Part of Lessor's Business Activities

Leasing is not a significant part of the Company's business activities.

Note 16 – Information about Financial Instruments with Off-Balance Sheet Risk and Financial Instruments with Concentrations of Credit Risk

1. The table below summarizes the face amount of the Company's financial instruments with off-balance-sheet risk.

	Assets		Liabilities	
	2018	2017	2018	2017
a. Swaps	14,905,000	-	-	1,800,000
b. Futures	1,904,000	-	1,727,000	-
c. Options	600,000	78,000	-	-
d. Total	17,409,000	78,000	1,727,000	1,800,000

See Schedule DB of the Company's annual statement for additional detail.

The notional amounts specified in the agreements are used to calculate the exchange of contractual payments under the agreements and are generally not representative of the potential for gain or loss on these agreements.

NOTES TO FINANCIAL STATEMENTS

2. The credit risk, market risk, cash requirements, and accounting policies of the Company's derivative instruments utilized during 2018 and 2017 are discussed in Note 8.

3. The Company is exposed to credit-related losses in the event of nonperformance by counterparties to financial instruments, but it does not expect any counterparties to fail to meet their obligations given their high credit ratings. The credit exposure is represented by the fair value of contracts with a positive statement value at the reporting date. Because exchange-traded futures are affected through a regulated exchange and positions are marked to market on a daily basis, the Company has little exposure to credit-related losses in the event of nonperformance by counterparties to such financial instruments. The Company has not incurred any losses on derivative financial instruments due to counterparty non-performance.

4. The Company is required to put up collateral for any futures contracts that are entered. The Company pledges or obtains collateral when certain predetermined exposure limits are exceeded. The amount of collateral that is required is determined by the exchange on which it is traded and is typically in the form of cash. The Company currently puts up cash and U.S. Treasury Bonds to satisfy this collateral requirement.

Note 17 - Sale, Transfer and Servicing of Financial Assets and Extinguishments of Liabilities

A. Transfers of Receivables Reported as Sales

The Company did not have any transfers of receivables reported as sales.

B. Transfers and Servicing of Financial Assets

The Company participates in a Securities Lending Program to generate additional income, whereby certain fixed income and mortgage backed securities are loaned for a period of time from the Company's portfolio to qualifying third parties, via a lending agent. The Company does not participate in term loans; therefore, the Company does not have contractual collateral transactions that extend beyond one year from the reporting date. Borrowers of these securities provide collateral equal to or in excess of 102% of the market value of the loaned securities. Acceptable collateral may be in the form of cash or U.S. Government securities, such as Treasuries and Agency Bonds. The market value of the loaned securities is monitored and additional collateral is obtained if the market value of the collateral falls below 102% of the market value of the loaned securities. Additionally, the lending agent indemnifies the Company against borrower defaults. Cash collateral is carried as an asset with an offsetting liability on the balance sheet, as the collateral is unrestricted and the Company can exercise discretion as to how the collateral is invested. The loaned securities remain a recorded asset of the Company.

At December 31, 2018 the total fair value of securities on loan was $685,060,495, with corresponding collateral value of $696,996,940 of which $669,543,680 represents cash collateral that was reinvested.

C. Wash Sales

1. The Company did not have any wash sale transactions during the year.

2. Not applicable.

Note 18 – Gain or (Loss) to the Reporting Entity from Uninsured A&H Plans and the Uninsured Portion of Partially Insured Plans

A. Administrative Services Only (ASO) Plans

Not applicable

B. Administrative Services Contract (ASC) Plans

Not applicable

C. Medicare or Other Similarly Structured Cost Based Reimbursement Contracts

Not applicable

Note 19 – Direct Premium Written/Produced by Managing General Agents/Third Party Administrators

The Company has no direct premiums written or produced through managing general agents or third party administrators.

Note 20 - Fair Value Measurements

A. Inputs Used for Assets and Liabilities Measured at Fair Value

1. Fair Value Measurements by Levels 1, 2 and 3

Fair value is the price that would be received to sell an asset or would be paid to transfer a liability in an orderly transaction between market participants at the measurement date. In determining fair value, the Company primarily uses the market approach which generally utilizes market transaction data for identical or similar instruments.

Included in various investment related line items in the financial statements are certain financial instruments carried at fair value. Other financial instruments are periodically measured at fair value, such as when impaired, or, for certain bonds and preferred stock, when carried at the lower of cost or market.

The hierarchy level assigned to each security in the Company's portfolio is based on the Company's assessment of the transparency and reliability of the inputs used in the valuation of each instrument at the measurement date. The highest priority is given to unadjusted quoted prices in active active markets for identical assets (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). Securities are classified based on the lowest level of input that is significant to the fair value measurement. The Company recognizes transfers between levels at the end of each reporting period. The three hierarchy levels are defined as follows:

- Level 1 — Valuations based on unadjusted observable quoted market prices in active markets for identical assets or liabilities that the Company has the ability to access.

- Level 2 — Valuations based on observable inputs (other than Level 1 prices), such as quoted prices for similar assets or liabilities at the measurement date, quoted prices in markets that are not active, or other inputs that are observable, either directly or indirectly.

- Level 3 — Valuations based on inputs that are unobservable and significant to the overall fair value measurement and involve measurement judgment. The unobservable inputs reflect the Company's estimates of the assumptions that market participants would use in valuing the assets and liabilities.

NOTES TO FINANCIAL STATEMENTS

The following table summarizes the Company's assets and liabilities that are measured at fair value at December 31, 2018:

Description for each class of asset or liability	(Level 1)	(Level 2)	(Level 3)	Net Asset Value (NAV)	Total
a. Assets at fair value					
Bonds					
U.S. Government & Agency Securities	$ -	$ -	$ -	$ -	$ -
U.S. MBS/ABS of Gov. & Corp. Agencies	-	42,364,331	-	-	42,364,331

Corporate and Other	48,041	687,193,124	4,954,200	-	692,195,365
Foreign Government Securities	-	9,484,697	-	-	9,484,697
Total Bonds	48,041	752,377,786	4,954,200	-	757,380,027
Preferred Stocks					
Industrial and Miscellaneous (Unaffiliated)	1,844,981	13,506,665	10,501,625	-	25,853,271
Total Preferred Stocks	1,844,981	13,506,665	10,501,625	-	25,853,271
Common Stocks					
Industrial and Miscellaneous	1,031,359,821	14,070,466	17,599,328	-	1,063,029,615
Total Common Stocks	1,031,359,821	14,070,466	17,599,328	-	1,063,029,615
Derivative Assets	-	21,110,620	965,933		22,076,553
Total assets at fair value	$ 1,033,252,843	$ 801,065,537	$ 34,021,086	$ -	$ 1,868,339,466
b. Liabilities at fair value					
Derivative Liabilities	$ 91,945	$ -	$ -	$ -	$ 91,945
Total liabilities at fair value	$ 91,945	$ -	$ -	$ -	$ 91,945

The Company did not have significant transfers between Levels 1 and 2 during the period ended December 31, 2018.

2. Rollforward of Level 3 Items

The following tables set forth the fair values of assets basis classified as Level 3 within the fair value hierarchy:

	Balance as of 12/31/2017	Transfers into Level 3	Transfers out of Level 3	Total gains and (losses) included in Net Income	Total gains and (losses) included in Surplus	Purchases	Issuances	Sales	Settlements	Balance as of 12/31/2018
U.S. Government & Agency Securities	$ -	$ -	$ -	$ -	$ -	$ -		$ -	$ -	$ -
U.S. MBS/ABS of Gov. & Corp. Agencies	-	-	(4,566,150)	-	(6,117)	4,568,493		-	3,774	-
U.S. State and Municipal	-	-	-	-	-	-		-	-	-
Corporate and Other	5,097,024	1,886,316	(72,125)	(9,873)	(219,306)	11,876		(1,755,089)	15,377	4,954,200
Foreign Government Securities	-	-	-	-	-	-		-	-	-
Total Bonds	5,097,024	1,886,316	(4,638,275)	(9,873)	(225,423)	4,580,369		(1,755,089)	19,151	4,954,200
Preferred Stock	8,840,000	-	(2,040,000)	1,283,388	-	33,008,125		(30,589,888)	-	10,501,625
Common Stock	19,495,993	5,858,378	(7,212,072)	(159)	334,916	1,086,614		(1,898,538)	(65,804)	17,599,328
Total	33,433,017	7,744,694	(13,890,347)	1,273,356	109,493	38,675,108	-	(34,243,515)	(46,653)	33,055,153
Net Derivatives	38,521,080	-	-	25,725,925	(6,824,044)	239,111,737	-	(295,568,765)	-	965,934
Total	38,521,080	-	-	25,725,925	(6,824,044)	239,111,737	-	(295,568,765)	-	965,934

3. Policy on Transfers Into and Out of Level 3

The Company holds NAIC designated 6 fixed maturity securities at the lower of amortized cost or fair value defined by SSAP No. 26, Bonds and NAIC designated 4-6 preferred stocks at the lower of cost or fair value as defined by SSAP No. 32, Investments in Preferred Stock. Market fluctuations cause securities to change from being held at cost or amortized cost to fair value or vice versa. These changes result in a transfer in or out of Level 3. In addition, the Company also transfers securities into or out of level 3 as a result of re-evaluation of the observability of pricing inputs.

4. Inputs and Techniques Used for Fair Value

Fixed Maturities

At each valuation date, the Company uses various valuation techniques to estimate the fair value of its fixed maturities portfolio. The primary method for valuing the Company's securities is through independent third-party valuation service providers. For positions where valuations are not available from independent third-party valuation service providers, the Company utilizes broker quotes and internal pricing methods to determine fair values. The Company obtains a single non-binding price quote from a broker familiar with the security who, similar to the Company's valuation service providers, may consider transactions or activity in similar securities, as applicable, among other information. The brokers providing price quotes are generally from the brokerage divisions of leading financial institutions with market making, underwriting and distribution expertise regarding the security subject to valuation. The evaluation and prioritization of these valuation sources is systematic and predetermined resulting in a single quote or price for each financial instrument. The following describes the techniques generally used to determine the fair value of the Company's fixed maturities by asset class:

U.S. Government and Agency Securities

U.S. government and agency securities consist primarily of bonds issued by the U.S. Treasury and mortgage pass-through agencies such as the Federal Home Loan Bank, the Federal National Mortgage Association and the Federal Home Loan Mortgage Corporation. As the fair values of the Company's U.S. Treasury securities are based on active markets and unadjusted market prices, they are classified within Level 1. The fair value of U.S. government agency securities is generally determined using observable market inputs that include quoted prices for identical or similar assets in markets that are not active, benchmark yields, reported trades, bids, offers and credit spreads. Accordingly, the fair value of U.S. government agency securities is classified within Level 2.

Mortgage-Backed Securities

The Company's portfolio of residential mortgage-backed securities ("MBS") and commercial MBS are originated by both agencies and non-agencies, the majority of which are pass-through securities issued by U.S. government agencies. The fair value of MBS is generally determined using observable market inputs that include quoted prices for identical or similar assets in markets that are not active, benchmark yields, contractual cash flows, prepayment speeds, collateral performance and credit spreads. Accordingly, the fair value of MBS is primarily classified within Level 2.

Asset-Backed Securities

Asset-backed securities ("ABS") include mostly investment-grade bonds backed by pools of loans with a variety of underlying collateral, including automobile loan receivables, credit card receivables, and collateralized loan obligation securities originated by a variety of financial institutions. The fair value of ABS is generally determined using observable market inputs that include quoted prices for identical or similar assets in markets that are not active, benchmark yields, contractual cash flows, prepayment speeds, collateral performance and credit spreads. Accordingly, the fair value of ABS is primarily classified within Level 2.

Municipal Securities

The Company's municipal portfolio is comprised of bonds issued by U.S. domiciled state and municipal entities. The fair value of municipal securities securities is generally determined using observable market inputs that include quoted prices for identical or similar assets in markets that are not active, benchmark yields, binding broker quotes, issuer ratings, reported trades and credit spreads. Accordingly, the fair value of municipal securities is primarily classified within Level 2.

NOTES TO FINANCIAL STATEMENTS

Corporate debt and other

Corporate debt securities consist primarily of investment-grade debt of a wide variety of corporate issuers and industries. The fair value of corporate and other securities is generally determined using observable market inputs that include quoted prices for identical or similar assets in markets that are not active, benchmark yields, new issuances, issuer ratings, reported trades of identical or comparable securities, bids, offers and credit spreads. Accordingly, the fair value of corporate and other securities is primarily classified within Level 2. In the event third-party vendor valuation is not available, prices are determined using non-binding price quotes from a broker familiar with the security. In this instance, the valuation inputs are generally unobservable and the fair value is classified within Level 3.

Foreign government securities

Foreign government securities include bonds issued or guaranteed by foreign governments. The fair value of foreign government securities is generally generally determined using observable market inputs that include quoted prices for identical or similar assets in markets that are not active, benchmark yields, binding broker quotes, issuer ratings, reported trades of identical or comparable securities and credit spreads. Accordingly, the fair value of foreign government securities is primarily classified within Level 2. In the event third-party vendor valuation is not available, prices are determined using non-binding price quotes from a broker familiar with the security. In this instance, the valuation inputs are generally unobservable and the fair value is classified within Level 3.

Common and Preferred Stocks

Common stocks are recorded at fair value and preferred stocks are reported at cost or fair value, depending on their NAIC designation. Common stocks with fair values based on quoted market prices in active markets are classified in Level 1. Common stocks with fair values determined using observable market inputs that include quoted prices for identical or similar assets in markets that are not active are classified in Level 2. The fair value of preferred stock is generally determined using observable market inputs that include quoted prices for identical or similar assets in markets that are not active. Accordingly, the fair value of preferred stock is primarily classified within Level 2.

Other Invested Assets

Other invested assets include limited partnership investments, other equity method investments and other alternative investments, which are not subject to these disclosures and therefore are excluded from the table in this note.

Derivatives

Derivatives can be exchange-traded or traded over-the-counter ("OTC"). OTC derivatives are valued using market transactions and other market evidence whenever possible, including market based inputs to models, model calibration to market clearing transactions, broker or dealer quotations or alternative pricing sources with reasonable levels of price transparency. When models are used, the selection of a particular model to value an OTC derivative depends on the contractual terms of, and specific risks inherent in the instrument, as well as the availability of pricing information in the market. The Company generally uses similar models to value similar instruments. Valuation models require a variety of inputs, including contractual terms, market prices and rates, yield curves, credit curves, measures of volatility, prepayment rates and correlations of such inputs. For OTC derivatives that trade in liquid markets, such as generic forwards, swaps and options, model inputs can generally be corroborated by observable market data by correlation or other means, and model selection does not involve significant management judgement. The fair value of derivatives using models with observable inputs are classified as Level 2 within the fair value hierarchy and the fair value of derivatives using models with unobservable inputs are classified as Level 3 within the fair value hierarchy.

B. Other Fair Value Disclosures

Not applicable.

C. Aggregate Fair Value of All Financial Instruments

Type of Financial Instrument	Aggregate Fair Value	Admitted Assets	(Level 1)	(Level 2)	(Level 3)	Net Asset Value (NAV)	Not Practicable (Carrying Value)
Cash, Cash Equivalents and Short Term	$ 464,266,681	$ 464,341,712	$ (274,027,299)	$ 3,435,106	$ 3,543	$ 734,855,331	$ -
Bonds	14,069,675,073	14,124,491,550	1,488,351,116	12,438,103,159	143,220,798	-	-
Preferred Stock	25,853,271	25,853,271	1,844,981	13,506,665	10,501,625	-	-
Common Stock	1,063,022,755	1,063,022,755	1,031,359,821	14,063,605	17,599,329	-	-
Securities Lending	669,879,151	669,543,680	-	669,879,151	-	-	-
Mortgage Loans	579,228,177	582,464,448	-	-	579,228,177	-	-
Surplus Notes	58,544,381	72,572,734	-	9,369,131	49,175,250	-	-

Total Assets	$ 16,952,546,043	$ 17,024,366,703	$ 2,247,528,619	$ 13,169,467,438	$ 800,694,655	$ 734,855,331	-
Derivative Liabilities	91,945	91,945	-	-	-	-	
Total Liabilities	$ 91,945	$ 91,945	$ -	$ -	$ -	$ -	-

D. Reasons Not Practical to Estimate Fair Value

Not applicable.

E. Instruments Measured at Net Asset Value (NAV)

The Company elected to use NAV for all money market mutual funds in lieu of fair value as NAV is more readily available. These funds are backed by high quality, very liquid short-term instruments and the probability is remote that the funds would be sold for a value other than NAV.

Note 21 - Other Items

A. Unusual or Infrequent Items

On May 1, 2018 the Company, with regulatory approval, sold its 90% ownership interest in Liberty Life Assurance Company to Lincoln Financial Group, resulting in a total realized gain of $302,579,097.

B. Troubled Debt Restructuring: Debtors

Not applicable

C. Other Disclosures

1. Florida Special Disability Trust Fund

a. The Company took a credit in the determination of its loss reserves of $0 in 2018 and $8,235,629 in 2017.
b. The Company received payments from the Special Disability Trust Fund of $0 in 2018 and $1,028,511 in 2017.
c. The amount the Company was assessed by the Special Disability Trust Fund was $0 in 2018 and $2,889 in 2017.

D. Business Interruption Insurance Recoveries

The Company does not purchase business interruption coverage.

NOTES TO FINANCIAL STATEMENTS

E. State Transferable and Non-transferable Tax Credit

1. Carrying value of transferable and non-transferable state tax credits gross of any related state tax liabilities and total unused transferable and non-transferable state tax credits by state and in total

Description of State Transferable and Non-transferable Tax Credits	State	Carrying Value	Unused Amount
Historic Preservation Tax Credit	TX	$ 9,680,597	$ 9,680,597
Film Credit	MA	$ 17,079,415	$ 17,079,415
Total		$ 26,760,012	$ 26,760,012

2. Method of estimating utilization of remaining transferable and non-transferable state tax credits

The Company estimated the utilization of the remaining transferable and non-transferable State Tax credits by projecting future premium taking into account policy growth and rate changes, projecting future tax liability based on projected premium, tax rates and tax credits, and comparing projected future tax liability to the availability of remaining transferable and non-transferable state tax credits.

3. Impairment amount recognized by the reporting period, if any.

The Company has not recognized any impairment losses associate with its transferable and non-transferable state tax credits during the reporting period.

4. State Tax Credits Admitted and Nonadmitted

	Non Admitted	Total Nonadmitted
a. Transferable	$ 26,760,012	
b. Non-transferable		

F. Subprime-Mortgage-Related Risk Exposure

1. The Company has not purchased securities characterized by the market as subprime. The Company looks at such factors as average FICO scores, loan to value ratios, and levels of documentation when evaluating securities. The Company's only exposure to subprime was inherited through past acquisitions of insurance companies.

2. The Company does not have any direct exposure through investments in subprime mortgage loans.

3. The Company has direct exposure through their investment in residential mortgage-backed securities.

	Actual Cost	Book/Adjusted Carrying Value (excluding interest)	Fair Value	Other-Than-Temporary Impairment Losses Recognized
Residential mortgage-backed securities	$ 1,713,631	$ 2,659,878	$ 2,937,937	$ 44,653

4. The Company does not have any underwriting exposure to sub-prime mortgage risk.

G. Insurance Linked Securities (ILS) Contracts

	Number of Outstanding ILS Contacts	Aggregate Maximum Proceeds
Management of Risk Related To:		
1. Directly Written Insurance Risks		
a. ILS Contracts as Issuer		
b. ILS Contracts as Ceding Insurer	11	663,595,592
c. ILS Contracts as Counterparty		
2. Assumed Insurance Risks		
a. ILS Contracts as Issuer		
b. ILS Contracts as Ceding Insurer		
c. ILS Contracts as Counterparty		

Note 22 - Events Subsequent

The Company evaluated subsequent events through February 21, 2019, the date the annual statement was available to be issued.

There were no events subsequent to December 31, 2018 that would require disclosure.

The Company did not receive any assessments under the Affordable Care Act.

Note 23 - Reinsurance

A. Unsecured Reinsurance Recoverable

Excluding amounts arising pursuant to the Liberty Mutual Amended and Restated Intercompany Reinsurance Agreement, the following are the unsecured reinsurance recoverable or ceded unearned premium of an individual reinsurer which exceed 3% of policyholder's surplus.

Reinsurer	NAIC No.	Federal ID No.	Reinsurer
National Workers Compensation Reinsurance Pool	00000	AA-9992118	$ 1,191,323,000
Michigan Catastrophic Claims Assn (MCCA)	00000	AA-9991159	624,592,000
Total			$ 1,815,915,000

B. Reinsurance Recoverable in Dispute

There are no reinsurance recoverable in dispute from an individual reinsurer which exceeds 5% of the Company's surplus. In addition, the aggregate reinsurance recoverable in dispute do not exceed 10% of the Company's surplus.

C. Reinsurance Assumed & Ceded

1. The following table sets forth the maximum return premium and commission equity due the reinsurers or the Company if all of the Company's assumed and ceded reinsurance were canceled as of December 31, 2018.

	Assumed Reinsurance		Ceded Reinsurance		Net	
	Premium Reserve	Commission Equity	Premium Reserve	Commission Equity	Premium Reserve	Commission Equity
Affiliates	$ 15,070,644,000	$ 235,119,279	$ 7,953,619,000	$ 30,965,162	$ 7,117,025,000	$ 204,154,117
All Other	454,598,375	123,490,781	937,335,483	181,493,328	(482,737,108)	(58,002,546)
Total	$ 15,525,242,375	$ 358,610,060	$ 8,890,954,483	$ 212,458,489	$ 6,634,287,892	$ 146,151,571

Directed Unearned Premium Reserve: $ 1,217,141,557

NOTES TO FINANCIAL STATEMENTS

2. Certain contracts provide for additional or return commissions based on the actual loss experience of the produced or reinsured business. Amounts accrued at December 31, 2018 are as follows:

	Direct	Assumed	Ceded	Net
a. Contingent Commission	$ 16,013,724	$ 519,525,693	$ 267,769,708	$ 267,769,709
b. Sliding Scale Adjustments	-	261,938	(371,557)	633,495
c. Other Profit Commission Arrangements	-	(2,457,355)	(1,669,845)	(787,510)
d. TOTAL	$ 16,013,724	$ 517,330,276	$ 265,728,306	$ 267,615,694

3. The Company does not use protected cells as an alternative to traditional reinsurance.

D. Uncollectible Reinsurance

During the current year, the Company wrote off reinsurance balances of $160,629. This amount is shown below by Income Statement classification and by reinsurer.

a. Losses incurred	$ (159,870)
b. Loss adjustment expenses incurred	(759)
c. Premiums earned	-
d. Other	-
TOTAL	$ (160,629)

e. Company	Amount
Pennsylvania Manufactures Asn	$ (158,254)
Excalibur Reinsurance Corp	$ (2,375)

E. Commutation of Ceded Reinsurance

The Company commuted several ceded reinsurance treaties in the current year with the reinsurers listed below. The net effect of all commutations was a decrease in Net Income of $201,763. This amount is shown below by Income Statement classification and by reinsurer.

a. Losses incurred	$ (47,015)
b. Loss adjustment expenses incurred	306,040
c. Premiums earned	-

Total	$ -	$ -	$ -

There are no reinsurance contracts covering losses that have occurred prior to the inception of the contract that have not been accounted for in conformity with the NAIC Accounting Practices and Procedures Manual.

In conjunction with the Ironshore acquisition and effective May 1, 2017, Ironshore entered into a reinsurance transaction with National Indemnity Company ("NICO"), a subsidiary of Berkshire Hathaway Inc., on a combined aggregate excess of loss agreement providing coverage for substantially all of Ironshore's reserves related to losses occurring prior to January 1, 2017. This agreement is being accounted for as retroactive reinsurance.

On July 17, 2014, Liberty Mutual Insurance reached a definitive agreement with NICO, on a combined aggregate adverse development cover for substantially all of Liberty Mutual Insurance's U.S. workers compensation, asbestos and environmental liabilities. The agreement, accounted for as retroactive reinsurance, is effective January 1, 2014.

G. Reinsurance Accounted for as a Deposit

At December 31, 2018, the deposit receivable balance for reinsurance contracts accounted for under the deposit method was $4,862,065.

At December 31, 2018, the deposit liability balance for reinsurance contracts accounted for under the deposit method was $26,909,972.

H. Disclosures for the Transfer of Property and Casualty Run-off Agreements

The Company has not entered into any agreements which have been approved by their domiciliary regulator and have qualified pursuant to SSAP No. 62R, *Property and Casualty Reinsurance* to receive P&C Run-off Accounting Treatment.

I. Certified Reinsurers Downgraded or Status Subject to Revocation.

1. Reporting Entity Ceding to Certified Reinsurer Downgraded or Status Subject to Revocation.

   The Company does not transact business with Certified Reinsurers.

2. Reporting Entity's Certified Reinsurer Rating Downgrade or Status Subject to Revocation.

   The Company is not a Certified Reinsurer.

NOTES TO FINANCIAL STATEMENTS

J. Asbestos and Pollution Counterparty Reporting Exception

The Counterparty reporting party does not apply to the Company.

Note 24 - Retrospectively rated Contracts and Contracts Subject to Redetermination

A. Accrued retrospective premiums reported in Line 15.3 of the asset page have been determined based upon loss experience on business subject to such experience rating adjustment.

B. The Company records accrued retrospective premium as an adjustment to earned premium.

C. For detail of net premium written subject to retrospective rating features refer to Schedule P, Part 7A.

D. The Company does not recognize a liability for medical loss ratio rebates pursuant to the Public Health Service Act, as the Company does not write direct comprehensive major medical health business.

E. Ten Percent of the amount of accrued retrospective premiums not offset by retrospective return premiums, other liabilities to the same party (other than loss and loss adjustment expense reserves), or collateral as permitted by SSAP No. 66, *Retrospectively Rated Contracts* , has been nonadmitted.

a.	Total accrued retro premium	$ 192,533,511
b.	Unsecured amount	-
c.	Less: Nonadmitted amount (10%)	19,252,489
d.	Less: Nonadmitted for any person whom agents' balances or uncollected premiums are nonadmitted	-
e.	Admitted amount (a) - (c) - (d)	$ 173,281,022

F. Risk Sharing Provisions of the Affordable Care Act

The Company did not receive any assessments under the Affordable Care Act.

Note 25 - Change in Incurred Losses and Loss Adjustment Expenses

Incurred loss and loss adjustment expense attributable to insured events on prior years decreased through the fourth quarter of 2018. The decrease was the result of updated reserve analysis in a number of lines, with the largest decreases in reserve estimates in Workers' Compensation, Special Property, and Homeowners/Farmowners lines. Partially offsetting these decreases were increases in reserve estimates for Reinsurance – Nonproportional Assumed Property, Other Liability and Commercial Auto Liability/Medical lines. Prior estimates are revised as additional information becomes known regarding individual claims.

Note 26 - Intercompany Pooling Arrangements

The Company is a member of the Liberty Mutual Second Amended and Restated Intercompany Reinsurance Agreement consisting of the following affiliated companies:

		NAIC Company Number	Pooling Companies	Line of Business

100% Quota Share Affiliated	LM Property and Casualty Insurance Company (“LMPAC”)	32352	0.00%	All Lines

Under the terms of the Reinsurance Agreements, the sequence of transactions is as follows:

a. Except for WBIC, WGIC and WUIC, each Affiliated Pool Company cedes its underwriting activity to the Lead Company. WBIC, WGIC and WUIC cede 100% of its direct underwriting activity to EICOW.

b. After recording the assumed affiliate transactions noted above, the Lead Company records 100% of its external assumed and ceded reinsurance activity.

c. The Lead Company's remaining underwriting activity, after processing all internal and external reinsurance, is retroceded to the pool members in accordance with each company's pool participation percentage, as noted above.

d. There were no members that are parties to reinsurance agreements with non-affiliated reinsurers covering business subject to the pooling agreement and have a contractual right of direct recovery from the non-affiliated reinsurer per the terms of such reinsurance agreements.

e. There were no discrepancies between entries regarding pooled business on the assumed and ceded reinsurance schedules of the Lead Company and corresponding entries on the assumed and ceded reinsurance schedules of other pooled participants.

f. The write-off of uncollectible reinsurance is pooled and the provision for reinsurance is recognized by the entity placing the outbound external reinsurance.

g. Amounts due (to)/from affiliated entities participating in the Liberty Mutual Second Amended and Restated Intercompany Reinsurance Agreement as of December 31, 2018:

Affiliate	Amount
Peerless Insurance Company	$ (1,466,982)
Employers Insurance Company of Wausau	$ (586,793)
Liberty Mutual Fire Insurance Company	$ (586,793)
The Ohio Casualty Insurance Company	$ (586,793)
Safeco Insurance Company of America	$ (440,095)
Wausau General Insurance Company	$ 1,102,171
Wausau Underwriters Insurance Company	$ 7,247,136
Wausau Business Insurance Company	$ (2,023,213)
Ironshore Specialty Insurance Company	$ 1,613,774
Ironshore Indemnity Inc.	$ (604,960)

NOTES TO FINANCIAL STATEMENTS

Effective July 1, 2017 ISII and ISIC became participants of the Liberty Mutual Second Amended and Restated Intercompany Reinsurance Agreement. All ISII and ISIC underwriting assets and liabilities were ceded to the Lead Company and subsequently retroceded to the pool members in accordance with each company's pool participation percentage, as noted above. Operational underwriting results prior to the effective date of ISII and ISIC becoming pool participants remained as results of operations on each company's respective income statements for the year ended December 31, 2017.

Note 27 - Structured Settlements

A. As a result of purchased annuities with the claimant as payee, the Company no longer carries reserves of $517,427,538 after applying Intercompany Reinsurance Agreement percentages. The Company is contingently liable should the issuers of the purchased annuities fail to perform under the terms of the annuities. The amount of unrecorded loss contingencies related to the purchased annuities was $517,427,538 as of December 31, 2018.

B. A summary of purchased structured settlement annuities exceeding 1% of policyholders' surplus and whereby the Company has not obtained a release of liability from the claimant is as follows:

Life Insurance Company and Location	Licensed in Company's State of Domicile Yes/No	Statement Value (i.e., Present Value) of Annuities
Prudential Insurance Company New Jersey	Yes	$ 254,702,930

Note 28 - Health Care Receivables

Not applicable.

Note 29 - Participating Policies

Not applicable.

Not 30 - Premium Deficiency Reserves

1.	Liability carried for premium deficiency reserves	$ -
2.	Date of the most recent evaluation of this liability	12/31/2018
3.	Was anticipated investment income utilized in the calculation?	No

Note 31 - High Dollar Deductible Policies

As of December 31, 2018, the amount of reserve credit recorded for high dollar deductible policies on unpaid losses was $2,704,250,542 and the amount billed and recoverable on paid claims was $86,816,720. There are no unsecured high dollar deductible recoverables from professional employer organizations included in these amounts.

Note 32 - Discounting of Liabilities for Unpaid Losses and Unpaid Loss Adjustment Expenses

For Workers' Compensation, the Company discounts its reserves for unpaid losses using a tabular discount on the long-term annuity portion of certain workers compensation claims. The tabular discount is based on Unit Statistical Plan tables as approved by the respective states at an annual discount rate of 4.0%. The December 31, 2018 liabilities include $6,581,175,086 of such discounted reserves. The Company recognized $23,566,196 of interest accretion in the Statement of Income for the current year related to tabular discount on Workers' Compensation. The December 31, 2018 liabilities subject to discount were carried at a value representing a discount of $216,449,654 net of all reinsurance.

Note 33 - Asbestos/Environmental Reserves

Factors Contributing to Uncertainty in Establishing Adequate Reserves

The process of establishing reserves for asbestos and environmental claims is subject to greater uncertainty than the establishment of reserves for liabilities relating to other types of insurance claims. A number of factors contribute to this greater uncertainty surrounding the establishment of asbestos and environmental reserves, including, without limitation: (i) the lack of available and reliable historical claims data as an indicator of future loss development, (ii) the long waiting periods between exposure and manifestation of any bodily injury or property damage, (iii) the difficulty in identifying the source of asbestos or environmental contamination, (iv) the difficulty in properly allocating liability for asbestos or environmental damage, (v) the uncertainty as to the number and identity of insureds with potential exposure, (vi) the cost to resolve claims, and (vii) the collectability of reinsurance.

NOTES TO FINANCIAL STATEMENTS

The uncertainties associated with establishing reserves for asbestos and environmental claims and claim adjustment expenses are compounded by the differing, and at times inconsistent, court rulings on environmental and asbestos coverage issues involving: (i) the differing interpretations of various insurance policy provisions and whether asbestos and environmental losses are or were ever intended to be covered, (ii) when the loss occurred and what policies provide coverage, (iii) whether there is an insured obligation to defend, (iv) whether a compensable loss or injury has occurred, (v) how policy limits are determined, (vi) how policy exclusions are applied and interpreted, (vii) the impact of entities seeking bankruptcy protection as a result of asbestos-related liabilities, (viii) whether clean-up costs are covered as insured property damage, and (ix) applicable coverage defenses or determinations, if any, including the determination as to whether or not an asbestos claim is a products/completed operation claim subject to an aggregate limit and the available coverage, if any, for that claim. The uncertainties cannot be reasonably estimated, but could have a material impact on the Company's future operating results and financial condition.

In 2018, the Company and its affiliated pool members completed asbestos ground-up and aggregate environmental reserve studies. These studies were completed by a multi-disciplinary team of internal claims, legal, reinsurance and actuarial personnel, and included all major business segments of the Company's direct, assumed, and ceded A&E unpaid claim liabilities. As part of the internal review, policyholders with the largest direct asbestos unpaid claim liabilities were individually evaluated using the Company's proprietary stochastic ground-up model, which is consistent with published actuarial methods of asbestos reserving. Among the factors reviewed in depth by the team of specialists were the type of business, level of exposure, coverage limits, geographic distribution of products, injury type, jurisdiction and legal defenses. Reinsurance recoveries for these policyholders were then separately evaluated by the Company's reinsurance and actuarial personnel. A&E unpaid claim liabilities for all other policyholders were evaluated using aggregate methods that utilized information and experience specific to these policyholders. The studies resulted in an increase to reserves of $250 million including: $200 million of asbestos reserves, and $50 million of pollution reserves.

Uncertainty Regarding Reserving Methodologies

As a result of the significant uncertainty inherent in determining a company's asbestos and environmental liabilities and establishing related reserves, the amount of reserves required to adequately fund the Company's asbestos and environmental claims cannot be accurately estimated using conventional reserving methodologies based on historical data and trends. As a result, the use of conventional reserving methodologies frequently has to be supplemented by subjective considerations including managerial judgment. In that regard, the estimation of asbestos claims and associated liabilities and the analysis of environmental claims considered prevailing applicable law and certain inconsistencies of court decisions as to coverage, plaintiffs' expanded theories of liability, and the risks inherent in major litigation and other uncertainties, the Company believes that in future periods it is possible that the outcome of the continued uncertainties regarding asbestos and environmental related claims could result in a liability that differs from current reserves by an amount that could be material to the Company's future operating results and financial condition.

Effect of Uncertainty in Reserving For Asbestos and Environmental Claims on Company's Financial Condition

The methods of determining estimates for reported and unreported losses and establishing resulting reserves and related reinsurance

The following tables summarize the activity for the Company's asbestos and environmental claims and claim adjustment expenses, a component of the Company's unpaid claims and claim adjustment expenses, for the years ended December 31, 2018, 2017, 2016, 2015, and 2014 before consideration of the NICO Reinsurance Transaction. Refer to Note 23f.

Asbestos

GENERAL INTERROGATORIES

PART 1 – COMMON INTERROGATORIES

GENERAL

1.1 Is the reporting entity a member of an Insurance Holding Company System consisting of two or more affiliated persons, one or more of which is an insurer? Yes [X] No [ ]

If yes, complete Schedule Y, Parts 1, 1A and 2.

1.2 If yes, did the reporting entity register and file with its domiciliary State Insurance Commissioner, Director or Superintendent or with such regulatory official of the state of domicile of the principal insurer in the Holding Company System, a registration statement providing disclosure substantially similar to the standards adopted by the National Association of Insurance Commissioners (NAIC) in its Model Insurance Holding Company System Regulatory Act and model regulations pertaining thereto, or is the reporting entity subject to standards and disclosure requirements substantially similar to those required by such Act and regulations? Yes [X] No [ ] N/A [ ]

1.3 State Regulating? Massachusetts

1.4 Is the reporting entity publicly traded or a member of a publicly traded group? Yes [ ] No [X]

1.5 If the response to 1.4 is yes, provide the CIK (Central Index Key) code issued by the SEC for the entity/group.

2.1 Has any change been made during the year of this statement in the charter, by-laws, articles of incorporation, or deed of settlement of the reporting entity? Yes [ ] No [X]

2.2 If yes, date of change:

3.1 State as of what date the latest financial examination of the reporting entity was made or is being made. 12/31/2013

3.2 State the as of date that the latest financial examination report became available from either the state of domicile or the reporting entity. This date should be the date of the examined balance sheet and not the date the report was completed or released. 12/31/2013

3.3 State as of what date the latest financial examination report became available to other states or the public from either the state of domicile or the reporting entity. This is the release date or completion date of the examination report and not the date of the examination (balance sheet date). 05/20/2015

3.4 By what department or departments?
Massachusetts Division of Insurance

3.5 Have all financial statement adjustments within the latest financial examination report been accounted for in a subsequent financial statement filed with departments? Yes [ ] No [ ] N/A [X]

3.6 Have all of the recommendations within the latest financial examination report been complied with? Yes [ ] No [ ] N/A [X]

4.1 During the period covered by this statement, did any agent, broker, sales representative, non-affiliated sales/service organization or any combination thereof under common control (other than salaried employees of the reporting entity) receive credit or commissions for or control a substantial part (more than 20 percent of any major line of business measured on direct premiums) of:

4.11 sales of new business? Yes [X] No [ ]
4.12 renewals? Yes [X] No [ ]

4.2 During the period covered by this statement, did any sales/service organization owned in whole or in part by the reporting entity or an affiliate, receive credit or commissions for or control a substantial part (more than 20 percent of any major line of business measured on direct premiums) of:

4.21 sales of new business? Yes [ ] No [X]
4.22 renewals? Yes [X] No [ ]

5.1 Has the reporting entity been a party to a merger or consolidation during the period covered by this statement? Yes [ ] No [X]

If yes, complete and file the merger history data file with the NAIC.

GENERAL INTERROGATORIES

5.2 If yes, provide the name of the entity, NAIC Company Code, and state of domicile (use two letter state abbreviation) for any entity that has ceased to exist as a result of the merger or consolidation.

1 Name of Entity	2 NAIC Company Code	3 State of Domicile

6.1 Has the reporting entity had any Certificates of Authority, licenses or registrations (including corporate registration, if applicable) suspended or revoked by any governmental entity during the reporting period? Yes [ ] No [X]

6.2 If yes, give full information:

7.1 Does any foreign (non-United States) person or entity directly or indirectly control 10% or more of the reporting entity? Yes [ ] No [X]

7.2 If yes,

7.21 State the percentage of foreign control. _____ %

7.22 State the nationality(s) of the foreign person(s) or entity(s); or if the entity is a mutual or reciprocal, the nationality of its manager or attorney-in-fact and identify the type of entity(s) (e.g., individual, corporation, government, manager or attorney-in-fact).

1 Nationality	2 Type of Entity

8.1 Is the company a subsidiary of a bank holding company regulated by the Federal Reserve Board? Yes [ ] No [X]

8.2 If response to 8.1 is yes, please identify the name of the bank holding company.

8.3 Is the company affiliated with one or more banks, thrifts or securities firms? Yes [ ] No [X]

8.4 If response to 8.3 is yes, please provide the names and locations (city and state of the main office) of any affiliates regulated by a federal financial regulatory services agency [i.e. the Federal Reserve Board (FRB), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC) and the Securities Exchange Commission (SEC)] and identify the affiliate's primary federal regulator.

1 Affiliate Name	2 Location (City, State)	3 FRB	4 OCC	5 FDIC	6 SEC

9. What is the name and address of the independent certified public accountant or accounting firm retained to conduct the annual audit?
Ernst & Young, LLP
200 Clarendon Street
Boston, MA 02116

10.1 Has the insurer been granted any exemptions to the prohibited non-audit services provided by the certified independent public accountant requirements as allowed in Section 7H of the Annual Financial Reporting Model Regulation (Model Audit Rule), or substantially similar state law or regulation? Yes [ ] No [X]

10.2 If response to 10.1 is yes, provide information related to this exemption:

GENERAL INTERROGATORIES

10.3 Has the insurer been granted any exemptions related to the other requirements of the Annual Financial Reporting Model Regulation as allowed for in Section 18A of the Model Regulation, or substantially similar state law or regulation? Yes [ ] No [X]

10.4 If response to 10.3 is yes, provide information related to this exemption:

10.5 Has the reporting entity established an Audit Committee in compliance with the domiciliary state insurance laws? Yes [X] No [ ] N/A [ ]

10.6 If the response to 10.5 is no or n/a, please explain.

11. What is the name, address and affiliation (officer/employee of the reporting entity or actuary/consultant associated with an actuarial consulting firm) of the individual providing the statement of actuarial opinion/certification?
Stephanie Neyenhouse FCAS, MAAA
175 Berkeley Street, Boston, MA 02116
Vice President and Chief Actuary, Liberty Mutual Group Inc.

12.1 Does the reporting entity own any securities of a real estate holding company or otherwise hold real estate indirectly? Yes [X] No [ ]

12.11	Name of real estate holding company	Various
12.12	Number of parcels involved	15
12.13	Total book/adjusted carrying value	$ 1,012,091,599

12.2 If yes, provide explanation:
Liberty Mutual Insurance Company directly owns 100% of Liberty Real Estate Holdings, LLC, 92% of St. James/Arlington Real Estate LP, and 100% of Berkeley/Columbus III, LLC.

13. FOR UNITED STATES BRANCHES OF ALIEN REPORTING ENTITIES ONLY:

13.1 What changes have been made during the year in the United States manager or the United States trustees of the reporting entity?

13.2 Does this statement contain all business transacted for the reporting entity through its United States Branch on risks wherever located? Yes [ ] No [X]

13.3 Have there been any changes made to any of the trust indentures during the year? Yes [ ] No [X]

13.4 If answer to (13.3) is yes, has the domiciliary or entry state approved the changes? Yes [ ] No [ ] N/A [X]

14.1 Are the senior officers (principal executive officer, principal financial officer, principal accounting officer or controller, or persons performing similar functions) of the reporting entity subject to a code of ethics, which includes the following standards?

a. Honest and ethical conduct, including the ethical handling of actual or apparent conflicts of interest between personal and professional relationships;
b. Full, fair, accurate, timely and understandable disclosure in the periodic reports required to be filed by the reporting entity;
c. Compliance with applicable governmental laws, rules, and regulations;
d. The prompt internal reporting of violations to an appropriate person or persons identified in the code; and
e. Accountability for adherence to the code. Yes [X] No [ ]

14.11 If the response to 14.1 is no, please explain:

GENERAL INTERROGATORIES

14.2 Has the code of ethics for senior managers been amended? Yes [ ] No [X]

14.21 If the response to 14.2 is yes, provide information related to amendment(s).

14.3 Have any provisions of the code of ethics been waived for any of the specified officers? Yes [ ] No [X]

14.31 If the response to 14.3 is yes, provide the nature of any waiver(s).

15.1 Is the reporting entity the beneficiary of a Letter of Credit that is unrelated to reinsurance where the issuing or confirming bank is not on the SVO Bank List? Yes [X] No [ ]

15.2 If the response to 15.1 is yes, indicate the American Bankers Association (ABA) Routing Number and the name of the issuing or confirming bank of the Letter of Credit and describe the circumstances in which the Letter of Credit is triggered.

22.23 Other amounts paid $ _____

23.1 Does the reporting entity report any amounts due from parent, subsidiaries or affiliates on Page 2 of this statement? Yes [X] No [ ]

23.2 If yes, indicate any amounts receivable from parent included in the Page 2 amount: $ 719,254

INVESTMENT

24.01 Were all the stocks, bonds and other securities owned December 31 of current year, over which the reporting entity has exclusive control, in the actual possession of the reporting entity on said date? (other than securities lending programs addressed in 24.03) Yes [X] No [ ]

24.02 If no, give full and complete information, relating thereto:

24.03 For security lending programs, provide a description of the program including value for collateral and amount of loaned securities, and whether collateral is carried on or off-balance sheet. (an alternative is to reference Note 17 where this information is also provided)
Please reference Note 17B

24.04 Does the company's security lending program meet the requirements for a conforming program as outlined in the Risk-Based Capital Instructions? Yes [X] No [ ] N/A [ ]

24.05 If answer to 24.04 is yes, report amount of collateral for conforming programs. $ 696,996,940

24.06 If answer to 24.04 is no, report amount of collateral for other programs. $ _____

24.07 Does your securities lending program require 102% (domestic securities) and 105% (foreign securities) from the counterparty at the outset of the contract? Yes [X] No [ ] N/A [ ]

24.08 Does the reporting entity non-admit when the collateral received from the counterparty falls below 100%? Yes [X] No [ ] N/A [ ]

GENERAL INTERROGATORIES

24.09 Does the reporting entity or the reporting entity's securities lending agent utilize the Master Securities Lending Agreement (MSLA) to conduct securities lending? Yes [X] No [ ] N/A [ ]

24.10 For the reporting entity's security lending program, state the amount of the following as of December 31 of the current year:

24.101	Total fair value of reinvested collateral assets reported on Schedule DL, Parts 1 and 2	$ 669,543,680
24.102	Total book adjusted/carrying value of reinvested collateral assets reported on Schedule DL, Parts 1 and 2	$ 669,543,680
24.103	Total payable for securities lending reported on the liability page	$ 669,543,680

25.1 Were any of the stocks, bonds or other assets of the reporting entity owned at December 31 of the current year not exclusively under the control of the reporting entity or has the reporting entity sold or transferred any assets subject to a put option contract that is currently in force? (Exclude securities subject to Interrogatory 21.1 and 24.03). Yes [X] No [ ]

25.2 If yes, state the amount thereof at December 31 of the current year:

25.21	Subject to repurchase agreements	$
25.22	Subject to reverse repurchase agreements	$
25.23	Subject to dollar repurchase agreements	$
25.24	Subject to reverse dollar repurchase agreements	$
25.25	Placed under option agreements	$
25.26	Letter stock or securities restricted as to sale - excluding FHLB Capital Stock	$
25.27	FHLB Capital Stock	$ 17,597,200
25.28	On deposit with states	$ 1,360,863,848
25.29	On deposit with other regulatory bodies	$ 898,002,153
25.30	Pledged as collateral - excluding collateral pledged to an FHLB	$ 1,209,388,674
25.31	Pledged as collateral to FHLB - including assets backing funding agreements	$ 163,862,365
25.32	Other	$ 3,965,240

25.3 For category (25.26) provide the following:

1 Nature of Restriction	2 Description	3 Amount
FHLB CAPITAL STOCK	FEDERAL HOME LOAN BANK BOSTON	17,597,200

26.1 Does the reporting entity have any hedging transactions reported on Schedule DB? Yes [X] No [ ]

26.2 If yes, has a comprehensive description of the hedging program been made available to the domiciliary state? Yes [ ] No [ ] N/A [X]
If no, attach a description with this statement.

27.1 Were any preferred stocks or bonds owned as of December 31 of the current year mandatorily convertible into equity, or, at the option of the issuer, convertible into equity? Yes [ ] No [X]

27.2 If yes, state the amount thereof at December 31 of the current year. $

28. Excluding items in Schedule E - Part 3 - Special Deposits, real estate, mortgage loans and investments held physically in the reporting entity's offices, vaults or safety deposit boxes, were all stocks, bonds and other securities, owned throughout the current year held pursuant to a custodial agreement with a qualified bank or trust company in accordance with Section 1, III - General Examination Considerations, F. Outsourcing of Critical Functions, Custodial or Safekeeping Agreements of the NAIC Financial Condition Examiners Handbook? Yes [X] No [ ]

28.01 For agreements that comply with the requirements of the NAIC Financial Condition Examiners Handbook, complete the following:

1 Name of Custodian(s)	2 Custodian's Address
Bank of Itau	Av. Engenheiro Armondo de Arruda Pereira, 707 Torre Eudoro Villela – 7 andar 04309 010 Sau, Paulo SP
Bank of New York Mellon	601 Travis Street, Houston, TX 77002
JP Morgan Chase	1 Chase Manhattan Plaza, New York, NY 10005
JP Morgan Chase	259 George Street, Sydney, Australia
Royal Trust	77 King Street West, Toronto, Ontario M5W 1 P9
US Bank Corporate Trust Services	21 South Street, 3rd Floor, Morristown, NJ 07960

GENERAL INTERROGATORIES

28.02 For all agreements that do not comply with the requirements of the NAIC Financial Condition Examiners Handbook, provide the name, location and a complete explanation:

1 Name(s)	2 Location(s)	3 Complete Explanation(s)

28.03 Have there been any changes, including name changes, in the custodian(s) identified in 28.01 during the current year? Yes [ ] No [X]

28.04 If yes, give full and complete information relating thereto:

1 Old Custodian	2 New Custodian	3 Date of Change	4 Reason

28.05 Investment management - Identify all investment advisors, investment managers, broker/dealers, including individuals that have the authority to make investment decisions on behalf of the reporting entity. For assets that are managed internally by employees of the reporting entity, note as such. ["… that have access to the investment accounts"; "…handle securities"]

1 Name Firm or Individual	2 Affiliation
Liberty Mutual Group Asset Management Inc.	A
Liberty Mutual Investment Advisors, LLC	A
StanCorp	U
Prudential Mortgage Capital Company	U
Lazard Asset Management LLC	U
Matthews International Capital Management, LLC.	U

28.059 For those firms/individuals listed in the table for Question 28.05, do any firms/individuals unaffiliated with the reporting entity (i.e., designated with a "U") manage more than 10% of the reporting entity's assets? Yes [ ] No [X]

28.059 For firms/individuals unaffiliated with the reporting entity (i.e., designated with a "U") listed in the table for Question 28.05, does the total assets under management aggregate to more than 50% of the reporting entity's assets? Yes [ ] No [X]

28.06 For those firms or individuals listed in the table 28.05 with an affiliation code of "A" (affiliated) or "U" (unaffiliated), provide the information for the table below.

1 Name Firm or Individual	2 Central Registration Depository Number	3 Legal Entity Identifier (LEI)	4 Registered With	5 Investment Management Agreement (IMA) Filed
Liberty Mutual Group Asset Management Inc.	N/A	N/A	NO	DS
Liberty Mutual Investment Advisors, LLC	N/A	N/A	NO	DS
StanCorp	N/A	N/A	NO	DS
Prudential Mortgage Capital Company	N/A	N/A	NO	DS
Lazard Asset Management LLC	N/A	N/A	SEC	DS
Matthews International Capital Management,	N/A	N/A	SEC	DS

29.1 Does the reporting entity have any diversified mutual funds reported in Schedule D – Part 2 (diversified according to the Securities and Exchange Commission (SEC) in the Investment Company Act of 1940 [Section 5 (b) (1)])? Yes [ ] No [X]

29.2 If yes, complete the following schedule:

1 CUSIP #	2 Name of Mutual Fund	3 Book/Adjusted Carrying Value
29.2999 TOTAL		

GENERAL INTERROGATORIES

29.3 For each mutual fund listed in the table above, complete the following schedule:

1 Name of Mutual Fund (from above table)	2 Name of Significant Holding of the Mutual Fund	3 Amount of Mutual Fund's Book/Adjusted Carrying Value Attributable to the Holding	4 Date of Valuation

30. Provide the following information for all short-term and long-term bonds and all preferred stocks. Do not substitute amortized value or statement value for fair value.

	1 Statement (Admitted) Value	2 Fair Value	3 Excess of Statement over Fair Value (-), or Fair Value over Statement (+)
30.1 Bonds	14,129,699,481	14,074,216,769	(55,482,712)
30.2 Preferred stocks	25,853,271	25,853,271	
30.3 Totals	14,155,552,752	14,100,070,040	(55,482,712)

30.4 Describe the sources or methods utilized in determining the fair values:
The primary source for reported fair values is our pricing vendor, Interactive Data Corporation, followed by backfill from Reuters, Bloomberg, Barclays, Merrill Lynch, and Markit for Term Loan securities. Lastly, management determines fair value based on quoted market prices of similar financial instruments or by using industry recognized valuation techniques.

31.1 Was the rate used to calculate fair value determined by a broker or custodian for any of the securities in Schedule D? Yes [ ] No [X]

31.2 If the answer to 31.1 is yes, does the reporting entity have a copy of the broker's or custodian's pricing policy (hard copy or electronic copy) for all brokers or custodians used as a pricing source? Yes [ ] No [X]

31.3 If the answer to 31.2 is no, describe the reporting entity's process for determining a reliable pricing source for purposes of disclosure of fair value for Schedule D:

32.1 Have all the filing requirements of the Purposes and Procedures Manual of the NAIC Investment Analysis Office been followed? Yes [X] No [ ]

32.2 If no, list exceptions:

33 By self-designating 5GI securities, the reporting entity is certifying the following elements of each self-designated 5GI security:

a. Documentation necessary to permit a full credit analysis of the security does not exist or an NAIC CRP credit rating for an FE or PL security is not available.
b. Issuer or obligor is current on all contracted interest and principal payments.
c. The insurer has an actual expectation of ultimate payment of all contracted interest and principal.

Has the reporting entity self-designated 5GI securities? Yes [X] No [ ]

34 By self-designating PLGI securities, the reporting entity is certifying the following elements of each self-designated PLGI security:

a. The security was purchased prior to January 1, 2018.
b. The reporting entity is holding capital commensurate with the NAIC Designation reported for the security.
c. The NAIC Designation was derived from the credit rating assigned by an NAIC CRP in its legal capacity as an NRSRO which is shown on a current private letter rating held by the insurer and available for examination by state insurance regulators.
d. The reporting entity is not permitted to share this credit rating of the PL security with the SVO.

Has the reporting entity self-designated PLGI securities? Yes [X] No [ ]

GENERAL INTERROGATORIES

PART 2 – PROPERTY & CASUALTY INTERROGATORIES

1.1 Does the reporting entity have any direct Medicare Supplement Insurance in force? Yes [ ] No [X]

1.2 If yes, indicate premium earned on U.S. business only. $

1.3 What portion of Item (1.2) is not reported on the Medicare Supplement Insurance Experience Exhibit? $

1.31 Reason for excluding

1.4 Indicate amount of earned premium attributable to Canadian and/or Other Alien not included in Item (1.2) above. $

1.5 Indicate total incurred claims on all Medicare Supplement insurance. $

1.6 Individual policies:

Most current three years:

1.61 Total premium earned $

1.62 Total incurred claims $

1.63 Number of covered lives

All years prior to most current three years:

1.64 Total premium earned $ 9,913

1.65 Total incurred claims $ 16,243

1.66 Number of covered lives 2

1.7 Group policies:

Most current three years:

1.71 Total premium earned $

1.72 Total incurred claims $

1.73 Number of covered lives

All years prior to most current three years:

1.74 Total premium earned $

1.75 Total incurred claims $

1.76 Number of covered lives

2. Health Test:

		1 Current Year	2 Prior Year
2.1	Premium Numerator	$ 22,741,087	$ 26,268,452
2.2	Premium Denominator	$ 15,549,580,081	$ 13,754,980,458
2.3	Premium Ratio (2.1 / 2.2)	0.00	0.00
2.4	Reserve Numerator	$ 85,646,707	$ 44,775,597
2.5	Reserve Denominator	$ 28,231,964,775	$ 27,315,540,769
2.6	Reserve Ratio (2.4 / 2.5)	0.00	0.00

3.1 Does the reporting entity issue both participating and non-participating policies? Yes [X] No [ ]

3.2 If yes, state the amount of calendar year premiums written on:

3.21 Participating policies $ 18,920,742

3.22 Non-participating policies $ 2,069,754,115

4. For Mutual reporting entities and Reciprocal Exchanges only:

4.1 Does the reporting entity issue assessable policies? Yes [ ] No [X]

4.2 Does the reporting entity issue non-assessable policies? Yes [ ] No [X]

4.3 If assessable policies are issued, what is the extent of the contingent liability of the policyholders? %

4.4 Total amount of assessments paid or ordered to be paid during the year on deposit notes or contingent premiums. $

5. For Reciprocal Exchanges Only:

5.1 Does the exchange appoint local agents? Yes [ ] No [X]

5.2 If yes, is the commission paid:

5.21 Out of Attorney's-in-fact compensation Yes [ ] No [ ] N/A [X]

5.22 As a direct expense of the exchange Yes [ ] No [ ] N/A [X]

5.3 What expenses of the Exchange are not paid out of the compensation of the Attorney-in-fact?

5.4 Has any Attorney-in-fact compensation, contingent on fulfillment of certain conditions, been deferred? Yes [ ] No [X]

5.5 If yes, give full information

6.1 What provision has this reporting entity made to protect itself from an excessive loss in the event of a catastrophe under a workers' compensation contract issued without limit loss:
The Company purchases a combination of per risk excess of loss reinsurance and excess of loss per event catastrophe reinsurance.

GENERAL INTERROGATORIES

PART 2 – PROPERTY & CASUALTY INTERROGATORIES

6.2 Describe the method used to estimate this reporting entity's probable maximum insurance loss, and identify the type of insured exposures comprising that probable maximum loss, the locations of concentrations of those exposures and the external resources (such as consulting firms or computer software models), if any, used in the estimation process:
The Company employs industry recognized catastrophe modeling software to estimate the Probable Maximum Loss. For property exposures, we utilize RMS's RiskLink v17.0 and AIR's Touchstone v5.1 software. For workers' compensation, Liberty Mutual utilizes RiskLink v17.0 from RMS.

6.3 What provision has this reporting entity made (such as a catastrophic reinsurance program) to protect itself from an excessive loss arising from the types and concentrations of insured exposures comprising its probable maximum property insurance loss?
The Company purchases a combination of quota share reinsurance, per risk excess of loss reinsurance, excess of loss per event catastrophe reinsurance and aggregate programs.

6.4 Does the reporting entity carry catastrophe reinsurance protection for at least one reinstatement, in an amount sufficient to cover its estimated probable maximum loss attributable to a single loss event or occurrence? Yes [ ] No [X]

6.5 If no, describe any arrangements or mechanisms employed by the reporting entity to supplement its catastrophe reinsurance program or to hedge its exposure to unreinsured catastrophic loss
The Company purchases aggregate coverage to substantially replace nonreinstated catastrophe layers.

7.1 Has the reporting entity reinsured any risk with any other entity under a quota share reinsurance contract that includes a provision that would limit the reinsurer's losses below the stated quota share percentage (e.g., a deductible, a loss ratio corridor, a loss cap, an aggregate limit or any similar provisions)? Yes [X] No [ ]

7.2 If yes, indicate the number of reinsurance contracts containing such provisions. 11

7.3 If yes, does the amount of reinsurance credit taken reflect the reduction in quota share coverage caused by any applicable limiting provision(s)? Yes [X] No [ ]

8.1 Has this reporting entity reinsured any risk with any other entity and agreed to release such entity from liability, in whole or in part, from any loss that may occur on this risk, or portion thereof, reinsured? Yes [ ] No [X]

8.2 If yes, give full information
N/A

9.1 Has the reporting entity ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates) for which during the period covered by the statement: (i) it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders; (ii) it accounted for that contract as reinsurance and not as a deposit; and (iii) the contract(s) contain one or more of the following features or other features that would have similar results:
(a) A contract term longer than two years and the contract is noncancellable by the reporting entity during the contract term;
(b) A limited or conditional cancellation provision under which cancellation triggers an obligation by the reporting entity, or an affiliate of the reporting entity, to enter into a new reinsurance contract with the reinsurer, or an affiliate of the reinsurer;
(c) Aggregate stop loss reinsurance coverage;
(d) A unilateral right by either party (or both parties) to commute the reinsurance contract, whether conditional or not, except for such provisions which are only triggered by a decline in the credit status of the other party;
(e) A provision permitting reporting of losses, or payment of losses, less frequently than on a quarterly basis (unless there is no activity during the period); or
(f) Payment schedule, accumulating retentions from multiple years or any features inherently designed to delay timing of the reimbursement to the ceding entity. Yes [ ] No [X]

9.2 Has the reporting entity during the period covered by the statement ceded any risk under any reinsurance contract (or under multiple contracts with the same reinsurer or its affiliates), for which, during the period covered by the statement, it recorded a positive or negative underwriting result greater than 5% of prior year-end surplus as regards policyholders or it reported calendar year written premium ceded or year-end loss and loss expense reserves ceded greater than 5% of prior year-end surplus as regards policyholders; excluding cessions to approved pooling arrangements or to captive insurance companies that are directly or indirectly controlling, controlled by, or under common control with (i) one or more unaffiliated policyholders of the reporting entity, or (ii) an association of which one or more unaffiliated policyholders of the reporting entity is a member where:
(a) The written premium ceded to the reinsurer by the reporting entity or its affiliates represents fifty percent (50%) or more of the entire direct and assumed premium written by the reinsurer based on its most recently available financial statement; or
(b) Twenty-five percent (25%) or more of the written premium ceded to the reinsurer has been retroceded back to the reporting entity or its affiliates in a separate reinsurance contract. Yes [X] No [ ]

9.3 If yes to 9.1 or 9.2, please provide the following information in the Reinsurance Summary Supplemental Filing for General Interrogatory 9:
(a) The aggregate financial statement impact gross of all such ceded reinsurance contracts on the balance sheet and statement of income;
(b) A summary of the reinsurance contract terms and indicate whether it applies to the contracts meeting the criteria in 9.1 or 9.2; and
(c) A brief discussion of management's principle objectives in entering into the reinsurance contract including the economic purpose to be achieved.

9.4 Except for transactions meeting the requirements of paragraph 31 of SSAP No. 62R, Property and Casualty Reinsurance, has the reporting entity ceded any risk under any reinsurance contract (or multiple contracts with the same reinsurer or its affiliates) during the period covered by the financial statement, and either:
(a) Accounted for that contract as reinsurance (either prospective or retroactive) under statutory accounting principles ("SAP") and as a deposit under generally accepted accounting principles ("GAAP"); or
(b) Accounted for that contract as reinsurance under GAAP and as a deposit under SAP? Yes [ ] No [X]

9.5 If yes to 9.4, explain in the Reinsurance Summary Supplemental Filing for General Interrogatory 9 (Section D) why the contract(s) is treated differently for GAAP and SAP.

9.6 The reporting entity is exempt from the Reinsurance Attestation Supplement under one or more of the following criteria:
(a) The entity does not utilize reinsurance; or, Yes [ ] No [X]
(b) The entity only engages in a 100% quota share contract with an affiliate and the affiliated or lead company has filed an attestation supplement; or Yes [ ] No [X]
(c) The entity has no external cessions and only participates in an intercompany pool and the affiliated or lead company has filed an attestation supplement. Yes [ ] No [X]

GENERAL INTERROGATORIES

PART 2 – PROPERTY & CASUALTY INTERROGATORIES

10. If the reporting entity has assumed risks from another entity, there should be charged on account of such reinsurances a reserve equal to that which the original entity would have been required to charge had it retained the risks. Has this been done? Yes [X] No [ ] N/A [ ]

11.1 Has the reporting entity guaranteed policies issued by any other entity and now in force: Yes [X] No [ ]

11.2 If yes, give full information

The Company guarantees policies issued by Liberty Mutual Insurance Europe SE., Liberty International Underwriters Pte Limited, Liberty International Underwriters Limited, Ironshore Europe DAC and Liberty Specialty Markets Bermuda Limited.

12.1 If the reporting entity recorded accrued retrospective premiums on insurance contracts on Line 15.3 of the asset schedule, Page 2, state the amount of corresponding liabilities recorded for:

12.11 Unpaid losses	$ 122,919,351
12.12 Unpaid underwriting expenses (including loss adjustment expenses)	$ 10,011,659

12.2 Of the amount on Line 15.3, Page 2, state the amount that is secured by letters of credit, collateral and other funds? $ 9,596,277

12.3 If the reporting entity underwrites commercial insurance risks, such as workers' compensation, are premium notes or promissory notes accepted from its insureds covering unpaid premiums and/or unpaid losses? Yes [X] No [ ] N/A [ ]

12.4 If yes, provide the range of interest rates charged under such notes during the period covered by this statement:

12.41 From	5.00 %
12.42 To	8.00 %

12.5 Are letters of credit or collateral and other funds received from insureds being utilized by the reporting entity to secure premium notes or promissory notes taken by a reporting entity or to secure any of the reporting entity's reported direct unpaid loss reserves, including unpaid losses under loss deductible features of commercial policies? Yes [X] No [ ]

12.6 If yes, state the amount thereof at December 31 of current year:

12.61 Letters of Credit	$ 2,009,333,338
12.62 Collateral and other funds	$ 606,794,031

13.1 Largest net aggregate amount insured in any one risk (excluding workers' compensation): $ 550,000,000

13.2 Does any reinsurance contract considered in the calculation of this amount include an aggregate limit of recovery without also including a reinstatement provision? Yes [ ] No [X]

13.3 State the number of reinsurance contracts (excluding individual facultative risk certificates, but including facultative programs, automatic facilities or facultative obligatory contracts) considered in the calculation of the amount. 1

14.1 Is the company a cedant in a multiple cedant reinsurance contract? Yes [X] No [ ]

14.2 If yes, please describe the method of allocating and recording reinsurance among the cedants:

Premiums and recoverables were allocated pursuant to allocation agreements, including the intercompany pooling agreement.

14.3 If the answer to 14.1 is yes, are the methods described in item 14.2 entirely contained in the respective multiple cedant reinsurance contracts? Yes [ ] No [X]

14.4 If the answer to 14.3 is no, are all the methods described in 14.2 entirely contained in written agreements? Yes [X] No [ ]

14.5 If the answer to 14.4 is no, please explain:

N/A

15.1 Has the reporting entity guaranteed any financed premium accounts? Yes [ ] No [X]

15.2 If yes, give full information

16.1 Does the reporting entity write any warranty business? Yes [X] No [ ]

If yes, disclose the following information for each of the following types of warranty coverage:

Note: Parts 2 and 4 are gross of all discounting, including tabular discounting. Part 1 is gross of only nontabular discounting, which is reported in Columns 32 and 33 of Part 1. The tabular discount, if any, is reported in the Notes to Financial Statements, which will reconcile Part 1 with Parts 2 and 4.

Casualty Actuarial and Statistical (C) Task Force

Price Optimization White Paper

I. Scope

1. In this paper, the Casualty Actuarial and Statistical (C) Task Force provides background research on price optimization, identifies potential benefits and drawbacks to the use of price optimization, and presents options for state regulatory responses regarding the use of price optimization in ratemaking. The Task Force is not expressing an opinion on the policy decisions that have been or may be made by each state concerning rating practices that may incorporate price optimization.

2. The primary focus of the paper is on personal lines ratemaking. Ratemaking concepts and principles (e.g., cost-based actuarial indications or unfair discrimination) may have application to commercial lines of business, as well.

3. Though price optimization could be used in risk selection, marketing or other insurer operations, these issues are not addressed in this paper. The NAIC should consider whether these are issues that need to be addressed.

II. Introduction

4. Ratemaking is the process of establishing rates used in insurance or other risk transfer mechanisms. This process may involve a number of considerations, including estimates of future claims costs and expenses, profit and contingencies, marketing goals, competition, and legal restrictions. Actuaries play a key role in the ratemaking process and are generally responsible for determining the estimated costs of risk transfer. The advent of more sophisticated data mining tools and modeling techniques have allowed the use of more objective and detailed quantitative information for aspects of the rate-setting process for which insurers have traditionally relied on judgment or anecdotal evidence.

5. Making adjustments to actuarially indicated rates is not a new concept; it has often been described as "judgment." Insurers often considered how close they could get to the indicated need for premium without negatively affecting policyholder retention and how a given rate would affect the insurer's premium volume and expense ratio. Before the introduction of data-driven quantitative techniques, the answers to these questions were largely subjective. Historically, when judgment was applied, the changes were made on a broad level (e.g., an entire rating territory).

6. In recent years, through a process or technique referred to by many as "price optimization," insurers have started using big data (data mining of insurance and non-insurance databases of personal consumer information where permitted by law), advanced statistical modeling or both to select prices that differ from indicated rates at a very detailed or granular level. Formalized and

mechanized adjustments can be made to indicated rates for many risk classifications and, ultimately, perhaps even for individual insureds.

7. According to the Casualty Actuarial Society (CAS), until recently, companies had limited ability to quantitatively reflect individual consumer demand in pricing.[1] By measuring and using price elasticity of demand, an insurer can "optimize" prices to charge the greatest price without causing the consumer to switch to another insurer. It is this use of elasticity of demand that has led to criticisms that price optimization penalizes customers.

8. Critics object to insurers' use of price optimization when it results in unfairly discriminatory rates. Price optimization may use external, non-insurance databases to gather personal consumer information or detailed information about competitors' pricing to model consumer demand and predict the response of consumers to price changes. Some critics argue that price optimization has been developed to increase insurers' profits by raising premiums on individuals who are less likely to shop around for a better price, and many of these people are low-income consumers. The Consumer Federation of America (CFA) asserts that price optimization introduces a systematic component to rate setting unrelated to expected losses or expenses. The CFA has called price optimization unfairly discriminatory, claiming that it can result in drivers with the same risk profile being charged different rates.[2]

9. Regulators accept some deviations from indicated rates and rating factors. However, they are concerned that the use of sophisticated methods of price optimization could deviate from traditional ratemaking, extending beyond acceptable levels of adjustment to cost-based rates and resulting in prices that vary unfairly by policyholder. Regulators in each state determine the acceptable level of adjustment allowable based on state law and regulatory judgment.

10. In late 2013, the NAIC's Auto Insurance (C/D) Study Group began to study the use of price optimization in auto insurance. Because the topic of price optimization goes beyond auto insurance and requires a great deal of actuarial or statistical expertise, the Study Group asked the Task Force to perform any additional research necessary on the use of price optimization, including studying regulatory implications, and respond to the Study Group with a report or white paper documenting the relevant issues.

III. Background: State Rating Law, Actuarial Principles and Definitions

11. The basis for all rate regulation is established by the state law—both statutory and case law. State authority is derived from the inclusion in almost all states' laws that personal lines insurance "rates

1. Casualty Actuarial Society Committee on Ratemaking Price Optimization Working Party

2. Consumer Federation of America, March 31, 2014. "Insurance Commissioners Should Bar Industry Practice of Raising Rates on Customers Based on Shopping Habits," accessed at http://consumerfed.org/press_release/insurance-commissioners-should-bar-industry-practice-of-raising-rates-on-customers-based-on-shopping-habits/.

shall not be inadequate, excessive or unfairly discriminatory."[3] The NAIC has three model law guidelines related to rate regulation: 1) Property and Casualty Model Rating Law (File and Use Version) (#1775);[4] 2) Property and Casualty Model Rate and Policy Form Law Guideline (#1776);[5] and 3) Property and Casualty Model Rating Law (Prior Approval Version) (#1780).[6]

12. In Model #1775 and Model #1776, the description of "unfairly discriminatory rates" is as follows:

"Section 5. Rate Standards

Rates shall be made in accordance with the following provisions:

A. Rates shall not be excessive, inadequate, or unfairly discriminatory.

…

(3) Unfairly Discriminatory Rates. Unfair discrimination exists if, after allowing for practical limitations, price differentials fail to reflect equitably the differences in expected losses and expenses. …"[7]

In Model #1780,[8] a description of "unfairly discriminatory rates" is suggested to be adopted in regulation but does not provide wording for the description.

13. The actuarial profession utilizes ratemaking principles. The following are the four principles in the CAS "Statement of Principles Regarding Property and Casualty Insurance Ratemaking":

a. Principle 1: A rate is an estimate of the expected value of future costs.

b. Principle 2: A rate provides for all costs associated with the transfer of risk.

c. Principle 3: A rate provides for the costs associated with an individual risk transfer.

d. Principle 4: A rate is reasonable and not excessive, inadequate or unfairly discriminatory if it is an actuarially sound estimate of the expected value of all future costs associated with an individual risk transfer. [9]

14. The following terms are used in this paper:

3. Illinois law only contains that requirement for workers' compensation and medical professional liability. Kentucky statute § 304.13-031 includes the requirement only when the market is not competitive.

4. NAIC model law Guideline 1775; NAIC Model Regulation Service – January 2010.

5. NAIC model law Guideline 1776; NAIC Model Regulation Service – October 2010.

6. NAIC model law Guideline 1780; NAIC Model Regulation Service – October 2010.

7. NAIC Guideline 1775: Property and Casualty Model Rating Law (File and Use Version), Model Regulation Service—January 2010
NAIC Guideline 1776: Property and Casualty Model Rate and Policy Form Law Guideline, Model Regulation Service—October 2010.

8. NAIC model law guideline "Property and Casualty Model Rating Law (Prior Approval Version) Guideline 1780, Model Regulation Service—October 2010.

9. Casualty Actuarial Society, 1988. *Statement of Principles Regarding Property and Casualty Insurance Ratemaking*, accessed at *www.casact.org/professionalism/standards/princip/sppcrate.pdf.*

a. In this paper, "price optimization" refers to the process of maximizing or minimizing a business metric using sophisticated tools and models to quantify business considerations. Examples of business metrics include marketing goals, profitability and policyholder retention.

b. "Actuarial judgment" is used in many of the actuarial methodologies in the rate-setting process (e.g., selection of loss development factors, trends, etc.). Actuarial Standard of Practice (ASOP) No. 1, *Introductory Actuarial Standard of Practice,* states that "the ASOPs frequently call upon actuaries to apply both training and experience to their professional assignments, recognizing that reasonable differences may arise when actuaries project the effect of uncertain events."[10] According to the CAS, "[i]nformed actuarial judgments can be used effectively in ratemaking."[11] Actuarial judgments are made throughout the ratemaking (as well as risk classification) process, including assumptions on the inputs and assessing the accuracy of the results. Price optimization is a tool and does not replace actuarial judgment in ratemaking; actuarial judgment remains a separate and distinct exercise that is fully consistent with and permitted by sound actuarial standards.

c. "Ratemaking" is "the process of establishing rates used in insurance or other risk transfer mechanisms. This process involves a number of considerations, including marketing goals, competition and legal restrictions, to the extent they affect the estimation of future costs associated with the transfer of risk."[12] Basic elements that go into the risk transfer estimate include claim and claim handling expense, underwriting expenses, policy acquisition and a reasonable profit.

d. A "cost-based" rate is an estimate of all future costs associated with an individual risk transfer and is developed from and consistent with the expected claims, claim handling expense, underwriting expenses, policy acquisition expense, a reasonable profit, investment income and other risk transfer costs.

e. The "actuarial indication" is also referred to as a "cost-based indication" and is an actuarially sound estimate of the cost to transfer covered risk from a policyholder to the insurer. These estimates are based on the data at hand, the analytical techniques used and actuarial judgment about the underlying cost drivers. There can be a variety of reasons why the actuarial indication could have limitations, such as low volume of data/credibility or a problem with data quality or biases in the analytical technique(s) used. Additionally, there could be changes that are not fully reflected in the data, such as internal company changes or changes in the external environment. The actuarial indication excludes adjustments that are not in accordance with actuarial principles.

f. "Price elasticity of demand" (commonly known as just "price elasticity") measures the rate of response of quantity demanded due to a price change. Price elasticity "is used to see how sensitive the demand for a good is to a price change. The higher the price elasticity, the more sensitive consumers are to price changes. A very high price elasticity suggests that when the price of a good goes up, consumers will buy a great deal less of it, and when the

10. Actuarial Standards Board, 2013. Actuarial Standard of Practice No. 1, *Introductory Actuarial Standard of Practice*.

11 Casualty Actuarial Society, 1988. *Statement of Principles Regarding Property and Casualty Insurance Ratemaking*, accessed at www.casact.org/professionalism/standards/princip/sppcrate.pdf.

12. Casualty Actuarial Society, 1988. *Statement of Principles Regarding Property and Casualty Insurance Ratemaking*.

price of that good goes down, consumers will buy a great deal more. A very low price elasticity implies just the opposite—that changes in price have little influence on demand."[13]

g. A "rating plan" in the context of this paper is a structure of elements used to determine the premium to be charged a specific risk. The elements include a set of rules, risk classifications and sub-classifications, factors, discounts, surcharges, and fees applied to a base rate that determines the price to be charged a consumer to transfer risk to the insurer. Generally, a rating plan is embodied in a document called a rating manual.[14]

h. "Rating variables" (or "rating classes") are those explicitly stated in the insurer's rating plan and necessary to calculate the premium to be charged. Items such as loss development, trend or price elasticity would not be considered a rating variable unless these items are part of a filed rating plan. A rating variable includes consideration of tier placement within a company (but not across companies; underwriting determines the acceptability of a risk to a company) and insurance scores of all types.

i. A "rating factor" is the numerical value assigned to a rating variable for premium calculation purposes.

j. A "rating cell" is the result of any combination of rating variables in the rating plan.

k. The "rate" is defined as an estimate of all future costs associated with an individual risk transfer. A base value used as the starting point for the calculation of a premium and other rating factors that adjust the base value are considered to be rates.

l. A "risk profile" is the set of characteristics set forth in the insurer's rating plan required to calculate the premium to be charged for the purpose of transferring the individual's risk to the insurer. Two individuals with the same risk profile have the same risk, loss and expense expectations.

m. The "price" or "premium" charged a consumer incorporates management decisions after taking into account other considerations such as underwriting, marketing, competition, law and claims, in addition to the actuarial estimate of the rate. The price (or premium) charged is calculated by taking the individual's risk profile and applying the final rates and rules contained in the insurer's rating plan according to the policyholder's relevant characteristics.

n. The purpose of "capping" or "transition" rules is to provide stability to the insurer's book of business when large premium changes are possible. A premium or rate "capping" rule is a widely used practice where the change in premium from the current premium to the renewing premium (increase or decrease) is reduced. Capping impacts the premium change at renewal on a policy-by-policy basis and is usually in effect for a short period of time (e.g., the full approved premium will be charged after no more than three renewal cycles). Capping usually occurs when large policy premium changes (increases or decreases) are

13. Moffatt, M. Economics expert, Economics.about.com.
14. Paraphrased from the Casualty Actuarial Society's Foundations of Casualty Actuarial Science.

caused by significant changes to the insurer's base rates or its rating factors. Transition rules are effectively the same as capping rules, which can occur when overhauling a company's rating plan or when merging books of business from different rating plans.

IV. Price Optimization Background

15. There is no single or widely accepted definition of price optimization. In economics, optimization is "(f)inding an alternative with the most cost-effective or highest achievable performance under the given constraints, by maximizing desired factors and minimizing undesired ones."[15]

16. Definitions or descriptions of price optimization as used in insurance, offered by various stakeholders, include the following:

    a. The CAS defines price optimization as "the supplementation of traditional actuarial loss cost models to include quantitative customer demand models for use in determining customer prices. The end result is a set of proposed adjustments to the cost models by customer segment for actuarial risk classes."[16]

    b. The American Academy of Actuaries' (Academy) Price Optimization Task Force defines price optimization as "a sophisticated technique based on predictive modeling results and business objectives and constraints that are intended to assist insurance companies in setting prices. It is an additional component of the pricing process in which the business manager goes from cost-based rates to final prices by integrating expected costs with expected consumer demand behavior, subject to target business objective(s). The target business objective(s) may be to improve profit, increase volume, increase or maintain retention, or some combination thereof. These targeted business objectives represent the insurer's pricing strategy. Price optimization is a technique used to achieve that pricing strategy."[17]

    c. Towers Watson defines price optimization as "a systematic process for suggesting adjustments to theoretical cost-based prices that better achieve business objectives, subject to known constraints."[18]

    d. Earnix defines price optimization as a "systematic and statistical technique to help an insurer determine a rating plan that better fits the competitive environment, within actuarial and regulatory standards." Earnix adds that price optimization helps inform an insurer's judgment when setting rates by producing suggested competitive adjustments that balance and help the insurer achieve certain business goals, including loss ratios,

15. *www.businessdictionary.com/definition/optimization.html*.
16. Casualty Actuarial Society Committee on Ratemaking Price Optimization Working Party, 2014. "Price Optimization Overview."
17. American Academy of Actuaries, April 15, 2015, letter.
18. Towers Watson, Nov. 3, 2014. Letter to Joseph G. Murphy, accessed at *www.naic.org/documents/committees_c_d_auto_insurance_study_group_related_141103_towers_watson.pdf*.

customer retention and new business.[19] Earnix describes price optimization as an application of prescriptive analytics as opposed to predictive analytics. Prescriptive analytics use predictive models and business goals as inputs to recommend decisions to achieve the optimal results.

e. The Ohio Department of Insurance (DOI) describes price optimization as varying premiums based upon factors that are unrelated to risk of loss in order to charge each insured the highest price that the market will bear.[20]

f. The Consumer Federation of America (CFA) describes price optimization as a practice where premiums are set based on the maximum amount a consumer is willing to pay, rather than the traditionally accepted methods of calculating premiums based on projected costs, such as claims, overhead and profit.[21]

17. Many regulators have noted that price optimization is a complex process based on predictive modeling intended to assist insurance companies in setting prices. It is an additional component of the pricing process in which the insurer transitions from actuarial indicated rates to the selected rates charged individual risks.

18. According to Earnix,[22] price optimization uses a variety of applied mathematical techniques (linear, nonlinear and integer programming) in the ratemaking process to analyze more granular data.

19. There are several different types of price optimization, and price optimization can be performed at different levels of aggregation. According to Towers Watson,[23] there are three main types of optimization used in ratemaking:

a. Ratebook Optimization – using mathematical algorithms informed by cost and demand models to adjust factors in an existing structure.

b. Individual Price Optimization – a non-parametric rate engine that builds a price based on the cost and demand for the product.

c. Hybrid Optimization – create a new rate factor based on the demand model that overlays the cost-based rate algorithm.[24]

22. Earnix Ltd. provides integrated pricing and customer analytics software that allows financial services companies to predict customer risk and demand and its impact on business performance. Its software platform allows insurance companies to harness customer data and optimize business performance across auto, home, commercial and other product lines; *www.bloomberg.com/research/stocks/private/snapshot.asp?privcapId=1745902*.

23. Towers Watson & Company manages employee benefit programs; develops attraction, retention and reward strategies; advises pension plan sponsors on investment strategies; provides strategic and financial advice to insurance and financial services companies; and offers actuarial consulting; *www.bloomberg.com/profiles/companies/TW:US-towers-watson-&-co*.

20. With ratebook optimization, the model proposes alternative selections of rating factors in the existing rating plan to achieve an insurer's business goals. These models generally determine selections at the classification level to optimize the insurer's program. According to the CAS, insurers engaging in the ratebook form of price optimization will not charge different premiums to consumers with the same risk profile. The CAS says there is no mechanism in the insurers' rating plans to charge different premiums to consumers with the same risk profile.

21. With individual price optimization, prices are determined at the individual policy level based on cost and demand. This type of price optimization is believed to be more common with retail or personal service companies in the U.S. and in insurance pricing in other countries.

22. With hybrid optimization, an additional factor is added to an insurer's existing rating plan to incorporate other aspects from a demand model such as expected retention, profitability, rate of transition from the current premium towards the proposed premium, premium volume or expense. The new rating factor would be designed to modify the existing rating plan to achieve an insurer's business goals; the rating factor may or may not be correlated with expected costs.

23. Some distinguish between "constrained" versus "unconstrained" optimization. Generally, constrained optimization refers to an insurer setting maximum and minimum limits on the model's output. For example, in price optimization, a price could be constrained by the current price and the fully loss-based indicated price. Unconstrained optimization has no such limits.

24. Vendors such as Towers Watson and Earnix have developed commercially available software for carriers that perform price optimization. The use of the software can vary from insurer to insurer, as each insurer may specify its own objectives and constraints. According to Towers Watson, its software provides: 1) an environment for a carrier to integrate its own models (e.g., loss cost models, expense assumptions and policyholder demand models) on customer data; and 2) mathematical algorithms that search the universe of rating structure parameters (i.e., relativities) to identify the set(s) that most closely meet the carrier's corporate objectives, subject to its constraints. Thus, each optimization exercise is unique to the insurer and relies on the insurer's data, assumptions, input models, targets and constraints. Some insurers develop their own price optimization software.

25. In the traditional rate-setting process, actuaries determine expected losses, expenses and profit loading; adjustments may be made to reflect business considerations such as marketing/sales, underwriting and competitive conditions. Depending on the situation, regulators may permit insurers to reflect judgment and the competitive environment in rates (e.g., to reflect differences expected in future costs that might differ from past costs or to avoid adverse selection and the resulting associated costs to the company and consumers). However, the insurer must ensure that

24. Guven, S., 2015. FCAS, MAAA, Towers Watson & Company. Presentation, Casualty Actuarial Society's RPM Seminar.

filed rates are not excessive, inadequate or unfairly discriminatory. This table provides a high-level comparison of these approaches:

	Traditional Approach	Price Optimization Approach
Rating Plan Development:	Base rate (loss cost) x adjustment factor	Base rate (loss cost) x adjustment factor
Adjustment factors (for auto insurance) are based on …	Age, gender, territory, make and model year, and many other rating variables	Age, gender, territory, make and model year, and many other rating variables
Adjustment to rates based on market, regulatory and other considerations are based on …	Qualitative assessment	Qualitative and quantitative assessments informed by analysis of risk-related and non-risk-related data
Basis for adjustments to rates is …	Insurer judgment	Automatic, systematic analysis (modeling)

26. Price optimization based on quantitative modeling has been characterized by the CFA as a new technique and a departure from traditional cost-based ratemaking. The CFA says it uses additional, and sometimes more complex, models that incorporate non-risk-related factors to quantify the effects of rate changes with the objective to improve profitability, attract new business and retain existing business, or other measures (business metrics).

27. Traditional cost-based ratemaking often includes judgment to select rate factors to achieve insurer objectives. The key difference between traditional judgment and price optimized modeling techniques is that with price optimized modeling: 1) market demand and customer behavior are quantified instead of being subjectively determined; and 2) the effect of the deviation from the cost-based rate on business metrics is mathematically measured. Both approaches can make adjustments to the indicated cost-based rating factors, but with price optimization, these adjustments are made to rating factors with more clearly quantified insurer goals, and in lieu of or in addition to adjustments to rating factors, price optimization could be used to adjust the rate or premium for an individual policy.

28. According to Towers Watson, price optimization incorporates models that generate a much larger number of rate scenarios to run through the price assessment environment and helps to better identify which scenarios best achieve business objectives.

29. Towers Watson notes that “elasticity of demand is a key ingredient” in the price optimization process. Towers Watson also notes that the input models in its optimization software include policyholder demand models, which “do not describe which customers shop more or less but rather how likely a customer is to renew a policy or accept an insurer’s quote.” Policyholder demand models, according to Towers Watson, are generally fit to recent, customer-level, historical data that

contains information about the customer, as well as what purchase decision the customer made (e.g., did the customer renew – yes/no, did she or he accept this quote – yes/no). [25]

30. Price optimization has been used for years in other industries, including retail and travel. However, the use of model-driven price optimization in the U.S. insurance industry is relatively new. A 2013 Earnix survey[26] of 73 major insurers found that 55% consider customer price elasticity. Of large insurance companies (with gross written premiums over $1 billion), 45% currently use some form of price optimization, with an additional 29% of all companies reporting they plan to do so in the future. State regulators report receipt of few rate filings specifically identifying the use of price optimization. This may be because price optimization is not clearly disclosed to regulators when a filing is made or because price optimization is used in a manner that is not directly part of a filed rating plan.

V. Identify Potential Benefits and Drawbacks of Price Optimization

31. Price optimization affects the selected rates, rating factors or premium rather than the cost-based indications. Historically, selections are often based, in part, on judgment. Therefore, regulators are challenged with reviewing an insurer's selected rates or rating factors without, in certain cases, knowing how price optimization influenced the insurer's selections. General guidelines some regulators may use to review rates include the relationship between the current, indicated and selected rates or factors, how far the selected rates or factors vary from the indications, or the relationship between factors for a rating plan variable. Distilling the voluminous information connected with price optimization makes determining the extent and effect of a program much more difficult for regulators. In addition, regulators must rely upon insurers to present accurate and complete information on indicated rates and the adjustments to arrive at selected rates. Regulators do not currently have the data necessary for an independent evaluation of most of the insurer modeling and calculations.

32. One aspect of working with generalized linear models (GLMs) and rating plans is that they can produce large changes in the risk estimate of individual policies between versions (or when introduced in a rating plan), often as the compounding of many small changes across all the rating variables. As such, companies need ways to provide rate stability when implementing a new rating plan or changes to an existing rating plan. One of the goals within constrained optimization can be to limit policyholder disruption. According to the CAS,[27] price optimization may improve rate stability and lower an insurer's long-term cost for providing coverage and limit policyholder disruption. This may be viewed as indirectly favorable for consumers who do not want to shop for insurance on a regular basis.

27. Casualty Actuarial Society, 2014. Letter to the Casualty Actuarial and Statistical Task Force.

33. Consumer advocates assert that deviation from cost-based ratemaking through price optimization will disfavor those consumers with fewer market options, less market power and less propensity to shop around—in particular, low-income and minority consumers.[28] Based on an Insurance Information Institute (III) poll, however, lower-income customers (under $35,000 annual income) are more likely to shop for insurance than more affluent individuals (above $100,000 annual income), who might shop less.[29] However, Robert P. Hartwig, president of the III, states that the "assertion that low-income consumers are particularly vulnerable because they do not shop is … entirely unsubstantiated." A poll conducted by the III "found that 68% of people with annual income under $35,000 compared prices when most recently buying auto insurance, a higher percentage than any other income group. [61%] of respondents with income above $100,000 said they had shopped around."[30] The CFA notes that only 18% of drivers shop for auto insurance every year, and 58% rarely or never shop according to a Deloitte survey.[31] A recent study by the Insurance Research Council (IRC) reports 26% of households with incomes of $100,000 or more reported shopping for auto insurance within the 12 months prior to the survey; 25% of households with incomes between $60,000 and $99,999 reported shopping; 25% of households with incomes between $35,000 and $59,999 reported shopping; 23% of households with incomes between $20,000 and $34,999 reported shopping; and 21% of households with incomes less than $20,000 reported shopping. The IRC study notes that "among racial/ethnic groups, Hispanic respondents were least likely to have shopped (22%), while black respondents were most likely to have shopped (33%) for auto insurance."[32]

34. According to the CFA, there is no evidence that price optimization improves rate stability, lowers long-term costs or limits policyholder disruption. Price optimization is not needed to select rates less than indicated rates, as evidenced by decades of rate filings. It is unclear how an insurer's long-term cost for providing coverage is improved by price optimization when price optimization is a non-cost-based adjustment to cost-based rate indications. Cost-based regulatory standards do not permit unfair discrimination in the name of "avoiding policyholder disruption." It is important to present consumers with the true cost of insurance and the role of markets to allow consumers to address policyholder disruption by shopping around.[33]

35. Mr. Hartwig claims the price optimization process does not (unfairly) discriminate and does not abandon the core principle of risk-based pricing. He said it simply provides "more precision in the

33. Comments on the Casualty Actuarial and Statistical (C) Task Force's Draft Price Optimization White Paper, *Consumer Federation of America and Center for Economic Justice*, not dated but received by the Task Force and posted as discussion material for the Task Force's July 21, 2015, conference call.

process associated with pricing, and it allows insurers in an analytical way to deal with what-if scenarios."[34]

36. State insurance regulators are concerned with the shift from "loss-based ratemaking principles to principles that encompass subjective market driven ratemaking"[35] and question how price optimization "would not conflict with state rating laws that require rates not to be excessive, inadequate and unfairly discriminatory."[36]

37. Insurers argue price optimization is a technological improvement over current practices, and criticisms are aimed at individual price optimization—not the ratebook form of price optimization used in setting rates.

38. Some insurers contend that price optimization is allowed under the current Actuarial Standards of Practice.

VI. Regulatory Responses to Price Optimized Rating Schemes

39. State law requires that rates not be excessive, inadequate or unfairly discriminatory. Regulators should consider whether these requirements can be met when price optimized rating schemes are used. Even if the requirements can be met, some constraints on the optimization might be needed.

40. Regulators have a number of potential responses regarding price optimization. Numerous states defined price optimization and issued bulletins prohibiting the defined practice. New York issued letters to insurers to further study price optimization. References to and some descriptions of bulletins are provided in the attached Appendix A.

41. Some state regulators believe that existing state laws are sufficient to deal with price optimization and that no bulletin or other public statement is necessary. Many states have not received a filing that stated price optimization was incorporated into the rating process. Many states are looking more closely at the issue or are waiting for the issue to be more thoroughly discussed and reported upon by the NAIC.

42. Regulators have broad authority to ensure rating practices are consistent with state rating laws. The Task Force identified the following options for regulatory responses to price optimized rating schemes:

    a. Determine which price optimization practices, if any, are allowed in a particular state.

34. Weisbaum, H., 2014. "Data Mining Is Now Used to Set Insurance Rates; Critics Cry Foul," accessed at www.cnbc.com/id/101586404.

36. Ibid.

b. Define any constraints on the price optimization process and outcomes.
    i. A constraint might limit the pricing adjustment to be between the current rate and the actuarial indicated rate and always move in the direction of the actuarial indicated rate.
    ii. A constraint might require selected rating factors to be between the current and actuarial indicated factors, within a confidence interval around the current/indicated factors, or directionally consistent with the current factors.
    iii. A constraint might limit the variables that can be used in defining a risk class, such as a categorical or numerical measure of retention.
    iv. A constraint might be that price optimization can only be applied to specific class sizes, not class sizes so small that price optimization could be applied at the individual insured level or to small groups of insureds.
    v. A constraint could be that price optimization adjustment to rating factors must produce rates that maintain cost-based differences.

c. Develop regulatory guidance on the meaning of statutory rate requirements so that rates are not excessive, inadequate or unfairly discriminatory.
    i. Provide clear examples of what is unacceptable.
    ii. Identify principles under which the legal requirements for rates are met.

d. Enhance filing requirements using a specific definition of "actuarial indication" of needed rates and rating factors.
    i. Consider whether the actuarial indication is a point estimate or any selected value within a confidence interval around the point estimate.
    ii. Consider whether to require actuarial certification that the indications presented in the rate filing are based solely on cost considerations and are not otherwise adjusted.
    iii. Consider requiring disclosure of any adjustments to rates that are not based on expected cost.
    iv. Consider not allowing any non-cost-based adjustments to selected rates or rating factors.

e. Require specific explanation or reasoning to support any proposed or selected rate that deviates from the actuarially indicated rate.

f. Change filing requirements to require the following transparency, with consideration of state law regarding confidentiality:
    i. Disclosure of whether price optimization, including any customer demand considerations, is used.
    ii. Disclosure of differences in proposed prices for the insurer's existing and new customers with the same risk profile.

iii. Filing of a report showing the distribution of expected loss ratios under the current prices and under the proposed prices (e.g., a histogram with two series). If the distribution under proposed prices is wider compared to the distribution under current rates, then there could be additional subsidies in the proposed rates. Note that this could be affected by changes in an insurer's mix of business, etc.

iv. Disclosure of all data sources, models and risk classifications used by an insurer to calculate a premium, whether referred to as underwriting, tier placement, rating factors, discounts, surcharges or any other term.

v. Disclosure of which rating factor or factors are affected by price optimization, the size of the impact by rating factor and the cumulative impact of price optimization across all rating factors for existing policyholders and applicants for insurance.

vi. Filing of a certification by an actuary that all non-cost-based considerations affecting the proposed rates and rating factors are documented in the filing. The certification would also identify the exhibits where differences are shown. A more precise definition of price optimization may be needed.

g. Ensure that the regulatory system does the following:

i. Requires all rating factors be filed and all adjustments to indicated rates be disclosed.

ii. Maintains adequate resources for reviewing complex rate filings, including price optimization.

iii. Establishes regulatory practice with more in-depth review of price optimization models used in ratemaking.

1. States and/or the NAIC should obtain expertise with models.
2. Modeling experts should review how a particular model works and the accuracy and appropriateness of input data in order to make an informed determination regarding the statutory rate requirements.

VII. Recommendations for Regulators

43. This white paper is focused on price optimization in personal lines and its impact on rates. The previous paragraphs provide the Task Force's background research and study of price optimization. Utilizing this study, the Task Force makes the following recommendations regarding rates and regulatory rate review for personal lines insurance.

44. The Task Force recognizes there are numerous definitions of price optimization. Companies can use the term to encompass activities that might include retention models, elasticity of demand, maximization of profit, competitive analysis, etc. The Task Force agreed not to recommend a definition of price optimization but rather, under any definition of price optimization, recommend

that the states address the requirement in their state rating laws that "rates shall not be excessive, inadequate, or unfairly discriminatory."

45. The Task Force recommends that rating plans should be derived from sound actuarial analysis and be cost-based. The proposed rates developed from an actuarial analysis need to comply with state laws. They should also be consistent with the actuarial principles derived from a professional actuarial body and the actuarial standards of practice established by the Actuarial Standards Board (ASB).

46. The Task Force recommends that two insurance customers having the same risk profile should be charged the same premium for the same coverage. Some temporary deviations in premiums might exist between new and renewal customers with the same risk profile because of capping or premium transition rules.

47. The Task Force acknowledges that not all rates and rating plans that are accepted or approved strictly adhere to the actuarial indications. While actuarial indications are largely preferred over pure judgment, regulators acknowledge that the actuarial indications are only an estimate of the cost to transfer risk and that some insurer judgment will inevitably enter the rate setting process. The Task Force recommends states allow flexibility reflecting insurance loss and expense costs in the selection of rating factors. Some additional recommendations regarding the acceptance of deviations from the actuarial indications are as follows:

    a. The Task Force recommends the selection of a proposed rate between the currently approved rate and the actuarially indicated rate be allowed if based on reasonable considerations adhering to state law and consistent with actuarial principles and Standards of Practice reflecting expected insurance loss and expense costs.

    b. The Task Force recommends that a selected rate outside the range defined by the current and indicated rate may be acceptable provided it is disclosed, complies with state law and is shown to be consistent with actuarial ratemaking principles and Standards of Practice.

    c. The Task Force acknowledges that capping and transitional rules can be in the public's best interest but recommends regulators consider the extent to which they will allow capping and transitional rating. Consideration should be given to the length of time over which premium changes will be limited before they reach the approved rate level, the size and reasonableness of capping's upper and lower bounds, and the extent to which capping of one rate might affect rates charged to others.

48. The Task Force recommends that under the requirement "rates shall not be … unfairly discriminatory," insurance rating practices that adjust the current or actuarially indicated rates or the premiums, whether included or not included in the insurer's rating plan, should not be allowed

when the practice cannot be shown to be cost-based or comply with the state's rating law. With due consideration as to whether practices are cost-based or in compliance with state rating law, the Task Force believes the following practices , at a minimum, are inconsistent with statutory requirements that "rates shall not be … unfairly discriminatory:"

a. Price elasticity of demand.
b. Propensity to shop for insurance.
c. Retention adjustment at an individual level.
d. A policyholder's propensity to ask questions or file complaints.

49. The Task Force recommends that rating plans in which insureds are grouped into homogeneous rating classes should not be so granular that resulting rating classes have little actuarial or statistical reliability. The use of sophisticated data analysis to develop finely tuned methodologies with a multiplicity of possible rating cells is not, in and of itself, a violation of rating laws as long as the rating classes and rating factors are cost-based.

VIII. State Considerations

50. With due consideration of the above recommendations, the Task Force proposes the following:

a. Consider issuing a bulletin to address insurers' use of methods that may result in non-cost based rates. (See Appendix B.)

b. Consider enhancing requirements for personal lines rate filings to improve disclosure and transparency around rates, rate indications and rate selections. (See Appendix C.)

c. Analyze models used by insurers in ratemaking to ensure the model adheres to state law and actuarial principles. A list of possible questions is provided to assist the regulatory analysis. (See Appendix D.)

Appendix A

State Actions Taken Prior to Adoption of the White Paper

1. Maryland, the first state to take explicit action against price optimization in rate setting, released Bulletin B 14-23 on Oct. 31, 2014.[37] The Maryland Insurance Administration announced it determined that price optimization is a practice in which an insurer varies rates based on factors other than the risk of loss, such as the willingness of some policyholders to pay higher premiums than other policyholders, resulting in rates that are unfairly discriminatory in violation of state law. Insurers using price optimization techniques in Maryland were required to end such practices and resubmit rates compliant with the bulletin no later than Jan. 1, 2015.

2. In February 2015, the Ohio DOI issued Bulletin 2015-01, noting that "price optimization involves gathering and analyzing data related to numerous characteristics specific to a particular policyholder that are unrelated to risk of loss or expense."[38] The bulletin says that insurer usage of the price elasticity of demand, or how much of a premium increase a particular policyholder will tolerate before switching insurers, is unrelated to risk of loss or expense. The Ohio DOI said that by its nature, price optimization can result in two insureds with similar risk profiles being charged different premiums. Insurance companies that use these price optimization techniques in Ohio were required to end the practice and resubmit rates compliant with the bulletin no later than June 30, 2015.

3. The California DOI issued a "Notice Regarding Unfair Discrimination in Rating Price Optimization" on Feb. 18, 2015, and generally defined price optimization as setting rates based on a willingness of an individual or group to pay more than another individual or group.[39] The Notice states that any insurer currently using price optimization to adjust rates in California must cease doing so. "Any insurer that has employed price optimization to adjust its rates in the ratemaking/pricing process shall remove the effect of any such adjustments from any filing to be submitted subsequent to the date of the Notice. And any insurer that has a factor or factors based on price optimization in its rating plan shall remove the factor or factors in its next filing."

4. On March 18, 2015, the New York Department of Financial Services (NYDFS) sent a letter to P/C insurers and defined price optimization as the practice of varying rates based on factors other than those directly related to risk of loss—for example, setting rates or factors based on an insured's likelihood to renew a policy or on an individual's or class of individuals' perceived willingness to pay a higher premium relative to other individuals or classes. The NYDFS declared such practices as inconsistent with traditional cost-based rating approaches and said such practices could violate its law prohibiting rates to be unfairly discriminatory. The NYDFS is seeking to determine whether

39. *www.insurance.ca.gov/0250-insurers/0300-insurers/0200-bulletins/bulletin-notices-commiss-opinion/upload/PriceOptimization.pdf.*

insurers use price optimization in New York and has required insurers to answer its specific rating questions by April 15, 2015.[40]

5. The Florida Office of Insurance Regulation Informational Memorandum OIR-15-04M was issued May 14, 2015.[41] Rates within a risk classification system would be considered fair if differences in rates reflect material differences in expected cost for risk characteristics. Price optimization involves analysis and incorporation of data not related to expected cost for risk characteristics—that is, it involves factors not related to expected loss and expense experience. The memorandum states the use of price optimization results in rates that are unfairly discriminatory and in violation of Sections 627.062 and 627.0651, Florida Statutes. Insurers that have used price optimization in the determination of the rates filed and currently in effect should submit a filing to eliminate that use. Insurers should ensure that any filings subsequent to the date of the Memorandum do not utilize price optimization in any manner.

6. The Vermont Department of Financial Regulation, Division of Insurance, issued Insurance Bulletin No. 186 titled Price Optimization in Personal Lines Ratemaking on June 24, 2015.[42] The bulletin is applicable to all personal lines policies. Price optimization, in some of its application, involves the judgmental use of factors not specifically related to a policyholder's risk profile to adjust the policyholder's insurance premium. Unfair discrimination is considered to exist if price differentials "fail to reflect equitably the differences in expected losses and expenses"[43] for different classes of policyholders. The bulletin states that Vermont law is clear and that both base rates and rating classes must be based on factors specifically related to an insurer's expected losses and expenses. Insurers are directed that all personal lines rate filings must disclose whether the company uses non-risk-related factors to help determine the insured's final premium.

7. Washington's Technical Assistance Advisory 2015-01 was issued July 9, 2015, by the state of Washington, Office of the Insurance Commissioner, on the subject of price optimization.[44] The advisory states Washington law requires that premium rates for insurance not be excessive, inadequate or unfairly discriminatory. A rate is not unfairly discriminatory if it is an actuarially sound estimate of the expected value of all future costs associated with an individual risk transfer. Thus, rates must be based on cost associated with risk. Charging higher rates to certain consumers based on their willingness to look elsewhere for insurance does not reflect a genuine increased cost incurred by the insurer. To the extent that an insurer's use of price optimization results in premiums, rates or rating factors unrelated to cost and risk, it will be considered unfairly discriminatory and in violation of Washington law.

Appendix B

Potential State Bulletin

INSURANCE BULLETIN XXX DATE

PRICE OPTIMIZATION
In Personal Lines Ratemaking

This bulletin is applicable to all property and casualty insurers issuing personal lines policies in [STATE].

While there is no universally accepted definition of price optimization, the practice, in some of its applications, involves the use of factors not specifically related to an insured's expected losses and expenses but are used to help determine or to adjust an insured's premium. An example would be using an individual policyholder's response to previous premium increases to determine how much of a premium increase the policyholder will tolerate at renewal before switching to a different insurer. This practice can result in two policyholders receiving different premium increases even though they have the same loss history and risk profile. It can also result in premiums that are excessive or inadequate.

Property and casualty insurers doing business in [STATE] are reminded that all ratemaking must conform to the statutory requirements contained in [STATUTE(S)]. Rates must not be "… excessive, inadequate or unfairly discriminatory …" A rate will be considered unfairly discriminatory if price differentials fail to reflect equitably the differences in expected losses and expenses for different classes of policyholders. Both base rates and rating classes must be based on policyholder characteristics specifically related to an insurer's expected losses, expenses or policyholders' risk. While insurers may employ actuarial judgment in setting their rates, judgmental adjustments to a rate may not be based on non-risk-related policyholder characteristics such as an individual's "price elasticity of demand," which seek to predict how much of a price increase an individual policyholder will tolerate before switching to a different insurer.

The following practices are inconsistent with statutory requirements that "rates not be … unfairly discriminatory":

a. Price elasticity of demand.
b. Propensity to shop for insurance.
c. Retention adjustment at an individual level.
d. A policyholder's propensity to ask questions or file complaints.

The Department of Insurance (DOI) does not intend this bulletin to prohibit or restrict such practices as capping or transitional pricing when applied on a group basis. Insurers should group individual policyholders into justifiable, supportable, risk-based classifications and treat similarly situated policyholders the same with respect to insurance pricing. Likewise, the use of sophisticated data analysis to develop finely tuned methodologies with a multiplicity of possible rating cells is not, in and of itself, necessarily a violation of rating laws as long as the classifications are based strictly on expected losses, expenses or other justifiable, supportable risk characteristics.

[Drafting note: States will need to consider whether the bulletin should also apply to commercial lines policies and adjust the bulletin accordingly.]

Appendix C

Potential Requirements for Rate Filings

1. The insurer should disclose the current, risk-based indicated (see #2 for definition) and the selected rating factor, rate or premium adjustments.

2. The risk-based indicated charge should be actuarially justified as the measurement of the cost to transfer risk from the insured to the insurer. Actuarial judgment [see 14.b for definition) to evaluate that transfer cost can be included.

3. The insurer must adequately explain any deviation from the actuarial indication to the selected change for each rating characteristic.

4. The insurer should disclose and adequately explain any capping rule and the plan to transition toward the indicated charge over time. Beyond the overall effect of capping or transition rules, the insurer should disclose and justify, in detail, any differences between new business and existing business pricing.

5. The insurer should disclose all data, sources and models used in ratemaking. In particular, the insurer should disclose use of customer elasticity of demand or demand models in the selection of rates. The insurer should disclose constraints used in the selection of rates. States should consider the proprietary nature of such information and grant confidentiality as appropriate and allowed under state law.

6. For any deviations around the actuarial indication, insurers should evaluate credibility of the actuarial indication and make appropriate actuarial assumptions. When rating classes are so granular that there is limited credibility, regulators should consider whether to allow such a rating plan.

7. Some states might decide to require an attestation of the proposed rates in a rate filing. Potential attestation could include:
    a. Attestation that proposed rates are within a reasonable range of cost-based indications.
    b. Attestation that actuarial indications are cost-based, which would inform regulators that any deviations from actuarial indications should be evaluated according to the law.
    c. Attestation that actuarial indications are based on a sound actuarial methodology.

8. The insurer should provide a disruption report that shows the distribution of proposed policyholder premium changes (percentage change) when the existing book of business is renewed under the proposed rating plan.

Note: States should consider the proprietary nature of each requirement and grant confidentiality as appropriate and if allowed under state law.

Appendix D

Potential Questions for Regulators to Ask
Regarding the
Use of Models in P/C Rate Filings

Insurers might use a model in the development of proposed rates and rating factors. The Task Force offers some potential questions a regulator could ask regarding the use of models in rate proposals. Questions may include, but not be limited by, the following:

Model Description

1. Please provide a high-level description of the workings of the model that was used to select rates and rating factors that differ from the indicated.
2. What is the purpose of the model? What does the model seek to maximize or minimize (e.g., underwriting profit, retention, other) and explain.
3. Under what specific constraints is any maximization/minimization performed? Identify each constrained variable and its minimum and maximum values.

Model Variables

4. How were the input variables for your model selected?
    a. What is the support for the model variables, including the predictive values and error statistics for the model variables?
    b. Are the parameters loss-related, expense-related or related to the risk in some other way?
5. Which of the input variables are internal (customer-provided or deduced from customer-provided information) or external?
    a. Identify whether each input variable is used in your rating plan.
    b. For each external variable, please identify:
        i. The owner or vendor of the data (e.g., Department of Motor Vehicles).
        ii. Which variables are subject to the requirements of the federal Fair Credit Reporting Act.
        iii. How you ensure that the data are complete and accurate.
        iv. The framework, if any, that provides consumers a means of correcting errors in the data pertaining to them.

Model Constraints and Output

6. What level of granularity is your model output (e.g., the class plan level, individual rating factors, or some other level such as household or demographic segment that is different from the rating plan)?
7. What are the limits (or constraints) for the selected rating plan factors, if any?
8. How do the modeled values compare to the company experience?

Note: Regulators should evaluate the particular filing and associated costs to insurers to determine the extent of questioning needed. Regulators should also consider the potential proprietary nature of modeling information and grant confidentiality as appropriate and if allowed under state law.

NAIC White Paper

THE U.S. NATIONAL STATE-BASED SYSTEM OF INSURANCE FINANCIAL REGULATION

and the

SOLVENCY MODERNIZATION INITIATIVE

August 14, 2013

Drafted by the
Solvency Modernization Initiative (E) Task Force

Table of Contents

SECTION:

1. Introduction
2. The United States Insurance Financial Solvency Framework
3. U.S. Insurance Financial Regulatory Oversight
4. Market Regulation
5. Solvency Modernization Initiative

Section 1: Introduction

1. In 2008, through the NAIC, state insurance regulators in the U.S. embarked on the Solvency Modernization Initiative (SMI) to perform a critical self-evaluation to improve the insurance solvency regulatory framework in the U.S., including a review of international developments and potential options for use in U.S. insurance supervision. The SMI focuses on the following key components of the solvency framework: capital requirements, governance and risk management, group supervision, statutory accounting and financial reporting, and reinsurance. The purpose of this white paper is to explain the U.S. solvency regulatory framework and how and why it works successfully. In addition, the white paper will discuss the SMI self-evaluation and highlight the strengths of the national state-based system of insurance regulation and the improvements made over the last several years in the SMI.

Implementation of the U.S. Financial Regulatory Mission

2. U.S. regulators adopted the following U.S. Insurance Regulatory Mission at the NAIC: *Protect the interests of the policyholder and those who rely on the insurance coverage provided to the policyholder first and foremost, while also facilitating the financial stability and reliability of insurance institutions for an effective and efficient marketplace for insurance products.*[1] Considering the variety of ways to implement all of the aspects of a regulatory regime, U.S. regulators decided that combining both financial and market regulation is the best means to achieve their regulatory mission.

Financial Regulation

3. The SMI project first produced a succinct description of the entire current U.S. financial regulatory framework, including the underlying principles in which U.S. regulators operate, titled, "The United States Insurance Financial Solvency Framework[2]" (hereafter called "Framework"). The financial regulatory process is essentially a three-stage process: 1) mitigate or eliminate some risks in the insurance business through guardrails around or restrictions on insurers' activities; 2) use financial tools and oversight to work with insurers to implement corrective actions in order to avoid failures; and 3) provide a back-stop of financial protection in the event that insurer rehabilitation or liquidation is required.

4. Stage one uses legal restrictions or regulatory approval requirements on significant, broad-based transactions/activities to mitigate or eliminate certain risk exposures at the outset. For example, the licensing application process requires extensive analysis of potential financial failure or marketplace illegal or improper risks. Not all requests to conduct insurance business are granted; thereby protecting policyholders by avoiding unacceptable risks. Insurers must obtain approval for extraordinary dividends before payment, thereby avoiding inappropriate investor payments or distributions. Other examples of pre-approval requirements include change of control, transactions with affiliates, investments, and some reinsurance transactions.

5. The second stage, and where most of the regulatory activity exists, is financial oversight. Financial oversight and the determination of hazardous financial condition are the most valuable and extensive part of U.S. insurance financial regulation. Regulators evaluate companies to determine if they are in

[1] Modified from "The United States Insurance Financial Solvency Framework," NAIC Financial Condition (E) Committee, 2010.
[2] *www.naic.org/documents/committees_e_us_solvency_framework.pdf.*

potentially hazardous financial condition, using financial analysis and financial examination tools based on an extensive and uniform financial reporting system along with correspondence with the insurer and other relevant entities (as may be necessary). Uniform and detailed reporting allows regulators to benchmark one company to other comparable companies, identifying outliers, unique situations, and potentially under-valued risks. These financial oversight activities also allow regulators to look for new risk concentrations and/or optimistically-valued risks in order to prioritize companies and catch issues long before they become apparent in the marketplace. Notably, the system maintains confidentiality of the financial analysis calculations so companies cannot "game" the reporting to achieve certain desired outcomes. In this way, regulators try not to place too much reliance on the "over-optimism" that might exist in a company's own measurement of regulatory capital needs. Due to the significance of financial reporting in the U.S. financial regulatory system, regulators focus considerable activity and oversight on consistent appropriate reporting (audits, compliance, actuarial opinions, etc.).

6. The final stage, and probably the most difficult stage of regulatory oversight, occurs when an insurer becomes insolvent or financially impaired, either in receivership[3] (conservation[4], rehabilitation[5], etc.) or liquidation[6]. Most often, regulators cite hazardous financial condition[7] as the basis for regulatory action. While one might expect the piercing of the required regulatory capital level (called Risk-Based Capital, or RBC) to be the most-often-cited finding prompting regulatory action, most regulators take action before companies fall below the required RBC levels. In the U.S., regulators do not use RBC as an insolvency predictor in isolation; but rather, they rely upon other significant financial indicators and analysis. Besides enhancing uniformity in regulatory action, the value of the RBC comes as back-stop protection. RBC provides the legal authority for regulatory action — a final line whereby regulators are required to take action with limited court intervention. Because of this automatic nature and mandatory regulatory action requirements, RBC action and control levels must be accurate as measures of truly weakly capitalized companies to avoid inappropriate, yet mandatory, action.

7. As a final measure of protection, the state-created insurance guaranty funds provide policyholder protection in the event of insolvency. Guaranty association member-insurers provide coverage to the policyholders of an insolvency insurer; however, not all claims are covered in full but to the limits of

[3] Receivership actions include three different types of judicial proceedings—conservation, rehabilitation, and liquidation—which may be ordered by the Court to resolve problems with insurance companies not in compliance with state financial statutes. The state's chief insurance regulator petitions the Court for the appropriate form of receivership. Receivership proceedings are usually commenced against insolvent or financially impaired insurers in the insurer's domiciliary state (the state in which the insurer is incorporated) and in specific courts within that state. Each state requires that the chief insurance regulator of the insurer's domiciliary state be appointed receiver of the insurer to administer the receivership under court supervision. (GRID FAQs: *https://i-site.naic.org/grid/gridPA.jsp*)

[4] In some states, a court may enter an order of conservation upon the petition of a regulator. An order of conservation is designed to safeguard the assets of the insurance company and give the regulator an opportunity to determine the course of action that should be taken with respect to the insurer. In some of the states, a court-ordered conservation may be confidential. (GRID FAQs: *https://i-site.naic.org/grid/gridPA.jsp*).

[5] The chief insurance regulator may petition a state court for an order of rehabilitation as a mechanism to remedy an insurer's problems, to protect its assets, to run off its liabilities to avoid liquidation, or to prepare the insurer for liquidation. (GRID FAQs: *https://i-site.naic.org/grid/gridPA.jsp*)

[6] In liquidation, the receiver/liquidator must identify creditors and marshal and distribute assets in accordance with statutory priorities and dissolve the insurer. In most states, the insurer must be insolvent to be placed in liquidation. (GRID FAQs: *https://i-site.naic.org/grid/gridPA.jsp*)

[7] Hazardous financial condition is cited within the authority of the state law based on the NAIC *Model Regulation to Define Standards and Commissioner's Authority for Companies Deemed to be in Hazardous Financial Condition* (#325).

coverage and types of policies specified in state law. By design and in an effort to cover the most vulnerable, guaranty funds generally do not pay high limits of coverage.

Market Regulation

8. Market regulation consists broadly of analysis and oversight of insurers' behavior in the market including treatment of policyholders and claimants in product development and pricing, competition, statistical reporting, administration of residual markets, licensing of insurance producers, and consumer assistance and information services. Because problems arising from market activities can increase risks to solvency, regulators balance market regulation and financial regulation activities to achieve our financial regulatory mission, including consideration of availability and affordability of insurance coverage and market competition. Effective communication between financial and market regulators is integral to the analysis process. Market regulators employ a variety of oversight techniques ranging from analysis conducted within the various departments of insurance to on-site examinations. Such techniques as data analysis, correspondence, interviews and interrogatories or questionnaires are also used.

Future of Financial Regulation

9. In the late 1980s and early1990s, state insurance regulators, through the NAIC, developed a uniform solvency system, introducing "risk-focused" processes into the supervisory system and creating the RBC tool to replace fixed capital requirements that did not vary by company size or risk exposure. U.S. regulators have made continuous improvements to our financial regulatory system over the past two decades, with many enhancements such as the model audit rule, risk-focused financial analysis and examination, and uniform statutory accounting practices and procedures. Today, the enhanced risk-focused surveillance process implemented across the states focuses on the insurer risks, the mitigation of those risks and on prospective risk analysis. In this way, U.S. regulators have developed and implemented a financial regulatory system based extensively on financial review and analysis, risk management, and corporate governance.

10. Extensive peer review is an essential element of the U.S. financial regulatory system. Communication and collaborative efforts among the states and through the NAIC have evolved over time and continue to progress each year. State regulators follow NAIC processes for discussions of financial regulatory issues and make changes every year to statutory accounting requirements, risk-based capital, financial rules, regulatory guidance, etc. Nonetheless, we have not conducted a comprehensive evaluation of our regulatory Framework since the early 1990s. Broadly speaking, the U.S. financial regulatory system meets the needs of U.S. regulators in achieving their regulatory mission, but, no regulatory system should remain stagnant and every regulatory regime should continuously evaluate its system in light of new industry issues, market conditions and regulatory developments.

11. Today, even though the U.S. insurance regulatory system proved successful through difficult financial markets in 2008-09, regulators can learn from the financial crisis (e.g., the need for improved group supervision) and international developments (e.g., the G-20 agreement for the International Monetary Fund's (IMF) Financial Sector Assessment Program (FSAP)). Accordingly, a comprehensive evaluation of the U.S. Financial Regulatory Framework is appropriate. Regulators implemented the SMI project to evaluate and report on regulatory areas in need of modification and supplementation and to offer methods for implementation of those changes.

12. As one step in SMI, regulators evaluated the success of the regulatory system. Opinions vary on an appropriate definition for "regulatory success," but, first and foremost, in the U.S. and around the world, there is agreement that a regulator's main priority is to protect policyholders and those who rely on insurance coverage. There are differences internationally, however, about the relative weight policyholder protection plays compared to other regulatory goals, such as maintaining an insurance market with available coverage at affordable prices and/or fostering successful financial markets. Differences in regulatory missions will likely result in different views of regulatory success.

13. Protection of the policyholder, beneficiaries and claimants is a top priority in all U.S. regulatory decisions. However, regulators must continuously evaluate the optimum level of regulation in terms of the costs and benefits associated with facilitating effective and efficient markets for insurance products, the fair and equitable treatment of insurance consumers, and the financial stability and reliability of insurance institutions.

14. One way to measure success is to determine how well a jurisdiction meets its own regulatory mission; but, even then, regulatory success is not fully quantifiable. While the primary goal of U.S. insurance regulators is policyholder protection by attempting to remedy areas of concern so there is no adverse impact on policyholders and others relying on insurance coverage, regulators will liquidate an insurer, if necessary, to ensure policyholder protection and successful rehabilitation outcomes. One can measure a variety of quantifiable activities in the business and regulation of insurance, but that does not measure the scope or success of a regulatory regime. Regulatory success also includes the extensive, and not often quantifiable, value regulators bring to "fix" ongoing insurer financial and market issues with insurers to prevent insolvencies.

15. Regulatory success in the U.S. is a judgment call that involves consideration of many factors: the frequency and extent the regulatory regime or framework aided insurers by identifying and rectifying potential problems before those problems could cause harm to policyholders and claimants; the rate of insolvencies and the payments to policyholders in those insolvencies; effective and efficient rehabilitation actions; market health, viability and competition; and a perceived and actual cost-benefit analysis of the regulatory regime.

16. The U.S. national state-based insurance regulatory system has a strong track record of protecting consumers and overseeing solvency, especially during the recent crisis when the insurance sector remained relatively stable compared to other financial sectors. Success is also evidenced by the depth and breadth of the U.S. insurance industry and capacity of the insurance guaranty system. With close to 8,000 insurers, few systemically important financial institutions (SIFIs) and limited interconnectivity between insurers and banks, the market is alive and well.

17. The following sections of the white paper will provide an overview of the current U.S. Framework; an evaluation of U.S. market competiveness, considering our regulatory mission; a more detailed description of financial regulation and regulatory tools used in the Framework; and an elaboration on expected SMI changes to the Framework. The following describes the purpose of each section:

    Section 1 – Overview

    Section 2 – *The United States Insurance Financial Solvency Framework:* The purpose of this section is to describe the U.S. insurance regulatory framework for financial solvency, the core principles underlying that framework, and the U.S. Insurance Regulatory Mission.

Section 3 – U.S. Insurance Financial Regulatory Oversight: The purpose of this section is to expand on the framework of the system, drilling down to the mechanics of the processes in U.S. financial solvency insurance regulation.

Section 4 – Market Regulation: The purpose of this section is to tie financial and market regulation together, as required in the U.S. Insurance Regulatory Mission. This section also describes the marketplace and considerations for insurance regulators.

Section 5 – Solvency Modernization Initiative: The purpose of this section is to document the SMI self-review, the improvements made in the SMI, and the reasons why U.S. regulators made or did not make changes.

Section 2

The United States Insurance Financial Solvency Framework and Core Principles

1. The purpose of this section is to describe the framework of the U.S. Insurance Financial Solvency System and present a set of core financial principles underlying this framework.

2. This section provides a description of the U.S. Insurance Financial Solvency Framework that, while drawing upon ideas developed by the International Association of Insurance Supervisors (IAIS), goes beyond the IAIS in important, material ways. In particular, in the U.S. regulatory system, ongoing collaborative regulatory peer review, regulatory checks and balances, and risk focused financial surveillance form the foundation of the regulatory process.[1] In addition, the framework indicates that the U.S. Insurance Financial Solvency Core Principles are embodied in the NAIC's Financial Regulation Standards and Accreditation Program, which is a uniform program to which all states subscribe. Also, included in this section is a discussion of the seven U.S. Insurance Financial Solvency Core Principles

Presentation of U.S. Insurance Financial Solvency Framework

3. The state regulatory system in the United States has had over a 100 year history of solvency regulation. This system is comprised of state insurance departments (currently 50 states, the District of Columbia and five territories), and can best be described as a national system of state-based regulation. The NAIC assists regulators in a nonbinding, supplementary role.

4. Ultimate regulatory responsibility for insurer solvency rests with each state insurance department and the state insurance Commissioner In a free market economy, such as in the U.S., some insurer insolvencies are naturally expected. The regulatory aim in the U.S. is to limit the frequency and size of insurer insolvencies. By following solvency standards, performing risk focused financial surveillance including extensive on-site examinations, and enforcing solvency related insurance laws, regulations and guidelines, the state regulatory system has limited insurer insolvencies and minimized the cost to policyholders and claimants of such insolvencies. A hallmark of the state regulatory system is its dynamic efforts to constantly improve the regulatory solvency system and adjust the system as needed, especially regarding inputs into the model used to determine asset, liability and capital requirements.

5. The NAIC is a voluntary organization of the chief insurance regulatory officials of the state insurance departments, and its overriding objective is to assist state insurance regulators in protecting consumers and helping maintain the financial stability of the insurance industry. The NAIC achieves this by offering financial, actuarial, legal, computer, research, market conduct, and economic expertise to state regulators. It is through the NAIC that insurers are provided the uniform platforms and coordinated systems they need in an ever-changing marketplace.

[1] For purposes of this document, the term "regulator" refers to the ongoing supervision and oversight of entities under the authority of the state insurance department with the assistance of the NAIC. This terminology contrasts with the use of the term "regulator" in other parts of the world. In other parts of the world, regulator refers to the government agency responsible for developing regulations (e.g., Ministry of Finance or Treasury Department), while the term "supervisor" refers to the government officials responsible for overseeing insurance entities.

Regulatory Mission as Starting Point for Framework

6. The starting point or context for the U.S. Insurance Financial Solvency Framework is the mission of insurance regulation in the United States:

   U.S. Insurance Regulatory Mission: To protect the interests of the policyholder and those who rely on the insurance coverage provided to the policyholder first and foremost, while also facilitating the financial stability and reliability of insurance institutions for an effective and efficient market place for insurance products.

7. This mission has been used for years as the basis on which regulatory decisions have been made, including overall industry policy decisions and regulatory decisions for individual insurers. While the policyholder is the focal point of the mission, this mission is mindful that regulatory actions and decisions will have an impact on the operation of insurance markets and their efficiency. Because it is felt that "facilitating the financial stability and reliability of insurance institutions for an effective and efficient market place for insurance products" is in the best interests of policyholders (e.g., cost efficiencies and product innovation), this is not considered to be a separate and distinct or secondary mission, but is considered to support a focus on the policyholder.

Preconditions for Effective Regulation

8. To achieve its mission the regulatory system must have the requisite authority. This requisite authority is comprised of the following elements: a legal basis, independence and accountability, adequate powers, financial resources, human resources, legal protection and confidentiality. These elements form the preconditions for effective insurance regulation.

   Regulatory Authority: The regulatory authority has adequate powers, legal protection and financial resources to exercise its functions and powers; is operationally independent from commercial and political interference in the exercise of its functions and powers; is ultimately accountable to the public; hires, trains, and maintains sufficient staff with high professional standards; and treats confidential information appropriately.

9. The U.S. Insurance Financial Solvency Framework has been created over many years through the unified development of NAIC model laws, regulations, and other NAIC requirements. The adoption of these model laws within the individual states has created a legal framework for insurance regulation that is largely uniform throughout all of the states. To carry out the laws, regulations and other requirements, individual states have created insurance departments that are staffed with personnel that have the necessary knowledge and expertise. These state insurance departments act independently of insurers. In the course of pursuing their regulatory responsibilities, especially when solvency is at issue, regulators allow for the sharing of otherwise confidential documents with any state, federal agency or foreign country provided that the recipients are required, under their law, to maintain their confidentiality.

U.S. Insurance Financial Solvency Regulation Foundations

10. Among the unique features of U.S. insurance regulation are (1) the extensive systems of peer review, communication and collaborative effort that produce checks and balances in regulatory oversight and (2) the diversity of perspectives with compromise that leads to centrist solutions. These, in

combination with a risk-focused approach to regulation, form the foundation for insurance regulation in the U.S., as explained below.

11. The U.S. insurance market is comprised of thousands of small to large-sized insurance companies and groups, as well as conglomerates. To effectively regulate in such a large market, a risk-focused approach is utilized by state regulators. Under a risk-focused approach, attention is paid to the greatest risks faced by insurers and the insurance market. Explicit examples where this practice is applied are in on-site examinations and the ongoing analysis of nationally significant U.S. insurance groups (as explained later in this section).

12. Mechanisms for peer review encourage effective regulatory and supervisory practices. The ongoing analysis of insurance groups provides an example of the checks and balances provided by peer review. Most regulators' interactions are collaborative and collegial; however, situations could arise where other state insurance commissioners can question the actions of another state insurance department, and, if necessary, pressure another state insurance department to act. This pressure is possible because regulators in other states have the power to examine all companies doing business in their state even though headquartered in other states and, in the worst case, to suspend their licenses to operate. Of course, free-flowing information among state regulators underlies this process; and the willingness of state insurance regulators to challenge and be challenged by other state regulators has developed over time in the U.S. as regulators work cooperatively with each other.

13. In regulation, there is a constant need to balance regulatory costs and benefits. Overregulation can impose unnecessary costs on consumers, while under-regulation (or de-regulation) can allow unnecessary harm to consumers and taxpayers. The balance between these two regimes is difficult to determine, but because of the multitude of diverse perspectives in the state U.S. regulatory system, it is less likely to end up at either extreme. Rather, the search for compromise tends to produce centrist solutions. Thus it is highly unlikely that a dogmatic move toward excessive deregulation (or overregulation) could occur in the state-based system.

U.S. Insurance Financial Solvency Core Principles[2] and the Accreditation Program

14. Seven core principles have been identified for the U.S. Insurance Financial Solvency Framework, as described below.

(1) *U.S. Insurance Financial Solvency Core Principle 1:*
Regulatory Reporting, Disclosure and Transparency

Insurers are required to file standardized annual and quarterly financial reports that are used to assess the insurer's risk and financial condition. These reports contain both qualitative and quantitative information and are updated, as necessary, to incorporate significant common insurer risks. Most of these reports are public information, allowing for a high level of transparency.

(2) *U.S. Insurance Financial Solvency Core Principle 2:*
Off-site Monitoring and Analysis

Off-site solvency monitoring is used to assess, on an ongoing basis, the financial condition of the insurer as of the valuation date and to identify and assess current and prospective risks through risk-focused surveillance. The results of the off-site analysis are included in an insurer profile for continual solvency monitoring. Many off-site monitoring tools are maintained by the NAIC for regulators (such as the Financial Analysis Solvency Tools -- FAST).

(3) *U.S. Insurance Financial Solvency Core Principle 3:*
On-site Risk-focused Examinations

U.S. insurance regulators carry out risk-focused, on-site examinations in which the insurer's corporate governance, management oversight and financial strength are evaluated, including the system of risk identification and mitigation, on a current and prospective basis. The reported financial results are assessed through the financial examination process and a determination is made of the insurer's compliance with legal requirements.

(4) *U.S. Insurance Financial Solvency Core Principle 4:*
Reserves, Capital Adequacy and Solvency

To ensure that legal obligations to policyholders, contract holders and others are met when they come due, insurers are required to maintain reserves and capital and surplus at all times and in such forms so as to provide an adequate margin of safety and avoid being in hazardous financial condition. The most visible measure of capital adequacy requirements is associated with the RBC system. The RBC calculation uses a standardized formula to benchmark specified level of regulatory actions for weakly capitalized insurers.

(5) *U.S. Insurance Financial Solvency Core Principle 5:*
Regulatory Control of Significant, Broad-based Risk-related Transactions/Activities

[2] For purposes of this white paper, a core principle is an approach, a process or an action that is fundamentally and directly associated with achieving the mission.

The regulatory framework recognizes that certain significant, broad-based transactions/activities affecting policyholders' interests must receive regulatory approval. These transactions/ activities encompass licensing requirements; change of control; the amount of dividends paid; transactions with affiliates; and reinsurance.

(6) *U.S. Insurance Financial Solvency Core Principle 6:*
Preventive and Corrective Measures, Including Enforcement

The regulatory authority takes preventive and corrective measures that are timely, suitable and necessary to reduce the impact of risks identified during on-site and off-site regulatory monitoring. These regulatory actions are enforced as necessary.

(7) *U.S. Insurance Financial Solvency Core Principle 7:*
Exiting the Market and Receivership

The legal and regulatory framework defines a range of options for the orderly exit of insurers from the marketplace. It defines solvency and establishes a receivership scheme to ensure the payment of policyholder obligations of insolvent insurers subject to appropriate restrictions and limitations.

The Financial Regulation Standards and Accreditation Program

15. It is primarily through the states' adoption of NAIC model laws and model regulations or substantially similar implementation that the U.S. Insurance Financial Solvency Core Principles can function effectively within competitive market dynamics. Accreditation is a certification given to a state insurance department once it has demonstrated it has met and continues to meet a wide range of legal, financial, functional and organizational standards as determined by a committee of its peers. All fifty states, the District of Columbia and Puerto Rico are currently accredited.

16. The purpose of the Financial Regulation Standards and Accreditation Program is for state insurance departments to meet minimum, baseline standards of solvency regulation, especially with respect to regulation of multi-state insurers. The emphasis in the Accreditation Program and the processes it creates is on: (1) adequate solvency laws and regulations to protect consumers; (2) effective and efficient financial analysis and examination processes based on priority status of insurers; (3) cooperation and information sharing with other state, federal or foreign regulatory officials; (4) timely and effective action when insurance companies are identified as financially troubled or potentially troubled; (5) appropriate organizational and personnel practices; and (6) effective processes for company licensing and review of proposed changes in control. At the present time, for a state to be accredited, it must adopt certain laws, regulations or administrative practices that provide appropriate regulatory authority and consumer protections in a variety of aspects of solvency regulation.[3] Appendix 2 provides more details about accreditation.

17. To become accredited, the state must submit to a full-scope on-site accreditation review. The review is extensive, as teams of regulators can typically spend months on an insurer's premises to complete a full-scope examination. Depending on the results of the review, the state is accredited or it is not (i.e.,

[3]Specific standards must be complied with that relate to financial analysis, financial examinations, information sharing, and procedures for troubled insurers. States encourage professional development and establish organizational and personnel standards regarding minimum educational and experience requirements and must have the ability to attract and retain qualified personnel to obtain and maintain accreditation status.

a pass/fail system is used). To remain accredited, an accreditation review must be performed at least once every five years with interim annual reviews. If necessary management letter comments may be provided to the state and interim follow-up reviews may be required.

U.S. Insurance Financial Solvency Standards and Monitoring

18. The implementation of the Accreditation Program requires state adoption of model laws and regulations that incorporate Insurance Financial Solvency Standards and Monitoring. These can be categorized into Insurance Company Financial Solvency Requirements and Regulatory Monitoring Requirements. Examples of each are provided below.

U.S. Insurance Company Financial Solvency Requirements

U.S. Insurance Company Financial Solvency Requirements consist of specific state laws, guidelines, regulations, or rules which are applicable to insurers. These standards are documented in the NAIC's Financial Regulation Standards and Accreditation Program.

Examples of U.S. Insurance Company Financial Solvency Requirements:

(1) Insurers' submission of the annual and quarterly financial statements ("the annual statement" or "blank").
(2) Most insurers' must annually submit a financial statement audited by a CPA, and their reserve estimates must be attested to by an actuary.
(3) *Management's Report of Internal Control over Financial Reporting* is required of all insurers whose premiums exceed a predefined threshold.
(4) Insurers are required to report the results of their risk-based capital calculation in the annual statement.[4]
(5) Insurers must adhere to state minimum capital and surplus requirements.
(6) Insurers must submit to examinations as deemed necessary by the regulator.
(7) Each state has statutes requiring insurers to invest in a diversified investment portfolio both with respect to type of investment and the issuer.
(8) There is a limitation on the amount on any single insured risk a property casualty insurer may underwrite.
(9) Producer controlled insurers must meet special contract provisions, have an audit committee and separate reporting requirements.
(10) For life and accident and health insurers, reserve requirements must adhere to statutory minimums and actuarial standards.
(11) All insurers are required to report investment values in the financial statements in accordance with the *Purposes and Procedures Manual of the Securities Valuation Office*.
(12) Insurers are required to use the NAIC's *Accounting Practices and Procedures Manual* and the *Annual Statement Blank and Instructions* in constructing their statutory financial statements.[5]
(13) Reinsurance credit is governed by the NAIC Credit for Reinsurance Model Law, which imposes standards on allowing such credit.

[4] The risk-based capital (RBC) system is discussed in more detail later in Core Principle 4.

[5] For example, these tools restrict discounting property and casualty reserves, and specific tables approved by regulators are required to establish reserves for various life insurance products. Only certain assets (admitted assets) are allowed to be considered as statutory assets. There are significant reinsurance requirements that take into account the ability of reinsurers to pay. One of these requirements includes statutory accounting requirements for taking a reserve credit for reinsurance.

U.S. Insurance Financial Solvency Regulatory Monitoring Requirements

U.S. Insurance Financial Solvency Regulatory Monitoring Requirements are laws, regulations and rules that must be adopted by the state and that are applicable to state regulators. Many of these solvency standards are requirements of the Financial Regulation Standards and Accreditation Program.

Examples of U.S. Insurance Financial Solvency Regulatory Monitoring Requirements:

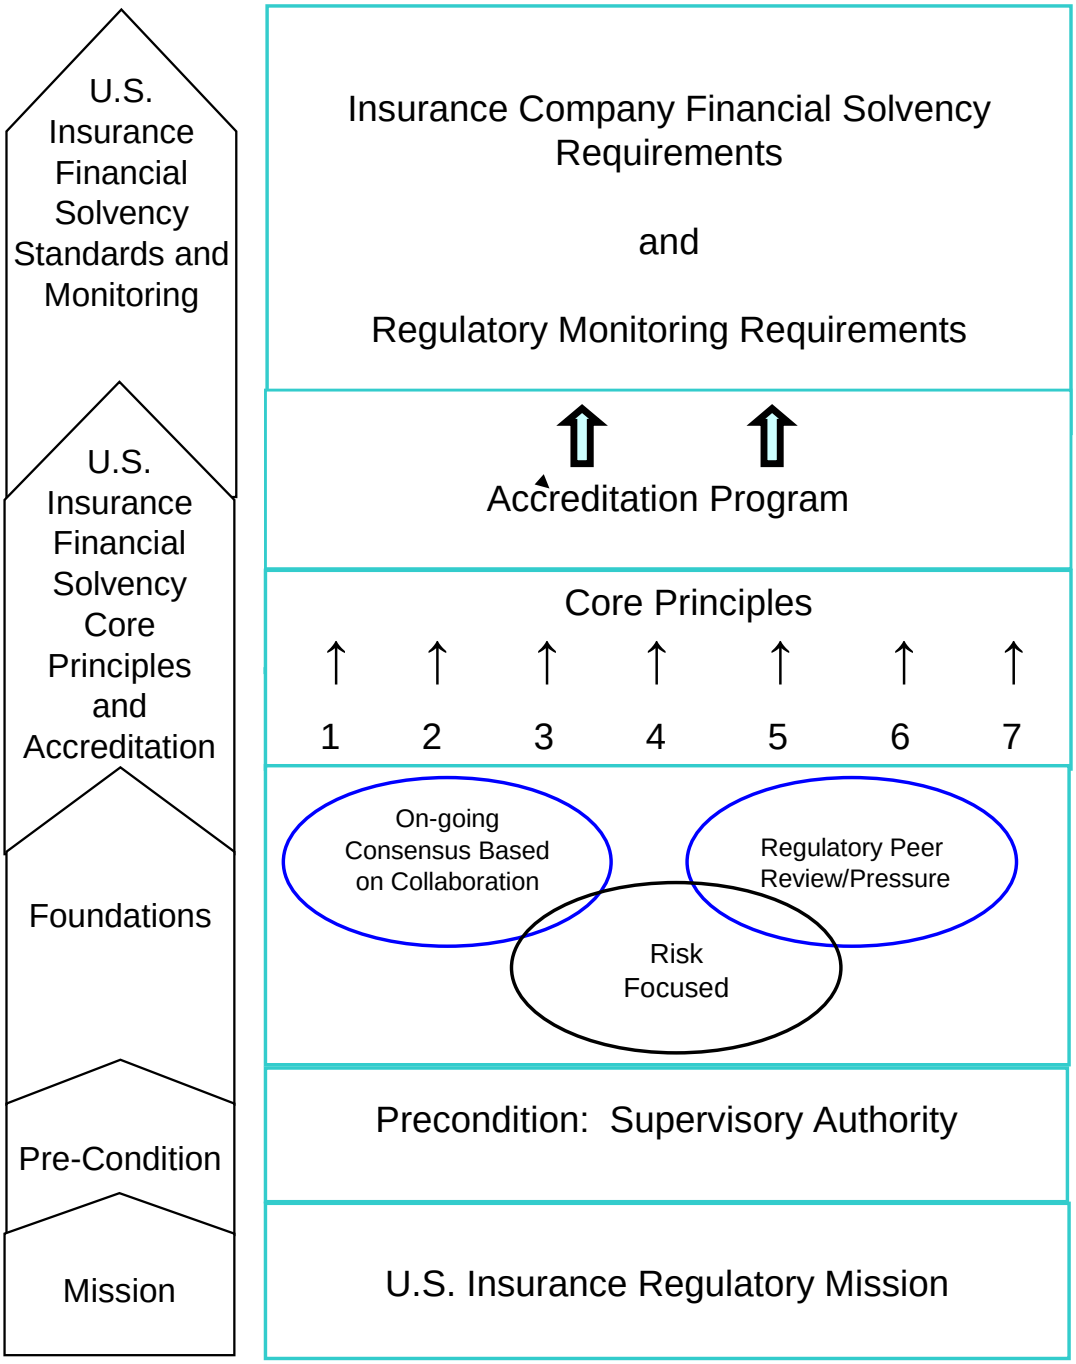
(1) Regulators are required to examine an insurer at least once every five years or more frequently as deemed appropriate and have the authority to examine a company at any time it is deemed necessary by the Commissioner.
(2) If a potential capital deficiency is signaled by the RBC result, a ladder of intervention exists under which regulators are required to undertake certain actions depending on the degree of deficiency. This intervention can vary from requiring insurers to file a plan of corrective action to regulatory takeover of the insurer.
(3) Certain transactions require approval (e.g., transactions among affiliated insurers).

Additionally, regulatory monitoring includes other surveillance processes such as:

(1) NAIC's FAST Tools. FAST encompasses a wide-ranging review/testing system that includes (but is not limited to): (1) a scoring system based on over 20 financial ratios; (2) the Analyst Team System (ATS) (an automated review process that creates a national prioritization system using statistical analysis, a scoring system, and RBC to assign review levels for insurers); (3) RBC trend test; and (4) loss reserve projection tools. Insurers deemed to be performing poorly from the FAST analysis are reviewed by experienced analysts to determine the degree of financial distress present, if any. Insurers deemed to be in financial distress are prioritized by the degree of financial distress and the results are communicated to the state insurance departments in which the insurer is licensed.[6]
(2) Nationally significant insurers are reviewed every quarter and those that appear to be performing poorly are prioritized for more detailed analysis by a group of experienced, seasoned financial regulators (i.e., the Financial Analysis Working Group (FAWG)). The FAWG committee confirms/informs the lead state regulator of problems with insurers in their state and can assert peer pressure on the regulator to intervene to address the troubled insurer's situation.

[6] The domestic regulator gives all insurers a priority status which is a driver for the level of risk focused surveillance an insurer receives.

Diagram of U.S. Insurance Financial Solvency Framework



Overview of U.S. Insurance Financial Solvency Core Principles

This section provides a brief discussion of each U.S. Insurance Financial Solvency Core Principle.

19. U.S. Insurance Financial Solvency Core Principle 1: Regulatory Reporting, Disclosure and Transparency

U.S. regulators receive required financial reports from insurers on a regular basis that are the baseline for continual assessment of the insurer's risk and financial condition. Standardized financial reporting is used in the financial statements to ensure comparability of results among insurers. To address concerns with specific companies or issues, supplemental data is requested in addition to the standardized data, and these data may be requested on a more frequent basis from specific companies. The standardized format is updated as necessary to incorporate significant, common insurer risks.

20. The financial reports filed with the regulator include the set of comprehensive financial statements known collectively as the Annual Statement. Also included in the financial reporting requirements is the filing of quarterly financial statements. To increase comparability and consistency in reporting, the insurer is required to complete the annual and quarterly statements in accordance with NAIC instructions, which provide specific direction on how the statements are to be completed. In addition, NAIC statutory accounting principles are used as the baseline accounting requirements in all financial reports.

21. The financial reports also include numerous qualitative disclosures, each of which are designed to identify potential risks of the insurer. These include but are not limited to general and specific interrogatories, the notes to financial statements, management's discussion and analysis, an actuarial opinion, and an annual audit opinion from an independent certified public accountant. Other standardized reports are filed with the regulator throughout the year that identifies more specific risks (e.g., investment risk interrogatories).

22. The information contained in all of these financial reports is designed to be thorough, so that sufficient information is provided to the regulator to continually monitor and identify specific risks faced by the insurer.[7] The financial reports are used extensively in regulatory solvency monitoring, including on-site examinations and off-site monitoring. That is, the regulatory reports feed into the off-site monitoring analysis and provide a foundation for on-site examinations. In turn, off-site monitoring and examinations are used to determine whether additional or more frequent reporting may be required of an insurer.

23. The annual and quarterly statements are electronically captured by the NAIC in two formats: data tables available for querying and automated analytical tool usage; and PDF files that are publicly

[7]Carrying value, fair value, credit quality designation and other pertinent information are disclosed for every applicable investment held by the insurer; and the detailed disclosures are categorized by asset type, e.g., issuer obligations vs. collateralized mortgage obligations and other structured securities. Similarly, each reinsurance contract is disclosed along with various amounts payable or receivable, grouped by assumed vs. ceded insurance, and categorized by type of entity, e.g., affiliated or mandatory pool. Property and casualty lines of business, which use a principles-based reserving approach, are disclosed in great detail regarding losses and loss expenses, including loss reserve triangles and historical development of various aspects of reserves, e.g., bulk and incurred but not reported (IBNR) reserves.

available and intended to provide consumers with direct access to financial information submitted by any insurer.[8]

24. The public nature of such insurance financial reporting is the most transparent in the world, encouraging industry, financial market and public analysis of insurers' financials to utilize market discipline of insurers. The extensive electronic database provides incredible utility, making NAIC automated analysis tools possible.

25. **U.S. Insurance Financial Solvency Core Principle 2:**
Off-site Monitoring and Analysis

U.S. regulators and the NAIC conduct off-site risk-focused analysis of insurers.

The primary purpose of off-site solvency monitoring is to assess on an on-going basis the financial condition of the insurer as of the valuation date and to identify and assess current and prospective risks through risk-focused surveillance, the results of which are included in an insurer profile for continual solvency monitoring. To accomplish this task, state insurance regulators conduct detailed financial analysis on a quarterly basis using regulatory financial reports, financial tools and other sources of information. Two key sources of information are the results of the most recently completed independent CPA audit report and the results of the most recent on-site regulatory financial examination.[9] Other sources utilized in the analysis include SEC filings, corporate reports, financial statements of ultimate controlling individual/corporation or reinsurers, market conduct reports, rate and policy form filings, consumer complaints, independent rating agency reports, correspondence from agents and insurers, and business media.

26. Off-site monitoring includes follow up on risks identified during the previous quarter's analysis and the most recent on-site examination. Otherwise, state insurance departments generally prioritize the review of their domiciliary insurers based on a system of financial ratios, other screening tools and criteria that are both qualitative and quantitative in form. When insurers with anomalous results (e.g., insurers experiencing significant variations or negative financial results) that may impact financial solvency are identified, regulators will allot necessary resources and prioritize further analysis of these insurers (relative to other non-priority insurers). The results of the ongoing financial analysis are then used to help prioritize and provide focus to future quarterly off-site monitoring activities (potentially increasing monitoring activities to a monthly or weekly basis) and any on-site examination efforts.

27. Many tools used by state regulators are maintained by the NAIC and have been created as regulator only tools. These tools are designed to provide an integrated approach to screening and analyzing the financial condition of insurers and are referred to collectively as FAST (i.e., Financial Analysis Solvency Tools). The tools include a comprehensive handbook that sets forth an overall analysis process to be used, as well as more specific financial analysis/tests that utilize the data provided in insurers' financial reports to identify risks or anomalies.

28. In addition to the NAIC tools described above, the NAIC's Financial Analysis Working Group (FAWG) performs its own analysis of the financial condition of each nationally significant insurer or

[8] Where an insurer's accounting differs from the baseline NAIC statutory accounting principles, the impact to capital and surplus as well as net income is disclosed in the notes to financial statements.

[9] The CPA audit report attests to the fair presentation of the financial statements on an annual basis to allow sufficient reliance upon the insurer's financial reports utilized in all off-site monitoring (see Principle 3).

group each quarter, as well as other insurers or areas posing unique risks identified during a given period, looking not only at statutory financial statements but at other public information, including such financial market metrics as the market's valuation and rating of the insurer's debt and short sales of the insurer's stock. The FAWG does not meet publicly and does not share its deliberations with the general public due to its discussion being focused on the financial condition of individual insurers. This group also monitors industry trends in various risk areas.

29. **U.S. Insurance Financial Solvency Core Principle 3: On-Site Risk-focused Examinations**

U.S. regulators carry out risk-focused, on-site examinations in which the insurer's corporate governance, management oversight and financial strength are evaluated, including the system of risk identification and mitigation. Through the examination, the reported financial results are assessed and a determination is made of the insurer's compliance with legal requirements.

30. As stated earlier, every insurer is subject to a full-scope financial examination at least once every five years.[10] The financial examination process is extensive and is conducted in accordance with the NAIC *Financial Conditional Examiners Handbook*, which contains hundreds of pages of regulatory guidance. However, based upon the results of off-site monitoring, regulators may place a higher priority on insurers which pose a financial risk and, therefore, conduct on-site examinations more frequently. These more frequent examinations may be limited to a review of a specific risk, as long as a full scope exam is conducted at least once every five years.

31. On-site examinations allow state insurance regulators to evaluate and assess the solvency of insurers as of the valuation date and to develop a prospective view of an insurer's risks and its risk management practices. This approach permits a direct and specific focus on the areas of greatest risk to an insurer. The results of the off-site analysis are also utilized in identifying areas of concern and key functional activities to be reviewed.

32. Through the on-site examination, corporate governance practices and processes that are in place to identify and mitigate risk are reviewed and assessed, including, among other things, the function and effectiveness of the board of directors and management, the adequacy of risk management (enterprise risk management), monitoring and management information systems. All significant inherent risks faced by the insurer are identified and assessed in the on-site examination, whether they relate to financial reporting issues or to business and operational issues. After risks have been identified, the examiner is required to identify and assess the internal control processes that mitigate each identified risk. Controls are assessed by considering both their current and prospective design and operating effectiveness. The results of these on-site examination processes also provide regulators an indication of the reliability of the insurer's financial reports utilized in off-site analysis.

33. To prevent duplicative examination efforts by regulators for insurers writing in multiple states, regulators may rely on the exam work of the NAIC accredited domiciliary state. Additionally, for large insurance holding company groups, regulators are encouraged to coordinate their examinations of individual entities by following a lead state concept, thereby allowing the pooling of resources to complete one coordinated exam for the insurer group. The role of the lead state is to coordinate and ensure proper communication is occurring for analysis, examination and other solvency-related and market regulatory issues.

[10] In some states the period is three years.

34. In conjunction with both the on-site examinations and off-site monitoring, regulators review insurer compliance with laws and regulations. Laws and regulations can vary by state.[11] Some states will combine their review of compliance with market conduct activities with a financial on-site exam.

    These full-scope examinations have been essential to the success of the U.S. regulatory system.

35. **U.S. Insurance Financial Solvency Core Principle 4:**
    Reserves, Capital Adequacy and Solvency

    To ensure that legal obligations to policyholders, contract holders and others are met when they come due, insurers are required to maintain reserves and capital and surplus at all times and in such forms so as to provide an adequate margin of safety.

36. Accounting standards, risk-based capital requirements, minimum statutory reserves and state-specific minimum capital requirements form the backbone of the reserve and capital adequacy requirements. Conservatism is a pervasive concept in specification of these requirements. As an example, conservatism is one of the foundations of the statutory accounting system.[12] Conservative statutory accounting reporting provides a reasonable level of assurance that an insurer's resources are adequate to meet its policyholder obligations at all times. Other NAIC standards are designed with the same conservatism principle (e.g., model investment laws, credit for reinsurance laws, etc.).

37. The most visible measure of capital adequacy requirements is associated with the RBC system. The RBC calculation uses a standardized formula to benchmark specified level of regulatory actions for weakly capitalized insurers. A significant portion of the RBC formula is derived from the annual statement, which is based upon statutory accounting. The RBC amount explicitly considers the size and risk profile of the insurer.[13] The RBC calculation provides for higher RBC charges for riskier assets or for riskier lines of business so that more capital is needed as a result. Although RBC results indicate when an insurer's capital position is weak or deteriorating, a ladder of intervention levels exists within the RBC system. Thus, regulators have the authority to require insurers to take some action or the regulator may have the authority to take action with respect to an insurer when the capital level falls within certain threshold amounts that are above the minimum capital requirement. The degree of action depends upon the relative capital weakness as determined by the RBC result and the existence of any mitigating or compounding issues.

38. States maintain fixed minimum capital requirements (statutes) relating to incorporation and licensing within the particular state that must also be met. Further, the state has the authority to require additional capital and surplus based upon the type, volume, and nature of the insurance business transacted.

[11] These laws typically include, but are not limited to, compliance with investment statutes and regulations regarding types of permissible investments and diversification and liquidity of investments, compliance with (minimum) reserving standards and minimum capital and surplus requirements (including RBC), and the restriction of certain reinsurance activities.

[12] Statutory accounting practices stress measurement of the ability to pay claims of insurers in the future, while generally accepted accounting principles (GAAP) stress measurement of earnings of a business from period to period, and the matching of revenues and expenses for the measurement period. Source: Preamble of the NAIC *Accounting Practices and Procedures Manual*.

[13] The factors used in the formula are based on considerable research and reflect industry loss experience.

39. Insurers have conservative reserve requirements in addition to capital requirements. Thus, the effect of having both reserves and capital adequacy requirements means that (1) policyholder obligations are covered by enough resources to meet most future economic scenarios, and (2) there are enough resources so that an adverse trend can be detected in time for the regulator to suggest/take corrective action.

40. In addition to these reserve and RBC requirements, regulators assess financial solvency and whether an insurer is in hazardous financial condition (See Core Principle 6).

41. **U.S. Insurance Financial Solvency Core Principle 5:**
Regulatory Control of Significant, Broad-based Risk-related Transactions/Activities

The regulatory framework recognizes that certain significant, broad-based transactions/ activities affecting policyholders' interests must receive regulatory approval.

42. Certain significant, broad-based transactions/activities of insurers that affect risk are not part of the day-to-day routine of underwriting and issuing insurance and/or have broad social and equity consequences. To control these risks, regulatory approval of these transactions/activities may be required. Many of these transactions are also reviewed during the off-site monitoring or the on-site examination process to assess insurer compliance. These transactions/activities encompass licensing requirements; change of control; the amount of dividends paid; transactions with affiliates; and reinsurance as explained below.

    (1) **Licensing Requirements:** An insurer must be licensed before it can operate in a state. The regulator sets the criteria for licensing, and these criteria are clear, objective and public. Regulators assess the license application; this assessment consists of a review of the ownership structure, quality and history of management, internal controls, and projected financial condition. Applicants that do not meet the criteria do not obtain a certificate of authority and/or license to conduct the business of insurance. [14]

    (2) **Change in Control:** Notification is required for changes in ownership or control. No transaction involving a change in ownership or control can be completed unless regulatory approval is granted or waived. The regulator bases the approval or rejection decision on financial statements, evaluation of current or potential management, and other relevant information filed with the regulator.

    (3) **Dividends:** The regulator requires prior notice of all stockholder dividends and dividends in excess of a predefined standard (extraordinary dividends) must be filed for approval. Extraordinary dividends cannot be paid until regulatory approval is granted.[15]

    (4) **Transactions with Affiliates:** The regulator requires notice for transactions with affiliates and has the authority to reject the transaction. These transactions include, but are not limited

[14] Effective January 1, 2012, the Financial Regulation Standards and Accreditation Program will incorporate new standards related to company licensure and change in ownership. These standards require that state insurance departments have sufficient, qualified resources to review applications in a timely manner and have appropriate procedures to properly analyze the application.

[15] This is a general requirement, but individual state requirements may vary. For example, not all states require approval of ordinary dividends. Some of the states require that all stockholder dividends be approved.

to, various intercompany cost sharing arrangements, guarantees, reinsurance, asset purchase and disposal agreements, and tax allocation agreements between the insurer and its affiliates.

(5) **Reinsurance:** Reinsurance transactions are subject to regulatory review and approval, with the result that some reinsurers may be required to post collateral.

43. **U.S. Insurance Financial Solvency Core Principle 6: Preventive and Corrective Measures, Including Enforcement**

The regulatory authority takes preventive and corrective measures that are timely, suitable and necessary to reduce the impact of risks identified during on-site and off-site regulatory monitoring. These regulatory actions are enforced as necessary.

44. If significant solvency risks are identified as being improperly mitigated such that the insurer is in a hazardous financial condition, the regulator may take corrective or preventive measures including, but not limited to: requiring the insurer to provide an updated business plan in order to continue to transact business in the state; requiring the insurer to file interim financial reports; limiting or withdrawing the insurer from certain investments or investment practices; reducing, suspending or restricting the volume of business being accepted or renewed by the insurer; ordering an increase in the insurer's capital and surplus; ordering the insurer to correct corporate governance practice deficiencies; requiring a replacement of senior management; and seeking a court order to place the company under conservation, rehabilitation, or liquidation;

45. In addition to the corrective measures that can be taken when the insurer is determined to be in a hazardous financial condition, under the RBC system, regulators have the authority and statutory mandate to take preventive and corrective measures that vary depending on the capital deficiency indicated by the RBC result. The broad authority for determining if an insurer is considered to be in a hazardous financial condition is an important part of the U.S. system, and allows for more precision within the RBC calculation.

46. These preventive and corrective measures are designed to provide for early regulatory intervention to correct problems before insolvencies become inevitable, thereby minimizing the number and adverse impact of insolvencies.

47. **U.S. Insurance Financial Solvency Core Principle 7: Exiting the Market and Receivership**

The legal and regulatory framework defines a range of options for the orderly exit of insurers from the marketplace. It defines solvency and establishes a receivership scheme to ensure the payment of policyholder obligations of insolvent insurers subject to appropriate restrictions and limitations.

48. Receivership laws provide measures for regulators to attempt to prevent insolvencies, minimize losses and provide protection for claimants (including policyholders) before an insolvency and/or if an insurer is found to be insolvent. Options considered by regulators as possible alternatives to insolvency include mergers, acquisitions, reinsurance arrangements, non-renewal of part or all of the insurer's book of business, and the viability of allowing the insurer to be placed in run-off mode under its own management. When insolvency cannot be prevented, receivership laws give some priority to the provision of benefits to claimants, including policyholders, or the payment of claims arising under policies. State guaranty associations have been established to protect policyholders,

claimants and beneficiaries against financial losses due to insurer insolvencies. Fundamentally, the purpose of an insolvency guaranty law/association is to cover an insolvent insurer's financial obligations, within statutory limits, to policyholders, annuitants, beneficiaries and third-party claimants.

Section 2
Appendix 2
Requirements for Accreditation

1. The Standards have been divided into three major categories: laws and regulations (Part A); regulatory practices and procedures (Part B); organizational and personnel practices (Part C); and organization, licensing and change of domestic control of insurers (Part D).

Part A: Laws and Regulations (Traditional Insurers)[16]

Preamble

2. The purpose of the Part A: Laws and Regulations Standards is to assure that an accredited state has sufficient authority to regulate the solvency of its multi-state domestic insurance industry in an effective manner. The Part A standards are the product of laws and regulations that are believed to be basic building blocks for sound insurance regulation. A state may demonstrate compliance with a Part A standard through a law, a regulation, an established practice which implements the general authority granted to the state, or any combination of laws, regulations or practice, which achieves the objective of the standard.

3. The Part A standards apply to traditional forms of "multi-state domestic insurers." This scope includes life/health and property/casualty/liability insurers and reinsurers that are domiciled in the accredited state and licensed, accredited or operating in at least one other state. This scope also includes insurers that are domiciled in the accredited state and operating or accepting business on an exported basis in at least one other state as excess and surplus lines insurers or as risk retention groups; except that the term does not include risk retention groups incorporated as captive insurers. It also does not include those insurers that are licensed, accredited or operating in only their state of domicile but assuming business from insurers writing that business that is directly written in a different state. The terms "insurer" and "insurers" used in the Part A standards fall within the definition of "multi-state domestic insurers." For the purpose of this definition, the term "state" is intended to include any NAIC member jurisdiction, including U.S. territories.

(1) **Examination Authority**

The Department should have authority to examine companies whenever it is deemed necessary. Such authority should include complete access to the company's books and records and, if necessary, the records of any affiliated company, agent, and/or managing general agent. Such authority should extend not only to inspect books and records but also to examine officers, employees, and agents of the company under oath when deemed necessary with respect to transactions directly or indirectly related to the company under examination. The NAIC *Model Law on Examinations* (#390), or substantially similar provisions, shall be part of state law.

[16]Part A differs for risk retention groups.

(2) **Capital and Surplus Requirement**

The Department should have the ability to require that insurers have and maintain a minimum level of capital and surplus to transact business. The Department should have the authority to require additional capital and surplus based upon the type, volume and nature of insurance business transacted. The NAIC *Risk-Based Capital (RBC) for Insurers Model Act* (#312), or provisions substantially similar, shall be included in state laws or regulations.

(3) **NAIC Accounting Practices and Procedures**

The Department should require that all companies reporting to the Department file the appropriate NAIC annual statement blank, which should be prepared in accordance with the NAIC's instructions handbook and follow those accounting procedures and practices prescribed by the NAIC *Accounting Practices and Procedures Manual*, utilizing the version effective January 1, 2001, and all subsequent revisions adopted by the Financial Regulation Standards and Accreditation (F) Committee.

(4) **Corrective Action**

State law should contain the NAIC *Model Regulation to Define Standards and Commissioner's Authority for Companies Deemed to be in a Hazardous Financial Condition* (#325), or a substantially similar provision, which authorizes the department to order a company to take necessary corrective action or cease and desist certain practices that, if not corrected, could place the company in a hazardous financial condition.

(5) **Valuation of Investments**

The department should require that securities owned by insurance companies be valued in accordance with those standards promulgated by the NAIC Securities Valuation Office. Other invested assets should be required to be valued in accordance with the procedures promulgated by the NAIC Financial Condition (E) Committee.

(6) **Holding Company Systems**

State law should contain the NAIC *Insurance Holding Company System Regulatory Act* (#440), or an act substantially similar, and the department should have adopted the NAIC model regulation relating to this law.

(7) **Risk Limitation**

State law should prescribe the maximum net amount of risk to be retained by a property and liability company for an individual risk based upon the company's capital and surplus. This limitation should be no larger than 10% of the company's capital and surplus.

(8) **Investment Regulations**

State statute should require a diversified investment portfolio for all domestic insurers both as to type and issue and include a requirement for liquidity. Foreign companies should be required to substantially comply with these provisions.

(9) **Liabilities and Reserves**

State statute should prescribe minimum standards for the establishment of liabilities and reserves resulting from insurance contracts issued by an insurer; including life reserves, active life reserves, and unearned premium reserves, and liabilities for claims and losses unpaid and incurred but not reported (IBNR) claims. The NAIC *Standard Valuation Law*

(#820) and the *Actuarial Opinion and Memorandum Regulation* (#822), or substantially similar provisions shall be in place.

(10) **Reinsurance Ceded**

State law should contain the NAIC *Credit for Reinsurance Model Act* (#785), the Credit for Reinsurance Model Regulation (#786) and the *Life and Health Reinsurance Agreements Model Regulation* (#791) or substantially similar laws.

(11) **CPA Audits**

State statute or regulation should contain a requirement for annual audits of domestic insurance companies by independent certified public accountants, based on the NAIC *Annual Financial Reporting Model Regulation* (#205).

(12) **Actuarial Opinion**

State statute or regulation should contain a requirement for an opinion on reserves and loss and loss adjustment expense reserves by a qualified actuary or specialist on an annual basis for all domestic insurance companies.

(13) **Receivership**

State law should set forth a receivership scheme for the administration, by the insurance commissioner, of insurance companies found to be insolvent as set forth in the NAIC *Insurer Receivership Model Act* (#555).

(14) **Guaranty Funds**

State law should provide for a regulatory framework such as that contained in the NAIC model acts on the subject, to ensure the payment of policyholders' obligations subject to appropriate restrictions and limitations when a company is deemed insolvent.

(15) **Filings with the NAIC**

State statute, regulation or practice should mandate filing of annual and quarterly statements with the NAIC in a format acceptable to the NAIC except that states may exempt from this requirement those companies that operate only in their state of domicile.

(16) **Producer Controlled Insurers**

States should provide evidence of a regulatory framework, such as that contained in the NAIC *Business Transacted with Producer Controlled Property/Casualty Insurer Act* (#325) or similar provisions.

(17) **Managing General Agents**

States should provide evidence of a regulatory framework, such as that contained in the NAIC *Managing General Agents Act* (#225) or similar provisions.

(18) **Reinsurance Intermediaries**

States should provide evidence of a regulatory framework, such as that contained in the NAIC *Reinsurance Intermediary Model Act* (#790) or similar provisions.

(19)**Regulatory Authority**

State law should provide for a regulatory framework for the organization, licensing and change of control of domestic insurers.

(Note: If a state can provide evidence that none of the entities contemplated in above standards 14, 16, 17 or 18, is either present or allowed to operate in the state, it will not need to demonstrate compliance with that standard.)

Part B: Regulatory Practices and Procedures

Preamble

4. The purpose of Part B is to identify base-line regulatory practices and procedures required to supplement and support enforcement of the states' financial solvency laws in order for the states to attain substantial compliance with the core standards established in Part A. Part B identifies standards that are to be applied in the regulation of all forms of multi-state insurers.

5. Part B sets out standards required to ensure adequate solvency regulation of multi-state insurers. Each state must make an appropriate allocation of its available resources to effectively address its regulatory priorities. In addition to a domestic state's examination and analysis activities, other checks and balances exist in the regulatory environment. These include other states' regulation of licensed foreign companies, the appropriate application of FAST and IRIS ratios, the analyses by NAIC's staff, the NAIC Financial Analysis (E) Working Group, the NAIC Analyst Team System project, and, to some extent, the evaluation by private rating agencies.

6. The scope of Part B is broader than the scope of Part A. "Multi-state insurer" as used in Part B encompasses all forms of insurers domiciled or chartered in the accredited state and licensed, registered, accredited or operating in at least one other state. This scope also includes insurers that are domiciled in the accredited state and operating or accepting business on an exported basis in at least one other state as excess and surplus lines insurers. It does not include those insurers that are licensed, accredited or operating in only their state of domicile but are assuming business from insurers writing that business that is directly written in a different state. The term "insurer" in Part B includes traditional insurance companies as well as, for instance, health maintenance organizations and health service plans, captive risk retention groups, and other entities organized under other statutory schemes. Although this scope includes risk retention groups organized as a captive insurer, it does not include any other type of captive insurer. While the unique organizational characteristics of some of these entities may require specialized laws, their multi-state activity demands solvency oversight that employs the base-line regulatory practices and procedures identified in Part B. For purposes of this definition, the term "state" is intended to include any NAIC member jurisdiction, including U.S. territories.

7. The accreditation program recognizes that complete standardization of practices and procedures across all states may not be practical or desirable because of the unique situations each state faces. States differ with respect to staff and technology resources that are available as well as the characteristics of the domestic industry regulated. For example, states may choose to emphasize automated analysis over manual or vice versa. Reliable results may be obtained using alternative, yet effective, financial solvency oversight methodologies. The accreditation program should not emphasize form over substance in its evaluation of the states' solvency regulation.

(NOTE: FRSAC has adopted Review Team Guidelines that provide detailed guidance to the review teams regarding how compliance with the Part B, Regulatory Practices and Procedures Standards

should be assessed. These guidelines can also assist states in preparing for the accreditation review of their Department.)

(1) **Financial Analysis**

a. **Sufficient Qualified Staff and Resources**

The Department should have the resources to review effectively on a periodic basis the financial condition of all domestic insurers.

b. **Communication of Relevant Information to/from Financial Analysis Staff**

The Department should provide relevant information and data received by the Department, which may assist in the financial analysis process to the financial analysis staff and ensure that findings of the financial analysis staff are communicated to the appropriate person(s).

c. **Appropriate Supervisory Review**

The Department's internal financial analysis process should provide for appropriate supervisory review and comment.

d. **Priority-Based Analysis**

The Department's financial analysis procedures should be priority-based to ensure that potential problem companies are reviewed promptly. Such a prioritization scheme should utilize appropriate factors as guidelines to assist in the consistent determination of priority designations.

e. **Appropriate Depth of Review**

The Department's financial analysis procedures should ensure that domestic insurers receive an appropriate level or depth of review commensurate with their financial strength and position.

f. **Documented Analysis Procedures**

The Department should have documented financial analysis procedures and/or guidelines to provide for consistency and continuity in the process and to ensure that appropriate analysis procedures are being performed on each domestic insurer.

g. **Reporting of Material Adverse Findings**

The Department's procedures should require that all material adverse indications be promptly presented to the commissioner or an appropriate designee for determination and implementation of appropriate regulatory action.

h. **Action on Material Adverse Findings**

Upon the reporting of any material adverse findings from the financial analysis staff, the Department should take timely action in response to such findings or adequately demonstrate the determination that no action was required.

(2) **Financial Examinations**

a. **Sufficient Qualified Staff and Resources**

The Department should have the resources to effectively examine all domestic insurers on a periodic basis in a manner commensurate with the financial strength and position of each insurer.

b. **Communication of Relevant Information to/from Examination Staff**

The Department should provide relevant information and data received by the Department, which may assist in the examination process to the examination staff and ensure that findings of the examination staff are communicated to the appropriate person(s).

c. **Use of Specialists**

The Department's examination staff should include specialists with appropriate training and/or experience or otherwise have available qualified specialists, which will permit the Department to effectively examine any insurer. These specialists should be utilized where appropriate given the complexity of the examination or identified financial concerns.

d. **Appropriate Supervisory Review**

The Department's procedures for examinations should provide for supervisory review of examination workpapers and reports to ensure that the examination procedures and findings are appropriate and complete and that the examination was conducted in an efficient and timely manner.

e. **Use of Appropriate Guidelines and Procedures**

The Department's policies and procedures for the conduct of examinations should generally follow those set forth in the NAIC *Financial Condition Examiners Handbook*. Appropriate variations in methods and scope should be commensurate with the financial strength and position of the insurer.

f. **Performance and Documentation of Risk-Focused Examinations**

The Department's performance and documentation of risk-focused examinations should generally follow the guidance set forth in the NAIC *Financial Condition Examiners Handbook*. Appropriate variations in method and scope should be commensurate with the financial strength and position of the insurer.

g. **Scheduling of Examinations**

In scheduling financial examinations, the Department should follow procedures such as those set forth in the NAIC *Financial Condition Examiners Handbook* that provide for the periodic examination of all domestic companies on a timely basis. This system should accord priority to companies that exhibit adverse financial trends or otherwise demonstrate a need for examination.

h. **Examination Reports**

The Department's reports of examination should be prepared in accordance with the format adopted by the NAIC and should be sent to other states in which the insurer transacts business in a timely fashion.

i. **Reporting of Material Adverse Findings**

The Department's procedures should require that all material adverse findings be promptly presented to the commissioner or an appropriate designee for determination and implementation of appropriate regulatory action.

j. **Action on Material Adverse Findings**

Upon the reporting of any material adverse findings from the examination staff, the Department should take timely action in response to such findings or adequately demonstrate the determination that no action was required.

(3) **Information Sharing and Procedures for Troubled Companies**

a. **Information Sharing**

States should allow for the sharing of otherwise confidential documents, materials, information, administrative or judicial orders, or other actions with the regulatory officials of any state, federal agency or foreign countries providing that the recipients are required, under their law, to maintain its confidentiality. States also should allow for the sharing of otherwise confidential documents, materials, information, administrative or judicial orders, or other actions with the NAIC providing that the NAIC demonstrates by written statement the intent to maintain its confidentiality. The Department should have a documented policy to cooperate and share information with respect to domestic companies with the regulatory officials of any state, federal agency or foreign countries and the NAIC directly and also indirectly through committees established by the NAIC, which may be reviewing and coordinating regulatory oversight and activities. This policy should also include cooperation and sharing information with respect to domestic companies subject to delinquency proceedings.

b. **Procedures for Troubled Companies**

The Department should generally follow and observe procedures set forth in the NAIC *Troubled Insurance Company Handbook*. Appropriate variations in application of procedures and regulatory requirements should be commensurate with the identified financial concerns and operational problems of the insurer.

Part C: Organizational and Personnel Practices

(1) **Professional Development**

The Department should have a policy that encourages the professional development of staff involved with financial surveillance and regulation through job-related college courses, professional programs, and/or other training programs.

(2) **Minimum Educational and Experience Requirements**

The Department should establish minimum educational and experience requirements for all professional employees and contractual staff positions in the financial regulation and surveillance area, which are commensurate with the duties and responsibilities of the position.

(3) **Retention of Personnel**

The Department should have the ability to attract and retain qualified personnel for those positions involved with financial surveillance and regulation.

Part D: Organization, Licensing and Change of Control of Domestic Insurers

Preamble

8. The focus of the Part D standards is on strengthening financial regulation and the prevention of unlicensed or fraudulent activities. The scope of this section only includes the licensing of new companies and Form A filings. The section applies to only traditional life/health and

property/casualty companies and this scope is narrower than that of Part B in that it does not include entities such as health maintenance organizations, health service plans, and captive insurers (including captive risk retention groups). These standards only deal with the department's analysis of domestic companies and do not include foreign or alien insurers. The initial company licensing process does not consider the "multi-state" concept since the company is in its initial licensing phase. The standards regarding Form A filings deal with only filings submitted related to multi-state insurers, as that term is defined in the Part B Preamble.

(1) Qualified Staff and Resources
The department should have minimum educational and experience requirements for licensing staff commensurate with the duties and responsibilities for analyzing company applications. Staff responsible for analyzing applications should have an accounting, insurance, financial analysis or actuarial background.

(2) Sufficient Staff and Resources
The department should have sufficient resources to effectively review applications for primary licensure or Form A filings in a timely manner.

(3) Scope of Procedures for Primary Applications
The department should have documented licensing procedures that include a review and/or analysis of key pieces of information included in a primary licensure application.

(4) Scope of Procedures for Form A Filings
The department should have documented procedures for the review of key pieces of information included in Form A filings.

(5) Use of the Form A Database
The department should utilize the Form A Database as a means of obtaining information on prior filings made by an applicant and informing other states of the receipt and status of Form A filings in a timely manner.

(6) Documentation of Work Performed
The department's files should include evidence that the department's procedures were adequately performed and well documented, including a conclusion regarding whether an application or filing is approved or denied.

Section 3

Regulating for Solvency Protects Consumers: U.S. Insurance Financial Regulatory Oversight

Overview of U.S. Financial Regulation

1. As noted in Section 2, the U.S. financial regulatory system can be described as a three-stage process. First, state lawmakers and regulators eliminate or limit some risks through restriction on activities or prior approval mechanisms or when companies modify actions based upon perceived risk/reward assessment and potential risk-based capital (RBC) consequences. Financial oversight is the second stage of the process and where most of the regulatory activity exists. At this stage, regulators are looking for companies in hazardous financial condition and evaluating the potential for insolvency. Regulatory backstops or safeguards, most notably the state guaranty associations and RBC, make up the final stage of the regulatory process.

2. The core of the financial regulatory system in the U.S. is the financial surveillance process for financial oversight, which is predominately built around an extensive and substantially uniform financial reporting system allowing for detailed analysis of asset holdings, reinsurance, and loss/claim reserves. Through the use of our centralized financial reporting database, within minutes regulators can perform stress tests on companies and determine the impact of other company insolvencies on the market. The data provides opportunities to find anomalies from one company to another through benchmarking and other processes and to look for new risk concentrations and/or optimistically valued risks. Because this data and disclosure is vital to the regulatory system, regulators spend considerable effort to validate appropriate financial reporting (e.g., audits, compliance evaluation, actuarial opinions, etc.) to allow for extensive analysis without significant extra attention from the company, thereby keeping regulatory disruptions to a minimum.

Stage 1: Limitation of Risk through Design of the System

Investment Requirements and/or Limitations

3. Regulators deem some risks to be so material and potentially contrary to the best interests of policyholders, that lawmakers and regulators either restrict those investment activities or require pre-approval of certain material transactions. Conservative valuation of assets and liability credits and application of the RBC formula can drive insurers toward less-risky activities.

4. In the 1990s, insolvencies caused by high risk investment strategies led regulators to consider their oversight and possible restriction of insurer investments by imposing either a defined limits or a defined standards approach. Using a defined limits approach, regulators place certain limits on amounts or relative proportions of different assets that insurers can hold to ensure adequate diversification and limit risk. Using a defined standards approach, regulators restrict investments based on a “prudent person” approach, allowing for discretion in investment allocation if the insurer can demonstrate its adherence to a sound investment plan Moreover, the NAIC Capital Markets & Investment Analysis Office reviews insurers’ assets for credit risk, potentially driving insurers toward less-risky investment.

Pre-Approval of Material Transactions and Activities

5. Commissioner approval is required for certain material transactions, such as large investment or reinsurance transactions, and extraordinary dividends. In an insurance holding company system, insurers also need regulatory approval for change in control and the amount of dividends paid. This is to help ensure that the assets of an insurer adequately protect the policyholders and are not unfairly distributed to others.

Valuation Requirements and Reinsurance Credit

6. Statutory accounting principles value some assets conservatively and, thus, are less favorable for investment. Reinsurance provides valuable risk mitigation and can provide significant stability. Therefore, in order to receive credit for ceded reinsurance, the reinsurer must be authorized or post security to cover its obligations.

Risk-Based Capital (RBC)

7. The RBC system was created to provide: 1) a capital adequacy standard that is related to risk; 2) a safety net for insurers 3) uniformity among the states; and 4) regulatory authority for timely action. The RBC system has two main components: 1) the RBC formula, which establishes a hypothetical minimum capital level that is compared to a company's actual capital level; and 2) and RBC model law that grants automatic authority to the state insurance regulator to take specific actions based on the level of impairment. While the RBC capital requirement calculation varies based on the type of asset, RBC does not tend to drive investments, because companies typically hold capital in excess of minimum capital requirements. However, the RBC formula could have some influence on management decisions.

Stage 2: Financial Oversight and Intervention Powers

8. Capital requirements are an important part of every regulatory regime. An insurance company must hold capital greater than the minimum regulatory capital levels to continue in business; however, financial regulation extends beyond just capital requirements in most countries and, in the U.S., financial regulation is much broader still.

9. U.S. insurance regulators can order conservation, rehabilitation or liquidation on numerous statutory grounds ranging from financial insolvency to unsuitable management and operations. The *Insurer Receivership Model Act* (#555) includes the following grounds for regulatory action (among others):

    (1) Impairment, insolvency, or hazardous financial condition;
    (2) Improperly disposed property or concealed, altered, or destroyed financial books;
    (3) Best interest of policyholders, creditors or the public; and
    (4) Dishonest, improperly experienced, or incapable person in control.

10. The most typical financial intervention occurs when a company is in hazardous financial condition. A regulator may deem a company in hazardous financial condition[1] based on:

    (1) Adverse findings in financial analysis or examination, market conduct examination, audits, actuarial opinions or analyses, cash flow and liquidity analyses;
    (2) Insolvencies of a company's reinsurer(s) or within the insurer's insurance holding company system;
    (3) Finding of incompetent or unfit management/director;
    (4) A failure to furnish information or provide accurate information; and,
    (5) Any other finding determined by the commissioner to be hazardous to the insurer's policyholders, creditors, or general public.

11. Financial oversight and the determination of hazardous financial condition is the most valuable and extensive part of financial regulation. Oversight focuses on appropriate asset and liability valuation, the risks accepted by the insurer, the mitigation of those risks, and the amount of capital held in light of the residual risks. Without the extensive financial reporting databases maintained by the NAIC, the financial analysis to evaluate hazardous financial condition would likely require much more significant and time-consuming company input.

12. In addition to numerous activities (such as consideration of management skills, products, sales, market activity, market concentrations, etc.), evaluation of hazardous financial condition status includes the review of an insurer's financial statement preparation, including preparation of all the schedules and audit and actuarial opinions, as well as regulators' financial surveillance, including financial statement validation, analysis and examination.

Financial Reporting Preparation and Requirements

13. The valuable oversight is possible because of the extensive financial reporting databases at the fingertips of each insurance regulator, allowing the financial analysis to occur without additional significant and time-consuming company input. Insurers are required to file standardized annual and quarterly financial reports that the regulators use to assess the insurer's risk and financial condition. These reports contain both qualitative and quantitative information, with content requirements updated as necessary to incorporate significant common insurer risks. Reporting requirements are specified in two forms: through the *Accounting Practices and Procedures Manual*, utilizing fully codified statutory accounting principles, and through the quarterly and annual statement instructions. Requirements run the gamut from typical accounting requirements (e.g., balance sheet and income statement) to detailed data reporting on specified schedules (e.g., Schedule D – investment schedules; Schedule F – reinsurance issues; and Schedule P – loss triangles, etc.).

14. Given the importance of accurate financial reporting to the financial oversight process, regulators pay particular attention to accuracy. Actuarial opinions on major components of an insurer's financial statements (asset adequacy[2] and claim/loss/premium reserves) are required to ensure the adequacy and/or reasonableness of reserves. The independent financial audit helps to provide assurances that all material aspects of the insurer's financial reporting are accurate.

[1] *Model Regulation to Define Standards and Commissioner's Authority for Companies Deemed to Be in Hazardous Financial Condition* (#385).

[2] Asset adequacy analysis is a model-based determination of various product groups under current and realistic scenarios that determine the amount of assets on the valuation date needed to fund prospective benefits and related expenses.

15. Generally, regulators judge financial condition based on the company's financial reporting, accompanying audits and actuarial opinions. As discussed later in this section, there are numerous financial analysis tools, including public calculations, such as NAIC's Insurance Regulatory Information System (IRIS) ratios and more detailed non-public calculations included in the Financial Analysis Solvency Tools (FAST) system that highlight "red flags." These non-public calculations are possible because of the detailed, validated and uniform financial reporting, allowing for identification of risk concentrations and anomalies.

16. Given that assets' and liabilities' valuations and reserves are a substantial portion of insurer risks, reserve analyses include actuarial opinions and, for life insurers, asset valuation reserves and interest maintenance reserves to help to ensure consistent asset and liability valuation.

Financial Surveillance

17. In assessing the financial condition of an insurer, the overall goal is to identify potential adverse financial indicators as quickly as possible, to evaluate and understand such problems more effectively, and to develop appropriate corrective action plans sooner, thus potentially decreasing the frequency and severity of insolvencies. Regulators conduct a risk-focused surveillance of the insurer's financial reports that includes financial analysis, risk-focused examination and supervisory plan development

Stage 3: Regulatory Backstops

18. As a final back-stop in the U.S. financial oversight process, state insurance regulators have the U.S. RBC calculation and analysis.[3] Regulators developed RBC to supplement the fixed minimum capital and surplus requirements which vary by line of business (higher for casualty lines, and higher for multiple lines over mono-line companies) and do not sufficiently account for differences in size, risks, or financial conditions among insurers. Although the RBC formula is the same for companies in a similar line of business, the specific calculation for each company reflects the particular risks unique to that specific company. This is because a company's RBC is calculated by applying factors to various asset, premium and reserve items. The factor is higher for those items with greater underlying risk and lower for less risky items.

19. RBC strengthens the regulatory safety net in the U.S. system by recognizing a company's different size, financial condition, and types of risks assumed. More important, regulators created RBC as a legal authority to provide for timely regulatory action with minimum court involvement when a company triggers an RBC intervention level.

20. The RBC formula is a process whereby the insurer calculates a Total Adjusted Capital (TAC), first by identifying dollar amounts of specific risk exposures in specific risk categories (i.e. direct/indirect affiliate/subsidiary insurer risks, fixed income risks, equity risks, credit risks, underwriting risks, etc.). An Authorized Control Level (ACL) amount is then established through many pages of calculations whereby individual risks are multiplied by risk factors to create RBC charges, the RBC charges are segregated into risk components based upon correlation, and a covariance calculation is used to account for the absence of perfect correlation among all risks.

[3] *Risk-Based Capital (RBC) for Insurers Model Act* (#312).

Once the ACL is calculated, the trigger points for the regulator's four action and control levels are then determined as a percentage of the ACL number: Company Action Level is 200% of ACL, Regulatory Action Level is 150% of ACL, ACL is the third level, and Mandatory Control Level is 70% of the ACL. Then the TAC is compared to the four regulatory action and control levels, and, in accordance with the RBC regulatory framework, all state statutes include specific actions that the regulator and insurer must take at each level to resolve risk exposures and capital inadequacies. These intervention levels are established to require regulatory action, but the regulator may otherwise consider a company to be in hazardous financial condition despite a specific RBC level finding.

21. Rounding out the policyholder protections, if a financially impaired insurance company is unable to pay its insurance claims, a state guaranty fund will pay them, subject to certain limits.

Oversight of Hazardous Financial Condition: Tools and Resources

22. In assessing the financial condition of an insurer, the overall goal is to identify potential adverse financial indicators as quickly as possible; evaluate and understand such problems more effectively; and develop appropriate corrective action plans sooner, thus potentially decreasing the frequency and severity of insolvencies. The U.S. solvency oversight framework is not designed to eliminate all insolvencies but, rather, to minimize the number of insolvencies and their corresponding impact on policyholders and claimants. Regulators conduct a risk-focused surveillance of insurers' financial reports that includes financial analysis, financial examination and supervisory plan development.

Financial Analysis

23. NAIC tools and resources (e.g., "FAST" scores and handbooks) supplement individual state regulatory efforts. FAST is a collection of analytical solvency tools and databases designed to provide state insurance departments with an integrated approach to reviewing the financial condition of insurers operating in their respective jurisdictions. FAST is intended to assist regulators in prioritizing resources to those insurers in greatest need of regulatory attention. The creation and development of sophisticated and comprehensive financial tools and benchmarks (through data management evolved from personal knowledge of troubled companies) encapsulate various categories, including leverage, asset quality, liquidity, and insurer operations.

24. Three key tools within the FAST System include:[4]

    1) **Insurance Regulatory Information System (IRIS)**: IRIS has served as a baseline solvency screening system for the NAIC and state regulators since the mid-1970s. Its first, "statistical phase" involves calculating a series of financial ratios for each insurer based on statutory annual statement data. Because the ratios by themselves are not indicative of adverse financial conditions, an experienced team of state insurance examiners and analysts then reviews the IRIS ratio results and other financial information through the second "analytical phase."

    In this second phase, the Analyst Team reviews a computer-selected priority listing of insurers that may be experiencing weak or declining financial results and meets to identify insurers that appear to require immediate regulatory attention. The team then validates the listing based on

further analysis of those companies, and provides a brief synopsis of its findings in a document that only state insurance regulators and authorized NAIC staff can access.

2) **Scoring System**: The NAIC Scoring System is based on several financial ratios and is similar in concept to IRIS ratios, but provides results both on an annual and a quarterly basis. The Scoring System also includes a broader range of financial ratios and assigns a score to each ratio based on the level of solvency concern each result generates. The Scoring System results and scores are available only to state insurance regulators and authorized NAIC staff.

3) **Insurer Profiles System**: Finally, the Insurer Profiles System produces quarterly and annual profiles on property and casualty, life, health and fraternal insurers that include either a quarterly or an annual five-year summary of a company's financial position. The Insurer Profile reports provide not only a snapshot of the company's statutory financial statement, but also include analytical tools such as financial ratios and industry aggregate information for analytical review. Insurer Profile reports also assist state insurance department analysts in identifying unusual fluctuations, trends or changes in the mix of an insurer's assets, liabilities, capital and surplus, and operations.

25. To prioritize resources, regulators use the Analyst Team System (ATS), a multi-tiered solvency surveillance process. ATS utilizes FAST including: the Annual Scoring System, IRIS ratios, RBC and selected information from the Annual Statement Blanks. The primary goal of ATS is to use many of solvency tools working together to identify insurance companies (all of the insurance companies that file Annual Statement Blanks with the NAIC) that appear to require immediate regulatory attention.

26. State regulators have also developed an NAIC *Financial Analysis Handbook* (Handbook) to advise use of a "stair-step" approach that directs analysts to perform more in-depth analysis commensurate with the financial strength, prospective risks and complexity of each insurer. The Handbook requires regulators to use many analytical tools, databases and processes in completing their quarterly analysis of insurers (such as ratio analysis and review of the actuarial opinion, audited statutory financial statements, holding company filings, and the management discussions and analysis filings). The Handbook provides a means for insurance departments to more accurately identify companies experiencing financial problems or posing the greatest potential for developing such problems. Furthermore, the Handbook provides guidance for insurance departments to define and evaluate particular areas of concern in troubled companies.

27. Ensuring a nationwide system of checks and balances, the NAIC, specifically the NAIC Financial Analysis (E) Working Group (FAWG), offers a layer of peer review for each regulator's solvency monitoring efforts, thus ensuring that experienced state regulator colleagues improve and enhance state regulator judgments regarding a company's financial condition. FAWG is comprised of the top financial regulators from around the country. These individuals, who are seasoned regulatory professionals, serve as an advisory panel and form of peer review for the home state's actions.

28. For over two decades, the NAIC FAWG has ensured that state insurance financial regulators have shared information and ideas to identify, discuss, and monitor potentially troubled insurers and nationally significant insurance groups[5]. For the past two decades, FAWG has identified market trends and emerging financial issues in the insurance sector and has leveraged the expertise of select

chief financial regulators from around the U.S. to provide an additional layer of solvency assessment to our national system of state-based regulation.

29. While FAWG does not have specific regulatory authority, no state has ever refused a FAWG recommendation. The U.S. state-based system of supervision fosters healthy peer review that creates peer pressure to be diligent and vigilant domiciliary regulators, knowing that each jurisdiction where a company is licensed has the separate authority to act on a FAWG recommendation if the domiciliary state regulator does not.

30. FAWG's mission has three overriding themes:

    1. Identify nationally significant insurers/groups that exhibit characteristics of trending towards financial trouble;
    2. Interact with domiciliary regulators and lead states in order to assist and advise on appropriate regulatory strategies, methods, and actions; and,
    3. Encourage, promote and support coordinated, multi-state efforts in addressing solvency issues.

31. FAWG's activities, oversight and insurer review includes, but is not limited to:

    - Identifying companies that are outliers when compared with industry benchmarks although, state regulators may refer some companies to FAWG for review.
    - Develop communication for the financial staff and commissioner for the state of domicile for the insurer/group under review; including a description of the issue, questions and suggestions on regulatory options.
    - Review of domestic or lead state regulator responses on identified issues and questions.
    - Consider whether responses identify a need for further regulatory action or FAWG intervention — including requesting the domiciliary regulator to answer questions and make a presentation to FAWG and other regulators.
    - Consider whether to request the formation of a FAWG subgroup for certain insurers or groups to facilitate regular communication and collaboration with applicable regulators although state regulators generally proactively communicate with the most relevant regulators for each situation on their own.

32. Through the FAWG forum, individual states work together to support and guide fellow regulators for the benefit of the whole in an entirely open (among regulators) yet confidential (not public) process. FAWG also reviews and considers trends occurring within the industry, often concentrating on particular market segments, product, exposure, or other problem that have the potential of impacting the solvency of the overall industry.

Financial Examination

33. U.S. regulators carry out periodic comprehensive risk-focused, on-site examinations in which they evaluate the insurer's corporate governance, management oversight and financial strength, including risk identification and mitigation systems both on a current and prospective basis, assessing the reported financial results through the financial examination process to determine the insurer's compliance with legal requirements.

34. Examinations consist of a process to identify and assess risk and assess the adequacy and effectiveness of strategies/controls used to mitigate risk. The process includes a determination of the quality and reliability of the corporate governance structure, risk management programs and verification of specific portions of the financial statements, limited-scope reviews and reviews of specific insurer operations.

35. Financial examiners evaluate the insurer's current strengths and weaknesses (e.g., board of directors, risk-management processes, audit function, information technology function, compliance with laws/regulations, etc.) and prospective risk indications (e.g., business growth, earnings, capital, management competency and succession, future challenges, etc.).

36. Regulators then document the results of financial condition examinations in a public examination report that assesses the insurer's financial condition and sets forth findings of fact with regard to any material adverse findings disclosed by the examination. Examination reports may also include required corrective actions, improvements and/or recommendations.

37. In between full-scope examinations, additional examinations might be needed that are limited in scope to review specific insurer operations.

Supervisory Plan

38. At least once a year, regulators develop a Supervisory Plan for each domestic insurer using the results of recent examinations and the annual and quarterly analysis process to outline the type of surveillance planned, the resources dedicated to the oversight and the coordination with other states. At the end of a financial examination, the financial examiner will document appropriate future supervisory plans for each insurer (e.g., earlier statutory exams, limited-scope exams, key areas for financial analysis monitoring, etc.). This Supervisory Plan provides an oversight link between financial examination and financial analysis processes.

Conclusion

39. U.S. insurance regulators are keenly aware of their regulatory system's unique structure, and have developed tools and financial regulatory processes, adopted by all jurisdictions (such as peer review and FAWG oversight), to help ensure that regulatory resources are used in an efficient and cost-effective manner, not only to protect consumers but also to maintain the solvency of regulated entities. U.S. insurance regulators utilize a number of coordinated resources to assess the financial strength and condition of insurers — from small single-state insurers to large multi-state groups — to verify the consistency, integrity and success of the supervisory approach.

Section 4

Effective and Efficient Markets Protect Consumers – Analysis of U.S. Property/Casualty Markets

U.S. Insurance Regulatory Mission

1. While the policyholder is the focal point of the U.S. Insurance Regulatory Mission, the mission is mindful that regulatory actions and decisions will have an impact on the operation of insurance markets and their efficiency. Because it is felt that "facilitating the financial stability and reliability of insurance institutions for an effective and efficient market place for insurance products" is in the best interests of policyholders (e.g., cost efficiencies and product innovation), this is not considered to be a separate and distinct or secondary mission, but is considered to support a focus on the policyholder.

2. Insurance regulators support the best way to facilitate an effective and efficient market place for insurance products and achieve cost efficiencies and product innovation is by cultivating a competitive market place.

Measuring Competitiveness of Markets

3. Economists often use the structure-conduct-performance hypothesis as a standard way to evaluate markets. This hypothesis states that market structure affects market conduct which in turn affects market performance. Market structure can be presented through market share, size of firms, number of firms, concentration measures and entry and exit rates. Market conduct refers to the degree of independence firms have in setting prices and output levels. Market performance for insurance markets can be measured through loss ratios, profit rates and insolvency rates. An evaluation of these factors can help one analyze insurance markets. A large number of sellers, along with free entry and exit lead to independent pricing and optimal market performance.

4. Insurance regulators strive for workable competition where insurance markets are relatively unconcentrated, barriers to entry are low, profits are comparatively moderate and inefficiencies are limited. A highly competitive market will lead to efficient, optimal outputs and available, innovative products. Under the U.S. capitalistic framework, companies are allowed to enter and exit markets and some will succeed and profit and others may fail. Financial insurance regulation is meant not to prevent companies from failing, but to protect policyholders by ensuring that claims are paid.

5. An evaluation of U.S. insurance markets shows that the vast majority of insurance markets in the vast majority of geographic regions are highly competitive with multiple writers, relatively low concentration and reasonable profitability rates. The insurance-related benchmarks in the following section are presented as a way to evaluate the competitiveness of insurance markets.

Market Shares

6. Market shares can be used to determine the degree of concentration found in markets. When looking at concentration rates, it is important to evaluate insurance markets based on group status because insurance entities within a group are not competing against each other. There are several ways to look at concentration rates. One common measure used by economists is the four-firm concentration ratio which measures the market share of the four largest groups. Ratios below 50% are considered desirable in terms of competitiveness of the market.

7. A more robust tool to measure concentration is the Herfindahl-Hirschman Index (HHI). The HHI is calculated by summing the squares of the market shares (as a percent) of all groups in the market. Although there is no precise point at which the HHI indicates that a market or industry is concentrated highly enough to restrict competition, the Department of Justice has developed guidelines with regard to corporate mergers. Under these guidelines, if a merger of companies in a given market causes the HHI to rise above 1,800, the market is considered highly concentrated. If, after the merger, the HHI is between 1,000 and 1,800, the market is considered moderately concentrated, and an HHI less than 1,000 is considered not concentrated. Since these numbers are guidelines, judgment must be used to interpret what information the HHIs provide for a particular market.

8. Using these two measures, the data shows that nationally there is little concentration in property/casualty insurance markets, especially within the larger lines of business (Table 1, Table 2 and Table 3). The states show slightly more concentrated markets but the data does not exhibit cause for concern. In addition, the states benefit from the fact that there is ease of entry by insurers that may be operating in neighboring states and could easily begin writing in a new state. Life, annuity, and health markets similarly show limited concentration in terms of the four-firm ratios. The market share of the four largest groups writing life insurance is 31.4%; 36.4% for the four largest groups writing annuity business; and 33.2% for the four largest groups writing health insurance.

Entries/Exits

9. Those analyzing competition are usually interested in how many insurance groups are participating in a market, as well as how many insurance groups are deciding to enter or leave a market. A market demonstrating a steady increase in the number of groups providing insurance (more groups enter the market than exit) can be considered a strong market where insurers see an opportunity to make a profit. Conversely, markets where more groups are exiting the market than entering may indicate that insurers are unable to earn a profit sufficient to justify a continued presence. Insurance data show that insurers are moving into and out of markets, without either entry or exit dominating the equation (Tables 1 & 2).

Residual Markets

10. When insurance is limited or not available through the voluntary market, a consumer may turn to the residual (e.g., assigned risk or other shared market plans) or surplus lines (i.e., unlicensed companies for hard-to-place risks) markets for coverage. When there is growth in these alternative markets, there may be a declining number of sellers in the standard market or a limited capacity to add new business. Data show that in most lines and most states, the residual markets are quite small and have fallen in recent years, indicating that the primary market is competitive with insurance relatively available and affordable (Table 2).

Profitability Rates

11. Insurer profitability results can be examined to determine whether a market is attractive to insurers to enter, thereby creating greater competition, or unattractive, causing insurers that are in the market to leave. Persistently high levels of profitability may indicate that a market is failing to attract competitors, thus enabling non-competitive rates of return to be earned. Alternatively, persistently low levels of profitability may indicate that insurers have difficulty estimating losses and/or are unable to set premium rates at adequate levels. Long-term profitability rates for the property/casualty insurance industry are relatively low, particularly when compared with other industries (Table 4).

U.S. Markets are Competitive

12. Insurance markets have numerous companies ready to write in most lines of business in all states. The bulk of the business written is done so by large groups (writing more than $1 billion in premium) and large individual insurers (writing more than $500 million in premiums and not in a large group)(Table 5, Chart 1). The size of these competing companies would allow them to seamlessly step in and write business of an insurer that moved out of the market.

Table 5

Percentage of Insurance Markets Written by Size of Group or Company, 2011

	Groups > $1 billion or Cos. > $500 million	Groups > $1 billion	Additional Cos. > $500 mil not in a Group >$1 B
PC	81.4%	78.9%	2.6%
Life	95.3%	93.8%	1.5%
Health	90.9%	82.3%	8.6%
All	90.0%	85.7%	4.3%

13. The structure and performance criteria for insurance markets confirm competitiveness at both the national and state level. Markets have large numbers of writers and the degree of market concentration falls below that which economists would typically use to identify preconditions necessary to show a lack of competition. The criteria described above provide the framework necessary for competitive markets. U.S. insurance markets are competitive and therefore the failure of a company in a U.S. insurance market can typically be absorbed by other market players without market disruption.

Size of U.S. Insurance Market

14. Insurance markets in the United States are large, competitive and well-functioning. Regulators continually ensure that markets remain competitive as this results in the most efficient markets for the ultimate benefit of consumers.

15. The overall insurance market in the United States is nearly three times larger than that of the next largest insurance market in the world. With $1.6 trillion in overall premium volume in 2011, the U.S. market makes up 33% of the world market, while Japan is the next largest with $655 billion in premiums (Chart 2). When individual states are compared to foreign countries, the states make up five of the world's 14 largest insurance markets and 24 of the world's top 50 insurance markets (Table 6).

16. More than 8,000 domestic insurers — including captives, risk retention groups, and state mutuals — operate in U.S. markets (Chart 3). In terms of insurance markets on a state level, the average state has more than 400 life/health insurers and more than 750 property/casualty insurers licensed to write business in their state (Table 7). The presence of a large number of insurers with the capacity to take on new business ensures that markets will be well functioning as insurers can move in and out of markets without causing severe dislocations. Most insurance markets in the U.S. are highly competitive and insurers aggressively seek market share by competing on product and price.

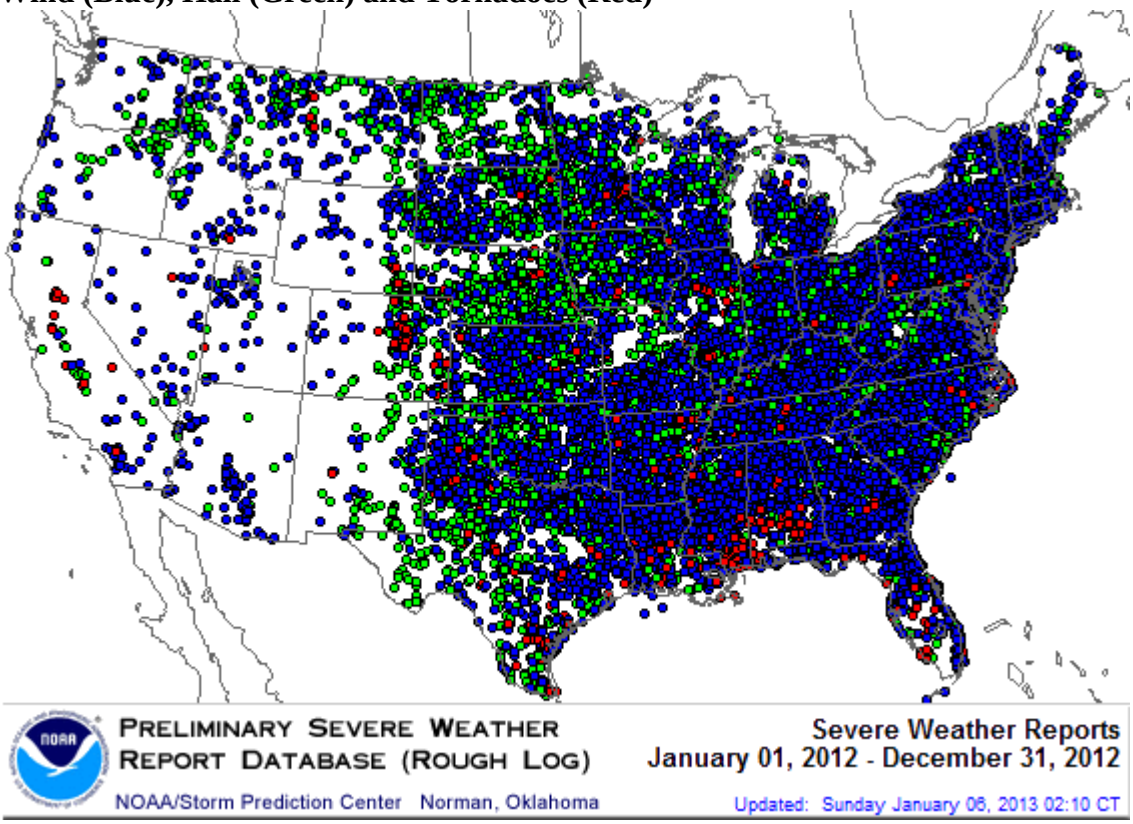
U.S. Markets are Regulated by the States Due to Local Differences

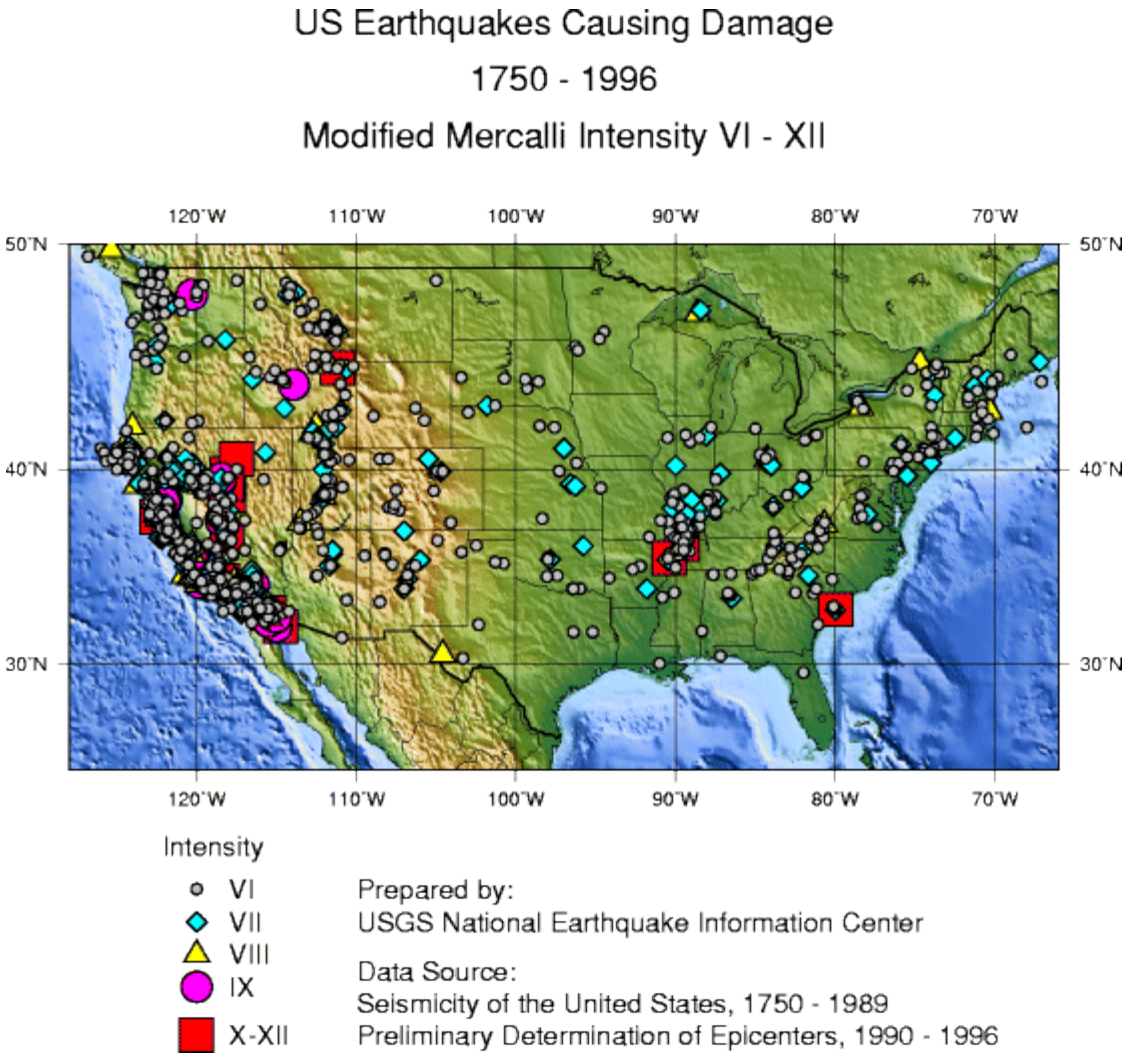
17. Insurance markets in the United States are regulated on the state level rather than a federal level, partly due to Constitutional reasons and prior decisions made by U.S. courts, but also due to practical reasons because it makes functional sense. The U.S. is large geographically and has differences between regions and states due to localized traditions, cultures, population densities and legal concepts. It is important to keep in mind that many state markets are as large or are larger than many foreign countries.

18. Effective consumer protection that focuses on local needs is the hallmark of state insurance regulation. Regulators at the state level understand the needs and special circumstances of consumers and insurers at the local level and are best able to properly address those unique circumstances.

19. Due to geographical differences, states experience unique perils within their individual markets. The following maps show that, depending on the state, catastrophic perils within a region might include any combination of tornadoes, wind, hail and earthquakes. States must focus their regulatory structure differently according to the perils contained within each state.

Wind (Blue), Hail (Green) and Tornadoes (Red)





20. In terms of factors affecting life and health insurance, states differ dramatically in population densities, ratios of urban and rural populations, age distributions, racial makeup and the overall health of the population. These factors make each state unique and call for different regulatory structures and rules.

21. The states have chosen to enact different statutory workers' compensation laws that determine the amount and forms of compensation to which employees are entitled, based upon that state's own preferences. State laws concerning automobile insurance differ because each state's legislature has enacted their own requirements on minimum levels of liability insurance and whether personal injury protection is mandatory. Each state's legislature determines the needs in that state and creates requirements based upon that state's citizens.

22. An attempt to create a "one-size-fits-all" regulatory framework for all functions of regulation (beyond solvency) does not make sense due to the great differences found between regions

and states. This competitive-market framework complements solvency regulation, which is a national system of state-based regulation where the regulatory responsibility for insurer solvency monitoring rests with the state insurance regulator.

23. The marketplace is generally the best regulator of insurance-related activity. However, there are instances where the marketplace does not respond in the best interests of its participants. A strong and reasonable market regulation program, balanced with those of financial solvency, will discover these situations and allow regulators to respond and act appropriately to change company behavior.

24. Because the terms of insurance policies are complicated, market regulation seeks to ensure that consumers understand the products being purchased and the products provide a minimum level of protection through the use of disclosures and policy review. In addition to the review of products prior to their sale, market regulation ensures that companies conduct their business according to state laws, regulations and policy provisions through the review of a company's marketing and sales practices, underwriting and rating practices, and claim-handling practices. The review of company practices is coupled with the regulation of agents and brokers selling, soliciting and negotiating insurance through background checks, examinations, and continuing education requirements. This type of regulation helps ensure a minimum level of competency of agents and brokers and helps eliminate the potential for market regulation issues and the disruption of a company's product availability and income stream. Finally, market regulation provides a continuous regulatory link to assisting consumers and monitoring companies' behavior through ongoing consumer assistance accomplished through the daily processing of consumer inquiries and complaints.

25. Just as solvency regulation aids the policyholder by ensuring funds are available to pay claims, the existence of a competitive market helps the consumer by ensuring a vibrant, well-functioning efficient marketplace consisting of available, innovative products.

Section 5

Solvency Modernization Initiative: The Future of U.S. Financial Insurance Regulation

1. The Solvency Modernization Initiative (SMI) is a critical self-examination in the continuous effort to improve the U.S. insurance financial regulatory framework. The U.S. financial regulatory system, using general authority and exception-based rule setting (vs. a detailed/explicit authority-based system), has been utilized for years and has been very effective and successful, without the need for intrusive regulation for financially sound companies.

2. U.S. insurance regulators support improving on an existing and time-tested regulatory framework, where the cost of regulation is reasonable and not excessive, rather than starting from scratch with all new, yet-to-be proven theories and more intrusive regulation.

3. The SMI critical self-examination includes an evaluation of lessons learned from the 2007–2008 global financial crisis, a focus on meeting the needs of the U.S. marketplace in an increasingly interconnected financial environment, and a review of international developments regarding insurance supervision, banking supervision and international accounting standards, as well as their potential use in U.S. insurance regulation.

4. Priorities in the SMI include the following:

    - Create a document articulating the U.S. insurance regulatory system, to communicate to domestic and international audiences.

    - Examine international developments (e.g., in the area of accounting and insurance supervision) and their potential use in U.S. insurance regulation.

    - Comply with the International Association of Insurance Supervisors (IAIS) Insurance Core Principles (ICPs) to the full extent appropriate in the U.S. system to aid assessment in the International Monetary Fund's (IMF) Financial Sector Assessment Program (FSAP).

    - Apply lessons learned from the global financial crisis, especially in regard to group supervision, while recognizing that the recent financial crisis was not triggered by insurance matters.

5. The SMI focuses on the following key components of the solvency framework: capital requirements, governance and risk management, group supervision, statutory accounting and financial reporting, and reinsurance. With exception of international accounting, our aim is to achieve almost all SMI policy decisions by mid-2013, with implementation of many changes to follow. For each SMI focus area, the following sections describe what decisions have been made and why.

STATUTORY ACCOUNTING AND FINANCIAL REPORTING: International Accounting and Principle-Based Reserving

6. Statutory accounting and financial regulatory reporting are at the core of solvency-based financial monitoring of U.S. insurers. The current statutory accounting model and financial reporting system are the culmination of extensive deliberation beginning with the insurance accounting codification project that became effective in 2001, and the continuous maintenance efforts led by insurance regulators since that time.

7. U.S. generally accepted accounting principles (GAAP) play a significant role in the maintenance of the statutory-based accounting model. In recognition of the convergence project under way between U.S. GAAP and International Financial Reporting Standards, the Solvency Modernization Initiative (E) Task Force identified the statutory accounting model and regulatory financial reporting system as one of its focus areas.

8. The Solvency Modernization Initiative (E) Task Force charged the International Solvency and Accounting Standards (E) Working Group to consider, among other things, the future of statutory accounting and reporting as a result of the global desire for a single set of high-quality accounting and financial reporting standards that can be utilized internationally.

9. In the SMI, U.S. insurance regulators have also concentrated on one of the largest values in the life and health insurance company balance sheets: their reserve liabilities. As international accounting moves away from formula-based approaches and toward more principle-based valuation due to increasingly complex insurance products, regulators looked to improve the reserve values for life and health insurance business in the U.S. and to increase uniformity in the process. The project became known as principle-based reserving (PBR).

Background on U.S. SAP

10. The *Accounting Practices and Procedures Manual* includes the baseline statutory accounting principles (SAP) insurers use for insurance regulatory financial statements, as occasionally modified by the accounting principles or practices prescribed or permitted by an insurer's domiciliary state. SAP is used to determine, at the financial statement date, an insurer's financial condition and its ability to pay claims and other obligations as they come due.

11. The objectives of SAP differ from the objectives of GAAP. SAP is designed to address the concerns of regulators, who are the primary users of statutory financial statements. SAP includes not only accounting principles, but also other aspects designed to prevent or avoid particular solvency-related problems. GAAP is designed to meet the varying needs of the different users of financial statements, such as investors. As a result, GAAP attempts to gauge a company's profitability by matching revenues to expenses, while SAP focuses on an insurer's ability to pay future claims. As an illustration of the difference, SAP expenses acquisition costs as incurred (because those funds are not available to pay claims), yet GAAP capitalizes acquisition costs and expenses them over time to match the revenues earned.

12. Even with these differences, SAP utilizes the framework established by GAAP. It does this, in part, through the SAP maintenance process, which requires the NAIC to consider new GAAP pronouncements adopted by the Financial Accounting Standards Board (FASB). More specifically, the NAIC must adopt as-is, adopt with modification or reject GAAP once adopted by the FASB.

13. SAP is also the basis used for insurers in U.S. tax law, which is a consideration when regulators discuss changes to SAP.

The Path of U.S. GAAP Convergence with IFRS

14. In 2002, the International Accounting Standards Board (IASB) and the FASB signed the Norwalk Agreement and have since taken on projects with an aim to develop a single global accounting standard. Numerous projects will impact insurance company general purpose accounting, including insurance, financial instruments, leases and revenue-recognition standards.

15. The Insurance Contracts project initially aimed to develop a single global comprehensive accounting standard for insurance contracts. In 1997, the IASB decided to address accounting for insurance contracts in a two-phase project. The first phase of the project was completed in May 2004 with the issuance of IFRS 4: Insurance Contracts. A few restrictions in practice were made, but generally a wide variety of pre-existing insurance accounting practice was allowed. The second phase is still in progress, with release of the FASB exposure draft and the IASB proposed standard in 2013. Fundamental differences still exist between the FASB and IASB on the insurance contracts standard, but there is still an expressed plan to continue to work together to attempt to produce separate standards with minimal differences.

16. The IAIS has been working with the IASB on their insurance contracts and other projects. The IAIS "considers it is most desirable that the methodologies for calculating items in general purpose financial reports can be used for, or are substantially consistent with, the methodologies used for regulatory reporting purposes, with as few changes as possible to satisfy regulatory requirements. However, the IAIS also recognizes (sic) that this may not be possible or appropriate in all respects, considering the differing purposes. The IAIS believes it is essential that differences between general purpose financial reports and published regulatory reports are publicly explained and reconciled."[1] This statement has been adopted by the IAIS, and agreed by the NAIC.

Looking Forward Regarding U.S. SAP

17. The current SAP system requires evaluation of GAAP pronouncements to accept fully, modify or reject those pronouncements. With no change to process, any convergence of GAAP and IFRS will flow through the SAP process for consideration, and some changes already have. With each change, U.S. insurance regulators must consider whether to modify the GAAP accounting or to make adjustments in other parts of the regulatory system so as not to lose the solvency perspective of the regulatory financial statement.

[1]International Association of Insurance Supervisors (IAIS), Insurance Core Principles (ICP) 14: Application Guidance, 14.0.1.

18. One such example would be the introduction of full market consistency to the accounting basis for insurance contracts. When there is low market activity, financial assets (e.g., bonds) held by an insurance enterprise would qualify for amortized cost measurement, as it is a long-standing business practice of insurers to match invested assets with liabilities by holding many of those financial assets backing the liabilities, to maturity. With limited market activity, it seems clear and consistent that such assets would be appropriately accounted for at amortized cost. Otherwise, the use of fair value can cause fluctuations within an insurer's financial statements that are inconsistent with the insurance business model; thus reflecting a financial position that does not depict the most relevant information to the user of the financial statements. A concern regulators have is that the mere fluctuation in interest rates might require them to put an otherwise financially solvent insurer into receivership. One could introduce market consistency and some adjustment in the calculations to stabilize the impact of fluctuating interest rates, but then need to weigh the extra complexity versus the benefit.

19. Another example is the treatment of short-term contracts and long-term contracts, especially related to discounting. It is the NAIC view that discounting on *long-term contracts* is appropriate, but that discounting on *short-term contracts* would have an immaterial effect and could even introduce more uncertainty in the process. More simplistic and less costly calculations could be sufficiently transparent.

20. As part of the SMI, U.S. insurance regulators decided to document the following:

    a. The purpose of the regulatory accounting model.

    b. A potential recommendation regarding whether the NAIC should continue to maintain an entire codification of statutory accounting.

    c. A recommendation of whether regulatory financial statements should continue to be utilized for public purposes.

21. A "Primary Considerations Document" was drafted to frame some of these issues, and included within it a continuum of options available to regulators on the policy issue. This document was exposed and discussed at the 2010 Summer National Meeting. Comments varied, but some of the more significant comments dealt with: 1) the desire to maintain control and not relinquish it to a third party (e.g., the IASB); 2) the value of prescribed and permitted practices; 3) the need for rules within the U.S. that could conflict with the use of principle-based accounting for IFRS; and 4) the timing and whether it is too early to make a decision.

22. The IASB and FASB continue to work on the insurance contracts standards. The U.S. Securities and Exchange Commission (SEC) is also watching what is transpiring with accounting standards and will decide how statements prepared in accordance with IFRS will be utilized within the U.S. With all of these moving parts, the SMI placed its decisions related to the future of statutory accounting on hold, but continues to actively monitor the discussions of the IASB and FASB. The NAIC anticipates submitting comments with each exposure, as it did in November 2010.

23. A final NAIC policy decision on the future of statutory accounting is expected to be made once the IFRS 4 standard from the second phase is adopted by the IASB/FASB and/or when the SEC makes their decisions. As the IASB/FASB and SEC decisions are substantive, the decisions are taking more time than originally planned. It is expected that these decisions might not be made until after the SMI formally ends.

Background on PBR

24. Reserve calculations for life insurance have been formula-driven for almost 150 years. While the formulaic reserves are consistent across companies and can be easily checked for compliance, the preciseness of such reserves varies widely, especially where 1) insurance products have become more complex (e.g., universal life features and option-based policy guarantees); and 2) a company's underwriting practices or expense containment is substantially different from industry averages.

25. Imprecise reserve values have led companies to utilize alternative practices to recognize the economic value of the reserves. One such practice is the use of captives or special purpose vehicles (SPVs). Another practice is the development of products where the economic reserve would be higher than the statutory reserve, thus creating a lower reserve on the regulatory balance sheet than economically viable.

26. The PBR approaches would more fully reflect the company's own mortality, lapse and other policy experience (where justified), risks inherent in secondary guarantees and policyholder options, the probability of exercising those guarantees and options, and the availability of cash flows from company investments to support those values. The traditional formulae would be replaced by stochastically generated reserves (i.e., taking into account probabilities rather than predefined answers) with some safeguards, such as justification for deviations away from industry averages and "floors" or minimums in calculations. Companies with more simplistic products and less risk could use simpler methodologies.

27. The move to PBR valuation requires legislative changes by state. The NAIC has adopted its proposed changes in the 2009 version of the *Standard Valuation Law* (#820) and in the 2012 version of the *Standard Nonforfeiture Law for Life Insurance* (#808). The changes to the Standard Valuation Law (SVL) would refer to an NAIC Valuation Manual containing the methodologies to be used to determine reserves and more. The first edition of the Valuation Manual was adopted in 2012.

Looking Forward Regarding PBR

28. Once 42 of the 55 jurisdictions with greater than 75% of written premiums adopt revised law to introduce the Valuation Manual, it will be operative January 1 following the first July 1 after the threshold is met. This translates to an operative date of between six and 18 months after the threshold is met. Then, there will be at least three years after this operative date before PBR is required (in those states with the law). PBR will be implemented prospectively, only for policies issued on or after the operative date of the Valuation Manual.

29. The Principle-Based Reserving Implementation (EX) Task Force will coordinate PBR activity with other NAIC groups to make necessary changes in financial reporting,

statistical reporting and analysis tools; will facilitate training of insurance department regulators; and will utilize collaborative efforts through the NAIC to successfully implement PBR.

CORPORATE GOVERNANCE AND RISK MANAGEMENT

Corporate Governance

30. Corporate governance, according to the IAIS, refers to systems (such as structures, policies and processes) through which an entity is managed and controlled. In the SMI, regulators were to consider whether laws, regulations or regulatory actions could be modified to improve continual understanding of a company's corporate governance and determine the potential impact of poor corporate governance on an insurance company's solvency.

Background

31. U.S. insurance regulators review the corporate governance of prospective insurers before granting a certificate of authority or license to write insurance business. This review generally focuses on the background and experience of directors and senior management that will be charged with governing the insurer.

32. U.S. insurance regulators review their domiciliary insurers' corporate governance practices during on-site financial examinations. The focus on corporate governance during a financial examination has increased significantly as the U.S. moved to a risk-focused examination process beginning in 2007. Examiners have cited concerns related to board oversight, succession planning, lack of formal risk management and no independent internal audit functions. These issues have typically been dealt with on an ad-hoc basis through management letter comments and recommendations, as there is not a set of uniform corporate governance standards for insurers within insurance regulation. Given that most of the states' insurance laws do not address specific issues of corporate governance practices directly, U.S. insurance regulators have dealt with corporate governance issues through the application of the state's business organization law (e.g., corporation law, limited liability company law, etc., depending on the form of entity), analogy to other appropriate law, comparison of a particular company's practices to industry standards or the practices of like entities, and reliance on commissioner's authority to assure the operation of companies consistent with standards of honest dealing, good faith and solvency.

33. The most recent improvements to U.S. regulatory oversight of insurance industry corporate governance were targeted to respond to the financial crises of 2007–2013 and the corporate accounting scandals of the early 2000s. U.S. insurance regulators developed greater corporate governance standards for insurers related to internal accounting controls for the financial reporting process. These actions took the form of amendments to the *Annual Financial Reporting Model Regulation* (#205), commonly known as the Model Audit Rule, which went into effect in 2010. The revisions primarily covered three significant governance areas: external auditor independence; board audit committee responsibilities; and internal controls over financial reporting. Those changes focused on financial reporting and did not address many broader governance matters, such as risk management.

34. Around the world, the 2007–2013 global financial crises led to discussions by financial regulators regarding the importance of corporate governance and risk management. Many financial supervisors took measures to clarify standards and expectations relating to corporate governance and risk management for regulated entities in their respective areas.

35. In its 2009–2010 survey, the IMF found that U.S. insurance regulators "largely observed" many of the IAIS ICPs related to corporate governance and risk management. However, the IMF cited considerations for enhancements in some areas, including the establishment of: 1) specific suitability criteria (e.g., background, experience, etc.) for key persons; 2) requirements in relation to ongoing notifications regarding suitability; 3) additional requirements or guidance for insurers related to good corporate governance practices; 4) requirements for insurers in maintaining an internal audit function; and 5) explicit requirements for insurers in maintaining risk-management systems capable of identifying, measuring, assessing, reporting and controlling risks.

Regulatory Action

36. U.S. regulators concluded that a greater regulatory focus on corporate governance is required, and formed the Corporate Governance (EX) Working Group in September 2009.

37. The Working Group had three charges, the first of which was to outline high-level corporate governance principles for use in U.S. insurance regulation. To do so, regulators analyzed the statutory and regulatory requirements and initiatives and best practices of the states, other countries, other regulators and the insurance industry. The Working Group was also asked to determine the appropriate method to ensure adherence with such principles, giving due consideration to development of a model law and to develop additional regulatory guidance including detailed best practices for the corporate governance of insurers.

38. Second, the Working Group was asked to review the current IAIS principles and standards related to corporate governance (adopted after the U.S. FSAP). As part of this review, it was asked to provide input and drafting to the IAIS Governance and Compliance Subcommittee, and on other IAIS papers as assigned by the parent Task Force. As a result of this work, it was anticipated that the Working Group should be able to identify future initiatives to improve our regulatory solvency system.

39. Third, and finally, the Working Group was asked to consider the development of insurance regulatory education for boards, senior management and regulators.

40. To begin the process, the Working Group reviewed existing U.S. state and federal law relating to corporate governance requirements for insurers. This project summarized the existing corporate governance laws in California, Delaware, Georgia, Illinois, Iowa, Nevada, New York and Texas. In addition, the Working Group studied Rhode Island's recent incorporation of express corporate governance proscriptions into its insurance code. The study found that existing corporate-governance laws vary significantly from state to state, set forth their requirements in reference to principles of fiduciary duty rather than as detailed or specific in relation to overseeing specific practices of the business of insurance, and do not establish specific legal duties of a board of directors toward policyholders.

41. The Working Group also performed a study of global corporate governance principles and standards such as those established by the IAIS, Australia, Canada, Switzerland and the United Kingdom. The study sought review and input from supervisors from each of these countries on the summarized principles. Working Group members noted that many of the standards and principles adopted in other countries, and included in the IAIS core principles (as updated post-FSAP), were expressly addressed within the current U.S. insurance regulatory system.

42. After reviewing existing corporate governance law in the United States as well as principles and requirements placed upon insurers in other countries, the Working Group developed a draft white paper outlining corporate governance principles for use in U.S. insurance regulation. The draft White Paper outlined principles that describe high-level standards for an insurer to follow in providing consumer protection and capital adequacy. Guidance supporting the principles was also included to provide detail regarding how an insurer can comply with a specific principle. In developing the principles and guidance in the draft White Paper, the Working Group was mindful of the recent corporate governance and risk management recommendations provided by the IMF in the FSAP. The principles and guidance developed, while not adopted as an officially sanctioned white paper, were utilized by the Working Group to determine what changes may be required to the U.S. insurance regulatory structure in order to evaluate adherence with such principles.

43. Regulators developed a summary of existing corporate governance requirements found within NAIC/insurance-specific sources and more general, broadly-based sources, to identify potential changes in the existing insurance regulatory structure that could be affected through the SMI. This summary identified existing corporate governance requirements; and standards and regulatory monitoring practices that are applied to insurance entities in the United States within the structure of *The United States Insurance Financial Solvency Framework* (adopted by the NAIC in 2010). The summary *Existing U.S. Corporate Governance Requirements* was adopted by the Working Group on December 22, 2011.

44. The Working Group then compared existing U.S. requirements and regulatory needs, best practices and the principles outlined within the IAIS ICPs. The results of this comparative analysis, along with proposed enhancements to the U.S. system resulting from this study, have been presented in a document titled, *Proposed Response to a Comparative Analysis of Existing U.S. Corporate Governance Requirements*. Adopted by the NAIC in early 2013, this document outlines the rationale of regulators in reaching policy decisions in this area. The following significant enhancements outline the policy decisions approved by the Working Group through the adoption of this document:

- Additional corporate governance disclosure requirements for insurers on an annual basis, implemented through the development of a new model law to provide confidentiality and consistency in the collection of information.
- A new requirement for large insurers to maintain an effective INTERNAL audit function (implemented through a change to Model #205).
- An accreditation proposal requiring adoption of a specific element of the existing *Model Regulation to Define Standards and Commissioner's Authority for Companies Deemed to be in a Hazardous Financial Condition* (#385), which would require

insurers deemed to be in a hazardous financial condition to correct corporate governance deficiencies to the satisfaction of the commissioner.

- The development of a common methodology to be used consistently by financial examiners and analysts across the states in assessing the corporate governance practices of insurers.
- The submission of referrals to NAIC groups charged with oversight of the company licensing, annual financial analysis and onsite examination processes to ensure that the responsibility to review key individuals for suitability is clear and consistent with international standards.

The developments in this area reflect regulators' opinion that a review of corporate governance practices is essential to effectively monitoring the financial solvency of insurers. The policy decisions reached by regulators in this area recognize differences between the U.S. system of corporate governance regulation and the systems of other countries. Therefore, these policy decisions sensibly balance regulatory needs, improving consistency with international standards, and avoiding placing unnecessary/redundant burdens on the insurance industry. The following table illustrates how the policy decisions reached by regulators relate to the recommendations received as a result of the 2009 FSAP.

FSAP Recommendation	**U.S. Policy Decision**
Develop specific suitability criteria (e.g., background, experience, etc.) for key persons responsible for governing/managing insurers.	Defining specific suitability requirements for key persons in statute could result in limiting the current process of evaluating suitability through a review of biographical affidavits and onsite interviews without providing a discernible benefit. Collection of additional corporate governance information annually will provide information on practices that insurers have put in place (i.e., suitability standards) to determine whether officers and key persons in control functions have the appropriate background, experience and integrity to fulfill their prospective roles. In addition, enhancements have been proposed to clarify the role of regulators and ensure consistency with international standards in reviewing the suitability of key individuals during the company licensing, financial analysis and financial examination processes.
Develop ongoing requirements for insurers to notify regulators regarding changes in the suitability status of key persons.	Insurers will be required to report any changes in an officer's or key person's suitability status as outlined by the organization's internal standards.
Develop additional requirements and/or guidance for insurers related to good corporate governance practices.	The project to develop a common methodology to assess the corporate governance practices of insurers will result in the development of additional guidance relating to good and bad corporate governance practices.

FSAP Recommendation	U.S. Policy Decision
Develop requirements for insurers in maintaining an internal audit function.	Large insurers to maintain an effective internal audit function.
Develop explicit requirements for insurers in maintaining risk management systems capable of identifying, measuring, assessing, reporting and controlling risks.	Insurers must maintain a risk management framework to assist in identifying, assessing, monitoring, managing and reporting on material and relevant added to the *Risk Management and Own Risk and Solvency Assessment Model Act* (#505).

Looking Forward

45. The Working Group recommendations have been distributed to the various NAIC groups responsible for the respective subject areas of those recommendations for further consideration and implementation. The responsibility to draft and develop model laws requiring annual submission of corporate governance information and the maintenance of an effective internal audit function will be fulfilled by the Working Group, after receiving the approval of the Executive (EX) Committee. It is expected that both models will be developed and adopted by the end of 2013, with implementation of all enhancements to occur over the next couple of years.

Risk Management

46. Regulators currently perform certain elements of risk management evaluation in the enhanced risk-focused surveillance process, which includes an assessment of risk and the insurer's ability to manage or mitigate risks. To formalize regulatory considerations in this area, regulators drafted a consultation paper to discuss risk management reporting and quantification requirements in light of the global development of risk management supervisory tools that incorporate periodic risk reporting, stress tests, and provide a group capital and prospective solvency assessment.

47. Ultimately the NAIC agreed to adopt the international approach to implement an Own Risk and Solvency Assessment (ORSA). In September 2012, the NAIC adopted the newly created *Risk Management and Own Risk and Solvency Assessment Model Act* (#505), which provides a statutory basis for requiring a risk management framework and the filing of an ORSA summary report. More specifically, it requires insurers above a certain premium threshold to follow the *NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual* when developing the reports that are required in the model. The model includes three primary requirements: 1) maintain a risk-management framework; 2) regularly conduct an ORSA; and 3) submit to the lead state commissioner an ORSA Summary Report.

Looking Forward

48. The NAIC has conducted one ORSA pilot project and will perform another to increase the effectiveness of the ORSA reports that would be required beginning in 2015. The first pilot occurred in July 2012, and resulted in 1) general feedback to the industry;

2) specific input to individual insurance groups; 3) small changes to the ORSA guidance manual; and 4) initial opinions from regulators regarding the positive impact that ORSA reports will have on group supervision by U.S. regulators.

49. Regulators are also interested in working with chief risk officers of some of the largest insurers in the U.S. to increase ORSA effectiveness at the initial implementation in 2015. Chief risk officer input will help regulators to develop regulatory guidance to be used by all companies performing ORSA and may help prepare regulators to use ORSAs in regulatory practice.

50. The NAIC is currently in the process of establishing the regulator guidance for reviewing the ORSA summary reports that will be required effective January 1, 2015. The guidance is expected to be focused on using the information to increase the analyst's ability to assess the liquidity, leverage, profitability and overall financial condition and capital of the insurance group. The guidance is also expected to set forth a process in which the examiner could review the processes used by the group in establishing its assumptions and techniques that were utilized in developing the summary report. This process of reviewing assumptions and techniques is deemed to a function that must be completed during an on-site review, where the regulator is able to understand and gauge through various auditing techniques the rigor and reasonableness of the group's enterprise risk management in developing the ORSA Summary Report.

REINSURANCE

Background

51. Reinsurers licensed in the U.S. are directly regulated through financial regulation (similar to direct financial regulation for primary insurers). For market regulation, reinsurers are comparatively less impacted than primary insurers, largely because of differences in consumer knowledge. Reinsurers and insurers (the consumer for reinsurance) have relative equality in negotiating leverage and extensive knowledge of the product. Thus, market regulation is not as extensive as it is in the primary market where consumers have less leverage and knowledge of the product.

52. In addition to direct financial regulation of licensed reinsurers, the U.S. uses an indirect approach to reinsurance financial supervision through statutory accounting requirements for U.S. primary companies (or "ceding" companies) transferring business via reinsurance. Generally, these accounting requirements allow credit for reinsurance on the balance sheet to the extent the reinsurance is deemed collectable. For example, reduced or no credit is given to the extent reinsurance payments are overly delayed.

53. This accounting credit has historically been given for use of reinsurers who are licensed in the U.S. and for reinsurers who are not licensed in the U.S. (called "unauthorized reinsurers") but have posted collateral in the U.S. (as security for their reinsurance obligations to U.S. ceding insurers). This system of credit for reinsurance has allowed U.S. regulators to avoid the need to assess the wide variety of regulatory systems in the reinsurers' home countries and reconcile their accounting and oversight frameworks to their U.S. equivalents. Since there are a variety of systems of regulation and accounting around the world, the differences between them and the U.S. have been considered less material due to the requirement that the reinsurance obligations of unauthorized

reinsurers must be 100% collateralized in order for the ceding company to take balance sheet and income statement credit.

54. The collateral requirements for reinsurers licensed outside of the U.S. have been a frequent subject of debate over the past decade at the NAIC. Numerous non-U.S. reinsurers, as well as non-U.S. regulators, have called for elimination of the collateral requirement for reinsurers licensed in well-regulated jurisdictions.

55. In 2007, in light of the evolving international marketplace, the NAIC determined that the timing was appropriate to consider whether a different type of regulatory framework for reinsurance in the U.S. was warranted. The Reinsurance Regulatory Modernization Framework proposal (Reinsurance Framework) was a conceptual framework that was developed by the Reinsurance (E) Task Force during 2007 and 2008 in response to its charges to consider the current collateralization requirements regarding unauthorized reinsurers, and to consider the design of a revised U.S. reinsurance regulatory framework. The Reinsurance Framework was intended to facilitate cross-border reinsurance transactions and enhance competition within the U.S. market, while ensuring that U.S. insurers and policyholders are adequately protected against the risk of insolvency. The NAIC adopted the Framework during its 2008 Winter National Meeting.

56. The Reinsurance Framework recommended implementation through federal legislation in order to best preserve and improve state-based regulation of reinsurance, ensure timely and uniform implementation of this legislation throughout all NAIC-member jurisdictions, and as a more comprehensive alternative to related federal legislation. The Reinsurance (E) Task Force developed proposed federal legislation, the Reinsurance Regulatory Modernization Act of 2009 in an effort to implement the Reinsurance Framework. At that time, Congress was focused on developing financial regulatory reforms within the Dodd-Frank Act. While the Dodd-Frank Act did contain certain provisions that impact reinsurance regulation, the NAIC's proposed federal legislation was not included.

57. On July 21, 2010, the Dodd-Frank Act became law, which included enactment of the federal Nonadmitted and Reinsurance Reform Act (NRRA). The NRRA prohibits a state from denying credit for reinsurance if the domiciliary state of the ceding insurer recognizes such credit and is an NAIC-accredited state. The NRRA preempts the extraterritorial application of credit for reinsurance laws by states and other than the ceding insurer's domiciliary state, and would permit states to proceed with reinsurance collateral reforms on an individual basis if they are accredited. The NRRA also defers to the reinsurer's domiciliary state sole responsibility for regulating the reinsurer's financial solvency.

58. The Dodd-Frank Act also created the Federal Insurance Office (FIO) to establish insurance expertise at the federal level. The Dodd-Frank Act also authorizes the secretary of the U.S. Treasury Department and the U.S. Trade Representative jointly to negotiate and enter into bilateral or multilateral agreements regarding prudential matters with respect to the business of insurance or reinsurance. The FIO will assist the Treasury secretary with those responsibilities It is important that the FIO and state insurance regulators communicate and coordinate in order to preserve the critical link between state-based solvency regulation and the impact that reinsurance has on U.S. insurer solvency.

Regulatory Action

59. In December 2010, the Reinsurance (E) Task Force was charged to consider amendments to the *Credit for Reinsurance Model Law* (#785) and *Credit for Reinsurance Model Regulation* (#786) to incorporate key elements of the Reinsurance Framework. In November 2011, the NAIC adopted revisions to these models that serve to reduce reinsurance collateral requirements for reinsurers meeting certain criteria for financial strength and business practices that are licensed and domiciled in qualified jurisdictions.

60. Other key elements of the revisions include:

- The revised models establish a certification process for reinsurers – a certified reinsurer is eligible for collateral reduction with respect to contracts entered into or renewed subsequent to certification.

- Each state will have the authority to certify reinsurers, or a commissioner has the authority to recognize the certification issued by another NAIC-accredited state. This eliminates the need for a reinsurer to be evaluated by each and every state, but preserves a commissioner's right to do so.

- Reinsurers are subject to certain criteria in order to be eligible for certification, as well as ongoing requirements in order to maintain certification. Examples of evaluation criteria include, but are not limited to, financial strength, timely claims payment history, and the requirement that a reinsurer be domiciled and licensed in a "qualified jurisdiction."

- Each state may evaluate a non-U.S. jurisdiction in order to determine if it is a "qualified jurisdiction." A list of qualified jurisdictions will be published through the NAIC committee process. A state must consider this list in its determination of qualified jurisdictions, and if the state approves a jurisdiction not on this list, the state must thoroughly document the justifications for approving this jurisdiction in accordance with the standards for approving qualified jurisdictions contained in the model regulation.

- A certified reinsurer will be eligible for collateral reduction with respect to contracts entered into or renewed subsequent to certification. A state will evaluate a reinsurer that applies for certification, and will assign a rating based on the evaluation. A certified reinsurer will be required to post collateral in an amount that corresponds with its assigned rating (0%, 10%, 20%, 50%, 75% or 100%), in order for a U.S. ceding insurer to be allowed full credit for the reinsurance ceded.

61. To assist the states in implementing the revised models, during 2012 the Task Force worked to put into place certain elements with respect to: 1) accreditation standards; 2) the review and approval of qualified jurisdictions; and 3) the creation of a new NAIC group to provide advisory support and assistance to the states in the review of reinsurance collateral reduction applications.

62. In April 2013 the NAIC adopted revisions to the accreditation standard for reinsurance ceded reflecting key elements from the revised Model #785 and Model #786. The revised standard was considered and adopted on an expedited basis and became effective immediately. The provisions within the accreditation standard pertaining to certified reinsurers do not require adoption by every NAIC jurisdiction; rather, these provisions are considered an optional standard (i.e., a state is not required to adopt the revisions to the credit for reinsurance models, but if it chooses to reduce reinsurance collateral requirements the state law must be substantially similar to the key elements of these revisions). The Reinsurance Task Force will consider developing revised standards for Part B: Practices and Procedures during 2013 for recommendation to the Financial Regulation Standards and Accreditation (F) Committee.

Looking Forward

63. Under revised reinsurance law and regulation based on the revised NAIC models, a state will need to designate which non-US supervisory jurisdictions are "qualified jurisdictions." Through the NAIC process, regulators will develop and maintain an NAIC list of recommended qualified jurisdictions. Each state will then consider this list, justifying approval of any additional jurisdiction not listed.

64. To arrive at the NAIC list of qualified jurisdictions, the Task Force is developing a process to 1) review non-U.S. jurisdictions, including consideration of budgetary and resource requirements; 2) determine which jurisdictions will be reviewed initially; and 3) develop an implementation timeline. The process, considering relevant international guidance for recognition of reinsurance supervision, will be an outcomes-based comparison to financial solvency regulation under the NAIC Financial Regulation Standards and Accreditation Program and will include evaluation of adherence to international supervisory standards. The plan is to implement the *NAIC Process for Developing and Maintaining the List of Qualified Jurisdictions* in 2013.

65. The states will also need to assign ratings or collateral requirements for individual reinsurers. The NAIC, through the Reinsurance Financial Analysis (E) Working Group (Reinsurance-FAWG), will provide advisory support and assistance to states in the review of reinsurance collateral reduction applications, aiming to strengthen state regulation and prevent regulatory arbitrage. In 2013 the Task Force adopted the *Reinsurance-FAWG Procedures Manual*, describing processes to facilitate communication of relevant information between the states with respect to individual reinsurers or reinsurance-related issues and multi-state certification recognition.

66. As of May 2013, 13 states have adopted reduced reinsurance collateral provisions. Of those 13 states (California, Connecticut, Delaware, Florida, Georgia, Indiana, Iowa, Louisiana, Maryland, New Jersey, New York, Pennsylvania and Virginia), only Florida, New York and Connecticut have approved any reinsurers for collateral reduction. Insurers domiciled in the 13 states wrote approximately 50% of the direct premium in the U.S. in 2011, so adoption in these 13 states represents a significant portion of the U.S. market. Several additional states have indicated they plan to adopt the revised models, with many planning to do so in 2013.

67. Credit for reinsurance requirements (including collateral) within the U.S. and European Union (EU) insurance supervisory systems continue to be the subject of discussion within the ongoing U.S./EU Dialogue. This NAIC will continue to participate in this dialogue.

68. The NAIC has committed to do the following: 1) undertake a re-examination of the collateral amounts within two years from the effective date of the revisions to the models (e.g., Nov. 6, 2013); and 2) revisit the issue of state uniformity in the adoption of the models within three years of the adoption of the new accreditation standard by the NAIC (e.g., April 9, 2016).

GROUP SUPERVISION

Background

69. U.S. state insurance holding company system[2] supervision (group supervision) is largely built on an indirect approach to supervision, meaning the regulators have influence and power at the legal entity insurer that can result in action taken by the group. Given the powers include required prior approval of material transactions, the power is significant.

70. In the U.S., group supervision and oversight is conducted by state insurance regulators primarily through licensed insurance legal entities resulting from the implementation and execution of uniform insurance holding company laws and regulations. The U.S. indirect approach provides:

    a. Unrestricted access to any information in possession of the insurer, the parent or other any other entity within the holding company system including non-regulated entities.

    b. Financial statements of the entire holding company system, which would include all affiliates.

    c. Fit and proper requirements.

    d. Rights of inspection (examination).

    e. Approval and intervention powers for certain transactions and events involving insurers.

    The state insurance departments must be informed or approve material affiliated transactions associated with investment purchases, reinsurance agreements, management and cost sharing agreements, tax allocation agreements, certain guarantees, intercompany investments, and requests for extra-ordinary dividends and any other material transactions that may adversely affect policyholder interests. All applicable contracts/agreements permitting such transactions must be submitted for regulatory approval to avoid the possibility of management inappropriately moving cash out of the regulated entity.

[2] A holding company system consists of two or more affiliated persons, one or more of which is an insurer. Of the roughly 7,800 insurance legal entities regulated by states, 78% of these are within a holding company system in 2011.

71. Group supervision in the U.S. has been called a "windows and walls" approach. "Walls," via prior approval of significant transactions, are built between insurers and other legal entities operating within a group, and "windows" allow unrestricted access to any information in possession of the insurer, the parent or any other entity within the holding company system. However, U.S. regulators believe that its group supervision approach goes beyond that label because the state regulator has the ability to influence the affairs of groups.

72. This approach to group supervision is influenced by the existing U.S. legal infrastructure, including but not limited to corporate law, insurance law, case/tort law with regard to legal liability (e.g., class action lawsuits) and receivership and bankruptcy laws. A good example to illustrate how the U.S. legal environment impacts group supervision can be seen by the emphasis placed on the ability to place "walls," or ring-fence, insurance legal entities and their related assets. Consider the following legalities:

    a. The U.S. receivership and bankruptcy proceedings allow for the separation of legal liability among the legal entities of a holding company system.

    b. Holding company structures are permitted to include U.S. based insurers in many different forms with few restrictions.

    c. These holding company systems may include unregulated entities, as well as regulated entities (including financial services entities), within the same holding company structure.

    d. The existing state insurance holding company laws do not differentiate between a group that is local in nature and one that is internationally active.

    By considering the above, one can draw legal conclusions to reinforce why ring-fencing has become an important regulatory tool to safeguard policyholders and other claimants. However, the use of ring-fencing exists not only to protect the policyholders of a given jurisdiction, but also to protect other entities within the group. Ring-fencing is an important part of the supervision of legal entities that is designed to limit risk within each entity. But the U.S. approach to group regulation requires all supervisors to communicate any concerns up to the lead state in order to have a bottom-up view of the group, using the various ring-fencing tools and techniques that exist within the regulatory structure. However, the U.S. approach to group regulation also utilizes a top-down view, where the lead state is responsible for reviewing the financial statements of the entire holding company system, and assessing the overall financial condition of the group, including assessing the risks from non-regulated entities along with an understanding of the group's enterprise risk management and corporate governance process. This collective use of the bottom-up view and the top-down view allow the states to determine where the risks of the group are derived from and how best to deal with those risks. Such an approach is necessary with any group because the stability of all entities within the group have a bearing on each other.

U.S. Group Supervisory Framework

73. All states and the District of Columbia have adopted substantially similar language found within the NAIC *Insurance Holding Company System Regulatory Act (#440)* and its related *Insurance Holding Company System Model Regulation* (#450). (These models are required by the NAIC Financial Regulation Standards and Accreditation Program.)

74. The supervision of the holding company system is routinely applied using the following mechanisms: reporting requirements, licensing oversight, financial analysis and financial examination review procedures.

Supervision Mechanism – Reporting

75. The state laws require annual filings regarding the holding company system which detail intercompany contract terms, relationships, biographical and other data for officers and directors of the ultimate parent and other financial information. Additional holding company financial information is required through other statutory filings such as the NAIC financial annual statement, where holding company information such as disclosure of affiliated transactions and a detailed organizational chart (Schedule Y) are included. Overall, the holding company system financial information requests can also be ad hoc by state insurance regulators, as the Holding Company Act provides access to books and records of the holding company system and affiliates.

Supervision Mechanism – Financial Analysis

76. The *Framework for Insurance Holding Company Analysis* was incorporated into the *Financial Analysis Handbook* to assist analysts with performing routine analysis on holding companies. The *Financial Analysis Handbook* contains an Analyst Reference Guide and Supplemental Procedures, including Form A, Form B, Form D, Form E and Extraordinary Dividend/Distribution procedures, as follows:

    a. Holding Company Analysis Level One and Level Two Procedures

    b. Form A—Statement of Acquisition of Control of or Merger with a Domestic Insurer

    c. Form B—Insurance Holding Company System Annual Registration Statement

    d. Form D—Prior Notice of a Transaction

    e. Form E (or Other Required Information)—Pre-Acquisition Notification Form Regarding the Potential Competitive Impact of a Proposed Merger or Acquisition by a Non-Domiciliary Insurer Doing Business in This State or by a Domestic Insurer

    f. Form F—Enterprise Risk Report

    g. Extraordinary Dividend/Distribution

77. As Form A, Form D, Form E and Extraordinary Dividend/Distribution are transaction-specific, the occurrence frequency of these transactions may vary. The NAIC Financial Regulation Standards and Accreditation Program requires that the state insurance department adequately and timely analyze these transaction specific filings and Form B. The depth and frequency of the analysis performed each year is based on the complexity and financial strength of the holding company system.

78. When there are two or more U.S. domestic insurers within a group, the applicable "lead state" will coordinate with other domestic supervisors within a group regarding the analysis procedures.

79. The *Model Regulation to Define Standards and Commissioner's Authority for Companies Deemed to be in a Hazardous Financial Condition* (#385), in part, provides an additional tool by which an Insurance Department may render the continuance of an insurers business hazardous to the public or policyholders.

80. The Financial Analysis (E) Working Group provides an additional layer of surveillance for insurance groups overall, supplementing individual state insurance departments' solvency monitoring by performing quarterly analysis on nationally significant groups that exhibit characteristics of trending toward or being financially troubled. The Working Group then works with domiciliary regulators and the lead state to advise the most appropriate regulatory strategies, methods and actions.

Supervision Mechanism – Examination

81. When multiple insurance legal entities are within the same group, the states may also engage in group examinations to maximize resources and create efficiencies. Examination work papers are typically shared real-time via a server and common software, which could result in a more timely update of insurer and group risk profiles under the NAIC's risk-focused solvency surveillance system.

Looking Forward

82. Key fundamental considerations continue to drive the discussion of the most appropriate enhancements to group supervision, especially as the NAIC works with international supervisors to develop a common framework for the supervision of internationally active insurers. Considerations include the depth of the overall regulatory framework in the U.S.; the legal framework for regulatory action; the protection of policyholders at the entity level; and the absence of a clear path to the flow ("fungibility") of capital in bad times (i.e., solvency concerns) between entities regulated by different jurisdictions and operating under different laws.

83. Essentially, the NAIC is considering incorporating certain prudential benefits of group supervision, providing clearer "windows" into the risks and overall financial strength embedded in group operations, while building upon the existing "walls" that provide the highest level of availability of capital resources and, therefore, policyholder protection. Some examples of areas receiving enhancements include enterprise risk, group capital assessment and supervisory colleges.

Group Capital Assessment

84. As one of the ways to provide clearer "windows" into the risks and overall financial strength embedded in group operations, U.S. regulators will require a group capital assessment as part of the Own Risk and Solvency Assessment (ORSA). The assessment does not establish a group capital requirement in the same sense as the legal-entity RBC requirement. However, the group capital assessment, in combination with the entity-centric legal framework for regulatory action, regulatory restrictions on the movement (fungibility) of capital, strong communication and cooperation between regulators, and other regulatory tools and safeguards, should allow earlier detection of potential financial and reputational contagion on insurance entities within the group or to the group as a whole.

Increased Participation in Supervisory Colleges

85. The U.S. state insurance regulators welcome the concept of supervisory colleges[3] as a useful platform to improve supervisory cooperation and coordination between international regulators to discuss insurance companies operating internationally. State insurance regulators both participate in and convene supervisory colleges. U.S. insurance regulators understand and embrace supervisory colleges; the states have been conducting a similar process for U.S. insurance legal entities within the same holding company system. The NAIC refers to this process as the "lead state" approach for insurance groups. U.S. insurance regulators have adopted best practices, which are incorporated into the *Financial Analysis Handbook*, and actively encourage and monitor participation in supervisory colleges.

86. U.S. insurance regulators currently host or will host supervisory colleges for the top U.S.-based groups that are considered internationally active insurance groups (IAIGs). Regulators have developed written best practices utilizing, but building upon, IAIS Insurance Core Principle (ICP) 25: Supervisory Cooperation and Coordination, which deals with supervisory colleges. Additionally, U.S. insurance regulators have begun to hold meetings to discuss and develop additional best practices, all with the intent of increasing the effectiveness of such meetings.

[3] Supervisory colleges are coordination mechanisms between international supervisors intended to foster cooperation, promote common understanding, and facilitate a communication and information exchange regarding insurance companies operating internationally.

CAPITAL REQUIREMENTS

87. Risk-based capital (RBC) is one of the methods used to monitor the capital adequacy of insurers. The RBC calculation is a standardized approach to measuring a minimum amount of regulatory capital required for an individual insurance company in consideration of its size and risk profile.

88. The RBC calculations are documented in the NAIC RBC manuals by business type (i.e., life, health and property/casualty). The RBC formulas in each manual are agreed upon by regulators and are referenced in the states' laws. Utilizing this approach, the RBC manuals can be updated and revised without requiring a change to state laws.

89. The RBC formula is a factor-based approach, but should be distinguished from simplistic methodologies that are often called factor approaches. The RBC is a detailed calculation performed on a risk-by-risk basis using company-specific data. Modeling, with regulatory-defined parameters, is used for some risks where factor approaches are not deemed sufficient.

Background

90. RBC work began in the early 1990s to address the limitations inherent in existing simplistic minimum capital and surplus requirements (e.g., a fixed-dollar amount, such as $1 million). These requirements did not reflect differences that exist from one company to another, differences such as: the riskiness of one line of business (e.g., auto insurance) compared to another (e.g., workers' compensation insurance), the amount of premium volume, the riskiness of the investment portfolio, and many others. RBC was developed as a capital adequacy standard that considers the risks and characteristics of the specific insurer.

91. RBC law defines the levels of company and regulatory action from least severe to most severe: company action, regulatory action, authorized control and mandatory control. With the extent of regulatory action commonly defined in state laws, a benefit of the RBC is that state insurance regulators can rely on the company's home (domestic) state for action, and regulators can take quicker action when they are specifically required by statute to take control of an insurer. However, lack of an RBC action level result does not preclude regulators from taking financial regulatory action on other grounds.

92. The RBC ratio is the total adjusted capital (TAC) divided by the authorized control level (ACL). The ACL results from a series of RBC calculations of risk exposure multiplied by risk factors, grouped by major risk category, and adjusted for independence of risk (by risk category or subcategory). An RBC ratio of 200% or more (when specific financial attributes of a company are not trending negatively[4]) does not trigger RBC action. RBC triggers include less than 200% at company action level; less than 150% at regulatory action level; less than 100% at authorized regulatory control; and less than 70% at mandatory regulatory control.

[4] Trend tests can result in a company action level trigger when the RBC ratio is less than 300%.

Looking Forward

93. The RBC formula is an effective tool to measure weakly capitalized companies and to require company and regulator action with limited court challenge. RBC will continue to be a final backstop in the financial regulatory oversight process. Supplementing the RBC, financial oversight will provide the analysis of the company's ability to be a going concern.

RBC Formula or Internal Model:

94. RBC was designed to utilize verifiable data for reliability and ease of verification. RBC is a standardized formula, varying by primary line of business (e.g., life, property/casualty, health), typically utilizing data disclosed in the insurer's statutory financial statement.[5] Benefits of using this data include the use of audited data (because the annual financial statement filing requires an audit by an independent certified public accountant (CPA) every year), the reserves being opined on by qualified actuaries, and some data being checked by state insurance regulators during their on-site examinations for each domiciliary U.S. insurer. Thus, the RBC formula utilizes a significant amount of standardized data that is subjected to accuracy and completeness checks. This was a conscious decision by the U.S. state insurance regulators, as they wanted the RBC results to be reliable and easily verified.

95. However, in some instances where a factor-based method was not considered to adequately capture the risk, regulators introduced modeling approaches to replace or supplement a factor-based approach for the particular risk or risks. The life RBC formula has already been updated to include some stochastic modeling in the RBC charge calculation for certain annuity products ("C-3 Phase 2 – interest rate and market risk – for variable annuity guarantees), and more work is under way to expand the use of models to other life insurance products as appropriate and to catastrophe risk for property/casualty RBC.

96. Regulators have concerns with a system that fully replaces a formula-based method with a company's internal model because of higher cost, less comparability of results, possible misuse and introduction of the potential for competitive advantages. SMI regulators believe the use of internal models and the regulatory approval necessary to use a model as a replacement for the standardized model does not currently add enough benefits to outweigh the costs. However, within other components of the financial regulatory system, regulators are considering the use of models.

RBC Measurement: Missing Risks

97. RBC is not the only safety mechanism for unexpected changes in valuation or unexpected losses. The underlying statutory accounting is performed on a conservative basis, which provides for some safety in the valuation before those values even enter into the RBC formula.

[5] The statutory financial statement is a uniform template adopted by the NAIC, known as the NAIC "blank," and used by all insurers of a similar business type. The blank is filed with the NAIC and the state insurance regulator. The insurers are also subject to a codified body of statutory accounting guidance that serves as the baseline requirement for all U.S. regulated insurers, and this includes uniform definitions of asset and investment types. By statute, the NAIC blank requires a significant amount of data and information from the insurers for the statutory annual statement.

98. The RBC then aims to capture each material risk for each particular insurance type. Some of the major general risk categories in the RBC formula include asset risk, insurance/underwriting risk, credit risk, interest rate risk and business risk. Some risks may not have been included in the RBC formulas (e.g., currency risk) because they were not considered to be significant or were difficult to quantify or not quantifiable. Focus on RBC in the SMI has been about ensuring the formulas are capturing all material risks. Going forward, state insurance regulators are developing an explicit catastrophe risk charge for inclusion in the property/casualty RBC formula (with adjustments to related charges that are currently embedded in other risk calculations) and are considering a pandemic charge in the health RBC formula (and removing the current charges out of other risk calculations). The NAIC is also reviewing the credit risk calculation to improve its accuracy. At present, the NAIC is reviewing the asset risk factors, classes of investments and asset quality designations based on historical default experience.

99. Operational risk is not explicitly identified in the RBC calculation, but is, arguably, partially included in certain existing risk charges, as well as in conservatism included in the accounting rules. Nonetheless, efforts are under way to develop a specific operational risk charge in the RBC formula, with initial consideration of factor-based methods (as used in other jurisdictions), which could eventually be augmented or replaced by an approach that incorporates qualitative elements or adjustments. Some advocate for formulas similar to how it is in other regulatory jurisdictions with growth charges and some proxy (such as a percentage of premium and/or losses), and others would like to study more qualitative aspects of operational risk.

RBC Correlation

100. Risk charges are currently combined within a square root formula, under the assumption that particular risks are either fully correlated or fully uncorrelated. Some international methodologies are developed to apply risk correlation matrices in their capital requirement calculations. The American Academy of Actuaries provided some research on the correlation methodologies used by some regulatory jurisdictions. At present, it can be argued that significant judgment is needed to populate risk correlation matrices, regulators are investigating the application of some intermediate step-wise correlations between the two extremes of 0 or 100 (perhaps 0/25/50/75/100) as a potential improvement over the current RBC square root formula.

101. Additional elements in the RBC formula also address concentrations, correlations and diversification. Examples include the invested asset concentration risk sections of the formulas and the property/casualty business line diversification adjustment.

RBC Safety Level and Time Horizon

102. Internationally, there has been significant discussion about the appropriate statistical safety level and time horizon for capital requirements. At present, the best practice seems to be implementation of a safety level for those risks where credible loss distributions are available and the use of judgment otherwise. Thus, no overall formula determination of statistical safety is sufficiently credible at present (even though some jurisdictions have stated an aim). The U.S. has, therefore, preferred an approach of calibrating the individual formula risk components and then utilizing financial analysis and market knowledge to verify that the overall capital is appropriate, utilizing financial analysis and market knowledge. We believe this is consistent with practice in other jurisdictions.

103. In the past in the U.S., time horizons have often been selected for individual risks where data was available. The time horizons selected vary by risk. According to the American Academy of Actuaries, the time horizon for individual factors in the life insurance RBC has been consistent with the time period where risks could cause rapid deterioration in statutory solvency. For example, bonds were modeled over 10 years, the industry average time-to-maturity and mortgages were modeled to their maturity, with a portfolio average time to maturity of seven years.[6] Going forward, regulators expect to recommend that every evaluation of formula factors for individual risks that is grounded in credible historical data be supported, where possible, by an underlying safety level and time horizon. The rationale for choice of the specific statistical parameters must be clearly documented and include reasoning for application of additional regulatory judgment. Where there is not a credible base of data to draw from, the rationale for regulator choice of a risk factor must be clear and transparent.

Timing

104. Just as has occurred since the RBC formulas were originally adopted, changes to improve the RBC formulas will be considered over time in order to enhance regulatory oversight of statutory solvency and to ensure that trigger levels for regulatory action are set appropriately.

EY

FOREWORD

EY was retained by the Casualty Actuarial Society (CAS) to write a new text on financial reporting and taxation as it affects reserving and statutory reporting for use in the CAS basic education process. The CAS had two key objectives for this text:

1. Replace a number of readings that existed on the CAS *Syllabus of Basic Education* as of 2011 with a single educational publication.
2. Refine the content of the syllabus material to focus on financial accounting and taxation topics that are of particular relevance to the property/casualty actuary.

The CAS specified that the new text would focus on the learning objectives contained within the syllabus as of 2011.

This publication has been prepared from an actuary's lens, highlighting those areas of financial reporting and taxation deemed to be relevant by the CAS Syllabus Committee and the authors of this text. The learning objectives contained within the 2011 syllabus provided the underlying direction of the content contained herein. The Exam 6 learning objectives and examination material may change over time, and thus, the content of this publication may need to be updated.

This text does not represent the position of EY or the authors with respect to interpretations of accounting or tax guidance. Nor is this text intended to be a substitute for authoritative accounting guidance issued by the National Association of Insurance Commissioners (NAIC), American Institute of Certified Public Accountants (AICPA), Financial Accounting Standards Board (FASB), Governmental Accounting Standards Board (GASB), Securities and Exchange Commission (SEC), Internal Revenue Service (IRS), Canadian Institute of Chartered Accountants (CICA), or any other regulatory body. Authoritative guidance from regulatory bodies trumps the writings contained herein. Furthermore, accounting standards are continuously evolving. As a result, readers of this text should be aware that the accounting standards referenced in this publication may have changed since the time of writing. The CAS may request that this publication be updated to reflect such changes.

While the authors of this publication have taken reasonable measures to verify references, content and calculations, it is possible that we may have inadvertently missed something. We would appreciate being informed of any inaccuracies so an errata sheet(s) may be issued and/or future editions of this publication may be corrected.

ACKNOWLEDGEMENTS

The authors of this publication would like to thank the CAS Syllabus Committee for its review of this publication and feedback provided. Special thanks goes to Sarah McNair-Grove, Laura Cali, George Levine and Michel Trudeau who reviewed the various drafts, and Wendy Germani who spent countless hours creating and editing the Annual Statement excerpts for Fictitious Insurance Company. The amount of personal time spent by these individuals demonstrates their tremendous dedication to the actuarial profession.

The authors would also like to acknowledge those individuals within EY who assisted us by creating certain content, tables and exhibits and performing editorial reviews. These individuals include John Dawson, Aleksandra Orlova, Cosimo Pantaleo, Doru Pantea, Anita Park, Kishen Patel, Yan Ren, Christopher Scudellari, Heidi Sullivan and Jay Votta. Particular credit goes to Adam Walter, who created the Risk-Based Capital calculations for Fictitious Insurance Company.

We would also like to thank Dave Heppen, member of the American Academy of Actuaries Committee on Property and Liability Financial Reporting, for reviewing the sections on the Statement of Actuarial Opinion and Actuarial Opinion Summary.

Finally, the authors of this text would like to express their deep gratitude to the actuarial professionals who have invested their time writing publications for the CAS examination process. Although this publication will serve as a consolidation of many of the papers formerly on the Exam 6 Syllabus, we acknowledge the significant contributions that those papers have made in advancing the actuarial profession, as well as the knowledge of the authors of the text.

In preparing *Financial Reporting through the Lens of a Property/Casualty Actuary*, we relied extensively on the following publications and resources:

PART I. INTRODUCTION

CHAPTER 1. FINANCIAL REPORTING IN THE PROPERTY/CASUALTY INSURANCE INDUSTRY

IMPORTANCE AND OBJECTIVES OF FINANCIAL REPORTING

Financial reporting serves as a means to communicate a company's financial results and health. Financial reporting is accomplished through a series of financial statements that consolidate a company's transactions and events into a summarized form under specified accounting rules. The purpose of these rules is to provide companies with a framework for measuring and recording transactions and the related revenue, expenses, assets and liabilities on a consistent basis.

Financial reports enable stakeholders and regulators to track financial performance, compare a company's performance to others and make informed financial decisions under a set of common rules. The stakeholders of an insurance company include policyholders, claimants, investors, directors of the board and company management. The regulators primarily include state governmental authorities, as we shall see below.

OVERVIEW OF THE BASES OF FINANCIAL REPORTING (STATUTORY, GAAP, IFRS, TAX, CANADIAN) AND DIFFERENCES IN TERMS OF USE

The accounting standards that govern financial reporting for insurance companies are numerous and complex. As we write this publication these standards are evolving, and this evolution is resulting in much debate among industry participants. Regardless, the intent of accounting standards is to promote a consistent framework for reporting insurance company transactions such that comparisons of financial performance and health of insurance companies can be made within the industry.

In the U.S., insurance companies are regulated by the individual state governments within which they are licensed to transact business. Within each state government there is an insurance division led by an insurance commissioner, director, superintendent or administrator (commissioner). The National Association of Insurance Commissioners (NAIC) serves as an organization of state regulators that facilitates and coordinates governance across the U.S. The NAIC itself is not a regulator; regulatory authority remains with the individual states. Therefore, model laws and regulations established by the NAIC are not law; individual states have the authority to decide whether to adopt NAIC model laws and regulations.

Statutory Accounting Principles (SAP) is a framework of "accounting principles or practices prescribed or permitted by an insurer's domiciliary state."[1] Most insurance companies are licensed to transact business in more than one state. Having to follow the accounting rules and regulations of each state in which the company is licensed can be cumbersome and result in inconsistent reporting practices. To minimize the varying complexities of different rules and facilitate commonality in reporting practices, the NAIC adopted Codification of SAP effective January 1, 2001. Codification does not prevent individual state regulation but rather provides a common set of principles that individual states can follow to ease the regulatory burden on companies and promote consistency.

Statements of Statutory Accounting Principles (SSAPs) are published by the NAIC in its *Accounting Practices and Procedures Manual*. The manual includes more than 100 SSAPs, which serve as the basis for preparing and issuing statutory financial statements for insurance companies in the U.S. in accordance with, or in the absence of, specific statutes or regulations promulgated by individual states.

From a financial reporting perspective, regulatory oversight by state governments focuses on insurance company solvency to ensure that policyholders receive the protection they are entitled to and claimants receive the applicable compensation for damages incurred. SAP and associated monitoring tools are intended to provide regulators with early warning of deterioration in an insurance company's financial condition. SAP tends to be conservative in order to provide that early warning. For example, certain illiquid assets are not admitted (excluded from the balance sheet) under SAP, despite having economic value.

Generally Accepted Accounting Principles (GAAP) provides another set of common rules under which publicly traded insurance companies and privately held companies report their financial transactions and operating results. GAAP does have certain specialized rules for insurance companies, but unlike SAP, this framework is not built on the principle of conservatism. Rather, the primary focus of GAAP is the presentation of a company's financial results in a manner that more closely aligns with the company's financial performance during the period. Historically, this has been accomplished by matching revenues and expenses. For example, under GAAP, expenses incurred by an insurance company in conjunction with successful acquisition of business are deferred to match the earning of associated premium. In contrast, under SAP, all costs associated with policy acquisition are expensed at the time they are incurred by the insurance company.

The Securities and Exchange Commission (SEC) is the authoritative body for establishing accounting and reporting standards for publicly traded companies in the U.S., including publicly traded insurance companies. As highlighted on the SEC's website, "The mission of the U.S. Securities and Exchange Commission is to protect investors, maintain fair, orderly and

[1] NAIC, *Accounting Practices and Procedures Manual,* Vol I, March 2009, page P-2.

efficient markets, and facilitate capital formation."[2] The SEC has assigned the Financial Accounting Standards Board (FASB) with the responsibility of developing and establishing GAAP, with the SEC operating in an overall monitoring role. The FASB is the private organization providing authoritative accounting guidance for nongovernmental entities.

The Governmental Accounting Standards Board (GASB) is the private organization providing authoritative accounting guidance for the public sector. According to the GASB's website, the GASB "is the independent organization that establishes and improves standards of accounting and financial reporting for U.S. state and local governments … the official source of generally accepted accounting principles (GAAP) for state and local governments."[3] Although this publication does not discuss accounting for governmental entities, we note that the accounting for such entities differs from the accounting for insurance companies. Knowledge of the GASB as it relates to insurance-related activities of governmental entities is important for the property/casualty actuary who performs actuarial services for the public sector.

The Internal Revenue Service (IRS) is the U.S. government agency responsible for enforcing tax laws and collecting taxes. Every business paying taxes in the U.S. must compute taxable income based on the tax laws passed by Congress and the related regulations issued by the IRS. For insurance companies, the starting point for taxable income is income determined under SAP. SAP income is adjusted based on the provisions of the various tax laws and regulations. While SAP is generally conservative, tax-basis accounting may be more or less conservative depending on how political and other factors affect tax legislation. While some adjustments result in a decrease to taxable income (e.g., tax-exempt income), adjustments specific to the insurance industry tend to focus on the acceleration of income for tax purposes (e.g., the discounting of loss reserves and the reduction of unearned premiums).

The Canadian Institute of Chartered Accountants is the body in Canada that defines Canadian Generally Accepted Accounting Principles (CGAAP). At one time, SAP applied to the preparation of the Annual Return for Canadian-domiciled insurers. However, this is no longer the case, and the financial statements included in the Annual Return are prepared in accordance with CGAAP.

Under CGAAP, policy liabilities can be recorded in accordance with accepted actuarial practice in Canada, which means that the recorded liabilities are discounted to reflect the time value of money and include a provision for adverse deviation.

International Financial Reporting Standards (IFRS) provide an alternative accounting framework used by many countries outside the U.S. IFRS are established by the International

[2] U.S. SEC, *The Investor's Advocate: How the SEC Protects Investors, Maintains Market Integrity, and Facilitates Capital Formation,* http://www.sec.gov/about/whatwedo.shtml, July 30, 2012.
[3] GASB, *Facts About GASB*, http://www.gasb.org/cs/BlobServer?blobcol=urldata&blobtable=MungoBlobs&blobkey=id&blobwhere=1175824006278&blobheader=application%2Fpdf, 2012.

Accounting Standards Board (IASB). There is pressure for the U.S. to replace GAAP with IFRS for purposes of creating a consistent accounting framework across the globe in response to the growth of the global economy. However, rather than a direct conversion to IFRS from U.S. GAAP, the current belief is that there will be a convergence process through joint projects of the IASB and FASB. It is expected that new standards would be developed and/or there would be an endorsement process whereby the FASB would evaluate and accept, reject or modify standards produced by the IASB.

IFRS already affect companies in the U.S. that currently have international subsidiaries or are subsidiaries of IFRS filers. At the time of the writing of this publication, IFRS 4, which pertains to the recognition and measurement of insurance contracts, permits insurance companies to report under the current accounting rules of their local country with slight modifications. An example of one such modification is requiring companies to establish premium deficiency reserves, as needed, regardless of local requirements. Given the current lack of a detailed measurement model under IFRS for insurance contracts, one of the key joint projects of the IASB and the FASB is development of a new accounting standard for insurance contracts. We will discuss the pending proposals of the IASB and FASB and how they differ from the measurement of insurance liabilities today.

CHAPTER 2. RELEVANCE OF FINANCIAL REPORTING TO THE ACTUARY

IMPORTANCE AND OBJECTIVES OF FINANCIAL REPORTING

Actuaries estimate the financial impact of insurable events. As such, actuaries need to understand the accounting rules under which the financial impact is being reported. Consider the actuary providing an estimate of an insurance company's unpaid claims for purposes of comparison to recorded loss reserves on the company's balance sheet. If the balance sheet is prepared under Statutory Accounting Principles (SAP), then the loss reserves are recorded on a net of reinsurance basis. If the company's financial statements are prepared under Generally Accepted Accounting Principles (GAAP), then the loss reserves are recorded gross of reinsurance. For comparison purposes, the actuarial estimate of unpaid claims would need to be prepared on a net basis for SAP and gross basis for GAAP. The actuary might also provide an estimate of unpaid claims ceded to the company's reinsurers, for comparison to the reinsurance recoverable amount recorded as an asset on a GAAP basis.

Actuaries providing estimates of unpaid claims on a SAP basis must also be aware of state regulations under which the company is recording its loss reserves. For example, while the National Association of Insurance Commissioners *Accounting Practices and Procedures Manual* permits companies to discount workers' compensation reserves on a tabular basis,[4] certain states have varying requirements with respect to whether and how the tabular discount is applied.[5] For instance, as of December 31, 2011, the state of Montana permitted tabular discounting but required use of a specific interest rate in the calculation (4%).[6]

To take this one step further, actuaries issuing Statements of Actuarial Opinion should include a statement within the opinion stating that the company's recorded loss and loss adjustment expense reserves "meet the requirements of the insurance laws of (state of domicile)."[7] The opining actuary is therefore required to read the state regulations and confirm that the recorded reserves meet the state laws.

The accounting convention is not only important to the reserving actuary for an insurance company, but also to actuaries who perform other jobs, including but not limited to the following:

- Working with regulators to monitor the financial health of insurance companies
- Pricing and designing insurance products, including development of profit margins

[4] According to page C-3 of the American Academy of Actuaries, *2011 Property/Casualty Loss Reserve Law Manual*, tabular reserves are defined as "indemnity reserves that are calculated using discounts determined with reference to actuarial tables that incorporate interest and contingencies such as mortality, remarriage, inflation, or recovery from disability applied to a reasonably determinable payment stream. This definition shall not include medical loss reserves or any loss adjustment expense reserves."

[5] American Academy of Actuaries, *Property/Casualty Loss Reserve Law Manual*, 2011, page A-6.

[6] Ibid., page 452.

[7] NAIC, *Annual Statement Instructions Property/Casualty,* 2011, page 12.

- Determining capital requirements to support the various risks of an insurer
- Evaluating risk transfer of reinsurance contracts
- Assessing reserve adequacy for non-insurance entities, such as organizations that self-insure or retain a portion of their property/casualty insurance exposures
- Preparing tax returns
- Appraising and valuing insurance companies in merger and acquisitions

For each of the above, the result of the work performed will differ depending on the accounting framework used, illustrating the need for actuaries in different disciplines to be knowledgeable about the various accounting and financial reporting frameworks.

CHAPTER 3. OVERVIEW OF THIS PUBLICATION

ROADMAP

This publication begins with an overview of basic accounting concepts (*Part II. Overview of Basic Accounting Concepts*) and then delves into the fundamental aspects of the statutory Annual Statement and certain supplemental filings, that provide the means for financial reporting in the U.S. under Statutory Accounting Principles (SAP) (*Part III. SAP in the U.S.: Fundamental Aspects of the Annual Statement* and *Part IV. Statutory Filings to Accompany the Annual Statement*). Measurement tools used to evaluate the financial health of a property/casualty insurance company are discussed in *Part V. Financial Health of Property/Casualty Insurance Companies in the U.S.* These tools are particularly important to regulators in monitoring solvency for the purpose of protecting the stakeholders of an insurance company. We then investigate differences between statutory reporting and other financial reporting frameworks in the U.S., namely Generally Accepted Accounting Principles, International Financial Reporting Standards and tax accounting in *Part VI. Differences from Statutory to other Financial/Regulatory Reporting Frameworks in the U.S.* We move on to Canada to provide a discussion of Canadian accounting principles (*Part VII. Canadian-Specific Reporting*). The publication closes with a discussion of the future of SAP and evolution of new accounting frameworks, differentiating between what is "real" and what is only in the discussion phase at the time of publication of this text (*Part VIII. The Future* of SAP).

ANNUAL STATEMENTS REFERENCED THROUGHOUT THE PUBLICATION

The Casualty Actuarial Society (CAS) Syllabus Committee and authors of this publication agreed that it would be helpful for students studying for the CAS exams to be able to rely as much as possible on one insurance company throughout the publication to illustrate the major concepts. For the U.S. examples, the CAS Syllabus Committee has assisted us in creating excerpts of a 2011 Annual Statement for a fictional insurance company named Fictitious Insurance Company (Fictitious). The excerpts of this statement are contained in Appendix I of this publication.

We have relied on the Annual Statement excerpts for Fictitious for the more detailed examples and calculations. We also referenced the National Association of Insurance Commissioners *2011 Property and Casualty Annual Statement Blank*, which was also included on the CAS Exam 6 U.S. Syllabus at the time this publication was written. We recommend that each of these statements be viewed side by side with this publication when reading and working through examples and following the flow of exhibits, notes, interrogatories, and schedules within the Annual Statement. We also recommend that the reader review the Annual Statement for a real company for the current year because the aforementioned statements were based on 2011.

For Canada, we have used the 2011 aggregate experience of Canadian insurers as published on the website of the Office of the Superintendent of Financial Institutions (OSFI). As with the U.S. chapters, we recommend that the student have this information by his or her side when reading the Canadian chapters of this publication.

We acknowledge that there may be differences between exhibits within an Annual Statement; such differences are due to rounding.

BACKGROUND ON FICTITIOUS INSURANCE COMPANY

The authors of this publication felt it important to provide some background information on Fictitious and describe the landscape in which Fictitious was operating during the time period covered by its Annual Statement filing (December 31, 2011). This will provide additional context for students when reading and interpreting the figures contained therein.

Fictitious is a publicly held property/casualty insurance company in the U.S. As displayed in Table 1, approximately one-third of the company's writings in 2011 were in personal lines markets, with the remainder in commercial markets. Homeowners multiple peril (homeowners) was the largest single line written in 2011 on a net of reinsurance basis (17% of net written premium), followed by workers' compensation (15% of net written premium) and other liability — occurrence (13% of net written premium). The company wrote business in all 50 states in the U.S. and was therefore exposed to natural catastrophes and weather-related events in 2011.

TABLE 1

Fictitious Insurance Company
Distribution of 2011 Written Premium (WP) by Line of Business (USD in 000s)

Line of Business	Direct WP $	Direct WP %	Net WP $	Net WP%
Personal lines				
Homeowners multiple peril	4,646	16%	4,555	17%
Private passenger auto liability	2,804	10%	2,804	10%
Private passenger auto physical damage	1,661	6%	1,665	6%

In terms of the frequency of catastrophe losses incurred by insurance companies worldwide, 2011 was an unprecedented year. Catastrophes ranged from tornadoes in the U.S. to tsunamis and flooding overseas. According to an article by *National Underwriter* in early 2012, "Underwriting losses are expected to total approximately $33.9 billion for 2011, the second consecutive year of underwriting losses and the third-largest annual underwriting loss ever behind 2001 ($56.4 billion) and 2002 ($34.3 billion)."[8] The *National Underwriter* article goes on to say, "The industry's combined ratio climbed 6.5 points to 107.5 for 2011. Catastrophe-related losses accounted for 10.1 points, compared to 4.6 points in 2010."[9]

As we shall see through examination of the company's 2011 Annual Statement, Fictitious did not escape the financial impact of the natural catastrophes in the U.S. During 2011, Fictitious experienced a net loss from underwriting of $2 million, largely due to events including wildfires in Texas, New Mexico and Arizona; tornadoes in the Midwest and Southeast; the Halloween Nor'easter; and Tropical Storm Lee and Hurricane Irene's impact on the East Coast. The company's net loss and loss adjustment expense (LAE) ratio for accident year 2011 was about 10 percentage points higher than that for accident year 2010.

[8] Gusman, P. "2011 Cats Lead to Largest U.S. P&C Underwriting Loss Since 2002," *National Underwriter PropertyCasualty 360,* February 6, 2012.
[9] Ibid.

When reading this publication and reviewing the 2011 Annual Statement for Fictitious Insurance Company, note that the U.S. insurance market, including Fictitious, continued to feel the effects of the financial crisis of 2008. Despite a soft insurance market,[10] insurance companies experienced declines in premium volume due to affordability and other economic issues.[11] They also experienced declines in investment income due to instability in the financial markets. The continued soft market conditions also contributed to the increasing loss and LAE ratio in 2011.

[10] A soft market is one where insurance prices are low and therefore insurance is cheaper for the consumer. The insurance industry tends to observe increasing loss ratios in a soft market because the consumer is paying less in premiums for the same level of insurance protection.

[11] For example, workers' compensation premium, which is determined based on a rate multiplied by payroll, declined over the period due to decreases in payroll levels as a result of the economic environment.

PART II. OVERVIEW OF BASIC ACCOUNTING CONCEPTS

INTRODUCTION TO PART II

Part II of this publication will provide a detailed discussion on the construction, use and interpretation of an insurance company's financial statements and other financial information. Before beginning that detailed discussion, we will introduce two important accounting topics: primary financial statements and key accounting concepts. Both are recurring topics throughout this publication, and a basic understanding will be helpful to students.

CHAPTER 4. PRIMARY FINANCIAL STATEMENTS

PRIMARY FINANCIAL STATEMENTS

Although there are numerous accounting frameworks, they generally rely on a few primary financial statements. Of these, the two most commonly referenced are the balance sheet and the income statement. Other primary financial statements include the statement of capital and surplus (or equity) and the statement of cash flow. The financial statements are accompanied by subsequent pages of notes, which provide additional information that helps explain balances within the financial statements.

BALANCE SHEET

The balance sheet presents all of a company's assets and liabilities as of a specific point in time. Assets are defined as resources obtained or controlled by a company as a result of past events that have a probable future economic benefit to the company. Liabilities are probable sacrifices of economic benefits arising from present obligations of a company to transfer assets or provide services to other entities in the future as a result of past events. The relationship between the assets and the liabilities of a company is important, because it is a measure of the company's ability to use its assets to fully satisfy its liabilities. The difference between assets and liabilities is generally referred to as net worth (or equity); in the case of an insurance company reporting under Statutory Accounting Principles (SAP), this difference is referred to as statutory surplus (or policyholders' surplus).

One unique aspect of insurance companies' balance sheets is the inherent uncertainty associated with the estimation of the liability for unpaid claims and claim adjustment expenses (loss reserves). While a certain amount of estimation is involved in other industries' accounting, the more significant estimates are generally with respect to asset valuation and collectibility and pale in comparison to the uncertainties involved in estimating loss reserves. Actuaries typically have an important role in valuing insurance company liabilities and are therefore critical to the accurate preparation of the balance sheet.

INCOME STATEMENT

While the balance sheet presents the financial balances of a company at a point in time, the income statement reveals a company's financial results during a specific time period. The general types of accounts that are used as a means to measure these results are revenue and expenses. Revenues are inflows or enhancements of assets or settlement of liabilities (or a combination of both) from delivering goods or services during the specific time period. Expenses are outflows or other use of assets or incurrence of liabilities (or a combination of both) from delivering or producing the goods and services that were provided during the specific time period. The difference between the amount of the revenues and expenses during the period is referred to as net income if it is positive or net loss if it is negative.

The nature of the service provided by insurance companies, which is a promise to pay claims in the future if some specific criteria are met, creates unique accounting challenges. Insurance accounting standards address how to earn the premiums insurance companies are paid and how to measure and when to record claim costs resulting from the insurance coverage. Again, actuaries usually play a significant role in the estimation of the amount and timing of these future payments and therefore are critical to the accurate preparation of the income statement. Another important source of revenue for insurance companies is investment income, which will be discussed in *Chapter 8. The Statutory Income Statement*: Income and Changes to Surplus.

CAPITAL AND SURPLUS

The statement of capital and surplus reflects certain changes in surplus that are not recorded in the income statement and reconciles the beginning surplus to the ending surplus for the reporting period. This statement is similar for insurance companies and for other types of companies; however, there are several items within the statement of capital and surplus, such as those related to nonadmitted assets and the provision for reinsurance, that are unique to insurers. These items and others will be discussed in *Chapter 7. Statutory Balance Sheet*: A Measure of Solvency and *Chapter 8. The Statutory Income Statement*: Income and Changes to Surplus.

CASH FLOW

The cash flow statement receives less attention but is also important. This financial statement is necessary because the timing of the receipt or payment of cash for a revenue or expense does not necessarily coincide with the recognition of that revenue or expense from an income statement perspective. In other words, even if the cash payment is received sometime before or sometime after the good or service is provided, the associated revenue is generally recognized at the time the good or service is provided. The cash flow statement presents all operations strictly from a cash perspective.

In other industries, companies face liquidity issues when they cannot collect revenue in cash on a timely basis, and this type of liquidity issue would be made evident by the statement of cash flows. An example of this would be a manufacturing company that sold products on credit but was not able to collect the cash on a timely basis to pay their expenses. For insurance companies, this specific type of liquidity issue is less likely to occur due to the collection of premiums at the onset of the policy and the subsequent payment of losses. This difference in the order of cash receipts and disbursements somewhat diminishes the importance of cash flow statements for insurance companies. Further, actuaries are not generally involved in or necessary for the preparation of the cash flow statement, so this financial statement is not covered in detail in this publication.

NOTES TO FINANCIAL STATEMENTS

In addition to the four primary financial statements already discussed, another important element is the notes to financial statements. The notes include quantitative and qualitative disclosures regarding the significant accounts presented in the financial statements. This includes matters that are relevant or may be relevant to the users of the financial statements. For instance, the notes will typically describe the basis of accounting used in the preparation of the financial statements, as well as any important details on specific aspects of the financial statements that are based on estimates or subject to uncertainty. We will discuss several of the footnotes to the financial statements that are of specific importance to actuaries in *Chapter 10. Notes to Financial Statements*.

CHAPTER 5. KEY ACCOUNTING CONCEPTS

Throughout each major accounting framework, there are several common key concepts. Understanding these key concepts will be beneficial to anyone who is involved in using or preparing financial statements because it will allow them to appreciate the purposes of and the differences between each framework. A few of the most important and relevant concepts are below.

- Liquidation vs. going concern: When preparing financial statements, it is possible to view the company as either an ongoing business (going concern) or as a run-off of the current assets and liabilities (liquidation). Either perspective may be appropriate depending on the user and purpose of the financial statements. For instance, investors would generally be most interested in the value of a business as a going concern, whereas regulators may think in terms of a liquidation perspective, given that they are primarily interested in satisfying policyholder obligations.

- Fair value vs. historical cost: There are often multiple possible approaches to valuing a given asset or liability. The choice of approach is of particular importance when the value of that asset or liability is uncertain. Recording an asset or liability at fair value means recording it at a value that it would be bought or sold for in the open market, while recording at historical cost means valuing it at the original purchase price less depreciation. In cases where the value of an asset or liability is uncertain, there is a trade-off between the reliability of the historical cost method (in that it is objectively verifiable) and accuracy of the fair value approach (in that it is more consistent with the actual market value).

- Principle-based vs. rule-based: Each aspect of any accounting framework is generally guided by either a principle or a rule. A principle describes a general accounting approach that must be interpreted and applied, while a rule provides specific accounting guidance on how something should be done. There is a trade-off because the rules-based guidance may be easier to understand and to audit, but a principles-based approach is generally more adaptable to changes in the business environment.

PART III. SAP IN THE U.S.: FUNDAMENTAL ASPECTS OF THE ANNUAL STATEMENT

INTRODUCTION TO PART III

In the U.S., property/casualty insurance companies report their financial results to state insurance regulators in what is called the Annual Statement. For those who have never used or seen an Annual Statement, it is an 8.5" x 14" book. The Property/Casualty Annual Statement is identified by its yellow cover, while the Life Annual Statement's cover is blue (known as the yellow book and blue book, respectively). Both types of Annual Statements are publicly available documents.

The Annual Statement is developed and maintained by the National Association of Insurance Commissioners and is often referred to as "the Blank." The Blank is the template that insurance companies use to report under Statutory Accounting Principles (SAP), and is uniformly adopted by all states. This allows insurance companies licensed in multiple states to prepare one Annual Statement for filing with all states. The Annual Statement is accompanied by NAIC instructions that are generally adopted by all states, though there are instances of specific differences and exceptions.

The first page in the Annual Statement is the Jurat page, which provides basic information about the reporting entity, such as name, NAIC code, address, name of preparer and title, and officers of the reporting entity. The notarized signatures of officers of the reporting entity are included on this page, attesting to the accuracy of the information contained therein.

Following the Jurat page are the statutory financial statements. The statutory Annual Statement contains other exhibits and schedules that provide further insight into the insurance company's statutory financial statements and historical experience. These include General Interrogatories; Five-Year Historical Data; and Schedules A, B, BA, D, DA, F, P, T and Y.

In *Part III. SAP in the U.S.: Fundamental Aspects of the Annual Statement,* we will walk through the Property/Casualty Annual Statement, beginning with the financial statements, and discuss the related accounting requirements. We provide examples to illustrate the uses of the Annual Statement and how certain amounts are calculated and compiled.

CHAPTER 6. INTRODUCTION TO STATUTORY FINANCIAL STATEMENTS

INTRODUCTION

This chapter focuses on Statutory Accounting Principles (SAP) and specifically discusses the fundamental aspects of the Annual Statement, including the financial statements themselves (the balance sheet and income statement, for example), as well as the other exhibits and filings that accompany the Annual Statement (such as various schedules, the Insurance Expense Exhibit and the Risk-Based Capital calculation). *Part V. Financial Health of Property/Casualty Insurance Companies in the U.S* will discuss how this information can be used to assess the financial health of an insurance company and *Part VI. Differences from Statutory to other Financial/Regulatory Reporting Frameworks in the U.S* will focus on differences between SAP and the other financial and relevant regulatory reporting regimes.

SAP AND THE NAIC

The National Association of Insurance Commissioners (NAIC) operates through various committees that comprise state insurance commissioners and their staff. Through these committees, the NAIC regularly updates SAP and creates model insurance laws and regulations that individual states may elect to adopt. While this generally leads to a good deal of uniformity in insurance regulation, there are still instances of differences between states. For example, individual states have the ability to permit accounting practices that differ from NAIC SAP ("permitted practices"). And, model laws and regulations are not always enacted by all states exactly as adopted by the NAIC.

It is worth noting that the NAIC may revise the Annual Statement each year, and these changes are described on the NAIC website. Some of the examples and exhibits provided in this section of the publication are based in part on the information provided in the 2011 industry Annual Statements.[12]

[12] Accessed via SNL.com by SNL Financial LC.

CHAPTER 7. STATUTORY BALANCE SHEET: A MEASURE OF SOLVENCY

As previously noted, the primary focus of statutory accounting is to highlight potential solvency issues (an insurance company's capability to meet its obligations to its policyholders and creditors). Consequently, the most important aspect of an insurance company's financial statements to an insurance regulator is the strength of its balance sheet (i.e., the extent to which its assets are sufficient to meet all liabilities).

RELEVANCE TO ACTUARIES

Solvency and the balance sheet are relevant to the actuary for two primary reasons.

First, actuaries traditionally have some responsibility for the loss and loss adjustment expense (LAE) reserves, which represent the majority of the liabilities for property/casualty insurance companies. Actuaries may either participate directly in the reserve-setting process, or they may assess the reasonableness of the reserves established by company management. Actuaries involved in either of these functions are focused on the liabilities for losses and LAE on the Liabilities, Surplus and Other Funds page of the Annual Statement (page 3).

Second, actuaries often have a role in determining or assessing the amount of capital that an insurance company requires to support the risks that it has taken through its business operations. In the context of statutory accounting, this would be based on an actuary's understanding of the Risk-Based Capital (RBC) framework to calculate the required capital at a given point in time (see *Chapter 19. Risk-Based Capital*). More broadly speaking, actuaries may evaluate the surplus needs on other bases, including on an economic basis, which is guided by the insurer meeting some economically defined criteria for solvency. In both of these cases, an actuary who is evaluating an insurance company's capital will need to be familiar with the assets and the liabilities on the balance sheet (pages 2 and 3), as well as the risk characteristics of each of those items.

This chapter will provide an overview of the composition of the two main categories in the statutory balance sheet:

- Assets (page 2)
- Liabilities, Surplus and Other Funds (page 3)

ASSETS[13]

Assets can be broadly defined as a property, right or claim arising from past events that has future value. From an individual perspective, we are all accustomed to the concept of owning

[13] In general, this section aligns with Chapter 2 (Assets) of Property Casualty Insurance Accounting by the Insurance Accounting and Systems Association (IASA). References to other sections in IASA that were previously on the CAS Syllabus will be included throughout. Readers seeking additional detail may consult with IASA on these topics or other topics.

financial assets, such as stocks and bonds, and owning real assets, such as a home or vehicle. Insurance companies own various assets in the same way that an individual does, and those assets are summarized on page 2 of the Annual Statement Blank (the balance sheet). Some of these assets are consistent with assets of non-insurance entities, and some are specific to insurance companies.

Table 2 summarizes the major assets held by the U.S. property casualty insurance industry as of December 31, 2011.[14] The first column indicates the numerical label for each item, as presented on page 2 of the Annual Statement. Only the material line items are shown in this summary.

TABLE 2[15]

Assets: Total U.S. P&C Insurance Industry
SNL Briefing Book — U.S. 2011 Statutory Financials, NAIC Format (USD in OOOs)

Line	Description	Assets	% of Total	Nonadmitted Assets	Net Admitted Assets	% of Total
1.	Bonds	902,605,065	55%	116,731	902,488,334	57%
2.1	Preferred stocks	11,685,355	1%	66,292	11,619,064	1%
2.2	Common stocks	232,556,368	14%	3,386,260	229,170,621	14%

[14] Accessed via SNL.com by SNL Financial LC.

[15] We acknowledge that assets minus nonadmitted assets should equal net admitted assets. However, there are certain line items in this table where this equation does not hold. We have taken the data as provided from SNL Financial LC without modification.

As shown in Table 2, the U.S. property/casualty industry held $1.6 trillion dollars of assets as of December 31, 2011. The statutory balance sheet makes two broad distinctions regarding assets held by insurers:

- Cash and invested assets vs. non-invested assets: Assets are categorized by this criterion to identify the proportion of an insurer's asset that is readily convertible to cash. The "cash and invested assets" are assets that could be readily sold in near term to meet the insurer's liabilities, while the "non-invested assets" are less liquid. This distinction is in line with the emphasis that statutory accounting places on solvency. Rows 1 through 12 on the Assets page include cash and invested assets, while rows 13 through 25 include non-invested assets.

- Admitted vs. nonadmitted assets: As shown in Table 2, there are separate columns that depict the amount of assets that are nonadmitted. These nonadmitted assets, which represent about 3% of total assets, are not recognized by state insurance departments in evaluating the solvency of an insurance company for statutory accounting purposes. The rationale for this exclusion is that those nonadmitted assets are not readily convertible for use to meet an insurer's liabilities now *or in the future* and thus would not be reasonable to consider in evaluating a company's solvency. In many cases nonadmitted assets are determined by formulae established by the National Association of Insurance Commissioners (NAIC). As shown in Table 2, there are nonadmitted assets in the cash and invested assets categories and the non-invested assets categories, though the proportion of nonadmitted assets is much lower for cash and invested assets. Several common examples of nonadmitted assets will be discussed in the description of the specific asset classes below (such as certain uncollected and deferred premiums and agents' balances and net deferred tax assets), which will help to demonstrate this point.

Those distinctions aside, it is clear from Table 2 that the largest asset class for the property casualty industry in 2011 was bonds, which represented 57% of the industry's total assets, followed by common stocks, which represented 14% of the industry's total assets. These statistics have remained relatively consistent over the years. While most actuaries will not need to have a deep understanding of each of the asset classes on the balance sheet, is it worthwhile to know a few relevant details on the largest classes to have a fundamental understanding of the balance sheet.

Bonds (Line 1)

Bonds are securities that pay one or more future interest payments according to a fixed schedule. The face value of a bond refers to the amount that is to be paid in the final single payment at the maturity of a bond. When an insurance company purchases a bond, the value of that bond is recorded as the actual cost, including brokerage and other fees. This purchase price may be more or less than the face value of the bond.

To the extent that the purchase price is higher (or lower) than the face value of the bond, a bond premium (or discount) is recorded as a part of the recorded amount. Over the life of the bond, that bond premium or bond discount will be amortized according to a constant yield approach. The reason for this amortization is that when the bond ultimately matures, the amortized value will be equal to the face value, eliminating a lump sum gain or loss at the maturity of the bond.

After the purchase, statutory accounting indicates that bonds be recorded at one of the following bases:

- Amortized cost
- The lower of amortized cost and fair value

The rating the NAIC's Security Valuation Office (SVO) assigns to the bond determines the applicability of the two bases above. The six possible ratings are NAIC 1 through NAIC 6, which range from the "highest quality" bonds to "bonds in or near default," respectively. Bonds with the two highest ratings (NAIC 1 and 2) are carried at amortized cost, while bonds with ratings NAIC 3 ("medium quality") and below are carried at the lower of amortized cost or fair value. The amount at which a bond is recorded, following these criteria, is referred to as the adjusted carrying value.

Schedule D of the Annual Statement provides details on the specific bonds that are held by an insurance company, including the following:

- Type of issuer (e.g., federal, state or corporate)
- Maturity (e.g., one year, one year to five years)
- NAIC Class (Class 1 through Class 6)

Based on the industry aggregate Annual Statement as of December 31, 2011, insurance companies' bond portfolios were made up of approximately one-third government-sponsored entity bonds; one-third corporate bonds; and one-third federal, state and local government bonds. By maturity, about half of bonds held were 5 years to maturity or less, with the majority of the remainder having maturities between 5 and 10 years. Furthermore, approximately 86% of bonds held by insurers were in the NAIC Class 1.

Given that bonds are the largest asset class for property casualty insurers, an actuary or other user of the financial statements who is reviewing the financial health of an insurance company may benefit from reviewing the detail in Schedule D.

Stocks (Lines 2.1 and 2.2)

As shown in Table 2, approximately 15% of insurers' assets were in common or preferred stock. Stocks are securities that represent an ownership share in a company. Those ownership shares are subordinate to bondholders and creditors. Common stock ownership

confers voting privileges and may pay a dividend, though the dividend is not guaranteed. Preferred stock does not confer voting privileges but usually provides a guarantee on dividends to be paid, and usually has preference to common stock in the event of liquidation.

At purchase, stocks are valued at cost plus any brokerage or related fees. After purchase, publicly traded stocks are recorded at fair value, which is based on the market price that is readily available to the public and which can generally be determined from external pricing services. If a stock is not publicly traded or a price is not available, the NAIC's SVO will determine a fair value. Preferred stocks are assigned similar NAIC ratings as bonds with six rating levels, which dictate whether they are valued at amortized cost or fair value based on the NAIC rating.

Because stocks represent a relative minority of the assets held by property casualty insurance companies, and due to the volatility and uncertainty in the value of stocks, an actuary or other user of the financial statements who is evaluating the financial health of an insurance company should take note and investigate further if an insurance company has a relatively larger portion of their assets in stocks, compared to the overall industry.

Real Estate (Line 4)

Three classes of real estate are presented separately on the Assets page of the Annual Statement:

- Properties occupied by the company
- Properties held for the production of income
- Properties held for sale

These classes are relatively self-explanatory, though one detail to be aware of is that if a company occupies less than 50% of a property, it is classified as either a property held for production of income or a property held for sale (as opposed to a property occupied by the company). Properties in the first two categories are recorded at depreciated cost, while properties that are held for sale are recorded at the lower of depreciated cost and fair value.

Details of a company's real estate transactions and holdings are presented in Schedule A of the Annual Statement.

Cash, Cash Equivalents and Short-Term Investments (Line 5)

This asset class generally includes assets that are immediately convertible to cash. As of December 31, 2011, these assets represented nearly 5% of insurers' total assets, and approximately two-thirds of these assets were in short-term investments.

Cash equivalents must have an original maturity of less than three months, and short-term investments must have an original maturity of one year or less. In the Annual Statement, details on cash are provided in Schedule E-1, cash equivalents are described in Schedule E-2,

and short-term investments are found in Schedule DA. Further, a reconciliation is made in the Cash Flow statement showing cash, cash equivalents and short-term investments at the beginning of the year, adjusted for net cash (inflows minus outflows from operations, investments, financing and miscellaneous sources) during the year. The result is the amount of cash, cash equivalents and short-term investments at the end of the year, which is shown in line 5 of the Assets page.

Uncollected and Deferred Premiums and Agents' Balances (Lines 15.1 and 15.2)

These two asset classes represent premiums that have been written, but have not yet been received. Although the names of the asset classes refer to "agents' balances" (or balances due from policies sold by insurance agents, as intermediaries between the insurance company and the policyholder), both asset classes may also include uncollected premiums for policies sold directly to policyholders.

Uncollected premiums and agents' balances include premiums due on or before the financial statement date, while deferred premiums and agents' balances include premiums due after the financial statement date. Both classes include installment premiums that meet those timing criteria as well.

Premiums that are more than 90 days past due from an agent or a direct policyholder are considered nonadmitted assets. Furthermore, an insurer may determine that agents' balances that are 90 days or more overdue are unlikely to be collected (or "impaired"). In this event the insurer should establish an allowance for bad debts.

These two classes together represented nearly 10% of the industry assets as of December 31, 2011, highlighting that collectibility of these assets is relevant to a company's financial health and a measure of the efficiency of its collections' department. An actuary or other user of the financial statements who is reviewing the financial health of an insurer may consider the overall magnitude of a company's uncollected and deferred agents' balances and the percentage of agents' balances that are nonadmitted. Either one of these metrics could be benchmarked to the overall industry; a company having a significantly higher portion of its assets in these two classes relative to the industry would warrant further analysis to understand the impact to liquidity.

Amounts Recoverable from Reinsurers (Line 16.1)

This asset class reflects amounts that are expected to be recovered from a reinsurer on losses and LAE that have been paid by the company, but do not include expected reinsurance recoveries for loss and LAE reserves. The reason that expected recoveries for loss and LAE reserves are not included is that loss and LAE are already reflected net of reinsurance on the balance sheet. Additional detail on expected recoveries for both paid amounts and reserves are included in Schedule F, which will be discussed in detail in *Chapter 14. Schedule F*. The detail

included in Schedule F allows an actuary or other user of the financial statements to assess the quality and collectibility of the reinsurance recoverables.

Net Deferred Tax Assets (Line 18.2)

Deferred tax assets (DTAs) represent expected future tax benefits related to amounts previously recorded in the statutory financial statements and not expected to be reflected in the tax return as of the reporting date. They are referred to as "net" DTAs because they are recorded net of any deferred tax liabilities (DTLs) that exist. Two common sources of DTAs relevant to the actuary are the following:

- The difference in tax accounting and statutory accounting for loss reserves
- The carryforward of net operating losses from previous years

The first source of DTAs is particularly relevant to actuaries. For tax reporting purposes, loss reserves are discounted when determining pre-tax income. This means that an insurance company is not able to deduct from taxable income the full amount of losses that are incurred during a year. Therefore, assuming loss reserves are growing, a company's pre-tax income on a tax basis is higher than the company's pre-tax income on a statutory basis in the current year. In the future, as this discounting unwinds, the insurer will get a tax deduction, which will not be recorded in statutory financial statements because it was already recorded in the year the reserves were established. The value of this future deduction (35% of the deduction) represents the DTAs. This asset can be particularly significant for growing companies.

The second source of DTAs of relevance to the actuary (carryforward of net operating losses) occurs when an insurance company has net operating losses in one financial year and expects those losses to offset gains in the future, thereby reducing future tax liability.

For any DTA or DTL, an insurer can only record the portion of the asset or liability that is expected to be realized, based on available evidence. Furthermore, the insurer must perform an admissibility test to determine the amount of a DTA that can be considered as an admitted asset.

As shown in Table 2, DTAs were the largest single source of nonadmitted assets at December 31, 2011, representing $18.6 billion of the total $54.2 billion in nonadmitted assets, or just over 34%.

Receivables from Parent, Subsidiary and Affiliates (Line 23)

Many insurance companies are members of a national or international insurance group or may be affiliated with other insurance companies that are owned by the same parent company. These affiliates often share services or resources, such as internal support staff or third-party vendor agreements. In these cases, receivable balances for these services or resources exist between the parties. As shown in Table 2, these receivables accounted for

about 1% of assets held by the industry at December 31, 2011. If an individual company had a significantly larger portion of their assets in the form of receivables, a user of those financial statements may consider investigating further, as those receivables may not be as liquid or available as other asset types. More specifically, the user could attempt to ascertain the specific source of the receivables and the proportion of the receivables that are paid on time.

Other Nonadmitted Assets

In addition to the examples of nonadmitted assets already mentioned (agents' balances more than 90 days overdue and net DTAs that are do not meet the statutory admissibility test), there are other sources of nonadmitted assets. Several common examples include:

- Amounts held of specific types of bonds, stocks, mortgage loans or real estate that are in excess of limitations that exist in specific states
- Capitalized electronic data processing equipment and software in excess of state-specific limits for admitted assets
- Furniture, equipment and supplies
- Balances due from a broker when a security has been sold but the proceeds have not been received that are still outstanding more than 15 days after settlement
- Funds held or deposited with reinsured companies that exceed the associated liabilities
- 10% of deductibles recoverable on deductible and service-only insurance policies in excess of collateral specifically held and identifiable on a per policy basis

As previously noted, nonadmitted assets only represented about 3% of the total industry assets at December 31, 2011. However, due to their importance when measuring solvency, an actuary should be familiar with the sources of nonadmitted assets. If an actuary or other user of the financial statements observes that an insurer has a larger proportion of nonadmitted assets than the industry average, it may be worthwhile to investigate further to understand the source of those nonadmitted assets because they could be indicative of a problem with the business.

LIABILITIES AND SURPLUS[16]

A liability is an obligation that the company must fulfill, based on past events or transactions, which will require the use of the company's resources. Under the literal definition of solvency, a company must have assets that are at least equal to its liabilities to remain solvent.

To be prudent and to comply with RBC requirements (see *Chapter 19. Risk-Based Capital*), most insurance companies have assets that significantly exceed their liabilities. The amount of this excess of assets over liabilities is generally referred to as surplus. Surplus can be viewed as the equity in the business or as the source of protection to the policyholders. These three amounts follow the relationship shown below:

[16] Aligns with IASA Chapter 5.

Assets = Liabilities + Surplus

Or, equivalently,

Assets – Liabilities = Surplus

Because the combination of liabilities and surplus are equal to assets, liabilities and surplus are presented on the same page (page 3) of the Annual Statement. The assets reflected in the relationship above include only admitted assets because Statutory Accounting Principles (SAP) does not allow insurers to take credit for nonadmitted assets in surplus.

A breakdown of the industry liabilities and surplus amounts (page 3 of the Annual Statement) by significant account is provided in Table 3 as of December 31, 2011.[17]

TABLE 3

Liabilities, Surplus and Other Funds: Total U.S. Property/Casualty Insurance Industry
SNL Briefing Book — U.S. 2011 Statutory Financials, NAIC Format (USD in 000s)

Line	Description	Liabilities	% of Total
1.	Losses	496,162,946	31%
2.	Reinsurance payable on paid loss and loss adjustment expenses	17,442,626	1%
3.	Loss adjustment expenses	104,532,699	7%
5.	Other expenses (excluding taxes, licenses and fees)	23,863,600	1%
9.	Unearned premiums	204,915,762	13%
12.	Ceded reinsurance premiums payable	40,200,154	3%
13.	Funds held under reinsurance treaties	24,144,250	2%
16.	Provision for reinsurance	2,994,296	0%
25.	Aggregate write-in for liabilities	42,889,678	3%
	Other liabilities	68,994,071	4%
28.	**Subtotal, liabilities**	**1,026,139,981**	**65%**
29.	Aggregate write-ins for special surplus funds	54,909,820	3%
30.	Common capital stock	4,536,681	0%
34.	Gross paid in and contributed surplus	186,691,158	12%
35.	Unassigned funds	300,443,945	19%
	Other surplus and capital	15,512,118	1%
37.	**Subtotal, surplus as regards policyholders**	**562,093,722**	**35%**
38.	**Total**	**1,591,145,369**	**100%**

First, note that the total amount of liabilities and surplus shown in Table 3 ($1.591 trillion) is exactly equal to the amount of net admitted assets that were shown in Table 2. This relationship must be true given the fundamental equation of Assets = Liabilities + Surplus.

[17] Accessed via SNL.com by SNL Financial LC.

The next observation that can be made is that the insurance industry carried liabilities and surplus on its balance sheet in a ratio of roughly 2 to 1 as of December 31, 2011. On the surface, this suggests that the industry as a whole had sufficient assets to be able to sustain a sizeable increase in liabilities (or reduction in asset values) while still maintaining solvency, due to the current positive difference of assets relative to liabilities.

However, this may not be true at the individual company level, and there are also other risks that could affect surplus that are not reflected in either the recorded assets or liabilities (such as catastrophe risk or liquidity risk). An actuary can benchmark a company's ratio of liabilities to surplus against the current industry average. Further investigation may be warranted if the ratio is significantly higher than that of the industry. A review of the company's RBC would be the next logical step.

We can also measure each of the underlying accounts in relation to total liabilities or surplus. Together, loss and LAE reserves (lines 1 and 3) have historically been the largest liability item on a property/casualty insurance company's balance sheet. As of December 31, 2011, this item represented nearly 60% of total industry liabilities. This speaks to the importance of property/casualty actuaries to the financial reporting process because they are often the most suited to evaluate and establish those liabilities. The next largest liability class is unearned premium reserves, which made up approximately 20% of the industry liabilities as of December 31, 2011. Given actuaries' involvement in pricing products, actuaries certainly play a role in this premium account. To the extent the unearned premium is not adequate to cover expected future losses, LAE and maintenance expenses, additional liabilities need to be recorded. Actuaries often play a key role in that analysis.

A brief description of each of the key liabilities and surplus classes is provided below.

Loss and Loss Adjustment Expense Reserves (Lines 1 and 3)

The required basis for loss and LAE reserves under SAP is defined by SSAP 55, *Unpaid Claims, Losses, and Loss Adjustment Expenses*. Statements of Statutory Accounting Principles (SSAP) 55 states that the recorded liabilities for loss and LAE reserves, for each line of business and for all lines of business in the aggregate, should be based on "management's best estimate" (note that this term is not explicitly defined in the accounting guidance). Further, SSAP 55 requires that management consider the variability in the estimate of these liabilities. The standard states that management's best estimate may consider a range of estimates; in the rare instances when no point within the range is considered to be a better estimate than other points within the range, the midpoint of the range should be used.

Note that SSAP 55 refers to management's best estimate and not the actuary's best estimate or central estimate. However, management will often rely on an actuary's estimate, in whole or in part, in establishing their own best estimate to be recorded on the balance sheet.

Whether or not management relies on an actuary in establishing the recorded reserves, the NAIC Model Law for Property and Casualty Actuarial Opinions (MDL-745)[18] requires that a Statement of Actuarial Opinion be provided that attests to the adequacy of the recorded liabilities (see *Chapter 16. Statement of Actuarial Opinion*).

Significant detail on the loss and LAE reserves is included in Schedule P of the Annual Statement. Schedule P provides loss and LAE reserves both gross and net, and also breaks down the total reserves by line of business and accident year. Further detail on the data in Schedule P and the potential uses of that data are described in *Chapter 15. Schedule P*. There are also relevant references to loss and LAE reserves in the Notes to Financial Statements within the Annual Statement (see *Chapter 10. Notes to Financial Statements*).

Because loss and LAE reserves are often the largest most variable liability on an insurer's balance sheet, they are of critical importance to the financial health of an insurance company.

Reinsurance Payable on Losses and Loss Adjustment Expenses (Line 2)

Reinsurance payable on losses and LAE includes liabilities related to assumed reinsurance contracts and is for loss and LAE that have already been paid by the reinsured. A detailed breakdown of this amount by type of reinsurer (e.g., affiliated, authorized and unauthorized as well as U.S. and non-U.S.) is provided in Schedule F, Part 1, column 6. Liabilities under assumed reinsurance contracts for loss and LAE that are reserved by the reinsured, but not paid, are included in lines 1 and 3 of the Liabilities, Surplus and Other Funds page (loss and LAE reserves).

Other Expenses (Excluding Taxes, Licenses and Fees) (Line5)

In general, an insurance company's expenses can be separated into two broad categories: LAE and underwriting and investment expenses. Further divisions can be made within each category. The underwriting and investment expense category can be further divided into the following subcategories:

- Commission and brokerage expenses
- Taxes, licenses and fees
- General and administrative expenses
- Investment expenses

The other expenses liability item on the balance sheet generally represents incurred but not yet paid expenses from the third and fourth categories listed above. Additional detail on these expenses can be found in the Underwriting and Investment Exhibit (U&IE), Part 3, Expenses, where the unpaid expenses are shown on line 26. Although this exhibit does not provide the

[18] NAIC, *Model Regulation Service – January 2012, Index and Model Description*, MDL-745, http://www.naic.org/documents/committees_models_index.pdf, 2012.

breakdown of the unpaid expenses by expense category, the total incurred expenses during the calendar year for these other expenses are included on lines 3 through 18.

An additional observation from U&IE, Part 3 is that each category of other underwriting expenses is split between column 1 (Loss Adjustment Expenses), column 2 (Other Underwriting Expenses) and column 3 (Investment Expenses). This is based on an allocation that is performed by the company, and that allocation determines whether unpaid amounts in these categories appear on the balance sheet as LAE reserves or as other expenses liabilities. Additional discussion regarding other expenses is provided in *Chapter 8. The Statutory Income Statement: Income* and Changes to Surplus. Further detail regarding the allocation of expenses by category is also provided in the following chapter (*Chapter 18. Insurance Expense Exhibit*).

Unearned Premiums (Line 9)

Unearned premium represents a liability related to the unexpired portion of all policies in force. For any individual in-force policy, the total amount of written premium can be separated into earned and unearned portions. In the simplest and most common case, this split is made by the number of coverage days in the total policy period that are expired or unexpired, respectively. This approach is referred to as the daily pro rata method and is the standard method used for lines such as automobile insurance, homeowners, general liability or property.

Another approach that is sometimes used is called the monthly pro rata method. This method assumes that policies are written evenly over the course of the month. Based on that assumption, 1/24 of the premium written in a given month is expected to earn in that month. Subsequent to that, 1/12 is expected to be earned in the next 11 months, and the remaining 1/24 is earned in the thirteenth month. This abbreviated method allows for a calculation of the earned premium in each month with less data and calculations.

Some specific types of coverage require different approaches to calculating earned premium (e.g., title insurance, financial guaranty and ocean marine).

The unearned premium reserve serves the important purpose of recognizing revenue over the time period the policy is in force. Unearned premium reserves represent an insurer's obligation to provide future coverage and the potential obligation to refund the unexpired portion of the premium to a policyholder, in the event that a policy is cancelled.

While this accrual of unearned premium and the subsequent earning of that premium may appear to be an attempt to match revenues with expenses, this is not the case. Statutory accounting requires that expenses related to the acquisition of an insurance policy be realized as an expense at the time of acquisition. Despite that, the full amount of the written premium is still recorded as an unearned premium reserve at the inception of the policy. This departure from the matching principle that is commonly followed in accounting regimes exists to allow

for a more conservative solvency-focused presentation because it results in lower policyholders' surplus, which is consistent with the objective of SAP.

Additional detail of the composition of the unearned premium recorded on page 3 (Liabilities, Surplus and Other Funds) of the Annual Statement can be found on page 7, which is part of the U&IE. Page 7 (U&IE Part 1) shows the breakdown of the total unearned premium into the following four categories:

- Amount unearned (running one year or less from date of policy)
- Amount unearned (running more than one year from date of policy)
- Earned but unbilled premiums
- Reserve for rate credits and retrospective adjustments based on experience

The first two categories above are relatively self-explanatory and separate the unearned premium related to policies with effective periods that are one year or less and policies with effective periods that are longer than one year. The third category, earned but unbilled (EBUB) premiums, includes estimated adjustments that will occur to the premium on audit-type policies where the actual amount of premium depends on some exposure measure, such as payroll, and is unknown until the end of the policy period. EBUB premiums are only recorded if they are reasonably estimable in the aggregate. The fourth category represents the expected adjustments that will occur on retrospectively rated policies, where the premium is variable based on the loss experience on the policy.

In addition, SAP and GAAP require an insurer to establish a separate premium liability, referred to as a premium deficiency reserve, if the unearned premium reserve for a portion of the business is not sufficient to cover the expected corresponding losses, expenses and other costs. An actuary in either a reserving or pricing role should be aware of the criteria that dictate when a premium deficiency reserve is required so they can advise management accordingly. Different criteria apply for short-duration and long-duration contracts. Additional discussion of premium deficiency reserves is included in *Chapter 10. Notes to Financial Statements*.

Ceded Reinsurance Premiums Payable (Line 12)

Ceded reinsurance premiums payable represent premiums that are owed to reinsurers for ceded reinsurance. This liability is recorded net of any commission retained to cover expenses that were incurred issuing the reinsured policies. This line item does not include ceded reinsurance that are owed to the reinsurer or other funds that are being held as a deposit by the ceding company as collateral for payment of the reinsurer's obligations under specific terms of the reinsurance treaty, which is reflected in the next item, "Funds Held Under Reinsurance Treaties," discussed below.

Funds Held Under Reinsurance Treaties (Line 13)

These liabilities relate to funds that are held by a ceding company as collateral from a reinsurer. The funds provide security to the ceding company that the reinsurer will pay losses as they come due. This is particularly common in the case of unauthorized reinsurers (companies not authorized or licensed to do business in the ceding company's state of domicile) because it allows the ceding company to avoid a statutory accounting penalty on the recoverables from the unauthorized reinsurer. This penalty is described in SSAP 62, which states that a recoverable from an unauthorized reinsurer that is not sufficiently collateralized is a nonadmitted asset. As noted above, this category also included ceded reinsurance premiums that were payable but were held according the terms of the reinsurance agreement.

Provision for Reinsurance (Line 16)

Although the magnitude of this liability category is not large for most insurers, it is worth mentioning because it is unique to statutory accounting. The provision for reinsurance is a statutory liability established for reinsurance recoverables that may not be collectable. The change in this provision is recorded directly to surplus. This penalty applies to all reinsurers that are slow to pay or that are disputing amounts owed to the ceding company and unauthorized reinsurers that do not meet the collateral requirements of the ceding company's domiciliary state. The actual details of the calculation of the provision for reinsurance are shown in Schedule F, Parts 4 through 7 (*Chapter 14. Schedule F* provides the details underlying this calculation).

Note that the net loss reserves, net unearned premium and the amounts recoverable from reinsurers for paid losses on page 2 of the Annual Statement are net of reinsurance but are stated without regard for the provision for reinsurance. The provision for reinsurance appears on page 3 and is a direct reduction to surplus and does not affect a company's assets or income. This direct reduction to surplus and other direct reductions to surplus will be discussed in *Chapter 8. The Statutory Income Statement: Income* and Changes to Surplus.

Common Capital Stock (Line 30)

Common capital stock is a surplus account that is equal to the par value of the common stock issued and outstanding. This account only applies to stock insurance companies and does not exist for purely mutual insurance companies. Par value is an amount set by the issuer of a stock (the insurer, in this case) when the stock is initially offered that serves as a minimum value for which the stock can be sold in that initial offering. Par value has no relation to the market value of a stock and is often set at a low amount, so this common capital stock is not a material item for most insurers (it is only included here to allow for a complete explanation). Certain state regulators have specific requirements for how the par value of shares is established. A separate, similar account is maintained for preferred stock.

Gross Paid in and Contributed Surplus (Line 34)

This account represents amounts received through the sale of stock in excess of the par value for each share. This account also exists only for stock insurers. As shown Table 3, gross paid in and contributed surplus makes up about 30% of the industry surplus, and it is much larger than the common capital stock account.

Unassigned Funds (Line 35)

Unassigned funds represent surplus that has been accumulated over time through retained earnings of the business. For mutual companies, all surplus will generally be reflected in the unassigned funds account because none of those funds were received due to the sale of stock. However, there are some cases in which mutual insurance companies have changed their capital structure through the creation of a mutual holding company. In those situations, the insurance companies do issue the holding company stock and will have common capital stock and gross paid in and contributed surplus accounts. Unassigned funds represented nearly 54% of the industry surplus as of December 31, 2011.

SUMMARY

This chapter has explained the basic structure of the statutory balance sheet and has introduced some of the more significant and relevant accounts. An actuary's involvement is often primarily focused on the loss and LAE reserves, which are the largest liability on the balance sheet, but it is also important for an actuary to understand the bigger picture of an insurer's balance sheet in order to better assess the overall financial health of an insurance company.

In *Chapter 13. Overview of Schedules and Their Purpose*, we will discuss other schedules in the Annual Statement that provide details beyond what we have touched upon here. We will also discuss how that additional detail can be used with the contents of the balance sheet to assess the financial health of an insurance company.

CHAPTER 8. THE STATUTORY INCOME STATEMENT: INCOME AND CHANGES TO SURPLUS

While the balance sheet is of key importance to regulators and the focal point of statutory accounting, the income statement is of equal importance to the ongoing viability of an insurance company. The income statement illustrates the revenue, expenses and net income of an insurance company.

The income statement is presented on the top portion of the Statement of Income on page 4 of the Annual Statement and provides the three sources of income, before federal and foreign income taxes and dividends to policyholders, separately: underwriting income, investment income and other income.

A sample of the statutory income statement for the industry as of December 31, 2011, is presented in Table 4.[19]

TABLE 4[20]

Statement of Income, Income Section: Total U.S. Property/Casualty Insurance Industry SNL Briefing Book — U.S. 2011 Statutory Financials, NAIC Format (USD in 000s)		
Line	**Description**	**Amount**
1.	Premiums earned	438,359,503
2.	Losses incurred	293,097,978
3.	Loss adjustment expenses incurred	55,157,144
4.	Other underwriting expenses incurred	123,917,023
5.	Aggregate write-ins for underwriting deductions	1,475,530
6.	Total underwriting deductions	473,647,676
8.	**Underwriting income**	**(35,288,173)**
9.	Net investment income earned	50,972,121
10.	Net realized capital gains (losses) less capital gains tax	7,576,459
11.	**Investment income**	**58,548,034**
12.	Net gain (loss) from agents' or premium balances charged off	(1,270,419)
13.	Finance and service charges not included in premiums	3,179,764
14.	Aggregate write-ins for miscellaneous income	401,701
15.	**Other income**	**2,311,045**
16.	**Net income before dividends to policyholders and federal/foreign income tax**	**25,530,839**
17.	Dividends to policyholders	2,315,009
19.	Federal and foreign income taxes incurred	3,030,418
20.	**Net income**	**20,123,505**

[19] Accessed via SNL.com from SNL Financial LC.

[20] We recognize that line 9 plus line 10 sums to $58,548,580. Further, line 16 minus lines 17 and 18 equals $20,185,412. We have taken the data as accessed from SNL Financial LC without modification.

As shown in Table 4, the net income for the industry during 2011 was $20.1 billion. The subtotals for each source of income show that the industry incurred underwriting losses in 2011, which were more than offset by investment and other income. Each of the three sources of income is discussed further below.

UNDERWRITING INCOME

Underwriting income is the most familiar and relevant source of income to most actuaries. Underwriting income is calculated as earned premium minus loss and loss adjustment expense (LAE) and other underwriting expenses incurred.

Actuaries are typically involved in estimating incurred losses and LAE and possibly in the calculation of earned premium, so these terms should already be familiar. On the income statement, each of the amounts labeled incurred presented also include the ultimate amount of those liabilities that occurred in the current year, and any changes in the ultimate amount of the liabilities that occurred in previous years (as shown in the formula below).

Income statement incurred = Current period ultimate + Change in prior period ultimate

where,

Change in prior period ultimate = (total all periods ultimate at end of period – total all periods ultimate at beginning of period) - current period ultimate

Actuaries may be less familiar with the item labeled "other underwriting expenses incurred." Further discussion on this other underwriting expense category is provided below.

Other Underwriting Expenses Incurred (Line 4)[21]

We already encountered other underwriting expenses briefly during our discussion of the liability for "Other Expenses (Excluding Taxes, Licenses and Fees)" in *Chapter 7. Statutory Balance Sheet*: A Measure of Solvency. The "Other Expenses" account represents all other expenses that were incurred but not paid at the end of the fiscal year, while this line on the income statement represents the total amount of other expenses incurred during the course of the year, whether or not they have already been paid.

As shown in Table 4, the amount of the other underwriting expenses that were incurred by the industry in 2011 was $123.9 billion, which is more than twice the amount of LAE incurred at the time and nearly half the amount of the industry losses incurred. The magnitude of these other underwriting expenses highlights the importance of other underwriting expenses to the profitability of the industry and the importance of ensuring that they are accurately reflected in the financial statements.

[21] Aligns with *IASA* Chapter 8.

Expense accounting requires that expenses be allocated in three ways:

1. NAIC operating expense classifications, which represent 24 types of expenses, some of which have sub-types. These 24 types are listed in the rows Underwriting and Investment Exhibit (U&IE), Part 3. Examples of these expense classifications are "commission and brokerage," "salary and related Items," and "taxes, licenses and fees." It is suggested that the reader review the U&IE, Part 3, now to see the full list of classifications.

2. Expense categories, which are broader groupings of expenses that align with the different operational functions of an insurance company. There are three of these broad categories: LAE, other underwriting expenses and investment expenses. These categories are presented in the columns of the U&IE, Part 3.

3. Line of business, of which there are 33, some of which have sub-lines. These lines of business are listed in the U&IE, Part 2A. The lines of business used for expense reporting are similar to those lines of business used in Schedule P, but not the same.

Each time an insurance company has an expense, the appropriate expense classification needs to be determined and an allocation must be made by line of business and expense category. In some cases, the entire amount of the expense can be specifically identified with one expense classification, within one expense category and for one line of business (for instance, a commission paid on a policy within a specific line of business); however, this is often not the case, such as the salary of an employee who oversees several products and functions. In those instances an allocation of that expense must be made. Some expenses may require several allocation steps.

When an allocation is required, it will be performed based on information that is relevant to that expense. Examples of potential allocation bases are policy counts, which may be appropriate in the case of policy administration expenses; employee headcount, which may be reasonable for supervisors' salaries; or other measures of business or employee activity.

An example of a complex expense allocation would be one related to the rent that is paid for a home office that serves as a center for all operating functions. The allocation process could take place as follows:

- This expense can be specifically identified as the "rent and rent items" expense classification and therefore assigned fully to that classification.

- Because the home office is used for all company functions, its expenses would need to be allocated between all three categories: LAE, other underwriting expenses and investment expenses. One possible approach to this is to allocate the rent to those three categories by headcount of personnel associated with each function.

- The home office is also the base for all lines of business, so the expenses may be allocated to each line of business by premium volume. This allocation to line of business could differ by expense category.

The result of the first two of these allocations can be observed in the U&IE, Part 3, and the line of business allocation is reflected in the Insurance Expense Exhibit, Part 2, which will be discussed in more detail in *Chapter 18. Insurance Expense Exhibit*.

Guidance for allocation of expenses is provided in the NAIC Annual Statement Instructions, and also in the Statements of Statutory Accounting Principles (SSAP) 70, *Allocation of Expenses*. These are the sources of the uniform classifications and categories that are described above, as well as additional allocation rules. In general, the guidance indicates that specific identification of expenses is preferable to allocation but that when allocation is required, it should be apportioned based on pertinent factors or ratios such as premium, number of claims or headcount. The decision to allocate and the factors or ratios that are used when allocation is required will require judgment on the part of a company.

While the topic of expense accounting and specifically other underwriting expenses may seem of questionable relevance to an actuary, it is important to have a basic awareness and knowledge of the topic. The reason for this is twofold.

First, the overall level of company expenses will directly affect the pricing (or the adequacy of pricing) of its insurance products. A company with lower expenses relative to its competitors has the potential to be more competitive and or more profitable. Actuaries can contribute by participating in the planning and control of expenses.

Second, if the relative allocation of expenses across functions and products is not accurate, it can lead to subsidies between products that may obscure the true profitability of those products and lead to inefficient allocation of resources or even anti-selection. An actuary who understands expense allocation can prevent or minimize such subsidies and their consequences by striving to allocate expenses as accurately as possible.

The expense allocation process described above and presented in the U&IE is the driver of the other underwriting expense account on the income statement, as well as other references to expenses elsewhere in the Annual Statement.

INVESTMENT INCOME[22]

Investment income is an important source of income to insurance companies and a unique aspect of an insurer's business relative to other industries. The importance of investment income was already highlighted by the summary of the industry income statement. There we

[22] Aligns with *IASA* Chapter 9.

saw that in 2011 the insurance industry's positive net income was entirely attributable to investment income and not to underwriting income.

Because there is a delay (significant in some cases) between the time insurers receive premiums and the payment of claims, they have an opportunity to earn investment income on those funds. This makes consideration of investment income fundamental to the pricing of insurance products, which is not the case for most other industries.

The investment income item on the income statement consists of the following:

- Net investment income earned
- Net realized capital gain (loss)

Net investment income earned is primarily related to interest and dividends received on investment assets held over the course of the year. Net investment income earned does not include changes to the prices in assets that are held (those are included in net realized capital gain described below). Furthermore, it is recorded on an accrual basis, meaning that it is reflected in the year in which it is earned and not necessarily the year in which the actual cash related to the income is received. The amount of this income is shown net of investment expenses and other costs, but gross of federal income taxes, on the income statement.

Net realized capital gain (loss) generally results from the sale of investments for more or less than original cost, adjusted for the amortization of premiums or accretion of discounts (amortized cost). Realized losses also result from impairment adjustments. Certain investments (primarily common stock) are recorded at fair value. The changes in the value of these investments (unrealized gains (losses)) are not included as income and instead reflected as direct adjustments to surplus. These direct adjustments to surplus are necessary because these items do not flow through net income for the current period, but the surplus must still be adjusted to maintain the assets equal liabilities plus surplus relationship.

In 2011, industry net investment income earned was $51 billion, and the net realized capital gain was $7.6 billion. Detail of both the net investment income and the net realized capital gain (loss) amounts that are shown in the income statement is provided on page 12 of the Annual Statement, which includes the Exhibit of Net Investment Income and the Exhibit of Capital Gains (Losses). These exhibits provide the detail of both sources of income by asset class. The Exhibit of Net Investment Income also differentiates between the amount of income collected and the amount of income earned in the year and describes the deductions for investment expenses and other costs. The Exhibit of Capital Gains (Losses) shows the split of the gains (losses) between those gains (losses) that were realized on the sale or maturity of an asset and those that were due to impairments (labeled "other realized adjustments").

The details underlying these two exhibits are provided in Schedules A, B, D, DA and DB of the Annual Statement, which describe the assets held in each asset class as of the evaluation date

of the financial statement and the assets that were sold, redeemed or disposed of during the current year.

While property/casualty actuaries are not typically involved in the investment reporting and valuation, they should have a basic understanding of these items due to their significance to product pricing and overall insurer operating results. For that reason, a discussion of the statutory reporting and valuation guidelines for each major asset class is included below. More detail will be provided on bonds and stocks because they represent the vast majority of assets held, but several other asset classes will also be discussed briefly.

Bonds

Bonds represent a majority of the assets held by insurance companies. On the Exhibit of Net Investment Income and the Exhibit of Capital Gains (Losses), bonds are reported in four categories: U.S. government bonds, bonds exempt from U.S. tax, other bonds (unaffiliated) and bonds of affiliates. The underlying detail is primarily provided in Schedule D, Part 1 (Long-Term Bonds Owned) and Schedule D, Part 4 (Long-Term Bonds Sold, Redeemed or Disposed of). Bonds that mature in one year or less are reported in Schedule DA, Part 1 (Short-Term Investments Owned).

The net investment income earned from bonds, as shown in the Exhibit of Net Investment Income, is based on the following four amounts:

1. Interest received during the year (Schedule D, Part 1, column 20 and Part 4, column 20).
2. Interest due and accrued (Schedule D, Part 1, columns 19 and 20).
3. Current year's (amortization)/accretion (Schedule D, Part 1, column 13 and Part 4, column 12)
4. Interest paid for accrued interest on dividends (Schedule D, Part 3, column 9).

The first of the four items, interest received during the year, represents all coupon payments that were received on bonds held during the year. This includes coupon payment on bonds owned at the end of the year and on bonds that were owned at the beginning of the year but sold, redeemed or disposed of during the year. This is presented on the basis of when the actual interest coupon was actually received, so an adjustment is required to convert it to an accrual basis. This adjustment is made by adding the change in the interest due and accrued account (the second item from above) over the last year to the interest received during the year.

The explanation of the third item above, current year's (amortization)/accretion, requires us to revisit basic bond valuation. Recall that when a bond is purchased, the actual purchase price is usually different from the face value due to the difference between the coupon rate on the bond and the market interest rates at the time of purchase. To provide the buyer with

an effective interest rate equal to the current market interest rate, the bond is sold at either a discount or a premium to the face value. For financial reporting purposes, that discount or premium is then realized as either positive (in the case of a discount) or negative (in the case of a premium) interest income over the life of the bond. This is referred to as either the amortization of the premium or the accretion of the discount and is reported for each bond in Schedule D, Parts 1 and 4.

The following example illustrates the accounting for a bond purchased at a discount. Assume a five-year bond with face value of $100 is purchased for $90. The purchase price is less than the face value because the coupon rate on the bond is less than the current market interest rate. This difference between the face value and purchase price is referred to as a discount, and the amount of the discount is set such that the effective yield on the bond will equal the current market interest rates at the time of purchase. The $10 discount is realized over the remaining five-year duration of the bond as investment income in addition to the actual coupon payments, such that the effective yield in each period also matches the market interest rate at the time of purchase.

The same example can be reversed for bonds that are purchased at premium (when the coupon rate exceeds the market interest rate), and that premium is amortized as negative investment income over the life of the bond to achieve an overall investment income equal to the market interest rate at the time of purchase.

The fourth and final item above, interest paid on accrued interest and dividends, is related to coupon payments that are received on bonds acquired during the year. When a bond is acquired between coupon payments, the buyer of the bond (in this case the insurance company) is required to pay the seller of the bond the portion of the coupon payment that was earned while they owned the bond. This amount is presented on Schedule D, Part 3 (Long-Term Bonds and Stocks Acquired During Current Year), column 9 (Paid for Accrued Interest and Dividends).

Each of these three items (interest received, accrual/amortization of discount/premium, interest due and accrued, and payments for accrued interest on purchases) is reflected in the investment income collected and earned columns in the Exhibit of Net Investment Income.

The other aspect of investment income related to bonds, net realized capital gains (losses), comprises the following components:

- Realized gain (loss) on sale or maturity (Schedule D, Part 4, column16)
- Foreign exchange gain (loss) on disposal (Schedule D, Part 4, column 17)
- Other than temporary impairments recognized (Schedule D, Part 1, column 14 and Part 4, column 13)

Before we discuss these items in more detail, we will first review the basic statutory accounting concepts for bonds. When a bond is purchased, it is recorded at actual cost, including brokerage and other fees. This amount is recorded as the "actual cost" in Schedule D, Part 1, column 7 and Schedule D, Part 4, column 7. In each statutory Annual Statement after the purchase of the bond, the bond is recorded at "adjusted carrying value," which is based on one of two amounts:

- Amortized cost
- The lower of amortized cost and fair value

Amortized cost represents the actual cost of the bond adjusted for the amortization of any premium or discount from the face amount (as described in the paragraphs above). Fair value generally refers to the value that an asset could be sold for in the open market.

For bonds that are rated National Association of Insurance Commissioners (NAIC) 1 and 2 and carried at amortized cost, the adjusted carrying value of the bond is updated each year to reflect the amortization of premium or the accretion of discount. As a result, the adjusted carrying value of the bond will converge with the par value as a bond matures. For bonds that are rated NAIC 3 through 6, the value of the bond is shown as the lesser of fair value or amortized cost. The fair value is provided by the NAIC *Valuation of Securities Manual* for all securities that are owned by insurers. All of this information is summarized on Schedule D, Part 1, including the NAIC designation, actual cost, fair value, par value and book/adjusted carrying value.

To the extent the adjusted carrying value of a bond is adjusted to fair value, the adjustment is considered an unrealized loss and is reflected in Schedule D, Part 1, column 12. Once the bond is sold, the difference between the consideration received and the adjusted carrying value is considered a realized gain or loss and is recorded in Schedule D, Part 4, column 18. Many bonds held by insurance companies are rated NAIC 1 or 2 and held to maturity, so there is never any capital gain or loss over the life of the bond.

Bonds denominated in a foreign currency will also be affected by changes in foreign exchange rates over time. These changes are reflected in the adjusted carrying value but are unrealized until the bond is sold, redeemed or otherwise disposed of. The change in the unrealized amount of this foreign exchange gain or loss is found on Schedule D, Part 1, column 15, and the amount of foreign exchange gain or loss that is realized upon disposal is found on Schedule D, Part 4, column 17.

The sum of the realized gain or loss on disposal and the foreign exchange gain or loss on disposal equals the total gain or loss on disposal, which is shown on Schedule D, Part 4, column 19.

One important exception to the reporting and valuation rule described above relates to the third source of the net realized capital gains and losses, which is referred to as "other than temporary impairments recognized." In general an impairment occurs when it is deemed probable that the insurer will not collect all amounts due on a debt security. Whether or not impairment is temporary is a subjective judgment of the company. Impairments can occur on bonds with any NAIC rating, and they result in the realized capital losses even though a bond has not been sold, redeemed or disposed.

The total realized capital gain or loss for a year is calculated in the Exhibit of Capital Gains (Losses). Column 1 represents the "Realized Gain (Loss) On Sales or Maturity," which is calculated in Schedule D, Part 4, and shown in column 18 of that exhibit. Column 2 is labeled "Other Realized Adjustments" and includes the foreign exchange gain (loss) on disposal and other than temporary impairments recognized in the first year.

Stocks

Like bonds, investment income from stocks comprises investment income earned and realized capital gains.

Preferred stocks and common stocks are reported on separate lines on the Exhibit of Net Investment Income and the Exhibit of Capital Gains (Losses), and they have separate supporting schedules, Schedule D, Part 2, Section 1 and Section 2, respectively. Disposals of preferred and common stocks are reflected in Schedule D, Part 4.

Investment income for stocks is simply the amount of dividends received during the year plus the change in the accrual for dividends declared but unpaid (dividends are accrued on the ex-dividend date). These dividends are included in Schedule D, Part 2-Section 2, column 11 for stocks owned at year end and in Schedule D, Parts 4 and 5, column 20 for stocks sold during the year.

When either common stocks or preferred stocks are purchased, the actual cost plus any commissions or taxes becomes the initial carrying value. Subsequently, the valuation of preferred stocks and common stocks differ, so each is discussed separately.

Common stocks of unaffiliated companies listed on the major U.S. exchanges (NYSE and NASDAQ) are simply recorded at fair value. Changes to fair value after purchase are recorded as unrealized valuation increases (decreases) in Schedule D, Part 2, Section 2, column 13. When a stock (common or preferred) is disposed of, the difference between the consideration received and the original cost is recorded as a realized gain (loss) on disposal and a foreign exchange gain (loss) on disposal (if applicable) in Schedule D, Part 4, columns 17 and 18.

The rules governing the accounting for investments in subsidiaries and controlled and affiliated entities are complex and beyond the scope of this publication. A brief description of the accounting for investments in insurance company affiliates is discussed in the RBC

chapter of this publication (see *Chapter 19. Risk-Based Capital*), where accounting background is needed on the accounting for determination of the asset risk charge.

The valuation of preferred stock of unaffiliated entities is dictated by the form of the instrument and the ratings assigned by the NAIC Securities Valuation Office. The two common forms of preferred stock are redeemable and perpetual preferred stock. Redeemable preferred stock, also known as callable preferred stock, is preferred stock that is redeemable at the option of the issuer at a specified maturity date or after a specific period of notice, for a preset price. Perpetual preferred stock is preferred stock with no maturity date that cannot be redeemed by the issuer. For redeemable preferred stock, the highest two rating categories are recorded at the original purchase price plus acquisition costs; for perpetual preferred stock, the highest two rating categories are recorded at fair value; for redeemable and perpetual preferred stock designated, the lower four rating categories are recorded at the lower of book or fair value.

As with fair value changes, market value changes to common and preferred stock after purchase are also shown in Schedule D, Part 2, Section 2, column 13 as unrealized valuation increases (decreases). Again, when a stock is disposed of, the difference between the consideration received and the original cost is recorded in Schedule D, Part 4, columns 17 and 18 as a realized gain (loss) on disposal and a foreign exchange gain (loss) on disposal (if applicable).

Both common stocks and preferred stocks are subject to impairment charges if there is a decline in fair value that is deemed to be "other than temporary" by the company. This determination must be made by the company based on available information (e.g., published reports, bankruptcy notifications). When impairment is made, it is recorded in Schedule D, Part 2, Section 1, column 17 and Schedule D, Part 2, Section 2, column 14 (as well as Part 4 for stocks that are disposed of during the year). Impairments made in a given year are included in the "Other Realized Adjustments" of the Exhibit of Capital Gains.

Each component of investment income from stocks is included in the Exhibit of Net Investment Income (page 12). Dividends received plus the change in dividends declared but unpaid are shown in the Exhibit of Net Investment income. In the Exhibit of Capital Gains (Losses), the realized gain or loss on disposal is shown in column 1, and the realized foreign exchange gain (loss) on disposal and other than temporary impairments are shown in column 2.

Cash, Cash Equivalents and Short-Term Investments

This class includes assets that are immediately convertible to cash and have an original maturity of one year or less. Short-term investments are reported in Schedule DA, Part 1, cash is reported in Schedule E, Part 1, and cash equivalents are reported in Schedule E, Part 2.

The short-term investments presented in Schedule DA, Part 1 are composed of bonds or other securities with a maturity of one year or less (at acquisition) and follow the same reporting and valuation rules as the long-term bonds. When a short-term bond or other investment is purchased, the security is recorded at cost and the premium or discount (if any) is amortized or accreted until maturity. Other than temporary impairments are also possible, though they are less common given the short duration of these investments.

The reporting and valuation of cash and cash equivalents is similar but relatively simpler than short-term investments, as evidenced by the fewer columns that are included in Schedule E, Parts 1 and 2 relative to Schedule DA.

Derivatives

Derivatives are financial contracts between two parties for which the value depends on the performance of other assets or variables. While derivatives are not a major asset class for most property/casualty insurance companies, they are becoming more common, and they are of heightened importance due to the financial crisis that occurred in the late 2000s. During the financial crisis, one large insurance group nearly collapsed due to derivatives that had been sold by one of its units. Had these additional disclosures that are now required in this exhibit been available at that time, that near-collapse may have been avoided.

A list of outstanding derivatives owned, sold ("written"), and terminated during the year is provided in Schedule DB. Companies that are not involved in any open derivatives may omit Schedule DB.

Schedule DB provides the number of contracts for each derivative and the notional amount, which represents the number of units of the underlying asset that are involved. The original trade date and the maturity or expiration date are also provided. The two prices listed are the transaction price, which is the price that the company agreed to buy or sell at, and the reporting date price, which is the current price.

One common reason a company may buy or sell derivatives is to hedge, or offset, the exposure they have to changes in price for an underlying asset or variable, such as an interest rate. For this reason, Schedule DB includes information on the item that is hedged with each derivative position and on the type of risk being hedged.

If a derivative position is held for hedging purposes and a company can demonstrate that the hedge has sufficiently reduced the risk related to the specific underlying asset or assets (known as a "highly effective" hedge), then that derivative may qualify for hedge accounting. Under hedge accounting, the derivative is accounted for in the same way as the asset that is hedged, which allows for any changes in the value of the hedged asset and the derivative to offset (or be unrecorded in cases where the hedged item is recorded at amortized cost). For instance, if an interest rate swap is held to specifically hedge the value of a bond portfolio and

that interest rate swap qualifies as a highly effective hedge, then that interest rate swap can be accounted for on an amortized basis to effectively neutralize any changes in the value of the bond portfolio.

If a derivative no longer qualifies for hedge accounting (i.e., is no longer highly effective), then the mark-to-market accounting method should be used, and any changes in the fair value of the derivative should be recorded as unrealized gains (losses) directly to surplus in the current period. The accounting for derivatives used in income-generation transactions depends on the nature of the transaction and the accounting for the covering asset or underlying interest.

Schedule E is also related to derivatives and lists the counterparty exposure for all derivatives that are open at year-end. Counterparty is the person or institution on the other side of a transaction. This is important because it provides information to the regulators and any other users of the financial statements regarding any concentration of exposure to a specific counterparty. If the exposure to a counterparty becomes large enough that it is material relative to the surplus of a company, it should be considered as a potential warning sign.

Derivative accounting is very complex and beyond the scope of this publication. More detail regarding derivative accounting can be found in SSAP 86, *Accounting for Derivative Instruments and Hedging Activities*.

Other Sources of Investment Income

Although we have covered the largest and most common sources of investment income, there are other sources. For additional information on those other sources, or for additional detail regarding any of the sources discussed here, refer to the corresponding statutory accounting guidance.

Investment Guidelines

As discussed, there is a variety of investment asset classes available to insurers, and there is a wide range of specific assets within each class. So when purchasing a bond, an insurer needs to make decisions on the type of issuer (e.g., government, corporate, asset-backed), industry, quality, maturity and country. Each company will make these decisions based on a set of investment guidelines, which are governed by state investment laws applicable to insurers. The various states have established investment laws, which provide guidance and limits regarding the investments allowable by the insurers domiciled in their jurisdiction. Although the NAIC has established model laws governing various aspects of insurers' operations (including investments), the laws adopted by individual states may vary from those model laws. For purposes of this discussion, we will focus on the NAIC Model Investment

Law.[23] The NAIC Model Investment Law allows for two alternative types of investment guidelines, which are referred to as Defined Limits and Prudent Person.

The Defined Limit system of investment guidelines follows a rule-based approach and prescribes specific quantitative limits for the invested assets that a company may hold. Examples of some of the prescribed limits include the following:

- 5% limit of admitted assets with any single issuer (exceptions for government bonds)
- 1% limit of admitted assets with any single issuer with rating of NAIC 3
- 0.5% limit of admitted assets with any single issuer with rating of NAIC 4 or lower
- 20% limit of admitted assets in all securities rated NAIC 3 or lower
- 10% limit of admitted assets in all securities rated NAIC 4 or lower
- 5% limit of admitted assets in all securities rated NAIC 5 or lower
- 1% limit of admitted assets in all securities rated NAIC 6
- 25% limit of admitted assets or 100% of surplus in all common stocks

The Prudent Person system of investment guidelines follows a principles-based approach and requires an insurance company to develop its own investment guidelines. If a company chooses to use the Prudent Person approach, it should develop the investment guidelines with the protection of the policyholder in mind, and it should consider the specific investment expertise and resources available.

Measuring Investment Performance

Although investment income is a critical aspect of an insurer's profitability, it can be difficult to measure investment performance and make comparisons between insurance companies. Several factors to consider are the size of the asset base of a company, the level of risk inherent in a company's investment portfolio and the impact of taxes on a company's investment income. Each of these considerations will be discussed below.

It may be tempting to compare the amount of investment income from one company to another or to create the ratio of investment income to written or earned premium. Neither of these approaches is an accurate measure of investment performance because they ignore the size of a company's invested assets. All things being equal, a company with 10 times the invested assets of another company would also be expected to generate 10 times the investment income. For that reason, one metric to consider is the ratio of the investment income for the year to the average invested assets.

That ratio will provide a basic comparison between two companies and how much investment income they are generating relative to their invested assets. However, this ratio does not consider the inherent risk to the assets that are being held. If one company has a significantly

[23] NAIC, *Model Regulation Service – January 2012, Index and Model Description*, MDL-280, 282, 283, and 340, http://www.naic.org/documents/committees_models_index.pdf, 2012.

higher percentage of its assets in common stocks or lower-rated bonds, it would be expected to achieve a higher investment return during a good year, but the level of risk is significantly higher. While there may not be a single ratio or metric that measures this inherent level of risk, it is at least possible to qualitatively compare the types of assets held by two companies to see if there are significant differences.

Measurement and comparison of investment performance is also difficult due to taxes. As discussed earlier in this chapter, net investment income earned is presented on the income statement before the effects of federal income taxes. On the other hand, net realized capital gain (loss) is presented after capital gains tax. Two companies that had the same net investment income earned may be subject to different taxation. The full implications of the impact of taxes on investment income are beyond the scope of this publication, but a user of the financial statements should be aware of this potential difference and seek input from a tax professional as needed.

OTHER INCOME

As shown in the summary of the industry income statement, the other income category is relatively small compared to the other two categories. For that reason, only a few of the significant sources of other income will be discussed below. Although they are not technically considered to be part of other income, dividends to policyholders and federal and foreign income taxes are also discussed below because they are part of the consideration of net income.

Net Gain (Loss) from Agents' or Premium Balances Charged Off (Line 12)

In *Chapter 7. Statutory Balance Sheet*: A Measure of Solvency, we discussed the assets related to uncollected and deferred agents' balances. If a company determines that a portion of those balances will not be collected, those balances should be charged off as a loss and are recorded as an expense under this category in other income. Conversely, if an agents' balance that was previously written off is recovered, that recovery would be included as a gain in this category. Losses can be used to offset gains that occur during the same period.

Finance and Service Charges not Included in Premiums (Line 13)

Insurers will often offer financing or payment plans to the insured that allow the insured to spread out premium payment over time. Typically, the insured will pay an additional flat service charge to pay through these financing or payment plans. Those service charges are not recorded as a part of written or earned premium and are instead included in this category under other income.

Aggregate Write-ins for Miscellaneous Income (Line 14)

While the amounts included as miscellaneous write-ins are not usually material, several of the common entries are the following:

- Gain or Loss on Sale of Equipment: When furniture, equipment or automobiles are sold, the sale price may differ from the current depreciated cost. That difference may be recorded as either a gain or a loss under other income.
- Retroactive Reinsurance: An insurer may purchase reinsurance on existing liabilities, and the reinsurance premium paid may be more or less than the previously recorded value of the liabilities transferred. That gain or loss is recorded as other income.
- Gain or Loss on Foreign Exchange: When payments are made or received in a foreign currency, the ultimate settlement of the payment may be at a different exchange rate than the exchange rate at which the payment was originally recorded, and the resulting gain or loss is recorded as other income. This does not include changes in investment income due to foreign exchange, which were already discussed.
- Corporate Expense: Some insurers will record some corporate expenses that are not allocable to underwriting or investments, such as national advertising, to other expenses.
- Fines and Penalties of Regulatory Authorities: As per the Annual Statement Instructions, all fines and penalties imposed by regulatory authorities must be disclosed separately, regardless of materiality.

Dividends to Policyholders (Line 17)

The board of directors of a mutual insurance company may elect to pay a dividend to the policyholders. A dividend is effectively a return of a portion of the premium that was originally paid by the policyholder, and for a dividend to be paid, there are typically state requirements. When the decision is made to pay a dividend, it is considered to have been "declared," and payment won't actually be issued until a later date.

This item on the income statement includes dividends that were actually paid plus the change in accrued dividends.

Federal and Foreign Income Taxes Incurred (Line 19)

All foreign and federal income taxes that are incurred during the current year, including amounts related to prior years, are recorded on this line. This amount of income taxes incurred represents an estimate of the current income taxes incurred during the reporting period and excludes any amounts that would be deferred to later years. Further detail on taxation appears in *Chapter 26. Taxation in the U.S.*.

CHAPTER 9. CAPITAL AND SURPLUS ACCOUNT

In addition to various income items that have already been discussed, the Statement of Income within the Annual Statement also includes a section referred to as the "Capital and Surplus Account." This section is important because it reflects certain changes in surplus that are not recorded in the income statement and it reconciles the beginning surplus to the ending surplus for the reporting period.

In its simplest form, the key components of the Capital and Surplus Account are listed in Table 5 as follows:

Current Year Surplus (line 39) =
- Prior Year Surplus (line 21)
- \+ Current Year's Net Income (line 22)
- \+ Other Surplus Changes (lines 24 through 31)
- \+ Additional Capital Contributions (lines 32 and 33)
- \+ Stockholder Dividends (line 35)[24]

Under Statutory Accounting Principles, certain transactions are recorded directly to surplus, so the Other Surplus Changes component includes a number of important subcomponents. Table 5 is an excerpt of the Capital and Surplus Account for the U.S. property/casualty insurance industry as of December 31, 2011.[25]

[24] Stockholder dividends represent a charge to surplus for amounts paid during the year plus the change in the amount of dividends declared but unpaid during the year. These amounts are shown as a negative number in line 35 of the Capital and Surplus Account and therefore added, as a negative number, to calculate current year surplus. Table 5 demonstrates this calculation.

TABLE 5[26]

Statement of Income, Capital and Surplus Account Section: Total U.S. Property/Casualty Insurance Industry SNL Briefing Book — U.S. 2011 Statutory Financials, NAIC Format (USD in 000s)		
Line	**Description**	**Amount**
21.	Surplus as of December 31 of prior year	571,059,427
22.	Net income	20,123,505
24.	Change in net unrealized capital gains (losses) less capital gains tax	(3,233,712)
25.	Change in net unrealized foreign exchange capital gain (loss)	(380,971)
26.	Change in net deferred income tax	1,074,133
27.	Change in nonadmitted assets	(1,446,063)
28.	Change in provision for reinsurance	262,032
31.	Cumulative effect of changes in accounting principles	(15,121)
32.	Capital changes	30,609
33.	Surplus adjustments	2,896,742
35.	Dividends to stockholders	(27,695,087)
37.	Aggregate write-ins for gains or losses to surplus	365,756
**	Other adjustments to surplus (see footnote)	(947,528)
38.	Changes to surplus for the year (lines 22 through 37 and **)	(8,965,705)
39.	**Surplus as regards policyholders, December 31 current year**	**562,093,722**

The first item of Table 5, surplus as of December 31 of prior year, is taken directly from the Capital and Surplus Account from the prior year. Net income comes from the Statement of Income. The remaining rows describe the direct adjustments to surplus. An explanation of some of the important adjustments is below.

Change in Unrealized Capital Gains (Losses) (Line 24)

We previously discussed the concept of realized and unrealized capital gains in the discussion of investments and investment income. Capital gains (losses) occur when the carrying value of an asset changes, but those capital gains (losses) are only realized when an asset is either disposed of or impaired.

Recall that in the investment income section of the Statement of Income, realized capital gains (losses) are recorded in income, but unrealized capital gains (losses) are not. Unrealized capital gains (losses) occur when the fair values of investments carried at fair value change during the reporting period. Because these unrealized capital gains (losses) are reflected in

[26] The amount contained in the line denoted by ** in Table 5 of $(947,528) is equal to the sum of lines 23, 29, 30, 34 and 36 from the 2011 Statement of Income for the Total U.S. Property/Casualty Insurance Industry accessed via SNL Financial LC, plus a balancing item. The balancing item was added by the authors so that line 38 would reconcile to the amount provided in the dataset accessed via SNL Financial LC. The addition of a balancing item was for this table only and is not a standard practice.

the balance sheet but not in net income, an adjustment to surplus is required to maintain the Assets – Liabilities = Surplus relationship.

Because the current year's surplus is being calculated with the prior year's surplus as a starting point, the required adjustment is the *change in* net unrealized capital gains (losses) relative to the prior year, not the absolute amount of unrealized capital gains for the current year. This amount can be found in column 4 of the Exhibit of Capital Gains (Losses).

Unrealized capital gains (losses) most frequently occur with respect to stock holdings that are held at fair value because any change in the fair value from year to year affects capital gains (losses). Bonds may also produce unrealized capital gains, but this would typically only occur when a bond is rated National Association of Insurance Commissioners (NAIC) 3 or lower and is therefore recorded at fair value. Perpetual preferred stock and redeemable preferred stock that is rated in the four lowest rating categories could also produce unrealized gains since they also may be recorded at fair value.

Change in Net Unrealized Foreign Exchange Capital Gains (Losses) (Line 25)

This item is similar to the change in unrealized capital gains (losses), but it is specifically related to unrealized capital gains (losses) due to changes in the foreign exchange rate. When an asset is purchased in a foreign currency, any subsequent change in value due to foreign exchange rates as long as that asset is held are considered to be unrealized capital gains (losses). This amount can be found in column 5 of the Exhibit of Capital Gains.

Change in Net Deferred Income Tax (Line 26)

Deferred tax assets (DTAs) and deferred tax liabilities (DTLs) were already discussed in the previous discussion of the balance sheet (*Chapter 7. Statutory Balance Sheet*: A Measure of Solvency). DTAs and DTLs can arise for a variety of reasons, but the most common are differences in statutory and tax accounting (such as in the discounting of loss reserves, unrealized gains/losses and unrealized foreign exchange gains/losses) and carryforward of previous operating losses to future tax years. DTAs are only considered admitted assets if a strict admissibility test is met. All surplus adjustments are recorded net of deferred taxes if there is a difference in the treatment of the item for statutory accounting and tax purposes. Similar to unrealized capital gains, net DTAs affect the balance sheet but do not flow through to income. As a result, a direct adjustment is required to surplus to maintain the equality of Assets – Liabilities = Surplus. The change in deferred taxes is determined before consideration of the nonadmitted portion because the change in nonadmitted DTAs is captured with all the other nonadmitted assets.

Change in Nonadmitted Assets (Line 27)

The concept of nonadmitted assets was introduced in the previous discussion of the balance sheet. Nonadmitted assets are assets that are not allowed to be considered part of surplus for

the purpose of statutory accounting. This creates a violation of the Assets – Liabilities = Surplus relationship.

As with the previous items, the adjustment required is based on the *change* in nonadmitted assets relative to the prior year, not the current absolute amount. There is a specific exhibit in the Annual Statement, the Exhibit of Nonadmitted Assets (page 13 of the 2011 Annual Statement), which calculates the change in nonadmitted assets relative to last year by asset class and in total. The total change in nonadmitted assets from that exhibit is the source for the amount used as the change in nonadmitted assets in the Capital and Surplus Account.

Change in Provision for Reinsurance (Line 28)

Like nonadmitted assets, the provision for reinsurance is a concept that reduces surplus and is unique to statutory accounting. While nonadmitted assets are essentially treated as assets that are excluded from surplus, the provision for reinsurance is treated as an additional liability on the balance sheet (though no real liability exists). The provision for reinsurance is included on the balance sheet, but it does not flow through to the Statement of Income, which is why a direct adjustment to surplus is required.

The Liabilities page of the balance sheet shows the current year and the past year provision for reinsurance, so change in the provision for reinsurance can be calculated from those amounts. The amount of the change in the provision for reinsurance is included in the Capital and Surplus Account.

Cumulative Effect of Changes in Accounting Principles (Line 31)

Sometimes a company must adopt changes in accounting principles, either due to new accounting guidance, or a change in accounting policy. When such a change occurs, a company must determine the cumulative effect of the change (as if the accounting principle had always been in place) as of the beginning of the reporting period the change is made. The cumulative effect of the change is recorded as a direct adjustment to surplus.

Although an entry for a cumulative effect of changes in accounting principles could be required for many reasons, here are two examples:

- Anticipated salvage and subrogation: Companies have the option to record unpaid losses net of anticipated salvage and subrogation. When a company elects to change the recording from gross of salvage and subrogation to net of salvage and subrogation, the cumulative effect of this change should be reported here.
- Tabular discounting: When companies record loss reserves for life pension reserves, they have the option to discount for interest and mortality according to a prescribed actuarial table and interest rate. This is referred to as tabular discounting. When a

company makes a change in its use of tabular discounting, the cumulative impact of that change should be recorded here.

Capital Changes and Surplus Adjustments (Lines 32 and 33)

The lines for capital changes and surplus adjustments primarily describe inflows and outflows of capital from the new issuance of stock or return of capital, as well as transfers from surplus to capital when stock dividends are issued. When new stock is issued, the portion of the proceeds related to the par value of that stock is recorded as paid-in capital on line 32.1. The portion of the proceeds in excess of the par value is recorded as paid-in surplus on line 33.1.

Dividends to Stockholders (Line 35)

The board of directors of an insurance company may elect to pay a dividend to the stockholders, which serves as a return on the stockholders' investment. Stockholder dividends may only be paid out of unassigned surplus, which is surplus that is not assigned to the par value or paid in value of stock, special surplus funds, surplus notes or treasury stock. There are also specific state requirements that must be met for a stockholder's dividend to be paid.

The amount shown as dividends to stockholders equals the actual amount paid during the year plus the change in the amount of dividends declared but unpaid during the year.

SUMMARY

This section described the three sources of income on the Statement of Income (underwriting, investment and other) and discussed the Capital and Surplus Account within the Statement of Income, where total change in surplus is determined.

While actuaries are most familiar with the aspects relating to underwriting income, they should also be familiar with investment income, given the significance of investment income to the pricing and profitability of an insurer. Understanding the various items that affect the change in surplus is also important because this not only provides the link between the profitability and the solvency of a company (or the income statement and the balance sheet), but it also highlights several direct adjustments to surplus that may require input from an actuary.

CHAPTER 10. NOTES TO FINANCIAL STATEMENTS

We have now covered the numerical aspects of three of the primary financial statements: the balance sheet, income statement, and statement of capital and surplus. For some of the balances, Statutory Accounting Principles (SAP) requires additional qualitative or quantitative information in order to more fully portray the financial condition of an insurer. The Notes to Financial Statements include some of this additional qualitative and quantitative information.

This publication will focus on specific notes that often require direct involvement by actuaries and the notes that are potentially relevant to actuaries. The notes within each of those two categories are described below:

- Notes often requiring direct involvement by actuaries:
  - Reinsurance (23)
  - Change in incurred loss and loss adjustment expense (LAE) (25)
  - Premium deficiency reserves (30)
  - Discounting of liabilities for unpaid loss and LAE (32)
  - Asbestos/environmental reserves (33)
- Notes that are potentially relevant to actuaries:
  - Summary of significant accounting policies (1)
  - Events subsequent (22)
  - Intercompany pooling (26)
  - Structured settlements (27)
  - High deductibles (31)

The numbers listed next to each note above are the numbers corresponding to that note in the 2011 Notes to Financial Statements included in the Annual Statement Blank. These numbers may change from year to year due to the addition or subtraction of the notes that are required, so these numbers will not be used in the rest of this discussion. Examples will be drawn from the 2011 Notes to Financial Statements for Fictitious (referred to as the 2011 Fictitious Notes). It is also suggested that the reader review an example of the Notes to Financial Statements from a current insurance company Annual Statement as they review this section.[27]

For each of the notes described, the following information will be provided:

- Information contained in the note
- Importance of the note to actuaries
- Example of information from the 2011 Fictitious Notes

[27] The Notes to the Financial Statements are included only in individual company Annual Statements, not in group Annual Statements.

Readers seeking more detail on any notes listed above or on other notes to financial statements can refer to either the National Association of Insurance Commissioners (NAIC) Annual Statement Instructions or the paper *Notes to the NAIC Property/Casualty Annual Statement* by Sholom Feldblum and Ralph Blanchard (October 2010).

NOTES OFTEN REQUIRING DIRECT INVOLVEMENT BY ACTUARIES

These five notes typically require direct input from the actuaries at an insurance company, though in each case the management of the company is ultimately responsible (and in some cases the actuary may be a member of management). Because actuaries will likely be the primary source of input in these cases, readers should review these notes in detail and understand what information is needed to complete them.

Reinsurance

The loss and LAE reserve liabilities on the balance sheet and the underwriting income on the income statement are expressed net of reinsurance. Given that reinsurance can significantly lower the loss and LAE reserves on the balance sheet and affect the level of surplus, disclosures regarding the reinsurance in place are important to assessing the financial health of a company. Actuaries typically estimate the ceded reserves on reinsurance contracts and are therefore directly involved in the preparation of this note.

In particular, it is important to understand the potential credit risk associated with the assumed reinsurance recoverables (the risk that the reinsurer will not pay). This note provides information on specific liabilities for which the credit risk may be heightened, such as unsecured recoverables, recoverables in dispute and recoverables that have been deemed uncollectible.

In addition to the assessment of credit risk, there are also some specific accounting rules related to reinsurance that require additional disclosure. The note includes several of these matters, namely the commutation of ceded reinsurance, retroactive reinsurance, reinsurance accounted for as a deposit and run-off agreements.

There are eight sections of this note labeled A through H. A brief summary is provided on each of these sections:

- Unsecured Reinsurance Recoverables (Section A): The credit risk related to recoverables with a specific reinsurer is often mitigated by the reinsured having access to a letter of credit, trust agreement or funds withheld. This note discloses reinsurers for which no such security exists, but only in cases where the recoverable from that reinsurer exceeds 3% of the reporting entity's (i.e., the reinsured's) policyholder surplus. The mention of a reinsurer in this note is not necessarily a problem because those reinsurers may be highly rated and financially sound. The

amounts shown for each include paid losses billed but not yet collected, ceded reserves and ceded unearned premium.

- Reinsurance Recoverables in Dispute (Section B): Even when a recoverable is secured, it is possible for a reinsurer to dispute (or refuse to pay) a recoverable. A reinsurer may dispute either because they are unwilling to pay due to a disagreement on the coverage or amount or because they are unable to pay due to insolvency. A recoverable is considered to be in dispute once a formal written refusal to pay is received from the reinsurer. In addition to identifying a credit risk, recoverables in dispute might represent attempts by a financially troubled insurer to over-recover from reinsurers.

- Reinsurance Assumed and Ceded (Section C): Although unclear from the vague naming, this section includes information on ceding commissions to reinsurers related to the ceded unearned premium reserve. These ceding commissions received from reinsurers are treated as revenue by the insurer and therefore benefit the insurers' surplus position. This section helps regulators to identify situations where an insurer may be abusing ceding commissions to artificially enhance its surplus position, and it provides information on ceding commissions that would need to be returned in the event of cancellation. Specific disclosure is also required for contingent ceding commissions.

- Uncollectible Reinsurance (Section D): If an insurer deems that it is unlikely to collect a specific reinsurance recoverable, it must write off that recoverable as uncollectible and treat it as an expense. This section of the note includes a description of any recoverables that were written off as uncollectible during the course of the year. The disclosures in this note may help an actuary or other user of the financial statements to assess provisions set aside for future uncollectible reinsurance, which is reflected in the Provision for Reinsurance derived in Schedule F.

- Commutation of Ceded Reinsurance (Section E): A commutation is a "transaction which results in the complete and final settlement and discharge of all, or the commuted portion thereof, present and future obligations between the parties arising out of a reinsurance agreement."[28] This note requires disclosure of any commutations that occurred during the year. This information is important to a user of the financial statements because a commutation may cause a distortion to the income statement and balance sheet because the commutation payment received from the reinsurer may be reflected as a negative paid loss and the net loss reserves may increase to reflect the elimination of the reinsurance.

[28] SSAP 62.

- Retroactive Reinsurance (Section F): Retroactive reinsurance refers to reinsurance that is purchased for liabilities that occurred prior to the effective date of the reinsurance contract. Retroactive reinsurance must be accounted for differently than normal prospective reinsurance to avoid distortion of the balance sheet and income statement. Instead of reducing the net loss reserves, retroactive reinsurance reserves are recorded separately as a write-in item on the balance sheet with any gain recorded in the income statement and as a restricted special surplus amount. This section of the note includes disclosure of any retroactive reinsurance, including reserves transferred, consideration paid or received, paid losses reimbursed or recovered, special surplus generated, and other reinsurers involved in the transaction. This section allows a user of the financial statements to verify that retroactive reinsurance is being accurately accounted for and to understand its impact on the financial statements.

- Reinsurance Accounted for as a Deposit (Section G): To be accounted for as reinsurance, a reinsurance contract must meet certain risk transfer criteria. When a reinsurance contract does not qualify for reinsurance accounting, it must be accounted for as a deposit. This means that it is directly accounted for as a deposit asset or liability (depending on if amounts are owed from or to, respectively, other parties under the contract), instead of flowing through underwriting income. If a company has any reinsurance contracts that are accounted for as deposits, a schedule showing the historical changes to the balance since inception of each contract is included.

- Disclosures for the Transfer of Property Casualty Run-off Agreements (Section H): Run-off agreements are reinsurance agreements intended to transfer the risks and benefits of a specific line of business or market segment that is no longer actively marketed by the transferring insurer to a third party. This third party is often another insurance or reinsurance company. If certain criteria are met, a run-off agreement can be accounted for differently than is typically required for retroactive reinsurance. If these criteria are met, the transferring entity records the consideration paid to the assuming entity as a paid loss. If the consideration paid by the transferring entity is less than the loss reserves transferred, the difference is recorded by the ceding entity as a decrease in losses incurred. As noted above, retroactive reinsurance that is not considered a run-off agreement is recorded as a separate item on the balance sheet with no reduction in incurred losses at the time of the transaction.

In summary, this note is helpful to an actuary or other user of the financial statements because it identifies potential credit risks (Sections A, B and D) and identifies types of reinsurance that are subject to specific accounting treatment (Sections C, E, F, G and H). For the sections related to credit risk (A, B and D), the user of the financial statements may ask the following kinds of questions if material balances exist:

- Section A (Unsecured Recoverables): Why wasn't security provided? Are there concerns of the financial health of either the reinsurer or the reinsured? Was there a catastrophe that led to a large amount of recoverables? Are all of these unsecured recoverables concentrated with one reinsurer?

- Section B (Recoverables in Dispute): What is the point of disagreement with the reinsurer? Is the amount in dispute material to either the reinsured or the reinsurer? Are there legal opinions available on the validity of each side's claim?

- Section D (Uncollectible Reinsurance): What was the reason for the uncollectible reinsurance? Could other outstanding recoverables also be uncollectible in the future for the same or similar reasons? How long did it take the company to write off any uncollectible reinsurance that was disclosed?

The disclosures in this note are of specific interest to an actuary who is opining on a company's loss reserves because several of these items are referred to explicitly in the Statement of Actuarial Opinion (SAO).

A review of the 2011 Fictitious Notes indicates that Fictitious provided disclosures related to unsecured reinsurance, commissions and retroactive reinsurance. The other items were not applicable for the 2011 year.

Change in Incurred Loss and Loss Adjustment Expense

The total incurred loss and LAE for a year can be thought of in two categories: (1) loss and LAE that were incurred on liabilities occurring during the current accident year and (2) any changes in incurred loss and LAE from previous accident years. This note relates only to the second of these two items. The content of this note should include the amount of the change (i.e., reserve strengthening or weakening) in liabilities for previous accident years, the segments or lines of business that led to that change, and the reason for the change.

The importance of this note to the financial health of an insurance company is two-fold. First, the existence of a material change in prior accident years' incurred losses and LAE affects the current year's underwriting income and could obscure the true underlying experience of the current in-force business. A company that achieved positive underwriting income solely as a result of decreases to prior years' loss and LAE estimates may have profitability issues on their current business.

Second, recurring material changes in prior accident year incurred loss and LAE may be indicative of a bias or problem with a company's reserving process. For instance, if a company consistently experiences significant decreases in their estimates of prior accident years' losses, then there may be inherent conservatism to the company's process for establishing

loss and LAE reserves. Schedule P provides additional information that may assist in this assessment, and it will be discussed in more detail in *Chapter 15. Schedule P*.

Actuaries should be familiar with the required content of this note so that they are prepared to provide input to management. Also, when reviewing a company's financial statements, actuaries may be in the best position to identify one of the two problems noted above. This note should be consistent to the similar note included in the annual Generally Accepted Accounting Principles financial statements and also to the one-year development column from Schedule P, Part 2 (with the exception of Adjusting & Other Loss Adjustment Expenses, which are included in this note but not in Schedule P, Part 2).

Finally, if the actuary is the Appointed Actuary for the company, the actuary may be called on to understand the difference in estimates underlying the loss reserves since the prior year's estimates and comment on those changes in the Appointed Actuary's Statement of Actuarial Opinion. For that reason, the actuary needs to be aware of the content of this note.

In the case of the 2011 Fictitious Notes, it is disclosed that the prior year-end total loss and LAE reserves developed favorably by $875,000, and several specific segments were cited as the major drivers of this favorable development. According to Fictitious' income statement, the company's net income in 2011 was $2.2 million. This tells the user of the financial statements that the favorable reserve development was a significant factor in the financial results of the company for the year. *Chapter 12. Five-Year Historical Data Exhibit* will provide guidance on how to assess whether this favorable development has been occurring consistently over time.

Premium Deficiency Reserves

Premium deficiency reserves must be recorded when the unearned premium of in-force business is not sufficient to cover the losses, LAE and maintenance expenses that will arise as that premium is earned. Companies have the option to consider investment income when performing this calculation. Also, before performing the calculation, the business should be grouped in a manner that is consistent with how it is marketed, serviced and measured.

Most insurance policies sold by insurance companies are priced with rates that are greater than the expected losses and expenses, especially after consideration of investment income. Furthermore, if there is a segment of the business that is underpriced, it may be a part of a larger grouping where the deficiency in that segment is offset by other more profitable segments. For these reasons, the premium deficiency reserve will be zero for a majority of companies. However, there are cases where a non-zero premium deficiency reserve exists due to regulatory, competitive or other conditions that led to inadequate rates.

When a non-zero premium deficiency reserve does exist, a company may record it as either a write-in liability or a part of the unearned premium reserve on the balance sheet. When it is

recorded as a part of the total unearned premium reserve liability, Notes to Financial Statements is the only way to identify whether a premium deficiency reserve exists and the amount of the reserve.

In the note relating to premium deficiency reserves, the company must disclose the amount of the premium deficiency reserve. The company also needs to disclose whether investment income was considered in the determination of the premium deficiency reserve (although this is often disclosed in the accounting policy note).

This note is relevant to users of the financial statements because the existence of a premium deficiency reserve is usually a clear indication that issues of rate adequacy exist for at least the affected segment. However, the absence of a non-zero premium deficiency reserve does not necessarily indicate that rates for all business segments are adequate, due to the ability to consider investment income and to group segments into broad categories.

As a result of actuaries' involvement in the pricing and reserving of business, actuaries are in a position to provide input on whether a premium deficiency reserve is necessary and on the amount of the premium deficiency reserve. The analytical approach for this is beyond the scope of this publication, but there are other resources available that provide direction.

In the 2011 Fictitious Notes, the note on premium deficiency reserves indicates that at December 31, 2011, the company had liabilities of $0 related to premium deficiency reserves, and anticipated investment income was considered in that determination. If an insurer were to elect to change its consideration of investment income from one year to the next for the purposes of calculating the premium deficiency reserve, that change would likely need to be disclosed, along with the amount of the impact, in the Note called "Accounting Changes and Correction of Errors."

Discounting of Liabilities for Unpaid Loss and Loss Adjustment Expenses

This note indicates whether a company discounts loss reserves, and if so, it also describes the basis for calculating the amount of the discount. There are two types of discounting that need to be disclosed: tabular discounting and non-tabular discounting.

Tabular discounting applies specifically to outstanding annuity-type claims that pay pension benefits. These claims arise most commonly from workers' compensation coverage but may also arise from other types of liability coverage. A tabular discount reflects mortality assumptions according to a specific life table and a defined interest rate. Both the life table and the interest rates may be specified by the state regulator. Not all insurance companies that have these eligible liabilities choose to utilize tabular discounts.

In the first part of this note, the company needs to indicate whether any liabilities are discounted using tabular discounting. If any tabular discounting is used, the company also needs to indicate the basis and assumptions used in calculating the tabular discount. For

instance, in the 2011 Fictitious Notes, the company disclosed that tabular workers' compensation case reserves were discounted under various state laws, reflected a discount rate of 3.5% or a rate prescribed by the state regulator, and were derived based on a defined set of U.S. life tables.

In the second part of this note, any non-tabular discounting needs to be disclosed and described. This should reconcile to the amount of the non-tabular discount that was disclosed in Schedule P, Part 1, columns 32 and 33. Non-tabular discounting is less common than tabular discounting and is typically only done in specific cases where a company has been permitted by its state regulator to discount a specific type of liability. Two lines of business most commonly used for non-tabular discounting are workers' compensation and medical professional liability.

While tabular discounts are calculated for specific pension claims, non-tabular discounts are typically calculated on the aggregate amount of a specific segment of reserves by using a projected payment pattern and an assumed discount rate. If a company applies any non-tabular discounting, they must disclose that and describe the basis in this note. We can see from the 2011 Fictitious Notes that the company did not apply non-tabular discounting.

The note also requires a company to disclose whether any of the key assumptions used to discount loss reserves (whether for tabular or non-tabular discounting) have changed relative to the prior year.

It is important for actuaries and other users of the financial statement to be familiar with this note because different companies have different discounting policies, and those differences must be considered to make a consistent comparison. Non-tabular discounts may be of particular interest because they usually exist due to a specific exception granted by the regulator, which may relate to the solvency of an insurer. Furthermore, an actuary that is opining on the loss reserves of a company must disclose and describe any discounting of loss reserves in the SAO.

Asbestos/Environmental Reserves

Asbestos and environmental liability reserves have developed adversely over the past several decades. Therefore, exposure to asbestos or environmental liabilities can represent a significant source of uncertainty in a company's loss and LAE reserves. Furthermore, asbestos and environmental liabilities have consistently developed adversely over the past several decades. For these reasons, specific qualitative and quantitative disclosure is required regarding a company's asbestos and environmental reserves.

This note requires a company to disclose whether it has identified a potential exposure to asbestos or environmental reserves. These disclosures specifically exclude exposures relating to policies that were issued specifically to cover asbestos and environmental exposure. If the

company answers affirmatively for either asbestos or environmental exposures, it must disclose the lines of business affected, the nature of the exposures and the reserving methodology used to estimate the liability. In addition to those qualitative disclosures, the company must complete a table that provides the following information for each of the past five years:

- Beginning loss and LAE reserves
- Incurred loss and LAE
- Calendar year payments for losses and LAE
- Ending loss and LAE reserves

This information must be provided separately for asbestos and environmental reserves on a direct, assumed and net of reinsurance basis. The company must also disclose the amount of the reserves that relate to unreported claims (i.e., pure incurred but not reported (IBNR)).

This note is important to the users of the financial statements because it discloses the existence of asbestos and environmental exposure, the magnitude of that exposure and the recent development of that exposure. In cases where these liabilities are material relative to a company's overall reserves and/or have consistently been developing adversely, it should serve as a potential warning sign to the financial health of the company.

Actuaries at insurance companies are often directly involved in the estimation, monitoring and reporting of asbestos and environmental reserves. In situations where the financial statements of a company are under financial review, actuaries may also be in the best position to evaluate the disclosures made here for potential impact on the financial health of the company.

In the 2011 Fictitious Notes, the company acknowledged exposure related to asbestos and environmental liabilities. The company then described its process for identifying, monitoring and estimating these exposures.

The excerpt below in Table 6 shows an example of the five-year history of the calendar year incurred and paid asbestos losses and LAE on a net of reinsurance basis for Fictitious. In this case, we see that the net asbestos liability as of December 31, 2011, was $3.28 million. We also see that there was adverse development in Fictitious' asbestos reserves from 2008 through 2011, as evidenced by the incurred losses and LAE each year.

TABLE 6

Net of Ceded Reinsurance Basis — Asbestos	2007	2008	2009	2010	2011
a. Beginning reserves	$5,450,000	$5,023,000	$3,920,000	$3,709,000	$3,426,000
b. Incurred losses and LAE	–	$49,000	$249,000	$188,000	$236,000
c. Calendar-year payments for losses and LAE	$427,000	$1,153,000	$459,000	$471,000	$382,000
d. Ending reserves	$5,023,000	$3,919,000	$3,710,000	$3,426,000	$3,280,000

The excerpt below in Table 7 includes the information on the portion of these reserves that relates to unreported claims.

TABLE 7

Ending Loss and LAE Reserves for Unreported Claims Included in Part A Above	
1. Direct basis	$3,116,000
2. Assumed reinsurance basis	$0
3. Net of ceded reinsurance basis	$2,782,000

From Tables 6 and 7 we see that $2.78 million out of the total $3.28 million in asbestos reserves (85%) related to unreported claims. The strong majority of the liability that is related to unreported claims underscores the high level of uncertainty in these liabilities.

NOTES THAT MAY BE POTENTIALLY RELEVANT TO ACTUARIES

In addition to the five notes described above, there are several other notes that may be potentially relevant to actuaries. Actuaries should be familiar with these notes and their significance, and they may need to review them when they are evaluating the reserves for a company (particularly if they are the opining actuary).

Summary of Significant Accounting Policies

This note describes the accounting rules used to produce the Annual Statement, including:

- The source of the accounting rules (typically the NAIC *Accounting Practices and Procedures Manual*)
- Any exceptions that were made in applying those rules and the basis for those exceptions, such as an exception that made with specific state approval
- Additional detail on the company's significant accounting policies

Where exceptions are made to the rules in the NAIC *Accounting Practices and Procedures Manual*, they must typically be either prescribed or permitted. "Prescribed" refers to practices that are required by state law, and "permitted" refers to approval by the state regulator.

An actuary who is evaluating the reserves of a company will want to review this note to identify prescribed or permitted practices or other accounting policies that relate to loss reserves. Any unexpected deviations described in this note should be evaluated for their impact on the reserves and general financial health of the insurance company.

The following provides an excerpt of this note as provided in the 2011 Annual Statement for Fictitious:

> 1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES.
>
> A. Fictitious Insurance Company prepares its statutory financial statements in conformity with accounting practices prescribed or permitted by the state of Florida. The state of Florida requires that insurance companies domiciled in Florida prepare their statutory basis financial statements in accordance with the National Association of Insurance Commissioners (NAIC) Accounting Practices and Procedures Manual, subject to any deviations prescribed or permitted by the Florida Insurance Commissioner. The impact of any permitted accounting practices on policyholder surplus of the Company is not material.

As shown in this excerpt, the company prepared its statutory financial statements in conformity with the practices prescribed or permitted by the State of Florida and with the NAIC *Accounting Practices and Procedures Manual*, subject to deviations prescribed or permitted by the Florida Insurance Commissioner. Further, the note indicates that the impact of any permitted practices on policyholder surplus was not material.

Events Subsequent

Subsequent events are broadly defined as events that occur between the accounting date of the financial statements (for instance, December 31) and the date that the financial statements are issued (for instance, March 1). Within the broad category of subsequent events, there are also two specific types that should be defined:

- Type 1 (Recognized Subsequent Events) subsequent events provide "additional evidence with respect to conditions that existed as of the date of the Balance Sheet." An example of this type of information would be if updated information was received on a large claim on January 15, when that claim had already been reported and known of prior to December 31, and the company deemed that insufficient IBNR was carried to cover the additional needed reserve.
- Type 2 (Nonrecognized Subsequent Events) subsequent events provide "evidence with respect to conditions that did not exist at the time of the Balance Sheet." An example of a Type 2 subsequent event would be if a new large claim occurred on January 15 and was not previously known.

Type 1 subsequent events should already be reflected in the recorded amounts of the financial statements because the financial statements should reflect all information that is known up until the day that the financial statements are issued relating to the conditions that existed as of the accounting date. Disclosure is not needed unless it is "necessary to keep the financial statements from being misleading." For example, if the booked reserves could not be adjusted in time to incorporate the revised reserve amount necessary to reflect the Type 1 event, this note would disclose the amount by which the reserves need to be adjusted. Note

that changes that are made to reserves due to their normal continual review are not considered Type 1 events.

Type 2 subsequent events are not already, and should not be, reflected in the financial statement. However, they should be described in this note if they "may have a material effect on the financial condition of the company." The guidance says "may have," which means that even if a company has determined that the impact is not material, it should still be disclosed as long as it "may have" a material impact. Type 2 subsequent event disclosure, of course, requires use of management's judgment.

An actuary or other user of the financial statement may consider reviewing this note to verify whether there are any material subsequent events that are not reflected in the financial statements. This is of specific importance to an actuary that is opining on a company's loss reserves because the opining actuary will need to determine whether a subsequent event is material to the estimate of the loss reserves and whether that subsequent event should be considered.

Review of the 2011 Fictitious Notes indicates that no subsequent events were disclosed.

Intercompany Pooling

Intercompany pooling is a common arrangement among companies in a group in which each of the participants fully cedes all of its business to the pool leader, and then each participant assumes back a specific percentage of the total.

In these situations, it is important for a regulator or any other user of the financial statements to understand the pooling arrangement to assess the solvency of the group as a whole. This note discloses the existence of the pooling arrangement and also describes the cessions and assumptions that occur. Typically, this includes identification of each company in the group, the lead company and the pooling percentages for each participant.

In cases where pooling exists, it will affect the various aspects of the Annual Statement in different ways. Some examples include the following:

- The Underwriting and Investment Exhibit will show direct business written by each company and the amounts ceded to the lead company in the pool and the portion of the pool assumed specifically by affiliates.
- Schedule F will show the cessions to the lead company as ceded reinsurance in Part 3 and the assumed business in Part 1.
- Schedule P will show only the pool member's share of the pooled results.

The 2011 Fictitious Notes indicate that this company did not participate in any intercompany pooling.

Structured Settlements

A structured settlement refers to a situation where an insurance company settles a claim by purchasing an annuity on behalf of a claimant. This is most commonly observed on workers' compensation or general liability claims, and the annuity is usually purchased from a life insurance company.

When the annuity is purchased, it is recorded as a paid loss by the original insurance company, and the claim is considered to be closed. However, if the life insurance company providing the annuity was ever to become insolvent, it is possible that the original insurer could still be liable for the remaining portion of the annuity payments.

The purpose of this note is to disclose the total amount of structured settlement payments for which an insurer could be held liable. Furthermore, if the amount of these remaining payments from a single life insurance company exceeds 1% of surplus, specific disclosure of the amount and the company from which the structured settlement was purchased is required.

This note is relevant to users of the financial statements because it describes a potential liability, or credit risk, that is not reflected on the balance sheet. The identification of life insurers that provide coverage for remaining payments exceeding 1% of surplus allows for further review of their financial condition to identify any significant issues.

Review of this note in the 2011 Fictitious Notes indicates that in total the company purchased structured settlements with a statement value of $4.3 million.

High Deductibles

High-deductible policies are commercial insurance policies that have a significant deductible, such as $250,000, giving the insured a substantial retention on each claim. Under these high-deductible policies, the insurer pays the full amount of the claim and then seeks reimbursement from the insured for the portion within the deductible. These types of policies are most commonly seen in workers' compensation but also may be used for liability business. Similar to the situation with structured settlements, these policies can present a credit risk to the insurer that is not apparent in the financial statements. For unpaid claims, the portion of the unpaid amount within the deductible is not included within the insurance company's booked loss reserve in the Annual Statement. The treatment for both paid and unpaid deductible losses creates a credit risk for the insurer due to the possibility that the insured will not reimburse them for the deductible portion of the loss.

This note requires disclosure of the following:

- The amount of reserve credit (i.e., the amount of case reserves established for the deductible portion of a loss) recorded by the company for unpaid claims.

- The amount of billed but not yet collected deductible reimbursements for paid claims.

To understand the potential impact of this credit risk, an actuary or other user of the financial statements who is reviewing the financial health of a company can consider the total amount of credit risk relative to the total unpaid claims and to the company's surplus.

As noted in the Notes to Financial Statements for Fictitious, Fictitious does not issue any policies with high deductible plans.

SUMMARY

Notes to financial statements provide additional qualitative and quantitative disclosure to support the numerical information provided in the statutory financial statements. The Notes provide additional detail to assist the user of the financial statement in understanding the numerical exhibits and provide a source of publically available information on off-balance sheet items.

CHAPTER 11. GENERAL INTERROGATORIES

In the previous chapter we discussed the Notes to Financial Statements. These notes provide additional information at the end of the financial statements in the interest of full disclosure of a company's financial condition. The notes address accounting policy and provide explanatory data and supplemental information to the financial statements. They assist the reader in interpreting some of the more complex items within a company's financial statements by expanding upon and adding clarity to specific items contained in the balance sheet and income statement. In contrast, the General Interrogatories are a series of questions within the statutory Annual Statement that the insurance company is required to respond to. The questions are divided into two parts:

- Part 1, Common Interrogatories, provides general questions applicable to life, health and property/casualty insurers.
- Part 2 provides questions that are specific to the type of insurance company (e.g., life, health or property/casualty). In the Property/Casualty Annual Statement, this section is Property & Casualty Interrogatories.

Similar to the Notes to Financial Statements, the responses provided in the General Interrogatories provide additional clarity to the reader of the Annual Statement but also serve to identify additional areas that warrant closer review by regulatory officials.

COMMON INTERROGATORIES

Part 1 contains of the following subheadings: General, Board of Directors, Financial, Investment and Other. The purpose of each section is to give the reader an understanding of the company's operations, business practices, and the types of internal and external controls in place.

General

The General subsection asks questions pertaining to the following topics:

- Holding company relationships
- Latest regulatory financial examinations
- Excessive sales commission levels
- Merger activity
- Suspension of licenses
- Foreign control
- Exemptions from required regulations
- Whether senior management is subject to a code of ethics

Answers to these questions provide the reader with additional information about the company and its discipline in following the "rules." For example, if a company has suspended licenses or does not comply with recommendations from the latest financial examinations, there may be a lack of internal discipline, and this company would therefore be looked at with further scrutiny by external parties. Likewise, further inquiry may be appropriate if a company reports excessive commission levels, as this might be a sign that the company is conceding on commission to maintain business or achieve growth.

The General subsection also provides the name and address of the independent certified public accountant (CPA) or accounting firm (the auditor) conducting the annual audit and the appointed actuary.

While important to peruse all the interrogatories, knowledge of the auditor, appointed actuary and latest financial exam(s) are of particular relevance to the property/casualty actuary.

Audit firm: The CPA opines as to whether the insurance company's financial statements are free of material misstatement and prepared in accordance with the accounting principles used. The audit firm is responsible for reconciling figures contained in a company's financial statements to detailed underlying balances and confirming amounts due to or from third parties.

It is important for the actuary to be aware of any misstatements in the financial statements or errors in the underlying data relied upon. Further, in accordance with National Association of Insurance Commissioners (NAIC) data testing requirements,[29] a company's independent accountant and appointed actuary are required to communicate so the accountant can determine which data relied upon by the actuary should be subject to audit testing procedures.

Actuary: The name, address and affiliation of the appointed actuary are provided in the General Interrogatories. The appointed actuary is the actuary explicitly appointed by the insurance company's board of directors, or equivalent body, to opine on the loss and loss adjustment expense (LAE) reserves reported in the company's Annual Statement. It is important for the user of the Annual Statement to know who the appointed actuary is; questions pertaining to the Statement of Actuarial Opinion should be addressed to the appointed actuary.

Latest financial examination: The General Interrogatories also provide information regarding the latest financial examination performed by state regulatory officials. The interrogatories include:

- The date of the latest financial exam

[29] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 19.

- The date through which financial statements were evaluated
- The release date of the examiner's report
- The name of the department performing the exam
- Whether the insurance company has complied with all adjustments and recommendations from the examination report

Regulatory examination reports are generally available to the public through the state insurance department in which the exam was performed. The examination report will provide the state's findings with respect to the adequacy of the company's loss and LAE reserves.

Board of Directors

The Board of Directors subsection of the Common Interrogatories focuses on the board's role in overseeing the company's operations. In particular, it includes questions regarding the board's approval of the purchase or sale of investments and whether the company has a process in place to notify the board of conflicts of interest within the company's senior management. The company is also asked whether permanent records of board proceedings are retained; this enables tracking and monitoring of the board's oversight role.

Financial

While it is generally assumed that the Annual Statement is performed under Statutory Accounting Principles (SAP), the first question within the Financial subsection asks if the statement was performed using another basis (e.g., Generally Accepted Accounting Principles). The basis of accounting is important for users of the statement and should probably be read first when opening an Annual Statement. If it is assumed that the Annual Statement is performed under SAP, yet it is performed under a different accounting basis, then the user may misinterpret individual figures and ultimately a company's financial position.

The questions within the remainder of the Financial subsection pertain to loans made to senior leadership and other stakeholders of the company, assets that the company was obliged to transfer to another party that were not reported as a liability in the statement, assessments other than those to a guaranty fund or guaranty association, and amounts due from affiliates. The purpose is to understand if the company has financial obligations that have not previously been reported in the Annual Statement and/or if the company is providing financial support or a lifeline to stakeholders or affiliates.

Investment

The Investment subsection has the most questions within the General Interrogatories (more than 30). They cover control over assets and investment decisions, security lending programs

and associated collateral, hedging programs, mandatorily convertible preferred stocks or bonds, and compliance with the *Purposes and Procedures Manual* of the NAIC Securities Valuation Office, among other topics. Here again, the questions pertain to the level of control the company has over its operations and compliance with the rules.

Other

The Other subsection captures information about payments made to trade associations, service organizations, statistical or rating bureaus, attorneys or others in connection with legislative or regulatory matters. Examples of such organizations include the Insurance Services Office and A.M. Best Company. The company is required to list the names of organizations where payment exceeded 25% of the subtotal so that the reader can get an idea of the amount of influence or reliance that the company has on a particular organization, bureau or legislative matter.

PROPERTY & CASUALTY INTERROGATORIES

Part 2 of the General Interrogatories is specific to property/casualty insurers and provides more details about the company's exposures that are not readily determinable based on the quantitative information contained in the schedules and exhibits within the Annual Statement. Many of these questions focus on specific exposures that are not generally dealt with by the property/casualty actuary on a daily basis, such as those pertaining to Medicare supplement insurance, health lines of business or health savings accounts. However, other questions are of major interest to actuaries. For example, certain questions center on the company's exposure to catastrophic events and excessive loss, the process by which probable maximum loss is determined and the level of reinsurance protection afforded to protect the company's net results against catastrophic losses. These questions (requests) include the following:

- "What provision has this reporting entity made to protect itself from an excessive loss in the event of a catastrophe under a workers' compensation contract issued without limit of loss?" [30]
- "Describe the method used to estimate this reporting entity's probable maximum insurance loss, and identify the type of insured exposures comprising that probable maximum loss, the locations of concentrations of those exposures and the external sources (such as consulting firms or computer software models), if any, used in the estimation process." [31]
- "What provision has this reporting entity made (such as a catastrophic reinsurance program) to protect itself from an excessive loss arising from the types and

[30] *2011 Property/Casualty Annual Statement,* General Interrogatory 6.1 (Part 2 Property & Casualty Interrogatories).
[31] Ibid., General Interrogatory 6.2 (Part 2 Property & Casualty Interrogatories).

concentrations of insured exposures comprising its probable maximum property insurance loss?" [32]

- "Does the reporting entity carry catastrophe reinsurance protection for at least one reinstatement, in an amount sufficient to cover its estimated probable maximum loss attributable to a single loss event or occurrence?" [33]
- "If no, describe any arrangements or mechanisms employed by the reporting entity to supplement its catastrophe reinsurance program or to hedge its exposure to unreinsured catastrophic loss." [34]

Although the General Interrogatories are not included for Fictitious Insurance Company, the aforementioned questions would be of particular interest to users of Fictitious' Annual Statement in light of the company's catastrophic loss experience in 2011. Review of answers to the above questions in conjunction with the information provided in Schedules F and P about Fictitious' reinsurers and ceded loss ratios would assist the user in evaluating the adequacy of Fictitious' reinsurance protection relative to its catastrophe exposures. Other questions within the Property & Casualty Interrogatories that are of interest include those pertaining to the use of finite reinsurance. Finite reinsurance was a hot topic in the property/casualty insurance industry in 2005 when several large insurance companies were fined by the Securities and Exchange Commission for accounting for finite reinsurance deals in a way to bolster their financial position.

In its simplest form, finite reinsurance does not transfer underwriting risk; rather it is a play on interest. Assume an insurance company knows it will have to pay a fixed amount in losses, say $10 million, in two years. Under a finite reinsurance deal, the insurance company could take the present value of $10 million and give it to a reinsurance company as "premium," in exchange for an agreement that the reinsurer pay the $10 million in losses two years from now. The amount the reinsurer will have to pay is fixed ($10 million), and the time the reinsurer will have to pay the losses is fixed (two years); there is no underwriting or timing risk involved in the transaction.

Using a simplified example, assuming a 5% rate of interest, if the insurance company were to account for this contract as reinsurance, its balance sheet would show a reduction of approximately $9 million in cash for premium paid (the present value of $10 million at 5% interest per year for two years) in return for a corresponding reduction of $10 million in loss reserves, resulting in a net increase to surplus of approximately $1 million. However, since there is no underwriting or timing risk, this is more akin to a deposit, such as one with a bank, and this is how such contracts must be accounted for. There is no surplus relief as a result of this contract; the insurer still has to pay $10 million in two years.

[32] Ibid., General Interrogatory 6.3 (Part 2 Property & Casualty Interrogatories).
[33] Ibid., General Interrogatory 6.4 (Part 2 Property & Casualty Interrogatories).
[34] Ibid., General Interrogatory 6.5 (Part 2 Property & Casualty Interrogatories).

Several high-profile insurance companies engaged in finite reinsurance arrangements in the early 2000s to boost their financial results through improper accounting. This behavior prompted the NAIC to adopt additional disclosure requirements, including an expansion of the Property & Casualty Interrogatories. One such interrogatory requires insurers to answer affirmatively if they ceded reinsurance that:

1. Resulted in underwriting gain (or loss) of more than 5% of prior year surplus or ceded premiums or loss and LAE reserves of more than 5% of surplus.
2. Was accounted for as reinsurance rather than as a deposit.
3. Had one or more of the following features ("or other features that would have similar results"[35]):
    a. Duration of at least two years and is non-cancelable during the term.
    b. Limited cancellation provisions such that the ceding company is required to enter into a new contract with the same reinsurer or its affiliate.
    c. Aggregate stop loss coverage.
    d. The right by either party to commute, unless triggered by a downgrade in the credit rating of the other party.
    e. The ability to report or pay losses less frequently than quarterly.
    f. Delayed timing of reimbursement to the ceding company.[36]

A following interrogatory requires insurers to answer affirmatively if they have entered any ceded reinsurance contracts where ceded premium is 50% or more than the insurer's gross written premium, or 25% or more of the ceded written premium is retroceded to the insurer. Reinsurance ceded to entities other than captives under the insurer's control or approved pooling arrangements is excluded from this interrogatory.[37]

If either interrogatory is answered affirmatively by the insurance company, the insurer is required to file the Reinsurance Summary Supplemental Filing to the Annual Statement. This filing is due on March 1. Within this filing the insurer is required to disclose:

1. The financial impact on the balance sheet and statement of income if such contracts were excluded (i.e., the restatement of assets, liabilities, surplus and net income gross of the reinsurance contract(s)).
2. A summary of the applicable terms of the contract(s) that triggered the affirmative response.
3. The reasons management entered into the contract, including the expected financial gain.[38]

[35] Ibid., General Interrogatory 9.1 (Part 2 Property & Casualty Interrogatories).
[36] Ibid., General Interrogatory 9.1 (Part 2 Property & Casualty Interrogatories).
[37] Ibid., General Interrogatory 9.2 (Part 2 Property & Casualty Interrogatories).
[38] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 440.

The intent of these additional interrogatories and the supplemental filing is to identify those contracts that may be accounted for improperly and therefore warrant further review by regulatory officials. Knowledge of such contracts is relevant to the actuary as the accounting treatment may impact the actuary's evaluation of unpaid claims. If a ceded contract is accounted for as reinsurance, it will serve to reduce the unpaid claim liabilities; if accounted for as a deposit, it will not.

Examples of other items addressed within the Property & Casualty Interrogatories that tend to be a focus of the actuary include:

- Whether there are specific limiting provisions within reinsurance contracts, guaranteed policies and retrospectively rated policies, as these features may affect the actuary's evaluation of unpaid claims.[39]
- Any releases of liability under reinsured policies, such that the company could reassume liability and potentially have its surplus position weakened as a result.[40]
- Exposure to warranty business, whereby the adequacy of the unearned premium reserve would be the focus of attention as the contract terms, and therefore exposure, tends to continue beyond 12 months.[41]

CHAPTER 12. FIVE-YEAR HISTORICAL DATA EXHIBIT

OVERVIEW

Most other exhibits and schedules within the Annual Statement provide only one or two years of financial data for a company. The Five-Year Historical Data exhibit is valuable because it provides a summarization of key financial figures and statistics from historical Annual Statements going back five years: the current and prior four. Key line items from the balance sheet and income statement are included. Also included are operating ratios and ratios showing one- and two-year development in loss reserves relative to policyholders' surplus. This compilation facilitates the identification of trends when evaluating the health of a property/casualty insurance company.

Following is a brief overview of content that actuaries tend to focus on within this exhibit, with illustrations using data from Fictitious' 2011 Annual Statement where deemed relevant.

WRITTEN PREMIUM

The first page of the Five-Year Historical Data exhibit begins with the insurance company's revenue. For an insurance company, revenue is in the form of written premium. Gross and net written premium information is provided. Gross and net amounts are summarized into the following five lines of business categories:

1. Liability
2. Property
3. Property and liability combined
4. All other
5. Non-proportional reinsurance

A sixth line contains the totals.

This information shows how the company's premium volume, use of reinsurance and business mix have changed over time. Things to look out for when assessing the health of an insurance company include rapid growth or decline in revenue, increases or decreases in the use of reinsurance protection, and changes in business mix toward riskier or unprofitable lines. Observations such as these would prompt additional inquiry through review of other schedules, exhibits and notes within the Annual Statement and a meeting with company management. For example, if a company significantly increased its use of ceded reinsurance, we would want to understand the quality of the reinsurance. The Notes to Financial Statements and Schedule F provide additional information on the company's reinsurers.

Total gross and net written premium figures from Fictitious' Five-Year Historical Data exhibit are displayed in Table 8.

TABLE 8

Data from Fictitious Insurance Company 2011 Five-Year Historical Data (USD)					
	2011	2010	2009	2008	2007
6. Gross premiums written	28,634,000	28,085,000	29,519,000	31,238,000	31,670,000
	2%	-5%	-6%	-1%	
12. Net premiums written	26,752,000	25,936,000	25,521,000	25,583,000	25,363,000
	3%	2%	0%	1%	
Net/gross ratio	93%	92%	86%	82%	80%

Fictitious experienced an approximate 5% decline in gross writings in 2009 and 2010. This could have been attributed to many things, including a decrease in concentration in a certain line of business or risk class, the continued softening of the market observed over this time period or a decrease in the amount of coverage purchased. Gross written premiums increased by 2% in 2011, which again could have been a function of the economy or insurance prices starting to rebound or both.

Over the same period, net written premium volume was relatively flat and even slightly positive. Calculation of the net-to-gross ratio shows that the company's net retention had been growing since 2007, from 80% in 2007 to 93% in 2011. This means that the company was ceding fewer premium dollars to its reinsurers. This could have been attributed to either a decision by the company to retain more business or a softening in reinsurance prices over the period or both. Observations such as these would warrant further inquiry of company management to fully understand the cause for changes in the company's direct, assumed and ceded business volume.

Table 9 shows the gross written premium figures by line of business segment as reported by Fictitious, below which the corresponding distribution of gross written premium by segment is shown.

TABLE 9

Data from Fictitious Insurance Company 2011 Five-Year Historical Data (USD)					
Gross premiums written (GPW)	2011	2010	2009	2008	2007
1. Liability lines	13,281,000	13,843,000	15,075,000	16,422,000	16,815,000
2. Property lines	5,566,000	4,990,000	5,436,000	5,925,000	6,155,000
3. Property and liability lines	9,649,000	8,936,000	8,651,000	8,544,000	8,355,000
4. All other lines	138,000	316,000	357,000	347,000	345,000
5. Non-proportional reinsurance lines	-	-	-	-	-
6. Total	**28,634,000**	**28,085,000**	**29,519,000**	**31,238,000**	**31,670,000**
Distribution of GPW	2011	2010	2009	2008	2007
Liability lines	46%	49%	51%	53%	53%
Property lines	19%	18%	18%	19%	19%
Property and liability lines	34%	32%	29%	27%	26%
All other lines	0%	1%	1%	1%	1%
Non-proportional reinsurance lines	0%	0%	0%	0%	0%
Total	**100%**	**100%**	**100%**	**100%**	**100%**

For Fictitious, the lines of business flowing into the segments identified in Table 9 are as follows:[42]

1. Liability lines: workers' compensation, other liability and automobile liability
2. Property lines: fire and auto physical damage
3. Property and liability lines: homeowners and commercial multiple peril
4. All other lines: fidelity

Fictitious does not write any non-proportional reinsurance (line 5).

Over the five-year period ending in 2011, Fictitious' writings declined in the liability lines (line 1) and grew in the property and liability lines (line 3). Writings in the straight property lines (line 2) remained consistent over the period.

Property lines tend to be short-tailed in nature; property claims are reported and paid relatively quickly when compared to liability claims. Shifts from liability to property lines would tend to result in a reduction in uncertainty surrounding the company's loss and loss adjustment expense (LAE) reserves. However, shifts to the property lines increase uncertainty due to the exposure to catastrophe loss.

A similar analysis can be performed on Fictitious' net written premium data.

[42] Written premium by line of business is shown in Part 1B, Premiums Written, of the U&IE.

STATEMENT OF INCOME

The Five-Year Historical Data exhibit also provides summarized information from the Statement of Income that is useful in identifying components of changes in a company's net income (e.g., whether attributed to underwriting or investments or other income). Table 10 shows this data for Fictitious.

TABLE 10

Data from Fictitious Insurance Company 2011 Five-Year Historical Data (USD)					
Statement of Income	2011	2010	2009	2008	2007
13. Net underwriting gain (loss)	(2,133,000)	1,488,000	2,544,000	1,883,000	2,773,000
14. Net investment gain (loss)	4,305,000	4,415,000	2,850,000	3,993,000	4,747,000
15. Total other income	33,000	47,000	38,000	143,000	47,000
16. Dividends to policyholders	46,000	32,000	23,000	29,000	31,000
17. Federal and foreign income taxes incurred	(20,000)	963,000	1,489,000	1,378,000	1,304,000
18. Net income	2,179,000	4,955,000	3,920,000	4,612,000	6,232,000
Increase/(decrease) year-over-year	(2,776,000)	1,035,000	(692,000)	(1,620,000)	
Percentage increase/(decrease) year-over-year	-56%	26%	-15%	-26%	

We see that Fictitious' net income was been positive in each of the years 2007 through 2011, with growth achieved in 2010 over 2009 after two years of decline. The $1 million (+26%) growth observed in 2010 was predominantly attributed to improvements in the financial markets and a reduction in taxes. Investment gains improved in 2010 to levels near where they were prior to the 2008 financial crisis and remained at that level in 2011.

Despite the rebound in the investment market, the company experienced a 56% decline in net income in 2011 over 2010 due to a net underwriting loss of $2 million. Given what we know about the company's shift toward property lines over the period 2007 through 2011, and consequential increase in exposure to catastrophe losses, we can hypothesize that the underwriting loss in 2011 was due to the high frequency of catastrophe events during the year. Investigation of other statements and exhibits within Fictitious' Annual Statement can help us validate our theory.

As discussed in *Chapter 8. The Statutory Income Statement: Income* and Changes to Surplus, the Statement of Income on page 4 of the Annual Statement provides the components of net underwriting gain (loss), net investment income gain (loss) and other income, and each component can be further investigated through various supporting schedules. For example, as displayed in the Statement of Income for Fictitious, the net underwriting loss of $2 million was primarily driven by an increase in losses incurred during 2011 ($17 million in 2011 versus $13 million in 2010, per line 2 of the Statement of Income).

We can drill down further by looking at the one-year development line (Development in estimated losses and loss expenses incurred prior to current year) within the five-year exhibit to see whether this increase was attributed to prior-year development or current-year incurred losses.

TABLE 11

Data from Fictitious Insurance Company 2011 Five-Year Historical Data (USD in 000s)					
	2011	2010	2009	2008	2007
73. Development in estimated losses and loss expenses incurred prior to current year (Schedule P, Part 2, Summary, Line 12, Column 11)	(875)	(1,354)	(1,618)	(1,959)	(918)

As displayed in the one-year development line, loss and defense and cost containment (DCC) development in 2011 on prior accident years was *negative* $875,000.[43] This means that the company experienced favorable development in 2011 on the prior years in the aggregate. As a result, the underwriting loss in 2011 must have been due to current (2011) accident year incurreds, providing further evidence that catastrophes were the cause. A review of accident year 2011 loss and DCC experience per Schedule P can confirm this.

Turning to Schedule P, Part 2, Summary, we see that accident year 2011 incurred loss and DCC was $19 million, approximately $3 million higher than it had been in the company's 10-year history. Later in Schedule P, the line of business detail shows that the company experienced higher incurred loss and DCC on the homeowners/farmowners line (roughly $4 million on accident year 2011 versus $2.5 million on accident year 2010). This further suggests that Fictitious, like the rest of the insurance industry, was adversely impacted by the natural catastrophes in 2011.

With respect to investment gains in 2010, a line-by-line comparison of the Exhibit of Net Investment Income within the company's current-year and prior-year Annual Statements can provide further details on changes in the company's investment income, as can a line-by-line comparison of changes in amounts by asset class within the Exhibit of Capital Gains (Losses). While these two exhibits are not included in the Annual Statement excerpts provided for Fictitious, a study of the changes in net investment income can be made by reviewing these exhibits for one of the (real) insurance companies on the CAS Exam 6 U.S. Syllabus.

Absent these exhibits for Fictitious, we expect that the growth in investment income in 2010 was most likely due to a rebound in the financial markets post crisis.

[43] We acknowledge that Schedule P, Part 2, Summary, provides both loss and DCC, while we are focusing on the change in incurred losses only. However, as shown in the Statement of Income, loss adjustment expenses have not changed significantly in dollar terms. We therefore feel this comparison is reasonable for illustration purposes.

As displayed in the Five-Year Historical Data exhibit for Fictitious, the decline in taxes in 2011 is directionally consistent with what one would expect with a decline in income. However, the decrease in taxes between 2009 and 2010 by approximately $0.5 million (from $1,489,000 to $963,000) is somewhat counterintuitive. Generally, one would expect to pay more taxes the higher the income. While not included in the Annual Statement excerpts provided for Fictitious, the note in the financial statements titled "Income Taxes" (number 9 in the Notes to Financial Statements of the 2011 Annual Statement) can be helpful in explaining movements in taxes from year to year, such as that which occurred for Fictitious. This note provides details on deferred tax assets and losses and shows what taxes would have been if a straight 35% statutory tax rate was used. It also provides the reasons for differences between the total recorded income tax and taxes at the statutory rate, which might in turn explain higher or lower taxes paid in a particular year.

BALANCE SHEET

The balance sheet section of the Five-Year Historical Data exhibit contains summarized information that is useful in identifying components of changes in surplus (e.g., whether attributed to changes in assets or certain liability items) over time.

Only two major asset categories are provided: (1) total admitted assets and (2) premiums and considerations. However, the distribution of assets by class is provided further along in the exhibit (percentage distribution of cash, cash equivalents and invested assets). For trend analysis, the distribution of assets by class is more useful than the actual dollar amounts. When analyzing the health of a property/casualty insurer, things to look out for include large holdings in risky asset classes or changes in mix to riskier classes. However, the user would also look to the company's use of hedging vehicles to mitigate increased holdings in riskier investments, such as derivative instruments (see *Chapter 8. The Statutory Income Statement: Income* and Changes to Surplus).

The remaining lines within the balance sheet section of the exhibit are summarized items from the Liabilities, Surplus and Other Funds page. Of most relevance to the property/casualty actuary is the level of loss and LAE reserves, unearned premiums, and surplus relative to the actuary's knowledge of the underlying business and the changes therein.

A review of Fictitious' data shows no significant changes in these items other than a dip in surplus in 2008 (6% decrease from 2007) and 2010 (12% decrease from 2009). The capital and surplus account within the Statement of Income shows that the large decrease in 2010 was attributed to sizeable dividends paid to stockholders during the year (approximately $10 million). This can also be seen in the Capital and Surplus Account section of the Five-Year Historical Data exhibit. This section provides two sources of the change in surplus: that due to unrealized capital gains (losses) and that resulting from dividends paid by the company to its stockholders.

RISK-BASED CAPITAL

We will discuss Risk-Based Capital (RBC) in detail in *Chapter 19. Risk-Based Capital*. It is a solvency framework developed by the National Association of Insurance Commissioners from which an amount of capital is determined formulaically based on the application of specified factors to an insurance company's recorded assets and liabilities as of year-end. The calculated capital, or RBC, is compared to the total adjusted capital recorded by the insurance company at year-end to determine the level, if any, of company or regulatory action required from a solvency perspective.

The components of the RBC ratio are provided in the Five-Year Historical Data exhibit but not the RBC ratios themselves. However, the user can calculate the RBC ratios from the information provided in the Five-Year Historical Data exhibit. Table 12 provides the figures shown in lines 28 and 29 of Fictitious Insurance Company's 2011 Five-Year Historical Data, below which we show the RBC ratios that we calculated from lines 28 and 29.

TABLE 12

Data from Fictitious Insurance Company 2011 Five-Year Historical Data (USD)					
Risk-Based Capital analysis	2011	2010	2009	2008	2007
28. Total adjusted capital	31,024,000	31,608,000	35,793,000	32,572,000	34,567,000
29. Authorized control level RBC	5,552,000	6,097,300	5,854,000	5,685,000	6,517,000
Total adjusted capital as a percent of ACL (= Line 28 / Line 29)	559%	518%	611%	573%	530%
Total adjusted capital as a percent of RBC (= Line 28 / (Line 29*2))	279%	259%	306%	286%	265%
Reduction in capital to next RBC level (= Line 28 - (Line 29*2))	19,920,000	19,413,400	24,085,000	21,202,000	21,533,000

Table 69 of this publication provides the various levels of company and/or regulatory action in response to a company's calculated RBC ratios. For Fictitious, the percentage of adjusted capital to authorized control level (ACL) ranged between 518% to 611% over the five-year period 2007 through 2011, which is 2.6 to 3.1 times the first level requiring action (company action level, which is equal to 200% of ACL). This means that Fictitious' capital in 2011 could have been reduced by $20 million before any action was required under the RBC requirements. This was computed by taking the total capital in line 28 and subtracting from it the upper bound of the range of the first action level of RBC requirements (150% to 200%).[44]

In establishing a materiality standard for Statement of Actuarial Opinion purposes, some actuaries look at the impact on surplus from a change in RBC levels. In these circumstances, an increase in reserves by an amount that would cause the company (or regulator) to take

[44] $19.920 million = $31.024 million - (2 * $5.552 million).

action under RBC is thought to be material. This is discussed further in *Chapter 16. Statement of Actuarial Opinion*.

OPERATING PERCENTAGES

Operating percentages provide the distribution of earned premium into its components of loss, LAE, other underwriting expenses and the profit (loss) from underwriting (net underwriting gain (loss)) that remains. For Fictitious, the ratios were reasonably consistent over the five-year period with the exception of 2011. The high loss ratio in 2011 relative to prior years highlights the spike in losses in 2011 and resulting loss from underwriting.

Spikes or changes in other underwriting expenses directly impact profitability and would be investigated further as to whether such costs were necessary and/or indicative of costs to be incurred by the company in the future.

ONE- AND TWO-YEAR LOSS DEVELOPMENT

Actuaries, in particular those that work in the reserving area, pay considerable attention to the last four lines of the Five-Year Historical Data exhibit (lines 73 through 76 of 2011 Five-Year Historical Data exhibit), as this information shows how the company's prior-year loss and DCC reserves have developed over one- and two-year time horizons.

We already presented the one-year development line (line 73) when interpreting the cause of the underwriting loss incurred by the company in 2011. The subsequent line (line 74) shows the relationship of one-year loss and DCC development to the company's surplus as recorded in the prior year's balance sheet. The purpose is to show the impact of adverse or favorable reserve development on policyholders' surplus. That is, it shows the percentage of surplus that would have been absorbed (enhanced) as a result of adverse (favorable) loss development.

In a perfect world, development would be nil. However, loss reserves represent estimates made by a company's management based on information available as of a certain point in time. It is expected that actual loss emergence will differ from expected, and company management will revise its estimates each year as additional information becomes available. As a result, it's not often that $0 is observed in the one-year (or two-year) development line. The issue here is not that a company experiences development in its loss reserves, but rather how big the development is and its significance to surplus.

Stakeholders tend to be concerned when large positive numbers are shown in the development lines as this means that the prior-year reserves were deficient. The question is whether the increase is attributed to an anomaly or if it is symptomatic of a trend of under-reserving. Further investigation could be made within the Annual Statement by reading the Notes to Financial Statements, specifically the note on changes in incurred loss and LAE, and looking at Schedule P, Part 2, which may show that the adverse development is coming from

a particular year or line of business. Oftentimes, such development is also discussed in public reports by and on behalf of the company (e.g., 10-K for public companies or the AMB Credit Report for the company published by A.M. Best). However, nothing supplants discussion with company management.

Table 13 provides both the one-year development line and the relationship of one-year development to prior-year surplus (line 74) for Fictitious.

TABLE 13

Data from Fictitious Insurance Company 2011 Five-Year Historical Data					
	2011	2010	2009	2008	2007
73. Development in estimated losses and loss expenses incurred prior to current year (Schedule P, Part 2, Summary, Line 12, Column 11); *USD in 000s*	(875)	(1,354)	(1,618)	(1,959)	(918)
74. Percent of development of losses and loss expenses incurred to policyholders' surplus of prior year-end (line 73 divided by Page 4, Line 21, Column 1 x 100)	(2.8)	(3.8)	(5.0)	(5.6)	(2.6)

During 2011, Fictitious' booked net ultimate loss and DCC estimates on accident years 2010 and prior developed favorably by $0.9 million (line 73). This means that, with the benefit of one year's hindsight, the net loss and DCC reserves recorded by the company as of December 31, 2010, were overstated by $0.9 million. That overstatement represented 3% of the company's surplus as of December 31, 2010 (line 74).

Going back a year, with the benefit of one year's hindsight, recorded net loss and DCC reserves as of December 31, 2009, were overstated by $1.4 million, or 4% of surplus.

We can continue going back and observe development in years 2007 through 2009 on prior-year reserves. For Fictitious, the result was consistent over the five-year period; recorded loss and DCC reserves (or ultimate loss and DCC estimates) developed favorably in the following year. This implies that the company was relatively conservative in establishing its reserve estimates.

While stakeholders and regulators of insurance companies tend to be more concerned when development is adverse, large favorable development also raises an issue with certain parties. For example, the Internal Revenue Service pays close attention to favorable emergence as overstatements in reserves reduce the amount of taxable income. Additionally, investors would be concerned that the company is accumulating funds that could be better invested elsewhere, thereby suppressing the investor's rate of return.

The two-year development lines show similar information as contained in the one-year lines, with the exception that development over a two-year period is provided. For example, Fictitious' recorded net loss and DCC reserves as of year-end 2009 developed favorably by $2.6 million in 2010 and 2011. This represents 7.3% of surplus recorded at the end of 2009.

TABLE 14

Data from Fictitious Insurance Company 2011 Five-Year Historical Data					
	2011	2010	2009	2008	2007
75. Development in estimated losses and loss expenses incurred two years before the current year and prior year (Schedule P, Part 2, Summary, Line 12, Column 12); *USD in 000s*	(2,602)	(2,906)	(3,680)	(2,544)	(1,059)
76. Percent of development of losses and loss expenses incurred to policyholders' surplus of second prior year-end (Line 75 divided by Page 4, Line 21, Column 2 x 100)	(7.3)	(8.9)	(10.6)	(7.3)	(3.0)

This information enables the actuary to see whether the development tends to be isolated to the first year of development or continues to the next. In Fictitious' case, the favorable development continued through year two. For example, one-year development on year-end 2009 reserves developed by $1.4 million in 2010 (line 73) and then another $1.2 million in 2011 (per line 75, computed by taking $2.6 million and subtracting the one-year development of $1.4 million).

CHAPTER 13. OVERVIEW OF SCHEDULES AND THEIR PURPOSE

OVERVIEW

Schedules A through E

The first eight schedules (Schedules A through E) of the Annual Statement provide further transparency of the company's assets, as displayed in the balance sheet of the statutory financial statements. The purpose of these schedules is to assist stakeholders and regulators in identifying and analyzing risks inherent in those assets, changes in those assets and differences in their valuation.

The following outlines the contents of Schedules A through E:

TABLE 15

Schedule	Part	Title
A	1	Real Estate Owned December 31 of Current Year
A	2	Real Estate Acquired and Additions Made During the Year
A	3	Real Estate Disposed During the Year
B	1	Mortgage Loans Owned December 31 of Current Year
B	2	Mortgage Loans Acquired and Additions Made During the Year
B	3	Mortgage Loans Disposed, Transferred or Repaid During the Year
BA	1	Other Long-Term Invested Assets Owned December 31 of Current Year
BA	2	Other Long-Term Invested Assets Acquired and Additions Made During the Year
BA	3	Other Long-Term Invested Assets Disposed, Transferred or Repaid During the Year
D	Part 1	Long-Term Bonds Owned December 31 of Current Year
D	Part 2 - Section 1	Preferred Stocks Owned December 31 of Current Year
D	Part 2 - Section 2	Common Stocks Owned December 31 of Current Year
D	Part 3	Long-Term Bonds and Stocks Acquired During Current Year
D	Part 4	Long-Term Bonds and Stocks Sold, Redeemed or Otherwise Disposed of During Current Year
D	Part 5	Long-Term Bonds and Stocks Acquired During the Year and Fully Disposed of During Current Year
D	Part 6 - Section 1	Valuation of Shares of Subsidiary, Controlled or Affiliated Companies
D	Part 6 - Section 2	Valuation of Shares of Lower Tier Company
DA	Part 1	Short-Term Investments Owned December 31 of Current Year
DB	Part A - Section 1	Options, Caps, Floors, Collars, Swaps and Forwards Open December 31, of Current Year
DB	Part A - Section 2	Options, Caps, Floors, Collars, Swaps and Forwards Terminated During Current Year
DB	Part B - Section 1	Futures Contracts Open December 31 of Current Year
DB	Part B - Section 2	Futures Contracts Terminated During Current Year
DB	Part C - Section 1	Company's positions in replication (synthetic asset) transactions Open December 31 of Current Year
DB	Part C - Section 2	Company's positions in replication (synthetic asset) transactions Terminated During Current Year
DB	Part D	Counterparty Exposure for Derivative Instruments Open December 31 of Current Year
DL	Part 1	Securities Lending Collateral Assets (Reinvested Collateral Assets Owned December 31 Current Year)
DL	Part 2	Securities Lending Collateral Assets (Reinvested Collateral Assets Owned December 31 Current Year)
E	Part 1	Cash
E	Part 2	Cash Equivalents
E	Part 3	Special Deposits

There is considerable information within each schedule, including a description of each asset, its value and the basis for valuation. We do not intend to provide all the details of each asset schedule. As discussed previously, most property/casualty actuaries will not need to have a deep understanding of all of the asset classes on the balance sheet. Therefore, we only provide a brief description of each schedule and show how the reader can source the items listed in the asset side of the balance sheet (page 2 of the Annual Statement) to these schedules.

While we will present each of Schedules A through E in order of presentation in the Annual Statement, keep in mind the distribution of admitted assets by class for the property/casualty industry as a whole, as was provided in *Chapter 7. Statutory Balance Sheet*: A Measure of Solvency. Table 16 provides a comparison of the distribution for the industry to that of Fictitious Insurance Company as of December 31, 2011.

TABLE 16[45]

Summary of Net Admitted Assets (column 3) on Page 2 of the Annual Statement				
Assets	Line Number per Page 2	Schedule Reference	Property Casualty Industry	Fictitious Insurance Company
Investments				
Bonds	1	D – Part 1	56.7%	58.7%
Preferred stocks	2.1	D – Part 2 – Section 1	0.7%	0.0%
Common stocks	2.2	D – Part 2 – Section 2	14.4%	19.3%
Mortgage loans	3.1 + 3.2	B	0.3%	0.2%
Real estate	4.1 + 4.2 + 4.3	A	0.7%	3.8%
Cash and short-term investments	5	E, DA	4.6%	1.0%
Contract loans	6		0.0%	0.0%
Derivatives	7	DB	0.0%	0.0%
Other investments	8 + 9 + 10 + 11	BA, DL	7.0%	4.7%
Total cash and investments	**12**		**84.4%**	**87.8%**
Total assets	**28**		**100.0%**	**100.0%**

Note: Contract loans are loans on contracts issued by the insurance company. They typically pertain to life insurance contracts. There is no schedule within the Annual Statement that pertains to or provides additional disclosure about contract loans.

The assets detailed in Schedules A through C and E make up a relatively small portion of the total admitted assets of the property/casualty insurance industry at year-end 2011 (less than 15%). This relationship has remained relatively consistent over the years. Property/casualty insurers tend to invest in relatively short-term, fixed assets of low risk given their need to be able to pay claims emanating from short-term contracts (as opposed to long-term life insurance contracts). As a result, the largest holding of a property/casualty insurer tends to

[45] The distribution of assets by class within this table is based on admitted assets. Schedules A through E provide supporting detail for total assets, including amounts that become nonadmitted in column 2 of the asset side of the statutory balance sheet.

be in bonds, followed by common stocks. Therefore, Schedule D tends to be the most populated of the asset schedules within the Annual Statement.

In assessing the financial health of an insurance company, it is important to understand differences in the distribution of assets by class relative to the industry. In particular, large concentrations in riskier asset classes would warrant additional scrutiny. The information contained in Schedules A through E and in the notes and interrogatories within the Annual Statement will provide some level of quantitative and qualitative detail to aid in the assessment. However, enhanced understanding will come through inquiries of management as to its investment policy, including any hedging strategies that have been implemented to mitigate investments in higher-risk asset classes.

Schedules F and P

Property/casualty actuaries tend to spend more time focusing on page 3 (Liabilities) of the balance sheet than on page 2 (Assets). Therefore, of all the schedules within the Annual Statement, property/casualty actuaries tend to spend the most time with Schedules F and P, in particular Schedule P. Schedule F pertains to reinsurance accounting, and Schedule P pertains to loss and loss adjustment expense reserves. We will devote much of our attention to these Annual Statement schedules in separate chapters for each (*Chapter 14. Schedule F* and *Chapter 15. Schedule P*).

Schedules T and Y

The remaining two schedules, Schedule T and Schedule Y, will be discussed at the end of this chapter. These schedules provide details on the insurance company's premium writings by state and organizational structure, respectively.

SCHEDULE A

Schedule A provides information on real estate directly owned by the insurance company. Schedule A, Part 1 provides a detailed listing of all real estate owned by the company as of December 31 of the current year, while Parts 2 and 3 provide a detailed listing of real estate acquired and disposed during the year, respectively.

Schedule A, Part 1, column 9, Book/Adjusted Carrying Value Less Encumbrances, is the source of the information provided in line 4 of the asset side of the balance sheet. Amounts are provided for each property that the reporting entity owns, grouped in the same three parts as shown in line 4 of page 2:

4.1 Properties occupied by the company
4.2 Properties held for the production of income
4.3 Properties held for sale

All figures are shown less the amount of any encumbrances, which include items such as a lien on the company's property or outstanding principal balance of a mortgaged property.

Consistent with the rest of the property/casualty insurance industry (1%), real estate was a small asset class for Fictitious in 2011, representing less than 4% of its total assets. Although small, actuaries will look at the level of an insurance company's investment in long-term assets and associated cash flows relative to the cash outflows of its liabilities. For example, a property/casualty insurer writing short-tailed lines of business (e.g., homeowners) will require relatively liquid and continual flows from its assets to pay its claims. A large proportion of this company's assets in real estate holdings, or other longer-term assets that do not have constant outflows, might raise questions about liquidity of the company's assets. This is particularly true during unstable economic times when the real estate market is at a low and the seller may not be able to dispose of the investment let alone get the expected value. Schedule A, Part 3 shows what the reporting entity was able to sell real estate investments for over the past year, relative to the value of the investment as shown in the entity's prior-year statement.

SCHEDULE B

Schedule B provides information on mortgage loans owned by the insurance company that are secured by real estate. These are instances where the insurance company has issued a mortgage loan to another party.

Schedule B is organized in the same three parts as Schedule A. Part 1 provides a detailed listing of all mortgage loans owned by the company as of December 31 of the current year, while Parts 2 and 3 provide a detailed listing of mortgage loans acquired and disposed during the year, respectively. Part 3 includes mortgage loans transferred or repaid during the year.

Part 1 is the source of the information provided in line 3 of the asset side of the balance sheet. Line 3 of the asset side of the balance sheet is broken up into two parts:

3.1 First liens
3.2 Other than first liens

The source of the figures provided in line 2 is column 8, book value/recorded investment excluding accrued interest, of Schedule B, Part 1. The figures in column 8 reconcile to the amounts in lines 3.1 and 3.2 on the asset side of the balance sheet. However, it is not evident from Schedule B as to which loans are first liens.

Part 1 provides a detailed listing of mortgage loans owned by the company in the following groupings:

- Mortgages in good standing, which are those loans where the terms are being met by borrowers.

- Restructured mortgages, which are those loans where the terms have been restructured in 1986 or subsequent due to delinquency.
- Mortgages with interest more than 90 days due and not in the process of foreclosure.
- Mortgages in the process of foreclosure.

Issuing mortgages is not a core business strategy of a property/casualty insurance company. Further, mortgage loans are relatively illiquid assets. Therefore, insurers don't have large holdings in Schedule B assets. However, for those insurance companies that do invest in mortgage loans, the groupings provided in Schedule B provide the reader with a sense of the risk associated with the company's mortgage loan investments. For example, investments in mortgages in the process of foreclosure are riskier than those in good standing.

Only 0.2% of Fictitious' assets were invested in mortgage loans on real estate as of December 31, 2011, as compared to 0.3% for the industry.

SCHEDULE BA

Schedule BA provides information on other long-term invested assets owned by the insurance company. These are assets not included in any of the other invested asset schedules, such as real estate that is not owned directly by the insurance company and therefore excluded from Schedule A. Other examples of BA assets include joint ventures, partnership interests and surplus debentures.

Schedule BA, Part 1 provides a detailed listing of other long-term invested assets owned by the company as of December 31 of the current year, while Parts 2 and 3 provide a detailed listing of other long-term invested assets acquired and disposed during the year, respectively. Part 3 includes other long-term invested assets transferred or repaid during the year.

The total in column 12, book/adjusted carrying value less encumbrances, of Schedule BA, Part 1, is the source of the figure provided in line 8 of the asset side of the balance sheet.

As with real estate investments, actuaries will look at the level of cash flows from a company's long-term invested assets relative to the duration of its liabilities for liquidity purposes.

As displayed in Table 17, Fictitious had only 5% of its assets invested in Schedule BA assets at year-end 2011. Schedule BA assets are included within the other investments line. Other investments also include receivables for securities, securities lending reinvested collateral assets and aggregate write-ins for invested assets.

TABLE 17

Current-Year Assets, 2011 Annual Statement Page 2, Column 1 (USD)	
8. Other invested assets (Schedule BA)	4,726,000
28. Total assets	101,454,000
Percentage of total assets (Row 8 / Row 28)	4.7%

SCHEDULE D

Schedule D provides information on bonds and stocks owned by the insurance company. It is broken into six parts, 1 through 6. The amounts shown on the assets side of the balance sheet for bonds and stocks comes from the book/adjusted carrying value column, within Schedule D, Parts 1 and 2.

Part 1

Part 1 provides a detailed listing of the long-term bonds and certificates of deposit (CDs) *owned* by the insurance company as of December 31 of the current year. The term "long-term" is intended to exclude bonds and CDs with maturity or repurchase dates one year or less from the date acquired and cash equivalents with maturities of three months or less. Bonds that are not long term are reported in other schedules. Bonds with maturities of one year or less are reported in Schedule DA. CDs with maturities of one year or less are reported in Schedule E, Part 1. Cash equivalents are reported in Schedule E, Part 2. Schedules DA and E are discussed in subsequent sections of this chapter.

The source of the balance sheet figure for bonds is the total in column 11 (Book/Adjusted Carrying Value) of Schedule D, Part 1.

In Part 1, bonds are separated into the following categories:

- U.S. governments
- All other governments
- U.S. states, territories and possessions (direct and guaranteed)
- U.S. political subdivisions of states, territories and possessions (direct and guaranteed)
- U.S. special revenue and special assessment obligations and all non-guaranteed obligations of agencies and authorities of governments and their political subdivisions
- Industrial and miscellaneous (unaffiliated)
- Hybrid securities
- Parent, subsidiaries and affiliates

Within each of the aforementioned categories, there are issuer obligations, residential mortgage-backed securities (MBS), commercial MBS, and other loan-back and structured securities, with subtotals for each.

In addition to book/adjusted carrying value, the columns within Part 1 enable the user to obtain an understanding of fluctuations in value over the past year and time to maturity of each bond. As noted, users of the Annual Statement consider time to maturity, and therefore liquidity, relative to liability duration.

Part 2

Part 2 provides a detailed listing of the stocks *owned* by the insurance company as of December 31 of the current year. Preferred stocks are in Section 1 of Schedule D, Part 2, and Common stocks are in Section 2.

Schedule D, Part 2 is the source of the information provided within line 2 of the asset side of the balance sheet titled "Stocks (Schedule D)."

The source of the balance sheet figure for preferred stocks is the total in column 8, Book/Adjusted Carrying Value, of Schedule D, Part 2, Section 1, whereas the source for common stocks is the total in column 6, Book/Adjusted Carrying Value, of Schedule D, Part 2, Section 2.

In Part 2, Section 1 of Schedule D, preferred stocks are separated into the following categories:

- Industrial and miscellaneous (unaffiliated)
- Parent, subsidiaries and affiliates

Part 2, Section 2 has the additional categories for common stocks of:

- Mutual funds
- Money market mutual funds

Parts 3 through 6

Part 3 provides a detailed listing of long-term bonds and stocks *acquired during the current year* and still owned by the company as of December 31 of the current year. Those acquired and disposed of during the current year are only provided in subtotal in Part 3, with the details reported in Part 5.

Part 4 provides a detailed listing of long-term bonds and stocks that were *owned as of the beginning of the current year* and disposed of during the year through sale, redemption or

other means. Those acquired and sold during the current year are provided in detail in Part 5, with only subtotals in Part 4.

Part 6 provides a detailed listing of preferred and common stocks in affiliated companies. This is particularly relevant in the calculation of the R_0 charge in the RBC calculation, as we will see in *Chapter 19. Risk-Based Capital*.

SCHEDULE DA

Schedule DA provides information on short-term investments owned by the insurance company. According to the 2011 National Association of Insurance Commissioners (NAIC) *Annual Statement Instructions Property/Casualty*, this schedule is to "include all investments whose maturities (or repurchase dates under repurchase agreement) at the time of acquisition were one year or less except those defined as cash or cash equivalents in accordance with Statement of Statutory Accounting Principles No. 2, Cash, Drafts, and Short-term Investments."[46]

Schedule DA, Part 1 provides a detailed listing of short-term investments by the company as of December 31 of the current year. This is the source of the information provided within line 5 of the asset side of the balance sheet.

Short-term investments can include the following asset classes:

- Bonds
- Mortgage loans and other short-term invested assets for parent, subsidiaries and affiliates
- Mortgage loans
- Exempt money market mutual funds
- Class one money market mutual funds
- Other short-term invested assets

Fictitious had less than 1% of its assets invested in short-term investments in 2011.

SCHEDULE DB

Schedule DB provides information on derivative instruments owned by the insurance company. It is broken into four parts, A through D. Part A provides the company's positions in options, caps, floors, collars, swaps and forwards. Part B provides the company's positions in futures contracts. Part C provides the company's positions in replication (synthetic asset) transactions. And in Part D, the company reports counterparty exposure for derivative instruments open December 31 of the current year. Counterparty exposure is the exposure to credit risk.

[46] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 367.

Parts A and B are further broken into two sections. Section 1 provides open positions during the year, and Section 2 provides positions terminated during the year.

Schedule DB, Parts A and B are the source of the information provided within line 7 of the asset side of the balance sheet, Derivatives (Schedule DB).

While property/casualty insurance companies do not invest much in the derivatives market, derivatives are used to hedge the mismatch between the timing and payment of assets and liabilities. A company investing in a greater proportion of risky assets than the industry (say a higher proportion in common stocks than bonds), would be expected by its stakeholders to have a hedging strategy in place to mitigate those risks.

As displayed on line 7 of the asset side of its balance sheet, Fictitious did not use derivatives in its investment strategy in 2011.

SCHEDULE DL

Schedule DL provides information on securities lending collateral assets. Schedule DL is a fairly new schedule in the Annual Statement, added in 2010 as a result of the financial crisis.[47]

Securities lending received a lot of publicity during the financial crisis of September 2008. Securities lending involves a company lending securities that it does not actively trade to another party for a fee. The borrower will generally sell the borrowed security, in anticipation of repurchasing it at a lower price before returning it to the lender. The difference between the sale price and repurchase price is profit to the borrower.

The borrower is required to post collateral with the lender. This collateral may in turn be invested by the lender; however, the lender needs to have the collateral available for return when the borrower decides to return the borrowed security. These arrangements tend to be for less than a year, and the borrower generally can return the security on relatively short notice. Therefore, a prudent investment strategy would call for investment of the collateral by the lender in short-term, low-risk, liquid markets. Investment in long-term, riskier securities is one of the causes of the financial crisis in 2008.

According to an article by the NAIC and The Center for Insurance Policy and Research,[48] American International Group (AIG) was involved in securities lending whereby securities owned were loaned in exchange for fee and cash collateral. During the period 2005 through 2007, investments of the collateral were made in long-term subprime residential MBS, which subsequently experienced significant declines in market value. When the borrowers came

[47] NAIC and The Center for Insurance Policy and Research, Capital Markets Special Report, *Securities Lending in the Insurance Industry,* http://www.naic.org/capital_markets_archive/110708.htm, (July 11, 2011)
[48] Ibid.

back to AIG to exchange the borrowed securities for the cash collateral they had provided, AIG was experiencing liquidity constraints. The demand for cash from securities lending counterparties put further constraints on AIG, resulting in regulators and the U.S. government stepping in to help alleviate the liquidity issue and reduce strains on AIG's capital.

While securities lending was not the main cause of the financial crisis in 2008, one of the many lessons learned was the lack of transparency in the securities lending market. Schedule DL was created to provide further transparency by providing detailed information on the collateral assets that are reinvested by the insurance company, including the fair value and book value and the date the agreements mature. As the length of the agreement term increases, so does the risk to the insurance company. If borrowers in the company's securities lending program were to return the borrowed securities and request their collateral back with short notice, the company may have difficulty meeting the cash (collateral) demand.[49]

Schedule DL, Part 1 contains those collateral assets that are not included in other investment schedules within the Annual Statement (e.g., Schedule A, B, BA, D, DA and E). Part 2 contains those that are reported in the other asset schedules. Therefore, Part 1 is the source of the information provided in line 10 of the asset side of the balance sheet.

The total in column 6, Book/Adjusted Carrying Value, of Schedule DL, Part 1, is the source of line 10 of the asset side of the balance sheet.

As displayed in Table 18, Fictitious had an immaterial securities lending program relative to total assets and policyholders' surplus at year-end 2011. As a result, sudden demand to return collateral to a borrower would not have had a significant impact on Fictitious' balance sheet.

TABLE 18

Current-Year Assets, 2011 Annual Statement Page 2, Column 1 (USD)	
10. Securities lending reinvested collateral assets (Schedule DL)	79,000
28. Total assets	101,454,000
Percentage reinvested collateral assets (Row 10 / Row 28)	0.08%
Total PHS	31,024,000
Percentage reinvested collateral assets	0.25%

SCHEDULE E

Schedule E provides information on the insurance company's cash and cash equivalents.

Schedule E, Part 1 provides:

[49] Regulators became aware of this strategy as a result of the financial examination process, which occurs only once every three to five years.

- A detailed listing of cash on deposit with banks, trust companies, and savings and loan and building and loan associations
- Totals for cash held in the company's offices
- CDs maturing one year or less (long-term CDs are reporting in Schedule D)

Part 2 provides a detailed listing of investments in what are referred to as cash equivalents and are therefore three months or less.

Part 3 provides a detailed listing of special deposits, which include assets reported in the various asset schedules within the Annual Statement but are segregated for a special purpose, such as bail bonds, workers' compensation, property and casualty insurance, collateral and escrow.

Column 6, Balance, of Schedule E, Part 1, is the source of the cash amount included in line 5 of the asset side of the balance sheet. Column 6, book/adjusted carrying value of Schedule E, Part 2, is the source of the amount of cash equivalents, which are also included in line 5.

Table 19 shows that Fictitious had less than 1% of its assets in cash and cash equivalents at year-end 2011.

TABLE 19

Current-Year Assets, 2011 Annual Statement Page 2, Column 1 (USD)	
5. Cash ($153,000, Sch. E-Part 1), cash equivalents ($0, Sch. E-Part2) and short-term investments ($829,000, Sch. DA)	983,000
28. Total assets	101,454,000
Percentage of total assets (Row 5 / Row 28)	1.0%

SCHEDULE T

Schedule T has two parts:

1. Exhibit of Premiums Written
2. Interstate Compact — Exhibit of Premiums Written

Each part is arranged showing its content by U.S. state (50); the District of Columbia; five U.S. territories (American Samoa, Guam, Puerto Rico, U.S. Virgin Islands and Northern Mariana Islands); Canada; and a line for aggregate other alien territories.[50]

The following provides a general description of the content of each part and their use(s).

[50] According to the glossary in the textbook *Property-Casualty Insurance Accounting* issued by Insurance Accounting & Systems Association, Inc., Eighth Edition (2003), First Addendum (2006), an alien insurance company is defined as "An insurer or reinsurer domiciled outside the U.S. but conducting an insurance or reinsurance business in the U.S."

Exhibit of Premiums Written

The purpose of this schedule is to apportion premiums, losses and other items amongst the states or territories in which the company writes business.

The first column shows the "active status" of the company for each state/territory. Active status is denoted by:

L: Licensed insurance carrier or domiciled Risk Retention Group (RRG)
R: Registered — non-domiciled RRGs
Q: Qualified or accredited reinsurer
E: Eligible — reporting entities eligible or approved to write surplus lines in the state
N: None of the above — not allowed to write business in the state

The total line of this column shows the number of states/territories that the company is licensed in.

Direct losses, premiums and other information are required to be allocated by state/territory regardless of the active status reported. The information requested includes:

- Written premiums
- Earned premiums
- Policyholder dividends
- Paid losses
- Incurred Losses
- Unpaid losses
- Finance and service charges
- Direct premiums written for federal purchasing groups

The complicated part of completing this schedule is figuring out how to allocate the foregoing items by state/territory. The NAIC *Annual Statement Instructions Property/Casualty* looks for the premiums to be reported "based on the physical location of the insured risk (except individual and group health insurance)."[51] Losses are to be reported to the states where the associated premium is allocated.

For example, an insurer writes workers' compensation insurance for an organization that has employees located across the country. The foregoing items need to be allocated to each state/territory based on primary workplace of each employee. Table 20 shows additional examples of the basis for allocating premiums and losses by state/territory, according to the NAIC instructions.

[51] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 241.

TABLE 20

Line of Business	Basis for Allocation by State
Property lines, such as fire, homeowners, boiler and machinery	Location of property
Marine coverages, where property is in transit	Beginning state location
Automobile lines	Location of principal garage of each automobile
Liability lines (other than auto) where premium determined per location	Location of principal office of operation

Companies are required to describe the basis for the allocation in the footnote of Schedule T.

Schedule T is useful to actuaries in several instances, such as the following:

- Actuaries use this schedule to learn where the company writes its business to further research and consider the insurance laws of those states. This is particularly important for workers' compensation insurers where estimates of unpaid claims depend on each state's laws.
- Actuaries also look to this schedule over a series of historical Annual Statements to see if the company has changed geographic concentration or is growing in a particular state. In addition to regulatory differences by state, changes in geographic mix have an impact on the exposures. For example, for a company writing in California or among fault lines, consideration should be made of the company's exposure to earthquakes.
- For a company where industry loss development factors are used in reserving, actuaries may look to this schedule for a distribution of losses by state to determine weights to apply to industry factors by state.

In addition, as we shall see in *Chapter 18. Insurance Expense Exhibit*, the totals in Schedule T are used as a means of reconciling items contained in the Insurance Expense Exhibit.

Interstate Compact — Exhibit of Premiums Written

There is another part to Schedule T that is less well-known to property/casualty actuaries: Interstate Compact — Exhibit of Premiums Written and Allocated by States and Territories. Part 2 only pertains to property/casualty insurers that also write life insurance, annuities, disability income and long-term care insurance products. The purpose of Part 2 is for regulators to monitor writings in these products for consumer protection purposes.

SCHEDULE Y

Schedule Y, Information Concerning Activities of Insurer Members of a Holding Company Group, has two parts:

1. Organizational chart
2. Summary of insurer's transactions with any affiliates

The following provides a brief description of the content and purpose of each.

Part 1 – Organizational Chart

Part 1 is required for those companies that file a registration statement under the Insurance Holding Company System Regulatory Act of the company's domiciliary state.[52]

This part provides exactly what its name says, an organizational chart. In simplest terms, it is similar to a family tree, showing a pictorial representation of where the company lies within an organization and its relationship to the other members of the organization.

We often hear the phrases "sister company," "parent company" and "holding company," but until you see the schematic, it can be difficult to understand where a company fits within an organization. Knowing this and the company's purpose relative to its affiliates is important. For example, the company may have an affiliated managing general agent or other agency that produces its business, or it may have an affiliated claims administrative organization. Consideration of the affiliate's underwriting philosophy and/or claims handling practices is significant in estimating unpaid claims and establishing reserves for the company's liabilities, including those for adjusting expenses.

Sometimes this part is provided in list form as opposed to an actual chart due to the number of companies involved.

Part 1A – Detail of Insurance Holding Company System

This part must be completed by members of a holding company system. The purpose is to provide information about the relationship between the reporting entity and any parent, subsidiary(ies) and/or affiliate(s). The relationship is identified in Part 1A as either:

- Upstream direct parent (UDP)
- Upstream indirect parent (UIP)
- Downstream subsidiary (DS)
- Insurance affiliate (IA)
- Non-insurance affiliate (NIA)

[52] Ibid., page 247.

- Other, which requires an explanation of the relationship in the footnotes to this part (OTH)

Additionally, the controlling entity in the relationship is provided, along with the type of control that the entity has over the other:

- Control through ownership
- Control at the board of directors level
- Control through management
- Control by acting as the attorney-in-fact
- Controlling influence
- Other

If the reporting entity is a member of a holding company system, the reporting entity must include the above items for each parent, subsidiary or affiliate of the reporting entity whose names are listed in column 8 of Schedule Y.

According to the NAIC 2011 *Annual Statement Instructions Property/Casualty*, which references the Insurance Holding Company System Regulatory Act, "Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities by another person."[53]

As we shall see in *Chapter 19. Risk-Based Capital*, this information is particularly useful in determining the RBC R_0 charge for investments in insurance affiliates.

Part 2 – Summary of Insurer's Transactions With Any Affiliates

Schedule Y, Part 2, provides a listing of transactions among members of the holding company system where an insurance affiliate was a party to the transaction. Examples include:

- Shareholder dividends
- Capital infusions
- Purchases/sales of loans or real estate
- Management agreements and service contracts
- Income (disbursements) incurred under reinsurance contracts and reinsurance recoverable (only those transactions that took place during the reporting period are included)

The purpose of this part of Schedule Y is to assist regulators in monitoring monetary flows in and out of insurance company affiliates. This schedule is the same for all members of an

[53] Ibid., page 249.

insurance holding company system. Therefore, the totals all balance to zero, as an outflow from one company is offset by the inflow to another.

CHAPTER 14. SCHEDULE F

OVERVIEW

As noted in the previous *Chapter 13. Overview of Schedules and Their Purpose*, Schedule F and Schedule P are two of the Annual Statement schedules that property/casualty actuaries tend to use most. In this chapter we will focus on Schedule F; Chapter 15 focuses on Schedule P.

Schedule F provides details underlying an insurance company's reinsurance transactions on prospective contracts[54] that meet the conditions for reinsurance accounting as defined in SSAP No. 62R. It includes the names of the counterparties to the transactions and the premium, loss and expense amounts that emanate from those transactions as of December 31 of the reporting year. This information is important to actuaries for several reasons:

- Loss and loss adjustment expense (LAE) reserves recorded by an insurance company include business assumed by the company. Knowledge of the source and amount of assumed reinsurance provides valuable information to an actuary in assessing the reasonableness of the gross and net loss and LAE reserve balances. Schedule F, Part 1 provides a listing of assumed premiums and losses by ceding company.

- Loss and LAE reserves recorded on an insurance company's statutory balance sheet are net of reinsurance. Considerable focus is placed on the collectibility of that reinsurance by users of the Annual Statement, particularly regulators. In fact, the NAIC Instructions to the Statement of Actuarial Opinion require the Appointed Actuary to provide relevant comment paragraphs to address reinsurance. According to the NAIC Instructions, "Before commenting on reinsurance collectibility, the actuary should solicit information from management on any actual collectibility problems, review ratings given to reinsurers by a recognized rating service, and examine Schedule F for the current year for indications of regulatory action or reinsurance recoverable on paid losses over 90 days past due."[55]

  Schedule F, Part 3 provides the name of each of the company's reinsurers, a listing of liability amounts ceded to each reinsurer and the amount of collateral held by the insurance company in support of those liabilities. Using this information, research can be done on the financial ratings of the reinsurers as a measure of the quality of the reinsurance.

[54] According to page 62R-7 of SSAP No. 62R, "Prospective reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for losses that may be incurred as a result of future insurable events covered under contracts subject to the reinsurance."

[55] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 13.

Schedule F, Part 4 provides the aging of ceded reinsurance. An assessment can be made of the company's exposure to collectibility issues in light of the reinsurer's payment history and the amount of collateral the company holds in support of its reinsured balances, as shown in Schedule F, Part 5.

- The Statement of Actuarial Opinion also requires the Appointed Actuary to comment on and disclose the amount of net reserves for the insurance company's participation in underwriting pools and associations. Schedule F, Part 1 provides a source for this information. In fact, regulators expect there to be a reconciliation of the amount disclosed in the Statement of Actuarial Opinion to Schedule F.[56]

Schedule F also provides the derivation of the provision for reinsurance, which is included as a liability on the statutory balance sheet (page 3, line 16 of the 2011 Annual Statement). While Statutory Accounting Principles (SAP) requires insurance companies to record loss and LAE reserves net of reinsurance, SAP also presumes that a portion of that reinsurance is not collectible. The provision for reinsurance provides "a minimum reserve for uncollectible reinsurance with an additional reserve required if an entity's experience indicates that a higher amount should be provided. The minimum reserve Provision for Reinsurance is recorded as a liability, and the change between years is recorded as a gain or loss directly to unassigned funds (surplus). Any reserve over the minimum amount shall be recorded on the statement of income by reversing the accounts previously utilized to establish the reinsurance recoverable."[57]

This minimum reserve is computed in Schedule F, Part 7. It reflects the conservative nature of statutory accounting since the entire provision may ultimately be collected.

Finally, Schedule F also provides a view of the reporting entity's balance sheet on a gross of reinsurance basis. Ceded reinsurance is a valuable means for insurance companies to mitigate insurance risk. Schedule F, Part 8 enables the user to observe the amount of protection afforded to the company's balance sheet through the use of reinsurance.

Note that retroactive reinsurance does not flow through Schedule F.[58] Ceding companies record loss and LAE reserves gross of retroactive reinsurance and assuming companies

[56] American Academy of Actuaries Committee on Property and Liability Financial Reporting, "Statements of Actuarial Opinion on Property and casualty Loss Reserves 2012," Appendix 9a, "Regulatory Guidance On Property and Casualty Statutory Statements of Actuarial Opinion for the Year 2012 Prepared by the NAIC's Casualty Actuarial and Statistical (C) Task Force," page 99.

[57] SSAP No. 62R, Property & Casualty Reinsurance, paragraph 55.

[58] According to page 62R-7 of SSAP No. 62R, "Retroactive reinsurance is defined as reinsurance in which a reinsurer agrees to reimburse a ceding entity for liabilities incurred as a result of past insurable events covered under contracts subject to the reinsurance." Note that there are exceptions for property/casualty run-off agreements whereby the entire risk for a line of business or segment (e.g., asbestos liabilities) is retroactively transferred by a ceding company to a reinsurer. We will not get into the specifics in this publication, but note that the accounting for this type of contract can be found in SSAP No. 62R, pages 62R-15 and 16.

exclude the retroactive reinsurance from loss and LAE reserves. The same is true for Schedule P[59]; retroactive reinsurance does not flow through Schedule P.

STRUCTURAL ORGANIZATION OF SCHEDULE F

Schedule F is arranged in the following eight parts:

- Part 1 Assumed Reinsurance as of December 31, Current Year (000 Omitted)
- Part 2 Premium Portfolio Reinsurance Effected of (Canceled) during Current Year
- Part 3 Ceded Reinsurance as of December 31, Current Year (000 Omitted)
- Part 4 Aging of Ceded Reinsurance as of December 31, Current Year (000 Omitted)
- Part 5 Provision for Unauthorized Reinsurance as of December 31, Current Year (000 Omitted)
- Part 6 Provision for Overdue Authorized Reinsurance as of December 31, Current Year (in whole dollars)
- Part 7 Provision for Overdue Reinsurance as of December 31, Current Year (in whole dollars)
- Part 8 Restatement of Balance Sheet to Identify Net Credit for Reinsurance

Parts 1, 3 and 7 provide details underlying the reinsurance items on a company's balance sheet. There is one asset item and three liability items on an insurance company's balance sheet that come directly from Schedule F.

The asset item is "amounts recoverable from reinsurers" (Assets, page 2, line 16.1). It includes amounts the insurance company has already paid in loss and LAE to its claimants that are recoverable from its reinsurers. The first of the liability items provide this balance from the reinsurer's perspective (Liabilities, Surplus and Other Funds, page 3, line 2).

The other two liability items that come directly from Schedule F include funds held by the company under reinsurance agreements (Liabilities, Surplus and Other Funds, page 3, line 13) and the provision for reinsurance (Liabilities, Surplus and Other Funds, page 3, line 16). Schedule F, Parts 4, 5 and 6, as well as Part 3, are used to derive the provision for reinsurance in Part 7.

The following illustrates how the amounts in the balance sheet map to those in Schedule F using the 2011 Annual Statement for Fictitious Insurance Company[60]:

[59] SSAP No. 62R, page 62R-8 and 9.

[60] In gaining an understanding of the interplay between the Financial Statements and various Schedules within the Annual Statement, it is important to remember that the amounts in Schedule F, Parts 1 and 3 are displayed in

TABLE 21

Company:	Fictitious Insurance Company
Annual Statement for the year:	2011

Assets, page 2

Line	Item	Current Year
16.1	Amounts recoverable from reinsurers	426,000

Schedule F Source

Part	Column	Item	Row	Amount
3	7 + 8	Reinsurance recoverable on paid losses and paid LAE	Totals	426

Liabilities, Surplus and Other Bunds, page 3

Line	Item	Current Year
2.	Reinsurance payable on paid losses and loss adjustment expenses	–
13.	Funds held by company under reinsurance treaties	170,000
16.	Provision for reinsurance	283,000

Schedule F Source

Part	Column	Item	Row	Amount
1	6	Reinsurance on paid losses and loss adjustment expenses	Totals	–
3	19	Funds held by Company under reinsurance treaties	Totals	170
7		Provision for reinsurance	6.	283,000

While relevant, Parts 2 and 8 tend to get less attention by actuaries. As the name suggests, Schedule F, Part 2 provides the user with a detailed listing of all portfolio reinsurance transactions entered into or canceled during the current year.

Schedule F, Part 8 provides a summarized form of the balance sheet with adjustments to restate it on a gross of ceded reinsurance basis. The assets are adjusted to remove any expected recoverables from the company's reinsurer, while the liabilities are restated to remove any anticipated recoveries or payables.

Given the limited level of focus on Parts 2 and 8 by property/casualty actuaries, we will provide only a brief description of their contents and use. We will devote the majority of this chapter on the contents of the other parts of Schedule F and the calculation of the provision for reinsurance.

SCHEDULE F — PART 1: ASSUMED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR (000 OMITTED)

Overview

Part 1 provides the total amount of the insurance company's assumed reinsurance balances by reinsured. It enables the user to obtain additional understanding of the amounts at stake and risks associated with an insurance company's assumed reinsurance transactions as of the current year.

thousands of U.S. dollars, whereas amounts on the balance sheet, as well as in Schedule F, Part 7, are in whole dollars.

With Part 1, each reinsured is separated into the following groups or categories, with subtotals at the end of each category and group[61]:

- Affiliated Insurers:
  - U.S. Intercompany Pooling
  - U.S. Non-Pool
  - Other (non-U.S.)
- Other U.S. Unaffiliated Insurers
- Pools and Associations:
  - Mandatory Pools
  - Voluntary Pools
- Other Non-U.S. Insurers

Knowledge of the group or category the reinsurer is in, as well as the name of the reinsurer, provides the user of the Annual Statement with further insight as to the risk associated with the assumed transaction.[62] For example, the reporting entity may have less control over and knowledge of the risks assumed from an unaffiliated non-U.S. insurer than it would of risks assumed from a U.S. affiliate.

In terms of its structure, the first four columns of Part 1 provide the Federal ID number, NAIC company code, name of the reinsured and the reinsured's domiciliary jurisdiction. The remaining 11 columns provide the dollar amounts pertaining to the assumed reinsurance transactions, including premiums, loss and LAE liabilities, contingent commissions, and collateral or funds held by the ceding company to secure balances owed to it by the reporting entity.

Premiums

The amount of written premium assumed by the insurance company from the reinsurer during the year is shown in column 5. The totals in column 5 (000 omitted) will reconcile to the sum of the totals in columns 2 (reinsurance assumed from affiliates) and 3 (reinsurance assumed from non-affiliates) in Part 1B of the Underwriting and Investment Exhibit (shown in whole dollars).

Assumed premiums receivable, less commissions payable, are shown in column 10. The amount of commissions payable does not include contingent commissions, which are shown in column 9 and discussed below. The amount considered in column 10 is for fixed commissions. For example, if the reporting entity wrote a reinsurance contract for premium of $500,000 with a fixed ceding commission of 25%, all of which was unpaid at the end of the year, the

[61] Each ceding company is listed except for other U.S unaffiliated insurers, mandatory pools and associations, voluntary pools and associations, and other non-U.S. insurers, where the paid plus case outstanding losses and LAE balances are less than $100,000 in total. These reinsureds are grouped together in one line item.

[62] Reinsurance assumed from pools and associations is generally reported by the name of the pool or association rather than the individual insurers that comprise the organization. As a result, it is difficult to gain insight about the underlying risks of the pool(s) and/or association(s) that the insurer participates in from Schedule F alone.

figure in column 10 would be the $500,000 of assumed premium receivable less $125,000 of commissions payable, for a total of $375,000.

The total in column 10 (000 omitted) is included as a part of agent's balances in line 15 (premiums and considerations) of page 2. As we will see later, this is considered in the profit calculation in the IEE.

Unearned premium on assumed business is provided in column 11. This is a liability to the insurance company and is included within line 9 of page 3, entitled unearned premiums, as well as the unearned premium reserves contained in Parts 1 and 1A of the Underwriting and Investment Exhibit. The unearned premium reserves on page 3 and in the Underwriting and Investment Exhibit are net of reinsurance. As such, the assumed unearned premium reserves listed in column 11 of Schedule F, Part 1 make up only one piece of these net amounts.

The amount in Column 11 (000 omitted) should reconcile directly to item (1) within the "*Reinsurance*" note of the "Notes to Financial Statements" titled "*Reinsurance Assumed and Ceded*" (shown in whole dollars; Notes 23C of Fictitious' 2011 Annual Statement).

Loss and LAE liabilities

Known liabilities owed by the reporting entity (i.e., the insurance company) to the reinsured (i.e., ceding company) as of December 31 of the current year are displayed in columns 6 and 7, with column 8 being the sum of the two.

- Column 6 (reinsurance recoverable on paid losses and LAE) represents losses and LAE that the ceding company has already paid but for which the insurance company has yet to pay to the reinsured.
- Column 7 (reinsurance recoverable on known case losses and LAE) provides losses and LAE reported by the ceding company as case reserves and for which the reporting entity has included in its direct plus assumed case reserves stated on Schedule P, Part 1 and its net loss and LAE reserves stated on page 3 of the balance sheet.[63]

The above information is valuable to the actuary in assessing the reasonableness of unpaid claims. The actuary can reconcile the case reserves relied upon in the actuarial analysis to Schedule F, Part 3 and determine where the ceded loss reserves are coming from. However, Part 1 does not provide assumed IBNR. While a ceding company may report IBNR figures to its reinsurer, the reinsurer is responsible for recording assumed IBNR.

As shown in Table 21, the total in column 6 (reinsurance recoverable on paid losses and LAE; 000 omitted) reconciles to the amount on page 3, line 2 (reinsurance payable on paid losses and LAE, displayed in whole dollars). However, the total in column 7 (000 omitted) does not

[63] This is only true for those companies that do not participate in intercompany pooling. A discussion of the treatment of intercompany pooling in Schedule P is provided *Chapter 15. Schedule P* of this publication.

reconcile directly to any exhibits or schedules within the Annual Statement. Known case reserves for losses are a part of the reported losses included in Column 2 of the Underwriting and Investment Exhibit, Part 2A; however LAE would need to be added to this balance to reconcile to the amount in Schedule F, Part 1, column 7.

Contingent commissions

Column 9 provides a listing of contingent commissions payable. Reinsurers pay ceding companies a commission for the premium income generated under the reinsurance contract. Contingent commissions payable are profit commissions generated from assumed reinsurance contracts that have yet to be paid as they are "contingent" on the profitability of the underlying reinsurance arrangement. The total amount listed in column 9 (000 omitted) is included within the amount on page 3, line 4, entitled *Commissions payable, contingent commissions and other similar charges*. The amount in column 9 (000 omitted) should reconcile to item (2) within the "Reinsurance" note of the "Notes to Financial Statements" titled "Reinsurance Assumed and Ceded" (Note 23C of the 2011 Annual Statement), which provides the amount of additional or return commission contingent upon loss experience or other forms of profit sharing arrangement as a result of existing contracts (shown in whole dollars).

Let's go back to the example we used in our explanation of column 10 (assumed premiums receivable), but this time, let's assume that the 25% ceding commission is on a one-to-one sliding scale basis instead of being fixed. The 25% ceding commission assumes a 75% loss ratio. If the loss ratio is worse than expected and ends up being 80%, then the ceding commission drops to 20%. If the loss ratio turns out to be better than expected and is 65%, for example, then the ceding commission increases by 10 points to 35%.

The amount of commissions payable in column 10 would be $500,000, and the contingent commissions payable in column 9 would be $125,000, which is the amount of expected commission at the onset of the contract. Let's fast-forward to the end of the following year and assume that the $500,000 in premium was paid by the ceding company (reinsured) to the reporting entity (reinsurer), and the $125,000 in ceding commission was paid by the reporting entity to the ceding company. However, based on actual loss experience to date, the reporting entity now knows that the loss ratio is 65% as opposed to the 75% originally expected. This means that the reporting entity will owe the ceding company 10 more points of commission, or $50,000. The $50,000 would be shown in column 9 as a positive number and is a liability to the reporting entity. Of course, since the $500,000 in premium has already been received by the reporting entity, the amount shown in column 10 would be $0.

Security

The remaining columns of Schedule F, Part 1 (columns 12 through 15) provide forms of security that ceding companies often require of their reinsurers to avoid credit risk or an insolvency problem with the reinsurer.

Funds held

Funds held by or deposited with reinsured companies (column 12) represent an asset to the reinsurance company and a liability to the ceding company. It represents a provision within a reinsurance contract under which a portion of the premium due to the reinsurer is withheld by the ceding company to pay claims. There is usually a limit to the funds-held balance; however, it is replenished as (or when) it is absorbed.

Not only do the funds held reduce credit risk, but they also serve to reduce the administrative burden of the reinsured having to go to the reinsurance company to collect each time it makes a loss payment. This provision is often beneficial to the reinsurer as the funds withheld are credited for interest, the rate of which is determined in the contract. Given the benefit, this is one provision that is considered in the evaluation of whether a reinsurance contract transfers underwriting risk.

Letters of credit

The dollar amount underlying any letters of credit that the reporting entity is required to post to benefit the reinsured is shown in column 13. Letters of credit are issued by a bank in favor of the reinsured in the event that the reinsurer is unable to meet its obligations. Reinsureds tend to favor this form of credit because it is not part of the estate of an insolvent reinsurer and therefore not tied up or subject to degradation in bankruptcy or liquidation proceedings. However, letters of credit can be very costly to the reinsurer. First, banks charge the reinsurer a fee, and this fee can be very high in uncertain economic times, as experienced during 2008 and several years thereafter. Second, letters of credit serve as a reduction to the reinsurer's line of credit with a bank and therefore reduce the amount of collateralization available on its debt obligations.

Amount of assets pledged or collateral held in trust

Broadly speaking, these are amounts not otherwise included within the funds-held provision. Unlike the other two types of security (funds held and letters of credit), these assets or collateral amounts are under the control of the reinsurer.

As we will see in Schedule F, Part 5, the funds-held provision and letters of credit serve to reduce a ceding company's liability for unauthorized reinsurance.

Schedule F — Part 1 for Fictitious Insurance Company

Because Fictitious Insurance Company does not have any assumed reinsurance, these balances are $0 within Fictitious' 2011 Annual Statement. However, a reconciliation of these

balances could be made within the Annual Statement for another company on the Exam 6 U.S. Syllabus.

SCHEDULE F — PART 2: PREMIUM PORTFOLIO REINSURANCE EFFECTED OR (CANCELED) DURING CURRENT YEAR

Overview

Part 2 provides a detailed listing of portfolio reinsurance transactions effected or canceled during the current year. Portfolio reinsurance is the transfer of policies in force or liabilities remaining on a block of the insurance company's business. Companies tend to enter into these arrangements when they:

- Want to discontinue writing a certain business
- Would like to get the risk or uncertainty associated with the liabilities off of their books
- Need surplus relief, which can come in the form of the discounted premium

However, these transactions come at a price, as the reinsurer will require a risk premium; the benefit of these contracts must be weighed with the cost.

Schedule F – Part 2 for Fictitious Insurance Company

Fictitious Insurance Company neither effected nor canceled any portfolio reinsurance during 2011.

SCHEDULE F — PART 3: CEDED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR (000 OMITTED)

Overview

Part 3 is one of the most referenced parts within Schedule F and marks the beginning of the remaining parts of Schedule F, which focus on ceded reinsurance. Part 3 provides a comprehensive listing of the company's ceded reinsurance balances by reinsurer. It shows the dollar amounts relating to ceded reinsurance contracts, which enable the user to identify amounts recoverable from each of the company's reinsurers and assess credit risk.

Each reinsurer in Parts 3 is separated into the same groups and categories as Part 1. However, these groups and categories are provided separately for authorized reinsurers and unauthorized reinsurers,[64] with subtotals for each. Additionally, the amount reinsured on protected cells is listed separately,[65] in aggregate. As we shall see, the categorization of

[64] An authorized reinsurer is one that is licensed or approved to transact insurance business in a jurisdiction; an unauthorized reinsurer is not.

[65] A protected cell company is one that is separated into separate cells, each having its own assets and liabilities, but also having access to a part of the company's overall capital. The liability to each cell is limited such that

authorized and unauthorized is used in the calculation of the provision for reinsurance, which culminates in Part 7.

With the exception of Part 8, the remaining Parts (3 through 7) of Schedule F each start off with a listing of the Federal ID Number, NAIC Company Code and name of each of the Company's reinsurers. Parts 3 through 5 also include the domiciliary jurisdiction of each reinsurer.

Cessions of 75% or more of subject premium

By definition, an insurance company is a risk-bearing entity. So when an insurance company decides to cede most, if not all, of the risk under a contract, regulators need to understand why an insurer writes business and then cedes a large portion of it to another insurer. Column 5 identifies, through an indicator of the number 2 in the relevant row, each individual reinsurance contract whereby 75% or more of the subject direct written premiums are ceded. The purpose of column 5 is to identify situations where the reporting entity may be acting as a fronting carrier for another company (the reinsurer) in a particular state where the reinsurer is not licensed to transact business. The concern on behalf of the regulator is that the reinsurer is using the fronting company to avoid regulatory oversight.

We often see this in the case of workers' compensation insurance due to the strict licensing requirements. For example, Insurer A may wish to write workers' compensation for a retail organization with locations along the west coast of the U.S. However, Insurer A may not be licensed to write workers' compensation insurance in California. So Insurer A may turn to Insurer B, which is licensed in California, to write the policy on Insurer A's behalf. In turn, Insurer B would cede 100% of the exposure to Insurer A. Insurer B would require a fronting fee to provide this service to Insurer A.

Certain reinsurance transactions are exempt from this requirement, as they are not fronting arrangements and their purpose is not to avoid regulatory oversight. These transactions include:

- Intercompany cessions with affiliates, as these are used to share risks across related companies
- Cessions to a group, association, pool or organization of insurers that underwrite jointly and are subject to examination by any state regulatory authority or that operate pursuant to any state or federal statutory or administrative authorization, such as a workers' compensation or auto assigned risk pool
- Those where the gross annual premium ceded is less than 5% of policyholder surplus, as these transactions are deemed immaterial and may represent situations where an insurance company is exiting a line of business as opposed to a fronting arrangement

creditors to one cell cannot look to another cell or the company as a whole for assets. Only certain jurisdictions currently have insurance legislation pertaining to protected cell companies.

- Cessions to captive insurance companies, which are regulated in their domiciliary state (captive insurance companies are used by parent companies (non-insurance) to keep commercial insurance costs down)

Many of the remaining columns are mirror images (albeit with different column numbers) to the corresponding contents of Part 1 for assumed reinsurance and pertain to premiums ceded, reinsurance recoverable, reinsurance payable and funds held by the reporting entity. In our discussion of the remaining columns of Part 3, we provide parenthetical references to amounts in Schedule F of Fictitious Insurance Company's 2011 Annual Statement where applicable.

Premiums ceded

The amount of written premium that is ceded to each of the company's reinsurers during the year is shown in column 6. The total amount in column 6 ($1,882; 000 omitted) should reconcile to the total of columns 4 plus 5 in Part 1B of the Underwriting and Investment Exhibit (shown in whole dollars).

Reinsurance recoverable

Columns 7 and 8 provide recoverables on paid losses and LAE ($426; 000 omitted). These are booked as an asset on the insurance company's balance sheet ($426,000 on page 2, line 16.1) because the company is awaiting receipt of a recovery from its reinsurer on payments that the insurance company already made to the claimant.

Columns 9 through 12 provide recoverable on unpaid loss and LAE. The totals of column 9 ($5,343; 000 omitted) will reconcile to the Underwriting and Investment, Part 2A, column 3 (shown in whole dollars). And, the totals of column 11 ($4,038; 000 omitted) will reconcile to the Underwriting and Investment, Part 2A, column 7 (shown in whole dollars).

For companies that do not participate in intercompany pooling, Schedule F, Part 3, columns 9 through 12 are equal to the amount of ceded reserves that are netted against the gross loss and LAE reserves, which result in the net loss and loss adjustment expense reserves shown on page 3 of the balance sheet in rows 1 plus 3. Columns 9 through 12 should also reconcile to the sum of the totals in columns 14, 16, 18, 20 and 22 of Schedule P, Part 1 – Summary as follows:

- The totals in Schedule F, Part 3, columns 9 and 11 ($5,343 and $4,038) should reconcile directly to the total amounts in Schedule P, Part 1, columns 14 and 16 ($5,343 and $4,038), respectively.[66]

[66] Differences due to rounding within the Annual Statement for Fictitious Insurance Company.

- Similarly, Schedule F, Part 3, column 10 ($258) should reconcile to Schedule P – Part 1, column 18 ($258), since the NAIC Annual Statement Instructions require column 10 of Schedule F, Part 3 to exclude Adjusting and Other expenses.
- The total in Schedule F, Part 3, column 12 ($503) should reconcile to the sum of the totals in columns 20 and 22 of Schedule P, Part 1 ($503).[67]

Even if the company does participate in intercompany pooling the recoverables on known case and IBNR loss reserves should match columns 3 (reported losses recoverable from authorized and unauthorized companies) and 7 (IBNR losses on reinsurance ceded) of the Underwriting and investment Exhibit Part 2A.

Note that Part 3 provides IBNR reserves, as these are amounts determined and recorded by the reporting entity. Recall that Part 1 does not provide IBNR. Part 1 provides case reserve amounts reported by the assuming company from the ceding company. While the ceding company may report IBNR to the assuming company, it is the assuming company's responsibility to book what it believes to be its best estimate.

Column 13 represents the amount of unearned premium that will be ceded to an insurance company's reinsurers ($920; 000 omitted). This should equal to the parenthetical amount on page 3, line 9 of the balance sheet ($920,000), which provides the reduction to gross unearned premium for the amount ceded. This is a contra liability to the ceding company. It should also reconcile directly to the amount in item (1) within the "Reinsurance" note of the Notes to Financial Statements titled "Reinsurance Assumed and Ceded" (shown in whole dollars; Note 23C of the 2011 Annual Statement).

Column 14 is similar to Schedule F, Part 1, column 9 (contingent commissions payable), but column 14 is from the view point of the reporting entity as a ceding company (reinsured) as opposed to the reporting entity as the reinsurer. Schedule F, Part 3, column 14 represents the amount of contingent commissions receivable from the reporting entity's reinsurers. The amount in column 14 ($12; 000 omitted) should reconcile to item (2) within the "Reinsurance" note of the Notes to Financial Statements titled "Reinsurance Assumed and Ceded" (shown in whole dollars; Note 23C of the 2011 Annual Statement), which provides the amount of additional or return commission contingent upon loss experience or other forms of profit sharing arrangement under the reporting entity's existing reinsurance contracts. In the case of Fictitious, this amount is positive, which means that Fictitious expects to receive additional commission from the companies it cedes business to (specifically Good Reinsurer and Slightly Overdue Reinsurer) as a result of favorable loss experience. However, the amount can also be negative, which would mean that the reinsurer's experience as has been worse than anticipated under the contract and the reporting entity is expected to return some of the commission already received.

[67] Differences due to rounding within the Annual Statement for Fictitious Insurance Company.

Column 15 provides a sum of reinsurance recoverables, whether on paid (an asset) or unpaid losses (a reduction to liabilities), a reduction to unearned premiums, or contingent commissions receivable.

Reinsurance payable

Columns 16 and 17 provide other amounts payable by the insurance company to the reinsurer. All other commissions receivable that are not included in column 14 are netted with ceded balances payable in column 16. Column 16 ($440; 000 omitted) should reconcile to page 3, line 12, "Ceded reinsurance premiums payable (net of ceding commissions) ($440,000). Amounts in column 17 ($0) represent miscellaneous liabilities owed to the reinsurer under the ceded contracts, excluding funds held by the company under the terms of the contracts with its reinsurers. Funds held are provided for separately in column 19.

Column 18 ($11,061; 000 omitted) represents the net amount recoverable from reinsurers and is equal to column 15 reduced by columns 16 and 17.

Funds held

Column 19 provides the liability for funds held by company under reinsurance treaties ($170; 000 omitted) and reconciles to page 3, line 13 ($170,000). This provision is the mirror image of that reported by the reinsurer in a transaction, as described in Part 1. It is used by the reporting entity to protect balances due from the reinsurer under the terms of the reinsurance contract. As we will see in Schedule F, Part 5, this provision enables the insurance company to reduce its liability for unauthorized reinsurance.

Footnotes to Part 3

There is a required footnote at the end of Part 3 that is particularly relevant from a regulatory perspective. The footnote requires disclosure of the top five provisional commission rates under the reporting entity's reinsurance contracts where the ceded premium is greater than $50,000. This note is read in conjunction with column 14 (contingent commissions receivable) and the aforementioned Note to Financials on reinsurance assumed and ceded.

The purpose of these items is to identify companies that may be using reinsurance as a means to conceal high operating leverage. As we shall see in Appendix I of this publication, one purpose of the Insurance Regulatory Information System (IRIS) ratios is to identify companies that may be taking on more business and more risk than they can handle relative to their surplus. Specifically, IRIS Ratio 2 provides the ratio of net written premium to policyholders' surplus. Unusual values triggering regulatory attention are those in excess of 300% on a net basis. The 300% ratio on a net basis corresponds to the age-old generally accepted benchmark that insurers remain within the 3-to-1 range in terms of writings relative to surplus.

Companies growing rapidly may use reinsurance as a means to reduce pressure on its surplus. This is known as "surplus relief." All else being equal, an increase in the amount of ceded premiums will reduce the amount of net premiums and reduce the premium to surplus ratio (IRIS Ratio 2). This is perfectly legitimate; the purpose of reinsurance is to spread and manage insurance risk.

For example, consider a company that has $150 million of direct written premium and surplus of $25 million. The premium-to-surplus ratio is 600%, well above the 300% benchmark. Let's say this company decides to purchase a 30% quota share reinsurance contract with a fixed ceding commission of 35%. The company's net written premium would be:

Direct written premium * (1 – ceding percentage)
= $150 million * (1 – 0.30)
= $105 million.

At the onset of the contract, the company's surplus would grow by the amount of ceding commission:

Direct written premium * ceding percentage * ceding commission
= $150 million * 30% * 35%
= $15.75 million

The resulting surplus would be $40.75 million ($25 million current surplus plus $15.75 million in ceding commission). The purchase of this contract would reduce the company's premium-to-surplus ratio below the 300% "usual" value benchmark, from 600% to 258%.

However, consider the situation where the commission is instead offered on sliding scale basis such that a one-point increase in loss ratio from 65% would result in a one-point decrease in the 35% commission rate. The premium-to-surplus ratio at the onset of this contract would be the same as that under the situation where the commission rate is fixed (258%). However, if the actual loss ratio turns out to be 80%, then the company will have to return $6.75 million of the original $15.75 million in ceding commission. Instead of receiving 35% of ceded premium in commission, the company (reinsurer) will end up getting only 20%. If a 20% fixed commission rate was considered at the onset, the premium-to-surplus ratio would have been 309%, triggering an unusual value for IRIS Ratio 2.

Schedule F, Part 3 and the reinsurance note to the financial statements identify reinsurance contracts with high provisional commission rates so that the regulator may investigate these contracts and determine if they are being used to mask high operating leverage.

We note that IRIS Ratio 4 (surplus aid to policyholders surplus) is another statistic that can identify companies that rely heavily on reinsurance for surplus relief. As explained in Appendix I of this publication, IRIS Ratio 4 provides the ratio of surplus aid to policyholders

surplus. Surplus aid is the amount of surplus enhancement in the current year attributed to ceding commission (both fixed and contingent) that has been taken into income on ceded unearned premium. Ratios of surplus aid to policyholders surplus in excess of 15% are considered unusual and trigger regulatory scrutiny.

In either of our examples (with the 35% ceding commission being either fixed or provisional), IRIS Ratio 4 would be computed as 39% at the onset of the contract, well in excess of the 15% benchmark.[68] This further illustrates the company's heavy use of reinsurance as surplus relief, masking considerable growth and uncertainty in results.

SCHEDULE F — PART 4: AGING OF CEDED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR (000 OMITTED)

Part 4 is titled "Aging of Ceded Reinsurance as of December 31, Current Year (000 Omitted)." It provides a breakdown by age of the paid loss and LAE amounts recoverable from the insurance company's reinsurers that are shown in columns 7 (reinsurance recoverable on paid loss) and 8 (reinsurance recoverable on paid LAE) of Schedule F, Part 3. The reinsurers are grouped and categorized in the same authorized/unauthorized segments as Part 3.

This schedule provides one of the items that is considered in determining the provision for reinsurance in Part 7, and columns 8 and 9 (amounts greater than 90 days overdue) are used directly in Part 5.

Paid loss and LAE recoverables are provided in the following age categories:

- Current (column 5)
- 1 to 29 days (column 6)
- 30 to 90 days (column 7)
- 91 to 120 days (column 8)
- Over 120 days (column 9)

The total amount of paid loss and LAE recoverable that is overdue (columns 6 through 9) is provided in column 10. The total amount of paid loss and LAE recoverable that is due (current in column 5 plus overdue in column 10) is provided in column 11. The amount in column 11 ($426 in total; 000 omitted) reconciles to the amount in column 7 (recoverable on paid loss) plus column 8 (recoverable on paid LAE) in Schedule F, Part 3 ($426 + $0 = $426 in total; 000 omitted) and Page 2, line 16.1 (amounts recoverable from reinsurers; $426,000). As stated previously, paid loss and LAE recoverables are assets of the reporting entity.

According to the NAIC Annual Statement Instructions, the age of the recoverable is based on the following:

[68] IRIS Ratio 4 is computed as the unearned premium reserve of $45 million multiplied by the 35% ceding commission and divided by policyholders surplus of $40.75 million.

- The terms of the reinsurance contract as to when claims are to be paid by the reinsurer, if specified
- The terms of the reinsurance contract as to when claims are to be reported by the insurance company to the reinsurer, if specified
  Or
- The date when the amount recoverable exceeds $50,000 for a particular reinsurer and is entered in the insurance company's financial accounts as a paid recoverable

If the amount recoverable is less than $50,000, and the aforementioned paid/reported dates are not specified in the contract, then the recoverable is reported in column 5 as currently due.

Note that recoverables from mandatory pools and associations are reported in Column 5 as currently due.

Columns 12 and 13 of Part 4 provide percentages of the overdue balances to total amounts due. Column 12 provides the percentage overdue relative to the total due (column 10 divided by column 11), and column 13 provides the percentage overdue greater than 120 days to the total due (column 9 divided by column 11). These percentages are used in the calculation of the provision for reinsurance.

SCHEDULE F — PART 5: PROVISION FOR UNAUTHORIZED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR (000 OMITTED)

As explained in the "Overview" section of this chapter, the provision for reinsurance is a minimum reserve that is calculated under SAP to reflect an estimate of recoveries under the reporting entity's reinsurance contract(s) that it will not be able to collect. The provision is calculated on Schedule F, Part 7 and comprises two elements:

1. Provision for unauthorized reinsurance, which comes from Part 5, column 20
2. Provision for overdue authorized reinsurance, which itself comprises two components, one coming from Part 6 and the other from Part 7:
   - Part 7 provides the provision for what Sholom Feldblum refers to as "slow-paying" authorized reinsurers.[69] These are reinsurers where the ratio of reinsurance recoverable on paid losses and LAE more than 90 days overdue represents greater than 20% of total reinsurance recoverable on paid losses and LAE plus amounts received in the 90 days prior to December 31, current year.
   - Part 6 provides the provision for authorized insurers where the aforementioned ratio is less than 20%.

[69] Feldblum, S., "Reinsurance Accounting: Schedule F," CAS Exam Study Note, April 2003, 8th Edition, page 22.

There is more to come on the provision for overdue authorized reinsurance when we discuss Parts 6 and 7. For now we will focus on the provision for unauthorized reinsurance that is computed in Schedule F, Part 5.

Provision for unauthorized reinsurance

The provision for unauthorized reinsurance requires that the insurance company establish a liability to protect against the inability to collect on amounts due from a reinsurer not authorized by the insurance company's jurisdiction to write business and therefore not regulated by that jurisdiction. The liability is determined equal to the sum of:

- The total amount of reinsurance recoverable from each reinsurer, offset by any forms of security (or other allowable offsets such as trust funds) for that reinsurer (i.e., unsecured recoverable)
- The lesser of the offsets and 20% of amounts recoverable on paid losses that are more than 90 days overdue not in dispute (i.e., the late payers)
- The lesser of the offsets and 20% of the amount of recoverables in dispute

To put it another way, the liability is equal to total recoverable from unauthorized reinsurers, reduced for allowable offsets only to the extent that there are no amounts in dispute or more than 90 days due (and not in dispute). Otherwise, the allowable offsets are reduced by 20% of amounts due from late payers and 20% of amounts recoverable that are in dispute. Late payers and those that dispute coverage are more likely not to pay than those unauthorized reinsurers that have a history of paying on time and where no amounts are currently in dispute. For each reinsurer, the liability is capped at the total amount of reinsurance recoverable from that reinsurer. However, according to the Annual Statement Instructions, a higher amount could be entered if the insurance company's experience suggests that a higher amount is appropriate.

We note that the Appointed Actuary comments on the collectability of reinsurance in the Statement of Actuarial Opinion. However, a large provision for reinsurance would not always mean there is a collectability issue. Just because a reinsurer is not authorized to transact business in the jurisdiction in which the reporting entity operates doesn't mean that the reinsurer is not viable and will not pay claims owed under the terms of the reinsurance contract.

The following provides the calculation of the Provision for Unauthorized Reinsurers for several reinsurers included in Schedule F, Part 5 of the 2011 Annual Statement for Fictitious Insurance Company. Note that the recoverable amounts in dispute provided in the footnotes to Schedule F, Part 5 relate to Reinsurer C. There are no other recoverables in dispute with any of Fictitious' other reinsurers.

The first example is Reinsurer A, which is an unaffiliated unauthorized reinsurance company of Fictitious located in the U.S. Reinsurer A is more than 90 days late in reimbursing Fictitious for $5,000 in paid loss and LAE. We have mimicked the calculation of the provision for unauthorized reinsurance (Part 5, Column 20) for Reinsurer A in the following table. To illustrate the calculations for a single reinsurer, we show the Schedule F columns in rows.

TABLE 22

Schedule F — Part 5
Provision for Unauthorized Reinsurance as of December 31, Current Year (000 omitted)
Example #1: Reinsurer A from Schedule F — Part 5 of the 2011 Annual Statement for Fictitious Insurance Company

Col. #	Heading	Amount
5	Reinsurance Recoverable on all Items, Schedule F, Part 3, Col. 15	42
6	Funds Held By Company Under Reinsurance Treaties, Schedule F, Part 3, Col. 19	20
7	Letters of Credit	–
11	Ceded Balances Payable, Schedule F, Part 3, Col. 16	–
12	Miscellaneous Balances	–
13	Other Allowed Offset Items	–
14	Cols. 6 + 7 + 11 + 12 + 13 but not in Excess of Col. 5	20
15	Subtotal Col. 5 minus Col. 14	22
16	Recoverable on Paid Losses & LAE Expenses Over 90 Days Past Due not in Dispute	5
17	20% of Amount in Col. 16	1
18	Smaller of Col. 14 or Col. 17	1
19	Smaller of Col. 14 or 20% of Amount in Dispute Included in Col. 5	–
20	Total Provision for Unauthorized Reinsurance Smaller of Col. 5 or Cols. 15 + 18 + 19	23

As displayed above, included within Fictitious Insurance Company's Total provision for unauthorized reinsurance in Column 20 of Schedule F, Part 5 is $23,000 for Reinsurer A. This was computed by taking all items recoverable of $42,000 and reducing by the amount of offsets, which in this case are funds held by Fictitious of $20,000, plus 20% of the amount of recoverable on paid loss and LAE over 90 days past due (and not in Dispute).

Reinsurer C is also an unauthorized U.S. reinsurer of Fictitious. The difference between Reinsurer A and Reinsurer C is that Reinsurer C is not late in paying Fictitious, but is in dispute with Fictitious over $50,000 of the $148,000 of recoverable. The following shows how the provision for unauthorized reinsurance is calculated for Reinsurer C.

TABLE 23

Provision for Unauthorized Reinsurance as of December 31, Current Year (000 omitted)
Example #2: Reinsurer C from Schedule F – Part 5 of the 2011 Annual Statement for Fictitious Insurance Company

Col. #	Heading	Amount
5	Reinsurance Recoverable on all Items, Schedule F, Part 3, Col. 15	148
6	Funds Held By Company Under Reinsurance Treaties, Schedule F, Part 3, Col. 19	20
7	Letters of Credit	–
11	Ceded Balances Payable, Schedule F, Part 3, Col. 16	3
12	Miscellaneous Balances	–
13	Other Allowed Offset Items	–
14	Cols. 6 + 7 + 11 + 12 + 13 but not in Excess of Col. 5	23
15	Subtotal Col. 5 minus Col. 14	125
16	Recoverable on Paid Losses & LAE Expenses Over 90 Days Past Due not in Dispute	–
17	20% of Amount in Col. 16	–
18	Smaller of Col. 14 or Col. 17	–
19	Smaller of Col. 14 or 20% of Amount in Dispute Included in Col. 5	10
20	Total Provision for Unauthorized Reinsurance Smaller of Col. 5 or Cols. 15 + 18 + 19	135
Footnotes:		
1.	Amounts in dispute totaling $50,000 are included in Column 5.	50
2.	Amounts in dispute totaling $.....0 are excluded in Column 13.	–

As with Reinsurer A, the calculation starts by reducing the $148,000 total reinsurance recoverables by the amount of allowable offsets, which in this case are funds held totaling $20,000 and ceded balances payable by Fictitious to Reinsurer C of $3,000. Added to this balance is 20% of the amount that Fictitious and Reinsurer C are in dispute over, $50,000. The total provision for Reinsurer C is $135,000.

Remember, the total provision for unauthorized reinsurance in Column 20 is capped at the total amount of Reinsurance Recoverables in Column 5 for any given unauthorized reinsurer. If, for example, Fictitious did not hold any funds on behalf of Reinsurer C, then the offsets would only be $3,000, and the addition for amounts overdue and in dispute (totaling $10,000) would cause the provision to be in excess of the total recoverable. In this case, the provision for unauthorized reinsurance would be capped at the $148,000.

Reinsurer E is unauthorized to transact business in the U.S.; however, the provision for unauthorized reinsurance is $0 in this case. The reason is that Reinsurer E has allowable offsets that in total equal the amount of reinsurance recoverable ($170,000). Further, Reinsurer E is not overdue in any of its payments to Fictitious and is currently believed to be in agreement with the amount of recoverable. The calculation of the provision for unauthorized reinsurance for Reinsurer E is displayed below.

TABLE 24

Provision for Unauthorized Reinsurance as of December 31, Current Year (000 omitted)
Example #3: Reinsurer D from Schedule F – Part 5 of the 2011 Annual Statement for Fictitious Insurance Company

Col. #	Heading	Amount
5	Reinsurance Recoverable on all Items, Schedule F, Part 3, Col. 15	170
6	Funds Held By Company Under Reinsurance Treaties, Schedule F, Part 3, Col. 19	100
7	Letters of Credit	68
11	Ceded Balances Payable, Schedule F, Part 3, Col. 16	2
12	Miscellaneous Balances	–
13	Other Allowed Offset Items	–
14	Cols. 6 + 7 + 11 + 12 + 13 but not in Excess of Col. 5	170
15	Subtotal Col. 5 minus Col. 14	0
16	Recoverable on Paid Losses & LAE Expenses Over 90 Days Past Due not in Dispute	–
17	20% of Amount in Col. 16	–
18	Smaller of Col. 14 or Col. 17	–
19	Smaller of Col. 14 or 20% of Amount in Dispute Included in Col. 5	–
20	Total Provision for Unauthorized Reinsurance Smaller of Col. 5 or Cols. 15 + 18 + 19	0

SCHEDULE F – PART 6: PROVISION FOR OVERDUE AUTHORIZED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR

Provision for overdue authorized reinsurance

We just discussed one element of the provision for reinsurance, that being the provision for unauthorized reinsurance. Here we will begin the discussion of the other element, the provision for overdue authorized reinsurance. The provision for overdue authorized reinsurance comprises two components, one coming from Part 6 and the other from Part 7.

Similar to that for overdue unauthorized reinsurance, for purposes of calculating the provision for overdue authorized reinsurance, "overdue" reinsurance is that for which the amount of paid loss and LAE recoverable is over 90 days past due for reasons other than dispute between the insurance company and the reinsurer. Part 6 only includes those authorized reinsurers in Part 4 where the amount of paid recoverable is overdue.

The piece of the provision for overdue authorized reinsurance that comes from Part 6 comprises overdue authorized reinsurance that represents *less than 20%* the total recoverable on paid loss and LAE (plus amounts received by the insurance company from that reinsurer in the prior 90 days). For these reinsurers, most of the payments are less than three months late. This of course is not as great of a concern from a collectibility standpoint as is the situation where the majority of the amount overdue from a reinsurer is greater than 90 days (i.e., the "slow payers"); the likelihood of the reinsurer reimbursing the insurance company is less as time goes on. Schedule F, Part 7 provides the provision for slow payers

(i.e., authorized reinsurers where the amount of paid loss and LAE recoverable more than 90 days overdue represents more than 20% of the total recoverable on paids).

Column 11 of Part 6 provides the provision for overdue authorized reinsurance as of December 31, current year, for authorized reinsurers where the amount of recoverable on paid loss and LAE more than 90 days overdue represents *less than 20%* of the total recoverable on paid loss and LAE (plus amounts received by the insurance company from that reinsurer in the prior 90 days). The provision for overdue authorized reinsurance in column 11 of Part 6 is calculated as 20% of (1) the amount of reinsurance recoverable on paids more than 90 days overdue plus (2) amounts in dispute excluded from the recoverable on paids more than 90 days overdue for those authorized reinsurers where the amount overdue represents less than 20% of the total. This is equal to 20% of the amount reported in column 8 plus the amount reported in column 10.

Notice for authorized reinsurers where the payments are more than 90 days past due, the provision in column 11 focuses on paid losses and LAE, or slow payers. This contrasts with unauthorized reinsurers, where the provision is based on the total recoverable (i.e., that for slow payers and for unpaid loss and LAE).

For Fictitious Insurance Company, "Slightly Overdue Reinsurer" is the only authorized reinsurer for which loss and LAE payments are overdue in 2011 *and* for which the overdue amount represents *less than 20%* the total recoverable on paid. The following provides the calculation of the provision for overdue authorized reinsurance for Slightly Overdue Reinsurer as per the 2011 Schedule F, Part 6 of Fictitious Insurance Company.

TABLE 25

Provision for Overdue Authorized Reinsurance as of December 31, Current Year
Example: Reinsurer "Slightly Overdue" from Schedule F – Part 6 of the 2011 Annual Statement for Fictitious Insurance Company

Col. #	Heading	Amount
4	Reinsurance Recoverable on Paid Losses and LAE More Than 90 Days Overdue (a)	1,000
5	Total Reinsurance Recoverable on Paid Losses and Paid LAE (b)	59,850
6	Amounts Received Prior 90 Days	–
7	Col. 4 divided by (Cols. 5 + 6)	1.7%
8	Amounts in Col. 4 for Companies Reporting less than 20% in Col. 7	1,000
9	Amounts in Dispute Excluded from Col. 4 for Companies Reporting less than 20% in Col. 7	4,000
10	20% of Amount in Col. 9	800
11	Amount Reported in Col. 8 x 20% + Col. 10	1,000
Footnotes:		
(a)	From Schedule F – Part 4 Columns 8 + 9, total authorized, less $4,000 in dispute.	–
(b)	From Schedule F – Part 3 Columns 7 + 8, total authorized, less $4,000 in dispute.	–

As displayed in column 7, 1.7% of the total amounts recoverable from Slightly Overdue Reinsurer on paid loss and LAE are more than 90 days overdue. As a result, 20% of overdue payments (20% of $1,000, or $200) plus 20% of the amounts in dispute excluded from the overdue paids (20% of $4,000, or $800) is included in the provision for overdue authorized reinsurance.

SCHEDULE F – PART 7: PROVISION FOR OVERDUE REINSURANCE AS OF DECEMBER 31, CURRENT YEAR

The purpose of Part 7 is twofold:

1. To calculate the provision for overdue authorized reinsurers for slow payers (i.e., where recoverable on paids are greater than 90 days past due represents greater than 20% of total reinsurance recoverable on paid losses and LAE plus amounts received in the 90 days prior to December 31, current year) in line 2 ($45,000)
2. To calculate the total liability recorded by the insurance company for the provision for reinsurance, both authorized and unauthorized, in line 6 that is recorded on page 3, line 16 ($283,000)

Part 7, line 2 is computed as 20% of the amount in line 1, which in turn is equal to the total in column 12. Column 12 is computed as the maximum of (1) reinsurance recoverable on all items less offsets and (2) the amount recoverable on paid losses and LAE greater than 90 days past due. Similar to Part 6, the provision for overdue authorized reinsurers in Part 7 considers reinsurance recoverables on paid loss and LAE greater than 90 days overdue.

However, Part 7 also considers all recoverables from the reinsurer, less allowable offsets. In Part 7, the greater of all items recoverable, less offsets, and paid recoverables more than 90 days due, is used in the calculation of the provision.

Lines 1 through 6 of Fictitious' Schedule F, Part 7 are shown below.

TABLE 26

1.	Total	225,000
2.	Line 1 x .20	45,000
3.	Schedule F — Part 6 Col. 11	1,000
4.	Provision for Overdue Authorized Reinsurance (Lines 2 + 3)	46,000
5.	Provision for Unauthorized Reinsurance (Schedule F Part 5, Col. 20 x 1,000)	237,000
6.	Provision for Reinsurance (Sum Lines 4 + 5) (Enter this amount on page 3, line 16)	283,000

The following tables provide a listing of the column headings within Schedule F, Part 7, along with the calculation of the provision for overdue authorized reinsurance for Fictitious' two slow-paying reinsurers: "Overdue Reinsurer" and "Foreign Authorized."

TABLE 27

Example #1: Overdue Reinsurer from Schedule F — Part 7 of the 2011 Annual Statement for Fictitious Insurance Company		
Col. #	**Heading**	**Amount**
4	Reinsurance Recoverable on all Items, Schedule F, Part 3, Col. 15 *1,000	745,000
5	Funds Held By Company Under Reinsurance Treaties, Schedule F, Part 3, Col. 19 *1,000	–
6	Letters of Credit	515,000
7	Ceded Balances Payable, Schedule F, Part 3, Col. 16 * 1,000	13,000
8	Other Miscellaneous Balances	–
9	Other Allowed Offset Items	–
10	Sum of Cols. 5 through 9 but not in Excess of Col. 4	528,000
11	Subtotal Col. 4 minus Col. 10	217,000
12	Greater of Col. 11 or Schedule F - Part 4 Cols. 8 + 9	217,000

TABLE 28

Example #2:	Foreign Authorized from Schedule F — Part 7 of the 2011 Annual Statement for Fictitious Insurance Company	
Col. #	Heading	Amount
4	Reinsurance Recoverable on all Items, Schedule F, Part 3, Col. 15 *1000	2,411,000
5	Funds Held By Company Under Reinsurance Treaties, Schedule F, Part 3, Col. 19 *1000	–
6	Letters of Credit	2,500,000
7	Ceded Balances Payable, Schedule F, Part 3, Col. 16 * 1000	255,000
8	Other Miscellaneous Balances	–
9	Other Allowed Offset Items	–
10	Sum of Cols. 5 through 9 but not in Excess of Col. 4	2,411,000
11	Subtotal Col. 4 minus Col. 10	–
12	Greater of Col. 11 or Schedule F - Part 4 Cols. 8 + 9	8,000

As displayed in Tables 27 and 28, included within Fictitious Insurance Company's Total provision for overdue authorized reinsurance in column 12 and line 1 of Schedule F, Part 7 of $225,000 is $217,000 for Overdue Authorized and $8,000 for Foreign Authorized. These reinsurers are on this schedule because the amount of reinsurance recoverables on paids more than 90 days overdue represents over 20% of total recoverable from each (100% and 23.5% , respectively as calculated by dividing the sum of columns 8 and 9 by column 11 on Schedule F, Part 4).

To illustrate in words, the provision for overdue authorized reinsurers for Overdue Reinsurer is computed taking the maximum of the total reinsurance recoverable of $745,000 reduced for allowable offsets totaling $528,000, and the amount of recoverable on paids more than 90 days overdue totaling $9,945 per Schedule F, Part 6, column 4 and Schedule F, Part 4, columns 8 plus 9 (multiplied by 1,000). The corresponding formulas are as follows:

= Maximum [Total reinsurance recoverable on all items - Allowable offsets; Recoverable on paid loss and LAE more than 90 days overdue]

= Maximum [$745,000 - $528,000 = $217,000; $9,945]

The sum of the amounts for authorized slow payers is multiplied by 20% prior to inclusion in the total provision for reinsurance. That is, the provision for Overdue Reinsurer of $217,000, and the provision for Foreign Authorized of $8,000 are added together and multiplied by 20% to obtain the provision for authorized slow payers of $45,000 (20% * $225,000), per line 2 of Schedule F, Part 7.

The final provision for reinsurance in line 6 of Schedule F, Part 7, which is equal to the recorded on Liabilities, Surplus and Other Funds on Page 3, line 16 ($283,000) of the Annual

Statement, is equal to the sum of the following two items, which are displayed on Schedule F, Part 7:

1. Provision for overdue authorized reinsurance (totaling $46,000 per line 4)
2. Provision for unauthorized reinsurance (totaling $237,000 per line 5, which is derived in Column 17 of Schedule F – Part 5 multiplied by 1,000)

The provision for overdue authorized reinsurance (totaling $46,000 per line 4) is equal to the provision for overdue authorized for slow payers from Part 7 ($45,000) plus the provision for all other overdue authorized reinsurers (those where recoverable on paids more than 90 days overdue represents less than 20% of total recoverables on paids) from Part 6 ($1,000).

The provision for reinsurance is a series of intricate calculations. The following provides a formulaic version of the provision to provide a more simplified view of the calculations. The formulas are provided separately for each of the three major components of the calculations (unauthorized, authorized non-slow paying and authorized slow paying). The calculations are performed separately for each reinsurer within each component. The sum of the results of each component provides the total provision.

Unauthorized reinsurer (Schedule F, Part 5, column 20, total):

= Minimum [(A) and [(A) – (B)]]
+ Minimum [(B) and 20% * (C)]
+ Minimum [(B) and 20% * (D)]

All other overdue authorized reinsurers (non-slow paying; Schedule F, Part 6, column 11, total):

= 20% * [(C) + (D)]

Overdue authorized slow-paying reinsurers (Schedule F, Part 7, line 2):

= 20% * Maximum [(A) – Minimum [(A) and (B)] and (E)]

Where,

(A) = Total reinsurance recoverable on all items (Schedule F, Part 3, column 15)
(B) = Allowable offsets (Schedule F, Part 5, column 14 for unauthorized; Schedule F, Part 7, sum of columns 5 through 9 for authorized slow paying)
(C) = Recoverable on paid loss and LAE greater than 90 days overdue, excluding amounts in dispute (Schedule F, Part 4, columns 8 + 9, excluding (D) as applicable)
(D) = Recoverable on paid loss and LAE in dispute (per footnotes to the associated parts of Schedule F)
(E) = Recoverable on paid loss and LAE greater than 90 days overdue, including amounts in dispute (Schedule F, Part 4, columns 8 + 9)

SCHEDULE F — PART 8: RESTATEMENT OF BALANCE SHEET TO IDENTIFY NET CREDIT FOR REINSURANCE

Part 8 of Schedule F provides a summarized form of the balance sheet with adjustments to restate it on a gross of ceded reinsurance basis. That is, Part 8 provides a snapshot of the balance sheet as if the company had no reinsurance protection.

Part 8 is one page and displays the assets followed by the liabilities. Both the assets and liabilities are in a compressed format for ease of presentation and computation. There are three columns, providing balances for each of the following asset and liability line items:

Column 1: As Reported (Net of Ceded)
This provides the amounts included on page 2 of the Annual Statement, which are net of reinsurance.

Column 2: Restatement Adjustments
This provides the adjustments necessary to put the net amounts in column 1 on a gross of reinsurance basis in column 3.

Column 3: Restated (Gross of Ceded)
This is equal to the sum of columns 1 and 2 and shows the corresponding asset and liability figures on a gross of reinsurance basis.

Adjustments to assets

The asset side of the balance sheet is generally easier to adjust because there are fewer items that require adjustment. This is because certain items relate to direct or assumed business only, and/or certain items are not impacted by the amount of ceded reinsurance a company has. In general, no adjustment is made to the following asset items within Part 8:

- Cash and invested assets (line 1 of Schedule F, Part 8; line 12 of page 2), as these represent balances that the company has on hand or invested, regardless of its ceded reinsurance
- Premiums and considerations (line 2 of Schedule F, Part 8; line 15 of page 2), as these represent uncollected or deferred balances relating to direct written premiums
- Funds held by or deposited with reinsured companies (line 4 of Schedule F, Part 8; line 16.2 of page 2), as these represent balances for business assumed by the company, not ceded
- Other assets (line 5 of Schedule F, Part 8; representing the balance of page 2 not separately identified), as these represent balances that would not change regardless of ceded reinsurance balances, such as title plants, furniture and electronic data equipment

- Protected cell assets (line 7 of Schedule F, Part 8; line 27 of page 2), as these are not related to ceded reinsurance

The only two lines that are affected by the reinsurance adjustments are line 3, reinsurance recoverable on loss and loss adjustment expense payment, and line 6, net amount recoverable from reinsurers. The adjustment in line 3 is simply a reversal of the amount of reinsurance recoverable on loss and LAE such that the balance gross of reinsurance ceded is $0 for this asset. The adjustment for line 6 is a balancing item such that the total adjustments on the liabilities side of the balance sheet equal those on the asset side.

Adjustments to liabilities

With respect to the Liability side of the balance sheet, generally no adjustment is made to the following line items in Part 8:

- Taxes, expense, and other obligations (line 10 of Schedule F, Part 8; lines 4 through 8 of page 3), as these are generally applied to direct writings
- Advance premium (line 12 of Schedule F, Part 8; line 10 of page 3), as this represents balances that the company has received in advance on its direct writings
- Dividends declared and unpaid (line 13 of Schedule F, Part 8; line 11.1 and 11.2 of page 3), as dividends are not affected by the ceded reinsurance balances
- Amounts withheld or retained by company for account of others (line 16 of Schedule F, Part 8; line 14 of page 3), as these balances are not related to ceded reinsurance
- Other liabilities (line 18 of Schedule F, Part 8; representing the balance of the liabilities on page 3 not separately identified), as these are unrelated to ceded reinsurance

Adjustments are made for the following lines:

Line 9: Losses and LAE (lines 1 through 3 of page 3)
These balances are stated net on a company's statutory balance sheet. The adjustment puts the balances on a gross of reinsurance basis. For companies that are not involved in intercompany pooling arrangements, the adjustment equals the ceded case and IBNR figures from Schedule P, Part 1, Summary, total, columns 14, 16, 18, 20 and 22.

Line 11: Unearned premiums (line 9 of page 3)
These balances are stated net on a company's statutory balance sheet. The adjustment puts the balances on a gross of reinsurance basis. The source of the ceded unearned premium reserve is Schedule F, Part 3, column 13, multiplied by 1,000. The ceded balance is also provided within the

parenthetical reference on the Liabilities, Surplus and Other Funds page of the Annual Statement (page 3) on line 9.

Line 14: Ceded reinsurance premiums payable (line 12 of page 3)
If we ignore ceded reinsurance, as is the purpose of Part 8, then the company will not have any ceded reinsurance premiums payable. The adjustment reverses the amount in column 1.

Line 15: Funds held by company under reinsurance treaties (line 13 of page 3)
Similarly, if we don't have any ceded reinsurance treaties, then the company won't have any funds held related to these treaties. The adjustment reverses the amount in column 1.

Line 17: Provision for reinsurance (line 16 of page 3)
This is the Schedule F "penalty," as computed in Schedule F, Part 7. If the company is assumed to have no reinsurance protection in Part 8, then there will be no provision for reinsurance. The adjustment reverses the amount in column 1.

Surplus

Surplus remains unadjusted in Part 8, as such, the adjustment amount is shown as "XXX" in column 2 and the amount in column 3 equals that in column 1.

Totals

The totals shown in column 1, line 22 of Part 8, balance to the totals shown on line 38 of page 3 of the Annual Statement. The total is equal to the difference between the total assets and total liabilities of the company. This calculation follows through to column 3, with the new total being on gross of reinsurance basis.

The following provides Schedule F, Part 8 for Fictitious Insurance Company.

TABLE 29

Schedule F — Part 8
Annual Statement for the year 2011 of the Fictitious Insurance Company
Restatement of Balance Sheet to Identify Net Credit for Reinsurance

		1 As Reported (Net of Ceded)	2 Restatement Adjustments	3 Restated (Gross of Ceded)
Assets (page 2, Col. 3)				
1.	Cash and invested assets (Line 12)	87,825,000	0	87,825,000
2.	Premiums and considerations (Line 15)	7,990,000	0	7,990,000
3.	Reinsurance recoverable on loss and loss adjustment expense payments (Line 16.1)	426,000	(426,000)	0
4.	Funds held by or deposited with reinsured companies (Line 16.2)	0	0	0
5.	Other assets	3,759,000	0	3,759,000
6.	Net amount recoverable from reinsurers	0	10,595,000	10,595,000
7.	Protected cell assets (Line 27)	0	0	0
8.	Totals (Line 28)	100,000,000	10,169,000	110,169,000
Liabilities (page 3)				
9.	Losses and loss adjustment expenses (Lines 1 through 3)	51,557,000	10,142,000	61,699,000
10.	Taxes, expenses, and other obligations (Lines 4 through 8)	1,932,000	0	1,932,000
11.	Unearned premiums (Line 9)	11,895,000	920,000	12,815,000
12.	Advance premiums (Line 10)	0	0	0
13.	Dividends declared and unpaid (Lines 11.1 through 11.2)	1,562,000	0	1,562,000
14.	Ceded reinsurance premiums payable (net of ceding commissions) (Line 12)	440,000	(440,000)	0
15.	Funds held by company under reinsurance treaties (Line 13)	170,000	(170,000)	0
16.	Amounts withheld or retained by company for account of others (Line 14)	308,000	0	308,000
17.	Provision for reinsurance (Line 16)	283,000	(283,000)	0
18.	Other liabilities	829,000	0	829,000
19.	Total liabilities excluding protected cell business (Line 26)	68,976,000	10,169,000	79,145,000
20.	Protected cell liabilities (Line 27)	0	0	0
21.	Surplus as regards policyholders (Line 37)	31,024,000	0	31,024,000
22.	Totals (Line 38)	100,000,000	10,169,000	110,169,000

As displayed above, the asset items are adjusted in column 2 for:

- Reinsurance recoverable on loss and LAE payments in line 3, totaling $426,000
- The net amount recoverable from reinsurers in line 6, totaling $10,595,000

The amount in line 6, column 2, is simply a reversal of the balance shown in column 1, and therefore the asset side of the balance sheet. The amount in line 6 is computed as the "plug," such that the total adjustment to the assets in line 8 equals the total adjustment to the liabilities in line 19.

The liability items are adjusted in column 2 for:

- Loss and LAE in line 9, totaling $10,142,000
- Unearned premiums in line 11, totaling $920,000
- Ceded reinsurance premiums payable in line 14, totaling $440,000
- Funds held by company under reinsurance treaties in line 15, totaling $170,000
- Provision for reinsurance in line 17, totaling $283,000

The amount in line 9, column 2, is equal to the amount of ceded loss and LAE reserves per Schedule P, Part 1, Summary, of Fictitious' 2011 Annual Statement (sum of the totals in columns 14, 16, 18, 20 and 22).[70]

For companies that do not participate in intercompany pooling, this is equal to the ceded reserve loss and LAE reserve balance in Schedule P, Part 1, Summary. For those that operate in an intercompany pooling arrangement, we note that Schedule P is prepared net of pooling on both a gross and net of external reinsurance basis, whereas Schedule F considers all assumed and ceded reinsurance, including intercompany pooling. As such, it makes it difficult to have full visibility into the loss and LAE reserve balances shown in column 2 of Schedule F, Part 8 for companies participating in intercompany pooling.

The amount in line 11, column 2 is equal to the amount of gross unearned premium reserves that are ceded, as displayed in the total line of Schedule F, Part 3, column 13, multiplied by 1,000.

The amounts in column 2 for lines 14, 15, and 17 represent a reversal of the amount in column 1.

As displayed above, there is no adjustment to surplus; therefore, the amount in column 1 equals that in column 3 ($31,024,000).

CHANGES TO SCHEDULE F IN 2012[71]

As noted, the annual statement instructions referenced and relied upon in this publication are those from 2011. In 2012, the NAIC added a new Part 6 to Schedule F and shifted the former Parts 6 through 8 to Parts 7 through 9, respectively.

[70] Schedule P is prepared net of intercompany pooling on both a gross and net of external reinsurance basis, whereas Schedule F considers all assumed and ceded reinsurance, including intercompany pooling. As such, it makes it difficult to have full visibility into the loss and LAE reserve balances shown in column 2 of Schedule F, Part 8 for companies participating in intercompany pooling arrangements.

[71] NAIC, *Annual Statement Instructions Property/Casualty,* 2012, pages 207-232.

In 2012, the NAIC added a third facet to the "authorized" and "unauthorized" categorization of reinsurers in Schedule F, called "certified." Certified reinsurers are reinsurers that were previously categorized as unauthorized, but since have applied for an attained certification from the reporting entity's domiciliary state as a certified reinsurer. In attaining certification, consideration is made for the reinsurer's jurisdiction, financial position, amount of capital and surplus, regulatory history, financial strength rating(s) from recognized rating agency(ies), among other factors. Once certified, the reinsurer is given a rating that ranges from 1 to 6, called the Certified Reinsurer Rating. A reinsurer with a rating of 1 is considered most secure from a financial strength perspective; a reinsurer with a rating of 6 is considered vulnerable.

The rating defines the amount of collateral that the reinsurer is required to post with the reporting entity. The more secure the certified reinsurer, the less collateral required. For example, a reinsurer with a rating of 1 is not required to post any collateral; a reinsurer with a rating of 6 is required to post 100% of total recoverable due to the reporting entity in collateral. The rating and collateral are used in the calculation of the provision for reinsurance in the new Part 8 of Schedule F (formerly Part 7).

The obvious benefits of this new "certified" category are twofold: (1) the reporting entity does not get "penalized" as much as an unauthorized reinsurer in the provision for reinsurance, and (2) the reinsurer does not have to post as much security with the ceding company.

The new Part 6 has two sections. Section 1 provides the provision for reinsurance ceded to certified reinsurers due to collateral deficiency. This provision is equal to total recoverables from certified reinsurers (from Schedule F, Part 3, column 18) in excess of the amount of credit permitted for recoverables based on the Certified Reinsurer Rating. The amount of credit permitted is based on the amount of collateral actually posted by the reinsurer relative to the amount of collateral required based on its Certified Reinsurer Rating. For example, if a certified reinsurer has a rating of 6, then the reinsurer is required to post 100% of the recoverable in collateral. However, if the reinsurer only posts 75% of the total collateral required, then the reporting entity would record a provision for reinsurance in Section 1 equal to 25% of the recoverables. The 25% represents the deficiency in collateral; 75% represents the amount of credit permitted.

Section 2 of Part 6 provides the provision for overdue reinsurance ceded to certified reinsurers. As with authorized and unauthorized reinsurers, overdue reinsurance ceded is defined as recoverable on paid losses and LAE more than 90 days overdue per columns 8 and 9 of Schedule P, Part 4. The provision is calculated as:

= Minimum [Maximum [20% * (C) + 20% * (D) and 20% of (F)] and (G)],

where (C) and (D) are as defined previously in this chapter and:

(F) = net[72] unsecured recoverable for slow payers for which credit is permitted (Schedule F, new Part 6, Section 2, column 11 minus column 12); and
(G) = amount of credit permitted for net recoverable (Schedule F, new Part 6, Section 1, column 22).

The new Part 8 in 2012 (formerly Schedule F, Part 7) has two more lines in the calculation of the provision for reinsurance (lines 6 and 7) to account for the provision for certified reinsurers, as displayed below.

TABLE 30

Schedule F, Part 8, lines 1 through 8	
1	Total (Schedule F-Part 8, Col. 12, Total
2	Line 1 x .20
3	Schedule F-Part 7 Col. 11
4	Provision for Overdue Authorized Reinsurance (Lines 2 + 3)
5	Provision for Unauthorized Reinsurance (Schedule F-Part 5, Col. 20 x 1,000)
6	Provision for Reinsurance Ceded to Certified Reinsurers (Schedule F, Part 6, Section 1, Col. 23 x 1,000)
7	Provision for Overdue Reinsurance Ceded to Certified Reinsurers (Schedule F, Part 6, Section 2, Col. 15 x 1,000)
8	Provision for Reinsurance (sum Lines 4 + 5 + 6 + 7) (Enter this amount on Page 3, Line 16)

Reporting entities that have certified reinsurance need to bifurcate ceded balances pre- and post-certification periods in the new Schedule F. The amount of collateral and Schedule F penalty are determined separately based on the pre- and post-certification balances and requirements for each reinsurer. The amounts pre-certification will be reported within Part 5 as unauthorized reinsurance, and the amounts post-certification will be reported in Part 6.

As of the summer of 2013, not all states have enacted the NAIC model laws, which permit consideration for certified reinsurers: Credit for Reinsurance Model Law (#785) and Credit for Reinsurance Model Regulation (#786). Schedule F, Part 6 is only used by those reporting entities whose domiciliary state has adopted the model law(s); all other reporting entities will report "NONE" in Part 6. Given its newness, and the fact that the NAIC model laws for certified reinsurers have not been adopted in every state, Part 6 was not applicable for many companies in 2012. Accordingly, our discussion and description has been relatively brief.

[72] Net recoverable from Schedule F, Part 3, column 18 is used in the calculations in Part 6. Column 18 is equal to the total recoverable from Part 3, column 15, less reinsurance payable on ceded balances payable (Part 3, column 16) and reinsurance payable on other amounts due to reinsurers (Part 3, column 17).

SUMMARY

As we have seen, Schedule F is not only important to actuaries in assessing net loss and LAE reserves, but it is also an important tool to the many users of the Annual Statement in solvency monitoring because it:

- Identifies the amount of gross losses that emanate from the reporting entity's assumed reinsurance transactions
- Provides an estimate of the significance of the reporting entity's assumed and ceded reinsurance transactions to its surplus
- Enables further inquiry into the financial strength of the reporting entity's reinsureds and reinsurers
- Identifies those of the reporting entity's reinsurers that may require further scrutiny because they are either slow at paying claims or are not regulated.

Yet, Schedule F is only one of many tools used to monitor solvency by regulators. And as we have stressed throughout this publication, no one tool can be used blindly.

Further, while Schedule F is valuable, it has received some criticism as to how well it meets the regulatory objectives of monitoring solvency for the protection of policyholders.[73] The following are a few of those criticisms:[74]

- The provision for reinsurance is strictly formulaic, potentially masking the true estimate of uncollectible reinsurance that would be determined by company management based on their knowledge of the reinsurers and terms of each contract.
- There is no statistical, historical or actuarial basis for the formula, and its application may not adequately represent an insurer's exposure to collectibility risk.
- Unauthorized reinsurance may provide more and/or higher-quality reinsurance at a lower price than a competing authorized reinsurer.
- Slow payers who are financially strong eventually pay, whereas a reinsurer that is current in its payments may not be able to withstand a stress scenario to its financials.
- The numerous calculations and detail involved in determining the provision for reinsurance can lead to a false level of precision such that the true issue of collectibility risk is overlooked.
- The costs associated with collateral requirements may be passed down to the primary policy, thereby costing the policyholder more for insurance.
- The provisions within Schedule F can limit competition to the U.S. market as a result of the penalty that the European reinsurers bring given that they are unauthorized.

Schedule F does not directly tell us anything about the reinsurer's solvency, which is really the source of collectibility risk.

CHAPTER 15. SCHEDULE P

OVERVIEW

Schedule P is probably the most important schedule within the Annual Statement to property/casualty actuaries. Schedule P provides details underlying the recorded loss and loss adjustment expense (LAE) reserves on the reporting entity's statutory balance sheet, including 10 years of the company's historical loss and defense and cost containment (DCC) experience. Because the Annual Statement is a public document, Schedule P tends to be a means for outside parties to evaluate the adequacy of recorded reserves, absent loss and LAE data provided directly by the company. And even when detailed data is provided by the company, oftentimes outside parties look to Schedule P for purposes of providing a check on the reasonableness of the recorded balances. However, there are cautions to using this information, and we have presented several within this chapter.

Schedule P has numerous other uses in addition to providing support for the recorded loss and LAE reserves. For example, Schedule P:

- Supports and provides necessary disclosures for the Statement of Actuarial Opinion, including:
  - Direct plus assumed and net loss and expense reserves
  - The amount of anticipated salvage and subrogation (S&S) that the reporting entity takes credit for in its reserves
  - The amount of tabular and non-tabular discount that the reporting entity takes credit for in its reserves
- Shows how loss reserves have developed over time and enables the reader to decipher whether development is attributed to a specific year or line of business
- Provides the source of a company's payment patterns for purposes of discounting reserves for federal income tax
- Shows the split between a company's reserves for known claims and those actuarially determined (i.e., IBNR reserves)
- Provides historical claim count data to facilitate review of trends in claim frequency and severity, as well as changes in claims handling and reserving
- Provides information necessary to compute the loss sensitive discount in the RBC calculation

We will discuss some of these additional uses within this chapter.

ORGANIZATIONAL STRUCTURE

There are seven parts to Schedule P plus interrogatories, as described below.

Part 1 summarizes a company's loss and LAE experience as of December 31 of the current year. It displays a company's loss and LAE reserves, after adjustment for tabular discount if

applicable, and then separately shows the reserves net of all discounts (both tabular and non-tabular). These are the loss and LAE reserves that are recorded on a company's statutory balance sheet (page 3 of the Annual Statement).

For those companies that participate in intercompany pooling, Part 1 displays the pooling percentage.

Part 2 provides a historical display of a company's net ultimate loss and DCC estimates. This enables the user to see how the company's ultimate loss and DCC estimates have developed over time. In a perfect world, the company's ultimate estimate of the cost of incurred claims would remain the same at each evaluation point. However, these are estimates, and therefore have the potential to develop upward or downward as the claims mature. The information provided in Part 2 feeds into the one-year development test in the Five-Year Data Exhibit and is also used in computing IRIS ratios 11, 12 and 13.

Part 3 shows a historical array of the company's net paid loss and DCC experience as of each of the past 10 years. Actuaries can use this information to project unpaid claims using methods such as the paid loss development technique.

The difference between Part 2 (ultimates) and Part 3 (paids) provides a historical array of the company's net loss and DCC reserves as of each of the past 10 years. These amounts are provided *before* tabular discount.

Part 4 displays a company's recorded net IBNR for loss and DCC *before* tabular discount. The difference between Parts 2 and 4 provides a historical array of the company's net reported loss and DCC experience as of each of the past 10 years. This information can be used by actuaries to project unpaid claims using methods such as the case incurred loss development technique.

Part 5 provides a historical array of claim counts as of each of the past 10 years, including claims closed with payment, open claims and reported claims.

Part 6 displays the earning of premium over time, separately on a direct plus assumed and ceded basis. Like the information provided in Parts 2 through 4, the earned premium data is provided in a triangular format enabling the monitoring of premium adjustments over time.

Part 7 provides loss and premium data on loss sensitive contracts, separately for primary and reinsurance contracts, for those lines of business where such contracts are written.

All dollar amounts presented in Schedule P are in thousands (i.e., 000 omitted).

Within the remaining sections of this chapter, we will provide an overview of each part of Schedule P, focusing on those of most relevance to the property/casualty actuary. We will then get into details of those parts, providing relevant examples from the 2011 Schedule P for Fictitious Insurance Company.

SCHEDULE P – PART 1

Part 1 is shown in summary format for all lines of business combined, followed by separate schedules (Parts 1A through 1T) in the same format as Part 1 – Summary, but by Schedule P line of business. The data in Part 1 is provided on a direct plus assumed (gross) and ceded basis and includes premiums earned, paid loss and LAE, case outstanding loss and DCC reserves, and IBNR for loss and LAE. Additionally, incurred loss and LAE ratios are displayed on a gross, ceded and net of reinsurance basis.

One item that is not included in Schedule P is the segregation of gross data into its direct and assumed components. Oftentimes actuaries look for this information separately in performing analyses of unpaid claims however it is not provided in Schedule P. As noted in *Chapter 14. Schedule F*, certain of this information can be provided in Schedule F, Part 1, including assumed case reserves.

Line of Business Segmentation in Part 1

Parts 1A through 1T provide the same information as in Part 1 – Summary, except separately by line of business. The line of business segmentations are as follows:

A – Homeowners/Farmowners
B – Private Passenger Auto Liability/Medical
C – Commercial Auto Liability/Medical
D – Workers' Compensation
E – Commercial Multiple Peril
F – Section 1 – Medical Professional Liability - Occurrence
F – Section 2 – Medical Professional Liability – Claims-Made
G – Special Liability (Ocean Marine, Aircraft (All Perils), Boiler & Machinery)
H – Section 1 – Other Liability - Occurrence[75]
H – Section 2 – Other Liability – Claims-Made
I – Special Property (Fire, Allied Lines, Inland Marine, Earthquake, Burglary & Theft)
J – Auto Physical Damage
K – Fidelity/Surety
L – Other (Including Credit, Accident and Health)
M – International
N – Reinsurance – Nonproportional Assumed Property[76]
O – Reinsurance – Nonproportional Assumed Liability[77]

[75] Business reported as an aggregate write-in for other lines of business in the State Page is included here (either as occurrence or claims-made, depending on the coverage written).
[76] Property includes fire, allied, ocean marine, inland marine, earthquake, group, credit and other A&H, auto physical damage, boiler and machinery, burglary and theft and international property.
[77] Liability includes farmowners, homeowners and commercial multiperil; medical professional liability workers' compensation; other liability; products liability; auto liability; aircraft (all peril); and international liability.

P – Reinsurance – Nonproportional Assumed Financial Lines[78]
R – Section 1 – Products Liability – Occurrence[79]
R – Section 2 – Products Liability – Claims-Made
S – Financial Guaranty/Mortgage Guaranty
T – Warranty

The definitions of these lines correspond to those on the Exhibit of Premiums and Losses (Statutory Page 14), with the exception of the three nonproportional reinsurance assumed lines (Parts N, O and P), which are not included in Statutory Page 14, as it provides information on a direct basis only. Nonproportional reinsurance assumed is generally excess of loss reinsurance, whereas proportional is generally a form of quota share reinsurance. Proportional reinsurance is included within its respective line(s) of business segments. For example, premiums and losses associated with assumed commercial property reinsurance under a quota share contract would be included within Schedule P, Part 1I. Whereas the same risk assumed on an excess of loss basis would be included within Schedule P, Part 1N.

Only two accident years and a "prior years" row are shown for the following lines due to the limited amount of loss development beyond two years:

I – Special Property (Fire, Allied Lines, Inland Marine, Earthquake, Burglary & Theft)
J – Auto Physical Damage
K – Fidelity/Surety
L – Other (Including Credit, Accident and Health)
S – Financial Guaranty/Mortgage Guaranty
T – Warranty

That is, claims for the aforementioned lines of business are expected to be reported and paid within a relatively short period of time after the occurrence of a claim. Consider the Special Property line of business. If a commercial property is damaged due to fire, the insured will report the claim rather quickly to get the building repaired or rebuilt in order to continue operations. Payments may continue to the insured while the commercial property is being repaired due to business interruption; however, the insured will generally be back in business within the year in which the loss occurred. As a result, losses will develop for 12 to 24 months after the beginning of the accident year (January 1) in which the loss occurred, but typically the claim will be closed by the end of 24 months.

To illustrate the "bucketing" of claims, consider a complete fire loss to a paper mill on December 19, 2011. Assume the building is rebuilt and the insured is back in business on September 4, 2012. This claim would be recorded as an accident year 2011 claim, with loss

[78] Financial includes financial guaranty, fidelity, surety, credit, and international financial.
[79] There is no Part Q.

payments extending into the second year of development (24-month period) until the claim is closed on September 4.

Despite only two years being shown in the Schedule P line of business parts, all 10 years are included in Schedule P – Part 1 – Summary. Therefore the insurer is required to retain data for these lines in a similar 10-year format as all other lines of business in Schedule P.

Many have argued that the two-year reporting convention is not necessarily appropriate for the aforementioned lines of business due to the tail on lines such as Fidelity/Surety. These opponents would vote for including all 10 years, as is shown for the other Schedule P lines, arguing further that all 10 years are already produced for purposes of forming the summaries in Schedule P.

Yearly Reporting Convention

Part 1 provides information related to earned premiums and cumulative loss and LAE data at the current evaluation date (i.e., December 31 of the current year) for the last 10 years in which premiums are earned and losses incurred. Earned premiums are shown by calendar year, and once they are entered in Schedule P, they do not change for retrospective premium adjustments or other adjustments. Losses are shown by:

- Accident year for occurrence policies
- Report year for claims-made policies
- Policy year for tail policies
- Discovery year for fidelity and surety policies

Accident year is defined as the calendar year in which accidents occur and/or losses are incurred. For example, a claim with a date of loss of November 13, 2011, would be a 2011 accident year claim. This reporting convention is used for occurrence-basis policies, where the trigger of coverage is the occurrence of a loss. With occurrence policies, a claim can be reported at any time after the loss occurs, subject to statutes of limitation, as long as the loss occurs during the policy term. For example, an injury that occurred 15 years ago can be reported to the insurer today, and any coverage for that injury would be provided by the terms and conditions of the policy that was in effect 15 years ago.

Report year represents the calendar year in which losses are reported. This is typically used for claims-made policies, as the trigger of coverage is the reporting of a claim or incident to the insurance carrier. In their most basic format, claims-made policies cover claims that are first made during the policy term. As a result, if a claim occurs during the policy period but is not reported by the insured during the policy term, the claim is not covered by the insurance company under the terms and conditions of the policy that was in force at the time the claim occurred. This significantly reduces the uncertainty for the insurance carrier, both for pricing and reserving, since the policy that is in effect at the time the claim is made will be the policy

providing the coverage for the claim, regardless of how long ago the incident took place (provided there is no retroactive date on the policy).

A claims-made policy may have a retroactive date that is before the effective date of the policy, the same as the effective date of the policy or it may have no retroactive date. The retroactive date is the date on or after which the incident must occur in order for it to be covered under the claims-made policy. An incident that occurs before the retroactive date will not be covered by the claims-made policy even if it is first reported during the policy period.

These types of policies are generally issued for medical malpractice, other liability, or products liability coverages because claims covered by these types of policies tend to have a long latency period. It becomes very difficult for insurance companies to project the claim frequency as well as the severity of claims and therefore difficult to price and reserve for an occurrence that will result in a claim many years in the future.

To illustrate the concept of claims-made coverage and the concept of report year, assume a young surgeon purchases a medical malpractice policy on a claims-made basis for the term beginning July 1, 2011, and expiring on June 30, 2012. Assume that the surgeon performs a procedure on his patient on October 21, 2011, and complications arise during the surgery. If the surgeon reports the incident to his insurance carrier before June 30, 2012, and subsequently the surgeon is sued and a claim materializes, he will be covered under his policy in effect from July 1, 2011, through June 30, 2012. This would be a 2011 report year claim for Schedule P reporting purposes. If the surgeon does not report the incident because the patient did not become aware of the complications until a year later, and the claimant decides to sue the physician on August 22, 2012, the surgeon reports this claim to his carrier on August 23, 2012. He would not be covered by the policy in effect from July 1, 2011, through June 30, 2012, as the claim was not reported during the policy term. If the surgeon renewed the claims made policy, the renewal policy that is in effect from July 1, 2012, through June 30, 2013, would be the policy that covers the claim.

In general, the people or companies that purchase claims-made policies do not like to leave themselves exposed to the risk of being uninsured, despite the cost savings of a claims-made policy as compared to an occurrence policy. As a result, they generally purchase something called an extended reporting period or "tail coverage." Tail coverage extends the reporting period of a claims-made policy for an additional period of time, which may be one to five years or an unlimited period of time past the expiration of the claims-made policy. A claims-made policy plus an unlimited extended reporting period essentially turns the claims-made policy into an occurrence policy. To illustrate using our previous example, let's assume that the surgeon does not renew his claims-made policy and therefore purchases unlimited tail coverage on July 1, 2012, when the policy expires. This means that any accident or loss that occurred as a result of error by the surgeon during the period July 1, 2011, through June 30, 2012, would be a covered claim by the insurance company that issued the claims-made

policy regardless of when in the future the surgeon first reports the claim. Without the tail coverage, the surgeon would have no coverage for claims that he learns about on or after July 1, 2012.

Premiums and losses associated with tail policies are included in Schedule P with their associated line on an occurrence basis.

Discovery year is generally used for fidelity and surety policies, as it is difficult to determine the actual date the "loss" occurs. As the name suggests, discovery year represents the calendar year in which a loss or damage is discovered.

For simplicity, and because it is most common, we will use the term accident year in the remainder of our discussion of Schedule P, unless explicitly stated otherwise.

Note that there is also a prior years row in Schedule P, which accumulates loss and expense information into one row within each of the schedules. The prior years row shows paid (received) activity *during* the current year (i.e., calendar year activity) and ending reserves *as of* the evaluation date of the Statement. Within this chapter we provide examples of how to calculate the prior years row; it is a bit trickier than this brief explanation suggests.

Loss Adjustment Expenses

Losses are provided separately from LAE, which is separated into two components: DCC expenses and Adjusting and Other (A&O) expenses. DCC generally includes defense, litigation and medical cost containment expenses, whether internal or external, and A&O includes all expenses associated with adjusting and recording policy claims, other than those included with DCC.[80] The following table summarizes the types of expenses by category.

[80] Per the Official NAIC Annual Statement Instructions for 2011, DCC are defined as "those that are correlated with the loss amounts," and A&O are defined as "those expenses that are correlated with claim counts or general loss adjusting expenses."

TABLE 31

DCC	A&O
Surveillance expenses	Fees of adjusters and settling agents
Fixed amounts for medical cost containment	
Litigation management expenses (e.g., audit of bills)	
LAE for voluntary and involuntary pools if reported by accident year	LAE for voluntary and involuntary pools if reported by calendar year
Fees/salaries for: ▸ Appraisers ▸ Private investigators ▸ Hearing representatives ▸ Reinspectors ▸ Fraud investigators (If working in defense of a claim)	Fees/salaries for: ▸ Appraisers ▸ Private investigators ▸ Hearing representatives ▸ Reinspectors ▸ Fraud investigators ▸ Attorneys (If working in the capacity of an adjuster)
Fees/salaries for rehabilitation nurses, if not included with losses	
Attorney fees incurred owing duty to defend	Attorney fees incurred in determination of coverage
Cost of engaging experts, if not included with losses	

The NAIC Instructions to the Annual Statement indicate that DCC should be assigned to accident year in accordance with the associated losses, while for A&O, *"in any justifiable way, … [t]he preferred way is to apportion these expenses in proportion to the number of claims reported, closed, or outstanding each year."*[81] The following table illustrates this using Fictitious' commercial automobile liability line of business as an example. Fictitious allocates its unpaid A&O for commercial automobile liability by applying the distribution of outstanding claim counts by accident year to total unpaid A&O.

[81] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 226.

TABLE 32

	Years in Which Premiums Were Earned and Losses Were Incurred	Number of Claims Outstanding Direct and Assumed	Distribution of Outstanding Claims	Direct and Assumed Adjusting & Other Unpaid
1.	Prior	1	1%	2
2.	2002	1	1%	2
3.	2003	1	1%	2
4.	2004	1	1%	2
5.	2005	1	1%	2
6.	2006	1	1%	2
7.	2007	2	3%	4
8.	2008	4	5%	8
9.	2009	7	9%	15
10.	2010	13	18%	27
11.	2011	42	57%	89
	Totals	74	100%	156

Disclosure of the methodology used to allocate A&O by year is required in the interrogatories to Schedule P.

LAE wasn't always segregated between DCC and A&O. Prior to 1988, LAE were stated as either allocated LAE (ALAE) and unallocated LAE (ULAE) in the Annual Statement. ALAE is defined as claim expenses that can be specifically assigned to a particular claim, and ULAE as those that cannot. ULAE is generally associated with the cost of administering claims. The terms ALAE and ULAE are still used in practice. In fact, for reserving purposes many companies perform actuarial analyses on an ALAE/ULAE basis.

Salvage and Subrogation

Most insurance policies require the insured to transfer the right to S&S recovery upon payment of a covered claim to an insured. Salvage is typically received by insurance companies in the case of automobile claims, when the vehicle incurs physical damage that is beyond repair. Here the insurance company can sell usable parts of the vehicle, such as tires, hubcaps and engine parts, to companies that salvage damaged vehicles.

Subrogation is typically received in the case of liability policies. For example, an insurance carrier paying a claimant for liability associated with a product manufactured by an insured, may in turn attempt to recover part or all of the amount paid to the claimant from the company that made a part used in manufacturing the product.

The paid loss figures provided in columns 4 (direct and assumed loss payments) and 5 (ceded loss payments) are net of S&S received, and the unpaid losses provided in columns 13 through 16 are net of anticipated S&S, if the company reduces its reserves for anticipated S&S. We typically find that when companies take credit for anticipated S&S, they do so in the "bulk and IBNR"[82] amounts as opposed to the "case basis" reserves. It is difficult enough to estimate reserves for known claims, let alone the amount that will be recovered for salvage and/or subrogation on those claims.

For statutory reporting purposes, insurance companies can take credit for S&S received, as well as that anticipated in its loss reserves. This means that companies can reduce their reserves by estimates of recoveries that they expect to receive in the future.

The S&S figures displayed in columns 10 (received) and 23 (anticipated) are for informational purposes only. As displayed in the formula for total net paid loss and LAE in column 11, S&S received in column 10 is not subtracted from the paid loss and LAE amounts in columns 4 through 9, as they are already reduced by the S&S received. The following illustrates the calculation on total net paid loss and LAE using data from the total line from Schedule P, Part 1 – Summary of the 2011 Annual Statement for Fictitious Insurance Company.

TABLE 33

Data from 2011 Schedule P — Part 1 — Summary for Fictitious Insurance Company (000 omitted)

Column	Item	Amount	Notes
4	Direct and assumed loss payments	116,277	
5	Ceded loss payments	16,875	
	Net loss payments	99,402	= Column 4 − Column 5
6	Direct and assumed DCC payments	10,266	
7	Ceded DCC payments	1,067	
	Net DCC payments	9,199	= Column 6 − Column 7
8	Direct and assumed A&O payments	10,830	
9	Ceded A&O payments	417	
	Net A&O payments	10,413	= Column 8 − Column 9
11	Total net paid	119,014	= (Columns 4 + 6 + 8) − (Columns 5 + 7 + 9)

The S&S received figure in column 10 of Schedule P, Part 1 – Summary ($5,283 in total; 000 omitted) does not enter the above calculation, as the loss payments shown in columns 4 and 5 have already been reduced by this amount. The amount shown in column 11 is net of the S&S received amount shown in column 10.

The same goes for the total net loss and LAE unpaid in column 24; anticipated S&S in column 23 is not subtracted from the case and IBNR figures in columns 13 through 22, as it is already

[82] Hereafter we will refer to "bulk and IBNR" simply as "IBNR."

displayed net of anticipated S&S. The following provides a similar illustration using total unpaid amounts from Fictitious' 2011 Schedule P, Part 1 – Summary.

TABLE 34

Data from 2011 Schedule P — Part 1 — Summary for Fictitious Insurance Company (000 omitted)

Column	Item	Amount	Notes
13	Direct and assumed case basis losses	24,945	
14	Ceded case basis losses	5,343	
	Net case basis losses	19,602	= Column 4 − Column 5
15	Direct and assumed IBNR losses	26,330	
16	Ceded IBNR losses	4,038	
	Net IBNR losses	22,292	= Column 6 − Column 7
17	Direct and assumed case basis DCC	2,424	
18	Ceded case basis DCC	258	
	Net case basis DCC	2,166	= Column 8 − Column 9
19	Direct and assumed IBNR DCC	5,401	
20	Ceded IBNR DCC	499	
	Net IBNR DCC	4,902	= Column 8 − Column 9
21	Direct and assumed A&O unpaid	2,599	
22	Ceded A&O unpaid	4	
	Net A&O unpaid	2,595	= Column 8 − Column 9
24	Total net losses and expenses unpaid	51,557	= (Columns 4 + 6 + 8) − (Columns 5 + 7 + 9)

Column 23, which provides anticipated S&S ($1,363 in total; 000 omitted), is not included in the above calculation as the amounts in loss columns are provided on a net basis.

Composition of Loss and LAE Reserve Figures Provided in Schedule P, Part 1

The case and IBNR reserves provided in Part 1 are net of tabular[83] discounting and gross of non-tabular discounting, up until columns 32 and 33. The amount of non-tabular discount is shown separately for loss and LAE in columns 32 and 33, respectively. For Fictitious, the amounts shown in columns 32 and 33 are zero because the Company does not discount non-tabular reserves. This is confirmed in part B of the Note to Financial Statements titled "Discounting of Liabilities for Unpaid Losses or Unpaid Loss Adjustment Expenses" (Note 32B in the 2011 Annual Statement).

The reserves shown on the Balance Sheet are provided in columns 35 and 36 for loss and LAE, respectively. These figures are on a net of reinsurance basis, and net of all discounting,

[83] Tabular reserves are defined on page 159 of the 2011 NAIC Annual Statement Instructions to Note 32 of the Financial Statements as "indemnity reserves that are calculated using discounts determined with reference to actuarial tables that incorporate interest and contingencies such as mortality, remarriage, inflation, or recovery from disability applied to a reasonably determinable payment stream. This definition shall not include medical loss reserves or any loss adjustment expense reserves."

if applicable. The sum of columns 35 and 36 will reconcile to the amount shown in column 24 reduced by the amount of discount shown in columns 32 and 33.

TABLE 35a

Data from 2011 Schedule P - Part 1 - Summary for Fictitious Insurance Company (000 omitted)			
Column	**Item**	**Amount**	**Notes**
	Total net losses unpaid	41,894	Columns (13 + 15) - Columns (14 + 16)
	Total net expenses unpaid	9,663	Columns (17 + 19 + 21) - Columns (18 + 20 + 22)
24	Total net losses and expenses unpaid	51,557	
32	Nontabular discount on losses	XXX	
33	Nontabular discount on loss expense	XXX	
	Total nontabular discount	XXX	= Column 32 + Column 33
35	Net balance sheet loss reserves after discount	41,894	Columns (13 + 15) - Columns (14 + 16 + 32)
36	Net balance sheet loss expense reserves after discount	9,663	Columns (17 + 19 + 21) - Columns (18 + 20 + 22 + 33)
	Total net losses and expenses unpaid after discount	51,557	= Column 35 + Column 36

As we shall see in *Part IV. Statutory Filings to Accompany the Annual Statement* of this publication, Schedule P, Part 1 – Summary provides the source of the recorded reserve amounts that the Appointed Actuary opines upon in the Statement of Actuarial Opinion on behalf of the insurance company. The Appointed Actuary opines on the loss and LAE reserve amounts provided in columns 35 and 36, respectively, on a net of reinsurance basis, and columns 13 plus 15 and columns 17 plus 19 plus 21, respectively, on a gross of reinsurance basis. For Fictitious Insurance Company, the amounts shown in Exhibit A to the 2011 Statement of Actuarial Opinion, on which the Appointed Actuary has provided his opinion, are as follows.

TABLE 35b

Fictitious Insurance Company 2011 Statement of Actuarial Opinion Loss and LAE Reserve Amounts Per Exhibit A		
Loss and LAE Reserves:		Amount
1.	Reserve for Unpaid Losses (Liabilities, Surplus and Other Funds page, Col 1, Line 1)	$41,894,000
2.	Reserve for Unpaid LAE (Liabilities, Surplus and Other Funds page, Col 1, Line 3)	$9,663,000
3.	Reserve for Unpaid Losses – Direct and Assumed (Should equal Schedule P, Part 1, Summary, Totals from Cols. 13 and 15, Line 12 * 1,000)	$51,275,000
4.	Reserve for Unpaid LAE – Direct and Assumed (Should equal Schedule P, Part 1 – Summary, Totals from Cols. 17, 19 and 21, Line 12 * 1,000)	$10,424,000

The figures shown in Schedule P are net of intercompany pooling. As suggested by the "XXX" in column 34, Fictitious does not participate in any intercompany pooling arrangements. This can be confirmed by a reading of the Notes to the Financial Statements titled "*Intercompany Pooling Arrangements*" (Note 26 in the 2011 Annual Statement) for an insurance company. We will discuss the effect of intercompany pooling on Schedule P reporting in a separate section at the end of this chapter.

Incurred loss and LAE

The other items of interest in Schedule P, Part 1 are the total losses and loss expense incurred columns (26 through 28) and resulting loss and LAE ratios columns (29 through 31). The loss ratio columns are useful in assessing historical performance of the business separately on a direct and assumed, ceded and net basis. For companies with non-proportional reinsurance, the loss ratios will differ on a direct and net basis, and one can get a sense if the company is paying relatively more for the reinsurance than the direct risk. Using Fictitious as an example, we see that its incurred loss and LAE ratios differ on a direct plus assumed, ceded and net of reinsurance basis.

TABLE 36

Years in Which Premiums Were Earned and Losses Were Incurred		Loss and Loss Expense Percentage (Incurred/Premiums Earned)		
		29 Direct and Assumed	30 Ceded	31 Net
1	Prior			
2	2002	66.9	71.9	65.6
3	2003	57.7	44.3	61.3
4	2004	52.9	52.6	53.0
5	2005	61.8	106.5	54.3
6	2006	52.1	53.4	51.9
7	2007	54.9	52.2	55.2
8	2008	66.5	65.0	66.6
9	2009	62.8	62.3	62.8
10	2010	68.2	52.5	69.5
11	2011	78.9	72.6	79.4

Since 2007, the Company's ceded loss and expense ratios have been lower than its direct plus assumed ratios, thereby resulting in higher net loss ratios.

We should note that the amounts shown as "incurred" in columns 26 through 31 are on an "ultimate incurred" basis. This is an important definitional distinction from "case incurred," and people often get the two confused, so we will walk through the definitions here.

The following equations are different ways of presenting ultimate incurreds:

Ultimate incurred loss

= Paid loss + case outstanding loss + IBNR loss
= Reported loss + IBNR loss
= Paid loss + unpaid loss

Paid losses represent those amounts paid by the insurance carrier. Case outstanding losses represent the reserve for known claims, which is generally established by the company's claims administrators/adjusters. IBNR represents the reserve for claims Incurred But Not Reported. IBNR includes a provision for:

- Development on known claims ("case development")
- Pure IBNR, or those claims that are incurred but not yet reported to the insurance carriers
- Reopened claims

Case development is intended to cover upward and downward movements in the reserves established by the adjusters as additional information becomes available about the claim. For example, an adjuster may establish an initial reserve for a workers' compensation claim based on the initial injury reports from the employer or claimant's doctor. However, subsequent medical examinations may uncover that the injury is worse than originally expected, resulting in additional cost and the need for an increase in the case reserve estimate to reserve the claim to its ultimate value.

Reported loss is equal to the amount of paid plus case outstanding; it represents the dollar value of loss known to the insurance company. The term "case incurred" is synonymous with "reported" and represents the reported value of known cases.

Unpaid loss (or loss reserve) equals the amount of case outstanding plus IBNR reserves. It represents the remaining amount expected to be paid on claims incurred by the insurance company.

Actuaries often derive an ultimate loss estimate using triangular projection methods. The amount unpaid (or loss reserve) can be derived using the above formulas by subtracting paid losses from the ultimate estimate. Similarly, IBNR can be determined by subtracting reported losses from the ultimate estimate.

Data used in actuarial projections can be derived from the information contained in Parts 2 through 4 of Schedule P, as will be discussed later in this chapter under the heading "Actuarial Projections" within the section "SCHEDULE P – PARTS 2 THROUGH 4."

Claim Count Information in Part 1

Certain line of business subparts of Part 1 also provide claim count information that is not included in Part 1 – Summary because such information is not captured for all lines. Column 12 provides the number of claims reported, direct plus assumed. However, this column only applies to certain lines and may be left blank for others, including the Summary. The applicable lines are:

- Homeowners/Farmowners
- Private Passenger Auto Liability/Medical
- Commercial Auto Liability/Medical
- Workers' Compensation
- Commercial Multiple Peril
- Medical Professional Liability
- Other Liability
- Auto Physical Damage
- Products Liability
- Warranty

Further, column 25 provides the number of claims outstanding, direct plus assumed. This column is completed for all lines except the nonproportional reinsurance assumed lines (Parts N, O and P) and therefore the Summary.

For those lines, including the Summary, where claim count information is not included, the corresponding columns are filled in with "XXX."

Claim count data can be used to explore changes in ultimate loss and LAE or reserve levels or to identify changes in claims settlement or reserving philosophy. We will provide more details in our discussion of Schedule P, Part 5; however, for now we will show the meaningful relationships that can be derived from Schedule P, Part 1 for Fictitious' Homeowners/Farmowners lines of business (Part 1A).

First, it is generally assumed that net claim counts are equal to direct and assumed counts, unless 100% of the business is ceded. The theory is that a direct claim results in a net claim, even if the value of the net claim is $0. Therefore, all ratios that we show below, both on a gross and net of reinsurance basis, are in relation to direct plus assumed counts.

Data from Schedule P, Part 1 can be used to calculate reported claim frequency, which is the relationship of reported claim counts as of December 31, 2011, to earned premium.

TABLE 37

Data From Schedule P — Part 1 — Homeowners & Farmowners
(000 omitted)
Average Reported Claim Frequency

Years in Which Premiums Were Earned and Losses Were Incurred		Earned Premium		Number of Claims Reported Direct and Assumed (Col. 12)	Average Reported Claim Frequency	
		Direct and Assumed (Col. 1)	Net (Col. 3)		Direct and Assumed Counts/Earned Premium	Direct and Assumed Counts/Net Earned Premium
1	Prior	XXX	XXX	XXX	XXX	XXX
2	2002	1,931	1,763	242	0.125	0.137
3	2003	2,251	2,084	253	0.113	0.122
4	2004	2,721	2,612	219	0.081	0.084
5	2005	3,123	3,000	217	0.069	0.072
6	2006	3,307	3,231	216	0.065	0.067
7	2007	3,609	3,507	194	0.054	0.055
8	2008	3,816	3,713	300	0.079	0.081
9	2009	4,003	3,895	296	0.074	0.076
10	2010	4,294	4,178	325	0.076	0.078
11	2011	4,550	4,445	427	0.094	0.096
12	Totals	XXX	XXX	XXX	XXX	XXX

Table 37 can help us identify trends in claim frequency over the accident years. It is not a complete picture because claim counts are on a reported basis, as opposed to ultimate. However, for a short-tailed line of business such as homeowners, where losses are generally reported within the year in which they are incurred (i.e., accident year), it is not a bad approximation. As expected, reported claim frequency appears to have increased in 2011 relative to both gross and net earned premiums (e.g., frequency in 2011 of 0.094 per $000 of gross earned premium versus 2010 of 0.076). This is most likely due to the high frequency of weather-related and catastrophe claims incurred by the Company during 2011.

We note that the interpretation of frequency trends using earned premium can be misleading due to the effect of rate changes. In our example, the increasing trend in Fictitious' claim frequency relative to earned premium may be partly attributed to soft market conditions in addition to the number of catastrophe claims. Viewing claim frequency in terms of exposures (e.g., house years for homeowners) would provide a clearer comparison and enhance the ability to understand observed trends. Regardless, when investigating trends in claim frequency, consideration should be made for changes over time in a company's mix of business (e.g., by types of exposures, geography), policy limits, reinsurance attachment points and limits, as well as the way the company counts its claims.

We can also compute the average value of reported claims by year, with each year evaluated as of December 31, 2011, using Schedule P, Part 1 data, as shown below.

TABLE 38

Data From Schedule P — Part 1 — Homeowners & Farmowners
(000 omitted)
Average Reported Loss and DCC Severity

		Reported Loss and DCC			Average Reported Loss & DCC		Trend in Average Reported $	
Years in Which Premiums Were Earned and Losses Were Incurred		Direct and Assumed (Cols. 4 + 6 + 13 + 17)	Net (Direct - Ceded per Cols. 5 + 7 + 14 + 18)	Number of Claims Reported Direct and Assumed (Col. 12)	Direct and Assumed Reported $/Counts *1000	Net Reported $/Direct and Assumed Counts *1000	Direct and Assumed Severity in Accident Year 20XX+1 divided by 20xx	Net Severity in Accident Year 20XX+1 divided by 20xx
1	Prior	6	6	XXX	XXX	XXX	XXX	XXX
2	2002	1,021	942	242	4,219	3,893		
3	2003	1,170	1,107	253	4,625	4,375	10%	12%
4	2004	1,450	1,381	219	6,621	6,306	43%	44%
5	2005	1,644	1,368	217	7,576	6,304	14%	0%
6	2006	1,350	1,349	216	6,250	6,245	-18%	-1%
7	2007	1,407	1,405	194	7,253	7,242	16%	16%
8	2008	2,186	2,185	300	7,287	7,283	0%	1%
9	2009	2,214	2,208	296	7,480	7,459	3%	2%
10	2010	2,421	2,419	325	7,449	7,443	0%	0%
11	2011	3,372	3,369	427	7,897	7,890	6%	6%
12	Totals	18,241	17,739	XXX	XXX	XXX	XXX	XXX

We see that there hasn't been much of a trend in the average cost per reported claim since 2008, until we get to 2011. The relatively flat trend from 2008 through 2010 is most likely due to economic factors during the time period and general flattening of costs associated with the repair and rebuilding of damaged properties. Similar to the increase in frequency in 2011, the increase in claim costs is primarily attributed to an increase in the size of claims due to the catastrophic events of 2011.

Here again, the comparison does not provide a complete picture because we are comparing accident year data at different levels of maturity rather than evaluating the reported loss and claims counts at their ultimate values. As we shall see, comparisons at the ultimate level can be made by developing loss and DCC data provided in Parts 2 through 4 and claim count data provided in Part 5.

Finally, we can also show the average cost of open claims as of December 31, 2011, using Part 1 data, as provided in the Table 39:

TABLE 39

Data From Schedule P — Part 1 — Homeowners & Farmowners (000 omitted) Average Case Outstanding Loss and DCC Severity						
		Case Basis Loss and DCC		Number of Claims Outstanding Direct and Assumed (Col. 25)	Average Case O/S Loss & DCC	
Years in Which Premiums Were Earned and Losses Were Incurred		Direct and Assumed (Cols. 13 + 17)	Net (Direct – Ceded per Cols. (14 + 18)		Direct and Assumed Case Basis $/Counts *1,000	Net Case Basis $/Direct and Assumed Counts *1,000
1	Prior	4	4	1	4,000	4,000
2	2002	0	0	1	0	0
3	2003	1	1	1	1,000	1,000
4	2004	2	2	1	2,000	2,000
5	2005	3	0	1	3,000	0
6	2006	8	8	1	8,000	8,000
7	2007	18	18	1	18,000	18,000
8	2008	40	40	1	40,000	40,000
9	2009	61	61	1	61,000	61,000
10	2010	124	124	3	41,333	41,333
11	2011	366	366	21	17,429	17,429
12	Totals	627	624	33	19,000	18,909

What we see in Table 39 table is that the case outstanding reserve values and number of open claims generally decrease with maturity (ignoring the prior years row, which is a compilation of all prior years into one line). This makes sense, as eventually all claims will be closed and the outstanding reserves will be $0.[84] We also see that the average case reserves increase in maturity to a certain point, at which they decrease (ignoring the prior years row). This suggests that the claims that remain open after 24 months (accident year 2010 in this case) tend to be the larger dollar-valued claims. Put another way, the claims that cost the least tend to be the easiest to administer and close, while the more costly claims take longer to settle and pay out. This makes sense and is generally the case with property/casualty lines of business. As time goes on, the average case reserve for homeowners claims tends to decrease as the payments decline to closure.

The average case reserve values are lower on accident year 2011 relative to the immediately prior periods. There are still small to midsized claims, in addition to the large dollar-value claims, that remain open on the current accident year. These low-value claims suppress the average.

[84] Sometimes we will see a very high severity in a mature accident year, relative to the surrounding years and the general decreasing trend with maturity. This will happen when there's one or a small number of large dollar-valued claims outstanding.

SCHEDULE P — PARTS 2 THROUGH 4

Parts 2 through 4 provide a historical array of incurred, paid and IBNR loss and DCC, respectively. The data is provided on a net of reinsurance and net of S&S (as applicable) basis.

Similar to Part 1 – Summary, the information in the Summary of Parts 2 through 4 is provided for each of the past 10 years in which losses were incurred using the aforementioned definitions depending on the type of policies (e.g., occurrence, claims-made, tail, or fidelity and surety). The data is evaluated as of December 31 for each of the last 10 years.

Details are provided by line of business in the same breakdowns as in Part 1, with 10 accident years shown for all lines except for those lines previously mentioned (e.g., Special Property, Auto Physical Damage).

Discounting

Parts 2 through 4 of Schedule P are gross of all discounting. Therefore, the reserve amounts shown in Parts 2 through 4 will not reconcile to those provided in Part 1 for companies that discount nontabular reserves. The amount of discount is reported in the Notes to Financial Statements, which enables reconciliation between Part 1 and Parts 2 through 4.

We can illustrate this using Schedule P, Parts 1, 2 and 3, Summary for Fictitious. As displayed in Table 40b, the difference between the total net loss and DCC reserve reported in Schedule P, Part 1 and the amount indicated by subtracting the figures in column 10 of Parts 2 and 3 provides the $1.365 million of reduction for tabular discount taken in Schedule P, Part 1.

TABLE 40a

Data from 2011 Annual Statement for Fictitious Insurance Company			
Years in Which Losses Were Incurred	Net Loss and DCC at Year End per Schedule P (000 omitted)		
	Net Incurred Part 2 Summary	Net Paid Part 3 Summary	Net Unpaid Part 2 − Part 3 Summary
Prior	46,022	30,210	15,812
2002	13,387	12,202	1,185
2003	13,540	12,238	1,302
2004	12,099	10,933	1,166
2005	12,321	10,919	1,402
2006	11,679	9,804	1,875
2007	12,895	10,503	2,392
2008	15,635	12,130	3,505
2009	14,745	10,332	4,413
2010	16,345	9,774	6,571
2011	19,364	8,660	10,704
Total	188,032	137,705	50,327

TABLE 40b

Net Unpaid Loss and DCC Reserves Per Schedule P − Part 1 − Summary (000 omitted)	
Column 24, Total Net Losses and Expenses Unpaid, Line 12, Totals:	51,557
Column 21, Direct and Assumed A&O Unpaid, Line 12, Totals:	2,599
Column 22, Ceded A&O Unpaid, Line 12, Totals:	4
Column 25 − (Column 21 − Column 22), Total Net Losses and DCC Unpaid:	48,962
Difference, Schedule P − Part 2 minus Part 3 and Schedule P − Part 1:	**1,365**
Note to Financial Statement on Discounting (in whole dollars)	
Workers' Compensation Cases:	495,000
Workers' Compensation IBNR:	664,000
Other Liability Cases:	21,000
Other Liability IBNR:	15,000
Other Liability − Structured Payments IBNR:	170,000
Total Amount of Tabular Discount per Notes to Financial Statements:	1,365,000
Total Amount of Tabular Discount per Notes to Financial Statements, divided by 1,000:	**1,365**

The amount of tabular discount included in Schedule P, Part 1 should reconcile to the amount disclosed in the Note titled "*Discounting of Liabilities for Unpaid Losses or Unpaid Loss Adjustment Expenses*" (Note 32 of the 2011 Annual Statement).

Actuarial Projections

The format of Parts 2 through 4 is conducive for loss development projection methods used by actuaries to assess a company's reserve adequacy. However, actuaries tend to view the data in a slightly different format than that presented in Parts 2 through 4. Shifting all of the cells to the left so that each accident year starts with figures in column 1 transforms the data into standard triangular format used in the loss development (or "chain ladder") method. The paid loss triangle comes directly from Schedule P, Part 3, and the case incurred loss triangle can be derived by subtracting the IBNR in Part 4 from the incurreds in Part 2. The following provides the calculation of the net case incurred (reported) triangle for Fictitious Insurance Company.

TABLE 41a

Cautions When Using Schedule P to Assess Reserve Adequacy

Age-to-age loss development factors can be computed from the above triangles and projections of ultimate loss and DCC made. However, we note several issues that we have observed in practice with blindly using Schedule P data to assess the adequacy of an insurance company's reserves:

- While there are Instructions to the Annual Statement and third-party companies provide software to assist in insurers in preparing their Schedule P, certain allocations and presentations are left up to interpretation of the person completing Schedule P.
- Internal pooling or reinsurance agreements may have an impact on the data set, and that impact may not be readily apparent from Schedule P. For example, we have seen pooling and reinsurance arrangements on a calendar year basis, as opposed to accident or policy year, which distorts Schedule P since it is on a net (or after pool) basis.

- Schedule P contains experience from a company's participation in voluntary and involuntary pools and/or associations. Many underwriting pools report IBNR reserves as case reserves, thereby distorting analytics and projections that use case base reserves. Further, a company's level of participation in the pool may have changed over time.
- Schedule P only contains data for the last 10 accident years. Most casualty lines have experienced loss development significantly longer than 10 years. Tail development factors have to be estimated using other (external) sources, thereby increasing the uncertainty of the projections.
- Commutations of reinsurance agreements can also distort an analysis of loss development using Schedule P. Commutations represent an agreement between a reinsurer and the reinsured to release all obligations under a reinsurance contract. Typically, the reinsurer will pay a lump sum to the reinsured to extinguish all future liabilities. The reinsurer's case and IBNR reserves for the assumed contract will drop to $0 upon paying the lump sum, while the ceding company's net reserves should increase since the ceding company can no longer take credit for the reinsurance and "reassumes" the liability.
- The data triangles in Parts 2 through 4 include DCC expenses, potentially masking trends in the loss or DCC components that may impact reserve needs.
- Analytics of the data, including a review of loss ratios, claim closure rates from Part 5 data, and average severities from data contained in Parts 2 through 5 can provide observations regarding trends. However, the underlying cause for these trends, and determination of their impact on future claim payments, can only be obtained through discussion with company management, including interviews with management in the pricing, underwriting and claims departments of the insurance company. Care should be taken in the interpretation of these trends absent these discussions.

This list is not intended to be all-inclusive, but rather illustrate that care should be taken when drawing conclusions about a company's recorded reserves using Schedule P data alone.

As with any unpaid claim analysis, consideration should be made for changes in the company's business, including but not limited to retentions, claims settlement and reserving, business mix, and underlying exposures. One of the Schedule P Interrogatories helps to address this. Interrogatory 7 asks for further explanation regarding *"any especially significant events, coverage, retention or accounting changes that have occurred that must be considered"* in using Schedule P data to assess reserve adequacy.

Hindsight Tests from Part 2

Part 2 represents ultimate incurred loss and DCC by accident year, recorded by the company at the end of each of the last 10 years. Part 2 is particularly useful as it shows how the company's estimates of ultimate loss and DCC have fared over the past year and past two years, as displayed in columns 11 and 12, respectively. The figures in column 11 provide the change in ultimates over the past year (column 10 minus column 9) for all accident years prior to the current accident year. Column 12 provides the change in ultimates over the past two years (column 10 minus column 8) for all but the most recent two accident years.

The totals of the figures in columns 11 and 12 of Part 2 – Summary reconcile directly to the current calendar year figures in column 1, lines 73 and 75 respectively, of the Five-Year Historical Data exhibit within the Annual Statement. This is illustrated below for Fictitious Insurance Company using the 2011 Annual Statement:

TABLE 43a

Data from 2011 Annual Statement for Fictitious Insurance Company
Schedule P – Part 2 – Summary (000 omitted)
Incurred Net Losses and Defense and Cost Containment Expenses Reported at Year-end

Years in Which Losses Were Incurred	Development	
	One Year	Two Year
Prior	177	138
2002	(21)	(270)
2003	(77)	(208)
2004	(189)	(386)
2005	(124)	(447)
2006	(158)	(377)
2007	(370)	(408)
2008	(380)	(471)
2009	(106)	(172)
2010	73	XXX
2011	XXX	XXX
Total	(875)	(2,601)

TABLE 43b

Five-Year Historical Data (000 omitted)	
	2011
73. Development in estimated losses and loss expenses incurred prior to current year (Schedule P, Part 2 – Summary, Line 12, Col. 11)	(875)
75. Development in estimated losses and loss expenses incurred 2 years before the current year and prior year (Schedule P, Part 2–- Summary, Line 12, Col. 12)	(2,602)

While the absolute dollar amount of development is useful, it is valuable to view loss development in relation to prior year reserves from which the development has emerged, as well as on prior year surplus. For Fictitious, the $0.875 million of favorable development represents less than 1.8% of prior year reserves totaling $49.445 million.[85] This means that, with perfect hindsight, company management would have established reserves at $48.570 million ($49.445 million minus $0.875 million).

In *Part IV. Statutory Filings to Accompany the Annual Statement* of this publication, we discuss loss development as a ratio to surplus in further detail. This is a measure used by the NAIC Insurance Regulatory Information System (IRIS). For now, we will simply state that the $0.875 million of favorable development represents less than 2.8% of policyholders' surplus as of December 31, 2010, totaling $31.608 million per column 2, line 37 of page 3 of the company's 2011 Annual Statement.

A benefit of Part 2 is that it provides further insight into the observed development. The development across all accident years may be negligible in aggregate; however, there may be large increases or decreases in certain accident years or lines of business that warrant further investigation.

As displayed above, Fictitious Insurance Company experienced favorable development in 2011, totaling $0.875 million on prior accident years. We see that the favorable development on accident years 2002 through 2009 was somewhat offset by adverse development on the prior accident years and the current accident year. This is where the actuary becomes a detective to uncover the cause of the development.

- First, when we see adverse development in the prior accident years, we might first look to the longer-tailed casualty lines as the culprit. Schedule P, Parts 2A through 2T

[85] The net loss and DCC reserve of $49.4 million as of December 31, 2010, was computed by subtracting column 9 in Schedule P, Part 2 – Summary from column 9 in Schedule P, Part 3 – Summary (i.e., ultimate incurred minus paid = unpaid). This was done to put the reserve amount on the same basis as the development amount, both of which are undiscounted.

provide net incurred loss and DCC development for each of the Schedule P lines of business.

- Second, when we see adverse development on the "all prior" years, and then a consistent trend of favorable development, we question the difference between the exposures in the prior accident years versus those in the subsequent accident years. Generally speaking, if the exposures underlying the prior years were consistent with those in subsequent accident years, we would expect the adverse development to flow through to the current years as well.

Once we identify the line of business, we could look to other areas of the Annual Statement for guidance. For example, we can turn to the Notes to the Financial Statements, in particular "Changes in Incurred Losses and Loss Adjustment Expenses" (Note 25 of the 2011 Annual Statement) for further details. This Note provides management's explanation for development during the year. This may lead to review of additional notes, such as the note titled "Asbestos/Environmental Reserves." Oftentimes when we see adverse development isolated to the prior years row, we look to see if it stems from asbestos and environmental (A&E) claims activity.[86]

While the line of business details in Parts 2A through 2T and Notes to the Financials provide further insight into the source of loss development, they do not substitute the value of a conversation with management of the insurance company. Management can provide further color around the causes of development that pure numbers and notes cannot.

Prior Years Row

The calculation of the prior years row in Schedule P, Parts 2 through 4 can be a bit cumbersome and confusing. The easiest way to explain the calculation is to start backwards, providing the source of the prior years row for Schedule P, Part 4, and then work our way to the details underlying the computation of Part 3, and then Part 2.

Prior Years Row – Part 4

The prior row in Part 4 is the most straightforward. It is simply the amount recorded by the company for bulk and IBNR reserves for all accident years prior to the most recent 10. This amount is determined by the company's management and recorded in Part 4, as are the amounts for all subsequent accident years.

One can reconcile the prior year balances at each evaluation date (i.e., across the columns) to Schedule P, Part 1 of the current and prior year Annual Statements. Specifically, the amount in column 15 (direct and assumed bulk + IBNR loss) minus 16 (ceded bulk + IBNR loss) plus 19

[86] There is considerable uncertainty around the reserving for these types of claims due to the length of time between exposure to manifestation of disease that gives rise to a claim. As such, the industry has experienced considerable adverse development on reserves established for these claims over the years.

(direct and assumed bulk + IBNR DCC) minus 20 (ceded bulk + IBNR DCC) of Schedule P, Part 1, should equal the last number in column 10 of the prior row in Part 4 after adjusting for any tabular discount. The following provides the calculation for Fictitious for 2011.

TABLE 44a[87]

Prior years row	Sch P Part 1 Column	Amount $000s
Direct plus assumed bulk + IBNR loss	15	7,719
minus Ceded bulk + IBNR loss	16	1,416
plus direct plus assumed bulk + IBNR DCC	19	1,545
minus Ceded bulk + IBNR DCC	20	138
Net bulk + IBNR loss & DCC (net of tabular discount)		7,710
plus tabular discount		378
Net bulk + IBNR per Schedule P, Part 4	2011	8,088

The entire prior years row for Part 4 is provided below.

TABLE 44b

Bulk and IBNR Reserves on Net Losses and Defense Cost Containment Expenses Reported at Year End (000 omitted)										
Years in Which Losses Were Incurred	1 2002	2 2003	3 2004	4 2005	5 2006	6 2007	7 2008	8 2009	9 2010	10 2011
1. Prior	17,126	14,330	13,764	12,807	12,285	11,632	10,529	9,752	8,907	8,088

Prior Years Row – Part 3

As discussed previously, Part 3 provides cumulative paid loss and DCC for the latest 10 accident years, evaluated as of the end of each of those years. The prior row for Part 3 also provides cumulative paid data; however, it does not start with the cumulative payments from the first year that the company wrote business. Rather, it shows the payments that have occurred on loss and DCC reserves as of the earliest evaluation date in the table, for all prior accident years. Only payments made subsequent to the establishment of reserves as of the earliest evaluation date in the table are shown. The 2011 Annual Statement for Fictitious shows the prior row for Part 3 as the following.

[87] The amount of tabular discount shown in the table is derived from the data in Fictitious' Schedule P by taking the bulk and IBNR in the prior years row from Part 4 minus the corresponding amount in Part 1.

TABLE 45

Data from 2011 Annual Statement for Fictitious Insurance Company, Schedule P — Part 3 — Summary

Cumulative Paid Net Losses and Defense and Cost Containment Expenses Reported at Year-End (000 omitted)

Years in Which Losses Were Incurred	1 2002	2 2003	3 2004	4 2005	5 2006	6 2007	7 2008	8 2009	9 2010	10 2011
1. Prior	000	9,061	13,830	18,110	21,281	23,728	26,341	27,752	29,108	30,210

The amount of $9.061 in column 2 represents net amounts paid in 2003 on net loss and DCC reserves established by the Company as of December 31, 2002. The amount shown in column 3 of $13,830 represents net amounts paid *since* year-end 2002 on net loss and LAE reserves as of December 31, 2002, for all prior accident years. This continues all the way until 2011, where the amount of $30,210 represents net amounts paid since year-end 2002 (through year-end 2011) on net loss and DCC reserves as of December 31, 2002, for all prior accident years.

Only loss and DCC payments on reserves evaluated as of the earliest evaluation date (December 31, 2002, in our example) are shown in the prior row. As a result, the balance in the first column is always zero.

The calculation of the prior row in Part 3 is done by computing the incremental payments subsequent to the earliest evaluation date (2002 in our example) for both the prior and first subsequent accident year from the previous year's Schedule P, Part 3 (2011 in our example). The following provides this calculation using Part 3 from the 2010 Schedule P for Fictitious.

TABLE 46

**Data from 2010 Annual Statement for Fictitious Insurance Company,
Schedule P – Part 3 – Summary**

**Cumulative Paid Net Losses and Defense and Cost Containment Expenses Reported at Year-End
(000 omitted)**

Years in Which Losses Were Incurred	1 2001	2 2002	3 2003	4 2004	5 2005	6 2006	7 2007	8 2008	9 2009	10 2010
Prior	000	8,238	14,960	18,129	21,279	23,817	25,840	28,163	29,380	30,519
2001	4,680	8,297	10,637	12,236	13,367	13,999	14,424	14,714	14,908	15,124

Calculation to Transition 2010 Part 3 Prior Row to 2011 Schedule P, Part 3

Current Column minus 2002 Column (Column 2) in 2010 Part 3

Years in Which Losses Were Incurred	1 2001	2 2002	3 2003	4 2004	5 2005	6 2006	7 2007	8 2008	9 2009	10 2010
Prior		–	6,722	9,891	13,041	15,579	17,602	19,924	21,142	22,281
2001		–	2,340	3,939	5,070	5,702	6,127	6,417	6,611	6,828
Sum		–	9,062	13,830	18,110	21,282	23,729	26,342	27,753	29,108

**Data from 2011 Annual Statement for Fictitious Insurance Company,
Schedule P – Part 3 – Summary**

**Cumulative Paid Net Losses and Defense and Cost Containment Expenses Reported at Year-End
(000 omitted)**

Years in Which Losses Were Incurred	1 2002	2 2003	3 2004	4 2005	5 2006	6 2007	7 2008	8 2009	9 2010	10 2011
Prior	000	9,061	13,830	18,110	21,281	23,728	26,341	27,752	29,108	30,210

As displayed above, the starting point for the calculation is the first two rows (prior and 2001) of Part 3 of Fictitious 2010 Annual Statement. To calculate the prior years row for Part 3 of Fictitious' 2011 Annual Statement, the difference between amounts in each column and the amounts in column 2 (2002) is computed. The prior and subsequent accident year (2001) payments are then added together to produce the new prior row for Part 3 of the Company's 2011 Schedule P.

For example, cumulative net paid loss and DCC for column 2 (2003) are calculated as:

$$14{,}960 - 8{,}238 + 10{,}637 - 8{,}297 = 6{,}722 + 2{,}340 = 9{,}061$$[88]

[88] Minor differences due to rounding.

As another example, the cumulative net paid loss and DCC for column 10 (2010) are calculated as:

30,519 - 8,238 + 15,124 - 8,297 = 22,281 + 6,827 = 29,108[89]

Prior Years Row – Part 2

As discussed previously, Part 2 provides cumulative ultimate incurred loss and DCC for the latest 10 accident years, evaluated as of the end of each of those years. The prior row for Part 3 also provides cumulative incurred data; however, it does not start with the cumulative incurreds from the first year that the company wrote business. Rather, it starts with the net loss and DCC reserves recorded by the Company as of the earliest evaluation date in the table and includes this amount in column 1 of Schedule P, Part 2. For example, using Schedule P, Parts 2 through 4, Summary, of the 2010 and 2011 Annual Statements for Fictitious Insurance Company, we see that column 1 of the prior row in the 2011 Schedule P, Part 2, is equal to the sum of the following amounts in column 2 (labeled "2002") from the 2010 Annual Statement (USD in 000s).

TABLE 47

Data from 2010 Annual Statement	2002	Source
Case outstanding:		*Schedule P, Part 2-Summary minus Part 3 – Summary minus Part 4 – Summary*
Prior Years row	15,123	*Line 1*
2001 row	3,745	*Line 2*
Sum	18,868	
Bulk and IBNR:		*Schedule P, Part 4-Summary*
Prior Years row	13,241	*Line 1*
2001 row	3,886	*Line 2*
Sum	17,127	
Total Unpaid:		
Prior Years row	28,365	*Sum of above (case outstanding plus bulk and IBNR)*
2001 row	7,630	*Sum of above (case outstanding plus bulk and IBNR)*
Sum	**35,995**	*Sum of above (case outstanding plus bulk and IBNR)*
↓		
2011 Annual Statement	**2002**	**Source**
Schedule P – Part 2 – Summary, Prior Years row	**35,994**	*Line 1*

As displayed above, the amount in column 1 of the prior row in 2011 Schedule P, Part 2, Summary is $35,994.

[89] Minor differences due to rounding.

Then, amounts in columns 2 and subsequent are equal to the ending reserves (case plus bulk plus IBNR reserves) as of each corresponding year-end, plus the paids from the corresponding prior row in Schedule P, Part 2. This is shown below for Fictitious:

TABLE 48

Data from 2011 Annual Statement for Fictitious Insurance Company, Schedule P — Parts 2 through 4 — Summary

Prior Years Row, Net Loss & DCC

Years in Which Losses Were Incurred	1 2002	2 2003	3 2004	4 2005	5 2006	6 2007	7 2008	8 2009	9 2010	10 2011
Prior Paid from Part 3	000	9,061	13,830	18,110	21,281	23,728	26,341	27,752	29,108	30,210
Prior Case Outstanding from Part 2 – Part 3 – Part 4	XXX	14,969	14,190	12,684	11,295	10,018	9,077	8,380	7,830	7,724
Prior Bulk + IBNR from Part 4	17,126	14,330	13,764	12,807	12,285	11,632	10,529	9,752	8,907	8,088
Total Prior Unpaid (Case + Bulk + IBNR)		29,299	27,954	25,491	23,580	21,650	19,606	18,132	16,737	15,812
Prior Incurred Loss = Paid + Unpaid	35,994	38,360	41,784	43,601	44,861	45,378	45,947	45,884	45,845	46,022

Data from 2011 Annual Statement for Fictitious Insurance Company, Schedule P — Part 2 — Summary

Incurred Net Losses and Defense and Cost Containment Expenses Reported at Year-End (000 omitted)

Years in Which Losses Were Incurred	1 2002	2 2003	3 2004	4 2005	5 2006	6 2007	7 2008	8 2009	9 2010	10 2011
Prior	35,994	38,360	41,784	43,601	44,861	45,378	45,947	45,884	45,845	46,022

As displayed above, the case outstanding plus bulk plus IBNR reserves in the prior rows, derived from Parts 2 through 4, are summed and then added to the corresponding cumulative paids since 2003. This produces the "incurreds" on all prior accident years, as shown in Schedule P, Part 2.

All the examples above are provided for the Summary of Schedule P, Parts 2 through 4, with the calculation being the same for all of the lines of business in Parts 2A through 2T.

Prior Years Row – Fictitious 2010 Annual Statement

For completion, and so that a reconciliation can be made of the amounts shown in Table 48 for 2010, the following provides the prior years and 2001 rows from Schedule P, Parts 2 and 4 from Fictitious' 2010 Annual Statement.

TABLE 49

**Data from 2010 Annual Statement for Fictitious Insurance Company,
Schedule P — Part 2 — Summary**

**Incurred Net Losses and Defense and Cost Containment Expenses Reported at Year-End
(000 omitted)**

Years in Which Losses Were Incurred	1 2001	2 2002	3 2003	4 2004	5 2005	6 2006	7 2007	8 2008	9 2009	10 2010
Prior	31,760	36,602	38,321	41,474	43,475	44,539	45,113	45,607	45,605	45,706
2001	15,976	15,927	16,574	16,844	16,661	16,856	16,799	16,875	16,814	16,673

**Data from 2010 Annual Statement for Fictitious Insurance Company,
Schedule P — Part 4 — Summary**

**Bulk and IBNR Net Losses and Defense and Cost Containment Expenses Reported at Year-End
(000 omitted)**

Years in Which Losses Were Incurred	1 2001	2 2002	3 2003	4 2004	5 2005	6 2006	7 2007	8 2008	9 2009	10 2010
Prior	14,550	13,241	11,605	11,986	11,610	11,089	10,606	9,506	8,852	8,191
2001	7,241	3,885	2,725	1,778	1,197	1,196	1,026	1,023	900	716

As a reminder, Part 3 from Fictitious' 2010 Annual Statement is shown in Table 46.

Claim Counts

Part 3 also provides the number of claims closed with and without loss payment in columns 11 and 12, respectively. These figures are provided only for those lines where this information is provided in Part 5 (see below); these figures are not shown in the Summary.

SCHEDULE P — PART 5

Part 5 is provided in the following three sections, which are provided by accident year as of the last 10 year-end evaluations on a direct plus assumed basis:

Section 1: Cumulative number of claims closed with loss payment
Section 2: Number of claims outstanding
Section 3: Cumulative number of claims reported

Part 5 is provided for the following lines of business:

A - Homeowners/Farmowners
B - Private Passenger Auto Liability/Medical
C - Commercial Auto Liability/Medical
D - Workers' Compensation

E – Commercial Multiple Peril
F – Section A[90] – Medical Professional Liability - Occurrence
F – Section B – Medical Professional Liability – Claims-Made
H – Section A – Other Liability – Occurrence[91]
H – Section B – Other Liability – Claims-Made
R – Section A – Products Liability – Occurrence
R – Section B – Products Liability – Claims-Made
T – Warranty

No summary is provided for Part 5.

As noted, claim counts can assist the user in identifying trends or changes in the way claims are settled and reserved. However, caution should be made in relying solely on the analytics without discussion with company management, ideally management within the claims department of the insurance company. There is inconsistency in the way that companies record and report claim counts, and sole reliance on the data without confirmation with management can be misleading. One known inconsistency is that some companies record claims on a per-claim basis and others on a per-claimant basis. As we shall see later in this chapter, the Interrogatories of Schedule P require that companies disclose the method for recording claim counts.

Actuaries can derive many statistics from the data contained in Part 5. In the following paragraphs we discuss the most common claim count statistics used by actuaries, as well as other uses of Part 5.

Claim Closure Rates

These represent the ratio of closed claims to total reported claims. The ratio can be computed as all closed claims, or only those claims closed with payment, divided by reported claims. This relationship, in particular when viewed in the current accident year in comparison to prior accident years during the first 12 months of a development, helps to identify any changes in the rate at which claims are settled (closed).

We often hear claims adjusters say "the best claim is a closed claim," the reason being that the longer a claim stays open, the greater the likelihood it will develop adversely and cost the insurer more money. A closed claim significantly reduces that potential, in most cases to zero.[92] Closed claims also benefit the insured by allowing the insured to receive medical

[90] The line of business section headings change from 1 and 2 to A and B in Part 5, due to the naming of Sections 1 through 3 herein.
[91] Business reported as an aggregate write-in for other lines of business in the State Page is included here (either as occurrence or claims-made, depending on the coverage written).
[92] There is always the chance that a claim could reopen.

treatment, repair damaged property and recover from the loss. Claims departments look for ways to increase claim settlement rates to achieve this mutual benefit.

Despite the benefits of such improvements, they can have an adverse effect on the projection of unpaid claims if not explicitly taken into consideration. Take for example the situation where a company has implemented a new strategy to increase claim settlement rates in the current year. This will result in higher than average claim payments being made in the current year and will cause the paid loss development factors at the latest evaluation date (i.e., last diagonal) to be higher than in prior evaluation dates along the diagonals. Giving weight to this higher factor in the application of loss development factors to paid losses (that are themselves higher than normal) will result in the over-projecting of ultimate losses and therefore the overestimate of unpaids.

Similarly, a claims department may also experience a reduction in claim settlement rates for numerous reasons, such as reductions in staffing levels, growth in a book without a commensurate increase in claim staff, or influx of claims resulting from the occurrence of a catastrophe, among others. A reduction in claim settlement rates could result in underestimating unpaid claims because the last diagonal of loss development factors and current evaluation of paid losses are suppressed relative to prior years.

A review of claim closure rates will help to identify these trends, thereby enabling the actuary to consider the impact on the analysis of unpaid claims.

Table 50 shows the triangle of claim closure rates for Fictitious' homeowners line of business.

TABLE 50

**Data from 2011 Annual Statement for Fictitious Insurance Company,
Data from Schedule P — Part 5A — Homeowners/Farmowners**

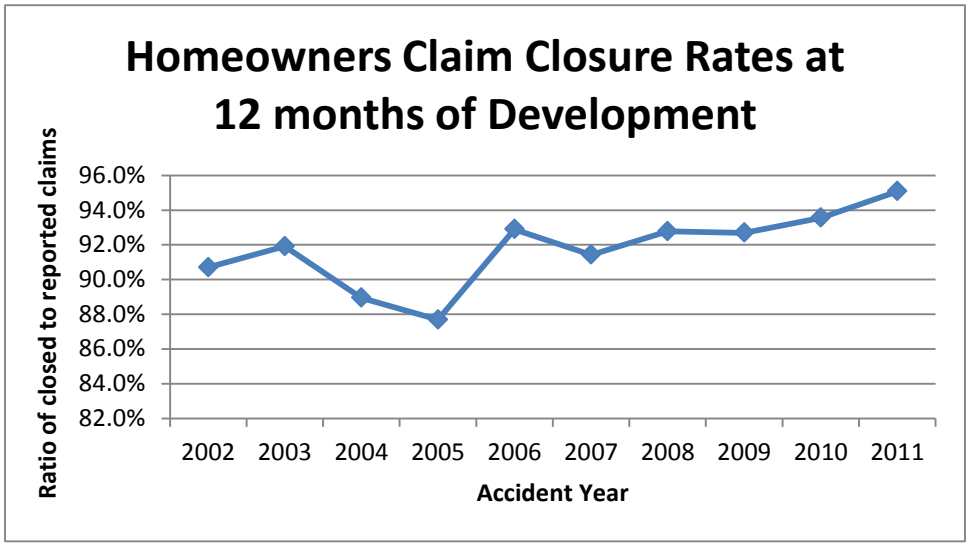
Calculation of Claim Closure Rate (Total Claims Closed from Section 3 minus Section 2, divided by Total Reported Claim Counts from Section 3)

Years in Which Losses Were Incurred	12 Months	24 Months	36 Months	48 Months	60 Months	72 Months	84 Months	96 Months	108 Months	120 Months
2002	90.7%	97.9%	98.8%	98.8%	99.2%	99.6%	99.6%	99.6%	99.6%	99.6%
2003	91.9%	98.4%	99.2%	99.6%	99.6%	99.6%	99.6%	99.6%	99.6%	
2004	88.9%	97.7%	99.1%	99.5%	99.5%	99.5%	99.5%	99.5%		
2005	87.7%	98.1%	98.6%	99.5%	99.5%	99.5%	99.5%			
2006	92.9%	98.6%	99.5%	99.5%	99.5%	99.5%				
2007	91.4%	98.4%	99.0%	99.5%	99.5%					
2008	92.8%	98.7%	99.3%	99.7%						
2009	92.7%	99.0%	99.7%							
2010	93.6%	99.1%								
2011	95.1%									

The above was computed by taking total reported counts in Section 3 of Part 5A and subtracting the open counts in Section 2 to compute a triangle of closed counts. We then took the resulting closed count triangle and divided by the reported count triangle in Section 3.

Depending on the line of business, generally, only the first two to three columns are relevant to the actuary, as claim adjusters tend to have the biggest impact on claim settlement in the first couple of years of development. After that, it is often difficult to have a widespread effect on the open claims. For a short-tailed line of business such as homeowners, actuaries will tend to focus on the first 12 months in the above triangle. The following provides a graphic depiction of the first 12 months of settlement rates.

TABLE 51



From the chart we see a slight uptick in the claim settlement rates since 2009. While the change is relatively benign, it would be important to talk to Fictitious' management to see if there are any internal or external changes than might impact the rate at which homeowners claims are being settled. Additionally, it would be interesting to inquire as to the changes that occurred in 2004 and 2005, as there appears to have been a large drop in the rate at which claims were being closed. We know 2005 was marred by Hurricanes Katrina, Rita and Wilma, and it may be that Fictitious' claims department had some difficulties keeping pace with the large number of claims reported during 2005.

Closed With Pay (CWP) Ratios

These represent the ratio of CWP claims to total closed claims. Companies may experience changes in the rate that claims are closed without payment. It is important for the actuary to understand the implications of changes in CWP rates on the unpaid claim analysis. While a

decreasing trend in CWP rates is generally a good sign, it may result in increases in reopened claims in the future or have other effects that are not easily discernible in the loss data.

Table 52 provides the ratio of claims closed without payment to total closed claims for Fictitious. While we can show the ratio of CWPs as well, which is simply one minus the ratios shown within Table 52, we thought the ratios of closed without pay more clearly highlights some changes in the Company's experience.

TABLE 52

Data from 2011 Annual Statement for Fictitious Insurance Company,
Data from Schedule P — Part 5A — Homeowners/Farmowners
Ratio of Claims Closed Without Payment to Total Closed Claims

Years in Which Losses Were Incurred	12 Months	24 Months	36 Months	48 Months	60 Months	72 Months	84 Months	96 Months	108 Months	120 Months	120 Months
2002	1%	16%	15%	15%	15%	15%	16%	16%	16%	16%	
2003	14%	14%	14%	14%	14%	13%	13%	13%	13%		
2004	16%	16%	16%	16%	16%	16%	16%	16%			
2005	13%	13%	13%	13%	13%	13%	12%				
2006	9%	9%	9%	9%	9%	9%					
2007	8%	9%	8%	8%	8%						
2008	8%	8%	8%	8%							
2009	9%	9%	9%								
2010	8%	8%									
2011	6%										

As displayed above, there appears to have been a drop in claims closed without pay between the 2004 and 2006 accident years from around the 15% level at 12 months of development to about the 8% level for accident years 2006 through 2010 at 12 months. There seems to be a further decline in accident year 2011, although to a much lesser degree. Inquiries would have to be made of company management to understand the cause for these trends and ascertain the impact on future loss and LAE development.

Claim Frequency

The rate of claim frequency can be determined using Schedule P data by dividing claim counts in Part 5 by earned premiums in Part 1. This can be useful in identifying changes in the rate claims are closed and reported relative to the exposure. However, we note that the exposure here is influenced by rate changes. Therefore, similar to loss ratios, these rates can go up or down depending on pricing changes. Schedule P does not provide the raw exposure base (e.g., home years for homeowners, car years for auto, payroll or employee count for workers' compensation). As a result, one cannot identify pure loss cost trends using this data without making manual adjustments for changes in rate.

Average Claim Severities

In addition to providing statistics based solely on counts, the actuary can also analyze severities using the loss data from Parts 2 through 4 and the count data in Part 5. The actuary can analyze the following:

- Average closed claim severities, which are computed as the ratio of net paid loss and DCC to direct plus assumed claims closed with payment (or total closed claim counts). The numerator in the equation comes from Schedule P, Part 3, and the denominator comes from Schedule P, Part 5, Section 1 (or Section 3 minus Section 2 for total closed claim counts).
- Average case outstanding severities, which are computed as the ratio of net case outstanding loss and DCC to direct plus assumed open counts. The numerator in the equation comes from Schedule P, Part 2 minus Part 3 minus Part 4, and the denominator comes from Schedule P, Part 5, Section 2.
- Average reported claim severities, which are computed as the ratio of net reported loss and DCC to direct plus assumed reported counts. The numerator in the equation comes from Schedule P, Part 2 minus Part 4, and the denominator comes from Schedule P, Part 5, Section 3.

The above enables the actuary to identify trends in the cost of insurance claims. Such trends may be inflationary, a result of law changes, attributed to one-time catastrophic claims, due to changes in deductibles or retentions, or caused by internal factors, among others.

As with claim counts, actuaries generally look for changes in the first few years of development, as these changes tend to have the biggest impact on reserve levels.

A review of average case reserves is particularly useful to the reserving actuary. Changes in case reserve levels may be a sign that the company has strengthened or weakened its case reserves. For example, if we were to compute a triangle of average case outstanding severities and observe a decrease along the last diagonal relative to the prior diagonal, then that may be a sign that the company has weakened its case reserves.[93] Of course, this observation would warrant discussion with the company's claims department. However, assuming there was a weakening in case reserves, use of the reported loss development method to project unpaid loss, without adjustment to reflect the weakening, may understate the reserve need.

[93] The last diagonal represents average case outstanding reserves corresponding to the accident years in the left most column, as of the current evaluation date, which is December 31, 2011 for Fictitious. The prior diagonal is one year prior to the current evaluation (i.e., December 31, 2010 for Fictitious).

To be more specific, loss development methods assume that the past is predictive of the future. When a company weakens reserves, the reported losses are at a lower level than they had been at the past. Therefore application of prior average loss development factors to current, lower loss amounts, will tend to understate the ultimate loss estimate and therefore the reserve need. The effect is similar to what happens to development methods using paid loss data when there has been a change in the rate claims are being closed. A decrease in claim settlement rates (i.e., "slowdown") along the last diagonal will result in an understatement of the reserve need absent adjustment to the paid loss triangle or paid loss development methods. And, the opposite can happen when there has been a strengthening in case reserves or a speed-up in claim settlement. While not the topic of this publication, there are loss reserving methods that explicitly adjust for changes in case reserve adequacy and claim closure rates, such as those described in the Berquist-Sherman paper.[94]

Table 53 provides the average case outstanding reserves for Fictitious' homeowners line of business:

TABLE 53

Data from 2011 Annual Statement for Fictitious Insurance Company,
Data from Schedule P – Parts 2 through 5 – Homeowners/Farmowners

Average Net Case Outstanding Loss and DCC Severities
(Net Case Outstanding Loss and DCC / Open Claim Counts)

Years in Which Losses Were Incurred	12 Months	24 Months	36 Months	48 Months	60 Months	72 Months	84 Months	96 Months	108 Months	120 Months	120 Months
2002	7,350	10,800	10,677	6,000	5,000	7,000	5,000	2,000	1,000	–	
2003	9,053	16,750	19,000	21,000	12,000	7,000	5,000	2,000	1,000		
2004	8,636	18,600	23,500	25,000	14,000	9,000	5,000	2,000			
2005	9,360	13,750	8,667	9,000	11,000	12,000	–				
2006	14,571	30,333	45,000	26,000	15,000	8,000					
2007	18,333	37,000	30,500	34,000	18,000						
2008	14,684	32,250	37,500	40,000							
2009	15,789	42,000	61,000								
2010	16,789	41,333									
2011	17,429										
		2002	2003	2004	2005	2006	2007	2008	2009	2010	2011
Ending			10,966	10,844	11,243	14,833	17,920	17,071	17,774	19,194	18,909
Annual Trend				-1%	4%	32%	21%	-5%	4%	8%	-1%

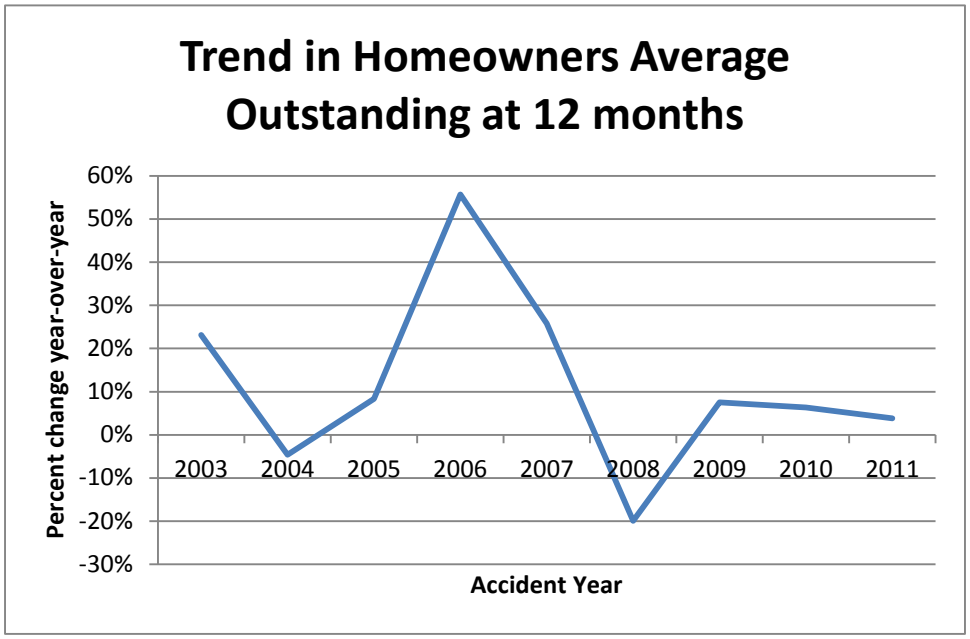
The bottom row shows the trend across all accident years combined, over each evaluation year. We see that in 2009 and 2010, average reserve levels increased by about 4% and 8%,

[94] Berquist, J.R.; and Sherman, R.E., "Loss Reserve Adequacy Testing: A Comprehensive, Systematic Approach," Proceedings of the Casualty Actuarial Society (PCAS) LXIV, 1977, pp.123-184.

respectively. However, in 2011, reserve levels decreased by 1%. As a result of this decline, the actuary may see ultimate loss and DCC estimates based on reported methods coming in lower than the ultimate loss and DCC estimates based on paid methods.

Looking down the column at the first 12 months, we see a significant increase in case reserve between 2005 and 2006. This is a bit more obvious graphically. The following provides the change in average case reserves, from one accident year to the next, going down the 12 month development column.

TABLE 54



A large spike is seen in 2006. The approximate 56% increase was computed by taking the average case outstanding severity for accident year 2006 of $14,571 and dividing by the average for accident year 2005 of $9,360 to obtain the year-over-year change of 1.56 (+56%).

Despite the large increase in 2006 and subsequent sharp decline in 2008, the year-over-year trend rates in the first 12 months of development appear to have been on a slight decline from 8% to 4% between 2009 and 2011.

As previously mentioned, the value of these analytics is to identify trends and generate discussion with management so that the actuary can appropriately consider them in the analysis of unpaid claims.

Reasonableness Tests

In addition to the raw trends, actuaries also use Part 5 data to provide checks on the reasonableness of unpaid claim estimates. For example, actuaries can compute the following statistics and compare the results to see if the trends across the accident years are in alignment with what they expect:

- Average claim frequency — the ratio of the ultimate claim count estimate by accident year to the corresponding earned premium
- Average ultimate severity — the ratio of the ultimate loss and DCC estimate by accident year to the corresponding estimate of ultimate claim counts
- Average unpaid claim severity — the ratio of the unpaid loss and DCC estimate by accident year to the corresponding estimate of unpaid claims

The above can be computed using direct plus assumed loss and DCC estimates in addition to the net estimates.

Uses of Part 5 in Estimating Unpaid Claims

Before turning to Part 6, we should add that actuaries also use Part 5 for purposes of projecting ultimate loss and DCC estimates. These methods are referred to as "counts and averages" methods. Projections are made by developing average paid and reported loss severities to ultimate and applying them to estimates of ultimate claim counts using closed and reported claims count development methods. These methods can be valuable when adjusting for observed trends in each of their specific components.

SCHEDULE P — PART 6

Part 6 provides cumulative premiums earned as of December 31 for each of the last 10 calendar years. The first year of report includes premiums earned in the calendar year. Moving left to right, subsequent years show premiums earned after positive or negative adjustments from premium audits, retrospectively rated policies, lags in reporting or accounting for premiums, among others. Part 6 provides the information needed to develop earned premium to its ultimate amount using methods similar to those used to develop ultimate loss and DCC (i.e., using traditional, triangular development methods). Part 6 is provided for the following lines of business, as these lines tend to be the ones subject to the aforementioned adjustments:

C – Commercial Auto Liability/Medical
D – Workers' Compensation
E – Commercial Multiple Peril

H – Section A – Other Liability – Occurrence[95]
H – Section B – Other Liability – Claims-Made
M - International
N – Reinsurance – Nonproportional Assumed Property[96]
O – Reinsurance – Nonproportional Assumed Liability[97]
P – Reinsurance – Nonproportional Assumed Financial Lines[98]
R – Section A – Products Liability – Occurrence
R – Section B – Products Liability – Claims-Made

The premium displayed in Part 1 of Schedule P is that which is earned at the end of each specified year and is not updated for subsequent adjustments. It is equal to the left-most diagonal in Part 6. Adjustments made after the first year of report come through in the remaining columns of Part 6.

Workers' compensation provides a good example of a line that is subject to premium adjustment. At inception, the premium charged for a workers' compensation policy is determined by applying a rate to an estimate of the payroll (exposure) for the policy term. At the end of the year, or shortly thereafter, the actual payroll is known. The insurance carrier, however, has determined its premium earnings on the basis of the estimated premium. As a result, the premium figure will change from its initial amount, and this change is recorded in Part 6.

Additionally, the exposure base used to determine the premium can be subject to audit by the insurance carrier. For example, an insurance company can verify that payroll amounts used in determining an insured's workers compensation premium, or revenue figures used in computing an insured's general liability premium, are accurate and complete. Differences uncovered through these audits will emerge as premium development in Part 6.

The one area where we tend to see the most development on earned premium is retrospectively rated insurance policies. Under these policies, the insured is charged a base premium that is adjusted over time based on the insured's loss experience based on a formula. The formula incorporates tax multipliers and expense factors and typically imposes a minimum and maximum premium amount.

[95] Business reported as an aggregate write-in for other lines of business in the State Page is included here (either as occurrence or claims-made, depending on the coverage written).
[96] Property includes fire, allied, ocean marine, inland marine, earthquake, group, credit and other A&H, auto physical damage, boiler and machinery, burglary and theft and international property.
[97] Liability includes farmowners, homeowners and commercial multiperil; medical professional liability workers' compensation; other liability; products liability; auto liability; aircraft (all peril); and international liability.
[98] Financial includes financial guaranty, fidelity, surety, credit and international financial.

Insurance companies record the claim experience associated with retrospectively rated insurance policies within Schedule P, and the loss reserve estimates typically include a provision for these claims. Without adjustment for the additional premium income expected under these policies, a company's surplus would be understated. This adjustment comes in as an asset on line 15.3 of page 2 of the Annual Statement titled "Accrued Retrospective premium."

Estimates of future premium can be determined by developing the earned premiums in Part 6 using development methods. However, as with reliance on the rest of Schedule P for projection purposes, exclusive reliance on Part 6 should not be made without having a good understanding of its contents.

SCHEDULE P — PART 7

Part 7 is optional and completed only by those companies using the loss sensitive adjustment in the RBC calculation. It provides premium and loss information on loss sensitive contracts. It is broken into two parts: A for Primary Contracts (i.e., direct written business) and B for Reinsurance Contracts (i.e., assumed business). Parts A and B each have the same five sections:

- Section 1 provides net loss and LAE unpaid and net written premium on loss sensitive contracts, relative to all contracts written by the company, for each Schedule P line of business in total.
- Section 2 provides incurred loss and DCC reported at year-end on loss sensitive contracts in the same format as Schedule P, Part 2.
- Section 3 provides loss and DCC IBNR at year-end on loss sensitive contracts in the same format as Schedule P, Part 4.
- Section 4 provides net earned premiums reported at year-end on loss sensitive contracts in the same format as Schedule P, Part 6.
- Section 5 provides net reserves for premium adjustments and accrued retrospective premiums at for each of the last 10 years in which the policies were issued, evaluated at each of the last 10 years.

The information provided in Part 7 is on a policy year basis.

As noted, the primary use of this exhibit is for RBC purposes. The Reserve RBC and Written Premium RBC are adjusted to reflect the fact that loss experience under loss sensitive contracts is shared in whole or in part with the insured. As such, the risk of adverse loss development is also shared with the insured. The insurance company receives a discount to its RBC reserve charge to reflect this reduction in risk. This discount is computed separately by line of business. Columns 3 and 6 of Schedules A and B provide the percentage of loss and LAE reserves and written premiums by line of business for loss sensitive contracts. Column 3

provides the distribution of reserves, and column 6 provides the distribution of net written premium.

Examples of how this information is used in computing RBC are contained in *Part IV. Statutory Filings to Accompany the Annual Statement* of this publication.

SCHEDULE P INTERROGATORIES

The Schedule P Interrogatories are a series of seven questions that the insurance company is required to answer to provide further insight into the information reported in Schedule P. We will briefly discuss those interrogatories that are most widely referred to by property/casualty actuaries.

Question 1 pertains to extended reporting endorsements (EREs) arising from death, disability or retirement (DDR). EREs essentially turn a medical professional liability claims-made policy into an occurrence policy upon the policyholder's death, disability or retirement. In the 1990s, DDR endorsements were issued for free and known as "free tail coverage" as a marketing effort by medical insurers to attract physicians. Many such DDR extended reporting period endorsements are still offered for free.

Question 1 has six parts, the first of which pertains to whether the company issues such endorsements for free or at a reduced rate. The remaining five parts serve to identify where and how the company reports the DDR reserve: as unearned premium or loss reserve, claims-made or occurrence, etc. The main point is to make sure these policies have been reserved for somewhere in the company's financial statements, either as losses or unearned premium.

Question 2 asks whether LAE are reported as DCC and A&O as per the definitional change effective January 1, 1998. This is relevant to the actuary or other user who may be relying on Schedule P data to perform reserve adequacy tests.

Question 4 requires disclosure on whether the company's recorded loss and LAE reserves are net of non-tabular discount and reminds the preparer of the Annual Statement that:

- Disclosure of non-tabular discount must be included in the Notes to Financial Statements.
- Discounting is only allowed if the company has permission from its state insurance regulator.
- Schedule P must be prepared gross of non-tabular discounts, with the amount of discount reported in Schedule P – Part 1, Columns 32 and 33.
- Support for the amount of discount must be available for regulatory review upon request.

In question 6, the company is required to indicate whether the company reports claim counts on a per-claim or per-claimant basis in Schedule P. This, along with whether the reporting

convention has changed over time, is relevant in interpreting trends in claim frequency and severity. It is also relevant when assessing reserve adequacy using counts and averages (frequency and severity) methods.

Question 7 is the most important and aligns most directly with the use of Schedule P. It asks if there are any changes or if there is anything special that the user should be aware of if the user decides to rely on the data provided in Schedule P to assess the adequacy of the recorded loss and LAE reserves. If the answer is yes, disclosure of such is required.

INTERCOMPANY POOLING AND SCHEDULE P

It is important to know that intercompany pooling differs from intercompany reinsurance. Intercompany reinsurance is accounted for in the same way as third-party reinsurance, subject of course to statutory accounting rules. Very broadly, cessions to affiliated reinsurers under straight reinsurance agreements serve to reduce gross premiums and losses.

Under intercompany pooling, the treatment is different in Schedule P; gross losses are combined or "pooled" and then shared based on the pooling percentage of each company within the group of affiliates that participates in the intercompany arrangement. Net losses are treated in the same manner in that they are first pooled and then shared based on each company's pooling percentage. Very simply, assume Companies A, B and C participate in intercompany reinsurance, with 60%, 20% and 20% participation, respectively. If each company has $100 of loss reserves on a direct basis and cedes $30 to outside reinsurers, the recorded reserves in Schedule P of Companies A, B and C would be $180, $60 and $60 on a gross of reinsurance basis and $126, $42 and $42 on a net of reinsurance basis, respectively. That is, the pooled gross ($300) and net amounts ($210) are shared based on each company's participation rates. This is summarized in Table 55.

TABLE 55

Reporting in Schedule P				
	Company A (Lead)	Company B (Non-Lead)	Company C (Non-Lead)	Total
Total Gross	180	60	60	300
Total Net	126	42	42	210

While Schedule P for companies that operate under an intercompany pooling arrangement is prepared on a pooled basis, as exemplified above, other schedules and exhibits within the Annual Statement treat intercompany pooling as if it is a typical reinsurance arrangement. Therefore, using the above example, if Company A were the lead in the intercompany pool, then Company A would have $100 in direct loss reserves, plus $70 assumed from each of

Companies B and C, for a total of $240 in gross reserves. The $70 in assumed loss reserves from each non-lead company is after cessions to outside reinsurance.

For each non-lead company, the amount of gross loss reserves is $100 in direct reserves plus the amount assumed after the lead company cedes through the intercompany reinsurance relationship. The amount of business in the intercompany pool is $300 of direct loss reserves minus $90 (=$30*3) of ceded business, for a total of $210 net reserves. The $210 pooled net loss reserve is shared 60%, 20%, 20%, so each non-lead gets $42. Thus, the total gross loss reserves for each non-lead is $100 in direct plus $42 of intercompany pooled loss reserves for a total of $142. These amounts are summarized in Table 56.

TABLE 56

Reporting in Annual Statement Exhibits and Schedules other than P				
	Company A (Lead)	Company B (Non-Lead)	Company C (Non-Lead)	Total
Total Gross	240	142	142	524
Total Net	126	42	42	210

Notice that on a net basis, the amounts are the same in all of the exhibits and schedules within the Annual Statement. However, on a gross basis, exhibits and schedules other than Schedule P essentially double count the cessions to intercompany pooling, whereas Schedule P nets them out.

The fact that Schedule F does not show IBNR on an assumed basis, the double counting effect of pooling, as well as the fact that some companies have other intercompany reinsurance relationships outside the intercompany pooling relationship, complicates the reconciliation between Schedules within the Annual Statement to Schedule P. This is the main reason we have not used Fictitious in our examples.

We used loss reserves in our example. However, it is important to note that pooling percentages apply to the premium, loss, expense and claim count data within Schedule P. Therefore, all figures provided in Part 1 and the triangles provided in Parts 2 through 7 are provided after intercompany pooling. If one wanted to determine total premium, loss, expense and/or claim count data for the pool in aggregate, all one would need to do is divide the figures in Schedule P for a pool member by its intercompany pooling percentage in Schedule P, Part 1, column 34.

Intercompany pooling percentages can change over time, based on a particular group's strategy. The Schedule P for a particular company is generally restated retroactively when there is a change in intercompany pooling.

PART IV. STATUTORY FILINGS TO ACCOMPANY THE ANNUAL STATEMENT

INTRODUCTION TO PART IV

Insurance companies are required to file numerous documents with state insurance regulators each year, either included within or supplemental to the Property/Casualty Annual Statement. These annual filings include those listed in the Official NAIC *Annual Statement Instructions Property/Casualty*,[99] such as the Statement of Actuarial Opinion SAO, Actuarial Opinion Summary Supplement (AOS), Supplemental Compensation Exhibit, Insurance Expense Exhibit (IEE), Supplemental Investment Risks Interrogatories, Financial Guaranty Insurance Exhibit and others such as the National Association of Insurance Commissioners (NAIC) Insurance Regulatory Information System (IRIS) ratio and Risk-Based Capital (RBC) ratio results. Many of these filings serve as a means for regulators to obtain a relatively quick view of an insurance company's financial health, thereby enabling regulators to prioritize those insurance companies requiring immediate attention.

This section addresses the filings that tend to be used the most by property/casualty actuaries, namely:

- SAO
- AOS
- IEE
- RBC
- IRIS

We will discuss the purpose and important aspects of each filing. Many of these filings are addressed in considerable detail in other publications, and the NAIC has issued instructions, manuals and/or software applications that provide the preparer of these filings with authoritative guidance. This section is not intended to replace those readings or provide instructions on how to prepare those filings. Rather, we will limit our discussion to the purpose of each and a general overview of how they are prepared.

[99] *2011 NAIC Annual Statement Instructions Property/Casualty,* pages i-v.

CHAPTER 16. STATEMENT OF ACTUARIAL OPINION

OVERVIEW

The Statement of Actuarial Opinion (SAO) provides the opinion of a qualified actuary on the reasonableness of the loss and loss adjustment expense (LAE) reserves recorded by a property/casualty insurance company as of December 31 each year. It is filed with the Annual Statement, either included or attached to page 1 of the Annual Statement. The SAO must be prepared by a qualified actuary, as defined by the National Association of Insurance Commissioners (NAIC),[100] who is appointed by the company's board and then referred to as the appointed actuary.[101]

Certain companies may qualify for an exemption from the SAO requirement. Possible exemptions include the following:

- Size of the insurer (less than $1 million of total gross written premiums during a calendar year and less than $1 million of total gross loss and LAE reserves at year-end)
- Insurers under supervision or conservatorship
- Nature of business written
- Insurers under financial hardship (if the cost of the SAO is greater than either 1% of surplus or 3% of gross written premiums during the calendar year within which the exemption is requested)

Simply meeting one of the above criteria does not provide automatic exemption. To qualify, the insurer has to file for exemption with its domiciliary commissioner. It is at the discretion of the domiciliary commissioner to decide whether to exempt a company from the SAO requirement.

The main purposes of the SAO are the following:

[100] A qualified actuary is defined by the NAIC as "a person who meets the basic education, experience and continuing education requirements of the Specific Qualification Standard for Statements of Actuarial Opinion, NAIC Property and Casualty Annual Statement, as set forth in the *Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States,* promulgated by the American Academy of Actuaries, and is either: (i) A member in good standing of the Casualty Actuarial Society, or (ii) A member in good standing of the American Academy of Actuaries who has been approved as qualified for signing casualty loss reserve opinions by the Casualty Practice Council of the American Academy of Actuaries" *2011 NAIC Annual Statement Instructions Property/Casualty*, page 9.

[101] The *2011 NAIC Annual Statement Instructions Property/Casualty* go on further by saying that the requirements of the company's domiciliary state may permit individuals to issue the SAO despite not meeting the definition of qualified actuary per the NAIC. In these instances a letter from the state must be attached to the SAO indicating that the individual meets the state's requirement to issue SAOs. Throughout this text we will use the terms "qualified actuary" and "appointed actuary" to encompass these individuals.

- Provide the appointed actuary's opinion on the reserves specified within the scope of the SAO.
- Inform the reader, in particular regulators, of significant risk factors and/or uncertainties with respect to those reserves.
- Advise whether those risks and uncertainties are reasonably expected to lead to material adverse deviation in the reserves.

There is considerable guidance for the actuary in issuing the SAO. Every appointed actuary should read and be familiar with the most current versions of the following:

- Qualification Standards, as set forth by the American Academy of Actuaries (AAA)
- NAIC Instructions for the SAO
- AAA Committee on Property and Liability Financial Reporting (COPLFR) *Practice Note on Statements of Actuarial Opinion on Property and Casualty Loss Reserves* (COPLFR P/C Practice Note)
- NAIC *Regulatory Guidance On Property and Casualty Statutory Statements of Actuarial Opinion* Prepared by the NAIC's Casualty Actuarial and Statistical (C) Task Force[102]
- Actuarial Standards of Practice (ASOP), including but not limited to:
  - ASOP No. 20. *Discounting of Property/Casualty Unpaid Claim Estimates* (September 2011)
  - ASOP No. 23. *Data Quality*
  - ASOP No. 36. *Statement of Actuarial Opinion Regarding Property/Casualty Loss and LAE Reserves*
  - ASOP No. 41. *Actuarial Communications*
  - ASOP No. 43. *Property/Casualty Unpaid Claim Estimates*
- Applicable state laws, in particular with respect to reserve requirements, SAO requirements, discounting, etc. (the Property/Casualty Loss Reserve Law Manual published annually by the AAA provides a compilation of this material) [103]
- SSAP No. 62 *Property and Casualty Reinsurance*
- SSAP No. 65 *Property and Casualty Contracts*

The SAO is organized into four required sections:

1. Identification
2. Scope
3. Opinion
4. Relevant comments

Each section must be included and clearly identified within the SAO.

[102] This is updated annually and typically included as an appendix to COPLFR P/C Practice Note.
[103] Applicable laws and regulations supersede any applicable ASOPs.

The SAO also contains two exhibits, A and B. Exhibit A provides the recorded amounts associated with the items identified in the scope section, generally on a direct plus assumed and net basis. Exhibit B provides relevant disclosure items with respect to the *net* reserves identified in the scope section, as identified in the relevant comments section. For example, loss and LAE reserves for asbestos are disclosed in Exhibit B on a net of reinsurance basis. There is no separate exhibit within the SAO showing asbestos reserves on a gross of reinsurance basis. Differences between the net and gross (direct plus assumed) amounts reported in Exhibit B may be discussed in the relevant comments section.

While there are other publications on the CAS Exam 6 U.S. Syllabus of Basic Education that cover the SAO, there is not a "real" SAO on the Syllabus to bring the instructions to life for the student. As a result, we have created a SAO for Fictitious Insurance Company to illustrate the application of the SAO instructions in practice. Fictitious' SAO was issued by an imaginary actuary named Mr. William H. Smith, who is a consulting actuary with the make-believe firm, WS Actuarial Consulting. Smith's opinion is included in of this publication and should be read side-by-side with this chapter.

The Fictitious SAO is the author's interpretation of the NAIC instructions as they might apply to Fictitious. It should not be taken as authoritative guidance on format or content of the SAO.

The following provides a summarized view of each of the four sections of the SAO and how Fictitious' appointed actuary responded to each required section in his 2011 SAO for the company.

IDENTIFICATION

The identification section of the SAO provides the actuary's name and credentials, the actuary's qualifications for issuing the SAO, the actuary's relationship to the company, and the date the actuary was appointed by the company's board of directors (or its equivalent) to issue the opinion. This section typically includes a statement identifying the intended purposes and users of the opinion, consistent with ASOP 36 requirements.

For Fictitious, the 2011 SAO was issued by Mr. William H. Smith, who is a Fellow of the Casualty Actuarial Society and Member, American Academy of Actuaries, and is associated with the firm of WS Actuarial Consulting. He was appointed by the company's board of directors on September 7, 2011. At the time of issuance of his opinion (February 24, 2012), Smith met the qualification standards to issue SAOs.

The intended purpose of Smith's opinion was to satisfy the requirements of the NAIC. The intended users were the company's management, the directors of its board and state regulatory officials.

SCOPE

The scope section identifies the reserve items upon which the actuary is giving an opinion as well as the accounting basis for those reserves. The reserve items include:

- Loss and LAE reserves
- Retroactive reinsurance assumed reserves
- Unearned premium reserves for long-duration contracts
- Unearned premium reserves for extended reporting endorsements, such as those included in Schedule P Interrogatory No. 1 of the company's Annual Statement
- Other reserve items for which the actuary is providing an opinion

The scope also identifies the "review date," which is defined in ASOP 36 as "the date (subsequent to the valuation date) through which material information known to the actuary is included in forming the reserve opinion."[104] If no such date is explicitly disclosed, it is likely to be assumed by the reader of the opinion that the review date is the date the opinion is signed.

It also contains a statement regarding who provided the data relied upon by the actuary in forming the opinion and that either the actuary performed a reconciliation of that data, or reviewed a reconciliation prepared by the company, to Schedule P of the company's Annual Statement.

If the company participates in intercompany pooling, the actuary *may wish* to disclose this and the basis for reconciling data used in the actuary's analysis to Schedule P.

Further, regulatory guidance suggests that the scope section for each pooled company provide information about the pooling arrangement, including the intercompany pooling percentage for the company.

There are special requirements for opinions on non-lead companies operating under an intercompany pooling arrangement in which the lead company retains 100% of the pooled reserves. We refer the reader to the NAIC opinion instructions and COPLFR Practice Note for further guidance.

The reserve items on which Smith opined for Fictitious are presented in Exhibit A of his 2011 SAO. As displayed on Exhibit A, Smith opined on net loss and LAE reserves in lines 1 and 2, totaling $51,557,000 as of December 31, 2011. The amounts in lines 1 and 2 of Exhibit A reconcile to lines 1 and 3, respectively, of the Liabilities, Surplus and Other Funds page of the 2011 Annual Statements.

[104] Actuarial Standards Board of the American Academy of Actuaries, "Actuarial Standard of Practice No. 36, Statements of Actuarial Opinion Regarding Property/Casualty Loss and Loss Adjustment Expense Reserves," December 2010, page 3.

Smith also opined on total direct plus assumed (or gross) loss and LAE reserves of $61,699,000, as shown in lines 3 and 4. The amounts in lines 3 and 4 reconcile to Schedule P, Part 1, Summary, columns 13 plus 15, and columns 17, 19 and 21, respectively.

As disclosed in the Notes to Financial Statements (see *Chapter 10. Notes to Financial Statements*) and displayed in Exhibit A of the SAO, Fictitious did not have any retroactive reinsurance assumed as of December 31, 2011. Nor were there any other loss reserve items on which Smith expressed an opinion.

Smith disclosed his "review date" as January 28, 2012. This means that information received through January 28, 2012, was relevant to his analysis of unpaid claims and his opinion on the company's loss and LAE reserves. Information after that date, to the time he signed the opinion on February 24, 2012 (see the signature line of the opinion), was not relied on by Smith in forming his opinion.

The scope section also provides a statement from Smith that he reconciled the data that he relied upon for purposes of forming his opinion to Schedule P, Part 1, of Fictitious' 2011 Annual Statement.

OPINION

The opinion section provides exactly what the name says, the actuary's opinion with respect to the reserves identified in the scope section. The actuary has five options in terms of the type of opinion, as outlined in ASOP 36. These are:

1. Reasonable: if the recorded reserve lies within the actuary's range of reasonable unpaid claim estimates
2. Inadequate or deficient: if the recorded reserves are below what the actuary deems to be reasonable
3. Excessive or redundant: if the recorded reserves are above what the actuary deems to be reasonable[105]
4. Qualified: if the actuary is unable to issue an opinion on certain items and those items are believed to be material
5. No opinion: if the actuary is unable to conclude on the reasonableness of the recorded reserves

Note that in accordance with ASOP 36, the actuary should disclose the minimum amount that he or she deems reasonable when issuing an inadequate or deficient opinion.[106] Similarly, the actuary should disclose the maximum amount deemed to be reasonable when issuing an excessive or redundant opinion.

[105] Ibid., page 9.
[106] Ibid., page 10.

The actuary is also required to state whether the recorded reserves identified in the scope section meet the requirements of the insurance laws of the state the company is domiciled in and are computed in accordance with actuarial standards.

Additionally, if use was made of the work of another actuary, such as for pools and associations, for a subsidiary, or for special lines of business, in forming the SAO, the other actuary must be identified by name and affiliation within the opinion section. The appointed actuary cannot simply rely on another actuary's opinion. The appointed actuary needs to perform enough analysis on the other actuary's work to issue an unqualified opinion on the total reserve amounts listed in Exhibit A. A situation where the actuary may make use of another's work is for reserves assumed by the company for its participation in underwriting pools and associations. ASOP No. 36 provides the relevant guidance, and the COPLFR P/C Practice Note provides good examples of how to handle this situation in practice.[107]

The 2011 SAO for Fictitious states the following:

"In my opinion, the amounts carried in Exhibit A on account of the items identified:

- Make a reasonable provision for all unpaid losses and loss adjustment expenses, gross and net as to reinsurance ceded, under the terms of the Company's contracts and agreements
- Are computed in accordance with accepted standards and principles
- Meet the requirements of the insurance laws of Florida"[108]

Note that Smith opined on the loss and LAE reserves in Exhibit A, items 1 through 6. These reserves include "Retroactive Reinsurance Reserve Assumed," which in the case of Fictitious totaled $0.

Unless otherwise disclosed, the Appointed Actuary will generally opine on the loss and LAE reserves including the amount of retroactive reinsurance assumed, despite the fact that the amount of retroactive reinsurance is not accounted for within lines 1 and 3 of page 3 of the Annual Statement under SAP. This treatment is in accordance with the NAIC instructions. Retroactive reinsurance assumed is a liability, and regulators look for assurance that this balance is reasonable.

The reserves for retroactive reinsurance ceded are not separately listed on Exhibit A and are therefore not explicitly opined on by the actuary. The absence of this reserve from Exhibit A is not because regulators don't care about the reasonableness of the balance. Rather, the reserve for retroactive reinsurance ceded is already included as a component of the gross

[107] Committee on Property and Liability Financial Reporting, American Academy of Actuaries, "Property and Casualty Practice Note, Statements of Actuarial Opinion on P&C Loss Reserves as of December 31, 2011," page 50.
[108] See Appendix I of this publication for the Statement of Actuarial Opinion for Fictitious Insurance Company.

loss and LAE reserves, which are opined on by the actuary.[109] An overstatement or understatement of retroactive reinsurance ceded would impact gross and ceded reserves equally and have no impact on the net reserve balance.

RELEVANT COMMENTS

The relevant comments section provides commentary and disclosures relative to the reserves opined on to assist the reader in understanding the context and composition of those reserves. Commentary is required on the following items:

- The actuary's materiality standard for purposes of addressing the risk of material adverse deviation
- Significant risks and uncertainties that could result in material adverse deviation
- The significance of items listed in Exhibit B, including:
    - Anticipated net salvage and subrogation
    - Nontabular discounting
    - Tabular discounting
    - Net reserves for the company's share of voluntary and involuntary pools and associations
    - Net reserves for asbestos and environmental liabilities
    - Claims-made extended loss and LAE reserve reported as unearned premium and as loss reserves
- Retroactive or financial reinsurance
- Uncollectible reinsurance
- The results of IRIS ratios 11, 12 and 13 and explanation for exceptional values
- Changes in methods and assumptions from those employed in the most recent prior opinion that are deemed to have a material effect on the recorded reserve or actuary's unpaid claim estimate
- Unearned premium reserves for long duration contracts

With respect to the risk of material adverse deviation, the NAIC Instructions requires the appointed actuary to make an explicit statement as to whether or not he/she believes there are significant risks and/or uncertainties that could result in material adverse deviation.

Smith addresses the above items within the 2011 SAO for Fictitious, as applicable. We will not discuss each item but rather provide further details on some to assist in reading this section of the opinion.

[109] Recall from *Chapter 10. Notes to Financial Statements*, a company's gross reserves are not reduced for retroactive reinsurance ceded. Rather, retroactive reinsurance ceded is recorded separately as a write-in item on the balance sheet.

MATERIALITY STANDARD

There are numerous ways an actuary can establish his or her materiality standards, and examples are provided in the COPLFR Practice Note. Common methods are based on a percentage of reserves, surplus and movements in Risk-Based Capital (RBC) levels, among others. Materiality standards such as 10% of loss and LAE reserves or anywhere from 10% to 20% of surplus are commonly used. However, some actuaries establish materiality standards using a set dollar amount based on the actuary's particular knowledge of the company's operations. As an extreme example, for a company operating with limited surplus and/or under regulatory intervention, a deviation in loss and LAE reserves greater than $0 might be considered material.

Regardless, there is no "one size fits all" in terms of formulaic materiality standards. The standard is based on the actuary's personal opinion as to what he or she considers material in relation to the company's reserves and surplus. As noted in Appendix 7 of the COPLFR Practice Note, "Although certain quantitative measures can be suggested for consideration in certain circumstances, no formulaic approach to a quantitative materiality standard can be developed."[110]

Smith considered a deviation in net loss and LAE reserves of more than:

1. 10% of net loss and LAE reserves, which he calculated as:

   10% of $51.557 million = $5.156 million

2. 20% of policyholders' surplus, which he calculated as:

   20% of $31.024 million = $6.205 million

   Or

3. The reduction in surplus that would result in additional action per the NAIC RBC formula, which he calculated as the difference between the following:

   - The company's total adjusted capital of $31.024 million,[111] which produces an RBC ratio of 559% based on authorized control level (ACL) RBC of $5.552 million per the Five-Year Historical Data exhibit
   - Adjusted capital at the next RBC level of $11.104 million, which is equal to two times ACL

[110] American Academy of Actuaries Committee on Property and Liability Financial Reporting, "Statements of Actuarial Opinion on Property and casualty Loss Reserves 2011," Appendix 7, *"CAS VFIC Note on Materiality and ASOP No. 36: Considerations for the Practicing Actuary,"* page 77.

[111] Differences from above due to immaterial rounding errors that may occur in the Annual Statement.

> The difference between $31.024 million and $11.104 million is $19.920 million.

For purposes of establishing his materiality standard, Smith selects the smallest of the three balances, which in this case happens to be 10% of net loss and LAE reserves ($5.156 million).

MAJOR RISK FACTORS

Once materiality is defined, the actuary determines whether there are significant risks or uncertainties that could result in material adverse deviation in the company's loss and LAE reserve. According to the NAIC instructions to the SAO, "If such risk exists, the actuary should include an explanatory paragraph to describe the major factors, combination of factors, or particular conditions underlying the risks and uncertainties that the actuary reasonably believes could result in material adverse deviation."[112] Examples of risk factors are provided in the COPLFR Practice Note.

Note that the actuary is not expected to list all risks that the company is exposed. Rather, only those major risk factors that could result in the reserves developing adversely by an amount that is material relative to the actuary's materiality standard. To illustrate, Smith identifies and provides details about major risk factors that materially affect the variability of the reserves held by Fictitious Insurance Company. The major risk factors identified are mass tort claims; so-called "Chinese drywall" claims; cumulative injury losses; claims from large deductible workers' compensation policies; and claims related to catastrophic weather events, including wildfires, tornadoes and hurricanes. The uncertainty associated with these types of claims adds to the variability in the company's recorded reserves.

RISK OF MATERIAL ADVERSE DEVIATION

The actuary is required to make a clear statement within the SAO as to whether or not there are significant risks or uncertainties that could result in material adverse deviation. That determination is based on the major risk factors identified by the actuary, the actuary's professional opinion of the variability inherent in the unpaid claim estimates and the actuary's materiality standard.

In the case of Fictitious, Smith concludes that there are significant risks that could result in the net reserve amount deviating adversely from that recorded by the company by a material amount. This conclusion was determined in part quantitatively, by comparing the distance between the company's net recorded loss and LAE reserve and the high end of Smith's range to his materiality standard.

As shown in the Smith's Actuarial Opinion Summary for the company, he has developed a range of reasonable unpaid loss and LAE claim estimates on a net of reinsurance basis of $43

[112] *2011 NAIC Annual Statement Instructions Property/Casualty,* page 13.

million to $57 million with a point estimate of $50 million. The distance between the company's recorded reserve of $51.556 million and the high end of Smith's range is $5.443 million. Smith's materiality standard is $5.156 million, which is less than the distance between the high end of his range and the recorded reserve. This means that a deviation of $5.156 million is reasonably expected by Smith, as it lies within his range relative to the recorded balance. The compilation of these figures is shown in Table 57.

TABLE 57

	WS Actuarial Consulting				Carried +
				Fictitious	Materiality
	Low	Point	High	Carried	Standard
Reserve estimates	43,000	50,000	57,000	51,557	56,713

Stated differently, Smith reasonably expects that the company's carried reserve could deviate by an amount equal to the materiality standard since the carried reserve plus the materiality standard lies within his range of reasonable unpaid claim estimates. The results of his quantitative analysis, coupled with his knowledge of the significant risks and uncertainties inherent in the company's reserves, lead Smith to conclude that there are significant risks and uncertainties that could result in material adverse deviation in the recorded reserves.

It is important to note that there is no requirement for an actuary to provide a range. And even when a range is provided, the actuary may believe there are significant risks and uncertainties that could result in material adverse deviation despite the results of the calculation described above. For example, a company might have a significant portion of its gross loss and LAE reserves ceded to a reinsurer of relatively weak financial strength. In this case, the carried net reserve plus materiality standard might exceed the high end of the actuary's range (assuming all reinsurance was considered valid and collectible in determining the range). However, the risk that the company may not be able to recover a portion of its gross reserves due to the financial strength of one of its reinsurers may be considered significant by the actuary, and lead him/her to conclude the carried net reserves could deviate adversely by a material amount. Therefore, both qualitative and quantitative considerations should be considered in determining whether there are significant risks that could result in material adverse deviation.

REMAINING RELEVANT COMMENTS

The remaining relevant comments in Smith's opinion speak to the disclosure items in Exhibit B, addressing the fact that the company anticipates salvage and subrogation in its reserves totaling $1.363 million and discounts its reserves for certain workers' compensation and other liability claims on a tabular basis, the amount of which totals $1.365 million.

According to Smith, the company does not have claims-made extended reporting endorsement loss and expense reserves, participate in any underwriting pools or associations or write material amounts of long-duration policies.

As noted, retroactive and financial reinsurance is addressed in the relevant comments section. The liability for the one retroactive reinsurance assumed contract that the company has is deemed immaterial to Smith.

Finally, Smith has disclosed in his opinion that IRIS ratios 11, 12 and 13 did not produce unusual values for the company. We have confirmed this statement in our recalculation of Fictitious' IRIS ratios in Appendix I of this publication.

SIGNATURE OF THE APPOINTED ACTUARY

The SAO closes with an affirmative statement that an actuarial report supporting the SAO will be provided to the company and retained for a period of seven years at its administrative offices and will be made available for regulatory examination, if requested.

The SAO is signed and dated by the actuary for delivery along with the Annual Statement by March 1 of the year following the Annual Statement date (December 31). Note that some states require an original signature on each signed opinion, as opposed to a photocopy. The signature line includes the actuary's address (both postal and email).

Smith signed the opinion on February 24, 2012.

CHAPTER 17. ACTUARIAL OPINION SUMMARY SUPPLEMENT

OVERVIEW

The Actuarial Opinion Summary Supplement (AOS) is required to be filed by the company with its domiciliary state by March 15 of the year following the Annual Statement date (December 31). This is a confidential document containing the appointed actuary's range of unpaid claim estimates and/or point estimate, as calculated by the actuary, in comparison to the company's recorded reserves on a net and gross of reinsurance basis. Due to its confidential nature, it is filed separately from the public Annual Statement document, which is due on March 1.

Non-domiciliary states that provide evidence of the ability to preserve the confidential nature of the document may request a copy.

The AOS also provides a statement regarding whether the company has experienced one-year adverse development in excess of 5% of surplus in three or more of the past five years. The amount of adverse development is computed in Schedule P, Part 2, Summary, and is also provided in the one year development line of the Five-Year Historical Data exhibit within the Annual Statement. If the company has experienced adverse development in excess of 5% of surplus in three or more of the past five years, an explanatory paragraph is required so that the regulator can determine what additional review, if any, is required.

Prior to 2011, the actuary had the choice of providing his or her range, point estimate, or both, regardless of whether the actuary calculated both. In 2011, the instructions changed, requiring the actuary to include the point estimate and range, if both are calculated. If only one is calculated, the actuary would need only to provide one.

Because the AOS document is confidential, it is not available for public review, unlike the Statement of Actuarial Opinion (SAO). As a result, the student will not be able to find the AOS for the companies listed on the Casualty Actuarial Society *Syllabus of Basic Education*. However, we created an AOS for Fictitious Insurance Company, which is provided in Appendix I of this publication and should be read side by side with this chapter of the publication.

Like the SAO, the AOS is signed and dated by the actuary. In the case of Fictitious, this is Mr. William H. Smith. As we see in items A and B, Smith has produced a range and point estimate in his independent analysis of unpaid claims supporting the SAO. Items A and B include his range and point estimate on a net and gross of reinsurance basis, as displayed in Table 58.

TABLE 58

	Net Reserves (USD in 000s)			Gross Reserves (USD in 000s)		
	Low	Point	High	Low	Point	High
A. Actuary's range of reserve estimates	43,000		57,000	52,000		68,000
B. Actuary's point estimate		50,000			60,000	

Item C provides the company's carried loss and loss adjustment expense (LAE) reserves on which the actuary has based his opinion. Item D highlights the company's position within the actuary's range by showing the difference between the carried loss and LAE reserves and the actuary's range and point estimate. In Table 59 we see that Fictitious' recorded reserves lie above Smith's point estimate.

TABLE 59

	Net Reserves (USD in 000s)			Gross Reserves (USD in 000s)		
	Low	Point	High	Low	Point	High
C. Company carried reserves		51,557			61,699	
D. Difference between Company carried and Actuary's estimate (C. - A. and C. – B., if applicable)	8,557	1,557	(5,443)	9,699	1,699	(6,301)

It is not surprising that Fictitious' recorded reserves lie within the high end of the actuary's range given that the Fictitious' recorded loss and LAE reserves have developed favorably over time. This favorable development is seen in the one-year development line of the Five-Year Historical Data exhibit within Fictitious' 2011 Annual Statement. At the risk of being repetitious (see Table 13), we show the one-year development line again in Table 60.

TABLE 60

Data from Fictitious Insurance Company 2011 Five-Year Historical Data					
	2011	2010	2009	2008	2007
73. Development in estimated losses and loss expenses incurred prior to current year (Schedule P, Part 2 – Summary, Line 12, Column 11); *USD in 000s*	(875)	(1,354)	(1,618)	(1,935)	(1,918)
74. Percent of development of losses and loss expenses incurred to policyholders' surplus of prior year end (Line 73 divided by Page 4, Line 21, Column 1 x 100)	(2.8)	(3.8)	(5.0)	(5.6)	(2.6)

While the AOS only displays the company's current position within the actuary's range, the AOS Instructions require that the actuary state whether the company has experienced one-

year adverse development in excess of 5% of surplus in three or more of the past five years. This and an explanation are provided in Item E of the AOS. The information contained in Item E enables the regulator to obtain an understanding of why the company's recorded reserves continue to show adverse development over time. The concern, of course, is whether the company is consistently understating reserves and therefore overstating surplus. Depending on the result, the information provided in Item E could trigger additional regulatory review in assessing the company's financial health. As shown in Table 60, Fictitious' loss and LAE reserves have developed favorably in each of the past five years. As a result, Smith has responded with the following in Item E of his AOS:

> E. The Company has not had 1-year adverse development in excess of 5% of surplus in at least three of the last five calendar years, as measured by Schedule P, Part 2 Summary, and disclosed in the Five-Year Historical Data, on line 74, of the Company's December 31, 2011 statutory-basis Annual Statement.

In those cases where there has been adverse development in excess of 5% of surplus in three or more of the last five years, we have seen explanations in Item E vary from providing vague detail to very specific reasons for the changes. The more detail that can be provided as to the root cause, the easier time the regulator will have in his or her review.

To illustrate we have provided sample wording in the 2011 AOS of a fictional company that experienced one-year development in excess of 5% of surplus during 2008 through 2010:

> The company had one-year adverse development in excess of 5% of statutory surplus in three of the past five years. The exceptional values occurred in years 2008 through 2010. The exceptional values resulted from a strengthening in loss reserves made by management to reflect unexpected trends in asbestos and environmental claims on excess liability policies written by the company from 1968 to 1986.
>
> These trends include increased likelihood of exposure to higher-layer policies as a result of greater than expected emergence of reported claims on underlying policies, and efforts by insureds to expand coverage periods and expose additional policies.
>
> It should be noted that in 2011 the company entered into a retroactive reinsurance agreement whereby 100% of this run-off business is ceded to an unaffiliated reinsurance company. Going forward, this reinsurance agreement will mitigate the impact of adverse development of loss reserves on the company's statutory surplus.

The regulator reading the above will determine whether additional steps are necessary to understand the cause of the adverse development and impact on the company's financial health. While the regulator may gain comfort that the company's balance sheet is protected against future adverse development as a result of the new reinsurance agreement, we expect that the regulator would want to understand the impact of such development on the financial health of the company's unaffiliated reinsurer.

CHAPTER 18. INSURANCE EXPENSE EXHIBIT

OVERVIEW

As discussed in *Chapter 4. Primary Financial Statements*, the Statement of Income within the Annual Statement provides a view of an insurance company's profitability over the past year on a net of reinsurance basis, but only on an aggregate level for all lines of business combined. The Insurance Expense Exhibit (IEE) enables a deeper review of an insurance company's profitability by showing the components of statutory profit (loss) by line of business on a direct and net of reinsurance basis.

The IEE is required to be filed by April 1 of the year following the Annual Statement date (December 31). It contains three parts plus interrogatories. Part I provides an allocation of the other underwriting expense category within Part 3, Expenses, of the Underwriting and Investment Exhibit (U&IE) of the Annual Statement. Parts II and III allocate pretax profit by line of business, on a net and direct written basis, respectively. All dollars are shown in thousands within the IEE, either by rounding or truncating.

The uses of the IEE are numerous. The following provides some examples:

- Regulators use the IEE as a means for monitoring financial health. Changes or historical trends in an insurance company's profitability at the line of business level may put a strain on the company's surplus in total, thereby threatening solvency.
- Regulators also use the IEE as a means to monitor rate adequacy. Inadequate rates also threaten an insurance company's financial health. Conversely, excessive rates are also a concern to the regulator as they are unfair to the consumer.
- Stakeholders in general use the IEE as a means to identify those lines of business that have performed profitably and those that have not in order to make informed business decisions, such as where to deploy capital and/or where the company should grow.
- An investor might look at the IEE in light of the company's future growth plans to make decisions as to how much to invest in the company. Growth into unprofitable lines might lead the investor to reduce his or her level of investment in the company.
- Actuaries use the IEE as a publicly available source of premium, loss and expense data for benchmarking company performance by line of business.

As we shall see, there are cautions to using the IEE as described above, and we have presented several within this chapter.

Throughout our discussion of the IEE, we will continue to use Fictitious Insurance Company in our examples.

PART I — ALLOCATION TO EXPENSE GROUPS

The National Association of Insurance Commissioners (NAIC) instructions to the Property/Casualty Annual Statement provide directions for classifying expenses to the 22 operating expense categories provided in Part 3, Expenses, of the U&IE within the Annual Statement. The instructions provide uniformity in classification of expenses among property/casualty insurance companies.

The 22 operating expense categories are as follows, by line number per the U&IE, Part 3, Expenses:

1. Claims adjustment services
2. Commission and brokerage
3. Allowances to managers and agents
4. Advertising
5. Boards, bureaus and associations
6. Surveys and underwriting reports
7. Audit of assureds' records
8. Salary and related items
9. Employee relations and welfare
10. Insurance
11. Directors' fees
12. Travel and travel items
13. Rent and rent items
14. Equipment
15. Cost or depreciation of Electronic Data Processing (EDP) equipment and software
16. Printing and stationery
17. Postage, telephone and telegraph, exchange and expenses
18. Legal and auditing
20. Taxes, licenses and fees
21. Real estate expenses
22. Real estate taxes
24. Miscellaneous

Amounts for the above operating expenses are each allocated into the following three categories (column headings) within the U&IE:

1. Loss Adjustment Expenses
2. Other Underwriting Expenses
3. Investment Expenses

Part 1 of the IEE further allocates other underwriting expenses into the following three components (column headings):

1. Acquisition, Field Supervision and Collection Expenses
2. General Expenses
3. Taxes, Licenses and Fees

The allocation of other underwriting expenses from the U&IE, Part 3, Expenses, into Part I of the IEE is as follows:

- All commission and brokerage expenses from line 2 of U&IE, Part 3 should be allocated to acquisition, field supervision and collection expenses in column 2 of Part I of the IEE.
- All taxes, licenses and fees from line 20 of U&IE, Part 3 should be allocated to taxes, licenses and fees in column 4 of Part I of the IEE.
- The remaining operating expenses from lines 3 through 18 of the IEE can be allocated to acquisition, field supervision and collection expenses in column 2 or general expenses in column 3 of Part I of the IEE, as applicable.

Part 1 of the IEE looks like Part 3, Expenses, of the U&IE within the Annual Statement, except:

1. There are three columns under the other underwriting expenses heading, rather than one in total.
2. The operating expense classification line items end with line 25, total expenses incurred, and therefore do not include amounts unpaid, amounts relating to uninsured plans or total expenses paid (lines 26 through 30 of U&IE, Part 3).
3. Amounts are reported in thousands of dollars in the IEE rather than in whole dollars as in the U&IE.

The totals in column 4 of the U&IE, Part 3, line 25 should equal the totals in column 6 of Part I of the IEE multiplied by 1,000.

Table 61 provides the other underwriting expenses column from Part3, Expenses, of the U&IE from Fictitious' 2011 Annual Statement, with the allocation to acquisition, field supervision and collection expenses, general expenses, and taxes licenses and fees, as in Part I of the company's 2011 IEE.

PART II — ALLOCATION TO LINES OF BUSINESS NET OF REINSURANCE

Part II provides the components of total profit (loss) on a pretax basis, net of reinsurance, and additional information needed to calculate net profit (loss) for the line of business segments used in the U&IE of the Annual Statement. The line of business segments differ slightly from the U&IE in the following ways:

- Allied lines are broken down into further components in the IEE as:
  - 2.1 Allied lines
  - 2.2 Multiple peril crop
  - 2.3 Federal flood
- Commercial multiple peril is broken down into further components in the IEE as:
  - 5.1 Commercial multiple peril (non-liability portion)
  - 5.2 Commercial multiple peril (liability portion)
- Medical professional liability occurrence and claims-made lines are combined in the IEE into line 11, as are the corresponding product liability lines into line 18.
- Auto physical damage is broken down into further segments in the IEE as:
  - 21.1 Private passenger auto physical damage
  - 21.2 Commercial auto physical damage
- Reinsurance lines 31 through 33 are summed in the IEE.

Line 35 of the IEE provides the totals for all lines of business in lines 1 through 34.

Similar to the U&IE, the line of business segments are displayed in the first column of the IEE, with the components of profit (loss) and additional items in the remaining columns, providing the amounts (or percentages) for each line of business. These components and additional items are as follows:

- Net premiums written
- Net premiums earned
- Dividends to policyholders
- Incurred:
  - Loss
  - Defense and cost containment (DCC)
  - Adjusting and other (A&O) expenses
- Unpaid:
  - Loss
  - DCC
  - A&O expenses

- Unearned premium reserves
- Agents' balances
- Other underwriting expenses:
  - Commission and brokerage expenses incurred
  - Taxes, licenses and fees incurred
  - Other acquisitions, field supervision and collection expenses incurred
  - General expenses incurred
- Other income less other expenses
- Pre-tax profit or loss excluding all investment gain
- Investment gain on funds attributable to insurance transactions
- Profit or loss excluding investment gain attributable to capital and surplus
- Investment gain attributable to capital and surplus

The above items are organized in two columns: the first containing the dollar amount and the second providing the ratio of the dollar amount to premiums earned. There are 42 columns: 21 provide dollar amounts (odd-numbered columns) and 21 provide percentages to earned premium (even-numbered columns).

Total profit (loss) is calculated using the same components as in the Statement of Income, with the exception that the IEE is on a pretax basis. *Most* of the aforementioned components used to compute pretax profit (loss) either reconcile directly to exhibits within the Annual Statement, or are reasonably straightforward for companies to compute.[113] However, the calculation of investment gain is not straightforward, as the allocation of investment gain by line of business is not intuitive.

We will discuss the computation of each component (odd-numbered columns), reconciling to Annual Statement exhibits, and provide example(s) as to how to calculate investment gain. We will not address the even-numbered columns, other than to say that they represent the ratio of the dollar amount to net earned premium, on a line-by-line basis.

There are numerous ways to estimate profit by line of business; the approach used by the NAIC for the IEE is only one of them. The NAIC approach is a retrospective one. It allocates total profit that has emerged rather than providing an estimate of future profit, as is used in pricing insurance policies.

Further, the allocation of surplus by line of business does not consider how much surplus is needed to support the line, as is the intention in pricing insurance policies and capital

[113] According to page 419 of the *2011 NAIC Annual Statement Instructions Property/Casualty*, "In instances where the reporting entity cannot allocate amounts to lines of business by direct and accurate allocation, the methods of allocation stated in the Uniform Classification of Expenses found in the Appendix of the *NAIC Annual Statement Instructions* must be used. Where the instructions do not define means of allocation, a reasonable method of allocation must be applied and disclosed in Interrogatory 4."

modeling. Rather, as we shall see, the entire amount of surplus is allocated by line based on the level of the company's reserves (loss and unearned premium) and earned premium, which do not necessarily measure the inherent risk of a particular line of business. Good examples are catastrophe-exposed short-tailed lines, such as homeowners. In non-catastrophe years, the reserves for these lines may be relatively small because claims are reported and paid out relatively quickly when compared to longer-tailed casualty lines. However, as the property/casualty insurance industry observed in 2011, this short-tailed line of business is exposed to considerable risk. We shall see this in our examples for Fictitious. Therefore, caution should be made when reviewing and placing reliance on the results of the IEE calculations of surplus and profit by line of business for pricing or capital allocation purposes.

Columns 1 through 32

The following components or items within Part II reconcile directly to the U&IE within the Annual Statement by line of business as follows:

TABLE 62

IEE Part II		Reconciles to	U&IE		
Column Number	Heading		Part	Heading	Column Number
1	Premiums Written	-------->	1B	Net Premiums Written	6
3	Premiums Earned	-------->	1	Premiums Earned During Year	4
7	Incurred Loss	-------->	2	Losses Incurred Current Year	7
13	Unpaid Losses	-------->	2A	Net Losses Unpaid	8
19	Unearned Premium Reserves	-------->	1A	Total Reserve for Unearned premiums	5

Dividends to policyholders in column 5 reconcile in total to the amount in the Statement of Income of the Annual Statement, line 17. The allocation by line of business is based on the policies eligible and receiving dividends or on a company's formulaic determination if the line of business per the policy does not correspond directly to a line of business in the Annual Statement.[114]

Loss adjustment expense (LAE), provided separately for DCC and A&O expenses incurred and unpaid, in columns 9, 11, 15 and 17 of the IEE, cannot be found within the Annual Statement for the line of business breakdowns required in the IEE. However, insurance companies track expenses by line of business and therefore know which expenses are allocated to which lines. In total, the LAE incurred amounts in columns 9 plus 11 reconcile to the Statement of Income, line 3, column 1 (current year) and Part 3 of the U&IE, line 25, column 1. The LAE unpaid

[114] Feldblum, S., "The Insurance Expense Exhibit and the Allocation of Investment Income" (Fifth Edition), CAS Study Note, May 1997, page 32.

amounts reconcile to page 3 of the Annual Statement, line 3, column 1 (current year) and Part 2A of the U&IE, line 35, column 9.

Like policyholder dividends, insurance companies know which lines agents' balances stem from and therefore can allocate the amounts directly in column 21. The amounts should agree to balances included within lines 15.1 plus 15.2, column 3 of the Assets page of the Annual Statement.

Other underwriting expenses in columns 23, 25, 27 and 29 reconcile directly to Part I of the IEE.

Other income less other expenses in column 31 of the IEE reconciles in total to line 15 minus line 5 of the Statement of Income. Line 15 of the Statement of Income provides total other income incurred, and line 5 provides aggregate write-ins for underwriting deductions. The allocation by line is performed directly by accumulating the sources of other income and underwriting deductions on specific policies and mapping the income/deductions by policy to the Annual Statement lines of business.

Calculation of Pretax Profit or Loss Excluding All Investment Gain (Column 33)

Column 33 provides pretax profit (loss) excluding all investment gains and is calculated from the information contained in the previous columns of Part II of the IEE as follows:

Pretax profit (loss) excluding all investment gains =

Premiums earned (column 3)
- Dividends to policyholders (column 5)
- Incurred loss (column 7)
- DCC expenses incurred (column 9)
- A&O expenses incurred (column 11)
- Commission and brokerage expenses incurred (column 23)
- Taxes, licenses and fees incurred (column 25)
- Other acquisitions, field supervision and collection expenses incurred (column 27)
- General expenses incurred (column 29)
+ Other income less other expenses (column 31).

Simply put, pretax profit equals inflows of earned revenue minus outflows of incurred expenses.

The total amount in column 33 reconciles to line 18 (net income after dividends to policyholders, after capital gains tax and before all other federal and foreign income taxes) *minus* line 11 (net investment gain (loss)) of the Statement of Income.

Table 63 demonstrates the calculation of column 33 of Part II of the IEE *in total* and shows the reconciliation to the Statement of Income within the Annual Statement for Fictitious in

2011. Recall that figures in the IEE are provided in thousands; any differences from the Statement of Income are due to rounding errors.

TABLE 63

Data from Fictitious Insurance Company 2011 IEE (USD in 000s) for All Lines of Business			
Column Number	IEE Part II Column Heading	Total Line 35	Statement of Income Reference
3	Premiums Earned	26,512	Line 1
5	Dividends to Policyholders	46	Line 17
7	Incurred Loss	16,907	Line 2
9	Defense and Cost Containment Expenses Incurred	1,671	
11	Adjusting and Other Expenses Incurred	1,585	
	Subtotal Loss Adjustment Expenses Incurred	3,256	Line 3
23	Commissions and Brokerage Expenses Incurred	4,055	
25	Taxes, Licenses and Fees Incurred	860	
27	Other Acquisitions, Field Supervision and Collection Expenses Incurred	1,283	
29	General Expenses Incurred	2,285	
	Subtotal Other Underwriting Expenses Incurred	8,483	Line 4
31	Other Income Less Other Expenses	33	Line 15 minus Line 5
33	Pre-Tax Profit or Loss Excluding All Investment Gain	(2,147)	= Line 1 - Lines 17, 2, 3, 4 + Line 15

As displayed in Table 63, Fictitious operated at a pretax loss (before any gains or losses from investments) of $2.1 million in 2011, most of which was due to underwriting (underwriting loss totaled $2.1 million as per line 8 of the Statement of Income). Net incurred loss and LAE during 2011 was $4.4 million higher than that incurred in 2010, with less than $1 million more in net earned premium. As previously explained, this was due to the high frequency of catastrophe losses incurred by Fictitious in 2011.

Of the $2.1 million pretax loss (before investment gain), $1.2 million stems from the homeowners of business. Homeowners is the largest line of business written by the company in terms of net written premium volume ($4.6 million per column 1 of the IEE, Part II). Further, the homeowners line was hit hardest by the unprecedented catastrophe losses in 2011. Given its significance to the 2011 results, we will use homeowners as the line of business example for computing total profit or loss for Fictitious.

The remaining columns, columns 35 through 41, are determined formulaically and are the crux of Part II of the IEE.

Overview of the Calculation of Total Profit or Loss (Column 41)

Column 41 provides total profit (loss) on a pretax basis to an insurance company for each line of business. It is computed by taking pretax profit (loss) *before* any investment gain and adding investment gains.

Column 41 of the IEE is equal to net income as calculated in the Statement of Income within the Annual Statement, except all amounts in the IEE are gross of taxes. Column 41 reconciles

to line 18 (net income after dividends to policyholders, after capital gains tax and before all other federal and foreign income taxes) *plus* the amount of capital gains tax provided in line 10 (Net realized capital gains (losses) less capital gains tax) of the Statement of Income. Capital gains taxes are added back to the calculation simply because total profit is shown on a pretax basis.

Table 64 demonstrates the calculation of column 41 of Part II of the IEE *in total* and shows the reconciliation to the Statement of Income within the Annual Statement for Fictitious in 2011.

TABLE 64

Data from Fictitious Insurance Company 2011 IEE (USD in 000s) for All Lines of Business			
Column Number	IEE Part II Column Heading	Total Line 35	Statement of Income Reference
33	Pre-tax Profit or Loss Excluding All Investment Gain	(2,147)	= Line 1 - Lines 17, 2, 3, 4 + Line 15
35	Investment Gain on Funds Attributable to Insurance Transactions	2,663	
39	Investment Gain Attributable to Capital and Surplus	1,741	
	Subtotal Net Investment Gain (Loss) *Before* Capital Gains Tax	4,404	Line 11 + Capital Gains Tax of $99 per Line 10
41	Total Profit or Loss	2,257	Line 18 + Capital Gains Tax of $99 per Line 10

As displayed in Table 64, investment income net of expenses ($4.4 million) more than offset the Fictitious' underwriting loss in 2011.

The same formula is used to calculate total profit or loss (column 41) for each line of business. The tricky part, of course, is how to allocate investment gain (loss) by line of business and between funds attributable to insurance transactions versus those attributable to capital and surplus. The following provides an overview of the allocation procedure, with details in the subsequent sections.

The first step of the calculation is to determine the ratio of net investment gain (loss) to total investable assets then apply that ratio to investable assets by line of business. This calculation provides net investment gain (loss) by line. The ratio of net investment gain (loss) to total investable assets is called the net investment gain ratio.

The second step is to apply the net investment gain ratio to funds attributable to insurance transactions by line of business. This calculation provides investment gain on funds attributable to insurance transactions in column 35.

Investment gain attributable to capital and surplus in column 39 is computed as the difference between net investment gain (loss) and investment gain on funds attributable to insurance transactions in column 35. Formulaically, for each line of business,

Investment gain attributable to capital and surplus (column 39) =

Net investment gain (loss)[115]
- Investment gain on funds attributable to insurance transactions (column 35).

As indicated, both of the inputs in the calculation of investment gain attributable to capital and surplus (column 39) are determined by applying the ratio of net investment gain (loss) to total investable assets for all lines of business to the applicable investable funds (either in total or attributable to insurance transactions) associated with the particular line of business.

Net Investment Gain Ratio

The net investment gain ratio is the ratio of net investment gain (loss) to total investable assets. Total investable assets equal the sum of net loss and LAE reserves, net unearned premium reserves, ceded reinsurance payable and policyholders' surplus, minus agents' balances. These amounts are intended to be a proxy for investable assets as they are amounts that are available for investment by the insurance company.[116] Agents' balances are subtracted in the formula because they are not investable assets.

In the calculation of total investable assets, the mean of the aforementioned amounts are used (i.e., average of the prior year and current year) because investment income during the year is earned on reserves and surplus throughout the year, rather than a fixed point in time.

Formulaically, the net investment gain ratio is calculated as follows, for all lines of business in total:

Net investment gain ratio =

$$\frac{\text{Net investment gain (loss)}}{\text{Total investable assets}}$$

where,

Total investable assets =

Mean net loss and LAE reserves
+ Mean net unearned premium reserves
+ Mean ceded reinsurance premiums payable
+ Mean policyholders' surplus
- Mean agents' balances.

[115] The calculation of net investment gain (loss) is provided in subsequent paragraphs below.

[116] Going back to basics, assets minus liabilities equals surplus. Or equivalently, assets equals liabilities plus surplus. Reserves and ceded reinsurance payables are liabilities that the insurance carrier must hold. As with surplus, the company can invest these liabilities. They are therefore used in the calculation to represent investable assets.

Table 65 demonstrates the calculation of the net investment gain ratio based on 2011 Annual Statement data for Fictitious.

TABLE 65

Data from Fictitious Insurance Company 2011 IEE and Annual Statement (USD in 000s)						
All Lines of Business		2011 Current Year	2010 Prior Year	Mean	2011 IEE Part II Total, Line 35	Annual Statement
(1)	**Net Investment Gain Ratio**	**5.0%**				= (2) current year divided by (3) mean
(2)	**Net Investment Gain (loss) *before* Capital Gains Tax**	**4,404**				Statement of Income Page 4, Line 11 plus Capital Gains Tax of $99 per Line 10
(3)	**Investable Assets**	87,744	87,186	**87,465**		= (4) + (5) + (6) + (7) + (8) - (9)
(4)	**Net Loss Reserve**	41,894	40,933	41,414	Column (13)	U&IE, Part 2A, Total line, Column 8, divided by 1,000
(5)	**Net Loss Adjustment Expense Reserve**	9,663	9,664	9,664	Column (15) + (17)	U&IE, Part 2A, Total line, Column 9, divided by 1,000
(6)	**Net Unearned Premium Reserve**	11,895	11,557	11,726	Column (19)	U&IE, Part 1A, Total line 38, Column 4, divided by 1,000
(7)	**Policyholders' Surplus**	31,024	31,608	31,316		Liabilities, Surplus and Other Funds, Page 3, Line 37, divided by 1,000
(8)	**Ceded Reinsurance Premiums Payable**	440	608	524		Liabilities, Surplus and Other Funds, Page 3, Line 12, divided by 1,000
(9)	**Agents' Balances**	7,172	7,184	7,178	Column (21)	Equals the portion of Assets Line 15.1 plus 15.2, divided by 1,000, for Agents' Balances

As displayed above, the 2011 investment gain ratio for Fictitious was 5%. This means the company earned 5% on its "investable assets" during 2011.

Net Investment Gain (Loss) by Line of Business

Net investment gain (loss) by line of business is determined as the investment gain ratio multiplied by total investable assets for that line of business.

Net investment gain (loss) for a particular line of business =

Net investment gain ratio (for all lines)
* Total investable assets for the line of business

where,

Total investable assets for the line of business =

Mean net loss and LAE reserves for the line of business
\+ Mean net unearned premium reserves for the line of business
\+ Mean ceded reinsurance premiums payable for the line of business
\+ Mean policyholders' surplus for the line of business
\- Mean agents' balances for the line of business.

Table 66 demonstrates the calculation of the net investment gain for the homeowners line of business based on 2011 Annual Statement and IEE data for Fictitious.

TABLE 66

Data from Fictitious Insurance Company 2011 IEE and Annual Statement (USD in 000s)

Line of Business: Homeowners Multiple Peril	2011 Current Year	2010 Prior Year	Mean	2011 IEE Part II Total, Line 35	Annual Statement (AS)
(1) Investment Gain for Line of Business	232			Column (35)	= (3) Current Year * (3) Mean
(2) Net Investment Gain Ratio (all lines of business)	5.0%				Calculated in Table 65
(3) Investable Funds for Line of Business			4,603		= (4) + (5) + (6) + (7) - (8) + (9)
(4) Net Loss Reserve for Line of Business	1,311	1,161	1,236	Column (13)	U&IE, Part 2, Line 4, Columns 5 and 6, divided by 1,000
(5) Net Loss Adjustment Expense Reserve for Line of Business	144	170	157	Column (15) + (17)	U&IE, Part 2A, Line 4, Column 9, divided by 1,000; and prior year AS
(6) Net Unearned Premium Reserve for Line of Business	2,401	2,290	2,346	Column (19)	U&IE, Part 1A, Line 4, Column 5, divided by 1,000; and prior year AS
(7) Ceded Reinsurance Premiums Payable for Line of Business	21	3	12		Calculated in Table 67
(8) Agents' Balances for Line of Business	1,901	2,134	2,018	Column (21)	IEE, Column 21, line 4 provided in each of the 2011 and 2010 AS
(9) Surplus Allocable to Line of Business			2,869		Calculated in Table 69

As displayed in Table 66, $232,000 of the company's total $4.4 million in net investment gain during 2011 was allocated to the homeowners line using the NAIC's approach.

The net loss and LAE reserves, unearned premium reserves and agents' balances by line of business used in the above calculation come from columns 13, 15, 17, 19 and 21 of the IEE,

current year and prior year, respectively. Ceded reinsurance premiums payable by line and policyholders' surplus by line, are calculated separately.

Ceded Reinsurance Premiums Payable by Line of Business

Ceded reinsurance premiums payable are allocated to line of business based on the distribution of ceded written premiums by line. Formulaically, the calculation is as follows:

Ceded reinsurance premiums payable for the line of business =

Ceded written premiums for the line of business / Total ceded written premiums * Total ceded reinsurance premiums payable.

Table 67 demonstrates the calculation of Fictitious' ceded reinsurance premiums payable for homeowners.

TABLE 67

Data from Fictitious Insurance Company 2010 and 2011 Annual Statement (USD in 000s)

Line of Business: Homeowners Multiple Peril		2011 Current Year	2010 Prior Year	Mean	2011 IEE Part II Total, Line 35	Annual Statement (AS)
(1)	Ceded Reinsurance Premiums Payable for Line of Business	21	3	12	N/A	= (4) * (5)
(2)	Ceded Premiums Written for Line of Business	91	12		N/A	U&IE, Part 1B, Line 4, Columns 4 + 5, divided by 1,000; and prior year AS
(3)	Ceded Premiums Written, Total	1,882	2,149		N/A	U&IE, Part 1B, Totals, Columns 4 + 5, divided by 1,000; and prior year AS
(4)	Ratio of Ceded Premiums Written for Line of Business to Total	4.8%	0.6%		N/A	= (2) / (3)
(5)	Ceded Reinsurance Premiums Payable, Total	440	608		N/A	Liabilities, Surplus and Other Funds, Page 3, Line 12, divided by 1,000

The mean ceded reinsurance payable for homeowners that was used in the calculation of Fictitious' total investable assets for homeowners was $12 (dollars in thousands).

Policyholders' Surplus by Line of Business

The NAIC allocates surplus to line of business in proportion to the sum of net loss and LAE reserves, net unearned premium reserves and net earned premium. The mean values are used in the calculation of the balance sheet figures (reserves), while the current-year value is used for the income statement figure (net earned premium).

The first step in the calculation is to compute the ratio of mean policyholders' surplus to the sum of mean net loss and LAE reserves, mean net unearned premium reserves and current year net earned premiums, in total for all lines combined. This ratio is called the *surplus ratio*.

Surplus ratio =

Mean policyholders' surplus in total *divided by*
[Mean net loss and LAE reserves in total
+ Mean net unearned premium reserves in total
+ Current year net earned premium in total].

Table 68 demonstrates the calculation of the 2011 surplus ratio for Fictitious.

TABLE 68

Data from Fictitious Insurance Company 2011 IEE and 2010 and 2011 Annual Statement (USD in 000s)

All Lines of Business		2011 Current Year	2010 Prior Year	Mean	2011 IEE Part II Total, Line 35	Annual Statement (AS)
(1)	Surplus Ratio	35.1%				= (2) / [Sum of means of (3) through (5) plus (6) for current year]
(2)	Policyholders' Surplus	31,024	31,608	31,316		Liabilities, Surplus and Other Funds, Page 3, Line 37, Columns 1 and 2, respectively, divided by 1,000
(3)	Net Loss Reserve	41,894	40,933	41,414	Column (13)	U&IE, Part 2A, Total line, Column 8, divided by 1,000; and prior year AS
(4)	Net Loss Adjustment Expense Reserve	9,663	9,664	9,664	Column (15) + (17)	U&IE, Part 2A, Total line, Column 9, divided by 1,000; and prior year AS
(5)	Net Unearned Premium Reserve	11,895	11,557	11,726	Column (19)	U&IE, Part 1A, Total line 38, Column 4, divided by 1,000; and prior year AS
(6)	Net Earned Premium	26,512			Column (3)	U&IE, Part 1, Total line 35, Column 4, divided by 1,000

The surplus ratio for Fictitious was 35.1% in 2011.

The surplus ratio is then applied to the applicable mean balance sheet amounts and the income statement amount (earned premium) for the current year for the particular line of business to determine the amount of surplus allocated to that line.

Surplus allocated to line of business =

Mean surplus ratio (for all lines) *multiplied by*
[Mean net loss and LAE reserves for the line of business
+ Mean net unearned premium reserves for the line of business
+ Current year net earned premium for the line of business].

Table 69 shows the application of the surplus ratio in determining the amount of surplus allocated to Fictitious' homeowners line of business.

TABLE 69

Data from Fictitious Insurance Company 2011 IEE and 2010 and 2011 Annual Statement (USD in 000s)

Line of Business: Homeowners Multiple Peril		2011 Current Year	2010 Prior Year	Mean	2011 IEE Part II Total, Line 35	Annual Statement (AS)
(1)	Surplus Allocable to Line of Business			2,869		= (2) * [Sum of means of (3) through (5) plus (6) for current year]
(2)	Surplus Ratio	35.1%				Calculated in Table 68
(3)	Net Loss Reserve for Line of Business	1,311	1,161	1,236		U&IE, Part 2, Line 4, Columns 5 and 6, divided by 1,000
(4)	Net Loss Adjustment Expense Reserve for Line of Business	144	170	157		U&IE, Part 2A, Line 4, Column 9, divided by 1,000; and prior year AS
(5)	Net Unearned Premium Reserve for Line of Business	2,401	2,290	2,346		U&IE, Part 1A, Line 4, Column 5, divided by 1,000; and prior year AS
(6)	Net Earned Premium for Line of Business	4,445			Column (3)	U&IE, Part 1, Line 4, Column 4, divided by 1,000

As displayed in Table 69, $2.9 million of the Fictitious' total $31 million in policyholders' surplus at year-end 2011 was allocated to the homeowners line using the NAIC's allocation approach. Stated differently, less than 10% of the company's policyholders' surplus was allocated to homeowners using the IEE allocation. This exemplifies the caution noted earlier in relying on this method for prospective pricing or even retrospective evaluation of profitability. Given the catastrophe risk inherent in this line of business, which is quite evident based on 2011 experience, one might expect more than 10% of the surplus to be allocated to this line. To provide some perspective, in 2011 we saw that homeowners contributed more than 50% of the company's underwriting loss. If the IEE allocation is used in pricing for Fictitious, the rates will be inadequate and could eventually result in the insolvency of Fictitious.

Investment Gain by Line of Business Attributable to Insurance Transactions

Investment gain attributable to insurance transactions is allocated to line of business by applying the net investment gain ratio to funds attributable to insurance transactions for the particular line. Funds attributable to insurance transactions for a particular line are equal to

the sum of mean net loss and LAE reserves, mean net unearned premium reserves and mean ceded reinsurance premiums payable for that line, reduced by agents' balances and the portion of prepaid expenses in the unearned premium reserves.

Funds attributable to insurance transactions for the line of business =

Mean net loss and LAE reserves for the line of business
+ Mean net unearned premium reserves for the line of business
+ Mean ceded reinsurance premiums payable for the line of business
- Mean agents' balances for the line of business
- Prepaid expenses in the unearned premium reserves.

The elements that go into the calculation of funds attributable to insurance transactions differ from total investable funds in two ways. First, mean policyholders' surplus is not included in the calculation of funds attributable to insurance transactions. This is because here the focus is on funds attributed to insurance transactions and not to capital and surplus. Second, prepaid expenses in the unearned premium reserves are not included in the calculation because they are not an investable asset; they have already been expensed. These expenses were not explicitly removed in the calculation of total investable funds because they are already out of policyholders' surplus, which is a component of the calculation.

Table 70 provides the calculation of investment gain attributable to insurance transactions for Fictitious' homeowners line.

TABLE 70

Data from Fictitious Insurance Company 2011 IEE and 2010 and 2011 Annual Statement (USD in 000s)

	Line of Business: Homeowners Multiple Peril	2011 Current Year	2010 Prior Year	Mean	2011 IEE Part II Total, Line 35	Annual Statement (AS)
(1)	Investment Gain on Funds Attributable to Insurance Transactions for Line of Business	53			Column (35)	= (2) Current Year * (3) Mean
(2)	Net Investment Gain Ratio (all lines of business)	5.0%				Calculated in Table 66
(3)	Funds Attributable to Insurance Transactions for Line of Business	1,283	829	1,056		= (4) + (5) + (6) + (7) - (9) - [(6) * (8)]
(4)	Net Loss Reserve for Line of Business	1,311	1,161	1,236	Column (13)	U&IE, Part 2, Line 4, Columns 5 and 6, divided by 1,000
(5)	Net Loss Adjustment Expense Reserve for Line of Business	144	170	157	Column (15) + (17)	U&IE, Part 2A, Line 4, Column 9, divided by 1,000; and prior year AS
(6)	Net Unearned Premium Reserve for Line of Business	2,401	2,290	2,346	Column (19)	U&IE, Part 1A, Line 4, Column 5, divided by 1,000; and prior year AS
(7)	Ceded Reinsurance Premiums Payable for Line of Business	21	3	12		Calculated in Table 67
(8)	Prepaid Expense Ratio	29%				Calculated in Table 71
(9)	Agents' Balances for Line of Business	1,901	2,134	2,018	Column (21)	

As displayed in Table 70, $53,000 of the company's total $232,000 in net investment gain on the homeowners line was attributed to gains on insurance transactions using the NAIC approach.

Prepaid Expense Ratio

The ratio that is used to determine the amount of unearned premium reserves representing prepaid expenses is calculated for each line of business separately. It is the ratio of net acquisition expenses to net written premiums (column 1). Net acquisition expenses are calculated as the sum of commissions and brokerage expenses incurred (column 23); taxes, licenses and fees incurred (column 25); other acquisition, field supervisions and collection expenses incurred (column 27); and half of the general expenses incurred (50% of column 29).

The prepaid expense ratio for homeowners is calculated for Fictitious in Table 71.

TABLE 71

Data from Fictitious Insurance Company 2011 IEE and 2010 and 2011 Annual Statement (USD in 000s)

Line of Business: Homeowners Multiple Peril		2011 Current Year	2010 Prior Year	Mean	2011 IEE Part II Total, Line 4	Annual Statement
(1)	Prepaid Expense Ratio	29%				= (2) / (7)
(2)	Net Acquisition Expenses for Line of Business	1,315				= (3) + (4) + (5) + 50% of (6)
(3)	Commissions and Brokerage Expenses Incurred for Line of Business	867			Column (23)	
(4)	Taxes, Licenses and Fees Incurred for Line of Business	130			Column (25)	
(5)	Other Acquisitions, Field Supervision and Collection Expenses Incurred for Line of Business	169			Column (27)	
(6)	General Expenses Incurred for Lines of Business	298			Column (29)	
(7)	Net Written Premium for Line of Business	4,555			Column (1)	

The prepaid expense ratio for Fictitious was 29% in 2011.

Investment Gain by Line of Business Attributable to Capital and Surplus

The difference between net investment gain (loss) and the amount of investment gain attributed to insurance transactions is the amount of investment gain attributable to capital and surplus. Table 72 provides this calculation for Fictitious.

TABLE 72

Data from Fictitious Insurance Company 2011 IEE (USD in 000s)

Line of Business: Homeowners Multiple Peril		2011 Current Year	2010 Prior Year	Mean	2011 IEE Part II Total, Line 35	Annual Statement
(1)	Investment Gain Attributable to Capital and Surplus for Line of Business	179			Column (39)	= (2) - (3)
(2)	Investment Gain for Line of Business	232				Calculated in a Table 66
(3)	Investment Gain on Funds Attributable to Insurance Transactions for Line of Business	53			Column (35)	Calculated in Table 70

As displayed in Table 72, the amount of investment gain attributable to capital and surplus for homeowners was $179,000.

Total profit or loss

Finally, column 41 provides total profit (loss) by line of business. Table 73 demonstrates the calculation of total profit in 2011 for Fictitious' homeowners line. First we will provide the calculation of pretax profit excluding all investment gain for homeowners, as shown in column 33. Then we will add the components of net investment gain in columns 35 and 39 to compute total profit in column 41.

Pretax profit excluding all investment gain is first computed for Fictitious' homeowners line of business as follows in Table 73.

TABLE 73

Data from Fictitious Insurance Company 2011 IEE (USD in 000s) for Homeowners Multiple Peril

Column Number	IEE Part II Column Heading	Total Line 4	Notes
3	Premiums Earned	4,445	
5	Dividends to Policyholders	-	
7	Incurred Loss	3,789	
9	Defense and Cost Containment Expenses Incurred	74	
11	Adjusting and Other Expenses Incurred	360	
23	Commissions and Brokerage Expenses Incurred	867	
25	Taxes, Licenses and Fees Incurred	130	
27	Other Acquisitions, Field Supervision and Collection Expenses Incurred	169	
29	General Expenses Incurred	298	
31	Other Income Less Other Expenses	1	
33	Pre-Tax Profit of Loss Excluding All Investment Gain	(1,241)	= Column 1 minus Columns 5, 7, 9, 11, 23,25, 27, 29 plus Column 31

As displayed in Table 73, the NAIC allocation formula shows that Fictitious experienced a pretax loss of $1.2 million on its homeowners book in 2011, nearly all of which came from underwriting (since other income is $1).

The calculation of column 41 of Part II of the IEE shows that investment gains only offset $232,000 of the $1.2 million underwriting loss, such that homeowners showed an overall loss, after investment gain, of $1.0 million.

TABLE 74

Data from Fictitious Insurance Company 2011 IEE (USD in 000s) for Homeowners Multiple Peril			
Column Number	IEE Part II Column Heading	Total Line 35	Statement of Income Reference
33	Pre-Tax Profit or Loss Excluding All Investment Gain	(1,241)	
35	Investment Gain on Funds Attributable to Insurance Transactions	53	
39	Investment Gain Attributable to Capital and Surplus	179	
	Subtotal Net Investment Gain (loss) *before* Capital Gains Tax	232	
41	Total Profit or Loss	(1,009)	
42	%	22.7%	= Column 41 divided by Column 3

Out of the total $2.3 million in pretax profit for all lines earned by Fictitious in 2011, -$1.0 million was allocated to homeowners based on the NAIC calculation. This represents -23% of net earned premium in 2011. A review of column 41 of IEE shows that Fictitious also experienced pretax losses in the other liability, automobile physical damage and fidelity lines. Profits were earned in other lines to absorb the losses in these lines of business, the largest of which was achieved in workers' compensation ($3.3 million). This is why companies diversify insurance risks across property/casualty lines of business; the intent is that any losses would be offset by gains.

PART III — ALLOCATION TO LINES OF BUSINESS DIRECT

Part III provides the components of direct profit (loss) on a pretax basis, excluding investment gain. Investment gain is not considered because investment income is earned on the actual assets held by the company, which are net of reinsurance.

Different from Part II, the components used to compute profit (loss) in Part III are not readily available from the Annual Statement as presented. Unless assigned with the task of completing the IEE at for their employer, most students will not use the information contained in Part III of the IEE. This publication is not intended to be an instruction manual for completing the IEE. As a result, we will only provide a brief discussion of the computation of each component, reconciling to Annual Statement exhibits when possible.

Columns 1 through 32

As with Part II, the even columns of Part III of the IEE provide the percent of the corresponding amounts in the odd-numbered columns to earned premium, in this case on a direct basis.

Direct premiums written in column 1 reconcile to Part 1B, Premiums Written, column 1, of the U&IE. Direct premiums written also reconcile to column 1 of the Exhibit of Premiums and Losses (Statutory Page 14 Data) by line and in total to Schedule T, column 2, line 59.

Direct premiums earned in column 3 reconcile to column 2 of the Exhibit of Premiums and Losses (Statutory Page 14 Data) by line, for all states plus any alien business, and in total to Schedule T, column 3, line 59.

Dividends to policyholders in column 5 should agree to line 17 of the Statement of Income, excluding dividends associated with business assumed and ceded.

Incurred loss in column 7 reconciles to column 6 of the Exhibit of Premiums and Losses (Statutory Page 14 Data) by line, for all states plus any alien business, and in total to Schedule T, column 6, line 59.

DCC expenses incurred and unpaid in columns 9 and 15, respectively, reconcile to columns 9 and 10, of the Exhibit of Premiums and Losses (Statutory Page 14 Data) by line, for all states plus any alien business. Incurred expenses also reconcile in total to the U&IE, Part 3, Expenses, line 1.1 of column 1.

A&O expenses incurred and unpaid in columns 11 and 17, respectively, cannot be tied directly to amounts presented in the Annual Statement. The NAIC instructions state, "IEE Part III, columns 9, 11, 15 and 17 must agree with IEE Part II, columns 9, 11, 15 and 17, respectively, excluding expenses relating to reinsurance assumed and ceded."[117] An insurance company knows which expenses are allocated to which lines and can therefore complete these columns.

Unpaid losses in column 13 reconcile to column 7 of the Exhibit of Premiums and Losses (Statutory Page 14 Data) by line, for all states plus any alien business, and in total to Schedule T, column 7, line 59.

Unearned premium reserves in column 19 reconcile to column 4 of the Exhibit of Premiums and Losses (Statutory Page 14 Data) by line, for all states plus any alien business.

Agents' balances in column 21 stem from policies written; therefore, companies know the applicable line of business. The amounts should agree to balances included within lines 15.1 plus 15.2, column 3 of the Assets page, excluding balances relating to reinsurance.

Other underwriting expenses in columns 23, 25, 27 and 29 cannot be found in the line of business breakdown of Part III. However, they should reconcile in total to the corresponding amounts in Part I of the IEE excluding amounts relating to reinsurance assumed or ceded. In fact, commissions and brokerage incurred on a direct basis in column 23 should reconcile in total to the sum of the amounts in line 2.1 plus 2.4 of IEE Part I, column 2.

Other income less other expense in column 31 also does not reconcile directly to amounts in the Annual Statement. However, the NAIC instructions note that it should agree in total to

[117] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 422.

amounts in line 15 minus line 5 of the Statement of Income that apply to direct business only (i.e., "excluding expenses related to reinsurance assumed or ceded").[118]

Calculation of Pretax Profit or Loss Excluding All Investment Gain (Column 33)

Column 33 provides pretax profit (loss) excluding all investment gains and is calculated from the information contained in the previous columns of Part III of the IEE, using the same formulaic approach as in Part II. Specifically,

Pretax profit or loss excluding all investment gains =

Premiums earned (column 3)
- Dividends to policyholders (column 5)
- Incurred loss (column 7)
- DCC expenses incurred (column 9)
- A&O expenses incurred (column 11)
- Commission and brokerage expenses incurred (column 23)
- Taxes, licenses and fees incurred (column 25)
- Other acquisitions, field supervision and collection expenses incurred (column 27)
- General expenses incurred (column 29)
+ Other income less other expenses (column 31).

INTERROGATORIES

The interrogatories to the IEE are actually shown before the Parts I through III. The interrogatories provide explanatory notes on the information contained in Parts I through III, the most important of which is Interrogatory 4, which provides information on the process by which the allocations of expenses and profit are made. Specifically, question 4 asks:

4. The information provided in the Insurance Expense Exhibit will be used by many persons to estimate the allocation of expenses and profit to the various lines of business.
   - 4.1 Are there any items requiring special comment or explanation?
   - 4.2 Are items allocated to line of business in Parts II and III using methods not defined in the instructions?
   - 4.3 If yes, explain.[119]

Questions 4.1 and 4.2 each require "yes" or "no" responses. If the company answers "yes" to either question, the company is required to provide an explanation, so the user can consider differences in the company's process relative to what is stated in the instructions.

CHAPTER 19. RISK-BASED CAPITAL

OVERVIEW

The Risk-Based Capital (RBC) system was developed by the National Association of Insurance Commissioners (NAIC) and has been used since 1994 to provide a means for the early detection of insurance company insolvency. It was implemented for property/casualty companies in part in response to reports issued by the federal government in the late 1980s and early 1990s questioning the ability of state governments to regulate insurance companies.[120] These reports emerged in the wake of four of the largest property/casualty insurance company insolvencies in the history of the U.S. insurance industry: Mission Insurance Company, Transit Casualty Company, Integrity Insurance Company and Anglo-American Insurance Company.

The implementation of the RBC system was a significant advancement in solvency monitoring by state governments and has also served as the foundation for many other capital models that followed, including those currently used by rating agencies.

There are two main components to the RBC system:

1. RBC formula: The RBC formula results in a minimum level of required capital determined (the authorized control level benchmark, or ACL) formulaically using an approach that is standard to all insurance companies in a particular industry group (e.g., property/casualty, life and health). The minimum level of required capital is intended to reflect the capital need to support the risks faced by insurance companies. The company's recorded capital is compared to the minimum required capital to produce the RBC ratio.[121] The RBC ratio is compared to a range of values that define the levels of company and regulatory action.
2. RBC Model Act for Insurers:[122] The RBC Model Act, when adopted as law in each state, provides the state insurance regulator with authority to take specific action when a company's RBC ratio falls below certain thresholds.

The RBC system is applied to property/casualty, life and health insurance companies. Certain entities are exempt from the RBC system, including title insurance companies, monoline financial guaranty insurance companies and monoline mortgage guaranty insurance companies. Other exemptions may apply based on individual state rules. This publication will

[120] The most widely known of these reports was written by the U.S. House of Representatives Subcommittee on Oversight and Investigations of the Committee on Energy and Commerce titled, "Failed Promises – Insurance Company Insolvencies" (see U.S. House of Representatives Subcommittee on Oversight and Investigations of the Committee on Energy and Commerce. "Failed Promises-Insurance Company Insolvencies." 101 Cong., 2rid sess., February 1990. Washington, D.C.: GPO, 1993).

[121] The company's actual capital is adjusted to reflect certain items that will be introduced later in this chapter.

[122] NAIC RBC Model Act for Insurers (Model #312).

focus on the RBC system as it applies to property/casualty insurance companies. The formulas differ for property/casualty, life and health insurance companies, reflecting differing risk factors for each.

Insurance companies are required to file their RBC report with the NAIC by March 1 based on information evaluated as of the prior year-end (December 31). An insurance company's RBC report provides its RBC formula calculations and management discussion and analysis of the RBC results. The RBC report is confidential; therefore, details of the calculation are not available to the public. However, the summarized results of the RBC formula are shown in the Five-Year Historical Data exhibit of the Annual Statement, which is in the public domain.

RBC FORMULA

Overview

The RBC formula is computed by applying a set of factors to asset, reserve, recoverable and premium items reported in an insurance company's Annual Statement. The size of the factor depends on the level of risk associated with each item; the greater the risk, the greater the factor. The application of the factors to the associated Annual Statement items results in what are commonly referred to as "risk charges."

The formula is not a comprehensive measure of every risk for an insurance company; rather it only considers those risks that are material to an insurance company. Further, risks associated with a company's business plans and strategy, management, internal controls, systems, reserve adequacy and ability to access capital are not considered as these risks are difficult to quantify.

The general structure of the RBC formula has remained intact since it was first implemented in 1994. The RBC formula was developed based on its predecessor, the life RBC formula, which the NAIC implemented a year earlier in 1993.[123]

Risk Categories

The life RBC formula originally included four risk categories, each denoted by the letter "C" with a number subscript to identify the particular risk:

- C_1 Asset risk
- C_2 Insurance (or underwriting) risk
- C_3 Interest rate risk
- C_4 Business risk

The general definition of the major risk categorizations has remained the same since the life RBC formula was originally implemented:

[123] RBC for stand-alone health insurers was not implemented until 1998.

- Asset risk represents risks associated with an insurance company's investments and other recoverable-based assets (i.e., assets due to the insurance company). It considers the risk that a bond issuer will not make the required interest or principal repayments (i.e., default risk) or that the value of the asset will be substantially impaired due to changes in interest rates or financial market conditions.
- Insurance risk represents the risk associated with the issuance of insurance policies. It is analogous to underwriting risk in the property/casualty industry. It represents the risk that claims emerge greater than expected due to inadequate pricing or random variation.
- Interest rate risk represents the risk that interest rates will change and result in a mismatch between assets and liabilities.
- Business risk is intended to capture other risks inherent in an insurance company's operations. For life insurance companies, the business risk charge within RBC considers the risk of financial loss from litigation and guarantee fund assessments.[124] Both impact a life insurance company's expenses.

The property/casualty formula differs from the life formula in that interest rate risk and business risk are not included. Interest rate risk is more prevalent in life insurance because life insurance policies tend to be purchased as investment vehicles, whereas property/casualty products are purchased to protect the consumer from financial loss. As of December 31, 2011, the life insurance industry held more than 17 times the amount of recorded surplus in admitted assets whereas property/casualty insurers held less than three times the amount of surplus in admitted assets.

Further, while not explicitly included, certain aspects of business risk are inherently included within the underwriting risk charge for property/casualty insurers. These aspects include the impact of changes in operations on loss experience and the consideration of expenses.

Visually, the asset and underwriting risk charges of the property/casualty formula differ in that they denoted by the letter "R," instead of the letter "C" used for the life formula.

Asset Risk

Within the property/casualty RBC formula, there are currently four categories of asset risk:

R_0 Asset risk – Subsidiary insurance companies
R_1 Asset risk – Fixed income
R_2 Asset risk – Equity
R_3 Asset risk – Credit

[124] Letter from American Academy of Actuaries Joint Risk Based Capital Task Force to Lou Felice, Chair, NAIC Risk-Based Capital Task Force Re: Comparison of the NAIC Life, P&C and Health RBC Formulas, April 2001, http://www.actuary.org/pdf/finreport/RBC_0801.pdf, page 4.

R_0 through R_2 are risks associated with admitted invested assets, which are shown on lines 1 through 11, column 3, on the asset side of the statutory balance sheet (e.g., bonds, stocks, mortgage loans on page 2 of the Annual Statement). The R_0 charge considers default risk associated with investments in affiliated insurance companies. Note the life formula was modified from its original format to include asset risk associated with investments in affiliated insurance companies as C_0. The R_1 charge considers changes in interest rates and potential default of fixed income investments. The R_2 charge considers changes in asset valuations for non-fixed income investments (e.g., stocks, real estate).

R_3 considers the credit risk associated with receivables on the balance sheet, which include items listed on lines 12 and subsequent on the asset side of the balance sheet, as well as risk associated with reinsurance recoverables.

Underwriting Risk

There are two categories of underwriting risk in the property/casualty RBC formula:

R_4 Underwriting risk — Reserves
R_5 Underwriting risk — Net written premium

The reserve risk charge (R_4) is concerned with past business while the premium risk charge (R_5) is concerned with future business. Reserve risk is the risk that the company's recorded loss and loss adjustment expense (LAE) reserves will develop adversely, under the assumption that the current reserve balance is adequate. Written premium risk considers the risk that one year's worth of the company's future business will be unprofitable.

According to the NAIC RBC instructions, "Underwriting risk is the largest portion of the RBC charge for most property casualty insurance companies."[125] If we exclude the R_0 component, which does not represent true third-party asset risk, total asset risk is a smaller component of the formula than total underwriting risk. This contrasts with life insurance companies, where the predominant portion of the RBC charge is asset risk.

Approximately 60% of the admitted assets of the property/casualty insurance industry were in bonds, with the next largest investment category dropping to 15% in preferred (1%) and common (14%) stocks.[126] Property/casualty insurance companies tend to concentrate in short-term, relatively fixed and liquid investment categories given the short duration of most property/casualty insurance products sold and the need to have funds readily available to pay claims. The smaller volume and relatively short-term nature of the assets for property/casualty insurance companies significantly limits the asset risk compared to life insurance companies.

[125] NAIC, *RBC Property & Casualty 2011 Forecasting & Instructions,* page 19.
[126] 2011 SNL Financial LC.

Covariance Adjustment

Risk charges R_0 through R_5 are aggregated in the RBC formula to calculate the overall RBC need as follows:

$$RBC = R_0 + \sqrt{R_1^2 + R_2^2 + R_3^2 + R_4^2 + R_5^2}.$$

The square root calculation within the RBC formula is commonly referred to as the "covariance adjustment." Rather than summing up the individual risk charges (R_1 through R_5), it is assumed that the individual risk charge categories are independent of one another. That is, the formula reflects diversification among these risk categories, thereby assuming that the aggregate risk is less than the sum of risk of the independent components. This is considered to be a reasonable assumption. For example, the risk of default on an insurance company's invested assets (e.g., bonds, stocks) is independent of the performance of its loss reserves. Taking the square root of the sum of the squares for R_1 through R_5 increases the dependency of the larger risks in the calculation and decreases the significance of the smaller risk categories in the overall aggregate RBC requirement.

R_0 is kept outside of the covariance adjustment because the risk for investments in insurance company subsidiaries is believed to be directly correlated with the combination of the risks specific to the reporting entity (i.e., the other risk charges R_1 through R_5). Therefore, the risk for investments in insurance company subsidiaries is additive to the aggregate of the investment and underwriting risks of the reporting entity for which RBC is being calculated. Stated differently, RBC should not depend on organizational structure of the insurance company; investments in insurance subsidiaries that are subject to RBC do not provide diversification benefit.

The covariance calculation is applied in the life formula and the property/casualty formula, keeping C_0 outside of the square root like R_0.

For illustrative purposes, Table 75 assumes the following charges for a property/casualty insurance company (in USD):

TABLE 75

R_0	2,112,000
R_1	5,087,000
R_2	6,976,000
R_3	4,112,000
R_4	18,936,000
R_5	10,793,000
Sum	48,016,000

As shown in Table 75, the sum of the RBC charges is $48,016,000 (total RBC before covariance). After covariance, total RBC is $25,913,505. RBC after covariance is considerably less, reflecting independence of the risks associated with R_1 through R_5.

Components of the Charges

Within subsequent sections of this chapter, we will walk through the components of each charge that goes into the RBC formula, deliberately leaving out certain information that would be necessary to prepare and issue the RBC report for a company. The NAIC issues instructions on how to compute RBC, including an instructional CD-ROM providing a spreadsheet with the necessary formulas. Additionally, RBC software is available from Annual Statement software vendors and is used by insurance companies for filing with state regulatory authorities. This publication is only intended to provide an overview of the RBC formula and is not intended to supplant the NAIC instructions or electronic filing requirements.

Before we delve into the details, let us provide some perspective on the relevance of each risk category to the overall formula. Table 76 provides a summarization of a table provided by the NAIC in its presentation of 2011 RBC results for the property/casualty insurance industry:[127]

TABLE 76

Aggregate for 2,600 Property/Casualty Companies RBC by Category USD in 000s	
2011 Risk Category	Totals
R_0 – Asset Risk – Affiliates	45,083,423
R_1 – Asset Risk – Fixed Income	7,941,632
R_2 – Asset Risk – Equity	74,325,097
R_3 – Asset Risk – Credit	15,514,367
R_4 – Underwriting Risk – Reserves	102,176,645
R_5 – Underwriting Risk – Written Premiums	55,754,469
Total RBC before Covariance	300,795,633

Underwriting risk associated with loss and LAE reserves (R_4) represented the largest risk charge within the RBC formula for the property/casualty insurance industry in 2011 ($102 billion).

Recall that the covariance adjustment increases the dependency of the larger risks and decreases the significance of the smaller risk categories in the overall aggregate RBC requirement. As displayed in the Table 77, squaring each of charges R_1 through R_5 and

[127] NAIC, *Property & Casualty Industry RBC Results*, 2012, http://www.naic.org/documents/research_stats_rbc_results_pc.pdf, Table 5, pages 5 through 7.

summing the results shows that the underwriting risk charges contributed 70% of the total charge associated with R_1 through R_5 in 2011. The asset risk charge associated with equity investments essentially comprised the remainder (29%).[128]

TABLE 77

Aggregate for 2,600 Property/Casualty Companies RBC by Category USD in 000s			
2011 Risk Charges for R_1 through R_5	Totals	Squared Totals	Distribution
R_1 – Asset Risk – Fixed Income	7,941,632	63,069,518,823,424	0%
R_2 – Asset Risk – Equity	74,325,097	5,524,220,044,059,410	29%
R_3 – Asset Risk – Credit	15,514,367	240,695,583,410,689	1%
R_4 – Underwriting Risk – Reserves	102,176,645	10,440,066,783,456,000	54%
R_5 – Underwriting Risk – Written Premiums	55,754,469	3,108,560,813,471,960	16%
Total RBC before Covariance	255,712,210	19,376,612,743,221,500	100%

Despite representing more than half of the invested assets of the property/casualty insurance industry in 2011 (see Table 2), the asset risk charge for fixed income investments had almost no impact (0%) on the overall RBC charge for the industry. This is because property/casualty insurers tend to invest in relatively safe, high-credit quality bonds.

The asset risk charge for equity is relatively high (29%), reflecting the increased risk associated with these investments over fixed income. As shown in Table 2, common stocks represented 14% of total assets held by property/casualty insurers in 2011.

The charge for credit risk is relatively low. As we shall see, this is probably due to the fact that this charge is applied to reinsurance recoverables after consideration of the provision for reinsurance to avoid double counting.

Note that the NAIC's report on 2011 results also shows that the relative significance of each risk charge to the overall formula has remained relatively consistent over the past five years.

THE RBC CHARGE FOR ASSET RISK ASSOCIATED WITH INSURANCE COMPANY SUBSIDIARIES (R_0)

The RBC required for investments in insurance company subsidiaries depends on the asset class and type of subsidiary and whether the subsidiary is subject to RBC. Recall that certain insurance companies are not subject to RBC, such as title insurers, monoline mortgage guaranty insurers and monoline financial guaranty insurers. R_0 considers only those investments in insurance company subsidiaries for which the subsidiary itself files RBC. For

[128] Ibid.

these entities the *total* R_0 charge across all common stocks, preferred stocks and bond investments in a particular subsidiary is *limited to* the RBC of the subsidiary, adjusted by the reporting entity's ownership (pro rata) share in the subsidiary. The theory is that, through ownership, the reporting entity is subject to the same risks as its subsidiary.

The charge for investments in insurance subsidiaries that are *not* subject to RBC (excluding alien insurers,[129] which are considered in R_0) is included in R_1 or R_2, depending on whether the investment is fixed income or equity based. The R_1 or R_2 categories also include charges for investments in upstream affiliates, including parent and holding companies. This distinction is important because of the placement of R_0, R_1 and R_2 in the RBC formula. As noted, investments in insurance subsidiaries that are subject to RBC are assumed to be correlated with those of the reporting entity and therefore outside of the square root in the formula.

Term definitions will become important as we walk through the asset risk charges. Statutory Accounting Principles (SAP), specifically Statement of Statutory Accounting Principles (SSAP) No. 88, Investments in Subsidiary, Controlled, and Affiliated Entities, define these terms as follows:

Parent — "An entity that directly or indirectly owns and controls the reporting entity."[130]

Subsidiary — "An entity that is, directly or indirectly, owned and controlled by the reporting entity."[131]

Affiliate — "An entity that is within the holding company system or a party that directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies. …"[132]

Control — "The possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or non-management services, (c) by common management, or (d) otherwise. Control shall be presumed to exist if a reporting entity and its

[129] According to the Glossary of Terms in the textbook *Property-Casualty Insurance Accounting* issued by Insurance Accounting & Systems Association, Inc., 8th ed. (2003), First Addendum (2006), an alien insurance company is defined as "An insurer or reinsurer domiciled outside the U.S. but conducting an insurance or reinsurance business in the U.S."

[130] SSAP No. 88, Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement to SSAP No. 46, "Definitions" section.

[131] Ibid.

[132] Ibid.

affiliates, directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity."[133]

SSAP No. 88 further states that control is measured at the holding company level. For example, the 10% benchmark would apply to a group consisting of two affiliates where one affiliate owns 7% of a company and the other affiliate owns 4% of that same company. Each member of the group has control over the company as the sum of their ownership percentages exceeds 10%.

An insurance company's investment in subsidiaries, both controlled and affiliated entities (SCAs), are assets.

R_0 measures the risk associated with subsidiary insurance companies based on the following:

1. Common stock, preferred stock and bond investments in an insurance company subsidiary, when the insurance company subsidiary is also subject to RBC filing requirements
2. Investments in alien insurance company affiliates
3. Off-balance sheet or other items

To provide some perspective, Table 78 highlights the relevance of the above items to the R_0 charge based on the NAIC's compilation of the RBC results for the industry in 2011:[134]

TABLE 78

Aggregate for 2,600 Property/Casualty Companies R_0 Component of 2011 RBC USD in 000s		
R_0 – Asset Risk – Affiliates	**Totals**	**Distribution**
1. Common stock, preferred stock and bond investments	38,363,845	85%
2. Investments in alien insurance companies	4,940,746	11%
3. Off-balance sheet or other items	1,778,832	4%
Total R_0	45,083,423	100%

Common stock, preferred stock and bond investments in affiliated entities subject to RBC was the largest contributor to the R_0 risk charge for the industry in 2011 (85%), followed by investments in alien insurance companies (11%) and off-balance sheet items (4%).

[133] Ibid.

[134] NAIC, *Property & Casualty Industry RBC Results*, 2012, http://www.naic.org/documents/research_stats_rbc_results_pc.pdf, Table 5, pages 5 through 7.

We will discuss each of the components of the R_0, placing emphasis in our discussion on the calculation associated with common stock, preferred stock and bond investments due to their significance to R_0.

Insurance Subsidiaries Subject to RBC – Ownership in Common Stock

According to the NAIC's 2011 written instructions for RBC[135], the RBC charge for investments in common stock of an insurance company subsidiary depends on the accounting method used by the reporting entity to report the investment: the market valuation approach or the equity method.[136]

If the market valuation approach is used by the reporting entity to accounting for its investment in the insurance company SCA, the R_0 charge for ownership of common stock of the subsidiary is the *minimum* of the following:

- Total RBC of the affiliate, after covariance adjustment, multiplied by the percentage of ownership in the common stock
- The statutory surplus of the affiliate, multiplied by the percentage of ownership in the common stock

In these cases, there is also an R_2 charge in addition to the R_0 component which considers the book/adjusted carrying value of the affiliated's stock relative to RBC and policyholders surplus.

If the equity method is used, the R_0 charge for ownership of common stock in the insurance affiliate subject to RBC is equal to the *minimum* of the following:

- Total RBC of the affiliate, after covariance adjustment, multiplied by the percentage of ownership in the common stock
- The book/adjusted carrying value of the common stock (greater than 0) as recorded by the reporting entity (no adjustment for the percentage ownership)

We note that there is an inconsistency between the NAIC's written instructions and the formulas contained in the spreadsheet contained in the corresponding CD-ROM. The formula in the spreadsheet does not differentiate between the equity method and market valuation

[135] NAIC *RBC Property & Casualty 2011 Forecasting & Instructions,* page 1.

[136] According to SAP (SSAP No. 88), admitted investments in insurance company SCAs are recorded on the reporting entity's balance sheet using one of two methods: the market valuation approach or equity method. Under the market valuation approach, investments in insurance company SCAs are based on the market value of the SCA, adjusted for the reporting entity's ownership percentage. Market value is equivalent to fair value. Under the equity method, investments in insurance company SCAs are recorded based on the reporting entity's proportionate share of audited statutory equity of the SCA's balance sheet, adjusted for any unamortized goodwill. Under this method, the reporting entity records the initial investment at cost then essentially adjusts the value over time based on the reporting entity's share in the company's income (loss). At any point in time, the recorded amount is called the "carrying value."

approach in calculating R_0 for common stock investments in insurance affiliates subject to RBC. Rather, the spreadsheet computes the R_0 charge equal to the minimum of RBC of the affiliate and the book/adjusted carrying value of the stock; the affiliate's statutory surplus does not enter the equation. The NAIC has acknowledged the inconsistency between the written instructions and the spreadsheet and expects to research and resolve the issue by the end of 2013. We will update this publication when this issue is resolved and provide examples to illustrate the calculation of R_0 at that time.

Despite the inconsistency, we note that R_0 for ownership of common stock in an insurance affiliated cannot be greater than the RBC of the affiliate (after covariance adjustment and adjusted for the reporting entity's ownership share of the affiliate's outstanding common stock). Recall that RBC calculations are not in the public domain. Attempts to recalculate an insurance company's RBC often make a simplifying assumption that the R_0 charge for ownership in common stock of an SCA is equal to the SCA's RBC (adjusted for covariance and ownership).

Insurance Subsidiaries Subject to RBC — Ownership of Preferred Stock

The reporting entity's R_0 charge for investments in preferred stock of insurance subsidiaries depends on whether the subsidiary has excess RBC. Excess RBC is defined as the amount of RBC, after covariance adjustment, that exceeds the total value of the outstanding common stock. If the excess RBC is greater than zero, the RBC charge for ownership in preferred stock is the *minimum* of the following:

- The pro rata share of the excess RBC
- The book/adjusted carrying value of the preferred stock (greater than zero) as recorded by the reporting entity

The pro rata share is equal to the percentage of the affiliate's total outstanding preferred stock value that is owned by the company.

If the excess RBC is less than or equal to zero, then the RBC charge for the company's ownership in the preferred stock of its affiliate is zero.

Insurance Subsidiaries Subject to RBC — Ownership of Bonds

Similarly, for insurance subsidiaries subject to RBC, the reporting entity's R_0 charge for bond investments depends on whether there is excess RBC over the amount of the total value of subsidiary's outstanding common and preferred stock. If the excess RBC over the value of common and preferred stocks is greater than zero, the RBC charge for ownership in bonds is the *minimum* of the following:

- The pro rata share of the excess RBC

- The book/adjusted carrying value of the bonds (greater than zero) as recorded by the reporting entity

The pro rata share is equal to the percentage of the affiliate's total outstanding bond value that is owned by the company.

Investments in Alien Insurance Affiliates

An alien insurance company is a company that is incorporated under the laws of a country outside the U.S. Therefore, these entities are not themselves subject to RBC. The reporting entity's RBC charge for investments in directly owned alien affiliates is equal to the book/adjusted carrying value of the company's interest in the affiliate multiplied by a set factor of 0.500.

For those alien insurance affiliates that are indirectly owned by the company, the RBC charge is equal to the carrying value of the holding company's interest in the affiliate multiplied by 0.500 and adjusted to reflect the reporting entity's ownership on the holding company.

The 0.500 was originally established based on the average RBC charge for U.S. insurance company affiliates.[137]

Off-balance Sheet and Other Items

Off-balance sheet and other items include amounts that are not recorded by the insurance company in its statutory financial statements yet still represent assets and/or potential liabilities of the insurance company and therefore expose the company to risk. Off-balance sheet and other items are disclosed in the Notes to Financial Statements and General Interrogatories of the Annual Statement. There are three categories of such items included in the R_0 charge:

1. Non-controlled assets: This category of assets includes the following:
    - Collateral loaned to others from securities lending programs
    - Assets that are reported on the company's balance sheet but for which the company does not have exclusive control over, thereby exposing the company to increased investment risk
    - Assets sold or transferred that are subject to a put option, thereby enabling the purchaser to sell the assets back to the insurance company

2. Contingent liabilities: This includes amounts for which the insurance company may be held responsible but for which the amount cannot be determined and therefore is not entered on the balance sheet. An example includes structured settlements for which the insurance company purchases an annuity from a life insurance company to make

[137] NAIC *RBC Property & Casualty 2011 Forecasting & Instructions,* page 19.

structured payments to claimants in order to close out a claim. The insurance carrier would close the claim since it paid the life insurer to make the claim payments on its behalf. However, if the life insurance company fails to pay, the insurance company would still be ultimately responsible for settling the liability. This is a contingent liability to the insurance company.

3. Guarantees for the benefit of affiliates: These are guarantees that may expose the company's assets to contingent liability exposure. An example would be a guarantee made by a company to pay an outstanding loan held by an affiliate with a third party in the event that the affiliate was unable to meet its obligation to that third party.

With the exception of conforming securities lending programs,[138] which are those programs that have specified elements that lower the associated risk, a 1% factor, selected judgmentally by the NAIC, is applied to all off-balance sheet items for purposes of inclusion in the R_0 charge. Conforming securities lending programs have a charge of 0.2%.

THE RBC CHARGE FOR ASSET RISK ASSOCIATED WITH FIXED INCOME INVESTMENTS (R_1)

R_1 includes the charge for interest rate and default risk associated with fixed income investments in the following categories:

1. Holding company
2. Upstream affiliate (i.e., parent company)
3. Insurance subsidiaries that are not subject to RBC (other than alien insurers)
4. Investment affiliate
5. Other non-insurance subsidiaries
6. Unaffiliated bonds
7. Mortgage loans
8. Miscellaneous assets, including cash, cash equivalents, other short-term investments and nonadmitted collateral loans
9. Replication (synthetic asset) transactions and mandatorily convertible securities
10. Off-balance sheet collateral and Schedule DL, Part 1, Assets

In general, the charge for these investments is based on a factor determined by the NAIC multiplied by the book/adjusted carrying value of the investment. The same factor is used by all companies.

[138] According to the NAIC *RBC Property & Casualty 2011 Forecasting & Instructions*, page 16, conforming securities lending programs are those comprising all of the following: (1) a written plan approved by the company's board of directors describing the company's securities lending program and ways it can invest collateral; (2) written procedures that the company must follow to monitor and control the risks of the program; (3) a binding agreement between the insurance company and the borrowers of the insurer's securities; and (4) collateral in the form of investments that are allowable by the company's domiciliary state (e.g., cash, cash equivalents, federally guaranteed investments).

In addition to the charge for the aforementioned types of fixed income investment categories, there are two charges reflecting the level of diversification in the entity's fixed income portfolio. The first is the bond size factor, and the second is the asset concentration factor. The fewer the bond holdings and greater the concentration in individual issuers or borrowers, the greater the associated charge. These factors are discussed in further detail in this chapter's sections titled, "Unaffiliated Bonds and the Bond Size Factor" and "Asset Concentration Factor."

Table 82[139] highlights the relevance of the above items to the R_1 charge based on the NAIC's compilation of the RBC results for the industry in 2011: [140]

TABLE 82

Aggregate for 2,600 Property/Casualty Companies R_1 Component of 2011 RBC USD in 000s		
R_1 – Asset Risk – Fixed Income	Totals	Distribution
1. Holding company	1,858	0%
2. Upstream affiliate (parent company)	36,587	0%
3. Insurance subsidiaries not subject to RBC	-	0%
4. Investment affiliate	13	0%
5. Other non-insurance subsidiaries	1,260,343	16%
6. Unaffiliated bonds	4,088,852	51%
7. Mortgage Loans	248,169	3%
8. Miscellaneous assets	221,006	3%
9. Replication(synthetic asset) transactions and mandatorily convertible securities	37,717	0%
10. Off-balance sheet collateral and Schedule DL, Part 1, Asset	*Not separately provided*	0%
11. Bond size factor	1,458,498	18%
12. Asset Concentration (Fixed)	588,589	7%
Total R_1	**7,941,632**	**100%**

Investments in bonds of unaffiliated entities represented over half the risk charge within the R_1 category for the industry in 2011. The associated charge for bond size and the charge for fixed income investments in other non-insurance subsidiaries comprised the majority of the remainder of the R_1 charge.

[139] Note Tables 79, 80 and 81 have been omitted from this version of our publication. They serve as placeholders to illustrate the R0 calculation and will be included when the NAIC resolves the inconsistency between the written instructions to RBC and the NAIC spreadsheet.

[140] NAIC, *Property & Casualty Industry RBC Results*, 2012, http://www.naic.org/documents/research_stats_rbc_results_pc.pdf, Table 5, pages 5 through 7.

A brief discussion of each charge is provided below, with examples to illustrate their calculation as deemed appropriate.

Holding Company

For investment in a holding company, the RBC charge is 0.225 times the holding company value in excess of the carrying value (i.e., holding company value minus carrying value) for indirectly owned insurance affiliates calculated in R_0.

Upstream Affiliate (i.e., Parent Company)

For bond investments in a parent company, the RBC charge is 0.225 times the carrying value of the bonds of the parent, regardless of whether the parent is subject to RBC.

Insurance Subsidiaries Not Subject to RBC[141]

For bond investments in life, property/casualty and health insurance companies that are not subject to RBC, the charge is equal to 0.225 times the book/adjusted carrying value of the bonds.

Investment Affiliates

According to the NAIC RBC instructions, "An investment affiliate is an affiliate that exists only to invest the funds of the parent company. The term investment affiliate is strictly defined in the Annual Statement instructions as any affiliate, other than a holding company, engaged or organized primarily to engage in the ownership and management of investments for the insurer. An investment affiliate shall not include any broker-dealer or a money management fund managing funds other than those of the parent company."[142]

The RBC charge for an investment affiliate is essentially the same as it would be if the reporting entity held the assets directly. For example, if the reporting entity owned a subsidiary that managed $1 billion of its investments in common stock, then the RBC charge for that entity would be computed based on the $1 billion stock portfolio. If the charge for the stock investment were $10 million if the reporting entity owned the stock directly, then the charge for the investment affiliate would be $10 million. If the entity only owned 60% of the investment affiliate, then the RBC charge would be $6 million (= 0.6 * $10 million).

Note that the calculation follows the same process as that for common stock, preferred stock and bond investments in insurance subsidiaries in R_0. That is, there is an RBC charge for preferred stocks and bonds only if the excess RBC of the affiliate exceeds the carrying value of common stocks (plus preferreds in the case of bonds).

[141] Other than alien insurers, which are addressed in R_0.
[142] NAIC, *RBC Property & Casualty 2011 Forecasting & Instructions,* page 5.

Other Non-insurance Subsidiaries

Unless the RBC charge for a particular type of non-insurance subsidiary is addressed separately within this chapter (e.g., the charge for investment affiliates), the RBC charge for bond investments in a non-insurance subsidiary is 0.225 times the book/adjusted carrying value of the bonds.

Unaffiliated Bonds and the Bond Size Factor

The RBC charge for unaffiliated bond investments is equal to the book/adjusted carrying value of the bond multiplied by a factor, where the factors vary based on the bond class. The factors are as shown in Table 83.

TABLE 83

NAIC bond class	RBC factor
Class 01 — Highest credit quality	
U.S. government, guaranteed by U.S. government	0.000
U.S. government, not backed by full faith and credit of U.S. government	0.003
All other	0.003
Class 02 — High credit quality	0.010
Class 03 — Medium credit quality	0.020
Class 04 — Low credit quality	0.045
Class 05 — Lowest credit quality	0.100
Class 06 — In or near default	0.300

As displayed in Table 83, the RBC factors increase with amount of perceived credit risk, starting with 0.000 for U.S. government bonds that are backed by the full faith and credit of the government and therefore have almost no default risk, all the way to a factor of 0.300 for bonds issued by companies that are in or near default. According to the NAIC instructions for RBC, the bond factors are determined "based on cash flow modeling using historically adjusted default rates for each bond category." The instructions further explain: "For each of 2,000 trials, annual economic conditions were generated for the 10-year modeling period. Each bond of a 400-bond portfolio was annually tested for default (based on a "roll of the dice") where the default probability varies by rating category and that year's economic conditions."[143]

In addition to the charge for each class of bond, there is a separate charge to reflect the level of diversification called the bond size factor. According to the NAIC instructions, "The size factor reflects additional modeling for different size portfolios that shows the risk increases as the number of bond issuers decreases. Because most insurers' bond portfolios are considerably smaller than the portfolio used to develop the model bond risk, the basic bond factors understate the true default risk of these assets. The bond size factor adjusts the

[143] Ibid., page 8.

computed RBC for those bonds that are subject to the size factor to more accurately reflect the risk."[144]

The bond size adjustment factor, which measures the degree of diversification in the investment portfolio, is computed as the weighted average number of issuers in a portfolio subject to the adjustment, with the weights prescribed by the NAIC depending on the number of issuers. Table 84 displays the formula, including the NAIC weights.

TABLE 84

Bond Size Adjustment Factor			
	# of bond issuers *(1)*	Weights *(2)*	Weighted # Issuers *(3) = (1) * (2)*
First 50	XXXX	2.5	
Next 50	XXXX	1.3	
Next 300	XXXX	1.0	
More than 400	XXXX	0.9	
Total	XXXX		

The bond size factor is equal to the total in column 3 divided by the total in column 1 in Table 84, minus 1. For example, if a reporting entity invests in 500 bonds, the bond size adjustment factor would be 0.2. The calculation of this factor is provided in Table 85 as the sum of the weighted number of issuers in column 3 of 580 divided by the total number of issuers in column 1 of 500, minus 1.

TABLE 85

Example of Bond Size Adjustment Factor			
# of bond issuers *(1)*		Weights *(2)*	Weighted # Issuers *(3) = (1) * (2)*
First 50	50	2.5	125
Next 50	50	1.3	65
Next 300	300	1.0	300
More than 400	100	0.9	90
Total	500	1.2	580

[144] Ibid.

The bond size factor is applied to the RBC calculated for bonds subject to adjustment. As displayed in Table 85, the weights decrease with the number of issuers. Therefore, the more issuers, the lower the factor applied to the RBC and the lower the additional RBC amount required. For a reporting entity investing in fewer than 50 bonds, the factor is 1.5 times the RBC required for the bonds (=2.5 – 1); for an entity investing in 1,000 bonds, the factor is 0.03.[145]

The bond size factor only applies to portfolios having fewer than 1,300 bonds; the bond size factor for portfolios having 1,300 or more bonds is zero.

Bonds that are subject to the bond size adjustment factor include unaffiliated bonds in classes 02 through 06, plus non-U.S. government bonds in class 01.

Mortgage Loans

The RBC charge for mortgage loans is computed as the book/adjusted carrying value of the loans multiplied by a factor of 0.050.

Miscellaneous Assets

The RBC charge for miscellaneous assets is computed as a factor times the book/adjusted carrying value for those assets that are in excess of amounts considered elsewhere in the RBC formula, if any. The RBC charges for each investment are as follows:

- 0.003 times the book value of cash, net cash equivalents and other short-term investments
- 0.050 times admitted collateral loans

Replication (Synthetic Asset) Transactions and Mandatorily Convertible Securities

Assets included within this category are defined in the RBC instructions as follows:

"A replication (synthetic asset) transaction is a derivative transaction entered into in conjunction with other investments in order to reproduce the investment characteristics of otherwise permissible investments…

[A] mandatorily convertible security is a security that is mandatorily convertible at prices different from the market prices at the time of conversion. Such securities are classified on the Annual Statement by ignoring the conversion feature." [146]

To expand upon the discussion about derivatives in *Chapter 8. The Statutory Income Statement: Income and Changes to Surplus* and *Chapter 13. Overview of Schedules and Their Purpose*, insurance companies use derivative transactions for one of three reasons:

[145] 0.03 = [[(50*2.5) + (50*1.3) + (300*1.0) + (600*0.9)] / (1,000)] – 1.0

[146] NAIC, *RBC Property & Casualty 2011 Forecasting & Instructions,* page 10.

1. Hedge or mitigate risk
2. Generate income
3. Replicate an asset that cannot be purchased in the cash market because it is either too expensive or unavailable[147]

As stated previously, derivative holdings by property/casualty insurers are small relative to those held by life insurance companies. In 2011, life insurance companies held 96% of the industry's derivatives, whereas property/casualty insurance companies only held 4%. And only 3% ($1.8 billion) of the total notional amount of derivatives held by property/casualty insurers ($56.0 billion) was for replication purposes.[148] This somewhat explains the low-risk charge for this category.

Replication (synthetic asset) transactions are commonly referred to as "RSATs" and are reported in Schedule DB of the Annual Statement. An RSAT is a package of a derivative(s) and a cash instrument(s). The cash instrument is generally a bond.

The RBC charge for RSATs is equal to the RBC factor applicable for the asset the RSAT is replicating, multiplied by the statement value of the transaction from Schedule DB. Credit is given for the RBC charge already applied to the cash instrument. For example, if the cash instrument is a bond, then cash component of the RSAT is recorded as a bond on the company's balance sheet and has already received a risk charge based on its bond characterization. The RBC for RSATs is adjusted to remove the RBC previously calculated for the subject bond.

A mandatorily convertible security is reported in the Annual Statement schedule that corresponds to the security pre-conversion. For example, assume an insurer holds a bond that is mandatorily convertible into a fixed number of shares of common stock within three years. The bond will be reported in the company's balance sheet and will therefore receive a RBC charge based on its NAIC bond class. However, the insurer is not only exposed to risks associated with the bond, but also the risk associated with the common stock that it will convert to sometime over the next three years, since the bond's principal will be used to purchase the shares. The RBC charge for mandatorily convertible securities adjusts the RBC charge upward if the security that results from conversion is more risky. Since unaffiliated common stocks have a RBC charge of 0.15, and bonds have a charge between 0 and 0.3, depending on class, the RBC charge will be adjusted upward by the maximum of the difference between the RBC charge for the stock and bond, and zero. This is similar to the application of the RBC charge for RSATs; the RBC charge for mandatorily convertible securities is equal to

[147] Memorandum to NAIC Investment Risk Based Capital (RBC) Working Group from Walter Givier – Northwestern Mutual Life, Mark Anderson – Met Life and other members of the ACLI Derivative Risk Management Team, dated March 29, 2013, Re: Life Insurer RBC for Derivatives.
http://www.naic.org/documents/committees_e_capad_investment_rbc_wg_exposures_derivatives.pdf

[148] NAIC & The Center for Insurance Policy and Research, Capital Markets Special Report, "An Update of the Insurance Industry's Derivative Exposure," page 2 of 8, http://www.naic.org/capital_markets_archive/130109.htm.

the RBC charge for the converted security, reduced by the RBC charge for the original security.

Half of the charge for RSATs and mandatorily convertible securities is applied to R_1, with the remaining half applied to R_2. This assumes that half of the securities in the calculation are fixed income and half are equity.

Off-balance Sheet Collateral and Schedule DL, Part 1, Assets

The RBC charge for off-balance sheet collateral and Schedule DL assets considers the risk associated with securities lending programs. Recall the discussion of securities lending programs in *Chapter 13. Overview of Schedules and Their Purpose*. The risk associated with these programs is that the reporting entity will lose money on the reinvestment of collateral posted by the borrower. Collateral held by the reporting entity in conjunction with securities lending programs is reported one of three ways in the Annual Statement:

1. In investment schedules that correspond to the invested collateral (e.g., Schedule A, B, BA, D, DA and E), which roll up into the balance sheet
2. In Schedule DL, Part 1, of the Annual Statement, which rolls into line 10 of the asset side of the balance sheet
3. Off-balance sheet, due to not being recorded in the financial statements

The R_1 charge considered herein includes a provision for these assets as included in items 2 and 3 above. The charge is equal to the book/adjusted carrying value multiplied by a factor, where the factor is equal to that for the particular asset class. For example, the same bond factors by class applicable to unaffiliated bonds are also used in this calculation.

Asset Concentration Factor

The asset concentration factor doubles the RBC charge for the 10 largest issuers that the insurance company is exposed to. The purpose of this charge is to reflect the increased risk associated with large concentrations in single issuers.

The 10 largest issuers are determined by first summing the insurer's total investment (book/adjusted carrying value) across all investments (fixed income plus equity) for each issuer. The total amounts for each issuer are then sorted from largest to smallest to determine the top 10. The RBC charge for each fixed income and equity asset is computed for the 10 largest issuers. The resulting RBC charge for fixed income is included as the asset concentration RBC within R_1; the charge for equity is included as the asset concentration RBC

within R_2.[149] The RBC charge is limited to a maximum of 0.300 for each fixed income and/or equity investment.

Not all assets are subject to the asset concentration factor, as certain assets are deemed to be of low risk or have already received the maximum charge of 0.300. The assets excluded from the additional charge are also excluded in determining the 10 largest issuers.

Fixed income assets that are subject to the asset concentration factor include the 10 largest investments in each of the following:

- Unaffiliated bonds in classes 02 through 05[150]
- Collateral loans
- Mortgage loans

R_2 assets that are subject to the asset concentration factor include following:

- Unaffiliated preferred stocks and hybrid securities in classes 02 through 05
- Unaffiliated common stock
- Investment in real estate
- Encumbrances on invested real estate
- Schedule BA assets (excluding collateral loans)
- Receivable for securities
- Aggregate write-ins for invested assets
- Derivatives

The following provides a simplified example to illustrate the calculation of the asset concentration factor.

Assume that the fixed income and equity investments made by an insurance company that are subject to the asset concentration factor are limited to 15 issuers and investments in these issuers are limited to the assets listed in the Table 86 below. The following provides the total adjusted book/carrying value of these investments sorted from highest to lowest value by issuer[151].

[149] The asset concentration *factor* can be computed as the weighted average of the total asset concentration RBC charge with the total subject assets.
[150] Unaffiliated bonds in class 01 are excluded because they are deemed to be of low risk; unaffiliated bonds in class 06 are excluded because they already receive the maximum charge of 0.300.
[151] Note, for simplicity, only certain assets were included in the example.

TABLE 86

Example
Adjusted Book/Carrying Value for Assets Subject to Asset Concentration USD 000

		Fixed Income Assets		Equity Assets			
Issuer	Name	Unaffiliated Bonds Class 2 - 5	Collateral Loans	Unaffiliated Preferred Stocks Class 2 - 5	Unaffiliated Common Stock	Investment Real Estate	Total Assets Subject to Asset Concentration
1	Asppill Drug				1,200		1,200
2	Deal Mart		1,000				1,000
3	U.S. Express	1,000					1,000
4	MacroHard Inc.	900					900
5	Dill Computing			900			900
6	Tropical Beverage Co.	820					820
7	Popsi Co.			800			800
8	Texas Oil Inc.	550					550
9	Westwood Resorts		200			35	235
10	Dakota Energy	220					220
11	Bear Pharmaceuticals				200		200
12	Mediapro	200					200
13	Pear Computer				100		100
14	Jane Moose	80					80
15	KO Media				25	50	75
Total		3,770	1,200	1,700	1,525	85	8,280

Only the first ten of these issuers (Asppill Drug through Dakota Energy) are considered in the calculation of the asset concentration factor. The asset concentration charge is computed by multiplying the RBC charge for each asset class by the associated RBC factor for that class. For simplicity, assume that each of the bond investments is class 2 and each of the preferred stock investments is class 3. Table 87 provides the calculation of the asset concentration RBC within R_1 and R_2.

TABLE 87

Example

Derivatives	-	0.050	-
Subtotal Equity	2,935	0.074	218
Grand Total Asset Concentration			312

The asset concentration for fixed income investments within R_1 is $95,000 and the asset concentration for equity within R_2 is $218,000, resulting in a total asset concentration RBC of $312,000.

R_1 for Fictitious

To further illustrate the R_1 through R_5 charges, we used the Annual Statement for Fictitious Insurance Company to build a full example of the NAIC calculations[152]. Because Schedule D is

[152] Note that Fictitious Insurance Company does not have any affiliated entities. Therefore the R_0 charge is zero for Fictitious.

not included in the Annual Statement for Fictitious, we had to make assumptions in preparing the calculation, such as the distribution of fixed assets by RBC class. Table 88 provides the R_1 portion of the calculation for Fictitious.

TABLE 88

R_1 Charge for Fictitious Insurance Company
NAIC Risk-Based Capital 2011

R_1 Calculation — Fixed Income Assets	Amount Held	Charge Factor	RBC Charge
Cash and Cash Equivalents	154,000	0.0030	462

Total R_1 Charge — Fixed Income Assets Risk			**553,398**

THE RBC CHARGE FOR ASSET RISK ASSOCIATED WITH EQUITY INVESTMENTS (R_2)

R_2 includes the charge for risk associated with equity investments in the following:

1. Holding company
2. Upstream affiliate (i.e., parent company)
3. Insurance subsidiaries that are not subject to RBC (other than alien insurers)
4. Investment affiliate
5. Other non-insurance subsidiaries

6. Off-balance sheet collateral and Schedule DL, Part 1, Assets
7. Replication (synthetic asset) transactions and mandatorily convertible securities
8. Insurance affiliates that are subject to RBC
9. Unaffiliated stocks
10. Real estate
11. Schedule BA assets
12. Miscellaneous assets, including receivables for securities, aggregate write-ins for invested assets and derivatives

The RBC charge for the first six items listed above follows the same approach as described for fixed income securities in R_1, with the exception that the calculation is applied to the book/adjusted carrying values of common and preferred stocks instead of bonds. In addition, as discussed for R_1, half of the charge for replication transactions and mandatorily convertible securities listed above as item 7 is applied to R_2.

Similarly, there is the additional charge for asset concentration in the 10 largest issuers for each type of equity investment. The calculation is performed as described within the previous section of this chapter titled, "The RBC Charge for Asset Risk Associated with Fixed Income Investments (R_1)".

Table 89 provides perspective on the relevance of the above items to the R_2 charge based on the NAIC's compilation of 2011 RBC results for the industry.[153]

[153] NAIC, *Property & Casualty Industry RBC Results*, 2012, http://www.naic.org/documents/research_stats_rbc_results_pc.pdf, Table 5, pages 5 through 7.

TABLE 89

Aggregate for 2,600 Property/Casualty Companies R_2 Component of 2011 RBC USD in 000s		
R_2 – Asset Risk – Equity	**Totals**	**Distribution**
1. Holding company	2,148,678	3%
2. Parent company	88,198	0%
3. Insurance subsidiaries not subject to RBC	106,163	0%
4. Investment affiliate	274,407	0%
5.Other non-insurance subsidiaries	2,681,834	4%
6. Off-balance sheet collateral and Schedule DL, Part 1, Assets	32,430	0%
7. Replication transactions and mandatorily convertible securities	157,300	0%
8. Insurance affiliates that are subject to RBC	*Not separately provided*	0%
9. Unaffiliated stocks	26,300,329	35%
10. Real estate	1,044,097	1%
11. Schedule BA Assets	20,496,158	28%
12. Miscellaneous assets	189,348	0%
13. Asset Concentration (Equity)	20,838,585	28%
Total R_2	**74,357,527**	**100%**

Investments in unaffiliated stocks and Schedule BA assets, coupled with the asset concentration charge, represented nearly all of the risk charge within the R_2 category for the industry in 2011.

We won't get into all of the details underlying the calculations of the first seven items, as they were presented in the previous section of this chapter ("The RBC Charge for Asset Risk Associated with Fixed Income Investments (R_1)"). We will, however, provide an example to illustrate the calculation of the RBC charge for equity investment in a holding company (item 1), and then continue by providing a brief discussion of the charges for the remaining types of equity investments (items 8 through 12).

Holding Company

For investment in a holding company, the RBC charge is 0.225 times the holding company value in excess of the carrying value (i.e., holding company value minus carrying value) for indirectly owned insurance affiliates calculated in R_0. Let's use an example to illustrate. In this example we will use another fictional company named Reporting Entity Insurance Company (REIC).

Assume REIC purchased 100% of the shares in a holding company called HC Company in 2011. Also assume that HC Company has the following assets on its December 31, 2011, balance sheet, as illustrated in Table 90.

TABLE 90

Total assets held by HC Company as of December 31, 2011		
Type of asset	Assets 12/31/2011	Distribution by asset type
U.S. Sub Life Insurance Company	5,000,000	10%
U.S. Sub Property/Casualty Insurance Company	15,000,000	30%
UK Sub Property/Casualty Insurance Company	10,000,000	20%
Cash	8,000,000	16%
Other assets	12,000,000	24%
Total assets	50,000,000	100%

U.S. Sub Life Insurance Company, U.S. Sub Property/Casualty Insurance Company and UK Sub Property/Casualty Insurance Company are directly owned by HC Company and indirectly owned by REIC as a result of REIC's ownership of HC.

Recall that the book/adjusted carrying value is used in computing the R_0 charge. The carrying value of an indirectly owned insurance subsidiary will depend on the carrying value of the holding company and percentage of the holding company carrying value that the subsidiary represents. Let's continue our example to illustrate.

Assume that REIC carried HC Company on its Annual Statement at year-end 2011 at a value of $55 million, which is equal to the market value of the shares. Of this amount, 10%, or $5.5 million, would represent the carrying value of U.S. Sub Life Insurance Company for purposes of determining the R_0 charge in REIC's RBC calculation. Similarly, $16.5 million (= 0.3 * $55 million) would be the carrying value for U.S. Sub Property/Casualty Insurance Company, and $11 million is the value for the alien insurer, UK Sub Property/Casualty Insurance Company.

If REIC had only purchased, for example, 66% of the shares of HC Company, each carrying value would be adjusted by REIC's ownership interest of 66%. The corresponding values would be $3.63 million, $10.89 million and $7.26 million for the three subsidiaries of HC Company, respectively.

Now back to our discussion of the R_1 charge for investments in holding companies. The RBC charge is 0.225 times the holding company value in excess of the carrying value of indirectly owned insurance affiliates calculated in R_0. In our example, this would be 0.225 times $22 million, where $22 million is derived as in Table 91.

TABLE 91

Reporting Entity Insurance Company (REIC)	Carrying value
HC Company	55,000,000
U.S. Sub Life Insurance Company	5,500,000
U.S. Sub Property/Casualty Insurance Company	16,500,000
UK Sub Property/Casualty Insurance Company	11,000,000
Subtotal, indirectly owned insurance subsidiaries	33,000,000
Holding company minus indirectly owned subs	22,000,000

Insurance Affiliates that are Subject to RBC

As noted in the earlier section of this paper titled "Insurance Subsidiaries Subject to RBC – Ownership in Common Stock", the RBC charge for investments in common stock in excess of the amount allocated to R_0 is allocated to R_2.

Unaffiliated Stocks

The RBC charge for unaffiliated preferred stocks and hybrid investments is equal to the book/adjusted carrying value of the asset multiplied by a factor, where the factors vary based on the NAIC class. The classes for preferred stocks and hybrid securities are the same as those for bonds, as are the RBC factors, with the exception that there are no federal government guaranteed preferred stocks:

TABLE 93[154]

NAIC class for preferred stocks and hybrid securities	RBC factor
Class 01 – Highest credit quality	0.003
Class 02 – High credit quality	0.010
Class 03 – Medium credit quality	0.020
Class 04 – Low credit quality	0.045
Class 05 – Lowest credit quality	0.100
Class 06 – In or near default	0.300

The RBC charge for unaffiliated common stocks is computed separately for non-government money market funds and other admitted unaffiliated common stocks. The computation applies a specific factor to the book/adjusted carrying value. The RBC factor for non-government money market funds of 0.003 is equal to that for cash because these

[154] Note Table 92 has been omitted from this version of our publication. It serves as a placeholder to illustrate the R2 calculation and will be included when the NAIC resolves the inconsistency between the written instructions to RBC and the NAIC spreadsheet.

investments are considered to be of the same risk level. The factor applied to other common stocks is 0.150.

Real Estate, Schedule BA and Miscellaneous Assets

In general, the RBC charge for real estate investments, other long-term invested assets (as per Schedule BA) and miscellaneous assets are computed as a factor times the book/adjusted carrying value for those assets. The RBC charges for each investment are as follows:

- 0.100 times the book value of real estate (Annual Statement Schedule A assets)
- 0.200 times the book value for other long-term invested assets (Annual Statement Schedule BA assets) other than collateral loans
- 0.050 times the book value for receivables for securities, aggregate write-ins for invested assets and derivatives

R_2 for Fictitious

Table 94 shows the calculation of R_2 for Fictitious Insurance Company. As with the calculation of R_1 for Fictitious, we had to make several assumptions because only excerpts of Fictitious' Annual Statement are included with this publication. One such assumption that is relevant to the calculation of R_2 is the distribution of stock by RBC class.

TABLE 94[155]

R_2 Charge for Fictitious Insurance Company NAIC Risk-Based Capital 2011			
Total R_0 Charge – Affiliated Insurance Co. Asset Risk			0

Asset concentration RBC	87,825,000	0.0010	87,825
Total R_2 Charge – Equity Assets Risk			**4,303,948**

THE RBC CHARGE FOR CREDIT RISK (R_3)

Credit risk reflects counterparty (the entity owing the insurance company money) credit exposure for receivables, including those for reinsurance. It contemplates the risk that the counterparty will default (or not pay in whole or in part) and the risk associated with estimating the amounts recorded for counterparty receivables.

R_3 is the charge for credit risk associated with the following:

1. Non-invested assets
2. Reinsurance recoverable (reinsurance RBC)
3. Health credit risk

[155] Note the RBC charge is greater than or equal to 0 as in the case of Aggregate Write-ins (W/I) for Invested Assets in Table 94.

The charge to the property/casualty industry in 2011 for R_3 is provided in Table 95.[156]

TABLE 95

Aggregate for 2,600 Property/Casualty Companies R_3 Component of 2011 RBC USD in 000s		
R_3 – Asset Risk – Credit	Totals	Distribution
1. Non-invested assets	3,172,945	20%
2. Reinsurance RBC	12,341,422	80%
3. Health credit risk	-	0%
Total R_3	**15,514,367**	**100%**

As expected, the risk associated with uncollectible reinsurance (due both to reinsurers unable and unwilling to pay) comprised the largest portion of the R_3 charge in 2011. While the health credit risk charge will be introduced below for completeness, it was $0 in 2011 and has been since at least 2007.

Non-invested assets

R_3 includes the charge for risk associated with credit exposure resulting from the following non-invested assets listed on the balance sheet:

1. Investment income due and accrued
2. Amounts receivable relating to uninsured plans
3. Federal income tax recoverable
4. Guaranty funds receivable or on deposit
5. Recoverable from parent, subsidiaries and affiliates
6. Aggregate write-in for other than invested assets

The RBC charge for these assets is the net admitted value included in column 3 of the asset side of the balance sheet (page 2 of the Annual Statement), each multiplied by a factor of 0.050, with the exception of investment income due and accrued, which receives a factor of 0.010. The charge for investment income due and accrued is equal to the RBC factor applied to unaffiliated class 02 bonds because most of the investment income due and accrued comes from bonds, which are typically the largest holding for a property/casualty insurance company. The receivable assets are generally short-term balances generated in the normal course of doing business. The capital charges for these assets are lower than other long-term recoverables.

[156] NAIC, *Property & Casualty Industry RBC Results*, 2012, http://www.naic.org/documents/research_stats_rbc_results_pc.pdf, Table 5, pages 5 through 7.

Reinsurance recoverables

The R_3 charge for reinsurance recoverables is computed as 10% of the reinsurance recoverable amounts in column 15 of Schedule F, Part 3, of the Annual Statement. This charge reflects the risk that reinsurers can't or won't pay amounts the reporting entity expects to receive under the terms of its reinsurance contracts. Certain reinsurers are excluded from this charge. Recoverables from a reporting entity's cession to U.S. parents, subsidiaries and affiliates, state-mandated involuntary pools and associations, and federal insurance programs are excluded from the calculation. These recoverables are deemed to be of less risk because they are either due from a related entity, subject to joint and several liability on all participating companies, or backed by a governmental body. Further, a charge for involuntary pools was scrutinized by insurance companies at the onset because it was deemed as a disincentive for insurers to serve the involuntary market.[157]The recoverables due from reinsurers subject to the charge are reduced for the additional liability already established in the provision for reinsurance on line 16 of the liability side of the balance sheet and as calculated in Schedule F, Part 7. Recall from *Chapter 7. Statutory Balance Sheet*: A Measure of Solvency, the provision for reinsurance is a penalty that applies to all reinsurers that are slow to pay, disputing amounts owed to the ceding company, and/or unauthorized without posting required collateral.

Because the calculation of the provision for reinsurance considers all reinsurers, the provision must be allocated to those reinsurers that are subject to the R_3 charge.

The 10% was determined judgmentally and has remained since inception of the RBC formula for property/casualty insurers. Despite the relatively low impact that R_3 appears to have on the industry as a whole, the charge has been subject to criticism from insurance carriers, who have argued that the charge doesn't differentiate between highly rated reinsurers or those recoverable that are backed by collateral.[158] However, this charge continues to be included in the calculation. Over the years there has been considerable focus in the property/casualty industry on reinsurance. For one, uncollectible reinsurance was deemed partly to blame for the failure of Mission Insurance Company and Transit Casualty Company,[159] which helped set RBC in motion for the property/casualty industry. And throughout the years, reinsurance has

[157] Feldblum, S., "NAIC Property/Casualty Insurance Company Risk-Based Capital Requirements," PCAS LXXXIII, 1996, pages 322.
[158] Feldblum, S., "NAIC Property/Casualty Insurance Company Risk-Based Capital Requirements," PCAS LXXXIII, 1996, pages 317-319.
[159] U.S. House of Representatives Subcommittee on Oversight and Investigations of the Committee on Energy and Commerce, Failed Promises-Insurance Company Insolvencies, 101 Cong., 2rid sess., February 1990. Washington, D.C.: GPO, 1993.

been used in certain situations inappropriately to enhance a company's financial position or hide poor financial results.[160]

The RBC charge for reinsurance recoverable is split 50%/50% between R_3 and R_4 if the reserve RBC (see discussion below) exceeds the sum of the credit risk RBC for non-invested assets and reinsurance recoverables. Otherwise, the full amount of the reinsurance recoverable RBC charge is included in R_3.

Health credit risk

Finally, R_3 also includes a charge for health credit risk for those reporting entities writing 5% or more in accident and health premiums in any of the last three years. This charge considers the risk associated with transferring health risks (morbidity and mortality) to health care organizations through fixed prepaid amounts (i.e., capitated payments).[161] There is a risk of non-payment in these situations (similar to traditional reinsurance recoverables). A charge is applied to reflect the credit risk associated with the portion of capitated payments over and above security held by the reporting entity for these organizations.

Given that the charge to the industry was zero in 2011, we will not go into details of the calculation of this charge.

R_3 for Fictitious

Table 96 illustrates the calculation of R_3 for Fictitious.

[160] Feldblum, S., "NAIC Property/Casualty Insurance Company Risk-Based Capital Requirements," PCAS LXXXIII, 1996, pages 317-319.

[161] Health care organizations include health maintenance organizations or managed care organizations.

Half of Reinsurance Recoverables Moved to R_4 Calculation			561,463
Total R_3 Charge – Credit-Related Asset Risk			**720,373**

THE RBC CHARGE FOR RESERVE RISK (R_4)

As noted, R_4 is the largest of the RBC charges for the property/casualty insurance industry. Reserve risk contemplates the risk that a reporting entity's loss and LAE reserves will develop adversely. This charge is calculated separately by line of business using Schedule P data for the last 10 years.

R_4 is the charge for reserve risk associated with the following:

1. Reinsurance recoverable (reinsurance RBC)
2. Unpaid loss and LAE (reserve RBC)
3. Excessive premium growth
4. Accident and Health (A&H) claim reserves (health RBC)

Table 97 provides perspective on the relevance of each component of R_4 based on the NAIC report on 2011 RBC results.[162]

[162] NAIC, *Property & Casualty Industry RBC Results*, 2012, http://www.naic.org/documents/research_stats_rbc_results_pc.pdf, Table 5, pages 5 through 7.

TABLE 97

Aggregate for 2,600 Property/Casualty Companies R_4 Component of 2011 RBC USD in 000s		
R_4 – Underwriting Risk – Reserves	Totals	Distribution
1. Reinsurance RBC	8,005,311	8%
2. Reserve RBC	93,259,716	91%
3. Excessive premium growth	709,540	1%
4. Health RBC	202,078	0%
Total R_4	**102,176,645**	**100%**

Reserve RBC comprised the vast majority of the charge in 2011.

Within the following sections we provide a discussion of each of these categories, with considerable focus on the reserve RBC since this represents the crux of the R_4 charge.

Reinsurance RBC

Recall from our discussion of the R_3 charge, reinsurance RBC represents the minimum amount of capital included in the RBC formula that would be needed to survive the risk of reinsurer default.

The reinsurance RBC within R_4 is equal to the other half of the reinsurance recoverable amount computed in R_3 unless the reserve RBC is less than the RBC for reinsurance plus non-invested assets. If this is the case, the entire reinsurance RBC charge is included in R_3 and the reinsurance RBC within R_4 is zero. The reserve RBC limitation is put in place so the insurance company cannot diversify away a portion of its credit risk in the situation where the company has limited net reserves.

Reserve RBC

Reserve RBC is determined by applying a set of factors (called company RBC percent) to the company's net loss and LAE reserves before non-tabular discount. Nominal (undiscounted) reserves are used because consideration for investment income is made by applying the same set of discount factors to all property/casualty insurance companies (called the adjustment for investment income). The use of a common method for considering investment income puts all property/casualty companies on an equivalent basis rather than having differences due to discount rates and payout patterns.

The calculation is performed separately by line of business using the same lines of business as used in Schedule P of the Annual Statement, with the exception that certain lines of business are combined. The occurrence and claims-made categories are combined for other liability and product liability, and reinsurance property and financial lines are combined.

Once the calculation of the base loss and LAE reserve RBC is performed for each line of business, two adjustments are made: one for loss sensitive (e.g., retrospectively rated) contracts and the other for loss concentration. Similar to the asset concentration factor in R_1 and R_2, the loss concentration factor considers diversification in the RBC calculation. Both result in reductions to the reserve RBC.

We will discuss each component of the calculation, providing examples where applicable.

Base loss and LAE reserve RBC by line of business

The loss and LAE reserve RBC by line of business is computed as follows:

Equation 1: Base Loss and LAE Reserve RBC

= [[Company RBC % + 1] * Adjustment for investment income] – 1
* [Net loss and LAE reserve + Other discounts not in the reserves].

The net loss and LAE reserves used in this calculation are provided in Schedule P, Part 1, column 24, for each line of business. As previously noted, these are gross of non-tabular discount, but net of tabular discount.

Company RBC percentage

The company RBC percent is the crux of the reserve risk charge. According to the NAIC RBC instructions, "These factors are designed to provide a surplus cushion against adverse reserve development."[163]

For each line of business, the company RBC percent is determined based on a 50% weighting applied to the straight industry reserve RBC percent and 50% applied to the industry reserve RBC percent adjusted for the company's own experience.

- Industry reserve RBC percent
  The industry reserve RBC percent is a set of factors provided by the NAIC and is the same for all property/casualty insurance companies. There is one factor for each Schedule P line of business. According to the NAIC RBC instructions, these percentages "are based on detailed analysis of historical reserve development patterns found in Parts 2 and 3 of Schedule P for each major line of business."[164] They have been determined in the past by computing the ratio of net incurred loss and defense and cost containment (DCC) development during a particular period from Schedule P, Part 2, to the net loss and DCC reserves as of the earlier period (calculated by subtracting the figures in Schedule P, Part 3 from those in Part 2). The

[163] NAIC, *RBC Property & Casualty 2011 Forecasting & Instructions,* page 20.
[164] Ibid.

industry percent factor is selected based on the average for all companies within the property/casualty insurance industry, by line of business.

The industry RBC percent factors are not always updated annually, but rather on an as-needed basis. In fact, the factors in the original RBC model remained for well over 10 years. The only interim change was made to reflect the change in the format of Schedule P, such as when medical malpractice was split into its claims made and occurrence components.

The NAIC developed the original factors in 1993 based on an actuarial analysis using data evaluated as of 1991 and prior.[165] This analysis computed the aforementioned ratios of incurred loss and DCC to prior period reserves over each evaluation period provided in Schedule P, Parts 2 and 3 of the 1991 Annual Statement. Nine ratios were computed, the first of which provided development on accident years 1982 and prior over the period December 31, 1982, to December 31, 1991, as a ratio to loss and DCC reserves as of December 31, 1982. The remaining eight ratios were computed measuring development to December 31, 1991, for periods beginning December 31, 1983, through December 31, 1990. The nine ratios were calculated for each line of business by company. An average was computed over all companies for each evaluation period. The industry RBC percent factor for each line of business was set equal to the largest ratio over all of the evaluation dates. This is commonly referred to as the "worst-case year" ratio. The belief is that development of this magnitude could occur in the future because it occurred in the past.[166]

The original factors remained until 2008, when the NAIC adopted changes recommended by the American Academy of Actuaries P/C Risk-Based Capital Committee in a report titled *An update to P/C Risk-Based Capital Underwriting Factors: September 2007 Report to the National Association of Insurance Commissioners P/C Risk-Based Capital Working Group*. In this study, the Committee recognized that the insurance industry had been through many changes since the original factors were developed, namely changes in the underwriting cycle resulting in shifts in reserve redundancies/deficiencies. Furthermore, despite the formulaic approach of the worst-case year, the Committee found that the original factors could not be easily replicated and varied considerably relative to expectations as to the level of adverse development inherent in a particular line of business. The Committee therefore recommended developing a revised approach that would meet the following "criteria:

[165] American Academy of Actuaries, "An Update to P/C Risk-Based Capital Underwriting Factors: September 2007 Report to the National Association of Insurance Commissioners P/C Risk-Based Capital Working Group," page 3.
[166] Feldblum, S., "NAIC Property/Casualty Insurance Company Risk-Based Capital Requirements," PCAS LXXXIII, 1996, pages 327-329.

1. Simple to apply and understand;
2. Responsive to actual history and underlying risk;
3. Easily reproducible by future practitioners;
4. Statistically relevant;
5. Resulting in indications that could be adopted without disruptive swings in required capital for regulated companies."[167]

The revised approach differed from the original approach in four significant ways:

1. The historical data was filtered and screened to remove companies with insufficient or unusual data points. Examples include companies with less than 10 years of experience, and/or companies with negative paid, reserve and/or incurred loss and DCC in any one accident year.
2. Rather than selecting the ratio from the worst-case year over the average of all companies, the 87.5 percentile of all data points was used. "The 87.5 percentile was selected because it represents a conservative view of the risk in each line but is also broadly consistent with the existing factors."[168]
3. A floor was set such that the indicated industry reserve RBC percent factor resulted in a minimum charge of 5% after adjustment for investment income.
4. The indicated industry reserve RBC percent factors were capped to limit the change in the base loss and LAE reserve RBC. The Committee recommended a cap of 35%.[169]

For example, the indicated industry reserve RBC factor for private passenger automobile liability that was produced using the revised methodology before capping was 0.128, and the change in the investment income adjustment factor was 0.927. Using Equation 1 (assuming a net loss and LAE reserve balance of $1), the implied based loss and LAE reserve RBC is 0.046. As displayed below, this represented a change of -70.5% from the original industry reserve RBC factor of 0.254 with adjustment for investment income of 0.921:

Indicated base loss and LAE reserve RBC based on 2007 methodology before capping:

= [[[0.128 + 1] * 0.927] – 1] *$1
= 0.046

[167] American Academy of Actuaries, *An Update to P/C Risk-Based Capital Underwriting Factors: September 2007 Report to the National Association of Insurance Commissioners P/C Risk-Based Capital Working Group*, pages 2 and 3.
[168] Ibid, page 6.
[169] Ibid, pages 6 and 7.

Original base loss and LAE reserve RBC:

= [[[0.254 + 1] * 0.921] – 1] *$1

= 0.155

Change in base loss and LAE reserve RBC from original to revised (2007) methodology:

= 0.046 / 0.155 - 1
= -70.5%

Capped at 35%, the revised methodology produced an industry reserve RBC percent factor of 0.187, which was calculated as follows:

= [[[(-0.350 +1) * 0.155] +1] / 0.927] - 1
= 0.187

To summarize, the industry RBC reserve factor indicated from the revised 2007 methodology was 0.128 before capping and 0.187 after the 35% cap. The 35% cap reduced the impact of the change in methodology from the original factor of 0.254.[170]

The NAIC adopted the factors in 2008 using the revised methodology and indications of the September 2007 report, however with a cap at 15% instead of 35%. The revised factors were applied to RBC calculations for the 2008 reporting year. To continue with the previous example, capping at 15% resulted in an industry RBC reserve percent factor of 0.xxx, which was calculated as follows:

= [[[(-0.150 +1) * 0.155] +1] / 0.927] - 1
= 0.221[171]

Subsequent changes to the industry reserve RBC percent factors were also made and adopted in 2009 and 2010. The 2009 update applied a 15% cap to the factors adopted in 2008. That is, 2008 factors were substituted in for the "original" factors in the previous calculations, for purposes of capping the impact from the effects of the 2007

[170] Ibid, Appendix II, Exhibit I – III.
[171] American Academy of Actuaries, *Update to P/C Risk-Based Capital Underwriting Factors Presented to National Association of Insurance Commissioners P/C Risk-Based Capital Working Group*, March 2008.

revised methodology. This revision was adopted in 2009 and applied to the 2009 reporting year.[172]

Two changes were made in 2010. First, in March 2010, the American Academy of Actuaries P/C Risk-Based Capital Working Group updated the 2007 methodology but with 2008 data. As with the 2007 study, the factors were capped to cause no more than a 15% change to the current factors (2009 updated factors), and the minimum charge was set at 5%.[173] Second, in June 2010, the March 2010 study was updated using a 5% cap instead of 15%.[174] The 2010 study capped at 5% was adopted and applied to the 2010 reporting year.

- Company "development factor"

  The reporting entity's own loss experience is considered by adjusting the industry reserve RBC percent by the company "development factor" by line of business. This development factor is calculated as the ratio of the sum of incurred loss and DCC from nine prior accident years evaluated as of the current year to the sum of the initial evaluations of those incurred amounts. The current incurred loss and DCC values come from Schedule P, Part 2, column 10, with the initial values coming from the first incurred value shown for each accident year. The initial values lie along the diagonal. This development factor measures how the initial estimates of ultimate loss and DCC have developed based on what the company currently knows. The factor is capped at 400% to limit the impact of anomalous, one-time results.

  The reporting entity may not rely on its own experience in determining the company RBC percent if:

  1. Either the initial or current values shown in Schedule P, Part 2, are negative for any year.
  2. The current value is zero for any year.
  3. The sum of the initial values is zero across all years.

Adjustment for investment income

With the exception of workers' compensation tabular reserves, and instances where a company has explicitly requested and received permission from state regulatory authorities to discount non-tabular reserves, insurance companies are required to record loss and LAE

[172] American Academy of Actuaries, *2009 Update to P/C Risk-Based Capital Underwriting Factors Presented to National Association of Insurance Commissioners' P/C Risk-Based Capital Working Group*, December 2008.
[173] American Academy of Actuaries, *2010 Update to P/C Risk-Based Capital Underwriting Factors Presented to the National Association of Insurance Commissioners' Property Risk-Based Capital Working Group*, March 2010.
[174] Letter from the American Academy of Actuaries P/C Risk-Based Capital Working Group to the National Association of Insurance Commissioners Capital Adequacy (E) Task Force *Re: Risk-Based Capital Underwriting Factors – 2010 Update – Addendum Using 5 Percent Cap*, dated June 22, 2010.

reserves on an undiscounted basis under statutory accounting. This creates an inherent margin in surplus. For purposes of determining required capital under RBC, the reserves are adjusted to remove this margin.[175]

Similar to the industry reserve RBC percent, the investment income factors are provided by the NAIC. According to the NAIC RBC instructions, "This discount factor assumes a 5 percent interest rate. For lines of business other than workers' compensation and the excess reinsurance lines, the payment pattern is determined using an IRS type methodology applied to industry-wide Schedule P data by line of business; otherwise, a curve has been fit to the data to estimate the average payout over time. The discount factor for workers' compensation is adjusted to reflect the tabular portion of the reserves that is already discounted."[176] Tabular discounting is typically permitted only on the indemnity portion of workers' compensation reserves and not to the medical component due to the relatively fast-paying of medical expenses.

Similar to the industry reserve RBC percent, the investment income adjustment factors were updated in September 2007 from their original values. An approach similar to the original methodology was used, with the exception that updated data through 2005 was used.[177]

Other discounts not included in the reserves

The adjustment for investment income is applied to reflect non-tabular discount. It is applied to loss and LAE reserves on a net of reinsurance basis, net of tabular discount, but before any non-tabular discount, as provided in column 24 of Schedule P, Part 1. If for some reason the amounts included in column 24 are net of non-tabular discount, the amount of the non-tabular discount would need to be added back to the reserves before applying the adjustment for investment income.

These amounts are generally equal to zero; the amount of non-tabular discount is included in columns 32 and 33 of Schedule P, Part 1.

Adjustment for loss-sensitive business

The loss sensitive adjustment provides a discount for business that is written by the insurance company on contracts for which the premium is determined based on the insured's loss experience (i.e., retrospectively rated contracts). The loss experience is shared in whole or in part with the insured. Therefore, the risk of adverse loss development is also shared with the insured. The insurer needs less surplus to survive this risk of adverse loss development than it does if none of the policies were written on a loss sensitive basis thereby resulting in a

[175] Feldblum, S., "NAIC Property/Casualty Insurance Company Risk-Based Capital Requirements," PCAS LXXXIII, 1996, page 354.
[176] NAIC, *RBC Property & Casualty 2011 Forecasting & Instructions,* page 20.
[177] American Academy of Actuaries, *An Update to P/C Risk-Based Capital Underwriting Factors: September 2007 Report to the National Association of Insurance Commissioners P/C Risk-Based Capital Working Group*, page 5.

discount to the company's RBC reserve charge to reflect this reduction in risk. This discount is computed separately by line of business.

Prior to summing the reserve risk RBC over all lines of business written by the reporting company, an adjustment is made to reflect loss-sensitive business. The following provides the application of the loss-sensitive adjustment:

Equation 2: Loss and LAE RBC after discount
= Equation1 − Loss-sensitive discount
= Base Loss and LAE Reserve RBC − Loss-sensitive discount.

Where the loss-sensitive discount
= Loss-sensitive discount factor
* Base loss and LAE RBC (from Equation 1).

The loss-sensitive discount factor is 30% for net loss and expense reserves associated with direct loss-sensitive contracts and 15% for net loss and expense reserves associated with assumed loss-sensitive contracts. The difference stems from the potential offset associated with reinsurance contracts for commissions that are loss sensitive as well. Oftentimes such business is written with sliding scale commissions whereby the commission the ceding company receives from the reinsurer is dependent upon the loss ratio on the business; the lower the loss ratio, the higher the commission paid by the reinsurer to the ceding company, subject of course to specified limits. For example, the reinsurer may receive additional premium from the reinsured as losses emerge but in turn have to pay additional commission due to a reduction in loss ratio. As with direct loss-sensitive contracts, the risk of adverse development on assumed contracts is reduced; however, it is not reduced by as much due to the potential offset from ceding commissions.

The portion of net loss and expense reserves attributed to direct and assumed loss-sensitive contracts is found in column 3 of Schedule P, Parts 7A and 7B, respectively.

Adjustment for loss concentration

The loss concentration adjustment is applied to the sum of the RBC reserve charges for all lines of business and reflects diversification across the lines. The theory underlying this discount is that the reserves for each line of business written by an insurance company would not be expected to develop adversely or favorably at the same time, assuming such development is random.

The final net loss and LAE RBC charge is computed as follows:

Equation 3: Net loss and LAE RBC
= Total loss and LAE RBC after discount for all RBC lines * 1,000
* Loss concentration factor.

Where the loss concentration factor

$$= \frac{\text{Net loss and LAE for the largest line} * 0.30}{\text{Net loss and LAE for all lines combined}} + 0.70.$$

The loss concentration factor is determined by taking the percentage of total net loss and LAE reserves for the largest line of business to the total net loss and LAE for all RBC lines combined, multiplying this percentage by 0.300 and then adding the result to 0.700.[178]

Because all adverse loss development may not always be a random fluctuation in losses, such as when the company increases loss reserves to improve its earnings position, adverse development across lines may not be totally independent. This formula recognizes that there may be some interdependence between lines of business.

A monoline writer would not receive any discount, as the calculation would be 1.00 * 0.300 + 0.700, which produces a loss concentration factor of 1.000. However, a company writing 60% of its business in its largest line would receive a discount to its RBC reserve risk charge of 12%, or a loss concentration factor of 0.880 (0.60 * 0.300 + 0.700), which is a discount of 12% to the RBC reserve risk.

Illustration of reserve RBC calculation

The following provides an illustration of the reserve RBC calculation for REIC. Assume REIC writes only four lines of business: homeowners/farmowners (HO/FO), private passenger automobile liability (PPAL), workers' compensation (WC) and other liability (OL). The source of the company's own data is Schedule P, which is provided in thousands of U.S. dollars.

[178] For clarity, largest line is determined based on the Schedule P line of business having the highest amount of net loss and LAE reserves as of the filing date. Note, despite being separate lines of business within Schedule P, claims-made and occurrence business are combined for purposes of this calculation. For example, other liability claims-made and occurrence would be added together in determining whether other liability is the largest line.

TABLE 98

Reporting Entity Insurance Company (REIC)							
	Given the following data:	HO/FO	PPAL	WC	OL	Total All Lines	Source

(13)	Loss & LAE RBC After Discount	1,369	931	1,846	3,980	8,138	*= (10) - (12)*
	Step 3: Net Loss & LAE RBC * 1,000						
(14)	Distribution of Loss & LAE Reserves by Line	21%	17%	36%	26%		*= (5) by line / (5) total*
(15)	Loss Concentration Factor					0.809	*= 0.300 * Max of (14) + 0.700*
(16)	**Net Loss & LAE RBC * 1,000**					**6,573,735**	*= (13) * (15) * 1,000*

As displayed in Table 98, the reserve RBC included in the R_4 charge for REIC is $6,215,668. The main driver of the reserve RBC is the company loss and LAE RBC percent. This percentage is higher than the industry RBC percent in line 3 because REIC's ultimate estimates tend to develop adversely, as evidenced by the ratios of company development to industry development in excess of 1.000 in line 8 above.

Table 99 provides another example of the detailed R_4 calculation for the commercial automobile liability (CAL) line of business for Fictitious Insurance Company. This calculation uses the financial statements and Schedule P line detail found in other examples within this publication.

TABLE 99

Loss-sensitive Discount for Loss and Expense Reserves	1,247
Loss and LAE Reserve RBC	380,009

Excessive premium growth

The estimation of unpaid loss and LAE reserves is subject to greater uncertainty for companies that are growing rapidly. The reasons are twofold. First, an insurance company does not have as much insight into new business as it does into risks that are currently on the books. Second, the estimation of unpaid claims is more difficult for a growing company rather than a company in a steady state. Consider a company that decides to grow its writings by 20% over the course of a year. As a company grows throughout the year, the average writings are more heavily skewed toward the second half of the policy year. Without explicit consideration for this shift, traditional actuarial projection techniques will not adequately capture the lag in loss emergence and therefore understate the reserve need. However, the difficulty is in determining how exactly to consider this shift.

In the RBC calculation, excessive growth is defined as a three-year average growth rate in gross written premiums that is in excess of 10%. A growth rate of 10% is deemed to be a normal annual increase in premium volume. The growth rate for any single year is capped at 40%. The excess percentage (excess of 10%) is called the RBC average growth rate factor.

Average growth rate factor
= Minimum {maximum (average gross premium growth over three years, 0.10), 0.40} – 0.10.

For purposes of this calculation, gross written premiums are equal to direct written premiums from line 35 of column 1 of the Underwriting and Investment Exhibit (U&IE), plus assumed premiums from non-affiliates in column 3. To perform this calculation, Part 1 of the U&IE is required for each of the past four years. The calculation is performed using as many years as

possible, but no more than four; if the company only has one year of experience, only one year is used. However if the company is a start-up, a growth rate of 40% is used. And, if a company has no gross written premium in the current year, it is assumed not to be growing, and a growth rate of zero is used.

This calculation is formed on a group basis, for those companies that are part of a group. Therefore, each member of the group will have the same RBC average growth rate factor. The group basis is used to neither punish nor reward individual legal entities that might be growing due to a realignment of business from one company within the group to another. In this case the growth is not attributed to new business but rather a transfer or risks from one company to the other.

In addition, business acquired or divested as a "shell" is included in the calculation of the growth rate only to the extent that the liabilities are retained by the reporting entity. And, servicing carriers for assigned risk pools can exclude the written premiums associated with the involuntary pool, as the insurer has little or no control over the assignment of such risk.

The RBC average growth rate factor is multiplied by 0.450 of the net loss and LAE reserves as per the total line in Schedule P, Part 1, Summary, column 24.

Excessive premium growth charge for loss and LAE reserves =

RBC average growth rate factor * 0.450 * net loss and LAE reserves.

The 0.450 has remained unchanged since the original RBC formula for property/casualty insurers was implemented. It was determined by a member of the American Academy of Actuaries RBC Task Force (Mr. Allan Kaufman) by studying the average development in net loss and LAE reserves experienced by companies that experienced growth in excess of 10%, relative to development observed by the remainder of the industry.[179] The 0.450 is already adjusted for discount using a factor of 0.90, which was what Kaufman approximated to be the average discount factor for all lines of business.[180]

Health RBC

In addition to the charge for property/casualty lines of business, a health RBC is required for those property/casualty insurers that write 5% or more in accident and health premiums in any of the past three years. We will not go into the details of this calculation, but note that the health RBC calculation is based on the RBC formula for life insurance.

Excessive growth charge on loss and LAE reserves	51,557,000	0.0000			0
Half of Reinsurance RBC					561,463
Total R_4 Charge – Underwriting Risk – Reserves					**9.542,613**

[181] We have assumed that the percentage of Fictitious' net loss and expense reserves that emanates from loss-sensitive contracts written on a direct basis is: 1.09% for commercial automobile liability, 12.3% for workers' compensation, 0.5% for other liability, and 0% for all other lines and for loss-sensitive contracts written on an assumed basis.

THE RBC CHARGE FOR WRITTEN PREMIUM RISK (R_5)

The final category of the RBC charge for property/casualty insurers is the R_5 charge. This is the charge for reserve risk associated with the following:

1. Net written premium (written premium RBC)
2. Excessive premium growth
3. Health premium (health premium RBC)
4. Health stabilization

As displayed in Table 101, written premium RBC comprised nearly all (99%) of the R_5 charge for the property/casualty industry in 2011. [182]

TABLE 101

Aggregate for 2,600 Property/Casualty Companies R_5 Component of 2011 RBC USD in 000s		
R_5 – Underwriting Risk – Written Premiums	Totals	Distribution
Written premium RBC	55,005,221	99%
Excessive premium growth	359,836	1%
Health premium RBC	367,044	1%
Health stabilization	22,368	0%
Total R_5	**55,754,469**	**100%**

The following provides a brief discussion of each of the first two categories of the R_5 risk charge. As previously noted, we will not go into details of the charge for health insurance. As displayed in Table 101, the charge for health premium RBC and stabilization were immaterial to the industry in 2011. The 2011 statistics for the property/casualty industry have been consistent since at least 2007.

Written premium RBC

Written premium risk contemplates the risk that future business written by the company will be unprofitable. Ideally the charge for this risk should be based on business written in the following year, but since that is an unknown quantity, business written during the current year is used as a proxy. Similar to the reserve RBC, the written premium RBC is computed by applying a set of factors to the company's net written premiums during the current year by line of business. The calculation is done on the same lines of business as the reserve RBC with a different set of factors used in the calculation.

[182] NAIC, *Property & Casualty Industry RBC Results*, 2012, http://www.naic.org/documents/research_stats_rbc_results_pc.pdf, Table 5, pages 5 through 7.

As with the reserve RBC, once the calculation of the base net written premium RBC is calculated for each line of business, two reductions are made: one for loss-sensitive business and the other for premium concentration, as opposed to loss concentration. Premium concentration reflects diversification in writings across lines of business.

Because the mechanics generally follow those used in the reserve RBC charge, we will only discuss differences in the calculation for written premium RBC.

Base net written premium RBC by line of business

The net written premium RBC by line of business is computed as follows:

Equation 4: Base net written premium RBC

= Net written premium for the current calendar year

* [[Company RBC loss and LAE ratio * Adjustment for investment income] + Underwriting expense ratio - 1.000].

The net written premiums for each line of business are provided in column 6 of Part 1B of the U&IE within the Annual Statement. Aggregate write-ins for other lines of business are included within the other liability line of business.

Company RBC loss and LAE ratio

As with the company RBC percent used in the reserve RBC, the company RBC loss and LAE ratio is the crux of the written premium risk charge. For each line of business, the company RBC loss and LAE ratio is determined based on a 50% weighting applied to the straight industry RBC loss and LAE ratio and 50% applied to the industry RBC loss and LAE ratio adjusted for the company's own experience. The industry RBC loss and LAE ratio is given by the NAIC and is the same for all property/casualty insurance companies.

As with the industry reserve RBC percent, the industry RBC loss and LAE ratios did not change from their original value until 2008, when the NAIC adopted changes recommended by the American Academy of Actuaries P/C Risk-Based Capital Committee.[183] The original industry RBC loss and LAE ratios were based on the "worst-case" accident year ratio by line of business that resulted from taking a simple average over all companies. Company loss and LAE ratios by accident year were taken from what is currently column 31 of Schedule P, Part 1. The revised methodology recommended by the P/C Risk-Based Capital Committee instead uses the 87.5 percentile of all data points.

Consistent with the industry reserve RBC percent factor, a floor was set such that the indicated industry RBC loss and LAE ratio resulted in a minimum charge of 5% after

[183] Note, however, changes were made to reflect structural changes to Schedule P over the time period, such as the separation of medical malpractice into its occurrence and claims-made components.

adjustment for investment income. In addition, the indicated industry RBC loss and LAE ratios were capped to limit the change in the base loss and LAE reserve RBC. The data was also filtered and screened to remove anomalous values (e.g., companies having less than an average of $500,000 in earned premium or a loss ratio of 0% for any one year). Further, loss ratios were capped at 300%.[184]

The reporting entity's own experience is considered by adjusting the industry loss and LAE ratios by the ratio of the company average loss and LAE ratio to the industry average loss and LAE ratio. The company average loss and LAE ratio is a straight average over the past 10 accident years of the net loss and LAE ratios provided in Schedule P, Part 1, column 31. Loss and LAE ratios for any accident year in excess of 300% are capped at that value in consideration of anomalous, one-time results.

Note that the reporting entity may not rely on its own experience in determining the company RBC loss and LAE ratio if:

1. Either the net earned premium of loss and LAE ratio for any accident year is zero or negative.
2. More than one year's net earned premium is less than 20% of the average over all years (if only one year meets this criteria the company can exclude this year from the average).
3. More than three years' net earned premiums are less than 20% of the average over all years for *all* lines (otherwise the company can exclude this specific year from the average).

Adjustment for investment income

The investment income factors are provided by the NAIC and calculated using the same assumptions as in the reserve RBC, with the exception that discounted years differ because written premium is discounted as opposed to reserves.

Underwriting expense ratio

This is the company's own underwriting expense ratio for the current year capped at 400%. It is equal to the ratio of other underwriting expenses incurred in the current year per line 4 of the income statement, divided by total net written premium for the current year from Part 1B, column 6 of the U&IE.

Underwriting expense ratio =
Other underwriting expenses / Net written premium.

[184] American Academy of Actuaries, *An Update to P/C Risk-Based Capital Underwriting Factors: September 2007 Report to the National Association of Insurance Commissioners P/C Risk-Based Capital Working Group*, pages 2 and 5.

Adjustment for loss-sensitive business

Prior to summing the base net written premium RBC over all lines of business written by the reporting company, an adjustment is made to reflect loss-sensitive business. The following provides the application of the loss-sensitive adjustment:

Equation 5: Net written premium RBC after discount
= Equation 4
- Loss-sensitive discount
= Based net written premium RBC
- Loss-sensitive discount.

Similar to the reserve RBC, a 30% discount is applied to the portion of the base net written premium RBC that is attributed to direct loss-sensitive contracts, and a 15% discount is applied to the base net written premium for assumed contracts. The portion of written net written premium attributed to direct and assumed loss sensitive contracts is found in column 6 of Schedule P, Parts 7A and 7B, respectively.

Adjustment for premium concentration

The final net written premium RBC charge is computed as follows:

Equation 6: Net written premium RBC
= Equation 5
* Premium concentration factor
= Total net written premium RBC after discount
* Premium concentration factor.

The premium concentration factor is determined by taking the percentage of total net written premiums that the largest line of business represents, multiplying this percentage by 0.300 and then adding the result to 0.700. As with the loss concentration factor, a monoline writer would not receive any discount, as the calculation would be 1.00 * 0.300 + 0.700, which produces a premium concentration factor of 1.000. However, a company writing 60% of its business in its largest line would receive a discount to its net written premium RBC charge of 12%, or a premium concentration factor of 0.880 (= 0.60 * 0.300 + 0.700).

Illustration of written premium RBC calculation

Table 102 shows the written premium RBC calculation for REIC used in our illustration of Reserve RBC. The source of the company's net written premium data is Part 1B of the U&IE, which is provided in U.S. dollars.

TABLE 102 (USD)

Reporting Entity Insurance Company (REIC)							
	Given the following data:	HO/FO	PPAL	WC	OL	Total All Lines	Source

	(a) % Direct Loss Sensitive	0.0%	0.0%	13.0%	0.0%		*Company Schedule P, Part 7A, Col 6*
	(b) % Assumed Loss Sensitive	0.0%	0.0%	0.0%	0.0%		*Company Schedule P, Part 7B, Col 6*
	Calculation of Written Premium RBC:	**HO/FO**	**PPAL**	**WC**	**OL**	**Total All Lines**	
	Step 1: Base Written Premium RBC						
(8)	Ratio of Company Average Loss & LAE Ratio to Industry	0.873	0.900	1.059	1.473		*= (2) / (1)*
(9)	Company Loss & LAE Ratio	0.878	0.921	1.063	1.288		*= 50% of (3) + 50% of (8)*(3)*
(10)	Base Loss & LAE WP RBC Charge	920,209	859,122	1,011,496	1,708,086		*= (5) * { [(9) * (4)] + (6) - 1 }*
	Step 2: Net Written Premium RBC After Discount						
(11)	Loss-sensitive Factor	-	-	0.039	-		*= 30% of (7a) + 15% of (7b)*
(12)	Loss-sensitive Discount	-	-	39,448	-		*= (11) * (10)*
(13)	Net Written Premium RBC After Discount	920,209	859,122	972,048	1,708,086	4,459,464	*= (10) - (12)*
	Step 3: Net Written Premium RBC						
(14)	Distribution of WP by Line	31%	26%	23%	20%		*= (5) by line / (5) total*
(15)	Premium Concentration Factor					0.794	*= 0.300 * Max of (14) +0.700*
(16)	**Net Written Premium RBC**					**3,542,797**	*= (13) * (15)*

As displayed in Table 102, the written premium RBC that is included in the R_5 charge for REIC is $3,542,797. Here the company average loss and LAE ratio for the past 10 years (line 2) is better than the industry average loss and LAE ratio (line 1) for the personal lines (HO/FO and PPAL) and worse for the commercial lines (WC and OL). Thus, the company loss and LAE ratio in line 9 is lower than the industry ratio in line 3 for the personal lines and higher for the commercial lines. In fact, the ratio is substantially higher for OL given the poor average loss ratio over the past 10 years, which is causing a higher overall written premium RBC for OL

than the other three lines of business, despite the fact that the premium writings are the lowest for OL.

Table 103 provides another example of the R_5 calculation for CAL for Fictitious.

TABLE 103

R_5 Charge for Commercial Automobile Liability (CAL) *Fictitious Insurance Company* *NAIC Risk-Based Capital 2011*	
R_5 – Written Premium Risk	
Industry Average Loss and Loss Expense Ratio	0.679

Company Average Loss Ratio/Industry Loss Ratio	0.910
Industry Loss & LAE Ratio	0.988
Company RBC Loss & LAE Ratio	0.944
Company Underwriting Expense Ratio	0.317
Net Written Premium	2,250,000
Adjustment for Investment Income	0.89
Net Written Premium RBC Before Discounts	353,610
Percent Loss-sensitive Direct NPW	0.008
Loss-sensitive Direct NPW Discount Factor	0.300
Loss-sensitive Discount for Direct NPW	849
Total NPW RBC	352,761

Excessive premium growth

The RBC average growth rate factor is calculated the same as that for reserve risk. The factor differs in its application however. In the case of R_5, the excessive growth charge is applied to net written premium rather than reserves and multiplied by 0.225, rather than 0.450. The net written premium is obtained from the total line in Part 1B, column 6, of the U&IE. The factor of 0.225 was determined by Kaufman based on a study of the loss ratio for companies experience growth in excess of 10% versus all companies in the industry. As with the 0.450 factor, the factor applied to net written premium of 0.225 has been adjusted for discounting by 0.90.

R_5 for Fictitious

Table 104 provides the R_5 portion of the calculation for Fictitious.

TABLE 104

RBC MODEL ACT

Each state's statutes define a minimum amount of capital that a company must have to obtain a license in that state. These amounts vary by state and by lines of business but are usually relatively low, from $1 million to $5 million. These minimum capital amounts do not account for the characteristics and risk level of individual insurance companies.

The purpose of RBC is to help regulators identify insurers that are in financial trouble and that need regulatory attention. Therefore, the RBC requirements attempt to individualize

[185] We have assumed that the percentage of Fictitious' net written premium that emanates from loss-sensitive contracts written on a direct basis is: 0.8% for commercial automobile liability, 5.5% for workers' compensation, 0.3% for other liability, and 0% for all other lines and for loss-sensitive contracts written on an assumed basis.

minimum capital requirements for each insurer. RBC is not a target-level of capital that strong insurers should hold; rather, it computes a minimum level of capital adequacy that a company must have to operate.

The RBC is a dollar amount calculated from the NAIC RBC formula. The RBC that results from the formula is compared to a company's total adjusted capital. Total adjusted capital is equal to the company's policyholders' surplus from page 3 of the Annual Statement that is reduced by:

1. The amount of non-tabular discount from Schedule P, Part 1, Summary, columns 32 and 33.
2. Tabular discount on medical reserves included in Schedule P, Part 1, Summary, column 24.

Additionally, a property/casualty insurer that owns a life insurance company subsidiary adjusts its surplus for the same amounts that the life subsidiary does for RBC purposes, namely by adding the asset valuation reserve and 50% of the dividend liability to surplus.

RBC ratio is the name used in the insurance industry to describe the ratio of total adjusted capital to ACL. While discretionary, ACL is the point at which the insurance commissioner is authorized to take control over the company under the RBC Model Act. ACL is equal to 50% of the RBC value.

RBC ratio
= Total adjusted capital / ACL
= Total adjusted capital / (Total RBC after covariance * 0.50).

Regulatory action is permitted when total adjusted capital is within 50 percentage points of the ACL (i.e., when the RBC ratio is 150% or less). This is called the regulatory action level.

Table 105 summarizes the level of regulatory control relative to the percentage of adjusted capital to both the RBC and ACL benchmarks:

TABLE 105

Action Level	Adjusted capital as % of ACL Benchmark	Action Required if Inside Range	
		By State Insurance Department	By Company
1. Company action level	150% to 200%	None initially	Must submit a plan of action to the insurance commissioner of the domiciliary state explaining how the Company intends to obtain the needed capital or to reduce its operations or risks to meet the RBC standards.
2. Regulatory action level	100% to 150%	Commissioner has the right to take corrective action against the insurance company, such as by restricting new business. However, all action by the state insurance department is discretionary; nothing is mandated.	Must submit a plan of action to the insurance commissioner of the domiciliary state explaining how the Company intends to obtain the needed capital or to reduce its operations or risks to meet the RBC standards.
3. Authorized control level	70% to 100%	Regulatory action still discretionary, but the insurance commissioner is authorized to take control of the company.	None initially
4. Mandatory control level	Below 70%	Insurance commissioner of the domiciliary state must rehabilitate or liquidate the company.	None initially

As noted earlier, the detailed calculations of a company's risk charges are not available to the public. However, two metrics of RBC are disclosed in the Five-Year Historical Data exhibit of the Annual Statement: total adjusted capital and the ACL. A company's RBC ratio can be calculated by dividing the total adjusted capital by the ACL from the company's Five-Year Historical Data. Table 106 provides the RBC ratios for Fictitious from its 2011 Five-Year Historical Data exhibit.

TABLE 106

Data from Fictitious Insurance Company 2011 Five-Year Historical Data (USD)					
RBC Analysis	2011	2010	2009	2008	2007
28. Total adjusted capital	31,024,000	31,608,000	35,793,000	32,572,000	34,567,000
29. Authorized control level risk-based capital	5,552,000	6,097,300	5,854,000	5,685,000	6,517,000
Total adjusted capital as a percent of ACL (= line 28 / line 29)	559%	518%	611%	573%	530%

As displayed in Table 106, the company's RBC ratios have been well over 300 points above the company action level (ranging from 150% to 200% of ACL), the first action level within the RBC system.

As shown in the Actuarial Opinion Summary in the Appendix of this publication, Fictitious Insurance Company's range of reasonable reserve estimates is $43 million to $57 million with an actuarial central estimate of $50 million and carried reserves of $51.557 million. If the high end of the range was to materialize, adjusted capital would decrease by $5.443 million ($57 million - $51.557 million). At $25.581 million, the adjusted capital would still be well above the company action level of $11.776 million by $13.807 million. Some Appointed Actuaries look to the impact on capital resulting from a movement in reserves relative to the high end of the actuarial range for purposes of selecting a materiality standard (see *Chapter 16. Statement of Actuarial Opinion*).

According to the NAIC 2011 RBC instructions, 98.5% of property/casualty insurance companies fall within RBC levels that require no regulatory action (i.e., having total adjusted capital in excess of 200% of ACL).[186] However, just because a company's RBC results do not require regulatory attention from RBC does not mean that the company is strong financially. RBC is not meant to be the only tool used by regulators to evaluate financial solvency and therefore should not be used in isolation.

Here is the final calculation of NAIC RBC for Fictitious.

TABLE 107[187]

NAIC RBC 2011 Fictitious Insurance Company	
Total R_0 Charge – Affiliated Insurance Co. Asset Risk	0
Total R_1 Charge – Fixed Income Assets Risk	553,398
Total R_2 Charge – Equity Assets Risk	4,303,948
Total R_3 Charge – Credit-Related Asset Risk	720,373
Total R_4 Charge – Underwriting Risk-Reserves	9,542,613
Total R_5 Charge – Underwriting Risk-Net Written Premiums	3,591,141
Total required capital (= RBC after covariance)	11,104,365
Authorized control level RBC	5,552,182
Total adjusted capital	31,024,000
Ratio of adjusted capital to required capital	559%

TREND TEST

Companies with RBC ratios exceeding 200% are not necessarily free from regulatory attention. Companies having a RBC ratio of between 200% and 300% are subject to the trend

[186] NAIC, *RBC Property & Casualty 2011 Forecasting & Instructions,* page 43.

[187] Note that the authorized control level RBC of $5,552,182 is rounded to $5,552,000 in Table 12 and Table 70 for simplicity.

test. The trend test is an early warning of companies that may be on a path to incur an RBC ratio below 200%, thereby triggering the company action level. The test looks to see whether companies having a RBC ratio of between 200% and 300% also have a current year combined ratio that exceeds 120%. Companies meeting the trend test criteria are required to comply with the company action level requirements despite having a RBC ratio in excess of 200%.

The combined ratio is calculated as the sum of:

(1) Loss and LAE ratio
(2) Dividend ratio
(3) Expense ratio

The loss and LAE ratio is calculated as calendar year net incurred loss and LAE divided by net earned premium from the Statement of Income. The dividend ratio is equal to policyholders dividends divided by net earned premium from the Statement of Income. The expense ratio is equal to other underwriting expenses incurred plus aggregate write-ins for underwriting deductions from the Statement of Income divided by net written premiums from the U&IE.

THE FUTURE OF RBC

The NAIC is currently undertaking a comprehensive review of solvency regulation in the U.S. This review is known as the Solvency Modernization Initiative (SMI). One consideration with the SMI is the RBC approach to assessing the adequacy of a company's capital level. Going forward, RBC will be complemented with additional assessments that form part of the new Own Risk and Solvency Assessments (ORSA) that certain companies will be required to undertake (see *Chapter 25. Solvency II* for additional details).

The target of RBC has been to identify weakly capitalized companies and not necessarily to develop a specific universal capital level for all companies over a specified time horizon. The primary focus of targeting weakly capitalized companies will continue under SMI. The NAIC has indicated that a universal target capital level and/or specified time horizon across all business is not feasible. The NAIC believes these target levels should be different for type/line of business due to inherently different risks and credibility issues around developing distributions that make the validation of safety levels difficult.[188] Nonetheless, it is expected that some changes will be made with respect to RBC as part of the SMI process. The NAIC is currently considering the following with respect to the RBC process:[189]

- Documenting the development of RBC over the past 20 years to retain the institutional knowledge of the process, including the reasons for changes to the calculation over its history.

[188] NAIC, "Solvency Modernization Roadmap," August 31, 2012, http://www.naic.org/documents/committees_ex_isftf_smi_roadmap_120831.pdf, pages 2 and 3.
[189] Ibid.

- Evaluating enhancements to current risk charges, the relevance of certain risk charges and need for additional risk charges. Examples include the credit risk charge that is applied to reinsurance recoverables, the level of detail of the asset risk charge, and the inclusion of a catastrophe risk charge.
- Making the details of the RBC calculation for an insurance company public rather than retained solely by the insurer and its regulator(s).

Since its inception, the RBC model has evolved and these chapters have captured the detail of the calculation at a point in time. In the future the principles behind the calculation are unlikely to change substantially, although we are likely to see enhancements to the calculation through the SMI.

CHAPTER 20. IRIS RATIOS

OVERVIEW

National Association of Insurance Commissioners (NAIC) Insurance Regulatory Information System (IRIS) has been used since 1972 to help insurance regulators evaluate the financial condition of insurance companies. More than 5,000 companies file their financial statements with the NAIC each year.[190] IRIS is applied to property/casualty, life/accident and health, and fraternal insurance organizations.

IRIS is known by practicing actuaries as being a series of 13 tests of financial ratios relative to benchmarks (i.e., ranges of "unusual values"). These are called IRIS ratios. However, the IRIS ratios are only one component of IRIS. IRIS includes other tools and databases of financial information that are used by state insurance regulators to monitor the financial health of insurance companies. One such tool that may be less well known to actuaries is the NAIC Analyst Team System. The Analyst Team System relies on analysis of the results of IRIS ratios, as well as other financial solvency tools, to categorize those insurance companies requiring immediate regulatory attention.

The instructions for computing IRIS ratios are currently included as part of the CAS Exam 6 U.S. Syllabus of Basic Education. As a result, we will not go into all of the details of the calculations here but rather will provide a brief overview of the IRIS ratios and Analyst Team System. In Appendix I of this publication, we walk through the calculation and purpose of each of the 13 IRIS ratios, provide possible explanations for unusual values, and show the results of the IRIS ratio calculations for Fictitious Insurance Company using the 2011 Annual Statement.

IRIS RATIOS

The IRIS ratios are grouped into four categories:

- Overall ratios
- Profitability ratios
- Liquidity ratios
- Reserve ratios

Many of the ratios are computed in terms of policyholder surplus, with the intent of providing an early warning of companies in financial distress. The results of each of these ratios are not reviewed in isolation. When reviewing the results of ratios and investigating unusual values,

[190] Per the description of the publication *Ratio Results for the IRIS* on the NAIC and The Center for Insurance Policy and Research, NAIC Store, Financial Regulation Publication on IRIS, http://www.naic.org/store_pub_fin_receivership.htm#iris_results.

mitigating or augmenting circumstances brought to light through other ratios and information are considered.

The reserve ratios are probably the most important ratios to the property/casualty actuary and where the actuary places most attention, as these ratios are specifically commented on by the appointed actuary in the Statement of Actuarial Opinion (SAO).

There are three reserve ratios:

IRIS ratio 11: One-year reserve development to policyholders' surplus
IRIS ratio 12: Two-year reserve development to policyholders' surplus
IRIS ratio 13: Estimated current reserve deficiency to policyholders' surplus

These three ratios focus on the development of an insurance company's net loss and LAE reserves for purposes of understanding reserve adequacy. IRIS ratio 11 is the same one-year development test as provided in the Five-Year Historical Data exhibit within the Annual Statement. It measures development in the company's net loss and LAE reserves over the past year, whether adverse or favorable, relative to prior year surplus. Essentially, this test looks to see how much surplus would have been absorbed or enhanced in the prior year as a result of adverse or favorable development in the corresponding net loss and LAE reserves. Adverse development is shown as an increase to reserves and therefore a positive number. Results of IRIS ratio 11 equal to or greater than 20% are considered unusual.

IRIS ratio 12 is the same two-year development test as provided in the Five-Year Historical Data exhibit within the Annual Statement. It measures development in the company's net loss and LAE reserves over the past two years, relative to surplus at the end of the second prior year. Similar to ratio 11, results of test 12 equal to or greater than 20% are considered unusual.

IRIS ratio 13 is a hindsight test. It looks at a company's net outstanding loss and LAE reserves at the immediate prior two years relative to calendar year earned premium for those years and adds to the reserves development that has emerged over that period (one-year development for the immediate prior year; two-year development for the year prior to that). The test then applies the average of the resulting two "adjusted" loss ratios to earned premium for the recent year to determine what the outstanding loss reserve should be. A calculated deficiency in recorded loss and LAE reserves of 25% or more is deemed to be unusual.

The purpose of this test is to identify companies that may not have gotten their reserves "right" in the past. The expectation inherent in this test is if companies have had adverse development in the past, they will probably have adverse development in the future. Regulators want to see if companies who have had such adverse development have corrected for it in their current estimates.

ANALYST TEAM SYSTEM

The Analyst Team, which includes financial examiners and analysts from all four geographic zones of the NAIC, performs an analysis of the IRIS ratios, as well as other solvency monitoring tools such as RBC, to identify companies requiring immediate attention by regulatory authorities.

Based on the analysis results, the Analyst Team categorizes companies into three levels:[191]

1. Level A: companies requiring immediate attention and financial analysis by regulatory officials
2. Level B: companies possibly having adverse results but not requiring immediate attention
3. Reviewed, no level: companies deemed not to require specific attention by the regulators

The analysis results are merely a first step in identifying insurers requiring further investigation; they are not intended to be a comprehensive evaluation or opinion on the financial soundness or solvency of a company. Reports prepared by the team are confidential and are made available only to state insurance regulators.

INTERPRETING THE RESULTS OF THE SYSTEM

The IRIS results are used to prioritize insurers requiring further analysis through examination by the state insurance regulatory system. An unusual value does not necessarily mean that the insurer is financially impaired. The NAIC *IRIS Ratios Manual* states, "No state can rely on the tools' results as the state's only form of surveillance."[192]

PART V. FINANCIAL HEALTH OF PROPERTY/CASUALTY INSURANCE COMPANIES IN THE U.S.

INTRODUCTION TO PART V

In *Part IV. Statutory Filings to Accompany the Annual Statement* we presented details underlying several filings either included within or supplemental to the statutory Annual Statement. These and other tools, including on-site financial examinations and Financial Analysis Solvency Tools (FAST, of which the IRIS System is a part), provide a means for the regulator to monitor the financial health of an insurance company. Many of these tools are confidential. However, certain results can be derived from publicly available information, such as the result of RBC, which is included within the Five-Year Historical Data exhibit in the Annual Statement.

The monitoring performed by regulators is risk-based and intended to identify financially troubled companies well before they are impaired. Regulators use the tools collectively to evaluate financial health and prioritize those insurers requiring additional scrutiny and analysis.

While policyholders and investors place heavy reliance on state insurance regulators in monitoring the health of property/casualty insurance companies, they themselves have access to the publicly available tools, such as quarterly and Annual Statement filings, the Statement of Actuarial Opinion, and Securities and Exchange Commission filings (for publicly traded companies). Also to assess financial health, they rely on ratings and analyses performed by credit rating agencies, such as A.M. Best, Moody's, Standard & Poor's and Fitch. Each of these rating agencies uses internally developed capital adequacy models to perform qualitative and quantitative financial strength assessments and establish a company's rating.

In this section we provide a summary of the tools used by regulators and stakeholders monitoring an insurance company's financial health and briefly explain how these tools are used in practice.

CHAPTER 21. MEASUREMENT TOOLS

Before we discuss what the tools mentioned in the introduction do, it is important to disclose what they don't do.

First, each measurement tool provides one piece of evidence and should not be taken as the only evidence of a healthy or troubled insurance company. For example, an insurance company may have "usual" values for each of its Insurance Regulatory Information System (IRIS) ratios, but something about the company's exposures or a pending regulatory decision may result in a risk of material deviation in the company's reserves, and such risk could be material to the company surplus. The risk of material adverse deviation would be discussed in the Statement of Actuarial Opinion (SAO) by the appointed actuary, and in reading that disclosure, the regulator would determine the necessary steps for further investigation. In this example, neither the results of the IRIS ratios nor the SAO should be considered alone; other information should be incorporated into an evaluation of an insurance company's health.

Second, these tools don't supplant the audit of an insurance company. In fact, the audited financial statements are themselves a tool used by the stakeholders and regulators of an insurance company. Further, these tools will not ensure that the data used as input into the tools is accurate and complete, nor will they provide any insight as to whether the company's management has good internal management, systems and controls in place. However, weaknesses in company management, systems and/or controls eventually leach into the output from the tools.

Finally, these tools will not identify fraud, which can be difficult to uncover.

WAYS IN WHICH THESE TOOLS ARE USED TO MEASURE FINANCIAL HEALTH

When viewed together, these tools can provide valuable insight into the financial health of a property/casualty insurance company. The information gathered from one tool may not in itself be an indicator but may prompt additional investigation, either through the evaluation of other tools or inquiry of company management.

Further, the results from a single year may not immediately suggest financial impairment; however, a review of these results over several years may identify a trend in that direction. When reviewed together and across multiple years, these tools can be used to provide an early warning of companies that are of higher risk for financial impairment.

Annual and quarterly financial statements and schedules

Insurance companies are required to file financial statements every quarter. To summarize what we learned in preceding chapters, substantial detail is contained in the annual filing (i.e., as of December 31), including qualitative information in the form of detailed notes to financial statements and interrogatories. These statements are filed under Statutory Accounting Principles. As discussed, statutory accounting focuses on protecting the policyholder and therefore is known as maintaining more of a conservative stance relative to Generally Accepted Accounting Principles. Assets and liabilities tend to be measured on a basis that includes some cushion in the event of financial impairment.

There are two perspectives of financial health measured by the statutory financial statement: balance sheet strength and earnings potential. In terms of balance sheet strength, regulators are concerned with an insurance company's claim-paying ability and therefore focus on areas that could impair solvency. Two such areas are loss and loss adjustment expense (LAE) reserve and unearned premium reserve adequacy. Loss and LAE reserves make up the largest item on an insurance company's balance sheet, representing nearly 40% of total Liabilities, Surplus and Other Funds at year-end 2011 for the U.S. property/casualty insurance industry. Coupled with unearned premium reserves, these liabilities represent half of the 2011 balance sheet for all U.S. property/casualty insurers in aggregate.

The Five-Year Historical Data exhibit provides a historical view of how an insurance company's losses have developed over time. Additionally, the Notes to Financial Statements provide management discussion of changes in incurred loss and LAE. Data from Schedule P, Parts 2 through 4 can also be used to perform independent tests of a company's reserve adequacy.

Because loss reserves are stated on a net of reinsurance basis on the balance sheet, reinsurance collectibility is also an area of risk relative to the statutory financial statements. The provision for reinsurance is established on the liability side of the balance sheet to offset some of this risk by excluding a portion of reinsurance recoverables from unauthorized and overdue authorized reinsurers. Despite the establishment of the provision for reinsurance, reserve credit risk still exists. Notes to financial statements are a means to identify reinsurance that is unsecured, uncollectible or in dispute. And Schedule F, Part 3 can be used to identify the company's reinsurers so that additional review of the reinsurers' financial strength can be performed. For example, the credit rating of each reinsurer can be determined from recognized rating agencies, such as those mentioned later in this chapter.

Accident-year loss and LAE ratios from Schedule P, Part 1 provide insight into the adequacy of claim reserves and unearned premium reserves. For example, property/casualty actuaries look at current accident year incurred loss and LAE ratios by line of business relative to prior year ratios adjusted for rate change and trend. Deviations from anticipated trends are typically investigated to assess adequacy of loss and LAE ratios on the current accident years.

To illustrate, for a line of business experiencing loss trend of +5% and rate change of -3% on premiums earned in 2012 over 2011, one might initially expect the accident year 2012 loss and LAE ratio to be approximately 8% higher (= 1.05 / 0.97 - 1) than that for 2011. That is, if the accident year 2011 loss and LAE ratio was 60%, one would expect the accident year 2012 ratio to be 65% (60% * 1.08). If the loss and LAE recorded in Schedule P, Part 1, for accident year 2012 was 55%, one might question the rationale behind an improvement in loss ratio, when deterioration was expected.

Additionally, deficiencies in loss and LAE reserves or current accident-year loss and LAE ratios in excess of 100% lead to further investigation of whether the unearned premium is adequate to cover losses that will emerge as premium is earned. In performing such an investigation, consideration is often made for investment income.

In terms of the asset side of the balance sheet, property/casualty insurance companies tend to invest in short-duration, relatively liquid fixed-income investments. Nearly 60% of the assets held by U.S. property/casualty insurers at year-end 2011 were in bonds. However, the financial crisis in 2008 taught us that even conservative investment strategies can pose a risk to insurance companies. Changes in asset values and yields on invested assets are monitored to assess this risk.

Further, investment in asset classes where the level of risk exceeds industry norms stimulates investigation of the hedging strategies a company has in place to mitigate risk.

While a company's balance sheet may appear financially solid, future earnings can be impaired by a company's underwriting, pricing and investment strategy. Although the Annual Statement schedules and exhibits may not be able to uncover a weakening in earning strength on their surface, trends in financial ratios and other analysis of year-over-year changes in income statement line items can provide an early warning. Examples of such trends include:

- Rapid and substantial growth in written premium and the timing of such growth relative to the underwriting cycle: In soft markets it is difficult to achieve significant growth without concessions on price or commission levels. The Five-Year Historical Data provides historical premium volume on a gross and net basis to assist in measurement of a company's growth.

- Increases in underwriting (or other) expense ratios: This may also be a sign that an insurer is conceding commission to grow or maintain business. Increases in commissions or other expenses mean that there is less premium available to pay losses. The income statement and Part 3 of the Underwriting and Investment Exhibit (U&IE) and the Insurance Expense Exhibit (IEE) are sources of this data.

- Deteriorating loss ratios: Historical loss ratios can be observed on a calendar-year basis in the Five-Year Historical Data or by accident year and line of business in

Schedule P. Deterioration in loss ratios implies that pricing is not keeping pace with the underlying risk being underwritten. Further investigation into a company's price monitoring practices relative to peer benchmarks and ability to increase rates would be warranted.

- Increased exposure to catastrophic or large events: A review of writings by state in Schedule T and writings by line of business per the U&IE can help to identify catastrophe exposure. A company with premium concentration in Florida homeowners business suggests that the company may have increased exposure to hurricane risk. Further, a review of Part 2 of the general interrogatories provides information regarding a company's probable maximum loss and provisions in place to protect the company against such loss, such as a catastrophic reinsurance program.
- Losses on investments, change in mix of invested assets by class and/or declining yields on investment assets: Such trends may suggest a change in a company's investment strategy or lack of control in the strategy.
- Increases in the provision for reinsurance: Changes in the provision for reinsurance, as displayed in the capital and surplus account of the income statement, can be a sign of increased credit risk.

Quarterly statements provide more limited information than what is included in the annual filing. However the primary financial statements remain in the same general format (i.e., Assets page; Liabilities, Surplus and Other Funds; Statement of Income; Cash Flow; and Notes to Financial Statements), as do many of the schedules. The evaluation date is the quarter-end and comparisons are made to the prior year-end. From the perspective of a property/casualty actuary, the biggest difference is that quarterly statement does not include Schedule P. Schedule P is replaced with a schedule titled "Part 3," which shows loss and LAE reserve development during the quarter for the latest three accident years and all years prior, for all lines of business in the aggregate. While this schedule provides a gauge of retrospective reserve strength during the current year, it does not provide all of the line of business detail that is provided annually in Schedule P.

There is a wealth of information contained in the annual and quarterly statements. But because more than 5,000 companies file their statements, state regulators of insurance companies may not have the resources available to analyze these filings in detail for every company domiciled or licensed to write business in their state. Rather, regulators rely on the other tools coupled with the financial statements and schedules to prioritize those companies of greatest risk of financial impairment.

IRIS

As discussed in *Chapter 20. IRIS Ratios*, IRIS is one tool used by regulators. The IRIS ratios focus on balance sheet strength and the earnings quality through measures that assess growth, profitability, liquidity, and reserve development/adequacy.

Although the IRIS ratio results are not widely available to the public, they can be calculated directly from an insurance company's Annual Statement. We have done so for Fictitious in Appendix I of this publication.

While there is no direct link to regulatory intervention based on the results of these ratios, the National Association of Insurance Commissioners (NAIC) Analyst System Team reviews the results of the IRIS values in conjunction with other solvency monitoring tools, such as Risk-Based Capital (RBC), to prioritize those insurance companies requiring immediate regulatory attention.

RBC

RBC is another tool that considers balance sheet strength and future earnings. Balance sheet risk is considered in the asset reserve risk charges (R_0 through R_4), while profitability of future writings is contemplated through the written premium risk charge (R_5).

The calculations underlying an insurance company's RBC are confidential and cumbersome to perform without using the spreadsheet provided with the NAIC instructions. However, the results of the RBC formula are provided in the Five-Year Historical Data exhibit within the Annual Statement. Stakeholders are able to review overall results and monitor changes over time.

RBC considers the risks and relative size of an insurance company in computing a required level of capital, whereas under IRIS, no adjustments are made to reflect what would be "usual" for an individual insurance company. Unlike IRIS, there is a direct link to regulatory intervention based on a comparison of the RBC required capital to the company's adjusted capital. The NAIC RBC Model Act provides regulators with the authority to take control of a property/casualty insurance company if the company's RBC ratio falls below 100% of the ACL.

RBC isn't a fail-safe test for financial impairment. While certain of the RBC factors consider a company's own experience, the majority of the factors used to determine the level of required capital are based on industry-wide factors developed by the NAIC. As a result, while a company's RBC ratios may not require any specific action by the company management or regulatory authorities, this doesn't mean that the company is safe from future impairment.

The trend test is one way that the RBC results are used to identify companies that may become financially impaired. The purpose of the trend test is to identify companies likely to

fall in the company action level in the coming year and require those companies to take action before that happens. The trigger for application of company action within the trend test is having an RBC ratio within 100 points of the company action level, coupled with a current-year combined ratio of more than 120%.

SAO

The SAO provides assurance of a qualified actuary that the company's loss and LAE reserves are reasonable on a gross and net of reinsurance basis. It is not an opinion on the solvency of an insurance company but an opinion on the adequacy of what is typically the largest item on an insurance company's balance sheet. Significant deviations in this balance may have a material impact on a company's solvency. Therefore, the actuary will provide commentary of any significant uncertainties or risks that could result in a material adverse deviation in the company's recorded reserves.

A determination by the appointed actuary that the reserves are anything other than "reasonable" and relevant comments that indicate there is are significant risks and/or uncertainties that could result in material adverse deviation are two triggers of additional scrutiny by regulatory authorities.

One thing the SAO does not tell the reader is the company's reserve position within the appointed actuary's range, if the appointed actuary calculates a range. A company that is exposed to significant risks and uncertainties, with reserves lying at the lower bound of the actuary's range, would be subject to greater concern than a company exposed to the same level of risk with reserves in the high end of the appointed actuary's range. There is no document available for public review, which includes rating agencies, that contains the appointed actuary's range. The appointed actuary's range is contained in the Actuarial Opinion Summary (AOS), SAO documentation report, and usually found in the work papers of the company's external auditors.

As noted previously, the AOS is a confidential document, for regulators only. The actuarial report contains the range; however, these reports contain restrictions on distribution and use, due to their confidential nature, and therefore are not widely distributed. Similarly, while audit work papers may be subpoenaed for cause, they are not publicly available.

AOS

The AOS is valuable in providing the regulator with context as to the company's reserve adequacy by providing the company's position relative to the appointed actuary's point estimate or range, if calculated, on a net and gross of reinsurance basis. It also provides details that explain to the regulator the cause for adverse development in the company's reserves over the past five years, where such development has exceeded 5% of surplus in

three of those years. The AOS is also a confidential document that is only shared with the insurance company's state regulator.

Credit Rating Agencies

Stakeholders also rely on financial strength ratings (FSRs) issued by credit rating agencies (CRAs) in the evaluation of financial health. FSRs represent a CRA's evaluation of an insurance company's ability to meet ongoing obligations to its policyholders. This is in contrast to debt/issuer credit ratings, which are also provided by CRAs. Debt/issuer ratings represent the CRA's evaluation of a company's ability to meet debt obligations. Debt/issuer credit ratings are provided on the creditworthiness of the entity as a whole or on individual debt instruments.

Of the CRAs that rate insurance companies, A.M. Best is the only one that focuses exclusively on the insurance industry, providing FSRs and debt/issuer ratings. A.M. Best rates thousands of insurance entities across the globe. Other CRAs, such as Standard & Poor's (S&P), Moody's and Fitch serve a wide range of industries (ranging from aerospace to utilities, financial institutions and the public sector) and are prevalent in the area of debt/issuer ratings.[193]

Ratings are based on qualitative and quantitative analysis of a company's financial statements and organization. Each CRA uses its own criteria. Qualitative factors can include corporate governance, product development, composition of capital structure, asset quality, investment strategy, reserve adequacy, claims management, contingent assets and liabilities, and the level of reinsurance dependency. Quantitative analysis includes running a company's financial data through capital adequacy models. Each CRA has its own internally developed model that computes required capital levels. Similar to RBC, the required capital levels are computed and compared to an insurer's capital to produce a ratio that translates to letter ratings. Examples of CRA models include Best's Capital Adequacy Ratio and S&P's Capital Adequacy Ratio.

The higher the rating, the greater the ability the company is deemed to have to meet its ongoing insurance obligations. The ability to meet ongoing insurance obligations generally diminishes as ratings decrease. For example, A.M. Best's ratings include 15 letter grades ranging from A++ to F,[194] with "secure" ratings ranging from A++ (superior) to B+ (good) and "vulnerable" ratings ranging from B (fair) to F (in liquidation).[195] Regardless, the CRAs provide no guarantee that the insurance company will be able to meet its obligations.

[193] Per the Ratings tab within the Standard & Poor's Financial Services LLC website, http://www.standardandpoors.com/ratings/en/us/, titled *Browse Ratings by Practice*, (2012).
[194] Note there is a 16th rating of "S," which stands for an insurance company that has been suspended from writing.
[195] A.M. Best, Ratings & Criteria Center, *Best's Financial Strength Rating,* http://www.ambest.com/ratings/guide.asp, 2012.

FSR ratings are generally established annually, with ongoing monitoring performed by the CRA analyst throughout the year to evaluate the impact of developments on a company's rating. Ongoing monitoring includes review of the following:

- Statutory financial statement filings
- Interim management reports and other information provided by the insurer to the rating agency
- Significant public announcements, including earnings releases/calls, made by the entity

A rating action or review can be considered at any time that A.M. Best becomes aware of significant development in the insurer's operation.

The following provides examples of the uses of FSRs by stakeholders of insurance companies:

- Individual and corporate policyholders want to make sure the insurance company will be there when needed to pay claims. They therefore look to the FSR as an indicator in their insurance buying decisions, weighing the company's rating against the cost of insurance.
- Many boards of directors of corporate policyholders require that their organization's insurance purchases are made with highly rated insurance companies. And after the financial crisis, many large corporations required insurance companies to include cancellation endorsements to allow the insured to cancel without penalty if the carrier was downgraded below a certain level(s) by recognized CRAs.
- Insurance companies will also look at FSRs of reinsurers in making reinsurance buying decisions.
- Investors look at FSRs in their decision to invest in an insurance company, weighing risk relative to the company's rating with expected return.

HOW THESE TOOLS HAVE FARED — INDICATORS OF INSURANCE COMPANY INSOLVENCIES OVER THE PAST 40 YEARS

The measurement tools discussed in this publication are designed to assist in predicting or preventing all insurance company failures, but it is impossible for a tool to work in all circumstances. The intent, however, is that they identify the vast majority before it's too late.

Over the years, studies have been performed to detect the cause of insurance company failure and therefore sharpen the tools that are available to monitor solvency. The American Academy of Actuaries (AAA) has issued three such studies that, collectively, have examined property/casualty insurance company insolvencies over a 40-year period, from 1969 through 2009. The following contains the results of these studies and common themes observed in insolvent companies prior to their demise.

The AAA Property/Casualty Financial Soundness/Risk Management Committee (the FSRM) published a report in September 2010 titled *Property/Casualty Insurance Company Insolvencies*. This report revisited the issue of insurance company solvencies, which was examined in two previous studies in the 1990s by AAA, one based on property/casualty insurance company insolvencies over the period 1969 to 1987 and the other from 1988 to 1990. The AAA's research included submitting a questionnaire to insurance regulators on the causes of the insurance company failures over that time period. In each period, "under-reserving" and "mismanagement" were the first and second most frequently cited cause of insurance company insolvencies.

Given that the adequacy of loss reserves was historically cited as the primary cause of insolvency in the prior two studies, the 2010 report focused on the performance and characteristics of companies having the largest reserve deficiencies. Additionally, the FSRM studied five years' worth of historical financial data for 36 property/casualty insurance companies that became insolvent over the period 2005 to 2009 for commonalities. The 2010 report concluded the following:

- Insolvency is caused by a combination of factors. "Under-reserving" is a factor in the insolvency of property/casualty insurance companies but "is not the leading cause of insolvency." [196]
- Size, experience and diversification matters. "The majority of the companies was small, relatively new, and/or was concentrated in one line of business and/or state."[197]
- Good management and governance is essential. "The review of financial data for many of the companies showed evidence of poor management and decision-making, including little or no reinsurance, inadequate reinsurance for the amount of risk, very rapid premium growth, significant adverse development, inadequate pricing, and potentially serious data problems."[198]

The report also studied the SAO as an indicator of financial impairment over the immediate five years prior to insolvency. The FSRM concluded that the SAO alone is not a backstop for insurance company insolvencies, but it "can help identify those companies and/or categories of companies that could be in trouble."[199] Where opinions were available, the FSRM observed the following:

- Only one SAO was qualified, and the remaining were "reasonable" reserve opinions.

[196] American Academy of Actuaries Property/Casualty Financial Soundness/Risk Management Committee. *Property/Casualty Insurance Company Insolvencies,* September 2010, page 5.
[197] Ibid., page 16.
[198] Ibid.
[199] Ibid., page 18.

- Nearly 50% of the SAOs concluded that a risk of material adverse deviation existed in the company's loss and LAE reserves, 37% concluded that such a risk did not exist, and the remainder of the SAOs either did not comment on the risk of material adverse deviation or it wasn't clear if the appointed actuary deemed a risk of material adverse deviation existed.
- When stated, materiality standards were generally based on a percentage of surplus (between 5% and 20%).

We note that the NAIC *Actuarial Opinion Instructions* and Actuarial Standards of Practice issued by the Actuarial Standards Board have continued to include enhancements on disclosure requirements within the SAO since the period studied.

The commonalities identified in the above studies provide us with areas of focus when evaluating the tools used to measure financial health. The key message is that financial impairment is caused by a variety of factors, and the measurement tools discussed in this publication, when considered in unison, can help detect companies at risk for financial impairment.

PART VI. DIFFERENCES FROM STATUTORY TO OTHER FINANCIAL/REGULATORY REPORTING FRAMEWORKS IN THE U.S.

INTRODUCTION TO PART VI

As discussed in *Part III. SAP in the U.S.: Fundamental Aspects of the Annual Statement*, U.S. Statutory Accounting Principles (SAP) focuses on the solvency of insurance companies. Other financial reporting frameworks exist for solvency, general purpose financial reporting, and taxation. In this section we will examine these other frameworks, beginning with general purpose financial reporting.

The framework in the U.S. for general purpose financial reporting is U.S. Generally Accepted Accounting Principles (GAAP). We will focus on the key differences between U.S. SAP and U.S. GAAP. We will also study the importance of accounting for business combinations and consider calculations that involve actuaries in fair valuing the balance sheet. We will provide an overview of the emergence of International Financial Reporting Standards as an alternative general financial reporting framework, including the joint insurance contracts accounting project between the International Accounting Standards Board and the Financial Accounting Standards Board. We will provide a brief overview of the alternative statutory financial reporting standards under the European insurance regulations known as Solvency II. Finally, we will discuss financial reporting for tax purposes.

CHAPTER 22. U.S. GAAP[200], INCLUDING ADDITIONAL SEC REPORTING[201]

OVERVIEW

U.S. Generally Accepted Accounting Principles (GAAP) for public companies is, by statute, determined by the Securities and Exchange Commission (SEC). The SEC has effectively delegated this responsibility since its inception to the private sector. Currently, the SEC looks to the Financial Accounting Standards Board (FASB) as the organization for establishing standards of financial accounting. In 2009 the FASB codified U.S. GAAP by publishing its Accounting Standards Codification (ASC). The ASC replaced several sources of authoritative U.S. GAAP literature from various standard setters. These sources included:

1. FASB
    a. Statements (FAS)
    b. Interpretations (FIN)
    c. Technical Bulletins (FTB)
    d. Staff Positions (FSP)
    e. Staff Implementation Guides (Q&A)
    f. Statement No. 138 Examples.
2. Emerging Issues Task Force (EITF)
    a. Abstracts
    b. Topic D.
3. Derivative Implementation Group (DIG) Issues
4. Accounting Principles Board (APB) Opinions
5. Accounting Research Bulletins (ARB)
6. Accounting Interpretations (AIN)
7. American Institute of Certified Public Accountants (AICPA)
    a. Statements of Position (SOP)
    b. Audit and Accounting Guides (AAG) – only incremental accounting guidance
    c. Practice Bulletins (PB)
    d. Technical Inquiry Service (TIS) – only for Software Revenue Recognition

References to the newly codified standards usually start with the letters ASC followed by a series of numbers. Insurance specific guidance can be found in Section 944. For example, the definition of the measurement approach to unpaid claims estimates under U.S. GAAP can be found at ASC-944-40-30-1. It states: "The liability for unpaid claims shall be based on the estimated ultimate cost of settling the claims (including the effects of inflation and other societal and economical factors), using past experience adjusted for current trends, and any

[200] Aligns with IASA Chapter 14.
[201] Aligns with IASA Chapter 15.

other factors that would modify past experience." A free basic version of the ASC is available, after registering, at https://asc.fasb.org/.[202]

Historically, U.S. GAAP formed the foundation of U.S. Statutory Accounting Principles (SAP). From this foundation, U.S. SAP evolved over time (on a state by state basis), incorporating many modifications and exceptions to U.S. GAAP in the interest of establishing a more conservative accounting framework with a focus on solvency. In the 1990s, the National Association of Insurance Commissioners (NAIC) undertook a project (Codification) to consolidate the myriad state-based rules and exceptions to U.S. GAAP into a cohesive set of accounting principles. SAP still remains the prerogative of each individual state; however, Codification provides a consistent and comprehensive framework of accounting and reporting for each state insurance department to consider. As new pronouncements are made under U.S. GAAP, they are reviewed by the NAIC's Statutory Accounting Principles Working Group, which decides whether to adopt, reject or modify it for NAIC SAP. In turn each state, if it has adopted SAP, may accept what the NAIC has produced or adopt deviations or develop exceptions.

The fundamental difference between SAP and GAAP is driven by the intended user. SAP is intended for use by insurance regulators and is thus focused on an insurance company's ability to pay claims, emphasizing the adequacy of surplus in the balance sheet. This is sometimes viewed as conservative-leaning philosophy to provide an element of margin if the regulator would need one day to step in to settle all current liabilities while not writing any new business. GAAP is primarily intended for investors and creditors and has historically been focused on the measurement of earnings emergence, through the income statement, over a specified reporting period. Given the objective of SAP, it is not surprising that SAP is a conservative basis of accounting in comparison to GAAP.

There are many differences between U.S. GAAP and U.S. SAP, but we will focus on those that actuaries need to be familiar with:

- Deferred acquisition costs (DAC)
- Nonadmitted assets
- Deferred tax assets (DTAs)
- Invested assets
- Balance sheet presentation of reinsurance
- Ceded reinsurance — prospective and retroactive
- Structured settlements
- Anticipated subrogation and salvage
- Discounting of loss reserves
- Goodwill under purchase accounting

[202] FASB, *Accounting Standards Codification,* https://asc.fasb.org/, 2012.

Deferred Acquisition Costs

DAC is an asset that is established under GAAP to defer the recognition of acquisition expenses to match the recognition of earned premium. Beginning in 2012, the deferral of acquisition costs is limited to those direct costs (i.e., those which would not have been incurred if the contract had not been entered into) related to the successful acquisition or renewal of a contract. In addition, certain direct marketing advertising costs can be deferred under very limited circumstances. All other expenses, either direct or indirect, must be expensed as incurred.

Certain companies are permitted to limit the capitalization (use of an asset to defer expenditure) of DAC to those expenses they had been capitalizing prior to 2012 if they previously had not been capitalizing all expenses that met the definition of direct expenses related to the successful acquisition or renewal of insurance contracts. Capitalization of acquisition costs, through the establishment of a DAC asset, is not permitted under SAP. Therefore, all acquisition costs are expensed to current operations as incurred. This is keeping with the conservative philosophy of SAP.

NONADMITTED ASSETS

As discussed in *Part III. SAP in the U.S.: Fundamental Aspects of the Annual Statement*, SAP is focused on the ability of an insurance company to pay claims. To reflect that certain assets are not readily liquid, they are considered nonadmitted for purposes of determining the company's statutory surplus. One such example is furniture, fixtures and equipment.

For other asset categories, matters are more complicated as they may be partly admitted and partly nonadmitted. One such asset category is DTAs.

Deferred Tax Assets

Under U.S. GAAP and SAP, deferred taxes are established for temporary differences in the accounting and tax treatment of all assets and liabilities. For example, discounting of loss reserves for tax purposes but not for accounting purposes leads to a deferred tax asset. This is because you pay tax based on income (revenue minus expenses) under the tax accounting basis. If liabilities incurred are discounted for tax purposes, this leads to higher income, which produces more tax for the taxing authorities. But the discount on incurred losses will unwind over time and create an expense that will reduce future taxable income. Some or all of this reduction to future taxable income is what is recorded as a DTA.

The primary difference between U.S. GAAP and SAP is in the treatment of DTAs. For U.S. GAAP DTAs are fully recognized, and a valuation allowance is established if, based on the weight of evidence, it is more likely than not that the DTAs will not be realized. GAAP establishes a hierarchy of evidence to be considered. This is a subjective determination

requiring management to use significant judgment. Under SAP there is a strict admissibility test for all DTAs in addition to the establishment of a valuation allowance. This can lead to recognition of less DTAs in SAP basis financial statements. The admitted portion is calculated, since January 1, 2012, as:[203]

1. The amount of DTA expected to be reversed in the forthcoming year that can be applied to federal income taxes paid on profits in the prior three years, sometimes referred to as loss carrybacks.
2. The amount of DTA expected to reverse during a forthcoming period (beyond the initial year in item 1) limited to a percentage of surplus. The period and percentage of surplus is determined based on the company's ratio of total authorized capital (with some adjustments) to authorized control level (ACL) Risk-Based Capital (RBC) that was filed in the most recent calendar year. Different rules apply for non-RBC reporting entities such as mortgage guarantee insurers.
3. The amount of DTA beyond items 1 and 2 that can be offset against existing DTLs.

INVESTED ASSETS

Under SAP, investment-grade bonds and higher rated redeemable preferred stocks are held at amortized cost while below-investment-grade bonds and lower rated redeemable preferred stocks are held at the lower of amortized cost or fair value. All common stock and non-redeemable preferred stock are recorded at fair value. Changes in the carrying value of investments attributed to changes in fair value are recorded as direct changes in surplus.

The accounting treatment of investment-grade bonds appears to be inconsistent with the conservative philosophy of SAP. In the case of increasing interest rates, the market value of older bonds issued at a lower interest rate will decrease. Yet SAP allows for the asset to be carried at the higher amortized cost value. One possible explanation for this is that the difference is only temporary if the bond is held until maturity, as is typically done by most property/casualty insurers.

Under U.S. GAAP, financial instruments such as bonds and stocks are classified as Available For Sale (AFS), Held To Maturity (HTM) or Held For Trading (HFT). If a security is acquired with the intent of selling it within hours or days, the security is classified as HFT. However, at acquisition an entity is not precluded from classifying a security as HFT if it plans to hold it for a longer period. HFT assets are recorded at fair value with changes in fair value recorded in the income statement. Investments in debt securities are classified as HTM only if the reporting entity has the positive intent and ability to hold those securities to maturity. HTM assets are recorded at amortized cost. Investments in debt securities and equity securities that have readily determinable fair values not classified as HFT securities or as HTM securities

[203] This recent change is not reflected in the 2007 Feldblum taxation CAS Study Note.

are classified as available-for-sale securities. AFS securities, securities purchased with the intent to sell before maturity but after being held for at least one year, are recorded at fair value with changes in fair value in other comprehensive income (OCI), resulting in a direct change to the value of surplus, rather than changes in their fair value flowing through the regular income statement. Most property/casualty companies' financial instruments are classified and measured as AFS.

BALANCE SHEET PRESENTATION OF REINSURANCE

U.S. GAAP requires, due to limited rights to offset assets and liabilities, that liabilities be presented gross on the balance sheet with a separate asset for anticipated ceded reinsurance recoveries. U.S. SAP requires the balance sheet presentation of liabilities on page 3 of the Annual Statement to be presented net of reinsurance. Schedule P provides additional detail on the gross liabilities.

CEDED REINSURANCE — PROSPECTIVE AND RETROACTIVE

The accounting for reinsurance depends on whether the reinsurance contract covers future or past insured events. The latter is called retroactive reinsurance and the former prospective reinsurance. The difference between SAP and U.S. GAAP for prospective reinsurance is limited to balance sheet presentation. U.S. GAAP requires liabilities to be stated gross of reinsurance with a separate ceded reinsurance asset. SAP on the other hand presents liabilities net of reinsurance.

Retroactive reinsurance, however, has a different measurement approach for SAP compared to U.S. GAAP. SAP requires that undiscounted ceded reserves be recorded as a negative write-in liability. This leaves Schedule P unchanged, i.e., gross of the retroactive reinsurance. Any gain to the ceding company (excess of the negative write-in liability over the consideration paid for the reinsurance) is treated as write-in gain in other income and restricted as special surplus until the actual paid reinsurance recovery is in excess of the consideration paid.

U.S. GAAP requires ceded reserves to be recorded as a reinsurance asset. Any gain is deferred, thereby resulting in no immediate income or surplus benefit. The deferred gain is amortized using the interest method if the timing of the payments under the reinsurance treaty are reasonably estimable. Otherwise the proportion of actual recoveries to total estimated recoveries (the recovery method) determines the amount of amortization.

STRUCTURED SETTLEMENTS

To settle certain liability claims, an insurance company may purchase an annuity from a life insurance company with the beneficiary being the original claimant. For the case where a full release is signed by the claimant upon agreement to settle for the future annuity payments,

the GAAP and SAP treatments are the same. The purchase price of the annuity is recorded as a paid loss and the claim is closed.

In the situation where a full release is not provided to the insurance company by the claimant, the insurance company is still contingently liable. In this situation, U.S. GAAP treats the structured settlement like a reinsurance contract, thus retaining the loss reserve and establishing an equivalent reinsurance recoverable. The accounting under SAP is the same as for structured settlements where a release is obtained, but it requires that the insurance company disclose the amount of these contingent liabilities in the Notes to Financial Statements.

ANTICIPATED SALVAGE AND SUBROGATION

In Schedule P reserves can be stated either gross or net of anticipated salvage and subrogation. If the reserves are stated net, column 23 in Schedule P discloses the amount of anticipated salvage and subrogation. This election appears to be a residual effect of pre-codification standards where certain states required reserves to be stated gross of anticipated salvage and subrogation.

Under U.S. GAAP, estimated realizable salvage and subrogation is subtracted from the unpaid loss estimates.

DISCOUNTING OF LOSS RESERVES

Statement of Statutory Accounting Principles (SSAP) 65 indicates that except for certain workers compensation and long-term disability claims with fixed and reasonably determinable payments, property/casualty reserves cannot be discounted. For those reserves that are tabular based, SSAP 65 is silent on the permitted discount rate. Most state regulations are also silent, but typically 3.5% per annum is used. For non-tabular reserves SSAP 65 indicates that the discount rate should be determined in accordance with Actuarial Standard of Practice 20, but capped at the lesser of:

1. The company's net rate of return on statutory invested assets minus 1.5%
2. The current yield to maturity on a U.S. Treasury debt instrument with a duration that is consistent to the payment of the claims

U.S. GAAP ASC 944-40-S30-1 refers to an SEC staff bulletin that indicates it is permissible to apply the same discount calculated under SAP for U.S. GAAP purposes. It also indicates that an alternative discount rate could be used as long as the alternative rate "is reasonable on the facts and circumstances applicable to the registrant at the time the claims are settled." This staff bulletin was prepared in response to an inquiry from a registrant asking if it was permissible to discount for U.S. GAAP purposes based on the company's historical investment yield.

GOODWILL UNDER PURCHASE ACCOUNTING

Under SAP, a business combination is accounted for as either a statutory purchase or a statutory merger. Business combinations that create parent-subsidiary relationships are accounted for as a statutory purchase. Alternatively, transactions are accounted for as a statutory merger if equity of one entity is issued in exchange for equity of the second entity, with the equity in the second entity then canceled. Prospectively, only one entity exists. Under statutory purchase accounting, the assets and liabilities of the acquired entity are recorded at their historical SAP carrying values. Goodwill is calculated as the difference between the purchase price and the statutory surplus of the acquired entity. Goodwill is limited in the aggregate to 10% of the acquiring entity's capital and surplus (adjusted to exclude any goodwill, electronic data processing equipment and operating system software, and net DTAs) for its most recently filed Annual Statement. Goodwill is amortized to unrealized capital gains and losses over the period in which the acquiring entity benefits economically, not to exceed 10 years.

Under U.S. GAAP, all business combinations are accounted for using purchase accounting, which requires all assets and liabilities of the acquired entity to be recorded at fair value (including all identifiable intangible assets). Goodwill represents the difference between the purchase price and the fair value of the net assets of the acquired entity. Goodwill is not amortized but is evaluated for possible impairment on a regular basis.

Due to these different approaches in calculating goodwill, the initial amounts of goodwill under SAP and GAAP can be significantly different. *Chapter 23. Fair Value Under* Purchase *GAAP* will discuss further the concept of fair value in business combinations.

SEC REPORTING

Companies with publically traded securities are required to file quarterly (10-Q) and annual (10-K) financial reports with the SEC. In addition, companies are required to file a form 8-K on an ad hoc basis for material events as they occur. The triggering events requiring the filing of an 8-K include a change in the principal officers or directors of the company, a change in the company's certified accountant, and entering or terminating a material definitive agreement.

These filings provide investors with quantitative and qualitative information about a company's business and operations, allowing investors to make informed and timely decisions. The key contents by section of a 10-K are:

- Part I — Business description, risks factors, unresolved issues with SEC staff, properties, legal proceedings and matters subject to vote by shareholders
- Part II — Financial statements (including report of independent accountants), supplementary data, management's discussion and analysis of results, and controls and procedures

- Part III – Directors and officers of the company, executive compensation, securities ownership by certain beneficial owners and management, and the fees of principal accountant
- Part IV – Reports, exhibits and schedules from 8-Ks filed during the reporting period.

The 10-Q is an abbreviated form of the 10-K.

SEC reporting requirements for all registrants are mainly outlined in two regulations.

1. Regulation S-X – Form and Content of Financial Statements
2. Regulation S-K – Integrated Disclosure Rules

Regulation S-X contains general instructions to all companies around the composition and presentation of financial statements. Specifically, article seven provides detailed rules around the form and content of financial statement data and schedules of insurance companies. Many of these requirements are also required under GAAP. In particular, article seven requires the insurance company to state in the Notes to Financial Statements the:

- Basis of assumptions, including interest rates, for determining discounted liabilities
- Deferred acquisition costs amortized in the period
- Statutory stockholders equity and net income or loss

In addition Regulation S-X requires certain schedules to be included in each registrant's 10-K form (their annual filing). These schedules include:

- Schedule III – Supplementary insurance information for each reporting segment, of which the following is required to be reported:
    - Deferred policy acquisition costs
    - Unpaid loss and loss expenses
    - Unearned premiums
    - Other policy claims payable
    - Premium revenue
    - Net investment income
    - Losses and loss expenses
    - Amortization of deferred policy acquisition costs
    - Other operating expenses
    - Premiums written
- Schedule IV – Reinsurance including amounts ceded and assumed
- Schedule VI – Supplemental information concerning property/casualty insurance operations that includes the same information as Schedule III in total across fiscal years for the current fiscal year and the two years prior

Following are examples of Schedules III (Table 108), IV (Table 109) and VI (Table 110) from a 2011 10-K filing for a company we are calling "Fictional Insurance Company".

2009	926	28,188	612	5,719	11,279	1,462	7,204	(763)	2,008	6,803	11,235

(1) Excludes accident and health insurance business.
(2) Consolidated property/casualty insurance operations.
(3) For a discussion of types of reserves discounted and discount rates used, see Item 1, Business, Discounting.

Regulation S-K contains the requirements for the nonfinancial statement portions of the 10-K filing. In conjunction with the Securities Act Industry Guides, Guide 6: Disclosures Concerning Unpaid Claims and Claim Adjustment Expenses of Property-Casualty Insurance Underwriters, the following items are required to be disclosed:

- A tabular analysis of changes in aggregate reserves for unpaid claims and claim adjustment expenses for each of the latest three one-year periods
- A 10-year loss reserve development table (detail discussed below and shown in Table 112)
- Method for estimating the effects of inflation, implicitly or explicitly
- A reconciliation between statutory and GAAP reserves for unpaid claims and claim adjustment expenses, including an explanation of the key differences
- The amount of discount embedded in the GAAP reserves for unpaid claims, including the pre-tax income effect of discount accrued and of discount amortized

The two most commonly referred to tables are changes in aggregate reserves and the 10-year reserve runoff table.

TABLE 111

10-K Notes to Consolidated Financial Statements
Fictional Insurance Company
Insurance Claim Reserves
Reconciliation of beginning and ending property casualty reserve balances for claims and claim adjustment expenses
(USD in millions)

At and for the year ending December 31	2011	2010	2009
Claims and claim adjustment expense reserves at beginning of year	27,139	28,188	29,026
Less reinsurance recoverables on unpaid losses	5,941	6,629	7,272
Net reserves at beginning of year	21,198	21,559	21,755
Estimated claims and claim adjustment expenses for claims arising in the current year	8,919	7,610	7,204
Estimated decrease in claims and claim adjustment expenses for claims arising in prior years	(443)	(746)	(763)
Total increases	8,476	6,864	6,441
Claims and claim adjustment expense payments for claims arising in:			
Current year	4,082	3,133	2,843
Prior years	4,030	4,080	3,959
Total payments	8,112	7,213	6,803
Unrealized foreign exchange (gain) loss	(14)	(13)	166
Net reserves at end of year	21,548	21,198	21,559
Plus reinsurance recoverables on unpaid losses	5,494	5,941	6,629
Claims and claim adjustment expense reserves at end of year	27,042	27,139	28,188

Table 111 shows for each of the last three years the beginning reserve from the prior year-end, the provision for reserve development in the calendar year (ultimate incurred losses from accidents occurring in the current year plus change in ultimate incurred losses on accidents from prior fiscal periods), paid losses and the ending reserve. The beginning reserve plus the provision for reserve development minus paid losses equals the ending reserve. If the company makes an acquisition, this would be reflected in the beginning reserve balance.

The 10-year loss reserve development table shows the runoff of management's best estimate of the required reserve from each year-end for the last 10 years.

Gross re-estimated liability – latest	21,247	20,480	19,734	31,521	30,469	28,440	27,459	26,452	26,363	26,470	
Re-estimated reinsurance recoverable – latest	6,710	6,309	5,841	9,394	9,484	8,214	7,331	6,646	6,131	5,716	
Net re-estimated liability – latest	14,537	14,171	13,893	22,127	20,984	20,226	20,128	19,807	20,232	20,755	
Gross cumulative deficiency (redundancy)	4,974	2,621	1,430	222	(1,896)	(2,985)	(3,133)	(2,574)	(1,825)	(669)	

Each column in the table is for a particular year-end. The first row shows the total net reserves for each year-end. The first triangle shows, going down each column, the cumulative (since the year-end in question) paid losses at successive periods on all accidents occurring on or before the specific year-end in question. The second triangle shows, in each column, management's best re-estimate of reserves at successive periods for all accidents occurring on or before the specific year-end in question with the hindsight of the paid losses from the first triangle. At the bottom of the table is a summary that provides the total reserve development down the column (basically the development to date by subtracting the last number in each column of the second triangle from the first number). By reviewing the total reserve development, either nominally or as a percentage of the starting reserve, users of the financial statement can evaluate management's past judgment in setting reserves. Critics of the usefulness of this table point out that management or their reserve setting process may

not have been consistent over the time period shown by the table, and it is distorted by the market cycles. Therefore, they believe the table to be of limited use.

To demonstrate how a loss development table is constructed we have used the Schedule P, Part 2 and Part 3 summaries for Fictitious. To construct the table, we have assumed that the company started writing business in accident year 2002 and that there are no statutory to GAAP accounting adjustments. Furthermore, we included only net loss and DCC expenses.

The 2002 column is therefore only accident year 2002 with the original reserve being the accident year 2002 reserve at December 31, 2002. The cumulative paid amounts show the respective amounts paid after December 31, 2002. After nine years the table tells us that accident year 2002 has run off favorably by $862 million, which can easily be reconciled to the change in ultimates in Schedule P, Part 2. The original reserve in the second column, 2003, is the sum of accident year 2002 and 2003 reserves at December 31, 2003, or at 24 months and 12 months, respectively. The 2003 column in the first triangle then shows the cumulative payments on those accident years since December 31, 2003.

TABLE 113

Building from Schedule P
Fictional Insurance Company
10-Year Loss Development Table

(at December 31, in millions)	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011
Net reserves for claims and claim adjustment expense originally estimated	10,368	16,785	23,462	28,062	28,689	30,315	31,359	31,903	32,708	34,515

CHAPTER 23. FAIR VALUE UNDER PURCHASE GAAP

When an entity agrees to buy another entity, under U.S. Generally Accepted Accounting Principles (GAAP) the purchaser is required to state at fair value the assets and liabilities of the purchased entity. This accounting for business combinations is often referred to as Purchase GAAP (P-GAAP). As part of the P-GAAP process, certain intangible assets are included that would not typically be recognized and measured under U.S. GAAP. After the fair value of the assets and liabilities is determined, the implied capital (fair value assets minus fair value liabilities) is compared to the purchase price. If the implied capital is less than the purchase price of the purchased entity, the difference is defined to be goodwill and an asset equivalent to that amount is established. If the implied capital is greater than the purchase price of the purchased entity, the difference is immediately recognized as an operating gain into income.

As actuaries we may become involved in the estimation of certain balance sheet items on a fair value basis. In particular we may be asked to estimate the fair value of loss and LAE reserves and to estimate the value of business acquired (VOBA).

FAIR VALUE OF LOSS AND LAE RESERVES

Fair value under U.S. GAAP is defined in Accounting Standards Codification (ASC) 820-10-05 as "the price at which an orderly transaction to sell the asset or to transfer the liability would take place between market participants at the measurement date under current market conditions." Such a value could be obtained by a market quote if there were a deep and liquid market for insurance liabilities. As there is no such market, the approach is "mark-to-model," which entails determining the market value through an estimation process rather than using an observable market price. Recent actuarial literature supports an approach to estimating fair value of insurance liabilities based on three components. These components are:

1. The expected value of the nominal future cash flows related to liabilities incurred, for loss and LAE, as of the date of the transaction.
2. The reduction in those cash flows for the time value of money at a risk-free rate plus an element for the illiquid nature of the liabilities. This discount rate is meant to reflect the characteristics of the underlying liabilities.
3. A risk adjustment to compensate an investor for bearing the risk associated with the liabilities. This is meant to reflect the expected net present value of profit that an investor would demand in return for the risk inherent within the liabilities.

We will separately consider each in our example below, basing the expected value of the cash flows on what we deem to be a reasonable estimate of unpaid claims as of the sale date and the associated future payout pattern (first component), and the current risk-free rate matched to the duration of those liabilities plus an adjustment for illiquidity (second

component). For the third component of fair value, the risk adjustment, we use what is commonly referred to as the "cost of capital approach." This approach estimates the amount of capital required to support the reserves at each future evaluation date. The required return in excess of the risk-free rate plus illiquidity adjustment is applied to this amount to calculate the value of the excess return expected by the investor in that future period. These values are in turn discounted to present value. The sum of the present value of excess returns from each future period is considered the risk margin.

The first component, expected nominal cash flows, can be derived from the current recorded reserve if management's best estimate is indeed an expected value that has no obvious inherent bias. There are two common ways to establish the cash flows by line of business from the nominal reserves. The first is to use the payout pattern based on the loss reserve development that the actuary would have selected in the course of his or her review of the reasonableness of management's recorded reserve. The second approach is to utilize the implied pattern based on the ratios of paid loss to ultimate loss by accident year. This latter approach may require more smoothing depending on the methods used in selecting ultimate losses and the stability, yet decreasing values, of incurred but not reported (IBNR) to case reserve ratios.

The second component is the amount of discount. Once the cash flows are estimated, the discounting calculation is fairly straightforward provided the rate is given. Given the third component is an explicit risk margin, the interest rate should reflect only the characteristics of the liability not related to the underlying risk in the outcomes for the purchasing entity. This is effectively the risk-free rate plus an element for the illiquidity of the liability, typically less than 100 basis points.

The risk-free rates are typically observed by referring the U.S. Treasury Daily Yield Curve for the evaluation date of study, for liabilities settled in U.S. dollars. The liquidity/illiquidity premium (the terms "liquidity" and "illiquidity" are used interchangeably) is not readily available or typically understood. The need for an illiquidity premium is much easier to initially comprehend when considered from an asset perspective. Two assets with identical expected cash flows and no difference in the risk associated with those cash flows would be expected to be valued exactly the same. But what if one was publically listed and readily tradable, while the other is privately held? In this situation the ability to readily trade the asset would result in a lower discount rate being applied to the tradable asset's future cash flows than that of the privately held asset. The difference in the discount rates is the illiquidity premium for the privately held asset.

From a liability perspective, many find it hard to fathom why a liability that is less liquid should be lower in value than a liability that is liquid. It is easier to understand by considering the asset transferred to support the liability by the seller. The less liquid the liability is, the greater the opportunity for the purchaser of the liability to utilize the asset for their own gain

until the liability comes due. This opportunity cost results in a greater discount for the seller of the liability, i.e., a higher discount rate. How to derive the illiquidity premium is an active debate at the time of writing and beyond the scope of this study material.

The third and final component of the fair value of the loss reserves is the risk adjustment. The most logical approach to calculating a risk adjustment for an estimate that is meant to represent a market-based valuation is a cost of capital. The cost of capital approach is simply the present value of the future returns on capital that an investor would require for bearing the risk in the expected cash flows. The basic formula for the risk adjustment is:

$$\text{Risk adjustment} = (R - i)\sum_{t=0}^{\infty}\frac{C_{t\,to\,t+1}}{(1+i)^{t+1}}$$

Where:

- R = pretax required return on capital by the capital provider
- i = risk-free rate of return plus an illiquidity premium
- t = time
- $C_{t\text{ to }t+1}$ = average capital carried over time t and t+1 to support the liability

The pretax required return can be approximated from the post-tax weighted average cost of capital that is typically produced by valuation experts performing the P-GAAP work on other intangible assets. The capital at any time t could be derived from using a suitable benchmark of the required capital for hypothetical market participant based on Risk-Based Capital, S&P's capital model or Best's Capital Adequacy Ratio model.

As an example, we shall calculate the fair value of the loss and loss adjustment expense (LAE) reserves for the homeowners/farmowners line of business from Fictitious' Annual Statement. In performing the calculation, we have assumed the following:

- The recorded reserve of $1.457 million is a mean estimate of the expected future cash flows, i.e., no margin is present in management's best estimate.
- The appropriate payout pattern of the loss reserves, with some slight smoothing, can be derived from the ultimates in each accident year divided by the paid losses in each accident year[204].
- The discount rates are the U.S. Treasury yield curve as of the valuation date plus an adjustment of 35 basis points for the illiquidity premium.
- The payments are made halfway through each future period.

[204] Note the term "payout pattern" is used interchangeably by actuaries as either the ratio of paid losses to ultimate loss ("percent paid") or the ratio of ultimate loss to paid loss (which is equivalent to a paid age-to-ultimate factor).

- The required capital ratio is 20.1% of the unpaid claim estimates in each future period and is applied to the average amount outstanding over the period to estimate the required capital.
- The cost of capital is 10%, which is reduced by the discount rate associated with the average duration of capital to derive the risk cost of capital of 9.7%, (R-i) in the above formula.
- The return on capital is paid at the end of each future period.

TABLE 114

Fictitious Insurance Company
Homeowners/Farmowners
Fair Value of Loss and LAE Reserves — Net
As of December 31, 2011
(U.S.D in 000s)

Associated Risk Margin	(12)	40	20	9	5	3	2	1	1	0	0	0
Total Fair Value Reserve	(13)	1,486										

(1) Determined from reserve and payout pattern
(2) Payments assumed to occur on average halfway through the period
(3) From yield curve
(4) = (1) / [1 + (3)] ^ (2)
(5) Sum of remaining amounts from (1)
(6) Selected
(7) = Average of (5) from t and t+1 x (6)
(8) Selected
(9) = (7) x (8)
(10) Capital is assumed to be held until the end of the period
(11) From yield curve
(12) = (9) / [1 + (11)] ^ (10)
(11) = Total (4) + Total (12)

The resulting fair value for this line of business differs only slightly from the recorded reserve and is likely within the bounds of the level of accuracy for determining a reasonable reserve estimate. However, this is due to several factors, some of which are offsetting. The discount

is minimal in this case due to the relatively short payout pattern of the line of business and the low level of interest rates on U.S. treasuries as of December 31, 2011.

The shorter payout pattern also affects how long you need to hold the capital. The less time the capital is held, the lower the future capital charges that can accumulate. In addition, in this case the line of business is not one that is associated with a large degree of reserve variability. Therefore, the required capital ratio is fairly small, which decreases the absolute return that a third party would demand to acquire the liability. Finally, working in the opposite direction, there is the effect of discount rates on the risk margin. The low discount rates effectively increase the risk margin as the present value of the future returns on capital is higher.

In this example, you can see that the fair value of a liability can be affected by many moving pieces that can require an actuary to dig into the calculation to be able to explain differences between lines of business or between evaluation dates.

Not all believe that cost of capital is the right approach to producing a risk adjustment. Australian Prudential Regulation Authority requires reserves to be recorded at or about the 75th percentile of the discounted distribution of outcomes. In Canada, property/casualty actuaries judgmentally select the risk adjustment for loss reserves as a percentage value up to 20%. In addition, one could use tail value at risk (T-VaR) approach. While the cost of capital can be calibrated to the pre-tax return investors require and the amounts of capital typically held for a risk, these other methods lack any calibration to the market. This makes it difficult to assert that the assumption of a certain confidence level, T-VaR or percentage load is required by a market participant in an arm's-length transaction.

VALUE OF IN-FORCE

Under P-GAAP, the fair value of deferred acquisition costs (DAC) is zero. In its place an asset is established based on the value of the business in-force (VBIF). This is not, as some company's assume, equivalent to the DAC asset. The VBIF is affected by the relationship of discount to risk adjustment on the liabilities expected to be incurred in connection with the unearned premium reserves, the amount of acquisition costs that were covered by the premium but previously expensed, and the estimated profitability of the unearned premium reserves. A shortcut technique to calculating the VBIF is to state at fair value the liabilities expected to be incurred in connection with the unearned premium reserves and subtract them from the unearned premium to obtain the implied VBIF. The steps to obtain a fair value of these liabilities are identical to those in obtaining the fair value of the loss reserves but with two additional steps. The expected and unbiased loss ratio is required to estimate the nominal expected liabilities from the unearned premium, and the cash flows in the first year should include an amount for policy maintenance costs.

CHAPTER 24. INTERNATIONAL FINANCIAL REPORTING STANDARDS

International Financial Reporting Standards (IFRS) is a single set of global financial reporting standards issued by the International Accounting Standards Board (IASB). It was developed in the public interest as a high-quality set of general purpose standards that will provide users across borders and industries with transparent and comparable information. That is, they provide the world's integrated capital markets with a common language for financial reporting.

Most of the world's major economies permit or require the use of IFRS. The European Union, Canada, Hong Kong, and Australia are among the economies that use IFRS. At the time of writing, the Securities and Exchange Commission (SEC) in the U.S. is in the process of determining whether to allow domestic issuers of financial statements the ability to file using IFRS rather than U.S. Generally Accepted Accounting Principles (GAAP), as it currently permits foreign private issuers. It appears that the SEC will not endorse such a move but will likely allow U.S. GAAP to converge with IFRS over time by using the Financial Accounting Standards Board (FASB) to accept, modify, or reject new standards issued by the IASB in a similar manner to how the National Association of Insurance Commissioners (NAIC) Statutory Accounting Principles Working Group decides how changes in U.S. GAAP will affect U.S. Statutory Accounting Principles.

Currently the IASB and the FASB are engaged in a joint project to develop a new accounting standard for insurance contracts. The initial project was started by the predecessor of the IASB, the International Accounting Standards Committee in the late 1990s. There were several reasons for starting the project:

- There is diversity of accounting practices around the world for insurance contracts.
- Existing standards were overly influenced by regulatory prudence, which does not provide an accurate picture of the economics of a company.
- A deferral and matching model is not currently in favor.
- Investors in life insurance companies in Europe do not currently rely on the accounting information presented but on supplemental measures such as market consistent embedded value.
- Most current approaches for accounting for insurance contracts are inconsistent with the accounting for other industries.

As 2005 approached, the IASB realized it was unable to issue a new standard before IFRS was due to be implemented in the European Union. Consequently, it decided to split the insurance contracts project into two phases. Phase I resulted in IFRS 4, which requires insurers to account for those contracts that meet the definition of an investment contract (this is mainly related to certain life insurance contracts) in accordance with International Accounting

Standards (IAS) 39, financial instruments. In addition it made limited improvements to accounting practices for other insurance contracts. The work on Phase II of developing a new measurement model for insurance contracts is still ongoing at the time of writing.

IFRS 4

One of the key components of IFRS 4 was to define an insurance and reinsurance contract as: "A contract under which one party (the insurer) accepts significant insurance risk from another party (the policyholder) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder."

What is insurance risk versus financial risk, and what insurance risk is significant? The IASB dealt with both of these questions. Financial risk was defined as the risk of a possible future change in one or more of a specified interest rate, financial instrument price, commodity price, foreign exchange rate, index of prices or rates, credit rating, or credit index or other variable, provided in the case of a non-financial variable that the variable is not specific to a party to the contract. Insurance risk is risk, other than financial risk, transferred from the holder of a contract to the issuers. The IASB stated that if both financial risk and significant insurance risk are present, the contract is classified as insurance.

For what constitutes ***significant*** insurance risk, the IASB stated that insurance risk is: "Significant if, and only if, an insured event could cause an insurer to pay significant additional benefits in any scenario, excluding scenarios that lack commercial substance."

This appears to most to be a much weaker standard for risk transfer than that currently in U.S. GAAP, which requires that it is "reasonably possible" that the reinsurer may realize a significant loss from the transaction. This latter standard appears to require more than just one scenario of economic substance.

IFRS 4, beyond the definition of insurance, allowed companies to continue to use their local GAAP but put into place some minimum rules around that practice. Some key requirements of IFRS 4 were that it:

- Prohibited certain accounting policies that do not meet the IFRS accounting framework:
    - Catastrophe provisions or any reserve for events beyond the scope of current contract
    - Offsetting of reinsurance assets and direct liabilities

- Mandated certain accounting policies if they are not already in the company's existing accounting policies:

    - Liability adequacy test (already required for unearned premiums under U.S. GAAP)
    - Impairment testing of reinsurance assets (already required under U.S. GAAP)

- Allowed companies to continue, but not start certain accounting policies that do not meet the IFRS framework:
    - Stating unpaid claim liabilities on an undiscounted basis

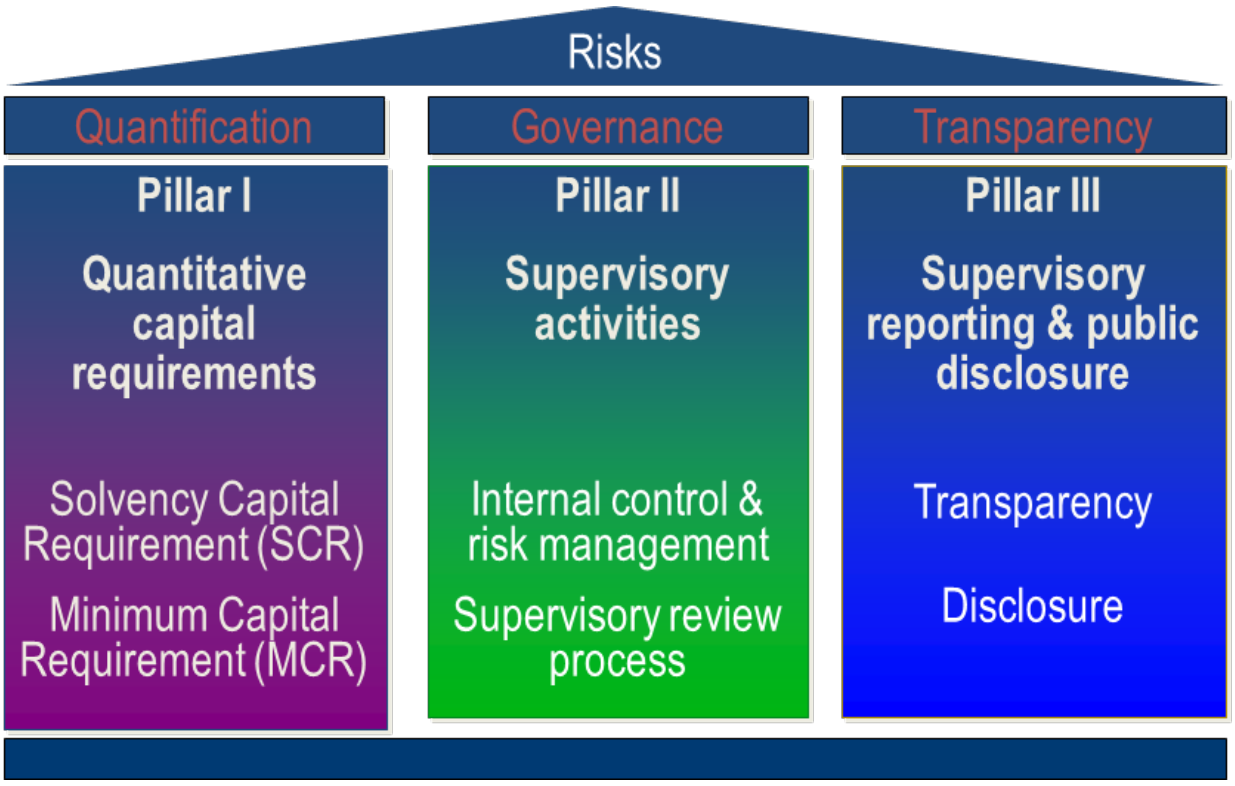
- Allowed companies to elect to introduce certain accounting policies:
    - Permitted the use of a measure as long as it was no less relevant and no less reliable than the current accounting policy such as discounting loss reserves

The IASB has continued to work on Phase II of the insurance contracts project but progress has been slow. A discussion paper was issued by the IASB in 2007, and shortly after, the FASB joined the project. In 2010, the IASB issued an exposure draft, and the FASB issued its own discussion paper. Both papers received a significant amount of comments and the boards have been re-deliberating since January 2011. The current timetable provides for the IASB and FASB to issue a revised exposure draft and initial exposure draft, respectively, by the end of the first quarter of 2013.

CHAPTER 25. SOLVENCY II

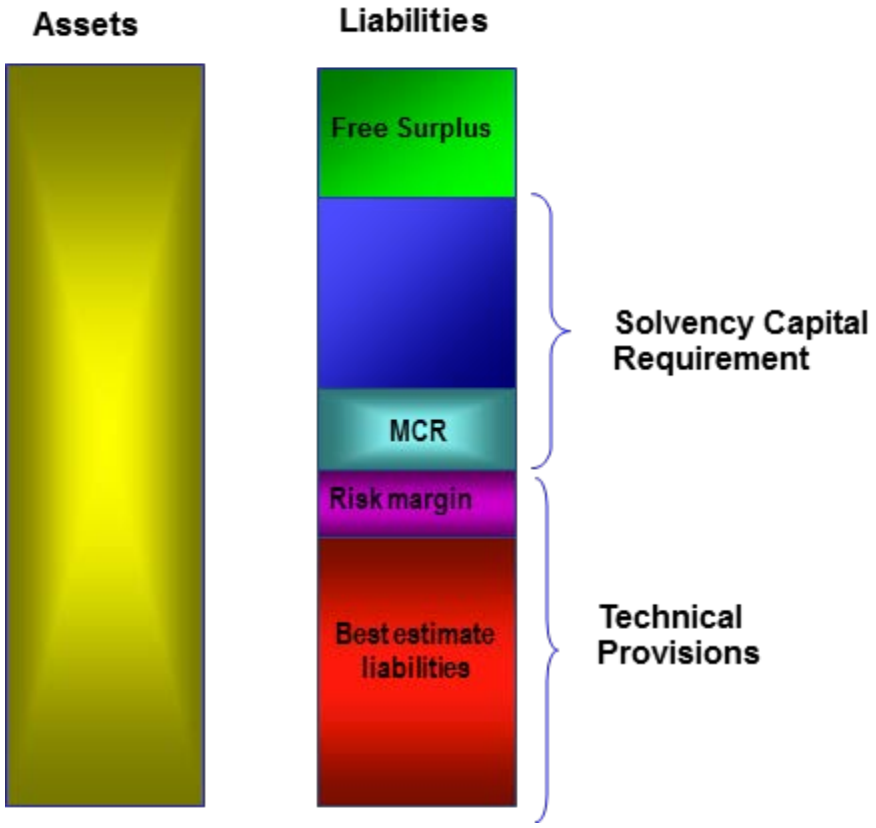
Solvency II is a new principle-based insurance regulatory system to determine the required capital levels of insurance companies in the European Union. It was developed to primarily link the required capital of insurance companies to their risk profile.

Solvency II is scheduled to be implemented from January 1, 2015, on. The new system will be based on three pillars similar to those of Basel II. Those pillars are quantification, governance, and transparency.



PILLAR I – QUANTITATIVE CAPITAL REQUIREMENTS

Pillar I is focused on the quantitative aspect of Solvency II to obtain the solvency capital requirement (SCR) and minimum capital requirement (MCR). The measurement approach is summarized in the following diagram and is often referred to as the total balance sheet approach.



On the asset side of the balance sheet, non-insurance assets are recorded using the measurement approach under International Financial Reporting Standards (IFRS). Reinsurance assets are measured in the same way as insurance liabilities. On the liability side of the balance sheet, the technical provisions consist of the discounted best estimate of the liabilities and their associated risk margin. These are meant to represent the fair market value of the insurance liabilities, and although principles based, the approach to calculating them is fairly prescriptive. The best estimate of the liabilities is the expected value of the cash flows discounted using a risk-free rate plus an illiquidity premium. The risk margin is calculated using a cost of capital method with the cost of capital above the risk-free rate (R-i from Chapter 23) equal to 6%. The required capital at each point in time is the SCR.

The SCR is defined as the amount of capital required to limit the probability of ruin over the forthcoming year to 0.5%, i.e., a one-year 99.5% Value at Risk (VaR). A company whose capital falls below the SCR will be subject to regulatory intervention. If it falls even further below the MCR, the company will not be permitted to operate. Critics have noted that the one-year 99.5% VaR is not an adequate measure for bearing the risk to ultimate settlement. Solvency II requires consideration of recapitalization based on adverse development in each future annual period, yet doesn't assume you need to hold sufficient capital from inception to settlement without raising capital. Therefore, critics of Solvency II believe using one-year

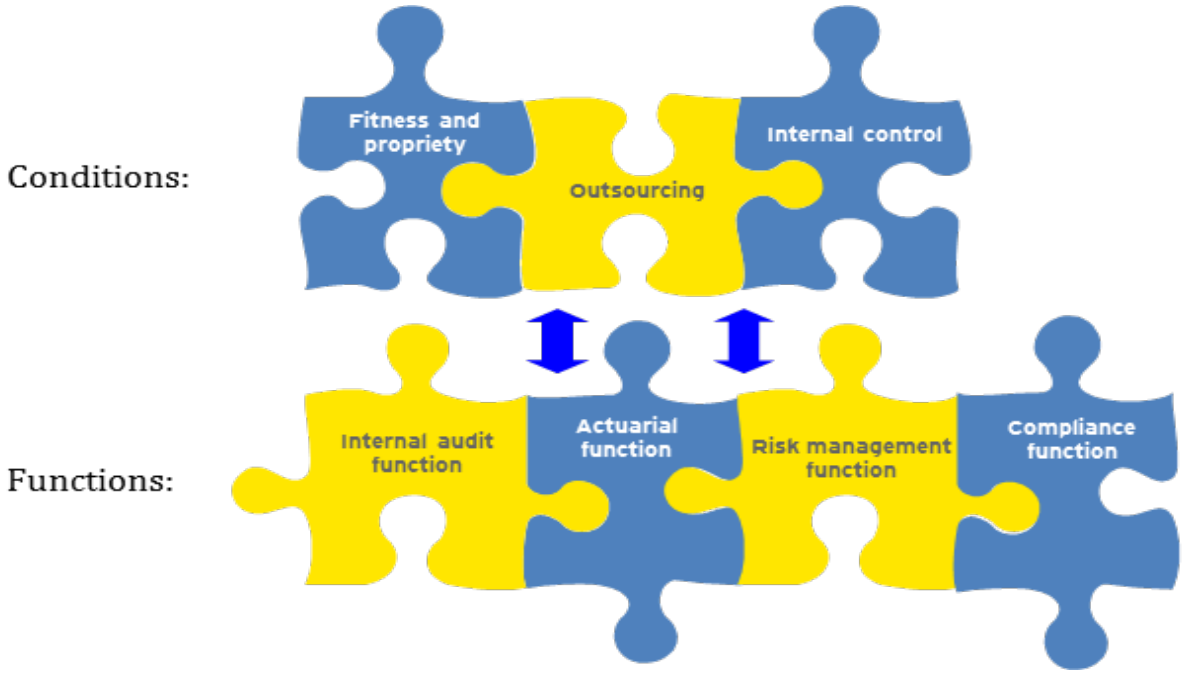
99.5% VaR as the capital standard in the risk margin calculation does not provide a true fair market value.

The SCR can be calculated using the standard model (a spreadsheet model provided by the regulator), an approved internal model or a mix of both. To obtain approval for an internal model, the company has to demonstrate that the model is used in running the business, has been validated by an independent third party and is documented appropriately. The benefit of using an internal model is the likely outcome of a lower SCR.

Any remaining amount between the assets minus the technical provisions and SCR is considered free surplus.

PILLAR II — SUPERVISORY ACTIVITIES

Pillar II provides the supervisor with the tools required to identify high-risk companies and the power to intervene. First, this pillar requires companies to have the governance structure in place to address key areas:



The functional areas, while each satisfying the conditions, should be allocated responsibility that avoids duplication. Each one is viewed as essential for an insurance business to operate effectively. Key responsibilities of each function include:

- Internal audit: Produce a report at least annually to the board of directors on any deficiencies of the internal controls and any shortcomings in compliance with internal

policies and procedures. This function should have unrestricted access to information and staff.

- Actuarial: Ensure the reasonability of methods and assumptions used in calculating the technical provisions and providing a look-back analysis of best estimates against experience. Also, provide opinions on the overall underwriting policy and adequacy of reinsurance arrangements.
- Risk management: Monitoring the risk management function and maintaining an aggregated view. Ensure the integration of any internal model with the risk management function.
- Compliance: Ensure the internal control system is effective to comply with all applicable laws and regulation, promptly reporting any major compliance issues to the board of directors.

Pillar II also requires that companies complete an own risk self-assessment (ORSA). An ORSA was defined by a Committee of European Insurance and Occupational Pensions Supervisors Issues Paper in May 2008: "The ORSA can be defined as the entirety of the processes and procedures employed to identify, assess, monitor, manage, and report the short- and long-term risks a (re) insurance undertaking faces or may face and to determine the own funds necessary to ensure that the undertaking's overall solvency needs are met at all times."

An ORSA should contain at a minimum the following:

- The overall solvency needs, taking into account the specific risk profile, approved risk tolerance limits and the business strategy of the undertaking
- The compliance with the capital requirements and the requirements regarding technical provisions
- The extent to which the risk profile of the undertaking deviates significantly from the assumptions underlying the SCR, calculated with the standard formula or with its partial of full internal model

The ORSA results will periodically be reported to the supervisor who will use the results as input for their risk-based supervision and actions. The ORSA will also be the basis for the dialogue between the insurer and the supervisor regarding important decisions made by the insurer.

In the case of significant deviations from the risk profile, the ORSA will be the starting point of the supervisor's process that could lead to a capital add-on (i.e., an increase in the SCR).

PILLAR III — TRANSPARENCY

Pillar III is the means by which information about a company's capital and regulatory position collected from pillars I and II is given to the supervisor and the financial markets. Some items will be reported quarterly and others annually. The purpose of public disclosure of a company's financial and solvency position is to increase market discipline because companies are aware that their risk-based decisions will be in the public domain.

CHAPTER 26. TAXATION IN THE U.S.

Beyond the solvency and general-purpose financial reporting frameworks, the third accounting framework is taxation. Taxation has many forms, including the direct taxation of the income of corporations. Generally, tax is imposed on net profits from business, net gains, and other income. The income subject to taxation is determined under accounting principles that are modified or replaced by tax law principles where a different basis is determined as necessary by the relevant taxing authorities. In the U.S., insurance companies are taxed based on their statutory income with adjustments that will be described herein.

Understanding the impact of federal taxation is important for insurance contract pricing, insurance company valuation, constructing capital models, and assisting in the preparation of federal tax returns. Too often actuaries simplify a company's tax situation by grossing up underwriting profit by 1/(1%-35%). This simplification ignores the significant effects of federal taxes on income and company valuations.

In this chapter, we will give a summary of how taxable income is derived for insurance companies from their statutory accounts, including a review of the adjustment of loss reserves for discounting. We will review the process for determining taxable income from statutory underwriting income and investment income. Statutory underwriting income consists of premium revenue minus loss and expenses. So we will start with premium revenue, otherwise known as earned premium.

TAX BASIS EARNED PREMIUM

On a tax basis, earned premium is adjusted for "revenue offset." The need for the revenue offset stems from a lack of a deferred acquisition cost asset under statutory accounting. Assume that today a company wrote a policy for $100 but incurred $20 in acquisition costs. Under statutory accounting, the company would incur $20 loss in income from establishing an unearned premium reserve of $100 and payment of $20 in acquisition costs. Rather than allow companies to claim a tax refund on that "loss" under statutory accounting, the IRS has established the revenue offset procedure. The revenue offset procedure assumes that acquisition costs are 20% for all lines of business and all types of insurers. In our example the unearned premium reserve would be reduced by $20, resulting in the income effect from writing this contract as $0.

Statutory earned premium is calculated as written premium minus the change in the unearned premium reserve. Under the revenue offset procedure, tax basis earned premium is written premium minus 80% of the change in unearned premium reserves.

Tax Basis Earned Premium
= Written Premium – (0.8 x (Change in Unearned Premium Reserve))

This formula can be rearranged to give:

Tax Basis Earned Premium
= Statutory Earned Premium
+ (0.2 x (Change in Unearned Premium Reserve)).

Where the change in Unearned Premium Reserve
= Unearned Premium Reserve at end of period – Unearned Premium Reserve at beginning of period.

TAX BASIS INCURRED LOSSES AND EXPENSES

Statutory calendar-year incurred losses are paid losses plus the change in full-value loss reserves:

Incurred losses = Paid losses + Change in full value loss reserves
= Paid losses + (Full value loss reserves at end of period – Full value loss reserves at beginning of period).

For long-tailed lines of business, time value of money considerations in the pricing of policies would result in an underwriting loss under this statutory definition of incurred losses. As we previously discussed, the Internal Revenue Service (IRS) prefers not to provide insurance companies with a tax refund on what appears to be a temporary loss until investment income can be made on the reserves held until the claims are paid. To avoid this, tax basis accounting is more aligned with economic reality by requiring the discounting of loss reserves, albeit with defined rules and the lack of a risk margin/adjustment.

Our next section will discuss the process of discounting for taxes in more detail. For now it is sufficient to understand that:

Tax Basis Incurred Losses = Paid Losses + Change in Discounted Reserves
= Statutory Incurred Losses – Change in Reserve Discount.

Expenses are the same under statutory and tax bases.

INVESTMENT INCOME

Taxable investment income consists of income from bonds, mortgages, real estate, and venture capital, and realized capital gains. In addition, there are two key adjustments: proration of tax-exempt municipal bond interest and proration of dividend received deduction for stockholder dividends.

Tax-exempt municipal bonds are just that for most taxpayers. Insurance companies, though, are required under the 1986 Tax Reform Act to add 15% of the interest income on tax-exempt municipal bonds to their taxable income. This proration effectively requires insurance companies to pay 15% x 35% = 5.25% tax on tax-exempt municipal bond income.

Dividends are paid by a company to its stockholders from after-tax earnings. In turn the stockholders, if individuals, pay taxes on these dividends. This is commonly referred to as double taxation. In the case of corporate stockholders certain allowances are made to reduce tax on dividends to avoid triple taxation when they in-turn dividend earnings to their investors. These allowances are called dividends-received deduction (DRD). The amount of the DRD is determined based on the relationship of the dividend paying corporation and the corporation being taxed. There are three levels of DRDs:

- Controlled: If the corporation being taxed owns 80% or more of the dividend-paying corporation, then the dividend income received is 100% exempt from tax.
- Affiliated: If the corporation being taxed owns at least 20% but less than 80% of the dividend-paying corporation, then 20% of the dividend income is subjected to tax.
- Unaffiliated: If the corporation being taxed owns less than 20% of the dividend-paying corporation, then 30% of the dividend income is subjected to tax.

For insurance companies, this is not quite the end of the story, as the proration provision of the tax code that requires insurance companies to pay tax on the income from tax-exempt municipal bonds also applies to dividend income from affiliated and unaffiliated companies. Therefore, the effective tax rates on dividend income for insurance companies from affiliated and unaffiliated companies are:

- Affiliated: (20% x 35%) + (80% x 15% x 35%) = 11.2%
- Unaffiliated: (30% x 35%) + (70% x 15% x 35%) = 14.175%

ALTERNATIVE MINIMUM INCOME TAX AND THE MINIMUM TAX CREDIT

Now that we have derived taxable income, we can establish the regular tax liability, which is 35% of regular taxable income. Yet that is not the end of the necessary calculations. A company whose investment strategy is heavily weighted to tax-exempt investments may have a high amount of income but little taxable income. To prevent such companies from paying little or no income tax, Congress has established an alternative minimum taxable income (AMTI), which sets a lower bound at which companies are taxed. AMTI consists of regular taxable income plus 75% of income that escapes regular taxation, such as the complement of the prorated municipal bond interest included in regular taxable income.

Once the AMTI is established, the associated alternative minimum income tax (AMIT) is 20% of AMTI. The AMIT is then compared to regular income tax adjusted for the minimum tax credit (described below). If the AMIT is greater than the adjusted regular income tax, the company must pay the AMIT.

When a company pays the AMIT for the first time, the amount that the AMIT is greater than regular income tax is established as a minimum tax credit. The minimum tax credit can be used in future years (carried forward indefinitely) to reduce regular income tax but only as far as the AMIT in a specific year.

For example, if a company in its first year of operation has regular income tax of $1.0 million and an AMIT of $1.2 million, $0.2 million is established as a minimum tax credit. In the second year of operation, the company has regular income tax of $2.1 million and an AMIT of $2 million. Given the minimum tax credit, it can lower its income tax by $0.1 million to the AMIT level, carrying forward the remaining $0.1 million of minimum tax credit.

DISCOUNTING LOSS RESERVES FOR TAXES

In the section within Chapter 22 titled "Nonadmitted Assets ", we discussed the reasons statutory loss reserves are discounted in calculating taxable income. We shall now look in more detail at the prescriptive method required by the IRS to discount. The discounted loss reserves are calculated using three components:

1. The undiscounted loss reserves
2. The discount rate promulgated by the U.S. Treasury for that accident year
3. The payment pattern

The first component is obtained from Schedule P, Part 1. Reserves in Schedule P, Part 1 are net of tabular discount but gross of non-tabular discount. Therefore any tabular discount will need to be eliminated to gross-up the loss reserves from Schedule P, Part 1 onto an undiscounted basis.

The discount rate is determined for each accident year as the 60-month moving average of the Federal midterm rates ending on December 1 of the preceding accident year. The Federal midterm rate is the average rate on U.S. Treasury securities with three to nine years remaining until they mature. Once the rate is determined for an accident year, it remains constant and is applied to the accident year in all future calendar periods.

The payment pattern is determined by an election by each company once every five years in the second and seventh years of each decade. Once the election is made, it applies until five years later. The election is between relying on a paid loss development method developed by the IRS from industry aggregate Schedule P, Part 1 data or applying the methodology to the company's own Schedule P, Part 1. One key difference is once the industry pattern election is

made, the payment patterns are not updated until five years later, when the election has to be made again. For companies that elect to use their own data the patterns have to be updated every year and are based on the last completed Annual Statement available and the commencement of the current accident year. This is typically the Annual Statement from two years prior to the current year-end.

The payment pattern is derived from Schedule P, Part 1 rather than Part 3 due to:

- Concerns related to using data in Part 3 that doesn't include adjusting and other expenses
- Part 1 being an audited schedule
- IRS method applied to Part 1 data requiring no judgment

The approach to deriving the payment pattern from Schedule P, Part 1 assumes that each successive accident year will pay a consistent percentage of ultimate losses based on the age of the accident year. The payment at each successive year is determined from Schedule P, Part 1 by using the ratio of cumulative paid loss and loss adjustment expense (LAE) to ultimate incurred loss and LAE. These cumulative ratios are then converted to incremental paid to ultimate incurred ratios to provide the expected future percentage of payments in successive calendar years. These incremental payments can then be discounted back, assuming that the payments take place approximately halfway through each calendar year on July 1.

For example, let's revisit Schedule P, Part 1 for Fictitious. We shall use the homeowners/farmowners line of business.

TABLE 115

Fictitious Insurance Company
Schedule P, Part 1A – Incremental Payment Percentages

Accident Year	Column 11 Net Paid Losses and LAE	Column 28 Ultimate Incurred Losses and LAE	Cumulative Percentage Paid	Incremental Percentage Paid
2002	1,035	1,038	99.71%	0.04%
2003	1,220	1,224	99.67%	0.00%
2004	1,509	1,514	99.67%	2.71%
2005	1,530	1,578	96.96%	-2.39%
2006	1,534	1,544	99.35%	0.65%
2007	1,599	1,620	98.70%	1.01%
2008	2,413	2,470	97.69%	0.99%
2009	2,404	2,486	96.70%	4.20%
2010	2,589	2,799	92.50%	15.74%
2011	3,346	4,359	76.76%	76.76%

Often, by the end of 10 years the paid-to-incurred ratio is less than 100%. In these cases the IRS has determined an extension of payments calculation. If the amount remaining unpaid after 10 years is less than the amount paid in the 10th year, the remaining amount is assumed to be paid in the 11th year. If the amount remaining is greater than the amount to be paid in the 10th year, the 10th year payment is repeated until all the remaining amount is paid or the 16th year is reached, in which the total remaining unpaid is assumed to be paid in the 16th year. This is the case for homeowners/farmowners, where the remaining unpaid is 0.29% (= 100% - 99.71%), which is greater than the amount to be paid in year 10 (0.04%). Therefore, we repeat the 0.04% incremental percentage paid in years 11 through 15, and then the total remaining unpaid of 0.09% is assumed to be paid in year 16.

If the cumulative percentage paid for homeowners/farmowners had instead been 100% in the 10^{th} year (accident year 2002 in this case), the incremental percentage paid would have been 0.33% in year 10, and no further payments would be made after 10 years.

We can perform the same calculation for the commercial automobile liability line of business.

TABLE 116

Fictitious Insurance Company Schedule P, Part 1C —Incremental Payment Percentages				
Accident Year	Column 11 Net Paid Losses and LAE	Column 28 Ultimate Incurred Losses and LAE	Cumulative Percentage Paid	Incremental Percentage Paid
2002	1,498	1,526	98.17%	0.62%
2003	1,509	1,547	97.54%	0.80%
2004	1,336	1,381	96.74%	5.29%
2005	1,220	1,334	91.45%	0.18%
2006	1,140	1,249	91.27%	2.65%
2007	1,238	1,397	88.62%	8.66%
2008	1,133	1,417	79.96%	15.62%
2009	911	1,416	64.34%	17.41%
2010	711	1,515	46.93%	23.71%
2011	378	1,628	23.22%	23.22%

As you can see from Table 116, the 10th year cumulative percentage paid for commercial auto liability is also less than 100%. Therefore, we repeat the 0.62% incremental percentage paid in years 11 and 12 before finally getting to 100% with an incremental paid percentage of 0.59% in year 13.

PART VII. CANADIAN-SPECIFIC REPORTING

INTRODUCTION TO PART VII

This part provides an overview of insurance financial reporting in Canada and a description of the main participants who influence the reporting framework in Canada. The Canadian regulatory Annual Statement and certain key elements of particular importance to Canadian actuaries are discussed.

CHAPTER 27. OVERVIEW OF FINANCIAL REPORTING IN CANADA

OVERVIEW

Insurance regulators, the accounting profession, and the actuarial profession play a role in setting the framework for insurance financial reporting in Canada.

Insurance is regulated in Canada at the federal and provincial levels. As a result, insurance companies can choose to be registered federally (across Canada) or separately in each province where they conduct business. The majority of insurers are regulated federally under the jurisdiction of the Office of the Superintendent of Financial Institutions (OSFI).[205] Registered insurers are required annually to file detailed financial statements with supporting exhibits and quarterly updates. In addition, since 1992 registered insurers have been required to appoint an actuary to value their policyholders' liabilities and to report at least annually on the current and future financial condition of the insurer. Each province regulates its own policy forms and monitors market conduct; hence, insurers must also be licensed by each province in which it writes business regardless of where it is registered.

OFFICE OF THE SUPERINTENDENT OF FINANCIAL INSTITUTIONS

OSFI is a federal agency established in 1987 under the Office of the Superintendent of Financial Institutions Act. OSFI's mandate is to supervise all federally regulated financial institutions, monitor federally regulated pension plans and provide actuarial advice to the Government of Canada.

OSFI's activities are structured to protect the rights and interests of depositors, policyholders, pension plan members, and creditors of financial institutions and in so doing to contribute to the public confidence in a safe and sound financial system. This is accomplished through supervision to identify key risks in certain institutions and intervene as appropriate and through regulation to enhance the financial system's safety and soundness.

OSFI differs from the National Association of Insurance Commissioners (NAIC) in that OSFI covers all federally regulated financial institutions and not just insurance companies. OSFI has authority over the entities it regulates, whereas the NAIC is a coordinating body that works with state insurance regulators to provide support and coordination to the regulation of multistate insurers across the various states.

CANADIAN INSTITUTE OF CHARTERED ACCOUNTANTS

In 2010 the Canadian Accounting Standards Board adopted International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB) as the financial reporting framework for publicly accountable entities (PAE). Regulated insurance

[205] Office of the Superintendent of Financial Institutions Canada, http://www.osfi-bsif.gc.ca/, May 29, 2012.

companies meet the definition of PAEs and therefore were required to adopt IFRS as of January 1, 2011 (with comparative information for 2010). The Canadian Institute of Chartered Accountants will adopt all changes to IFRS standards issued by IASB as part of the reporting framework for PAEs.[206]

The IFRS standard that deals with accounting for insurance contracts allows for the continuation of the valuation practices in existence at the adoption of IFRS that Canadian Generally Accepted Accounting Principles (CGAAP) provided for insurance contracts. Under CGAAP the policy liabilities can be recorded in accordance with accepted actuarial practice in Canada, which means the recorded liabilities are discounted to reflect the time value of money and include a provision for adverse deviation. The accounting for foreign branches and domestic insurers is substantially the same, and their financial statements are both prepared in accordance with IFRS. However, there are two key differences for foreign branches:

1. The assets of foreign branches are required to be under the control of either the Minister of Finance of Canada or the branches' Chief Agent in Canada. The amount of assets under the control of the Minister of Finance is determined by the branch test of adequacy of assets. Assets that are under the control of the Minister of Finance are to be placed in a trust.

2. There is no share capital account, as the entity is operating as a branch of its parent; therefore, there is a head office account instead.

CANADIAN INSTITUTE OF ACTUARIES

The Canadian Institute of Actuaries (CIA) is the national organization of the Canadian actuarial profession.[207] The CIA serves the public through the provision, by the profession, of actuarial services and advice of the highest quality.

Accepted Actuarial Practice (AAP) is the manner of performing work in Canada in accordance with the rules and the Standards of Practice (SOP) of the CIA. SOP is the responsibility of the Actuarial Standards Board,[208] and approval of standards and changes to standards is made through a process that involves consultation with the actuarial profession and other interested parties. If AAP conflicts with the law, the actuary should comply with the law but report the conflict and, if practical, useful and appropriate under the terms of the engagement, report the result of applying accepted actuarial practice.

The SOPs published by the CIA are binding on fellows, associates, and affiliates of the CIA for work in Canada and for members of bilateral organizations, as defined in the bylaws, when those members are practicing in Canada. The standards consist of recommendations and

[206] Chartered Accountants of Canada, http://www.cica.ca/, 2012.
[207] Canadian Institute of Actuaries, http://www.actuaries.ca/, 2012.
[208] Actuarial Standards Board, *"About the ASB — Terms of Reference,"* http://www.actuaries.ca/ASB, July 4, 2011.

other guidance. A recommendation is the highest order of guidance in the standards. Unless there is evidence to the contrary, there is a presumption that a deviation from a recommendation is a deviation from accepted actuarial practice. The other guidance, which consists of definitions, explanations, examples, and useful practices, supports and expands upon the recommendations.

The standards consist of general standards and practice-specific standards. The general standards apply to all areas of actuarial practice. Usually, the intent of the practice-specific standards is to narrow the range of practice considered acceptable under the general standards.

Actuaries practicing in Canada should be familiar with relevant educational notes and other designated educational material affecting their practice. Educational notes are not binding on an actuary; however, educational notes and other designated educational material describe but do not recommend practice in illustrative situations. A practice that the educational notes describe for a situation is not necessarily the only accepted practice for that situation and is not necessarily accepted actuarial practice for a different situation.

DIFFERENCES BETWEEN STATUTORY AND OTHER FINANCIAL/REGULATORY REPORTING FRAMEWORKS IN CANADA

Canadian insurers were required to prepare their financial statements in accordance with IFRS, as issued by the IASB for their fiscal years commencing in 2011. The Canadian Annual Returns were also modified to include the impacts of changes to IFRS. Upon the introduction of IFRS, the insurance contracts standard (IFRS 4) permitted insurers to apply CGAAP for their insurance contracts. At this point, therefore, the introduction of IFRS has had little impact on the financial statements of Canadian property/casualty insurers, and as in the past, the statutory Annual Return is prepared on the same basis as the company's financial statements.

Statutory Accounting Principles (SAP) is the accounting framework under which all U.S. insurance companies are required to report for state regulatory purposes. There are many differences between SAP and IFRS, including the valuation of invested assets and the valuation of policy liabilities. These differences arise because in Canada there is a desire to achieve consistency with published financial statements and in the U.S. there is a focus on insurer solvency.

CHAPTER 28. CANADIAN ANNUAL STATEMENT

OVERVIEW

All insurers are required to file an Annual Return (or Canadian Annual Statement) based on International Financial Reporting Standards (IFRS) in each province where they are licensed and with the Office of the Superintendent of Financial Institutions (OSFI) if they are federally regulated. The Annual Returns are prescribed forms that are annually reviewed by the Canadian Council of Insurance Regulators with one return applicable to domestic insurers (P&C-1) and the other return applicable to foreign insurers (P&C-2). The full P&C-1 or P&C-2 is to be completed and filed annually within 60 days of year-end. In addition, there is a requirement to file interim returns on a quarterly basis within 45 days of the end of the quarter.

PREPARATION OF KEY SCHEDULES

The Canadian Annual Return (P&C-1) is logically divided into a number of sections as follows:

- General information: This section contains information about the company, its officers, and directors and a summary of selected financial data for five years.
- Consolidated financial statements: This section shows the company's balance sheet (assets, liabilities, and equity), Statement of Income; statement of retained earnings and reserves; comprehensive income and accumulated comprehensive income; statement of cash flows; statement of changes in equity; and notes.
- Statutory compliance: This is the minimum capital test and supporting exhibits.
- Investments: This includes detailed information relating to the company's invested assets.
- Miscellaneous assets and liabilities: This includes items such as other receivables and interests in joint ventures.
- Premiums, claims, and adjustment expenses: This section contains detailed information relating to unearned premiums, incurred losses, claims liabilities, and runoff of claims and adjustment expenses.
- Provincial and territorial summaries: This provides geographical premium and claims information.
- Reinsurance ceded: This includes information related to premiums and claims ceded.
- Commissions and expenses: This includes details relating to commissions and operating expenses.
- Out of Canada exhibits: This section provides detail relating to operations outside of Canada.

- Non-consolidated financial statements and exhibits: Financial statements and many of the exhibits are also provided on a non-consolidated basis.

To be considered complete, the report of the appointed actuary must be submitted with the Annual Return for those insurers in Canada that have an appointed actuary. It is expected that the values reported in the financial statements for the items included in the opinion of the appointed actuary not differ materially from the values as reported by the appointed actuary.

BALANCE SHEET

Appendix II of this publication shows separately the assets and liabilities and equity elements of the balance sheet for the total of all Canadian property/casualty insurance companies as reported by the OSFI. The actuary should be familiar with all aspects of the Annual Return; however, the Canadian actuary is opining on the policy liabilities and is thus expected to demonstrate a significant understanding of all elements of the policy liabilities (claims and premium liabilities).

The claims and premium liabilities are typically the largest liabilities on the balance sheet of an insurer and consist of the following:

1. Claims liabilities:
    a. Direct unpaid claims and adjustment expenses
    b. Assumed unpaid claims and adjustment expenses
    c. Ceded unpaid claims and adjustment expenses
    d. Other amounts to recover
2. Premium liabilities:
    a. Gross unearned premiums
    b. Net unearned premiums
    c. Premium deficiency reserves
    d. Other net liabilities
    e. Deferred policy acquisition expenses
    f. Unearned commissions

Table 117 summarizes the balance sheet provided in Appendix II of this publication into key items from the perspective of the actuary.

TABLE 117

Balance sheet summary — Canadian property/casualty companies at December 2011			
Assets		**Liabilities and Equity**	
Total investments	61,412,454	Unpaid claims and adjustment expenses	41,294,310
Unpaid recoverable from reinsurers	7,592,262	Unearned premiums	17,528,620
Deferred policy acquisition expenses	2,965,054	Other liabilities	5,765,662
Other assets	18,647,065	Equity	26,028,243
Total assets	90,616,835	**Total liabilities and equity**	90,616,835

As illustrated, the unpaid claims and loss adjustment expense (LAE) and unearned premium liabilities are the most significant liabilities on the balance sheet. In Canada, the claims and premium liabilities are reported on the balance sheet on a gross basis. That is, the liabilities are reported gross of reinsurance, and an asset is recorded to reflect the amount of the liabilities expected to be recoverable from reinsurers, which, as illustrated above, is a significant asset on the balance sheet.

The liabilities in Canada are recorded in accordance with Accepted Actuarial Practices (AAP), which requires that the liabilities be equal to the value discounted to reflect the time value of money plus a provision for adverse deviation (PfAD). A discount rate has to be selected to determine the present value of the liabilities. This discount rate is defined by the Canadian Institute of Actuaries as follows:

> "The expected investment return rate for calculation of the present value of cash flow is that to be earned on the assets, taking into account reinsurance recoverables, that support the insurance contract liabilities. It depends on
>
> > the method of valuing assets and reporting investment income,
> > the allocation of those assets and that income among lines of business,
> > the return on the assets at the balance sheet date,
> > the yield on assets acquired after the balance sheet date,
> > the capital gains and losses on assets sold after the balance sheet date,
> > and investment expenses, and losses from default (C-1 risk).
>
> The actuary need not verify the existence and ownership of the assets at the balance sheet date, but would consider their quality." [209]

This definition requires the actuary to also have an understanding of the assets on the balance sheet, how they are valued and the insurer's investment policy. Typically, invested

[209] CIA ASB, Actuarial Standards of Practice – Practice-Specific Standards for Insurance (2000), *Present Values*, page 2023. http://www.asb-cna.ca/. *(Effective January 1, 2003 Revised June 1, 2006; February 5, 2009; November 24, 2009; December 3, 2009.)*

assets are used to support insurance contract liabilities. Therefore, the actuary should be able to estimate the expected investment return on those assets. The following chart, Table 118, illustrates a simple calculation of the market yield of a bond portfolio. The market yield and modified duration are calculated using readily available spreadsheet functions and the overall yield is calculated using the product of modified duration and market value as weights.

TABLE 118

BOND Q	5.56%	30-10-13	1,375,000.00	1,449,829.32	2.50%	2.51%	1.73
BOND R	4.95%	23-08-13	2,600,000.00	2,712,868.67	2.25%	2.26%	1.56
BOND S	4.54%	08-04-13	5,000,000.00	5,225,046.55	0.97%	0.98%	1.23
Total			**37,951,000.00**	**41,264,001.60**			
			Market value duration weighted average yield			3.93%	

The actuary would typically reduce the yield as calculated above to reflect investment expenses, e.g., discount rate = market yield – investment expenses = 3.93% - 0.25% = 3.68%.

There are also other more complex methods employed for estimating the investment yield, such as using a discounted cash flow model where the discount rate is the rate at which the present value of claims cash flows equals the market value of the assets.

INCOME STATEMENT

Appendix II of this publication shows the income statement for the total of all Canadian property/casualty insurance companies as reported by the OSFI. The income statement measures the financial performance of the insurer over the accounting period. The net

income for the period is equal to revenues less expenses and income taxes. For an insurance company, revenues and expenses are separately identified for insurance underwriting operations, investment operations, and other operations (mainly from subsidiaries, or affiliated or ancillary operations).

In the Canadian Annual Return, insurance revenue consists of net premiums written, which is equal to direct written premiums plus assumed written premiums less written premiums ceded to reinsurers.

The change (opening unearned premiums less ending unearned premiums) in net unearned premiums is added to net written premiums resulting in net premiums earned. The net premiums earned item is the net underwriting revenue that is attributable to the accounting period under consideration. Other underwriting-related revenues are added, such as service charges to generate total underwriting revenue.

Incurred claims, claims adjustment expenses, acquisition expenses, general expenses, and any premium deficiency adjustments must be deducted from total underwriting revenue to derive the underwriting income or loss for the period under consideration. Gross incurred claims and adjustment expenses are equal to gross claims and adjustment expenses paid during the period plus the change in gross unpaid claims and adjustment expenses (calculated in accordance with accepted actuarial practice) over the period. The reinsurers' share of claims and adjustment expenses is deducted from gross incurred claims and adjustment expenses to derive net claims and adjustment expenses. This calculation of net incurred claims and adjustment expenses provides the best matching of revenues and expenses over the period, where revenues are defined above.

The categories of acquisition expenses shown in the income statement in the Canadian Annual Return are gross commissions, ceded commissions, taxes, and other acquisition expenses. For an insurer that distributes its products through the independent broker network, commissions are typically the largest cost of acquiring the business. For those companies who have captive agents or who distribute their products directly to the consumer, the other acquisition expense will be larger. The net commission expense is the gross (direct plus assumed) commission expense less any commission income received from ceding reinsurance — typically ceding commissions received on proportional reinsurance. The tax expense item is for taxes, other than income taxes, such as premium taxes, associated with writing insurance in Canada.

General expenses are items that do not relate directly to the acquisition of the business. This includes salaries, management fees, professional fees, occupancy costs, and information technology costs, among other items not directly related to the acquisition of the business.

Premium deficiency adjustments are required if the actuary determines that the net policy liabilities in connection with the net unearned premium are larger than the total of the net

unearned premium plus unearned commission liabilities less the deferred policy acquisition expense asset as recorded by the company.

Net investment income consists of investment income earned plus realized gains (losses), less investment expenses.

Underwriting income, net investment income, and other revenues and expenses are added to derive net income before income taxes and extraordinary items. Income taxes are separated into current income taxes and deferred income taxes.

Extraordinary items, net of income tax, are added to arrive at the net income or loss for the accounting period under consideration.

STATEMENT OF RETAINED EARNINGS

The statement of retained earnings illustrates the calculation of the retained earnings for the insurance company at the end of the reporting period. The retained earnings at the end of the reporting period are equal to the retained earnings at the beginning of the period plus the net income earned during the period less dividends and changes in reserves required plus any prior period adjustments.

RESERVES

This statement provides detail as to the reserves shown under the Equity section of the balance sheet. These reserves are appropriations of surplus for items such as earthquakes or nuclear events.

STATEMENT OF COMPREHENSIVE INCOME AND ACCUMULATED COMPREHENSIVE INCOME

Total comprehensive income for the reporting period is equal to net income as reported on the Statement of Income (above) plus other comprehensive income (OCI). OCI comes from changes in unrealized gains (losses) on available-for-sale assets such as loans, bonds, and debentures and equities; derivatives designated as cash flow hedges; foreign currency translation; and share of OCI of subsidiaries, associates, and joint ventures. Items that are reclassified to earnings of gains (losses) are also included in OCI.

Accumulated other comprehensive income is the cumulative value of OCI or the total of unrealized gains on the above noted items that is included in the equity on the balance sheet.

STATEMENT OF CASH FLOWS

The statement of cash flows derives the value of cash and cash equivalents that are included as the cash item on the balance sheet at the end of the reporting period. Cash flow is derived from or used in operating activities, investing activities and financing activities. The cash flow

during the year from these activities is added to the opening cash to derive the cash balance at the end of the year.

Operating activities relate to the operation of the business and include such items as:

- The net income generated during the year
- Changes in receivables
- Changes in unearned premiums and unpaid claims liabilities
- Recognized gains/losses in investments

The cash flow from investing activities is basically the net cash flow from the purchase of new investments and the proceeds from the sale of investments plus the amortization of premiums on investments.

The cash flow from financing activities is the net cash flow from increasing/repayment of borrowing plus the increase/redemption of shares less dividends to shareholders.

STATEMENT OF CHANGES IN EQUITY

This exhibit illustrates the change in equity across the various classes of equity (e.g., share capital, retained earnings, available for sale financial assets) resulting from various transactions or events such as issue of share capital, total comprehensive income for the year, and dividends.

NOTES TO FINANCIAL STATEMENTS

The Notes to Financial Statements are an integral part of the financial statements. The notes provide significant detail on such important items as the basis of presentation, the basis of measurement, significant accounting policies and detailed explanations relating to some of the key financial statement items.

IMPACT OF REINSURANCE, INCLUDING COMMUTATIONS

Generally, insurance companies purchase reinsurance to limit their risk to loss from certain events. There are many different forms of reinsurance contracts that insurers can enter into, allowing each insurer to manage risk and capital in accordance with its own objectives. These reinsurance contracts can be used to protect against multi-claim, catastrophic events, individual large losses, and poor experience across a line of business, among other uses, and thereby act to reduce volatility in insurance results.

In the event that a registered insurer cedes business to a non-registered insurer, the registered insurer will have to secure adequate collateral from the non-registered insurer to receive full capital credit for the cession of this business. The collateral must be secured through a Reinsurance Security Agreement providing the adequate level of creditor protection to the ceding insurer.

Treaty reinsurance is a contract that applies to all or a portion of an insurance company's contracts during the term of the agreement, typically a calendar year. These contracts generally are placed on an excess basis or on a proportional (quota-share) basis. In an excess treaty, the reinsurer responds to all claims during the treaty period excess of a specified threshold to a specified limit, e.g., automobile claims for $5 million excess of $5 million. In a proportional treaty, the reinsurer receives a set proportion of all premiums subject to the treaty, net of ceding commission, and in return pays the same proportion of all claims subject to the treaty. The ceding commission is paid by the reinsurer to the insurer in a proportional treaty to reimburse the insurer for policy acquisition expenses.

Facultative reinsurance differs from treaty reinsurance in that it relates to reinsurance against risks from a certain policy written by an insurer. For example, an insurance company writes a very large commercial property exposure and wishes to limit its losses from this specific policy and hence purchases facultative reinsurance excess of its retained risk.

Reinsurance contracts impact the income statement and balance sheet of an insurance company. When an insurer purchases reinsurance, it pays a ceding premium, which reduces its earned premiums during the financial reporting period. It will also reduce its gross claims and adjustment expenses incurred by the reinsurer's share of claims and adjusting expenses and reduce its commission expense for any ceding commissions received. All of these items are reflected on the income statement.

Similarly, on the balance sheet of the Canadian Annual Statement, there are two reinsurance assets: unpaid claims and adjustment expenses recoverable from reinsurers and unearned premiums recoverable from reinsurers. These assets reflect the share of the corresponding liabilities recorded by the insurer, which are recoverable from reinsurers.[210]

Table 119 charts a sample income statement and balance sheet for an insurance company prior to the application of reinsurance.

[210] This differs from the U.S. Annual Statement, where liabilities are shown net of reinsurance.

TABLE 119

No Reinsurance

		TOTAL LIABILITIES	$ 518,000
		EQUITY	
		Retained Earnings	$ 300,000
		TOTAL LIABILITIES AND EQUITY	$ 818,000

Table 120 shows the impact of reinsurance on a company's financial statements resulting from two simple reinsurance treaties: an excess of loss treaty and a proportional treaty. To simplify the example, we will ignore all impacts on investment income and income taxes, and, further, we will assume that the treaties run from January 1 to December 31.

For the excess of loss treaty, it is assumed that the company will cede $20,000 in premiums and that it will recover $13,000 of losses from the reinsurer, of which $10,000 will be unpaid at the end of the year. The following chart illustrates the impact on the foregoing financial statements of such a treaty.

TABLE 120

Treaty Reinsurance

Statement of Income			Balance Sheet		
			ASSETS		
Premium Written			**Cash**	$	1,000
Direct	$	340,000	**Investments**		
Assumed	$	–	Bonds and Debentures	$	650,000
Ceded	$	20,000	Common Shares	$	120,000
Net Premiums Written	$	320,000	**Receivables**		
Decrease (increase) in Net Unearned Premiums	$	7,000	Other Insurers	$	20,000
Net Premiums Earned	$	327,000	Other	$	5,000
Gross Claims and Adjustment Expenses	$	225,000	**Recoverable from Reinsurers**		
Ceded Claims and Adjustment Expenses	$	13,000	Unearned Premiums	$	–
Net Claims and Adjustment Expenses	$	212,000	Unpaid Claims and Adjustment Expenses	$	10,000
Gross Commissions	$	50,000	**Other Assets**	$	5,000
Ceded Commissions	$	–			
Other Expenses	$	42,500	**TOTAL ASSETS**	$	811,000
Total Claims and Expenses	$	304,500			
			LIABILITIES AND EQUITY		
Underwriting Income (Loss)	$	22,500			
Net Investment Income	$	40,000	**LIABILITIES**		
Net Income (Loss) before Income Taxes	$	62,500			
Income Taxes	$	24,325	**Payables**		
NET INCOME	$	38,175	Other Insurers	$	3,000
			Other	$	2,000
			Unearned Premiums	$	10,000
			Unpaid Claims and Adjustment Expenses	$	500,000
			Other Liabilities	$	3,000
			TOTAL LIABILITIES	$	518,000
			EQUITY		
			Retained Earnings	$	293,000
			TOTAL LIABILITIES AND EQUITY	$	811,000

In the example above, the accounts impacted are highlighted, and it is assumed that ceded premiums and claims have flowed through cash.

In the proportional example, it is assumed that 15% of premiums and claims are ceded and that a ceding commission of 25% is paid to the insurer. It is also assumed that due to the large ceded premium that invested assets (bonds) would be reduced and that 100% of the claims are unpaid at the end of the year. Table 121 charts the impact on the foregoing financial statements of such a treaty.

TOTAL LIABILITIES AND EQUITY	$	813,500

Again, accounts impacted are highlighted.

COMMUTATION OF CLAIMS

Commuting a claim is a process in which one party is relieved of its obligations in respect of the claim in exchange for a cash payment. This can happen between insurers and individual claimants, with insurers under financial stress or between insurers and reinsurers. This section addresses the commutation of claims between insurers and reinsurers.

Reinsurance contracts may contain a commutation clause, which requires the insurer to relieve the reinsurer of its obligations in exchange for a cash payment. These clauses are

typically more common in contracts that cover long-tail liabilities, and the purpose is generally to allow the reinsurer to settle its obligations within a finite period.

The primary motivation for a reinsurer to commute is to bring certainty to its results; however, there are other benefits to the reinsurer associated with commutation, including capital relief and savings in claims adjusting and administrative costs. From an insurer's point of view, there can be a benefit from commutation if there is a concern in respect of the creditworthiness of the reinsurer — the receipt of cash extinguishes this risk. Insurers also will save administrative costs. Insurers, however, once they receive the cash payment will be subject to the risk of any future adverse loss experience in respect of the commuted liability and will have to hold capital for this risk.

Claims subject to commutation typically have expected cash flows that extend into the future. Therefore, the settlement of these claims requires that financial and non-financial considerations associated with the future cash flows be contemplated. Financial considerations can include items such as the amount and timing of cash flows, the discount rate to be used, cost inflation, the potential for volatility in cash flows and income tax. Non-financial considerations can include such items as morbidity or mortality of the claimant(s), current and future entitlements of the claimant(s), and unfavorable court decisions.

The commutation of a block of claims under a reinsurance agreement typically will involve the actuary for the insurer and the actuary for the reinsurer. Each actuary will be charged with estimating the present value of the future obligations. In estimating the present value of these obligations, the actuary must consider the following:

- The nominal or undiscounted value of future loss and LAE on reported and unreported claims
- The expected timing of the payout of the undiscounted loss and LAE
- Expected investment income on assets supporting these cash flows
- Income tax
- An appropriate risk load to provide for volatility

An example calculation of a commuted value of a portfolio is illustrated below.

TABLE 122

Estimate of Commuted Value of Claims
December 31, 2012

	Total	2013	2014	2015	2016	2017	2018	2019	2020
Estimated Payments in Period	$1,000,000	$350,000	$150,000	$125,000	$100,000	$100,000	$75,000	$50,000	$50,000

Duration Matched Risk Free Rate		2.00%	2.00%	2.00%	2.00%	2.00%	2.00%	2.00%	2.00%
Present Value Claims Cash Flow	$950,223	$346,552	$145,610	$118,962	$93,304	$91,474	$67,261	$43,961	$43,099
Undiscounted Future Payments		$1,000,000	$650,000	$500,000	$375,000	$275,000	$175,000	$100,000	$50,000
Required Margin		10.00%	10.00%	10.00%	10.00%	10.00%	10.00%	10.00%	10.00%
Regulatory Capital at 200%		$200,000	$130,000	$100,000	$75,000	$55,000	$35,000	$20,000	$10,000
Risk Cost of Capital		9.00%	9.00%	9.00%	9.00%	9.00%	9.00%	9.00%	9.00%
Cost of Capital in Period		$18,000	$11,700	$9,000	$6,750	$4,950	$3,150	$1,800	$900
Duration		1	2	3	4	5	6	7	8
Discount Rate		2.00%	2.00%	2.00%	2.00%	2.00%	2.00%	2.00%	2.00%
Risk Margin	$53,225	$17,647	$11,246	$8,481	$6,236	$4,483	$2,797	$1,567	$768
Commuted Value	$1,003,448								

The starting point in estimating the commuted value is to estimate the undiscounted value of the liabilities to be commuted and the expected payout of the liabilities. This can be completed using various actuarial approaches. In Table 122, these liabilities are discounted at a risk-free rate corresponding to the average duration of the liabilities to obtain an estimate of discounted liabilities.

The risk margin is estimated based on the cost of holding capital for claims liabilities. In this case, it is assumed that required capital is based on a regulatory approach. For purposes of this example, it is assumed that a margin of 10% of the claims liability is required and that the company must hold target capital equal to 200% of required capital.

The cost of holding capital is equal to the risk cost of capital multiplied by the regulatory capital. The risk cost of capital can be calculated in various ways, such as by calculating a weighted average cost of capital less the risk-free rate. The total risk margin is the present value of the annual cost of capital amounts discounted at the risk-free rate. The commuted value is calculated as the sum of the discounted value of the liabilities plus the risk margin.

PREMIUM LIABILITIES

The policy liabilities of a property/casualty insurance company at a particular valuation date consist of claims liabilities and premium liabilities. Claims liabilities provide for events that have happened prior to the valuation date, whether reported or not. Premium liabilities provide for events that will occur after the valuation date on policies in force on the valuation

date, i.e., premium liabilities are the liabilities associated with the unexpired portion of an insurance or reinsurance contract.

Net premium liabilities are not separately identified on an insurer's balance sheet as a single item but rather are derived by considering the following items:

1. Net unearned premiums
2. Net loss and LAE costs (external and internal) after the valuation date on in-force policies
3. Expected excess of loss reinsurance costs after the valuation date on in-force policies
4. Costs of servicing the in-force policies
5. Provision for premium adjustments
6. Contingent commissions adjustments
7. Unearned reinsurance commissions
8. Deferred policy acquisition expenses
9. Premium deficiency reserves

A property/casualty insurer typically records items 1, 6, 7, and 9 as liabilities on its balance sheet, item 8 is recorded as an asset on the balance sheet, and item 5 can be an asset or a liability. Items 2, 3, and 4 are not recorded on the insurer's financial statements but are used by the actuary in testing the adequacy of the recorded premium liabilities.

In testing the adequacy of premium liabilities, the actuary is comparing an estimate of ultimate costs associated with the unexpired portion of the policy against premium liabilities recorded by the company. This is illustrated below in Table 123 on both gross and net of reinsurance bases.

TABLE 123

ABC Insurance Company
Illustration of Test of Adequacy of Premium Liabilities (CDN$ in 000s)

Gross of Reinsurance Basis		Net of Reinsurance Basis	
A. Unearned Premiums	$ 100,000	A. Unearned Premiums	$ 80,000
B. Expected Losses and External LAE	$ 75,000	B. Excess of Loss Reinsurance Costs	$ 3,000
C. Expected Internal LAE	$ 4,500	C. Expected Losses and External LAE	$ 61,600
D. Expected Maintenance Expenses	$ 2,000	D. Expected Internal LAE	$ 4,500
E. Contingent Commissions	$ 50	E. Expected Maintenance Expenses	$ 2,000
F. Expected Expenses (B+C+D+E)	$ 81,550	F. Contingent Commissions	$ 50
G. Maximum Gross Deferred Acquisition Expense (A-F)	$ 18,450	G. Expected Expenses (B+C+D+E+F)	$ 71,150
		H. Unearned Commissions	$ 150
		I. Maximum Net Deferred Acquisition Expense (A+H-G)	$ 9,000

The elements of this calculation are discussed below (on a net of reinsurance basis as the gross basis is identical with the exception of the items relating to reinsurance ceded):

A. Unearned premiums: These are the company's unearned premiums net of proportional reinsurance.

B. Excess of loss reinsurance costs: This is the expected costs of excess of loss reinsurance associated with unexpired policies. It is typically calculated by applying the subsequent year's excess of loss reinsurance rates to the unearned premium.

C. Expected losses and external LAE: This is the expected losses (net of all reinsurance) for the unexpired portion of the policy. In Canada this is calculated on an AAP basis, i.e., discounted plus a PfAD. There are different ways to calculate this, such as reviewing historical loss and LAE ratios on an AAP basis and selecting an expected AAP loss ratio or by forecasting expected loss and LAE cash flows and then discounting these and adding a PfAD.

D. Expected internal LAE: This provides for the internal costs associated with settling these claims. This is typically calculated by reviewing historical ratios of paid internal LAE to paid losses.

E. Expected maintenance expenses: This is the cost of servicing these in-force policies, other than internal claims handling. This would provide for policy changes, customer inquiries, etc.

F. Contingent commissions: Many insurers have contingent commission arrangements with brokers, which pay additional commissions if certain volume and/or profit targets are met, and this provides for the anticipated cost of these.

G. Expected expenses: The total of items B to F are all costs associated with the unearned premium. The net liability recorded by the company would be the unearned premium plus unearned commissions less the deferred premium acquisition expense (DPAE) asset.

H. Unearned commissions: These are ceding commissions from proportional reinsurance that are not yet earned by the company.

I. Maximum net DPAE: This is the maximum DPAE asset that the company may record given the expected costs and the liability already recorded. If the company, on a provisional basis, has a higher amount recorded, it must be adjusted downward to a level at or below the amount flowing from this calculation. In the event that this amount is negative, the company must record a premium deficiency reserve, which is an additional liability to ensure that all future costs are provided for appropriately.

A number of items above are included in the premium liability component of the actuarial opinion required by OSFI, as part of the Annual Return, as illustrated in Table 124. It is assumed in this case that the company booked $6.5 million as a DPAE asset, which is less than the $9 million calculated by the actuary.

TABLE 124

Premium Liabilities (CDN in 000s)	Carried in Annual Return (Column 1)	Actuary's Estimate (Column 2)
(1) Gross policy liabilities in connection with unearned premiums		81,550

(9) Unearned commissions	150	

CHAPTER 29. FINANCIAL HEALTH OF PROPERTY/CASUALTY INSURANCE COMPANIES IN CANADA

RISK-BASED CAPITAL ADEQUACY FRAMEWORK

The Minimum Capital Test (MCT) for federally regulated property/casualty insurance companies and the Branch Adequacy of Asset Test (BAAT) for foreign property/casualty companies operating in Canada on a branch basis (foreign branch) were introduced in 2003 by the Office of the Superintendent of Financial Institutions (OSFI). To simplify their use, effective January 1, 2012, the MCT/BAAT guidelines were consolidated into one document, the MCT guideline. Under this new guideline the MCT/BAAT ratios will also be subject to an independent audit.

The minimum and supervisory target capital standards set out in the MCT guideline published by OSFI provide the framework within which the Superintendent assesses whether a property/casualty company, or a foreign branch, maintains adequate capital. Property/casualty companies are required, at a minimum, to maintain an MCT ratio of 100% (minimum capital ratio). OSFI has also set a "supervisory target capital ratio" of 150% to trigger early intervention and provide time for a company to take action to improve its MCT ratio.

OSFI expects companies to establish their own "internal target capital ratio" to reflect their own risk appetite and profile. An adequate internal target capital ratio provides the company with capacity to withstand unexpected losses beyond those covered by the minimum capital ratio. Notwithstanding that a property/casualty company or a foreign branch may meet these standards, the Superintendent has the authority to direct the property/casualty company to increase its capital or the foreign branch to increase the margin of assets over liabilities in Canada.

Typically, the actuary is involved with company management in setting its internal target capital ratio. In setting it, the actuary should consider the following, among other items:

- Nature of the company: Is the company a stock company or mutual company? A stock company has the ability to raise capital and thus may wish to hold enough capital to ensure that it stays above the supervisory target capital ratio (150%) but not so much that it cannot generate its required return on capital. A mutual company cannot raise capital and thus will typically wish to operate at a higher ratio.
- Size of the company: A smaller company or monoline company may have more volatile results and thus wish to hold more capital to ensure that it stays above the supervisory target capital ratio under most circumstances.
- Company reinsurance program: Reinsurance is a form of capital in that it can act to reduce the volatility in loss experience.

- Investment philosophy: Certain investment approaches will require greater capital. That is, if a company does not match assets and liabilities or if a company holds a greater proportion of its investments in equities, more capital may be required.

- Competitive forces: How are others capitalized? If competing companies require less capital to support their business, they may have a pricing advantage.

MINIMUM CAPITAL TEST

In simple terms, the MCT compares capital available to capital required.

CAPITAL AVAILABLE

Capital available is restricted to the following, subject to requirements by OSFI:

- Total equity less accumulated other comprehensive income (AOCI)
- Subordinated indebtedness and redeemable preferred shares
- AOCI (loss) on:
    - Available-for-sale equity securities
    - Available-for-sale debt securities
    - Foreign currency (net of hedging)
    - Share of AOCI on non-qualifying subsidiaries, associates, and joint ventures
- Revaluation losses in excess of gains on own-use properties
- Consolidated non-controlling Interests

Certain items are deducted from/adjusted within the total of capital available, such as:

- Amounts due to/from unregistered reinsurers to the extent they are not covered by deposits or letters of credit held as security
- Interests in non-consolidated subsidiaries and associates
- Interests in joint ventures with more than a 10% ownership interest
- Loans to non-consolidated subsidiaries, associates, and joint ventures with more than a 10% ownership interest considered as capital
- Deferred policy acquisition expenses that are not eligible for either the 0% or 35% capital factor
- Adjustment to own-use property valuations
- Net after-tax impact of shadow accounting
- Deferred tax assets that are not eligible for the 0% capital factor
- Goodwill and other intangible assets
- Other assets, as defined by OSFI, in excess of 1% of total assets
- Accumulated net after-tax fair value gains (losses) arising from changes in a company's own credit risk for the insurer's financial liabilities that are classified as held for trading
- Self-insured retentions where no collateral has been received

- IFRS phase-in adjustment

No capital factor is applied to items that are deducted from capital available.

CAPITAL REQUIRED

The total capital required is the sum of the capital charges for the following:

- Balance sheet assets
- Unpaid claims/unearned premiums and premium deficiencies
- Catastrophes
- Reinsurance ceded to unregistered reinsurers
- Interest rate risk
- Structured settlements, letters of credit, derivatives and other exposures

Capital charges are calculated for the foregoing categories using various approaches. For example, capital charges for balance sheet assets are calculated by applying factors to the balance sheet values of various assets that reflect the risks associated with those assets.

Factors are applied to net unpaid claims (less PfAD) and net unearned premiums. The factors for unpaid claims vary by class of insurance and reflect the potential for variability in the estimates of these amounts, e.g., a 5% factor is applied to property claims, and a 15% factor is applied to liability claims. A uniform factor of 8% is generally applied to unearned premiums across all classes of insurance; however, mortgage and accident and sickness lines of insurance have margins for unearned premiums and unpaid claims that reflect the characteristics of those types of business. A margin of 8% applies to premium deficiency reserves.

Insurers are also required to calculate their margins for unearned premiums, unpaid claims (net of PfAD), and premium deficiencies on a gross basis and multiply the resulting gross margins by 25%. The greater of this calculation and the net margins must be reported as capital required for unearned premiums/unpaid claims/premium deficiencies.

The factor to be applied to unearned premiums and unpaid claims ceded to unregistered reinsurers is 10%. The resulting margin can be reduced to zero by letters of credit and non-owned deposits held as security.

INTEREST RATE RISK

Effective January 1, 2012, insurers must hold capital for interest rate risk. Interest rate risk is the risk of loss from changes in interest rates impacting interest-rate-sensitive assets and liabilities. Assets and liabilities whose value depends on interest rates are impacted; generally, this includes fixed income assets and discounted policy liabilities. The interest rate risk margin is the difference between the change in the value of interest-rate-sensitive assets

and the change in the value of interest-rate-sensitive liabilities arising from a change in interest rates plus the change in the value of allowable interest rate derivatives (only simple derivatives such as interest rate futures, forwards, and swaps may be included).

Interest-rate-sensitive assets include the following:

- Term deposits and other short-term securities (excluding cash)
- Bonds and debentures
- Commercial paper
- Loans
- Mortgages
- Mortgage-backed securities and asset-backed securities
- Preferred shares
- Interest rate derivatives held for other than hedging purposes

Assets held in mutual funds and segregated funds that are interest-rate sensitive are to be included in interest-rate-sensitive assets. All interest-rate-sensitive assets that are held by the insurer are to be included, not just those backing liabilities.

Net unpaid claims and adjustment expenses and net premium liabilities (as determined in accordance with the Canadian Institute of Actuaries (CIA) standards for valuation of policy liabilities) are considered to be the interest-rate-sensitive liabilities.

The interest rate risk margin is calculated as A – B + C where:

A. Estimated change in the value of the interest-sensitive asset portfolio for an interest rate change of X%
B. Estimated change in the value of the interest-sensitive liabilities for an interest rate change X%
C. Estimated change in the value of the allowable interest rate derivatives for an interest rate change X%

The same calculation is completed for an interest rate change of –X%. The interest rate risk margin is the greater of that resulting from a change of X% or –X%.

The change in the value of the interest-rate-sensitive assets and liabilities depends on the duration of the relevant assets and liabilities. Modified duration or effective duration may be used to calculate duration; however, the selected method must be used for all interest-rate-sensitive assets and liabilities and must be used consistently from year to year. The portfolio duration is calculated as a weighted average of the duration of the individual assets or liabilities comprising the portfolio.

The estimated change in the value of the interest rate assets is therefore calculated as duration of the asset portfolio multiplied by fair value of the asset portfolio multiplied by X%.

The estimated change in the value of the interest rate liabilities is therefore calculated as duration of the liabilities multiplied by fair value of the liabilities multiplied by X%. A simple example (ignoring the impact of interest rate derivatives) follows:

Asset duration = 6 years
Fair value of asset portfolio = $500 million
X = 0.50%
Liability duration = 3 years
Fair value of liabilities = $350 million
Capital required = 6 * $500 million *.005 – 3 * $350 million * .005 = $9.75 million

STRUCTURED SETTLEMENTS, LETTERS OF CREDIT, DERIVATIVES, AND OTHER EXPOSURES

Capital required for structured settlements, letters of credit, derivatives, and other exposures are for counterparty risk not covered by the capital required for balance sheet assets. The capital required for these instruments is calculated as follows:

Capital required =
Value of the instrument less collateral or guarantees
* Credit conversion factor (reflects the nature and maturity of the instrument)
* Capital factor (to reflect counterparty default risk).

FOREIGN COMPANIES

Foreign companies operating in Canada on a branch basis are required to maintain an adequate margin of assets over liabilities in respect of their business in Canada. The BAAT provides a framework, similar to the MCT, by which the regulator assesses the adequacy of assets of the branch.

The BAAT is similar to the MCT in that it compares net assets available to margin required. The net assets available are equal to the excess of assets vested in Canada over net liabilities. The margin required is the sum of amounts required for the same items as in the MCT, e.g., assets, policy liabilities, catastrophes, etc.

The regulator also plans to require insurers to hold capital for foreign exchange risk commencing in calendar year 2013.

DYNAMIC CAPITAL ADEQUACY TESTING

Under federal regulation, the appointed actuary must investigate the insurer's financial condition. This is completed by way of Dynamic Capital Adequacy Testing (DCAT).

DCAT is a process of analyzing and projecting the trends of a company's financial condition, given its current financial and operating circumstances, its recent past, and its intended

business plan under a variety of future scenarios. It allows the actuary to inform company management of the likely implications of the business plan on capital and to provide guidance on the significant risks to which the company is exposed.

The principal goal of this process is to help measure capital adequacy by arming the company with the best information on courses of events that may lead to capital depletion and the relative effectiveness of alternative corrective actions. Furthermore, knowing the sources of threat, the company can strengthen the monitoring systems where it is most vulnerable and thus provide information on a continuous and timely basis.

In accordance with accepted actuarial standards, the DCAT process must include a base scenario and several plausible adverse scenarios. The CIA provides guidance as to the risk categories that must be examined for possible threats to capital adequacy. The risk categories enumerated by the CIA are not necessarily the only ones to be examined because the circumstances of the insurer may result in the need to examine other risk categories.

The DCAT process generally consists of the following:

1. Development of a base scenario, which is typically derived from the company's business plan
2. Examination of the risk categories (mandatory or otherwise) to determine those that are relevant to the company circumstances
3. Stress-testing of the risk category in question for each relevant risk category
4. Selection of those scenarios requiring further analysis.
5. Reporting on the results of the analysis

In the most general sense, solvency is the ability of an entity to honor its financial obligations. From the accounting viewpoint, solvency requires that assets equal or exceed liabilities and therefore that the total equity is non-negative. This is ascertained as of a specified date. Even though a balance sheet may show a corporate entity to be technically insolvent by this definition, legal insolvency is only determined through court or regulatory action to terminate the operations of that company. In contrast, the concept of capital adequacy envisioned by DCAT extends beyond the balance sheet at a specific date to the continued vitality of the organization.

Accordingly, in considering the solvency of insurance operations, the amount of and expected trends in surplus and other forms of available capital over the near future are of vital importance, especially in terms of risk profile of the company. It is necessary to consider the purposes of and needs for capital in relation to anticipated and possible events occurring after the statement date.

DCAT utilizes the regulatory formula for the capital adequacy standard. For insurers regulated under the Federal Insurance Companies Act or the Ontario Insurance Act, the minimum regulatory capital requirement for the purposes of the DCAT standard is based upon

the MCT for a Canadian property/casualty insurer and the BAAT for a Canadian branch of a foreign property/casualty insurer. Should an insurer be subject to minimum capital requirements under other jurisdictions, the most restrictive requirement is used.

The company's financial condition is deemed satisfactory if, throughout the forecast period, it is able to meet all its future obligations under the base and all plausible adverse scenarios. In addition, under the base scenario, it must meet the target regulatory capital requirement. Otherwise the company's financial condition is deemed unsatisfactory.

DCAT analysis provides the actuary with significant information about the financial condition of a company. The base scenario is in essence the business plan of the company throughout the forecast period. A review of the business plan should allow the actuary to learn much about the company, including the following:

- Whether the company is growing or contracting through the forecast period and, if relevant, the level at which it is growing
- Whether the company is profitable throughout the period and whether the profits are sufficient to grow the capital base to support the growth of the company
- Planned changes in mix of business written by the company through the forecast period
- Planned changes to reinsurance programs, investment philosophies, expenses, etc.

Further, the adverse scenarios can reveal information about the risk management strategy employed by the company. For example, if a scenario that tests the impact of a change in interest rates has very little impact on the company, it is likely that the company has employed an asset/liability matching strategy to minimize the impact of this event. Adverse scenarios can also identify risks to which the company's financial condition is particularly sensitive, and the actuary can work with management in developing mitigation strategies to manage these risks.

INDUSTRY RESEARCH

Market-Security Analysis and Research, Inc.

Market-Security Analysis and Research, Inc. (MSA) is a Canadian analytical research firm that is focused on the Canadian insurance industry.[211] While MSA is not a rating agency, it publishes many reports and also offers a software tool that allows for comprehensive analysis of company and industry results in significant detail over a number of years. Canadian insurers are also monitored by major rating agencies such as A.M. Best, Standard & Poor's, and Moody's.

[211] MSA Research Inc. http://www.msaresearch.com/. 2006-2012.

Individual company reports are presented by way of a number of exhibits. The first exhibit (Exhibit 1) is titled "Key Company Information." It presents key information about the company's type of license, ownership, and distribution category; identification of the appointed actuary and external auditor; and the name of the CEO or chief agent. There is additional information included in this exhibit for companies with publicly traded parents.

Key financial indicators are included in Exhibit 2. A number of regulatory tests and early warning indicators are included, such as:

- The MCT/BAAT ratio
- Profitability measures such as return on equity, return on revenue, return on assets after tax, and insurance return on net premium earned
- Liabilities as a percentage of liquid assets
- Net loss reserves to equity
- Cash flow from operations to net premiums written
- One-year loss development to equity
- Overall net leverage

The above measures are used by OSFI and other regulatory bodies as early warning solvency indicators. In its reports, MSA flags results that fall outside of OSFI's acceptable range. The MCT/BAAT ratios are OSFI's Risk-Based Capital adequacy assessment and are important measures of a company's financial position. If a company fails this test, it will likely be the subject of regulatory intervention. Often companies fail certain other ratios without being in distress; thus, the actuary should consider results across all of the tests as a whole when making judgments about a company's financial position.

There are also supplementary ratios calculated to provide more summary-level information about the company, including:

- Investment yield (including realized capital gains)
- Change in net premium written
- Change in gross premium written
- Change in equity
- AOCI to equity
- Reinsurance recoverable to equity
- Net underwriting leverage ratio (ratio of net premiums written to equity)
- Two-year combined ratio
- Overall diversification score

PART VIII. THE FUTURE OF SAP

INTRODUCTION TO PART VIII

Regulation and financial reporting of insurance companies has evolved over time. The original FASB accounting standard for insurance entities (FAS 60) was discussed and developed in the 1970s and adopted in June 1982. The NAIC codified its accounting principles in the 1990s. Today we see the joint project of the FASB and the IASB on insurance contracts accounting and the NAIC undertaking a Solvency Modernization Initiative (SMI). So what is driving change and where are we heading?

CHAPTER 30. THE FUTURE OF FINANCIAL REPORTING AND SOLVENCY MONITORING OF INSURANCE COMPANIES

THE NAIC AND THE FINANCIAL SECTOR ASSESSMENT PROGRAM

In *Part VI. Differences from Statutory to other Financial/Regulatory Reporting Frameworks in the U.S.*, we discussed the reasons behind the development of new accounting standards for insurance contracts by the Financial Accounting Standards Board (FASB) and the International Accounting Standards Board (IASB), including the benefit of having one common language for financial reporting. The National Association of Insurance Commissioners' (NAIC) Solvency Modernization Initiative was started in part because of pressure to conform to new and evolving international standards. In November 2008 at a G20 summit, during the global financial crisis, the G20 members agreed to undergo periodic peer reviews of their financial services regulatory regimes. This peer review process was developed by the International Monetary Fund and World Bank in response to the financial crisis in the late 1990s but had mainly been applied to developing countries. This peer review process is called the Financial Sector Assessment Program (FSAP).

The NAIC underwent the FSAP process during 2010 for the first time. The assessment process benchmarked the U.S. insurance regulatory regime against the Insurance Core Principles (ICPs) developed and published by the International Association of Insurance Supervisors (IAIS). The results of the assessment were generally favorable but were based on the ICPs published in 2003. In October 2011, the IAIS published a revised set of ICPs upon which future FSAP reviews will be based. One area that could pose a challenge to the NAIC is ICP 14 on valuation. The first page of ICP 14 states the following:

"The context and purpose of the valuation of assets or liabilities of an insurer are key factors in determining the values that should be placed on them. This ICP considers the valuation requirements that should be met for the purpose of the solvency assessment of insurers within the context of IAIS risk-based solvency requirements that reflect a total balance sheet approach on an economic basis and address all reasonably foreseeable and relevant risks."

ICP 14 later states that an "economic value should reflect the prospective valuation of the future cash flows of the asset or liability allowing for the riskiness of those cash flows and the time value of money." Some may argue the current statutory valuation of property/casualty liabilities does not comply with this statement as it doesn't reflect the time value of money, except in limited circumstance, nor the underlying risk. Other statements in ICP 14 may allow for some wiggle room, so what remains to be seen is how the next FSAP review of the NAIC will conclude on the current state-based solvency regime of the U.S. insurers against this new "globally accepted framework for the supervision of the insurance sector."

COMFRAME, SOLVENCY II EQUIVALENCE, AND THE FEDERAL INSURANCE OFFICE

In addition to just having completed the revised set of ICPs, the IAIS is developing a Common Framework for the Supervision of Internationally Active Insurance Groups, commonly referred to as ComFrame. To adopt a common framework, there needs to be a common valuation approach to measuring the assets and liabilities of an insurer. Otherwise, it would not be possible for regulators to compare statutory entities and relate them to common requirements. At the time of writing, the proposed valuation approach under ComFrame is International Financial Reporting Standards (IFRS). Given the divergent viewpoints between the FASB and the IASB, this proposal could place U.S. domiciled property/casualty insurance companies with a significant international presence in the position of having to create another set of financial statements in order to be regulated under ComFrame.

While ComFrame is being developed, Solvency II has an assessment process to determine if the regulatory regime in another country is equivalent to its risk-based approach to solvency regulation. A country that is considered equivalent is treated as if it were a European Union member state. This gives an advantage to reinsurers situated in such equivalent countries and to insurance groups with a presence in the equivalent country. Unfortunately, the U.S. will not be considered equivalent in the first phase of countries applying. One of the key reasons is the lack of a countrywide regulator for insurance.

The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 created the Federal Insurance Office (FIO), which has several functions. The relevant functions are:

- To coordinate federal efforts and develop federal policy on prudential aspects of international insurance matters, including representing the U.S., as appropriate, in the IAIS and assisting the Treasury Secretary in negotiating covered agreements (bilateral or multilateral agreements entered into by the U.S. regarding prudential measures with respect to the business of insurance or reinsurance)
- To determine whether state insurance measures are preempted by covered agreements
- To consult with the states (including state insurance regulators) regarding insurance matters of national importance and prudential insurance matters of international importance

Effectively, this gives the FIO the power to act like a national regulator for purposes of negotiating the contents of ComFrame and seeking Solvency II equivalency as it can preempt state law if the director of the FIO determines that the measure "results in less favorable treatment of a non-U.S. insurer domiciled in a foreign jurisdiction that is subject to a covered agreement than a U.S. insurer domiciled, licensed, or otherwise admitted in that State," and state law "is inconsistent with a covered agreement."

In addition to the FIO, Dodd-Frank gave the Federal government powers to regulate systemically important financial institutions (SIFI). What financial institutions are systemically important is still be determined by the Financial Stability Oversight Council, a body set up by Dodd-Frank to reduce the risk of any one company being "too big to fail." A limited number of property/casualty insurance companies have been identified as being potential SIFIs. For those property/casualty companies that are ultimately determined to be SIFIs, a federal regulatory framework awaits that was originally designed for bank holding companies and has been widely criticized as being ill-suited for insurance company regulation.

THE FUTURE

All the above activities by the NAIC, FASB, IASB, IAIS, and the FIO leave us with a very muddy picture of how insurance liabilities will be evaluated in the future. The common theme, though, is change, as each proposed framework differs from the current valuation of insurance liabilities today. It is also likely that we will see change in the general financial reporting world under U.S. GAAP before we see a change to U.S. statutory accounting. Several scenarios could play out that could leave us with several different frameworks in place. Yet, any of these changes individually would have one common result: a greater need for actuaries to perform the additional calculations and explain the drivers of the results.

GLOSSARY OF TERMS

Accepted Actuarial Practice (AAP)

The manner of performing work in accordance with rules and standards of practice as promulgated by the relevant actuarial body, e.g., American Academy of Actuaries in the U.S. or the Canadian Institute of Actuaries in Canada

Accident year

The calendar year in which the accident occurs and/or the loss is incurred

Accumulated other comprehensive income (AOCI)

The cumulative value of other comprehensive income or the total of unrealized gains on (i) available-for-sale assets such as loans, bonds and debentures and equities; (ii) derivatives designated as cash flow hedges; (iii) foreign currency translation; and (iv) share of other comprehensive income of subsidiaries, associates, and joint ventures. AOCI is included in the equity on the balance sheet of a Canadian insurance company.

Actuarial Opinion Summary (AOS)

A confidential document containing the appointed actuary's range of unpaid claim estimates and/or point estimate, as calculated by the appointed actuary, in comparison to the company's recorded reserves on both a net and gross of reinsurance basis

Actuarial Standards Board (ASB)

"The Actuarial Standards Board (ASB) establishes and improves standards of actuarial practice. These Actuarial Standards of Practice (ASOPs) identify what the actuary should consider, document, and disclose when performing an actuarial assignment. The ASB's goal is to set standards for appropriate practice for the U.S."[212]

Actuarial Standards of Practice (ASOP)

"ASOPs are intended to provide actuaries with a framework for performing professional assignments and to offer guidance on relevant issues, recommended practices, documentation, and disclosure."[213]

Adjusting and other (A&O) expenses

One of the two components of loss adjustment expense, with defense and cost containment being the other. A&O generally include all expenses associated with the

[212] Actuarial Standards Board. *"About the ASB."* http://www.actuarialstandardsboard.org/aboutasb.asp , 2012.
[213] Actuarial Standards Board, *Introduction to the Actuarial Standards of Practice,* http://www.actuarialstandardsboard.org/pdf/asops/Introduction_113.pdf , October 2008.

adjusting and recording of insurance claims, other than those included with defense and cost containment expenses. According to the 2011 National Association of Insurance Commissioners *Annual Statement Instructions Property/Casualty*, A&O expenses are "those expenses that are correlated with claim counts or general loss adjusting expenses."[214]

Alien insurance company

A company doing business in the U.S. that is incorporated under the laws of a country outside the U.S.

Allocated loss adjustment expenses (ALAE)

Expenses associated that can be readily assigned to a specific claim, such as attorney fees.

Alternative minimum taxable income (AMTI)

The lower bound of the income level at which companies are taxed

A.M. Best Company

A global credit rating agency that serves the financial and health care service industries. In the insurance area, Best's Credit Ratings cover property/casualty, life, annuity, reinsurance, captive, title and health insurance companies as well as health maintenance organizations. A.M. Best covers thousands of insurance entities across the globe.

American Academy of Actuaries Committee on Property and Liability Financial Reporting (COPLFR)

"This committee monitors activities regarding financial reporting related to property and liability risks, reviews proposals made by various organizations affecting the actuarial aspects of financial reporting and auditing issues related to property and liability risks, and evaluates property and liability insurance and self-insurance accounting issues."[215]

American Academy of Actuaries Property/Casualty Financial Soundness/Risk Management Committee (FSRM)

"The committee proactively provides actuarial support, advice, and communications on topics that involve the soundness and risk management of property and liability insurance. This includes seeking out additional audiences and topics to address so that the committee can coordinate and respond to issues at the state, federal, and

[214] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 225.
[215] American Academy of Actuaries, "Committee on Property and Liability Financial Reporting," http://www.actuary.org/committees/dynamic/COPLFR, 2012.

international levels. The committee actively interfaces with the NAIC and the Financial Reporting Council's Solvency and Risk Management Task Force. The committee also communicates and provides information to the membership of the Academy regarding these issues."[216]

Amortized cost

"The cost of bonds less the amortization of premium, or plus the accumulated accrual of discount, from the date of purchase to the date of valuation."[217]

Annual Statement

A filing made annually by an insurance company to each state insurance department in which it writes business. The filing is prepared under Statutory Accounting Principles and includes the company's financial statements and various supporting scheduled and exhibits.

Appointed actuary

"A qualified actuary appointed the Board of Directors, or its equivalent, or by a committee of the Board to render a statement of actuarial opinion. 'Qualified Actuary' is a person who is either:

i. A member in good standing of the Casualty Actuarial Society, or
ii. A member in good standing of the American Academy of Actuaries who has been approved as qualified for signing casualty loss reserve opinions by the Casualty Practice Council of the American Academy of Actuaries."[218]

Assets

Resources obtained or controlled by a company as a result of past events that have a probable future economic benefit to the company

Authorized control level (ACL)

The level of Risk-Based Capital within which the state regulatory authority is authorized, but not required, to take control of an insurance company. This level is triggered when a company's total adjusted capital is between 70% and 100% of the ACL benchmark, or 35% to 50% of Risk-Based Capital.

Authorized reinsurer

A reinsurer that is licensed or approved to transact insurance business in a jurisdiction; an unauthorized reinsurer is not.

[218] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 10.

Balance sheet

The financial statement that presents all of a company's assets and liabilities as of a specific point in time

Branch Adequacy of Asset Test (BAAT)

Guideline for federally regulated property/casualty insurance companies published by the Office of the Superintendent of Financial Institutions that provides the framework within which the Superintendent assesses whether a property/casualty company, or a foreign branch, maintains adequate capital

Canadian Institute of Actuaries (CIA)

The national organization of the Canadian actuarial profession

Canadian Institute of Chartered Accountants (CICA)

"The CICA is a not-for-profit entity incorporated by a Special Act of the Canadian Parliament in 1902. … The CICA works in collaboration with the provincial institutes/Ordre to ensure that the profession is well positioned to respond to the challenges and capitalize on the opportunities presented in today's marketplace.

It executes its strategy through:

- supporting the setting of accounting, auditing and assurance standards for business, not-for-profit organizations and government
- developing and delivering pre- and post-qualification education programs
- providing a range of member services and professional literature
- research and development of intellectual property
- issuing guidance on risk management and governance
- fostering relationships with key stakeholders nationally and internationally."[219]

Cap

"An agreement obligating the seller to make payments to the buyer, each payment under which is based on the amount, if any, that a reference price, level, performance or value of one or more Underlying Interests exceed a predetermined number, sometimes called the strike/cap rate or price"[220]

Carryforward of net operating losses

An accounting practice used when an insurance company has net operating losses in one financial year and expects those losses to offset gains in the future, thereby reducing future tax liability

[219] Chartered Accountants of Canada, "About the Canadian Institute of Chartered Accountants (CICA)," http://www.cica.ca/about-cica/index.aspx, 2012.
[220] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 373.

Carrying value

An initial cost of an investment adjusted over time based on the reporting entity's share in the company's income

Case development

Increases or decreases in the reserves for known claims as additional information becomes available

Case incurred loss

The reported value of a known claim equal to the sum of paid losses plus case outstanding losses

Case outstanding loss

The reserve for a known claims, or case reserve, generally established by the company's claims administrator(s)/handler(s) based either on the facts of the particular claim or based on formula

Case reserves

See definition for *case outstanding loss*

Cash flow statement

A statement that presents a company's operations strictly from a cash perspective

Ceded reinsurance premiums payable

Premiums that are owed to reinsurers relating to ceded reinsurance

Ceding commission

A fee paid by the reinsurer to the insurance company (ceding company) for the reinsurance transaction. The fee is generally expected to reimburse the insurer for policy acquisition expenses.

Certified public accountant (CPA)

"Professional accountant who has passed the uniform CPA examination administered by the American Institute Of Certified Public Accountants, and has fulfilled the educational and work related experience requirements for certification"[221]

Claim frequency

The rate of claim occurrence, typically calculated as the ratio of claim counts to exposures

[221] BusinessDictionary.com, *Definitions,* http://www.businessdictionary.com/definition/certified-public-accountant-CPA.html, 2012.

Claim severity

The average cost of a claim, typically calculated as the ratio of losses to claim counts

Claims-made policy

An insurance policy covering claims that arise on or after the policy retroactive date and are reported during the term of the policy. The retroactive date may be a date many years before the purchase of the policy. Therefore, a claims-made policy may cover claims made today that result from actions that occurred any time after the retroactive date.

Collar

"An agreement to receive payments as the buyer of an Option, Cap or Floor and to make payments as the seller of a different Option, Cap or Floor"[222]

Common capital stock

A surplus account that is equal to the par value of common stocks that were issued

Common stock

A type of stock holding that confers voting privileges and may pay a dividend, though the dividend is not guaranteed

Commutation of ceded reinsurance

The agreement to fully settle all current and future liabilities associated with a reinsurance agreement for a set payment from the reinsurer

Commuting a claim

A process in which one party is relieved of its obligations in respect of the claim in exchange for a cash payment

Contingent commissions

Additional commissions paid by an insurance company to its broker if certain volume and/or profit targets are met

Contingent liabilities

Amounts for which the insurance company may be held responsible but for which the balance is not currently determinable

[222] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 373.

Credit risk

A risk that the counterparty will default (or not pay in whole or in part) and the estimation risk associated with amounts recorded for those receivables

Defense and cost containment (DCC)

One of the two components of loss adjustment expense, with adjustment and other expense being the second. DCC generally includes defense, litigation and medical cost containment expenses, whether internal or external. According to the 2011 NAIC *Annual Statement Instructions Property/Casualty*, DCC expenses are "those that are correlated with the loss amounts."[223]

Deferred acquisition costs (DAC)

An asset that is established under Generally Accepted Accounting Principles to defer the recognition of acquisition expenses to match the recognition of revenue of insurance companies

Deferred tax assets (DTAs)

Expected future tax benefits related to amounts previously recorded in the statutory financial statements and not expected to be reflected in the tax return as of the reporting date

Derivatives

Financial contracts between two parties for which the value is dependent upon the performance of other assets or variables. Examples include options, warrants, caps, floors, collars, swaps, forwards and futures.

Discount rate

The term commonly used when referring to the rate at which the present value of cash flows are calculated

Discovery year

A calendar year in which a loss or damage is discovered

Dividends received deduction (DRD)

In the case of corporate stockholders, DRDs are certain allowances that are made to reduce tax on dividends to avoid triple taxation when they in turn dividend earnings to their investors

[223] Ibid., page 225.

Dynamic Capital Adequacy Testing (DCAT)

A process of analyzing and projecting the trends of a company's financial condition given its current financial and operating circumstances, its recent past, and its intended business plan under a variety of future scenarios

Earned but unbilled premiums

Estimated adjustments that will occur to the premium on policies where the actual amount of premium depends on an exposure measure (such as payroll) that is unknown until the end of the policy period

Encumbrance

An impediment or claim on an asset made by a party that restricts the value of asset from complete use by the owner until the owner clears its obligation to the other party. An example is a lien on a property.

Equity method

A method under which investments in insurance company subsidiary, controlled and affiliated entities (SCAs) are recorded based on the reporting entity's proportionate share of audited statutory equity of the SCA's balance sheet, adjusted for any unamortized goodwill

Excess treaty reinsurance

A contract under which the reinsurer responds to claims during the treaty period excess of a specified threshold to a specified limit

Exhibit of Capital Gains (Losses)

An Annual Statement exhibit that shows the split of the gains (losses) between those gains (losses) that were realized on the sale or maturity of an asset and those due to impairments

Exhibit of Net Investment Income

An Annual Statement exhibit that differentiates between the amount of income collected and the amount of income earned in the year and describes the deductions for investment expenses and other costs

Facultative reinsurance

A reinsurance contract that is negotiated separately for each insurance policy that is reinsured. Facultative reinsurance is purchased for individual risks that are not covered, or not adequately covered, by the insurer's treaty reinsurance.

Fair value

The value at which an asset or liability could be bought or sold for in the open market

Financial Accounting Standards Board (FASB)

A private organization providing authoritative accounting guidance for non-governmental entities. It has the responsibility of developing and establishing Generally Accepted Accounting Principles, with the Securities and Exchange Commission operating in an overall monitoring role over the accounting standards

Financial Analysis Solvency Tools (FAST)

"NAIC's Financial Analysis Solvency Tools encompasses wide-ranging review/testing system that includes (but is not limited to): (1) a scoring system based on over 20 financial ratios; (2) the Analyst Team System (ATS); (3) RBC trend test; and (4) loss reserve projection tools. Insurers deemed to be performing poorly from the FAST analysis are reviewed by experienced analysts to determine the degree of financial distress present, if any. Insurers deemed to be in financial distress are prioritized by the degree of financial distress and the results are communicated to the state insurance departments in which the insurer is licensed."[224]

Floor

"An agreement obligating the seller to make payments to the buyer, each payment under which is based on the amount, if any, that a predetermined number, sometimes called the strike/floor rate or price exceeds a reference price, level, performance or value of one or more Underlying Interests"[225]

Forward

"An agreement (other than a Future) to make or take delivery of, or effect a cash settlement based on, the actual or expected price, level, performance or value of one or more Underlying Interests"[226]

Future

"An agreement traded on an exchange, Board or Trade or contract market to make or take delivery of, or effect a cash settlement based on, the actual or expected price, level, performance or value of one or more Underlying Interests"[227]

[224] NAIC, *The United States Insurance Financial Solvency Framework*, http://www.naic.org/documents/committees_e_us_solvency_framework.pdf, 2010, pages 11-12.

[226] Ibid., page 373.
[227] Ibid., page 374.

General expenses

Insurance company operating and administrative expenses other than those that relate directly to the acquisition of the business or ongoing policy maintenance costs incurred by an insurance company

General Interrogatories

A series of questions that the insurance company is required to respond to within its Annual Statement

Generally Accepted Accounting Principles (GAAP)

An accounting framework that provides a consistent set of rules under which publicly traded and privately held companies report their financial transactions

Goodwill

An intangible asset that results from the excess of the price paid for an acquired entity and its book value. It represents the value perceived by the buyer in the company for things like strong customer relationships or trade name, which are not physical or material assets but can be bought or sold due to their relevance to the company's future profitability.

Governmental Accounting Standards Board (GASB)

"The independent organization that establishes and improves standards of accounting and financial reporting for U.S. state and local governments … the official source of generally accepted accounting principles (GAAP) for state and local governments"[228]

Income statement

A statement that describes a company's gain or loss in net income during a specific time period

Incurred but not reported (IBNR)

The reserve for claims that have been incurred but not yet reported to the insurance company. IBNR includes a provision for development on known claims ("case development"), a provision purely for those claims that are incurred but not yet reported to the insurance carriers ("pure IBNR"), and reopened claims.

[228] GASB, "Facts About GASB" http://www.gasb.org/cs/BlobServer?blobcol=urldata&blobtable=MungoBlobs&blobkey=id&blobwhere=1175824006278&blobheader=application%2Fpdf , 2012.

Insurance Expense Exhibit (IEE)

An Annual Statement exhibit that enables regulators to dive deeper into an insurance company's profitability by examining profitability by line of business on a direct and net of reinsurance basis.

Insurance Regulatory Information System (IRIS)

A collection of analytical solvency tools and databases designed to provide state insurance departments with an integrated approach to screening and analyzing the financial condition of insurers. IRIS is used to assist each state in prioritizing which companies need additional regulatory attention

Insurance contract

A contract under which one party (the insurer) accepts significant insurance risk from another party (the policyholder) by agreeing to compensate the policyholder if a specified uncertain future event (the insured event) adversely affects the policyholder

Insurance or underwriting risk

The risk of an insurance company associated with issuing insurance policies

Intercompany pooling

A common arrangement among companies in a group in which each participant fully cedes all of its business to the lead insurance company of the pool, and then each participant assumes back a specific percentage of the total

Interest rate risk

The risk of loss from changes in interest rates impacting interest-rate-sensitive assets and liabilities

Internal Revenue Service (IRS)

The U.S. government agency that is responsible for establishing tax laws and collecting taxes

Internal Target Capital Ratio

The ratio determined by an insurance company intended to provide capacity to withstand unexpected losses beyond those covered by the minimum capital ratio. Canadian property and casualty companies are asked by the Office of the Superintendent of Financial Institutions to establish their own internal target capital ratio.

International Accounting Standards Board (IASB)

"The IASB is the independent standard-setting body of the International Financial Reporting Standards Foundation. Its members are responsible for the development and publication of International Financial Reporting Standards."[229]

International Financial Reporting Standards (IFRS)

The accounting standards promulgated by the International Accounting Standards Board typically used for financial reporting by companies licensed in countries outside of the U.S.

Investment affiliate

An affiliate, other than a holding company, engaged or organized primarily to engage in the ownership and management of investments for the insurer. Investment affiliates exclude entities that manage funds of organizations other than the parent.

Letters of credit

Issued by a bank to guarantee that payment will be made by a borrower to the lender. In the case of reinsurance transactions, a letter of credit guarantees that the reinsurer will be able to meet its obligations to the reinsured. The bank typically charges for this guarantee as a percent of its value. The percentage rate generally rises during periods of uncertain economic times.

Liability

An obligation that the company must fulfill based on past events or transactions that will require the use of monetary resources

Liquidity/Illiquidity premium

In a situation when the ability to readily trade the asset results in a lower discount rate being applied to the tradable asset's future cash flows than that of the privately held asset, the difference in the discount rates is the liquidity/illiquidity premium for the privately held asset.

Loss adjustment expense (LAE)

Expenses associated with the handling of a claim from the time it is reported to the insurance company until the time it is closed. LAE includes allocated loss adjustment expenses (ALAE) and unallocated loss adjustment expenses (ULAE). The National Association of Insurance Commissioners currently uses the defense and cost containment (DCC) and adjusting and other (A&O) expenses to comprise the two forms of LAE. While LAE in total is equivalent under either the ALAE/ULAE or DCC/A&O

[229] IFRS Foundation, "About the IFRS Foundation and the IASB," http://www.ifrs.org/The+organisation/IASCF+and+IASB.htm, 2012.

definitions, it is the segregation of expenses between the two that differs. DCC generally includes defense, litigation and medical cost containment expenses, whether internal or external, and A&O includes all expenses associated with adjusting and recording policy claims, other than those included with DCC.

Mandatorily convertible security

A security that is required to be exchanged for another type of security at a specified price that differs from the market price at the time of conversion

Market-Security Analysis & Research (MSA)

A Canadian analytical research firm that is focused on the Canadian insurance industry

Market valuation approach

A valuation approach in which investment in insurance company subsidiary, controlled and affiliated entities (SCAs) is based on the market value of the SCA, adjusted for the reporting entity's ownership percentage

Maximum net deferred policy acquisition expense (DPAE)

A ceiling to the amount of the DPAE asset that a property/casualty insurance company may record on its financial statements in Canada

Minimum capital ratio

Minimum Capital Test (MCT) ratio of 100%

Minimum capital requirement (MCR)

The smallest level of capital at which a company would be permitted to operate in Canada per the Office of the Superintendent of Financial Institutions

Minimum capital test (MCT)

Guideline for Federally Regulated Property and Casualty Insurance Companies published by the Office of the Superintendent of Financial Institutions that provides the framework within which the Superintendent assesses whether a property/casualty company, or a foreign branch, maintains adequate capital. MCT compares capital available to capital required.

Mortgage-backed security (MBS)

"Debt instrument secured by a mortgage or a pool of mortgages (but not conveying a right of ownership to the underlying mortgage). Unlike unsecured securities, they are considered 'investment grade,' and are paid out of the income generated by principle

and interest payments on the underlying mortgage. It is a type of mortgage derivative."[230]

National Association of Insurance Commissioners (NAIC)

Serves as an organization of state regulators that facilitates and coordinates governance of insurance companies across the U.S.

NAIC Model Investment Law

Allows for two alternative types of investment guidelines:

1. The defined limit system of investment guidelines follows a rule-based approach and prescribes specific quantitative limits for the invested assets that a company may hold.
2. The prudent person system of investment guidelines follows a principles-based approach and requires an insurance company to develop its own investment guidelines.

NAIC's Securities Valuation Office (SVO)

"The National Association of Insurance Commissioners' Securities Valuations Office (SVO) is responsible for the day-to-day credit quality assessment and valuation of securities owned by state regulated insurance companies."[231]

Net income/Net loss

The difference between the amount of the revenues and expenses during the period. It is referred to as net income if it is positive and net loss if it is negative.

Net investment income earned

Interest and dividends received on investment assets held over the course of the year, net of investment expenses including any associated taxes

Net realized capital gain (loss)

Income received related to changes in the value of investment assets that are held, net of any associated taxes

Nonadmitted assets

Assets that are not recognized by state insurance departments in evaluating the solvency of an insurance company for statutory accounting purposes

[230] BusinessDictionary.com, *Definitions,* http://www.businessdictionary.com/definition/mortgage-backed-security.html, 2012.

[231] Per the description of the Securities Valuation Office on the NAIC and The Center for Insurance Policy and Research website, http://www.naic.org/svo.htm, 2012.

Notes to Financial Statements

Qualitative and quantitative disclosures made by a company to further explain the balances shown in its financial statements

Off-balance sheet and other items

Amounts that are not recorded by the insurance company in its statutory financial statements yet still represent assets and/or potential liabilities of the insurance company and therefore expose the company to risk

Office of the Superintendent of Financial Institutions (OSFI)

The organization that supervises all federally regulated financial institutions, monitors federally regulated pension plans and provides actuarial advice to the Government of Canada

Option

"An agreement giving the buyer the right to buy or receive, sell or deliver, enter into, extend or terminate, or effect a cash settlement based on the actual or expected price, level, performance or value of one or more Underlying Interests"[232]

Other comprehensive income (OCI)

Changes in unrealized gains and losses on (i) available for sale assets such as loans, bonds and debentures and equities; (ii) derivatives designated as cash flow hedges; (iii) foreign currency translation; and (iv) share of OCI of subsidiaries, associates and joint ventures. OCI is required by International Financial Reporting Standards.

Overdue authorized reinsurance

Reinsurance for which the amount of paid loss and loss adjustment expense recoverable is more than 90 days past due for reasons other than dispute between the insurance company and the reinsurer

Own risk self-assessment (ORSA)

The entirety of the processes and procedures employed to identify, assess, monitor, manage and report the short- and long-term risks a (re) insurance undertaking faces or may face and to determine the own funds necessary to ensure that the undertaking's overall solvency needs are met at all times.

Paid losses

Amounts paid by the insurance carrier for insured claims

[232] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 373.

Par value

An amount set by the issuer of a stock when the stock is initially offered, which serves as a minimum value for which the stock can be sold in that initial offering

Policyholder dividend

A return to the policyholder of a portion of the premium that was originally paid by the policyholder. There are typically state requirements that must be met for a company to pay dividends.

Preferred stock

A stock holding that does not confer voting privileges but usually provides a guarantee on dividends to be paid and usually has preference to common stock in the event of liquidation

Premium deficiency reserve

A reserve that must be recorded when the unearned premium of in-force business is not sufficient to cover the losses, loss adjustment expense and other expenses that will arise when that premium is earned.

Proportional treaty

A contract under which the reinsurer receives a set proportion of all premiums subject to the treaty, net of ceding commission, and in return pays the same proportion of all claims subject to the treaty

Protected cell company

A company that comprises individual cells, each with its own assets, liabilities and equity, but that also has access to a part of the company's overall capital. The liability to each cell is limited such that creditors to one cell cannot look to another cell or the company as a whole for assets.

Provision for adverse deviation (PfAD)

A provision required in Canada for adverse deviation in a company's loss reserves determined by increasing the value of variables used in the reserve estimation process.

Provision for reinsurance

A penalty for reinsurance recoverables that may not be collectible. The amount of this provision is a reduction to surplus. This penalty applies to unauthorized reinsurers that do not provided full collateral, that are slow to pay or that have disputed amounts owed to the ceding company, as well as the authorized reinsurers that are slow to pay or that have disputed amounts that are owed to the ceding company.

Regulation S-X

The Security Exchange Commission's regulation that contains general instructions to all companies around the composition and presentation of financial statements

Reinsurance contract

Oftentimes considered insurance for insurance companies, a contract under which one party (the insurer or reinsured) transfers risk to another party (the reinsurer) to protect the insurer (reinsured) from financial loss

Replication (synthetic asset) transaction

A derivative transaction entered into in conjunction with other investments to reproduce the investment characteristics of otherwise permissible investments

Report year

A calendar year in which losses are reported

Reported loss

Amount of paid plus case outstanding losses incurred by an insurance company. It represents the dollar value of loss known to the insurance company. Reported loss is synonymous with the term case incurred loss.

Reserve risk

The risk that a reporting entity's loss and loss adjustment expense reserves will develop adversely

Retroactive date

The date specified in a claims-made insurance policy that defines the first day on which incurred losses are covered under the policy

Retroactive reinsurance

Reinsurance that is purchased for liabilities that occurred in the past (i.e., prior to the effective date of the reinsurance policy)

Revenue offset

A reduction in earned premium to account for a lack of deferred acquisition costs.

Review date

The valuation date through which material information known to the actuary is included in forming the reserve opinion

Risk-Based Capital (RBC)

A solvency framework developed by the National Association of Insurance Commissioners from which an amount of capital is determined formulaically based on the application of specified factors to an insurance company's recorded assets and liabilities as of year-end. The calculated capital, or RBC, is compared to that recorded by the insurance company at year-end to determine the level, if any, of company or regulatory action required from a solvency perspective.

Risk-Based Capital ratio (RBC ratio)

The ratio of total adjusted capital to the authorized control level benchmark computed under the National Association of Insurance Commissioners RBC framework

Schedule A

A schedule within an Annual Statement that provides information on real estate directly owned by the insurance company

Schedule B

A schedule within an Annual Statement that provides information on mortgage loans owned by the insurance company that are backed by real estate

Schedule BA

A schedule within an Annual Statement that provides information on other long-term invested assets owned by the insurance company. These are assets not included in any of the other invested asset schedules, such as real estate, that is not owned directly by the insurance company and therefore excluded from Schedule A.

Schedule D

A schedule within an Annual Statement that provides information on bonds and stocks owned by the insurance company

Schedule DA

A schedule within an Annual Statement that provides information on short-term investments owned by the insurance company. The schedule includes all investments whose maturities (or repurchase dates under repurchase agreement) at the time of acquisition were one year or less except those defined as cash or cash equivalents in accordance with SSAP No. 2, Cash, Drafts, and Short-term Investments.

Schedule DB

A schedule within an Annual Statement that provides the number of contracts for each derivative and the notional amount, which represents the number of units of the underlying asset that are involved

Schedule DL

A schedule within an Annual Statement that provides information on securities lending reinvested assets

Schedule E

A schedule within an Annual Statement that provides information on the insurance company's cash and cash equivalents

Schedule F

A schedule within an Annual Statement that provides information on an insurance company's assumed and ceded reinsurance transactions

Schedule P

A schedule within an Annual Statement that provides loss and loss expenses reserves gross and net and also breaks down the total reserves by line of business and accident year

Schedule P interrogatories

A series of questions that the insurance company is required to answer to provide further insight into the information reported in Schedule P

Schedule T

A schedule within an Annual Statement that provides an allocation of its contents by U.S. state (50) and the District of Columbia, as well as five U.S. territories (American Samoa, Guam, Puerto Rico, U.S. Virgin Islands and Northern Mariana Islands), Canada, and "aggregate other alien" territories

Securities and Exchange Commission (SEC)

The authoritative body for establishing accounting and reporting standards for publicly traded companies in the U.S.

Solvency capital requirement (SCR)

An amount of capital required to limit the probability of ruin over the forthcoming year to 0.5%

Solvency Modernization Initiative (SMI)

An initiative of the National Association of Insurance Commissioners that involves "a critical self-examination of the U.S. insurance solvency regulation framework and includes a review of international developments regarding insurance supervision,

banking supervision, and international accounting standards and their potential use in U.S. insurance regulation."[233]

Statement of Actuarial Opinion (SAO)

The opinion of a qualified actuary on the reasonableness of the loss and loss adjustment expense reserves recorded by a property/casualty insurance company as of December 31 each year

Statement of cash flows

A statement that shows cash inflows and outflows from a company's operations, investments, financing and other sources, the net value of which is included as the value of cash and cash equivalents that is shown on the on the balance sheet at the end of the reporting period

Statement of Changes in Equity exhibit

A statement included within the financials of a Canadian insurance company Illustrating the change in equity across the various classes of equity (e.g., share capital, retained earnings, available for sale financial assets) resulting from various transactions or events such as issue of share capital, total comprehensive income for the year, dividends, etc.

Statement of retained earnings

A statement included within the financials of a Canadian insurance company that provides the calculation of the retained earnings for the insurance company at the end of the reporting period

Statutory Accounting Principles (SAP)

The accounting framework that all U.S. insurance companies are required to report under for state regulatory purposes: "accounting principles or practices prescribed or permitted by an insurer's domiciliary state"[234]

Structured settlements

A situation where an insurance company settles a claim by purchasing an annuity on behalf of a claimant

[233] NAIC, "Key Issue: The national System of State Regulation and the Solvency Modernization Initiative," http://www.naic.org/index_smi.htm, August 31, 2012.
[234] NAIC, *Accounting Practices and Procedures Manual*, Volume I, March 2009, page P-2.

Surplus (policyholders' surplus)

The difference between assets and liabilities is generally referred to as net worth, and, in the specific case of an insurance company under statutory accounting, it is referred to as surplus.

Surplus aid

An amount of enhancement to surplus in the current period as a result of ceding commission that has been taken into income on its ceded unearned premium

Surplus ratio

A ratio of mean policyholders' surplus to the sum of mean net loss and loss adjustment reserves, mean net unearned premium reserves and current year net earned premiums, in total for all lines combined

Swap

"An agreement to exchange or net payments at one or more times based on the actual or expected price, level, performance or value of one or more Underlying Interests or upon the probability occurrence of a specified credit or other event"[235]

Sweep account

"Banking arrangement in which a checking (current) account balance above or below a certain amount is automatically transferred to and from an interest-bearing (savings or money market fund) account. The objective of a sweep account is to maximize the accountholder's interest earnings while covering all withdrawals."[236]

Tabular reserves

Indemnity reserves that are calculated using discounts determined with reference to actuarial tables that incorporate interest and contingencies such as mortality, remarriage, inflation or recovery from disability applied to a reasonably determinable payment stream. This definition does not include medical loss reserves or any LAE reserves.

Tail coverage

Coverage issued as an endorsement to a claims-made policy that covers claims incurred after the retroactive date but reported to the insurer subsequent to the claims-made policy expiration date.

[235] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 373.
[236] BusinessDictionary.com, *Definitions,* http://www.businessdictionary.com/definition/sweep-account.html, 2012.

Tax-basis earned premium

Earned premium adjusted for a revenue offset

Tax-basis incurred losses and expenses

Statutory calendar-year incurred paid losses plus the change in discounted loss reserves

Total comprehensive income

Net income as reported by Canadian insurance companies on the Statement of Income plus other comprehensive income

Treaty reinsurance

A reinsurance contract that applies to all or a portion of an insurance company's policies written during the term of the reinsurance agreement, typically a calendar year

Unallocated loss adjustment expenses (ULAE)

Expenses associated with the handling of claims that are not generally assigned to a particular claim, such as salaries for adjustors and utility costs

Underwriting income

Earned premium minus loss and LAE incurred and other underwriting expenses incurred

Unearned commissions

Ceding commissions from reinsurance that are not yet earned by the insurance company

Unearned premiums

The premium that corresponds to the time period remaining on an insurance policy prior to expiration

Unpaid loss (or loss reserve)

Amount of case outstanding plus incurred but not reported reserves. It represents the remaining amount expected to be paid on claims incurred by the insurance company.

Value at risk

"Largest loss likely to be suffered on a portfolio position over a holding period with a given probability (confidence level)"[237]

[237] BusinessDictionary.com, *Definitions,* http://www.businessdictionary.com/definition/value-at-risk-VAR.html, 2012.

Warrant

"An agreement that gives the holder the right to purchase and underlying financial instrument at a given price and time or at a series of prices and times according to a schedule or warrant agreement"[238]

Written premium risk

A risk that future business written by the company will be unprofitable

Yield curve

"Graph used typically to show yields for different bond maturities and used for determining the best value in bonds and as an economic indicator (confidence level)"[239]

[238] *2011 NAIC Annual Statement Instructions Property/Casualty*, page 373.
[239] BusinessDictionary.com, *Definitions,* http://www.businessdictionary.com/definition/yield-curve.html, 2012.

Selected NOTES TO FINANCIAL STATEMENTS

1. Summary of Significant Accounting Policies

A. Accounting Policies

Fictitious Insurance Company prepares its statutory financial statements in conformity with accounting practices prescribed or permitted by the state of Florida. The state of Florida requires that insurance companies domiciled in Florida prepare their statutory basis financial statements in accordance with the National Association of Insurance Commissioners (NAIC) Accounting Practices and Procedures Manual, subject to any deviations prescribed or permitted by the Florida Insurance Commissioner. The impact of any permitted accounting practices on policyholder surplus of the Company is not material.

22. Events Subsequent

The company had no material subsequent events through February 15, 2012.

23. Reinsurance

A. Unsecured Reinsurance Recoverable

The company had one reinsurer whose aggregate recoverable for ceded losses, loss adjustment expenses and unearned premiums recoverable as of December 31, 2011 exceeded 3% of the Company's Surplus. The company was Good Reinsurer, F.E.I.N. xxxxxx. Its net recoverable was $4,189.000 or 14% of Surplus. Good Reinsurer has always been current in its payments and is an A+ rated company by A.M. Best and is financially sound.

B. Reinsurance Recoverable in Dispute

The company has a few recoverable in dispute, but they are not material.

C. Reinsurance Assumed and Ceded

(1) The following table sets forth the maximum return premium and commission equity due the reinsurers or the Company if all of the Company's ceded reinsurance was canceled as of December 31, 2011:

	Ceded Reinsurance		Net Reinsurance	
	Unearned Premium Reserve	Commission Equity	Unearned Premium Reserve	Commission Equity

Good Reinsurer	$ 302,000	$ -	$ -
Foreign Authorized	$ 34,000	$ -	$ -

Selected NOTES TO FINANCIAL STATEMENTS

25. Changes in Incurred Losses and Loss Adjustment Expenses

During the period from January 1, 2011 to December 31, 2011, the prior year-end total loss and loss adjustment expense reserves for The Company developed favorably by $875,000. This development was driven mainly by better than expected loss and DCC development in the other liability, workers compensation and homeowners segments. The deterioration in the commercial auto liability and commercial multi-peril segments offset some of this positive development.

Homeowners showed positive development in the 2010 accident year which was driven by better than expected loss development primarily related to catastrophe losses. The deterioration in Commercial Auto was driven by worse than expected severity for 2008 through 2010. Asbestos and Environmental reserves developed unfavorably and drove the large development for prior years.

26. Intercompany Pooling

The Company does not participate in any intercompany pooling.

27. Structured Settlements

The Company has purchased annuities from XYZ Life Insurance Company, under which the claimant is the payee and the Company is the owner of the annuity contract, to fund structured settlements. The statement value of these annuities is $ 4,304,000. The annuities are treated as closed claims, but in the event that XYZ Life Insurance Company fails to make the required annuity payments, the Company would be required to make such payments as not covered by state guaranty associations.

30. Premium Deficiency Reserves

The Company has no premium deficiency reserves and investment income was considered in determining premium deficiency reserves.

31. High Deductibles

The Company does not issue any policies with high deductible plans.

32. Discounting of Liabilities for Unpaid Losses or Unpaid Loss Adjustment Expenses

For Workers Compensation, the Company discounts its reserves for unpaid losses on a tabular basis with a discount rate of 3.5% based on United States Life Tables. Reserves for other liability structured settlements are discounted at a rate of 4.5% and reflect the Individual Annuity Mortality table.
The amount of tabular discount reserves for Workers Compensation is $1,159,000 of which $495,000 is the discount on case reserves and $664,000 is the discount on IBNR.
The amount of tabular discount for Other Liability is $206,000 of which $21,000 is the discount on case reserves, $15,000 is the discount on IBNR and $170,000 is the discount on structure settlements. The total amount of discount for Workers Compensation and Other Liability is $1,365,000.

33. Asbestos/Environmental Reserves

A. Does the Company have on the books or has it ever written an insured for which you have identified potential for the existence of a liability due to asbestos losses? Yes (X) No ( )

Exposures for asbestos and environmental losses arise from liability coverage written many years ago. The methods of determining estimates for reported and unreported losses and establishing resulting reserves and related reinsurance recoverables are periodically reviewed and updated. Conventional actuarial methods are not utilized to establish these reserves. Reserve methods used include an analysis of exposure and claim payment patterns and recent settlements, judicial

Due to the uncertainties of legal issues such as coverage, potential liability etc. for these asbestos and environmental related claims the Company believes that these claims could result in a liability that materially differs from current reserves.

The following tables summarize the activity for these asbestos and environmental claims for the past five years.

1. Direct Basis- Asbestos:		2007	2008	2009	2010	2011
a.	Beginning Reserves	$ 6,268,000	$ 5,717,000	$ 4,439,000	$ 4,166,000	$ 3,957,000
b	Incurred Losses and LAE:	-	49,000	249,000	353,000	262,000
c.	Calendar Year Payments for Losses and LAE:	551,000	1,328,000	522,000	561,000	478,000
d.	Ending Reserves	$ 5,717,000	$ 4,438,000	$ 4,166,000	$ 3,958,000	$ 3,741,000

2. Assumed Reinsurance Basis - Asbestos		2007	2008	2009	2010	2011
a.	Beginning Reserves	$ -	$ -	$ -	$ -	$ -
b	Incurred Losses and LAE:	-	-	-	-	-
c.	Calendar Year Payments for Losses and LAE:	-	-	-	-	-
d.	Ending Reserves	$ -	$ -	$ -	$ -	$ -

3. Net of Ceded Reinsurance Basis - Asbestos		2007	2008	2009	2010	2011
a.	Beginning Reserves	$ 5,450,000	$ 5,023,000	$ 3,920,000	$ 3,709,000	$ 3,426,000
b	Incurred Losses and LAE:	-	49,000	249,000	188,000	236,000
c.	Calendar Year Payments for Losses and LAE:	427,000	1,153,000	459,000	471,000	382,000
d.	Ending Reserves	$ 5,023,000	$ 3,919,000	$ 3,710,000	$ 3,426,000	$ 3,280,000

B. Ending Loss and LAE Reserves for unreported claims included in Part A above

a.	Direct Basis	$ 3,116,000
b.	Assumed Reinsurance Basis:	-
c.	Net of Ceded Reinsurance Basis	$ 2,782,000

C. Ending LAE reserves for reported and unreported claims included in Part A above:

a.	Direct Basis	$ 962,000
b.	Assumed Reinsurance Basis:	-
c.	Net of Ceded Reinsurance Basis	$ 907,000

Selected NOTES TO FINANCIAL STATEMENTS

D. Does the Company have on the books or has it ever written an insured for which you have identified a potential for the existence of a liability due to environmental losses? Yes (X) No ( ).

Exposure for environmental losses arises from liability coverage written many years ago. The exposures include bodily injury and property damage losses.

1. Direct Basis- Environmental:		2007	2008	2009	2010	2011
a.	Beginning Reserves	$ 562,000	$ 659,000	$ 565,000	$ 551,000	$ 503,000
b	Incurred Losses and LAE:	249,000	108,000	114,000	60,000	108,000
c.	Calendar Year Payments for Losses and LAE:	152,000	202,000	128,000	108,000	118,000
d.	Ending Reserves	$ 659,000	$ 565,000	$ 551,000	$ 503,000	$ 493,000

2. Assumed Reinsurance Basis - Environmental		2007	2008	2009	2010	2011
a.	Beginning Reserves	$ -	$ -	$ -	$ -	$ -
b	Incurred Losses and LAE:	-	-	-	-	-
c.	Calendar Year Payments for Losses and LAE:	-	-	-	-	-
d.	Ending Reserves	$ -	$ -	$ -	$ -	$ -

3. Net of Ceded Reinsurance Basis - Environmental		2007	2008	2009	2010	2011
a.	Beginning Reserves	$ 558,000	$ 650,000	$ 556,000	$ 528,000	$ 471,000
b	Incurred Losses and LAE:	248,000	108,000	94,000	47,000	102,000
c.	Calendar Year Payments for Losses and LAE:	156,000	202,000	122,000	104,000	114,000
d.	Ending Reserves	$ 650,000	$ 556,000	$ 528,000	$ 471,000	$ 459,000

E. Ending Loss and LAE Reserves for unreported claims included in Part D above

a.	Direct Basis	$ 428,000
b.	Assumed Reinsurance Basis:	-
c.	Net of Ceded Reinsurance Basis	$ 425,000

F. Ending LAE reserves for reported and unreported claims included in Part D above:

a.	Direct Basis	$ 112,000
b.	Assumed Reinsurance Basis:	-
c.	Net of Ceded Reinsurance Basis	$ 110,000

2011 STATEMENT OF ACTUARIAL OPINION FOR FICTITIOUS INSURANCE COMPANY

STATEMENT OF ACTUARIAL OPINION

Fictitious Insurance Company

IDENTIFICATION

I, William H. Smith, am a Fellow of the Casualty Actuarial Society, member of the American Academy of Actuaries, and am associated with the firm of WS Actuarial Consulting. I meet the qualification standards of the American Academy of Actuaries for Statements of Actuarial Opinion for the Property and Casualty Annual Statement.

I was appointed by the Board of Directors of Fictitious Insurance Company ("the Company") on September 7, 2011, to provide this opinion for purposes of satisfying the requirements of the NAIC *Annual Statement Instructions Property/Casualty*. The intended users of this opinion are Company management, its Board of Directors and state insurance department regulators.

SCOPE

I have reviewed the December 31, 2011, loss and loss adjustment expense reserves recorded under U.S. Statutory Accounting Principles, listed in Exhibit A and included in the 2011 Statutory Annual Statement of the Company as filed with the respective state insurance departments. Those loss and loss adjustment expense reserves are the responsibility of the Company's management; my responsibility is to express an opinion on those loss and loss adjustment expense reserves based on my review.

My review of the Company's reserves included the use of such actuarial assumptions and methods and such tests of the actuarial calculations as I considered necessary in the circumstances and was conducted in accordance with standards and principles established by the Actuarial Standards Board. My review considered information provided to me through January 28, 2012.

The reserves listed in Exhibit A, where applicable, include provisions for disclosure items (disclosures 8 through 13) in Exhibit B.

In my review, I have relied on data and other relevant information, prepared by John J. Hoffman, Vice President and Controller of the Company. I evaluated that data for reasonableness and consistency. I also reconciled that data to Schedule P, Part 1 of the Company's 2011 Annual Statement.

I have not reviewed the Company's unearned premium reserves, nor have I performed any analysis to determine whether a premium deficiency reserve is needed to supplement the unearned premium reserves reported by the Company.

I have not reviewed any of the Company's assets, nor have I formed any opinion as to their validity or value; the following opinion is based on the assumption that the Company's December 31, 2011, statutory-basis reserves identified herein are funded by valid assets that have suitably scheduled maturities and/or adequate liquidity to meet cash flow requirements.

OPINION

In my opinion, the amounts carried in Exhibit A on account of the items identified:

- Make a reasonable provision for all unpaid losses and loss adjustment expenses, gross and net as to reinsurance ceded, under the terms of the Company's contracts and agreements.
- Are computed in accordance with accepted standards and principles.
- Meet the requirements of the insurance laws of Florida.

RELEVANT COMMENTS

Materiality standard

In order to establish my materiality standard, for purposes of addressing the risk of material adverse deviation of the Company's reserves for unpaid losses and loss adjustment expenses, I have considered the following amounts:

1.	10% of the Company's net loss + loss adjustment expense reserves (10% of Exhibit A, Item 1. + Item 2.) at December 31, 2011	$5,155,700
2.	20% of the Company's surplus at December 31, 2011	$6,204,800
3.	The difference between the Company's surplus at December 31, 2011, and the company action level based on the NAIC's Risk-Based Capital formula	$19,920,000

My materiality standard, for purposes of preparing the analysis in support of this Statement of Actuarial Opinion, was established at $5,155,700, which is the smallest of the foregoing amounts.

Risk of material adverse deviation

I have identified the major risk factors for this company as: mass tort claims; construction defect claims; so-called "Chinese drywall" claims; cumulative injury losses; claims from large deductible workers' compensation policies; and claims related to catastrophic weather events.

In my analysis I have considered these risk factors and the implications of uncertainty in estimates of unpaid losses and loss adjustment expenses in determining my range of reasonable estimates. I also observed that the difference between the Company's carried reserves for losses and loss adjustment expenses and the higher end of my range of reasonable unpaid claim estimates is greater than my materiality standard.

In light of the materiality considerations within this analysis, and after considering the potential risks and uncertainties that could bear on the Company's reserve development, I concluded that there are significant risks and uncertainties that could result in material adverse deviation of the Company's carried reserves for unpaid losses and loss adjustment expenses as of December 31, 2011.

These risk factors are described in more detail in the following paragraphs and in the report supporting this opinion.

Mass Torts

The Company has exposure to mass tort claims such as those involving asbestos and environmental impairment liability. The Company's management has indicated that case-basis loss and allocated loss adjustment expense reserves for such claims are established as claims are reported. Additional reserves for such claims are established by the Company's management to include the potential for future development of those claims and the reporting of latent claims. Estimation of ultimate liabilities for those types of claims is unusually difficult due to such outstanding issues as whether coverage exists, definition of an occurrence, determination of ultimate damages, and allocation of such damages to financially responsible parties. The Company's net reserves for these mass tort claims totaling $3,739,000, which are included in the amounts listed in Exhibit A, are subject to greater inherent uncertainty than are estimates of the remainder of the Company's loss and loss adjustment expense liabilities.

Other losses and/or risk factors subject to greater inherent uncertainty

Additionally, at December 31, 2011, the Company has characterized construction defect claims; so-called "Chinese drywall" claims; cumulative injury losses; claims from large deductible workers' compensation policies; and claims related to catastrophic weather events, including wildfires tornadoes and hurricanes, as types of losses subject to greater inherent uncertainty than are estimates for the remainder of the Company's loss and loss adjustment expense liabilities due to pending legal interpretation, coverage disputes, length of the expected settlement pattern and high excess attachment levels. The absence of other types of losses and risk factors from this paragraph does not imply that additional factors will not be identified in the future as having contributed to significant uncertainty in the Company's estimates of unpaid losses and loss adjustment expenses.

Anticipated salvage and subrogation

The Company's management has informed me that the reserves listed in Exhibit A provide for anticipated salvage and subrogation.

Discounting

Except for tabular discount for workers' compensation and other liability, the Company's management has informed me that it does not discount its reserves for unpaid losses and loss adjustment expenses.

Pools and associations

The company does not participate in any voluntary and involuntary underwriting pools or associations.

Retroactive or financial reinsurance

I have been informed by the Company's management that it is not aware of any reinsurance contract that either has been or should have been accounted for as retroactive reinsurance or financial reinsurance.

Uncollectible reinsurance

I have been informed by the Company's management that it is not aware of any significant uncollectible reinsurance. In my review, I have requested information from management on uncollectible reinsurance, reviewed the latest available financial ratings of reinsurers by a recognized rating service and reviewed Schedule F for indications of regulatory actions or reinsurance recoverables on paid losses over 90 days past due. The majority of the Company's ceded loss reserves are with reinsurance companies rated A or better by A.M. Best Company. Past uncollectibility levels and current amounts in dispute have been reviewed and found to be immaterial relative to surplus. Therefore, reinsurance collectibility does not appear to be an issue. I express no opinion on the financial condition of the Company's reinsurers.

IRIS Ratios

I have reviewed the Company's calculations of the National Association of Insurance Commissioners' Insurance Regulatory Information System (IRIS) tests that relate to the Company's December 31, 2011, loss and loss adjustment expense reserves (Test 11, One-Year Reserve Development to Surplus; Test 12, Two-Year Reserve Development to Surplus; and Test 13, Estimated Current Reserve Deficiency to Surplus). No exceptional values were noted with respect to the Company's December 31, 2011, loss and loss adjustment expense reserve tests.

Extended reporting endorsements

According to management, the Company has no exposure to medical professional liability extended reporting endorsements, such as those relating to death, disability or retirement.

Long-duration contracts

Excluding financial guaranty contracts, mortgage guaranty policies and surety contracts, the Company's management has informed me that the Company does not write policies with coverage periods of 13 months or greater that are non-cancelable and not subject to premium increase.

* * *

An actuarial report supporting this actuarial opinion is to be provided to the Company to be retained for a period of seven years at its administrative offices and to be available for regulatory examination.

Exhibit A: SCOPE

Loss and Loss Adjustment Expense Reserves:		Amount
1.	Reserve for Unpaid Losses (Liabilities, Surplus and Other Funds page, Col 1, Line 1)	$41,894,000
2.	Reserve for Unpaid Loss Adjustment Expenses (Liabilities, Surplus and Other Funds page, Col 1, Line 3)	$9,663,000
3.	Reserve for Unpaid Losses – Direct and Assumed (Should equal Schedule P, Part 1, Summary, Totals from Cols. 13 and 15, Line 12 * 1000)	$51,275,000
4.	Reserve for Unpaid Loss Adjustment Expenses – Direct and Assumed (Should equal Schedule P, Part 1, Summary, Totals from Cols. 17, 19 and 21, Line 12 * 1000)	$10,424,000
5.	The Page 3 write-in item reserve, "Retroactive Reinsurance Reserve Assumed"	$0
6.	Other Loss Reserve items on which the Appointed Actuary is expressing an Opinion (list separately)	$0
Premium Reserves:		
7.	Reserve for Direct and Assumed Unearned Premiums for Long Duration Contracts	$0
8.	Reserve for Net Unearned Premiums for Long Duration Contracts	$0
9.	Other Premium Reserve items on which the Appointed Actuary is expressing an Opinion (list separately)	$0

Exhibit B: DISCLOSURES

			Last	First	Mid
1.	Name of the Appointed Actuary		Smith	William	H
2.	The Appointed Actuary's Relationship to the Company. Enter E or C based upon the following: E if an Employee of the Company or Group C if a Consultant			C	
3.	The Appointed Actuary has the following designation (indicated by the letter code):: F if a Fellow of the Casualty Actuarial Society (FCAS) A if an Associate of the Casualty Actuarial Society (ACAS) M if not a member of the Casualty Actuarial Society, but a Member of the American Academy of Actuaries (MAAA) approved by the Casualty Practice Council, as documented with the attached approval letter. O for Other			F	
4.	Type of Opinion, as identified in the OPINION paragraph. Enter R, I, E, Q, or N based upon the following: R if Reasonable I if Inadequate or Deficient Provision E if Excessive or Redundant Provision Q if Qualified. Use Q when part of the OPINION is Qualified N if No Opinion			R	
5.	Materiality Standard expressed in US dollars (Used to Answer Question #6)	$5,155,700			
6.	Are there significant risks that could result in Material Adverse Deviation?		Yes [X]	No [ ]	Not Applicable [ ]
7.	Statutory Surplus (Liabilities, Col 1, Line 37)	$31,024,000			
8.	Anticipated net salvage and subrogation included as a reduction to loss reserves as reported in Schedule P (should equal Part 1 Summary, Col 23, Line 12 * 1000)	$1,363,000			
9.	Discount included as a reduction to loss reserves and loss expense reserves as reported in Schedule P				
	9.1 Nontabular Discount [Notes, Line 32B23, (Amounts 1, 2, 3 & 4)], Electronic Filing Cols 1, 2, 3 & 4	$0			
	9.2 Tabular Discount [Notes, Line 32A23 (Amounts 1 & 2)], Electronic Filing Col 1 & 2.	$1,365,000			

10.	The net reserves for losses and expenses for the Company's share of voluntary and involuntary underwriting pools' and associations' unpaid losses and expenses that are included in reserves shown on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines.	$0
11.	The net reserves for losses and loss adjustment expenses that the Company carries for the following liabilities included on the Liabilities, Surplus and Other Funds page, Losses and Loss Adjustment Expenses lines.*	
	11.1 Asbestos, as disclosed in the Notes to Financial Statements (Notes, Line 33A03D, ending net asbestos reserves for current year), Electronic Filing Col 6	$3,280,000
	11.2 Environmental, as disclosed in the Notes to Financial Statements (Notes, Line 33D03D, ending net environmental reserves for current year), Electronic Filing Col 6	$459,000
12.	The total claims made extended loss and expense reserve (Greater than or equal to Schedule P Interrogatories).	
	12.1 Amount reported as loss reserves	$0
	12.2 Amount reported as unearned premium reserves	$0
13.	Other items on which the Appointed Actuary is providing Relevant Comment (list separately)	$0

* The reserves disclosed in item 11 above, should exclude amounts relating to contracts specifically written to cover asbestos and environmental exposures. Contracts specifically written to cover these exposures include Environmental Impairment Liability (post 1986), Asbestos Abatement, Pollution Legal Liability, Contractor's Pollution Liability, Consultant's Environmental Liability, and Pollution and Remediation Legal Liability.

2011 ACTUARIAL OPINION SUMMARY FOR FICTITIOUS INSURANCE COMPANY

ACTUARIAL OPINION SUMMARY

Fictitious Insurance Company

December 31, 2011

This Actuarial Opinion Summary has been prepared in conjunction with my role as Appointed Actuary for Fictitious Insurance Company ("the Company"), and in accordance with the NAIC's Annual Statement Supplemental Filing Instructions. The information provided in this Actuarial Opinion Summary will be included in the actuarial report in support of my Statement of Actuarial Opinion, dated February 24, 2012, on the Company's statutory-basis loss and loss adjustment expense reserves at December 31, 2011. That actuarial report is to be provided to the Company to be retained for a period of seven years at its administrative offices and to be available for regulatory examination.

		Net Reserves (USD in 000s)			Gross Reserves (USD in 000s)		
		Low	Point	High	Low	Point	High
A.	Actuary's range of reserve estimates	43,000		57,000	52,000		68,000
B.	Actuary's point estimate		50,000			60,000	
C.	Company carried reserves		51,557			61,699	
D.	Difference between Company carried and Actuary's estimate (C. - A. and C. – B., if applicable)	8,557	1,557	(5,443)	9,699	1,699	(6,301)

E. The Company has not had one-year adverse development in excess of 5% of surplus in at least three of the last five calendar years, as measured by Schedule P, Part 2, Summary, and disclosed in the Five-Year Historical Data, on line 74, of the Company's December 31, 2011 statutory-basis Annual Statement.

* * *

This Actuarial Opinion Summary was prepared solely for the Company for the purpose of filing with regulatory agencies and is not intended for any other purpose. Furthermore, it is my understanding that, consistent with the Annual Statement Supplemental Filing Instructions, the information provided

in this Actuarial Opinion Summary will be held confidential by those regulatory agencies and will not be made available for public inspection.

RESULTS OF IRIS RATIO TESTS FOR FICTITIOUS INSURANCE COMPANY

OVERVIEW

Within this section of the Appendix, we will walk through the calculation and purpose of the 13 IRIS Ratios, provide possible explanations for unusual values, and show the results of the IRIS Ratio calculations for Fictitious Insurance Company using the 2011 Annual Statement.

IRIS Ratios are grouped into four categories:

- Overall ratios
- Profitability ratios
- Liquidity ratios
- Reserve ratios

We will present the material separately by category.

It is important to note that the calculations provided herein are based on the 2011 version of the *NAIC Insurance Regulatory Information System (IRIS) Ratios Manual*. Further, the ranges of "unusual values" are as provided in the 2011 IRIS manual. The National Association of Insurance Commissioners (NAIC) re-evaluates the reasonableness of the ranges periodically, in light of the current environment. For example, years ago the range of "usual" values for IRIS Ratio 6, *Investment Yield*, was between 5% and 10%. Compare that to the range in 2011 of 3% to 6.5%, which reflects the current economic environment. The current version of IRIS needs to be followed when analyzing data.

OVERALL RATIOS

The overall ratios focus on the insurance company's leverage, in terms of premium volume relative to surplus. There are four overall ratios:

IRIS Ratio 1: Gross premiums written to policyholders' surplus
IRIS Ratio 2: Net premiums written to policyholders' surplus
IRIS Ratio 3: Change in net premiums written
IRIS Ratio 4: Surplus aid to policyholders' surplus

IRIS Ratios 1 and 2 provide written premium-to-surplus ratios on a gross and net of reinsurance basis, respectively. The denominator is the same in each of these ratios, with the numerator differing by the amount of ceded reinsurance premium written. The source of this data can be readily found in an insurance company's Annual Statement, from either Part 1B of the Underwriting and Investment Exhibit (U&IE) *and* the balance sheet (page 3), or Five-Year Historical Data.

The purpose of IRIS Ratios 1 and 2 is to identify companies that may be taking on more business and more risk than they can handle relative to their surplus. Unusual values are

greater than or equal to 900% on a gross basis and 300% on a net basis. The 300% ratio on a net basis corresponds to the age-old generally accepted benchmark that insurers remain within the 3-to-1 range in terms of writings relative to surplus. This ratio is higher on a gross basis in consideration of reinsurance.

The following are examples of considerations that should be made when reviewing the results of these ratios:

- The difference between the gross and net IRIS Ratio results:
    - Wide disparity could signal heavy reliance on reinsurance or involvement in fronting arrangements. Further investigation on the quality, rating and collectibility of the reinsurance should be made, as well as the level of collateral held, if any. This can be accomplished through a review of the note titled, "Reinsurance" (number 23 within the Notes to Financial Statement of the 2011 Annual Statement), Schedule F, Parts 3 through 5, and research on the financial ratings of the company's reinsurers listed in Schedule F by a recognized rating service, such as A.M. Best.
    - This does not mean that a narrow difference between the gross and net IRIS Ratio results should not be investigated, as they could signal inadequate levels of reinsurance protection, in particular if the company is exposed to catastrophe risk. Part 2 of the General Interrogatories provides information on a company's protection against excessive or catastrophic loss, although further inquiry would have to be made of the company for specific details.
- The amount of the gross premiums that stem from assumed business versus business directly written by the company:
    - Companies tend to have less control over business assumed from third parties. Those companies having a large portion of assumed business and IRIS Ratio 1 results nearing the unusual value benchmark should be subject to further investigation. This would include an understanding of the type of business assumed, attachment points, layers and limits of coverage, as well as the underwriting and price monitoring controls in place on the assumed book.
- The results relative to lines of business written:
    - Lower ratio results are preferred for company's writing long-tailed lines of business due to the uncertainty inherent in the ultimate payout of associated claims.

As displayed below, IRIS Ratios 1 and 2 can be calculated for Fictitious using data from the Five-Year Historical Data exhibit.

Appendix I. Fictitious Insurance Company

Data from Fictitious Insurance Company 2011 Five-Year Historical Data (USD)					
	2011	2010	2009	2008	2007
6. Gross premiums written (GPW)	28,634,000	28,085,000	29,519,000	31,238,000	31,670,000
12. Net premiums written (NPW)	26,752,000	25,936,000	25,521,000	25,583,000	25,363,000
26. Surplus as regards policyholders (PHS)	31,024,000	31,608,000	35,793,000	32,572,000	34,567,000
Results of IRIS Ratios 1 and 2					
IRIS Ratio 1 (= Line 6 / Line 26)	92%	89%	82%	96%	92%
IRIS Ratio 2 (= Line 12 / Line 26)	86%	82%	71%	79%	73%

As displayed in the above table, the results of IRIS Ratio 1 for Fictitious, ranging from 82% to 96% over the period 2007 to 2011, were well within the benchmark imposed for unusual values (900%). Similarly, the results of IRIS Ratio 2, ranging from 71% to 86% over same period, were well within the 300% benchmark on a net basis.

IRIS Ratio 3 provides the change in net written premiums, current year over prior year, as a percentage of prior year net written premium. The source of this data can be readily found in an insurance company's Annual Statement, from either Part 1B of the current year and prior year U&IEs, or Five-Year Historical Data.

The purpose of IRIS Ratio 3 is to identify companies that are growing or declining rapidly so that further investigation can be made as to the cause. Unusual values are outside of the -33% to +33% range.

The following are examples of considerations that should be made when reviewing the results of IRIS Ratio 3:

- Consistent or large increases in results:
    - Growth brings uncertainty in the types of risks written and the frequency and ultimate cost of claims. In certain markets it is difficult to expand without conceding on pricing and underwriting standards. Further investigation as to the source of the company's expansion and whether the company has been able to maintain adequate pricing and terms and conditions is warranted. In addition, a review of the results of other IRIS Ratios can serve to mitigate or augment the uncertainty. For example, a mitigating factor would be a low result for IRIS Ratios 1 and 2.
- Consistent or large decreases in results:
    - A decrease in writings also requires attention. A sharp reduction in writings may be a sign of financial stress.

- Unstable results year over year:
    - This may be a sign that the company does not have good controls on its underwriting or a solid business plan and therefore raises uncertainty with respect to the viability of the company in the long-term.

We can also calculate IRIS Ratio 3 from Fictitious' Five-Year Historical Data exhibit.

Data from Fictitious Insurance Company 2011 Five-Year Historical Data (USD)					
	2011	2010	2009	2008	2007
12. Net premiums written (NPW)	26,752,000	25,936,000	25,521,000	25,583,000	25,363,000
Results of IRIS Ratio 3					
IRIS Ratio 3 (= Line 12 current less prior year) /Line 12 prior year)	3%	2%	0%	1%	

As displayed in the above table, the results of IRIS Ratio 3 for Fictitious, ranging from 0% to 3% over the period 2007 through 2011, were well within the benchmark imposed for unusual values (outside the range -33% to +33%).

IRIS Ratio 4 provides the ratio of surplus aid to policyholder surplus and is meant to identify companies that rely heavily on reinsurance as a means to enhance surplus. Insurance companies receive a ceding commission from their reinsurers for placing business with those reinsurers. Under statutory accounting, the treatment of ceding commissions is similar to the way that an insurance company treats policy acquisition costs, the "signs" are just different. While acquisition expenses are a direct charge to income and surplus as they are incurred, ceding commissions are recognized as a credit to income and surplus when they are incurred. Surplus aid represents the amount of enhancement to surplus in the current period as a result of ceding commission that has been taken into income on its ceded unearned premium. Formulaically,

Surplus aid =

Estimated reinsurance commission rate
* Unearned premium on reinsurance ceded to non-affiliates

where,

Estimated reinsurance commission rate =

Ceding commissions from reinsurance, including contingent commissions
÷ Total written premiums ceded to reinsurers (affiliates and non-affiliates).

Ceding commissions from reinsurance for the current year are found in Part 3, Expenses of the U&IE of the Annual Statement, column 2 (other underwriting expenses), line 2.3 (reinsurance ceded, excluding contingent) plus line 2.6 (contingent — reinsurance ceded).

Total written premiums ceded to reinsurers is found in Part 1B, Premiums Written of the U&IE of the Annual Statement, column 4 (reinsurance ceded to affiliates) plus column 5 (reinsurance ceded to non-affiliates) totals.

Unearned premium on reinsurance ceded to non-affiliates is found in Schedule F, Part 3, reinsurance ceded of the Annual Statement, column 13 totals for the following three categories of unaffiliated reinsurers:

1. Authorized and unauthorized other U.S. unaffiliated insurers
2. Authorized and unauthorized mandatory and voluntary pools
3. Authorized and unauthorized other non-U.S. insurers

IRIS Ratio 4 is the ratio of surplus aid, as calculated above, to policyholders' surplus.

Unusual values are greater than or equal to 15%, and may be a sign that policyholders' surplus is inadequate. Therefore, when IRIS Ratio 4 produces values greater than 15%, certain other IRIS Ratio tests dependent upon policyholders' surplus are recalculated to remove surplus aid. These are:

IRIS Ratio 1: Gross premiums written to policyholders' surplus
IRIS Ratio 2: Net premiums written to policyholders' surplus
IRIS Ratio 7: Gross change in policyholders' surplus
IRIS Ratio 10: Gross agents' balances (in collection) to policyholders' surplus
IRIS Ratio 13: Estimated current reserve deficiency to policyholders' surplus

Further, when IRIS Ratio 4 produced unusual values, the company's reinsurance treaties should be evaluated to assess the impact that cancellation could have solvency.

The following provides the calculation of IRIS Ratio 4 for Fictitious.

Appendix I. Fictitious Insurance Company

Data from Fictitious Insurance Company 2011 Annual Statement (USD)			
		2011	Source
(1)	Surplus Aid	403,172	= (2) * (9) * 1000
(2)	Estimated reinsurance commission rate	44%	= (3) / (6)
(3)	Total ceding commissions from reinsurance	825,000	= (4) + (5)
(4)	Reinsurance ceded, excluding contingent	816,000	Underwriting & Investment Exhibit, Part 3, Column 2, Line 2, 3
(5)	Ceding Commission from reinsurance	9,000	Underwriting & Investment Exhibit, Part 3, Column 2, Line 2, 6
(6)	Total written premiums ceded to reinsurers	1,882,000	= (7) + (8); = Five Year Historical Data GPW minus NPW
(7)	Reinsurance ceded to affiliates	0	Underwriting & Investment Exhibit, Part 1B, Column 4, Total
(8)	Reinsurance ceded to non-affiliates	1,882,000	Underwriting & Investment Exhibit, Part 1B, Column 5, Total
(9)	Unearned premium on reinsurance ceded to non-affiliates	920	= Sum of (10) through (17)
(10)	Authorized Other U.S. Unaffiliated Insurers	626	Schedule F, Part 3, Column 13, Total (000 omitted)
(11)	Authorized Mandatory Pools		Schedule F, Part 3, Column 13, Total (000 omitted)
(12)	Authorized Voluntary Pools	50	Schedule F, Part 3, Column 13, Total (000 omitted)
(13)	Authorized Other Non-U.S. Insurers	201	Schedule F, Part 3, Column 13, Total (000 omitted)
(14)	Unauthorized Other U.S. Unaffiliated Insurers	28	Schedule F, Part 3, Column 13, Total (000 omitted)
(15)	Unauthorized Mandatory Pools		Schedule F, Part 3, Column 13, Total (000 omitted)
(16)	Unauthorized Voluntary Pools		Schedule F, Part 3, Column 13, Total (000 omitted)
(17)	Unauthorized Other Non-U.S. Insurers	15	Schedule F, Part 3, Column 13, Total (000 omitted)
(18)	Surplus as regards policyholders (PHS)	31,024,000	Page 3, Line 37, Column 1
Results of IRIS Ratio 4			
IRIS Ratio 4		1.30%	= (1) / (18)

As displayed in the above table, the result of IRIS Ratio 4 of 1.30% for Fictitious was well within the benchmark imposed for unusual values (greater than or equal to 15%).

PROFITABILITY RATIOS

The profitability ratios focus on the insurance company's profitability from an operations, investment and surplus perspective. There are four profitability ratios:

IRIS Ratio 5: Two-year overall operating ratio
IRIS Ratio 6: Investment yield
IRIS Ratio 7: Gross change in policyholders' surplus
IRIS Ratio 8: Change in adjusted policyholders' surplus

IRIS Ratio 5 essentially provides a company's combined ratio over a two-year period, offset for investment income earned over that period. In IRIS Ratio 5, the combined ratio is calculated as loss and loss adjustment expense (LAE) incurred plus policyholder dividends

incurred, divided by earned premium, plus other underwriting expenses less other income, divided by written premium. The investment income ratio is calculated as the ratio of investment income earned divided by earned premium.

Two-year operating ratio =

Two-year combined ratio – Two-year investment income ratio

where,

Combined ratio =

$$\frac{\text{Net loss and LAE + Dividends to policyholders incurred}}{\text{Net earned premium}} + \frac{\text{Other underwriting expenses – Other income incurred}}{\text{Net written premium}}$$

Investment income ratio =

$$\frac{\text{Investment income earned}}{\text{Net earned premium}}.$$

The source of this data can be readily found in an insurance company's Annual Statement, from the Statement of Income and Part 1B of the U&IE.

The purpose of IRIS Ratio 5 is to identify companies that are operating unprofitably. A two-year period is used in the calculation to smooth unusual fluctuations due to a "bad" loss or investment year. Unusual values are greater than or equal to 100%, meaning that the company is operating at an underwriting loss, even after consideration of investment income.

When reviewing the result of this ratio, consideration should be made for the cause by looking at each of the components of the calculation. During the financial crisis, companies experienced a significant decline in investment income and therefore did not achieve as much of a benefit in the offset afforded in the calculation. Further, adverse development on prior accident years will have an impact on the combined ratio, but such development may not be reflective of profitability on the company's current operations or current reserving.

IRIS Ratio 5 is calculated for Fictitious in the following table.

Appendix I. Fictitious Insurance Company

Data from Fictitious Insurance Company 2011 Annual Statement (USD)

		2011 (Current Year)	2010 (Prior Year)	Sum over 2-Year	Source
(1)	Combined Ratio	108%	94%	101%	= (2) + (8)
(2)	Loss Ratio	76%	62%	69%	= (3) / (7)
(3)	Loss & LAE plus Dividends to Policyholders incurred	20,208,000	15,838,000	36,046,000	= (4) + (5) + (6)
(4)	Losses incurred	16,907,000	12,798,000	29,705,000	Statement of Income, Line 2, Columns 1 and 2, respectively
(5)	Loss Adjustment Expenses (LAE) incurred	3,255,000	3,008,000	6,263,000	Statement of Income, Line 3, Columns 1 and 2, respectively
(6)	Dividends to policyholders	46,000	32,000	78,000	Statement of Income, Line 17, Columns 1 and 2, respectively
(7)	Net premiums earned	26,512,000	25,535,000	52,047,000	Statement of Income, Line 1, Columns 1 and 2, respectively
(8)	Expense Ratio	32%	32%	32%	= (9) / (13)
(9)	Expenses Incurred	8,450,000	8,194,000	16,664,000	= (10) + (11) - (12)
(10)	Other underwriting expenses	8,483,000	8,240,000	16,723,000	Statement of Income, Line 4, Columns 1 and 2, respectively
(11)	Aggregate write-ins for underwriting deductions	-	1,000	1,000	Statement of Income, Line 5, Columns 1 and 2, respectively
(12)	Total other income	33,000	47,000	80,000	Statement of Income, Line 15, Columns 1 and 2, respectively
(13)	Net premiums written	26,752,000	25,936,000	52,688,000	Underwriting & Investment Exhibit, Part 1B, Column 6, Total*
(14)	Investment Income Ratio	16%	19%	18%	= (15) / (16)
(15)	Investment income earned	4,290,000	4,860,000	9,150,000	Statement of Income, Line 9, Columns 1 and 2, respectively
(16)	Net premiums earned	26,512,000	25,535,000	52,047,000	Statement of Income, Line 1, Columns 1 and 2, respectively

Results of IRIS Ratio 5

IRIS Ratio 5	84%	= (1) - (14) for two-year period

**Also provided in Five-Year Historical Data*

As displayed above, the result of IRIS Ratio 5 for Fictitious of 84% was well within the 100% benchmark imposed for unusual values.

IRIS Ratio 6 provides the yield in the company's investment portfolio over the past year. IRIS Ratio 6 is calculated as net investment income earned during the year divided by the average of cash plus invested assets over the current and prior year. The source of this data can be readily found in an insurance company's Annual Statement, from the balance sheet and Statement of Income.

The purpose of IRIS Ratio 6 is to identify companies earning unusually low or high yields, potentially indicating a risky, inefficient or expensive investment strategy. Unusual values are

outside of the 3.0% to +6.5% range. That is, it is expected that companies will achieve a 3.0% to 6.5% yield on their invested assets during the year. The NAIC can change the range of usual (or unusual) values over time, in consideration of the financial markets.

When reviewing the result of this ratio, consideration should be made for the cause by looking at each of the components of the calculation, and further investigation into the types of investment should be made.

The following provides the calculation of IRIS Ratio 6 for Fictitious.

Data from Fictitious Insurance Company 2011 Annual Statement (USD)				
	2011 (Current Year)	2010 (Prior Year	Sum over 2-Year	Source
(1) Net investment income earned	4,290,000			Statement of Income, Line 9, Column 1
(2) Cash and invested assets	88,551,000	88,534,000	88,542,500	= (3) + (4) - (5); Average over two-year
(3) Total cash and investment assets	87,825,000	87,784,000		Page 2, Line 12, Columns 3 and 4, respectively
(4) Investment income due and accrued	726,000	750,000		Page 2, Line 14, Columns 3 and 4, respectively
(5) Borrowed money	-	-		Page 3, Line 8, Columns 1 and 2, respectively
Results of IRIS Ratio 6				
IRIS Ratio 6			5.0%	= 2 * (1) current year /[(2) for two-year period – (1) current year]

As displayed in the above table, the result of IRIS Ratio 6 for Fictitious of 5.0% was right around the midpoint of the expected benchmarks of 3.0% to 6.5% for usual values. This means that the company earned a return on its invested assets within what would be considered the "norm" for companies in 2011.

IRIS Ratio 7 is what the NAIC calls "the ultimate measure of improvement or deterioration in the insurer's financial condition during the year."[1] It provides the change in policyholder surplus, current year over prior year, as a percentage of prior year surplus, with the surplus figures coming directly from the company's balance sheet. We note that historical surplus figures are also provided in the Five-Year Historical Data of the company's Annual Statement.

Unusual values are outside of the -10% to +50% range. That is, a decrease in a company's surplus by 10% or more, or an increase by 50% or more, is considered a signal for the analyst

[1] NAIC, *Insurance Regulatory Information System (IRIS) Ratios Manual*, 2009, page 19.

to perform further inquiry and investigation. The NAIC recognizes that 10% is conservative; however, decreases in policyholder surplus are of course a greater concern than increases. Increases in surplus of 50% or more are very unusual for a stable company absent an acquisition or redistribution of capital amongst affiliates and therefore would be a sign of financial instability. According to the NAIC, "a number of insolvent insurers reported dramatic increases in policyholders' surplus prior to insolvency."[2]

Using the Five-Year Historical Data exhibit, we can calculate the result of IRIS Ratio 7 over the past four years.

Data from Fictitious Insurance Company 2011 Annual Statement (USD)					
	2011	2010	2009	2008	2007
26. Surplus as regards policyholders (PHS)	31,024,000	31,608,000	35,793,000	32,572,000	34,567,000
Results of IRIS Ratios 7					
IRIS Ratio 7 (= Line 26 current less prior year / Line 26 prior year)	-1.8%	-11.7%	9.9%	-5.8%	

As displayed in the above table, the result of IRIS Ratio 7 for Fictitious exceeded did breach the -10% mark for unusual values in 2010 at -12%.

IRIS Ratio 8 is similar to IRIS Ratio 7, with the exception that current-year policyholders' surplus is adjusted to remove changes in surplus notes, capital paid-in or transferred, and surplus paid-in or transferred. Removal of these items provides a picture of the improvement or deterioration in financial results due to operations. The source of the data used in the calculation of IRIS Ratio 8 is the balance sheet and Statement of Income of the company's Annual Statement.

Unusual values are outside of the -10% to +25% range. That is, a decrease in a company's surplus resulting from operations by 10% or more, or an increase by 25% or more, is considered a signal for the analyst to perform further inquiry and investigation. The lower bound benchmark is the same as in Ratio 7; however, the upper bound of +25% is lower, reflecting the expectation that operations would not typically cause an increase in surplus by more than 25%.

The calculation of IRIS Ratio 8 is shown below for Fictitious.

[2] Ibid.

Appendix I. Fictitious Insurance Company

Data from Fictitious Insurance Company 2011 Annual Statement (USD)				
		2011 (Current Year)	2010 (Prior Year)	Source
(1)	Adjusted policyholders' surplus	(584,000)	(4,546,000)	= (2) - (3) - (4) – (8) – (12)
(2)	Policyholders' surplus	31,024,000	31,608,000	Statement of Income, Line 39, Columns 1 and 2, respectively
(3)	Change in surplus notes	-	-	Statement of Income, Line 29, Columns 1 and 2, respectively
(4)	Capital paid-in or transferred	-	-	= (5) + (6) + (7)
(5)	Paid in	-	-	Statement of Income, Line 32.1, Columns 1 and 2, respectively
(6)	Transferred from surplus (Stock Dividend)	-	-	Statement of Income, Line 32.2, Columns 1 and 2, respectively
(7)	Transferred to surplus	-	-	Statement of Income, Line 32.3, Columns 1 and 2, respectively
(8)	Surplus paid-in or transferred	-	361,000	= (9) + (10) + (11)
(9)	Paid in	-	361,000	Statement of Income, Line 33.1, Columns 1 and 2, respectively
(10)	Transferred to capital (Stock Dividend)	-	-	Statement of Income, Line 33.2, Columns 1 and 2, respectively
(11)	Transferred from capital	-	-	Statement of Income, Line 33.3, Columns 1 and 2, respectively
(12)	Policyholders' surplus prior year	31,608,000	35,793,000	Statement of Income, Line 21, Columns 1 and 2, respectively
Results of IRIS Ratio 8				
IRIS Ratio 8		-2%	-13%	= (1) / (12)

As displayed in the above table, the result of IRIS Ratio 8 for Fictitious did breach the -10% mark for unusual values in 2010 at -13%. This is consistent with the finding from IRIS Ratio 7; however, it shows that the surplus enhancement during 2010 of $361,000 helped to cushion the impact of the change in surplus observed in IRIS Ratio 7.

This ratio is telling us that the unusual value in 2010 is attributed to the company's operations. However, going back and reviewing the components of IRIS Ratio 5, we see that the company's combined ratio for 2010 was 94%, indicating that the company was operating at a profit from its underwriting results. Further, the investment income ratio in 2010 was 19%, which was higher than in 2011. So the decrease in the company's surplus was not a result of the company's income; net income earned in 2010 was positive, at $4.955 million (see page 4, line 20, column 2). We therefore need to look to the capital and surplus account within the Statement of Income for the reason.

Within column 2 of the capital and surplus account, we see the biggest decrease in surplus came from dividends to stockholders totaling $10.023 million in 2010. This was more than

$7 million higher than dividends made in 2011 and was the reason for the decrease in surplus greater than 10%. Further investigation would determine why the company made such a large dividend payment in 2010 and whether regulatory approvals were required and obtained.

LIQUIDITY RATIOS

The liquidity ratios focus on the amount of liquid assets that the insurance company has to cover its obligations. There are two liquidity ratios:

IRIS Ratio 9: Adjusted liabilities to liquid assets
IRIS Ratio 10: Gross agents' balances (in collection) to policyholders' surplus

IRIS Ratio 9 provides an indication of the company's ability to pay its financial obligations out of assets that are readily convertible into acceptable forms of payment (i.e., cash). In this calculation, an insurance company's liabilities are adjusted to remove deferred agents' balances, as these balances are not liquid assets. Liquid assets include the following:

- Bonds, excluding affiliates
- Stocks, excluding affiliates
- Cash, cash equivalents and short-term investments, excluding affiliates
- Receivable for securities
- Investment income due and accrued

Unusual values are those in 100% or greater, suggesting that the company would not be able to pay its liabilities with current liquid assets as defined above.

The primary source of this information is the balance sheet, with investments in parent, subsidiaries and affiliates coming from Five-Year Historical Data, lines 42 through 45 in the 2011 Annual Statement.

The following provides the calculation of IRIS Ratio 9 for Fictitious.

Appendix I. Fictitious Insurance Company

Data from Fictitious Insurance Company 2011 Annual Statement (USD)				
		2011 (Current Year)	2010 (Prior Year)	Source
(1)	Adjusted Liabilities	63,862,000	63,141,000	= (2) - (3)
(2)	Total liabilities	68,976,000	68,068,000	Page 3, Line 28, Columns 1 and 2, respectively
(3)	Deferred agent's balances	5,114,000	4,927,000	Page 2, Line 15.2, Columns 3 and 4, respectively
(4)	Liquid assets	79,759,000	79,960,000	= (5) + (6) + (9) + (10) + (11) – (12)
(5)	Bonds	58,676,000	58,861,000	Page 2, Line 1, Columns 3 and 4, respectively
(6)	Stocks	19,374,000	19,116,000	= (7) + (8)
(7)	Preferred stocks	34,000	35,000	Page 2, Line 2.1, Columns 3 and 4, respectively
(8)	Common stocks	19,340,000	19,081,000	Page 2, Line 2.2, Columns 3 and 4, respectively
(9)	Cash, cash equivalents and short-term investments	983,000	1,233,000	Page 2, Line 5, Columns 3 and 4, respectively
(10)	Receivables for securities	-	-	Page 2, Line 9, Columns 3 and 4, respectively
(11)	Investment income due and accrued	726,000	750,000	Page 2, Line 14, Columns 3 and 4, respectively
(12)	Investments in parent, subsidiary and affiliates	-	-	= (13) + (14) + (15) + (16)

(14)	Affiliated preferred stocks	-	-	Five-Year Historical Data, Line 43, Columns 1 and 2, respectively
(15)	Affiliated common stocks	-	-	Five-Year Historical Data, Line 44, Columns 1 and 2, respectively
(16)	Affiliated short-term investments	-	-	Five-Year Historical Data, Line 45, Columns 1 and 2, respectively
Results of IRIS Ratio 9				
IRIS Ratio 9		80%	79%	= (1) / (4)

As displayed above, the result of IRIS Ratio 9 for Fictitious Insurance Company was 80% in 2011, about 20 points below the 100% benchmark for unusual values. This ratio was consistent with that in 2010 of 79%.

IRIS Ratio 10 provides the ratio of agents' balances in the course of collection to policyholders' surplus. The purpose is to show how dependent a company's surplus is to assets that may not be collectible upon liquidation or are of questionable liquidity.

The source of the data is the balance sheet of the company's Annual Statement. Unusual values are greater than or equal to 40% of surplus.

The following provides the calculation of IRIS Ratio 10 for the current and prior year for Fictitious.

Data from Fictitious Insurance Company 2011 Annual Statement (USD)			
	2011 (Current Year)	2010 (Prior Year)	Source
(1) Uncollected premiums and agent's balances in course of collection	2,626,000	2,866,000	Page 2, Line 15.1, Columns 3 and 4, respectively
(2) Policyholders' surplus	31,024,000	31,608,000	Page 3, Line 37, Columns 1 and 2, respectively
Results of IRIS Ratio 10			
IRIS Ratio 10	8%	9%	= (1) / (2)

As displayed above, the result of IRIS Ratio 10 for Fictitious was 8% in 2011, which was well below the 40% threshold for unusual values. This was consistent with the result in 2010 of 9%.

RESERVE RATIOS

The reserve ratios focus on the development of an insurance company's net loss and LAE reserves for purposes of understanding reserve adequacy. These are probably the most important ratios to the property/casualty actuary and where the actuary places most attention, as these ratios are specifically commented on by the appointed actuary in the SAO.

There are three reserve ratios:

IRIS Ratio 11: One-year reserve development to policyholders' surplus
IRIS Ratio 12: Two-year reserve development to policyholders' surplus
IRIS Ratio 13: Estimated current reserve deficiency to policyholders' surplus

IRIS Ratio 11 is the same one-year development test as provided in the Five-Year Historical Data exhibit within the Annual Statement (line 74 in the 2011 Annual Statement). It measures development in the company's net loss and LAE reserves over the past year, whether adverse or favorable, relative to prior year surplus. Essentially, this test looks to see how much surplus would have been absorbed or enhanced in the prior year as a result of adverse or favorable development in the corresponding net loss and LAE reserves. Adverse development is shown as an increase to reserves and therefore a positive number. Results of IRIS Ratio 11 equal to or greater than 20% are considered unusual.

The following table provides the calculation of IRIS Ratio 11 for Fictitious over the period 2008 through 2011.

Appendix I. Fictitious Insurance Company

Data from Fictitious Insurance Company 2011 Five-Year Historical Data (USD)					
	2011	2010	2009	2008	2007
73. Development in estimated losses and loss expenses incurred prior to current year (Schedule P, Part 2, Summary, Line 12, Col. 11; *in 000s*	(875)	(1,354)	(1,618)	(1,935)	(918)
74. Percent of development of losses and loss expenses incurred to policyholders' surplus of prior year end (line 73 divided by Page 4, Line 21, Col. 1 x 100)	(2.8)	(3.8)	(5.0)	(5.6)	(2.6)
26. Surplus as regards policyholders (PHS)	31,024,000	31,608,000	35,793,000	32,572,000	34,567,000
Results of IRIS Ratios 11					
IRIS Ratio 11 (= Line 74 above; = Line 73 / Line 26 prior * 1000)	-2.8%	-3.8%	-5.0%	-5.7%	

As displayed in the above table, Fictitious' loss and LAE net reserves developed favorably over the period 2007 through 2011. As a result, IRIS Ratio 11 has historically been negative, ranging from -3% to -6%, and therefore well below the benchmark imposed for unusual values (greater than or equal to +20%).

The trigger of an "unusual" value is a current year ratio greater than or equal to 20%. This will capture reserve deficiencies in the immediate prior year. In addition to this warning, the AOS serves to notify regulators of any trends whereby development in three of the prior five years exceeds 5%. The AOS has a lower threshold than IRIS 11, as it serves to identify those companies that consistently underestimate their loss and LAE reserves.

IRIS Ratio 12 is the same two-year development test as provided in the Five-Year Historical Data exhibit within the Annual Statement (line 76 of the 2011 Annual Statement). It measures development in the company's net loss and LAE reserves over the past two years, relative to surplus at the end of the second prior year. Similar to Ratio 11, results of test 12 equal to or greater than 20% are considered unusual.

The following table provides the calculation of IRIS Ratio 12 for Fictitious over the period 2009 through 2011.

Appendix I. Fictitious Insurance Company

Data from Fictitious Insurance Company 2011 Five-Year Historical Data (USD)					
	2011	2010	2009	2008	2007
75. Development in estimated losses and loss expenses incurred 2 years before the current year and prior year (Schedule P, Part 2, Summary, Line 12, Col. 12); *in 000s*	(2,602)	(2,906)	(3,680)	(2,544)	(1,059)
76. Percent of development of losses and loss expenses incurred to policyholders' surplus of second prior year end (Line 75 divided by Page 4, Line 21, Col. 2 x 100)	(7.3)	(8.9)	(10.6)	(7.3)	(3.0)
26. Surplus as regards policyholders (PHS)	31,024,000	31,608,000	35,793,000	32,572,000	34,567,000
Results of IRIS Ratios 12					
IRIS Ratio 12 (= Line 76 above; = Line 75 / Line 26 2nd prior * 1000)	-7.3%	-8.9%	-10.6%		

As displayed in the above table, Fictitious' IRIS Ratio 12 results have historically been negative, ranging from -7% to -10%, and therefore well below the benchmark imposed for unusual values (+20%).

IRIS Ratio 13 is a hindsight test. It looks at a company's net outstanding loss and LAE reserves at the immediate prior two years relative to calendar year earned premium for those years and adds to the reserves development that has emerged over that period (one-year development for the immediate prior year; two-year development for the year prior to that). The test then applies the average of the resulting two "adjusted" loss ratios to earned premium for the recent year (2011) to determine what the outstanding loss reserve should be for that year (2011). A calculated deficiency in recorded loss and LAE reserves of 25% or more is deemed to be unusual.

The purpose of this test is to identify companies that may not have gotten their reserves "right" in the past. The expectation inherent in this test is if companies have had adverse development in the past, they will probably have adverse development in the future. Regulators want to see if companies who have had such adverse development have corrected for it in their current estimates.

The following are examples of considerations that should be made when reviewing the results of IRIS Ratio 13:

- The losses and premiums are not matched in Ratio 13; the numerator is unpaid loss and LAE for all accident years, whereas the denominator is earned premium for the current accident year.

- This mismatch obstructs the usefulness of the ratio because growth or decline in premium volume, or changes in the mix of business between short- and long-tailed lines, will distort the "outstanding" loss ratio.

- Similarly, because it is strictly a quantitative test, IRIS Ratio 13 cannot take into account qualitative factors that may mitigate adverse development in the future on current reserves, such as change in mix of business.

  - A good example is a company that had observed adverse development on its CAL line in the prior two years but significantly changed their product mix in the current year to be more heavily weighted toward short-tailed homeowners business. As a result of this change in mix, such adverse development would not be expected in the future.

IRIS Ratio 13 requires use of the prior year Annual Statement. While we have not included the 2010 Annual Statement for Fictitious, we have included the required values in the following table to calculate the result of IRIS Ratio 13 for 2011.

	2009	2010	2011		Source
One-Year Development			(875)	(1)	Schedule P, Part 2, Line 12, Column 11; Five-Year Historical Data, Line 73
Two-Year Development			(2,602)	(2)	Schedule P, Part 2, Line 12, Column 12; Five-Year Historical Data, Line 75
Earned Premium	25,618	25,535	26,512	(3)	Stmt of Income, Line 1, divided by 1,000
Loss Reserves	41,643	40,933	41,894	(4)	Page 3, Line 1, divided by 1,000
Reinsurance Payable on Paid Losses	-	-	-	(5)	Page 3, Line 2, divided by 1,000
LAE Reserves	9,955	9,664	9,663	(6)	Page 3, Line 3, divided by 1,000
Policyholder Surplus	35,793	31,608	31,024	(7)	Page 3, Line 37, divided by 1,000
Result of IRIS Ratio 13	**2009**	**2010**	**2011**		**Source**
IRIS Ratio 13					
Outstanding Loss Ratios	201%	198%	194%	(8)	Sum of (4) thru (6), divided by (3)
Restated Loss and LAE Reserves	48,995	49,722		(9)	Sum of (4) thru (6), + (1) for 2010 or + (2) for 2009
Restated Outstanding Loss Ratios	191%	195%		(10)	= (9) divided by (3)
Average Outstanding Loss Ratio			193%	(11)	= average of row (10)
Implied Loss and LAE Reserves			51,165	(12)	= (11) * (3)
Actual Loss and LAE Reserves			51,557	(13)	Sum of (4) through (6)
Deficiency/(Redundancy)			(392)	(14)	= (12) – (13)
Ratio of Def/(Red to PHS)			-1%	(15)	= (14) divided by (7)

As displayed in the above table, Fictitious' IRIS Ratio 13 result was -1% for 2011, which was well below the benchmark imposed for unusual values (greater than or equal to 25%).

Errata #1
Financial Reporting through the Lens of a Property/Casualty Actuary (Version 4.0)
Edits from posting of version 4.0 through September 30, 2014
Note: all page/table number references refer to version 4.0 which is currently on the Exam 6US Syllabus for the Fall 2014/Spring 2015/Fall 2015/Spring 2016 Exam/Fall 2016.

1. Chapter 14, Schedule F

    a. Within SCHEDULE F — PART 1: ASSUMED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR (000 OMITTED), section titled *"Continent Commissions*", page 113, the following sentence should be corrected to read:

    "The amount of ~~**commissions payable**~~ **assumed premium receivable** in column 10 would be $500,000, and the contingent commissions payable in column 9 would be $125,000, which is the amount of expected commission at the onset of the contract."

    b. Within SCHEDULE F — PART 3: CEDED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR (000 OMITTED), section titled *"Footnotes to Part 3", p*age 120, the word "reinsurer" should be corrected to "reinsured" as follows:

    "Instead of receiving 35% of ceded premium in commission, the company (~~**reinsurer**~~ **reinsured**) will end up getting only 20%. If a 20% fixed commission rate was considered at the onset, the premium-to-surplus ratio would have been 309%, triggering an unusual value for IRIS Ratio 2."

    c. Within SCHEDULE F — PART 5: PROVISION FOR UNAUTHORIZED REINSURANCE AS OF DECEMBER 31, CURRENT YEAR (000 OMITTED), section titled *"Provision for Unauthorized Reinsurance"*, page 126

    Table 24 should refer to Reinsurer E, <u>not</u> Reinsurer D.

    d. Within SCHEDULE F — PART 7: PROVISION FOR OVERDUE REINSURANCE AS OF DECEMBER 31, CURRENT YEAR, page 131

    Formula for Schedule F, Part 5, column 20 should be:
    Unauthorized reinsurer (Schedule F, Part 5, column 20, total):
    = Minimum [(A) and
    [[(A) – (B)]
    + Minimum [(B) and 20% * (C)]
    + Minimum [(B) and 20% * (D)]]]

2. Chapter 15, Schedule P

    a. Within SCHEDULE P — PART 1, section titled *"Salvage and Subrogation"*, page 150

The "Notes" in TABLE 34 are incorrect. They should instead read as follows (corrections noted in red font within the table below):

TABLE 34

Data from 2011 Schedule P — Part 1 — Summary for Fictitious Insurance Company (000 omitted)

Column	Item	Amount	Notes
13	Direct and assumed case basis losses	24,945	
14	Ceded case basis losses	5,343	
	Net case basis losses	19,602	= Column 13 — Column 14
15	Direct and assumed IBNR losses	26,330	
16	Ceded IBNR losses	4,038	
	Net IBNR losses	22,292	= Column 15 — Column 16
17	Direct and assumed case basis DCC	2,424	
18	Ceded case basis DCC	258	
	Net case basis DCC	2,166	= Column 17 — Column 18
19	Direct and assumed IBNR DCC	5,401	
20	Ceded IBNR DCC	499	
	Net IBNR DCC	4,902	= Column 19 — Column 20
21	Direct and assumed A&O unpaid	2,599	
22	Ceded A&O unpaid	4	
	Net A&O unpaid	2,595	= Column 21 — Column 22
24	Total net losses and expenses unpaid	51,557	= (Columns 13 + 15 + 17 + 19 + 21) — (Columns 14 + 16 + 18 + 20 + 22)

b. Within "SCHEDULE P — PART 6", on page 183

We would like to clarify the following paragraph:

> "The premium displayed in Part 1 of Schedule P is that which is earned at the end of each specified year and is not updated for subsequent adjustments. It is equal to the left-most diagonal in Part 6. Adjustments made after the first year of report come through in the remaining columns of Part 6."

We can see how this paragraph can be confusing. The point we were trying to make is that Part 1 does not adjust each respective year's premium for subsequent adjustments. As we say *"The premium displayed in Part 1 of Schedule P is that which is earned at the end of each specified year and is not updated for subsequent adjustments."* Rather, for a particular year, *"It is equal to the left-most diagonal in Part 6. Adjustments made after the first year of report come through in the remaining columns of Part 6."* The focus in this paragraph is really Part 6 as opposed to Part 1.

We would like to edit the paragraph to read as follows (changes noted in red font below):

> "The premium displayed in Part 1 of Schedule P is that which is earned during ~~at the end of~~ each specified calendar year; it is not updated for

subsequent adjustments to the specified exposure year premium. It is equal to the left-most diagonal in Part 6 plus adjustments that come through during the specified calendar year to premiums on prior exposure years. Adjustments made after the first year of report are included in the appropriate column of Part 6."

3. Chapter 19, Risk-Based Capital

   a. Within "THE RBC CHARGE FOR ASSET RISK ASSOCIATED WITH INSURANCE COMPANY SUBSIDIARIES (R_0)", section entitled "Insurance Subsidiaries Subject to RBC — Ownership in Common Stock", pages 236 and 237

      In Version 4.0 of the publication we note that there is an inconsistency between the NAIC's written instructions and the formulas contained in the spreadsheet contained in the corresponding CD-ROM with respect to the calculation of R_0 for common stock investments in insurance affiliates subject to RBC. We further state *"we will update this publication when this issue is resolved and provide examples to illustrate the calculation of R_0 at that time."*

      We do not believe that this issue has been resolved as of the writing of these errata. However, we stress that this issue is specific to the calculation of R_0 for common stock investments in insurance affiliates subject to RBC and does not apply to any other calculations of RBC as described in Chapter 19.

      We remind the student that the previous paper on the Exam 6 US Syllabus pertaining to the topic of RBC ("NAIC Property/Casualty Insurance Company Risk-Based Capital Requirements", authored by Sholom Feldblum) was published over 17 years ago (in 1996). There have been changes to the RBC Instructions since that paper was published. Therefore, examination questions regarding this topic will be based on the description of the calculations of RBC as contained within the current publication on the Exam 6US Syllabus and not the Feldblum paper published in 1996.

   b. Within "RBC CHARGE FOR CREDIT RISK (R_3)", section titled *"Reinsurance recoverables"*, page 259

      The RBC charge for reinsurance recoverable is split 50%/50% between R3 and R4 if the reserve RBC (see discussion below) exceeds the sum of the credit risk RBC for non-invested assets and one-half reinsurance recoverables. The current version of the text does not specify the "one-half". Therefore, the following paragraph should be corrected as follows:

      "The RBC charge for reinsurance recoverable is split 50%/50% between R3 and R4 if the reserve RBC (see discussion below) exceeds the sum of the credit risk RBC for non-invested assets and **one-half the RBC for** reinsurance recoverables. Otherwise, the full amount of the reinsurance recoverable RBC charge is included in R3."

c. Within ”RBC CHARGE FOR RESERVE RISK (R_4)”, section entitled “*Reinsurance RBC*”, page261

Similarly, the paragraph explaining the adjustment to R_4 for half of R_3 should read as follows:

“The reinsurance RBC within R4 is equal to the other half of the reinsurance recoverable amount computed in R3 unless the reserve RBC is less than **one-half** the RBC for reinsurance plus noninvested assets. If this is the case, the entire reinsurance RBC charge is included in R3 and the reinsurance RBC within R4 is zero. The reserve RBC limitation is put in place so the insurance company cannot diversify away a portion of its credit risk in the situation where the company has limited net reserves.”

d. Within ”RBC CHARGE FOR RESERVE RISK (R4)”, section entitled “*Illustration of reserve RBC* calculation”, page270

The figure in the first sentence of the paragraph underneath Table 98 should read $6,573,735 (to match row (16), *Net Loss & LAE RBC * 1,000*, in Table 98) instead of $6,215,668.

Errata #2
Financial Reporting through the Lens of a Property/Casualty Actuary (Version 4.0)
Edits on October 11, 2014
Note: all page/table number references refer to version 4.0 which is currently on the Exam 6US Syllabus for the Fall 2014/Spring 2015/Fall 2015/Spring 2016 Exam/Fall 2016.

Chapter 18: Insurance Expense Exhibit, PART II — ALLOCATION TO LINES OF BUSINESS NET OF REINSURANCE

The unearned premium reserve figures provided in Tables 65 and 66 should reconcile to the total amount in column 19, row 35 of the Insurance Expense Exhibit (IEE) for Fictitious. This total amount should also reconcile to the Underwriting and Investment Exhibit (U&IE), Part 1A, Total line 35, column 4, divided by 1,000 within the Annual Statement for Fictitious. In the current version of the text, the unearned premium reserve figures are incorrectly shown as the amount in U&IE Part 1A, Total line 38, column 4, divided by 1,000.

This correction does not impact the balances shown in Fictitious' IEE. However, certain tables within the text should be corrected as follows (corrected values are shown in red font):

TABLE 65

Data from Fictitious Insurance Company 2011 IEE and Annual Statement (USD in 000s)

All Lines of Business	2011 Current Year	2010 Prior Year	Mean	2011 IEE Part II Total, Line 35	Annual Statement

CRS REPORT
Prepared for Members and
Committees of Congress

Summary

Prior to the September 11, 2001, terrorist attacks, coverage for losses from such attacks was normally included in general insurance policies without specific cost to the policyholders. Following the attacks, such coverage became very expensive if offered at all. Because insurance is required for a variety of transactions, it was feared that the absence of insurance against terrorism loss would have a wider economic impact. Terrorism insurance was largely unavailable for most of 2002, and some have argued that this adversely affected parts of the economy.

Congress responded to the disruption in the insurance market by passing the Terrorism Risk Insurance Act of 2002 (TRIA; P.L. 107-297). TRIA created a temporary three-year Terrorism Insurance Program in which the government would share some of the losses with private insurers should a foreign terrorist attack occur. This program was extended in 2005 (P.L. 109-144) and 2007 (P.L. 110-160). The amount of government loss sharing depends on the size of the insured loss. In general terms, for a relatively small loss, private industry covers the entire loss. For a medium-sized loss, the federal role is to spread the loss over time and over the entire insurance industry; the government assists insurers initially but then recoups the payments through a broad levy on insurance policies afterwards. For a large loss, the federal government would cover most of the losses, although recoupment is possible in these circumstances as well. Insurers are required to make terrorism coverage available to commercial policyholders, but TRIA does not require policyholders to purchase the coverage. The prospective government share of losses has been reduced over time, but the 2007 reauthorization expanded the program to cover losses from acts of domestic terrorism. The TRIA program is currently slated to expire at the end of 2014.

The specifics of the current program are as follows: (1) terrorist act must cause $5 million in insured losses to be certified for TRIA coverage; (2) the aggregate insured losses from a certified act of terrorism must be $100 million in a year for the government coverage to begin; and (3) an individual insurer must meet a deductible of 20% of its annual premiums for the government coverage to begin. Once these thresholds are passed, the government covers 85% of insured losses due to terrorism. If the insured losses are under $27.5 billion, the Secretary of the Treasury is required to recoup 133% of government outlays. As insured losses rise above $27.5 billion, the Secretary is required to recoup a progressively reduced amount of the outlays. At some high insured loss level, which will depend on the exact distribution of losses, the Secretary would no longer be required to recoup outlays, but retains the discretionary authority to do so.

Since TRIA's passage, the private industry's willingness and ability to cover terrorism risk have increased. According to industry surveys, prices for terrorism coverage have generally trended downward, with approximately 60% of commercial policyholders purchasing coverage over the past few years. This relative market calm has been under the umbrella of TRIA coverage, and it is unclear how the insurance market would react to the expiration of the federal program.

In the 113th Congress, five bills (H.R. 508, H.R. 1945, H.R. 2146, S. 2244, and H.R. 4871) have been introduced to amend the TRIA statute. S. 2244 passed the Senate on a vote of 93-4 on July 17, 2014. H.R. 4871 was reported by the House Financial Services Committee on July 16, 2014. Both bills would extend the TRIA program, but have a number of differences, particularly the length (seven years for S. 2244 vs. five years for H.R. 4871) and the program trigger (remaining at $100 million in S. 2244 vs. increasing to $500 million for non-Nuclear, Chemical, Biological, or Radiological [NCBR] terrorist events in H.R. 4871).

Introduction

Prior to the September 2001 terrorist attacks on the United States, insurers generally did not exclude or separately charge for coverage of terrorism risks. The events of September 11, 2001, changed this as insurers realized the extent of possible terrorism losses. Estimates of insured losses from the 9/11 attacks are over $40 billion in current dollars, the largest insured losses from a non-natural disaster on record. These losses were concentrated in business interruption insurance (34% of the losses), property insurance (30%), and liability insurance (23%).[1]

Although primary insurance companies, those who actually sell and service the insurance policies bought by consumers, suffered losses from the terrorist attacks, the heaviest insured losses were absorbed by foreign and domestic reinsurers—the insurers of insurance companies. Because of the lack of public data on, or modeling of, the scope and nature of the terrorism risk, reinsurers felt unable to accurately price for such risks and largely withdrew from the market for terrorism risk insurance in the months following September 11, 2001. Once reinsurers stopped offering coverage for terrorism risk, primary insurers, suffering equally from a lack of public data and models, also withdrew, or tried to withdraw, from the market. In most states, state regulators must approve policy form changes. Most state regulators agreed to insurer requests to exclude terrorism risks from commercial policies, just as these policies had long excluded war risks. Terrorism risk insurance was soon unavailable or extremely expensive, and many businesses were no longer able to purchase insurance that would protect them in future terrorist attacks. Although the evidence is largely anecdotal, some were concerned that the lack of coverage posed a threat of serious harm to the real estate, transportation, construction, energy, and utility sectors, in turn threatening the broader economy.

In November 2002, Congress responded to the fears of economic damage due to the absence of commercially available coverage for terrorism with passage of the Terrorism Risk Insurance Act[2] (TRIA). TRIA created a three-year Terrorism Risk Insurance Program to provide a government reinsurance backstop in the case of terrorist attack. The TRIA program was amended and extended in 2005[3] and 2007.[4] Following the 2007 amendments, the TRIA program is set to expire at the end of 2014. (A side-by-side of the original law and the two reauthorization acts is in **Table 1**.)

The executive branch has been skeptical about the TRIA program in the past. Bills to expand TRIA were resisted by then-President George W. Bush's Administration,[5] and previous presidential budgets under President Obama called for changes in the program that would have had the effect of scaling back the TRIA coverage.[6] Congress declined to act on these budgetary

[6] See, for example, Office of Management and Budget, *Analytical Perspectives*, Budget of the United States, Fiscal
(continued...)

proposals at the time and no such legislative proposals were contained in the President's FY2013 or FY2014 budget proposal. The FY2015 budget "proposes to extend the Terrorism Risk Insurance Program and to implement programmatic reforms to limit taxpayer exposure and achieve cost neutrality"[7] but does not detail what these reforms might be.

The insurance industry largely continues to support TRIA,[8] as do commercial insurance consumers in the real estate and other industries that have formed a "Coalition to Insure Against Terrorism" (CIAT).[9] Not all insurance consumers support renewal of TRIA, however, with the Consumer Federation of America questioning the need for the program.[10]

Although the April 2013 bombing in Boston was termed an "act of terror," by the President,[11] whether the bombing is considered as such under TRIA depends on a certification by the Secretary of the Treasury in conjunction with the Attorney General and the Secretary of State. Such certification has not been issued. The Massachusetts Department of Insurance has collected information on insured losses from the Boston bombing and the losses from TRIA covered lines of insurance appear to be under the $5 million threshold established in the act.[12] (See precise criteria under the TRIA program on page 6.)

TRIA in the 113th Congress

The Terrorism Risk Insurance Act of 2002 Reauthorization Act of 2013 (H.R. 508)

Representative Michael Grimm along with nine cosponsors introduced H.R. 508 on February 5, 2013. The bill is a reauthorization of the existing TRIA program that would extend the program five years, until the end of 2019. It would also extend the deadline for mandatory recoupment seven years, until September 30, 2024. The bill has been referred to the House Committee on Financial Services.

[12] According to information provided by the Massachusetts Department of Insurance to the Congressional Research Service (CRS), the incurred losses on TRIA-eligible lines of insurance totaled approximately $2.6 million as of August 2013, with $1.2 million of this having been paid out. Estimated health insurance losses totaled more than $20 million; health insurance, however, is not covered under TRIA.

The Fostering Resilience to Terrorism Act of 2013 (H.R. 1945)

Representative Bennie Thompson along with one cosponsor introduced H.R. 1945 on May 9, 2013. The bill would extend the expiration date of the program 10 years, until the end of 2024, and would extend the deadline for mandatory recoupment seven years, until September 30, 2024. The Secretary of Homeland Security would be added as the lead authority responsible for certifying an act of terrorism and required to provide information and reports on terrorism risks and best practices to foster resilience in the face of terrorism. The Secretary of the Treasury would remain in the certification process but as a concurring party, not the lead authority, and the program in general would remain under the authority of the Treasury. H.R. 1945 has been referred to the House Committee on Financial Services and the House Committee on Homeland Security.

Terrorism Risk Insurance Program Reauthorization Act of 2013 (H.R. 2146)

Representative Michael Capuano along with 20 cosponsors introduced H.R. 2146 on May 23, 2013. The bill is a reauthorization of the existing TRIA program that would extend the program 10 years, until the end of 2024, as well as extend the deadline for mandatory recoupment 10 years, until September 30, 2027. In addition, the President's Working Group on Financial Markets is to continue filing reports on the market conditions, with reports required in 2017, 2020, and 2023. The bill has been referred to the House Committee on Financial Services.

Terrorism Risk Insurance Program Reauthorization Act of 2014 (S. 2244)[13]

Senator Charles Schumer along with eight cosponsors introduced S. 2244 on April 10, 2014. The bill would extend the current TRIA program seven years, until December 31, 2021, as well as decrease the federal loss sharing amount and increase the amount to be retained by the industry and recouped by the government. The Senate Committee on Banking, Housing, and Urban Affairs marked up S. 2244 on June 3, 2014, and ordered the amended bill favorably reported on a vote of 22-0.[14] The full Senate took up the bill on July 17, 2014, amending it and passing it on a vote of 93-4.

S. 2244 as passed by the Senate would decrease the federal loss sharing gradually from 85% to 80%. It would increase the insurance marketplace aggregate retention amount by $2 billion per year until it reaches $37.5 billion from the current $27.5 billion, extend the various dates for mandatory recoupment by seven years, and increase the amount to be recouped to 135.5% of federal payments compared with the current 133%. Treasury would be required to issue a study on improving the certification process and final rules governing the process. GAO would be required to issue a study on the viability of upfront premiums. S. 2244 as passed also would create an advisory committee on risk-sharing mechanisms. In addition to these provisions related to terrorism risk insurance, it also included a section relating to the membership of the Federal Reserve Board of Governors and a second title nearly identical to the text of the National

[13] For more detail on S. 2244 and other legislation see CRS Report R43619, *Terrorism Risk Insurance Legislation: Issue Summary and Side-by-Side Analysis*, by Baird Webel.

[14] The written report (S.Rept. 113-199) was filed on June 26, 2014.

Association of Registered Agents and Brokers Reform Act, which previously passed the full Senate as Title II of S. 1926 and the House of Representatives as H.R. 1155.[15]

TRIA Reform Act of 2014 (H.R. 4871)[16]

H.R. 4871 was introduced by Representative Randy Neugebauer and one cosponsor on June 17, 2014. The bill would extend the TRIA program five years while generally reducing the government's exposure to future TRIA losses, increasing post-event recoupment, and making several other changes to the program. Among the provisions are

- gradual reduction of federal share of losses from 85% to 80%;
- gradual increase in program trigger from $100 million to $500 million;
- increase in the maximum of the mandatory recoupment amount to the total of insurer deductibles under the program (currently approximately $36 billion) and removal of a provision that decreases mandatory recoupment in the case of very large attacks;
- increase to mandatory recoupment from 133% to 150% of the federal share of losses;
- separate treatment of Nuclear, Chemical, Biological, and Radiological (NCBR) terrorist attacks with lower trigger ($100 million) and higher federal loss sharing (85%).

The House Committee on Financial Services marked up H.R. 4871 beginning June 19, 2014, and ordered the bill favorably reported on June 20, 2014, by a vote of 32-27.[17] During the markup, a second title was added containing the text of the National Association of Registered Agents and Brokers Reform Act (H.R. 1155), which previously passed both the committee and the full House of Representatives.[18] The committee rejected a substitute amendment by Representative Maxine Waters, which would have replaced the text with a straightforward 10-year reauthorization of the current program, on a vote of 27-31.

Congressional Hearings

The House Committee on Financial Services and the Senate Committee on Banking, Housing, and Urban Affairs have held hearings on terrorism insurance, including the following:

- "The Terrorism Risk Insurance Act of 2002," House Committee on Financial Services, September 19, 2013.[22]

Goals and Specifics of the Current TRIA Program

The original TRIA legislation's stated goals were to (1) create a temporary federal program of shared public and private compensation for insured terrorism losses to allow the private market to stabilize; (2) protect consumers by ensuring the availability and affordability of insurance for terrorism risks; and (3) preserve state regulation of insurance. Although Congress has amended specific aspects of the original act, the general operation of the program largely follows the original statute. The changes to the program have largely reduced the government coverage for terrorism losses, except that the 2007 amendments expanded coverage to losses due to domestic terrorism, rather than limiting the program to foreign terrorism.

Federal Government Sharing of Terrorism Losses

To meet the *first* goal, the TRIA program creates a mechanism through which the federal government could share insured commercial property/casualty[23] losses with the private insurance market. The role of federal loss sharing depends on the size of the insured loss. For a relatively small loss, there is no federal sharing. For a medium-sized loss, the federal role is to spread the loss over time and over the entire insurance industry, providing assistance up front but then recouping the payments through a broad levy on insurance policies afterwards. For a large loss, the federal government is to pay most of the losses, although recoupment is possible in these circumstances as well.

[19] See http://www.banking.senate.gov/public/index.cfm?FuseAction=Hearings.Hearing&Hearing_ID=08e1735c-d2be-4260-a1dc-12975ab9397f.

[22] See http://financialservices.house.gov/calendar/eventsingle.aspx?EventID=349518.

[23] Commercial insurance is generally insurance purchased by businesses in contrast to personal lines of insurance, which is purchased by individuals. This means damage to individual homes and autos would not be covered under the TRIA program. Property/casualty insurance includes most lines of insurance except for life insurance and health insurance.

The precise criteria under the current TRIA program are as follows:

1. An individual act of terrorism must be certified jointly by the Secretary of the Treasury, Secretary of State, and Attorney General; losses must exceed $5 million in the United States or to U.S. air carriers or sea vessels for an act of terrorism to be certified.
2. The federal government shares in an insurer's losses due to a certified act of terrorism only if "the aggregate industry insured losses resulting from such certified act of terrorism"[24] exceed $100 million.
3. The federal program covers only commercial property and casualty insurance, and excludes by statute several specific lines of insurance.[25]
4. Each insurer is responsible for paying out a certain amount in claims—known as its deductible—before receiving federal coverage. An insurer's deductible is proportionate to its size, equaling 20% of an insurer's annual direct earned premiums for the commercial property/casualty lines of insurance specified in TRIA.
5. Once the $100 million aggregate loss threshold and 20% deductible are passed, the federal government is to cover 85% of each insurer's losses above its deductible until the amount of losses totals $100 billion.
6. After $100 billion in aggregate losses, there is no federal government coverage and no requirement that insurers provide coverage.
7. In the years following the federal sharing of insurer losses, but prior to September 30, 2017, the Secretary of the Treasury is required to establish surcharges on property/casualty insurance policies to recoup 133% of some or all of the outlays to insurers under the program. If losses are very high, the Secretary has the authority to assess surcharges, but is not required to do so. (See "Recoupment Provisions" below for more detail.)

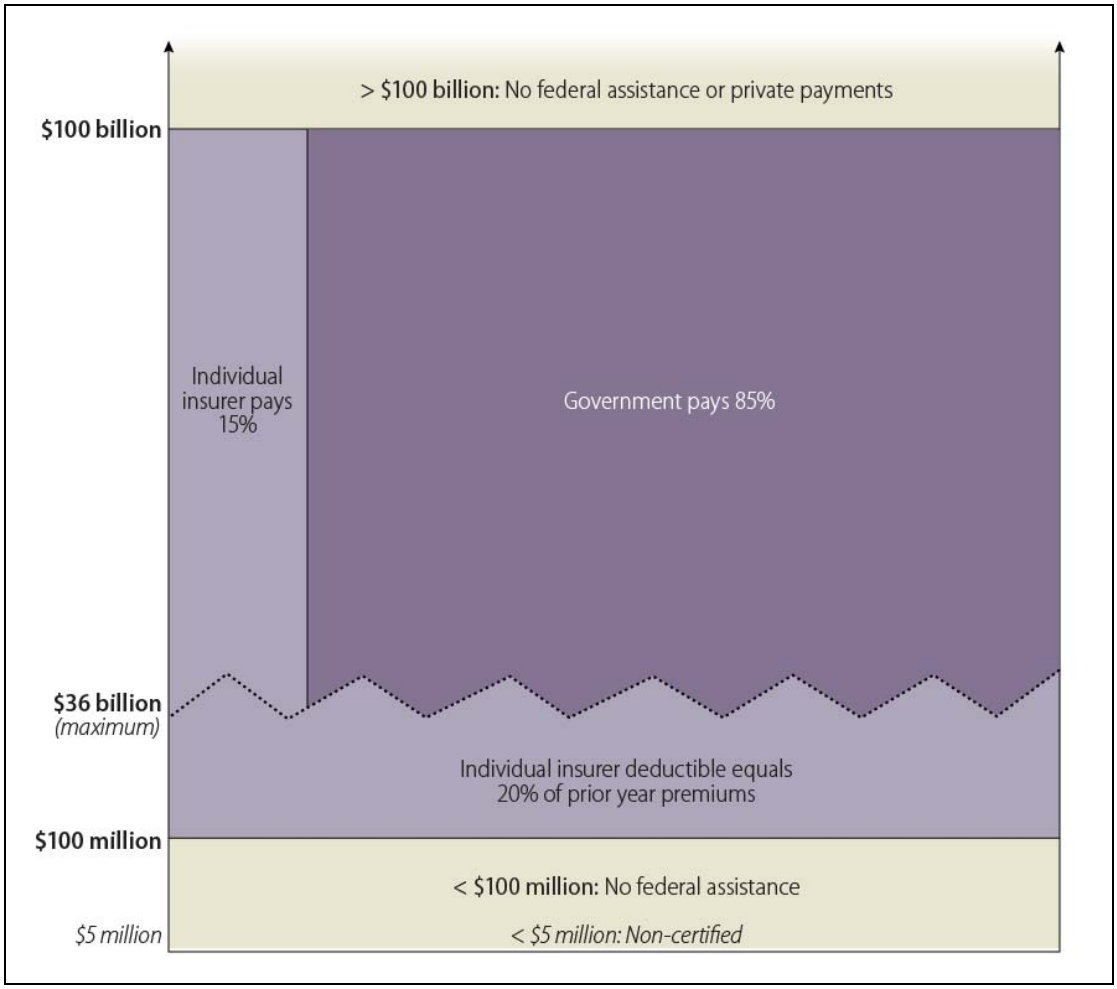
Initial Loss Sharing

The initial loss sharing under TRIA can be seen in **Figure 1**, adapted from a report by the Congressional Budget Office (CBO). The exact amount of the 20% deductible at which TRIA coverage would begin depends on how the losses are distributed among insurance companies. In the aggregate, 20% of the direct-earned premiums for all of the property/casualty lines specified in TRIA totaled approximately $36 billion according to 2012 data supplied by the National Association of Insurance Commissioners (NAIC). TRIA coverage is likely, however, to begin under this amount as the losses from an attack are unlikely to be equally distributed among insurance companies.

[24] 15 U.S.C. §6701 note, Section 103(e)(1)(B).

[25] Named lines of insurance that are not covered are federal crop insurance, private crop or livestock insurance, private mortgage insurance, title insurance, financial guaranty insurance of single-line guaranty insurers, medical malpractice, flood insurance, reinsurance, and all life insurance products.

Figure 1. Initial Loss Sharing Under Current TRIA Program



Source: Congressional Research Service, adapted from Congressional Budget Office, *Federal Reinsurance for Terrorism Risks: Issues in Reauthorization*, August 1, 2007, p. 12.

Note: Aggregate of all individual insurer deductibles totaled approximately $36 billion in 2012, according to the NAIC data and CRS calculations.

Recoupment Provisions

The precise amount to be recouped is determined by the interplay between a number of different factors in the law and in the insurance marketplace. The general result of the recoupment provisions is that, for attacks that result in under $27.5 billion[26] in insured losses, the Treasury Secretary is required to recoup 133% of the government outlays through surcharges on property/casualty insurance policies. For events with insured losses over $27.5 billion, the Secretary has discretionary authority to recoup all the government outlays and may be required to partially recoup the government outlays depending on the size of the attacks and the amount of uncompensated losses paid by the insurance industry. (See the **Appendix** for more information on exact recoupment calculations.) The mandatory recoupment is required to occur prior to the end

[26] This $27.5 billion figure is the current one and has been in effect since 2007. At the beginning of the TRIA program, this started at $10 billion and increased over time.

of FY2017. Since the latest reauthorization was passed in 2007, this requirement resulted in all recoupment being completed within a 10-year timeframe. For an attack causing large insured loses, however, this requirement could result in high surcharges being applied for a relatively short time.

Program Administration

The administration of the TRIA program was originally left generally to the Secretary of the Treasury. This was changed somewhat in the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010.[27] The act created a new Federal Insurance Office (FIO) to be located in the Department of the Treasury. Among the duties specified for the FIO in the legislation was to assist the Secretary in the administration of the Terrorism Insurance Program.[28]

TRIA Consumer Protections

TRIA addresses the *second* goal, to protect consumers, by requiring those insurers that offer the lines of insurance covered by TRIA to make terrorism insurance available prospectively to their commercial policyholders. This coverage may not differ materially from coverage for other types of losses. Each terrorism insurance offer must reveal both the premium charged for terrorism insurance and the possible federal share of compensation. Policyholders are not, however, required to purchase coverage. If the policyholder declines to purchase terrorism coverage, its insurer can exclude terrorism losses. The law itself does not limit what insurers can charge for terrorism risk insurance, though state regulators typically have the authority under state law to modify excessive, inadequate, or unfairly discriminatory rates.

Preservation of State Insurance Regulation

TRIA's *third* goal, to preserve state regulation of insurance, is expressly accomplished in Section 106(a), which provides "Nothing in this title shall affect the jurisdiction or regulatory authority of the insurance commissioner [of a state]." The Section 106(a) provision has two exceptions: (1) the federal statute preempts any state definition of an "act of terrorism" in favor of the federal definition and (2) state rate and form approval laws for terrorism insurance were preempted from enactment to the end of 2003. In addition to these exceptions, Section 105 of the law also preempts state laws with respect to insurance policy exclusions for acts of terrorism.

Coverage for Nuclear, Chemical, Biological, and Radiological Terrorism

A terrorist attack with some form of NCBR[29] weapon would often be considered the most likely type of attack causing large scale losses. The current TRIA statute does not specifically include or

[27] P.L. 111-203, 124 Stat. 1376.

[28] Section 502 of P.L. 111-203, codified at 31 U.S.C. §313(c)(1)(D).

[29] There is some variance in the acronym used for such attacks. The U.S. Department of Defense, for example, uses "CBRN," rather than NCBR, in its *Dictionary of Military and Associated Terms*; see p. 86 at http://www.scribd.com/ (continued...)

exclude NCBR events; thus, the TRIA program in general would cover insured losses from terrorist actions due to NCBR as it would for an attack by conventional means. The term *insured losses*, however, is a meaningful distinction. Except for workers compensation insurance, most insurance policies that would fall under the TRIA umbrella include exclusions that would likely limit insurer coverage of an NCBR event, whether it was due to terrorism or to some sort of accident, although these exclusions have never been legally tested in the United States after a terrorist event.[30] If these exclusions are invoked and do indeed limit the insurer losses due to NCBR terrorism, they would also limit the TRIA coverage of such losses. Language that would have specifically extended TRIA coverage to NCBR events was offered in the past,[31] but was not included in legislation as enacted. In 2007, the Government Accountability Office (GAO) was directed to study the issue and a GAO report was issued in 2008.[32] H.R. 4871 provides for higher federal cost sharing and a lower program trigger in the event of an NCBR attack, but does not specifically address NCBR exclusions. Other TRIA extension bills in the 113th Congress have not specifically addressed NCBR events.

Background on Terrorism Insurance

Insurability of Terrorism Risk

Stripped to its most basic elements, insurance is a fairly straightforward operation. An insurer agrees to assume an indefinite future risk in exchange for a definite current premium from a consumer. The insurer pools a large number of risks such that at any given point in time, the ongoing losses will not be larger than the current premiums being paid, plus the residual amount of past premiums that the insurer retains and invests, plus, in a last resort, any borrowing against future profits if this is possible. For the insurer to operate successfully and avoid bankruptcy, it is critical to accurately estimate the probability of a loss and the severity of that loss so that a sufficient premium can be charged. Insurers generally depend upon huge databases of past loss information in setting these rates. Everyday occurrences, such as automobile accidents or natural deaths, can be estimated with great accuracy. Extraordinary events, such as large hurricanes, are more difficult, but insurers have many years of weather data, coupled with sophisticated computer models, with which to make predictions.

Terrorism risk is seen by many to be so fundamentally different from other risks, making it essentially uninsurable by the private insurance market and thus requiring a government solution. The argument that terrorism risk is uninsurable typically focuses on lack of public data about both the probability and severity of terrorist acts. The reason for the lack of historical data would generally be seen as a good thing—very few terrorist attacks are attempted and fewer have

(...continued)

doc/25603718/The-DOD-Lexicon-JP1-02.

[30] It should be noted that insurers might have attempted to exclude the September 11, 2001, losses under existing war risk exclusions, but did not generally attempt to do so.

[31] See, for example, H.R. 2761 (110th Congress) as passed by the House on September 19, 2007, and H.Rept. 110-318, available at http://www.gpo.gov/fdsys/pkg/CRPT-110hrpt318/pdf/CRPT-110hrpt318.pdf.

[32] U.S. Government Accountability Office, *TERRORISM INSURANCE: Status of Coverage Availability for Attacks Involving Nuclear, Biological, Chemical, or Radiological Weapons*, GAO-09-39, December 12, 2008, at http://gao.gov/products/GAO-09-39.

succeeded. This, however, does not assuage the fiduciary duty of an insurance company president not to put a company at risk by insuring against an event that could bankrupt the firm. As a replacement for large amounts of historical data, insurers turn to various forms of models similar to those used to assess future hurricane losses. Even the best model, however, can only partly replace good data, and terrorism models are still relatively new compared with hurricane models.

One prominent insurance textbook identifies four ideal elements of an insurable risk: (1) a sufficiently large number of insureds to make losses reasonably predictable; (2) losses must be definite and measurable; (3) losses must be fortuitous or accidental; and (4) losses must not be catastrophic (i.e., it must be unlikely to produce losses to a large percentage of the risks at the same time).[33] Terrorism risk in the United States would appear to fail the first criterion. It also likely fails the third due to the malevolent human actors behind terrorist attacks, whose motives, means, and targets of attack are constantly in flux. Whether it fails the fourth criterion is largely decided by the underwriting actions of insurers themselves (i.e., whether the insurers insure a large number of risks in a single geographic area that would be affected by a terrorist strike). Unsurprisingly, insurers generally have sought to limit their exposures in particular geographic locations with a conceptually higher risk for terrorist attacks, making terrorism insurance more difficult to find in those areas.

International Experience with Terrorism Risk Insurance[34]

Although the U.S. experience with terrorism is relatively limited, other countries have dealt with the issue more extensively and have developed their own responses to the challenges presented by terrorism risk. Spain, which has seen significant terrorist activity by Basque separatist movements, insures against acts of terrorism via a broader government-owned reinsurer that has provided coverage for catastrophes since 1954. The United Kingdom, responding to the Irish Republican Army attacks in the 1980s, created Pool Re, a privately owned mutual insurance company with government backing, specifically to insure terrorism risk. In the aftermath of the September 11, 2001, attacks, many foreign countries reassessed their terrorism risk and created a variety of approaches to deal with the risk. The UK greatly expanded Pool Re, whereas Germany created a private insurer with government backing to offer terrorism insurance policies. Germany's plan, like TRIA in the United States, was created as a temporary measure. It has been extended since its inception and is now set to expire at the end of 2015.[35] Not all countries, however, concluded that some sort of government backing for terrorism insurance was necessary. Canada specifically considered, and rejected, creating a government program following September 11, 2001.

Previous U.S. Experience with "Uninsurable" Risks

Terrorism risk post-2001 is not the first time the United States has faced a risk perceived as uninsurable in private markets that Congress chooses to address through government action. During World War II, for example, Congress created a "war damage" insurance program, and there are current programs insuring against aviation war risk[36] and flood losses,[37] respectively.

The closest previous analog to the situation with terrorism risk may be the federal riot reinsurance program created in the late 1960s. Following large scale riots in American cities in the late 1960s, insurers generally pulled back from insuring in those markets, either adding policy exclusions to limit their exposure to damage from riots or ceasing to sell property damage insurance altogether. In response, Congress created a riot reinsurance program as part of the Housing and Urban Development Act of 1968.[38] The federal riot reinsurance program offered reinsurance contracts similar to commercial excess reinsurance. The government agreed to cover some percentage of an insurance company's losses above a certain deductible in exchange for a premium paid by that insurance company. Private reinsurers eventually returned to the market, and the federal riot reinsurance program was terminated in 1985.

The Terrorism Insurance Market

Post-9/11 and Pre-TRIA

The September 2001 terrorist attacks, and the resulting billions of dollars in insured losses, caused significant upheaval in the insurance market. Even before the attacks, the insurance market was showing signs of a cyclical "hardening" of the market in which prices typically rise and availability is somewhat limited. The unexpectedly large losses caused by terrorist acts exacerbated this trend, especially with respect to the commercial lines of insurance most at risk for terrorism losses. Post-September 11, insurers and reinsurers started including substantial surcharges for terrorism risk, or, more commonly, they excluded coverage for terrorist attacks altogether. Reinsurers could take these steps rapidly because reinsurance contracts and rates are generally unregulated. Primary insurance contracts and rates are more closely regulated by the individual states, and the exclusion of terrorism coverage for the individual purchaser of insurance required regulatory approval at the state level in most cases. States acted fairly quickly, and, by early 2002, 45 states had approved insurance policy language prepared by the Insurance Services Office, Inc. (ISO, an insurance consulting firm), excluding terrorism damage in standard commercial policies.[39]

The lack of readily available terrorism insurance caused fears of a larger economic impact, particularly on the real estate market. In most cases, lenders prefer or require that a borrower

[36] For more information, see http://www.faa.gov/about/office_org/headquarters_offices/apl/aviation_insurance/.

[37] For more information, see CRS Report R40650, *National Flood Insurance Program: Background, Challenges, and Financial Status*, by Rawle O. King.

[38] P.L. 90-448; 82 Stat. 476. The act also created state "Fair Access to Insurance Requirements" (FAIR) plans and a Federal Crime Insurance Program.

[39] Jeff Woodward, "The ISO Terrorism Exclusions: Background and Analysis," *IRMI Insights*, February 2002, available at http://www.irmi.com/expert/articles/2002/woodward02.aspx.

maintain insurance coverage on a property. Lack of terrorism insurance coverage could lead to defaults on existing loans and a downturn in future lending, causing economic ripple effects as buildings are not built and construction workers remain idle.

The 14-month period after the September 2001 terrorist attacks and before the November 2002 passage of TRIA provides some insight into the effects of a lack of terrorism insurance. Some examples in September 2002 include the Real Estate Round Table releasing a survey finding that "$15.5 billion of real estate projects in 17 states were stalled or cancelled because of a continuing scarcity of terrorism insurance"[40] and Moody's Investors Service downgrading $4.5 billion in commercial mortgage-backed securities.[41] This picture, however, was not uniform. For example, in July 2002, *The Wall Street Journal* reported that "despite concerns over landlords' ability to get terrorism insurance, trophy properties were in demand."[42] The Congressional Budget Office concluded in 2005 that "[TRIA] appears to have had little measurable effect on office construction, employment in the construction industry, or the volume of commercial construction loans made by large commercial banks," but CBO also notes that variety of economic factors at the time "could be masking positive macroeconomic effects of TRIA."[43]

After TRIA

The "make available" provisions of TRIA addressed the availability problem in the terrorism insurance market, as insurers were required by law to offer commercial terrorism coverage. There was significant uncertainty, however, as to how businesses would react, because there was no general requirement to purchase terrorism coverage[44] and the pricing of terrorism coverage was initially high. Initial consumer reaction to the terrorism coverage offers was relatively subdued. Marsh, Inc., a large insurance broker, reports that only 27% of their clients bought terrorism insurance in 2003. This take-up rate, however, climbed relatively quickly to 49% in 2004 and 58% in 2005. Since 2005, the take-up rate has remained near 60%, with Marsh reporting 62% in 2012.[45]

The price for terrorism insurance has appeared to decline over the past decade, although available pricing data are based on surveys; thus, the level of pricing may not always be comparable between sources. The 2013 report by the President's Working Group on Financial Markets shows a high of above 7% for the median terrorism premium as a percentage of the total property premium in 2003, with a generally downward trend, and the latest values around 3%.[46] These values were reported by Aon, another major insurance broker. While the trend may be downward,

[40] "Terror Insurance Drag on Real Estate Still Climbing," Real Estate Roundtable, September 19, 2003, available at http://www.rer.org/media/newsreleases/TRIA_Survey_15billion_Sept19_2002.cfm.

[41] "Moody's Downgrades Securities on Lack of Terrorism Insurance," *Wall Street Journal*, September 30, 2002, p. C14.

[43] Congressional Budget Office, *Federal Terrorism Reinsurance: An Update*, January 2005, pp. 10-11, available at http://www.cbo.gov/publication/16210.

[44] Although there is no requirement in federal law to purchase terrorism coverage, businesses may be required by state law to purchase the coverage. This is particularly the case in workers compensation insurance. Market forces, such as requirements for commercial loans, may also compel purchase of terrorism coverage.

[45] Marsh, Inc., *2013 Terrorism Risk Insurance Report*, May 2013, p. 9.

[46] President's Working Group on Financial Markets, *The Long-Term Availability and Affordability of Insurance for Terrorism Risk*, April 2014, p. 26.

there has been variability, particularly across industries. For example, Marsh reported rates in 2009 as high as 24% of the property premium for financial institutions and as low as 2% in the food and beverage industry.[47] This variability dropped in the report by Marsh as the rates for 2012 vary from 7% in the transportation industry and the hospitality and gaming industry to 1% in the energy and mining industry.[48]

The willingness of insurers to cover terrorism risk, as well as their financial capability to do so, has increased over the past decade. From the late 2001 and 2002 marketplace, where terrorism coverage was essentially unavailable, recent estimates from the insurance broker Guy Carpenter are that between $6 billion and $8 billion in terrorism reinsurance capacity is available in the U.S. market.[49] The combined policyholder surplus among all U.S. property/casualty insurers was $674.0 billion at the end of 2013, up from $293.5 billion at the start of 2002.[50] This amount, however, backs all policies in the United States and is subject to depletion in a wide variety of events. Extreme weather losses could particularly draw capital away from the terrorism insurance market, as such weather events share some risk characteristics with large terrorist attacks.

Evolution of Terrorism Risk Insurance Laws

Table 1 presents a side-by-side comparison of the original TRIA law, along with the reauthorizing laws of 2005 and 2007.

Table 1. Side-by-Side of Terrorism Risk Insurance Laws

Provision	15 U.S.C. 6701 Note (P.L. 107-297)	P.L. 109-144	P.L. 110-160
Title	Terrorism Risk Insurance Act of 2002	Terrorism Risk Insurance Extension Act of 2005	Terrorism Risk Insurance Program Reauthorization Act of 2007
Expiration Date	December 31, 2005 (§108(a))	December 31, 2007 (§2)	December 31, 2014 (§3(a))
"Act of Terrorism" Definition	For an act of terrorism to be covered under TRIA, it must be a violent act committed on behalf of a foreign person or interest as part of an effort to coerce the U.S. civilian population or influence U.S. government policy. It must have resulted in damage within the United States or to a U.S. airliner or mission abroad. Terrorist act is to be certified by the Secretary of the Treasury in concurrence with the Attorney General and Secretary of State. (§102(1)(A))	No Change	Removed requirement that a covered act of terrorism be committed on behalf of a foreign person or interest. (§2)
Limitation on Act of Terrorism Certification in Case of War	Terrorist act would not be covered in the event of a war, except for workers compensation insurance. (§102(1)(B)(I))	No Change	No Change
Minimum Damage To Be Certified	Terrorist act must cause more than $5 million in property and casualty insurance losses to be certified. (§102(1)(B)(ii))	No Change	No Change
Aggregate Industry Loss Requirement/Program Trigger	No Provision	Created a "program trigger" that would prevent coverage under the program unless "aggregate industry losses resulting from such certified act of terrorism" exceed $50 million in 2006 and $100 million for 2007. (§6)	No Change. Program trigger remains at $100 million until 2014. (§3 (c))
Insurer Deductible	7% of earned premium for 2003, 10% of earned premium for 2004, 15% of earned premium for 2005. (§102(7))	Raised deductible to 17.5% for 2006 and 20% for 2007. (§3)	No Change. Deductible remains at 20% until 2014. (§3(c))

Provision	15 U.S.C. 6701 Note (P.L. 107-297)	P.L. 109-144	P.L. 110-160
Covered Lines of Insurance	Commercial property/ casualty insurance, including excess insurance, workers' compensation, and surety but excluding crop insurance, private mortgage insurance, title insurance, financial guaranty insurance, medical malpractice insurance, health or life insurance, flood insurance, or reinsurance. (§102(12))	Excluded commercial auto, burglary and theft, professional liability (except for directors and officers liability), and farm owners multiple peril from coverage. (§3)	No change from P.L. 109-144
Mandatory Availability	Every insurer must make terrorism coverage that does not differ materially from coverage applicable to losses other than terrorism. (§103(c))	No Change. Mandatory availability extended through 2007. (§2(b))	No Change. Mandatory availability extended through 2014. (§3(c))
Insured Loss Shared Compensation	Federal share of losses will be 90% for insured losses that exceed the applicable insurer deductible. (§103(e))	Reduced federal share of losses to 85% for 2007. (§4)	No Change. Federal share remains at 85% through 2014.
Cap on Annual Liability	Federal share of compensation paid under the program will not exceed $100 billion and insurers are not liable for any portion of losses that exceed $100 billion unless Congress acts otherwise to cover these losses. (§103(e))	No Change	Removed the possibility that a future Congress could require insurers to cover some share of losses above $100 billion if the insurer has met its individual deductible. Requires insurers to clearly disclose this to policy holders. (§4(a) and §4(d))
Payment Procedures if Losses Exceed $100,000,000,000	After notice by the Secretary of the Treasury, Congress determines the procedures for payments if losses exceed $100 billion. (§103(e)(3))	No Change	Required Secretary of the Treasury to publish regulations within 240 days of passage regarding payments if losses exceed $100 billion. (§4(c))
Aggregate Retention Amount Maximum	$10 billion for 2002-2003, $12.5 billion for 2004, $15 billion for 2005 (§103(6))	Raises amount to $25 billion for 2006 and $27.5 billion for 2007. (§5)	No Change. Aggregate retention remains at $27.5 billion through 2014.

Provision	15 U.S.C. 6701 Note (P.L. 107-297)	P.L. 109-144	P.L. 110-160
Mandatory Recoupment of Federal Share	If insurer losses are under the aggregate retention amount, a mandatory recoupment of the federal share of the loss will be imposed. If insurer losses are over the aggregate retention amount, such recoupment is at the discretion of the Secretary of the Treasury. (§103(e)(7))	No Change	Increases total recoupment amount to be collected by the premium surcharges to 133% of the previously defined mandatory recoupment amount. (§4(e)(1)(A))
Recoupment Surcharge	Surcharge is limited to 3% of property-casualty insurance premium and may be adjusted by the Secretary to take into account the economic impact of the surcharge on urban commercial centers, the differential risk factors related to rural areas and smaller commercial centers, and the various exposures to terrorism risk across lines of insurance. (§103(e)(8))	No Change	Removes 3% limit for mandatory surcharge. (§4(e)(2)(A))

Notes: Section numbers for the initial TRIA law are as codified in 15 U.S.C. §6701 note. Section numbers for P.L. 109-144 and P.L. 110-160 are from the legislation as enacted.

Appendix. Calculation of TRIA Recoupment Amounts

Table A-1 contains illustrative examples of how the recoupment for the government portion of terrorism losses under TRIA might be calculated in the aggregate for various sizes of losses. The amount of the deductible in the chart is simply assumed to be 30% of the insured losses for illustrative purposes. Without knowing the actual distribution of losses due to a terrorist attack, it is impossible to know what the actual deductible will be. The conclusions of the chart with regard to recoupment, however, hold across different actual deductible amounts.

The specific provisions of the law define the "insurance marketplace aggregate retention amount" (Column F) as the lesser of $27.5 billion or the total amount of insured losses (Column A). The "mandatory recoupment amount" (Column G) is defined as the difference between $27.5 billion and the aggregate insurer losses that were not compensated for by the program (i.e., the total of the insurers' deductible (Column B) and their 15% loss share (Column C)). If the aggregate insured loss is less than $27.5 billion, the law requires recoupment of 133% of the government outlays (Column H). For insured losses over $27.5 billion, the mandatory recoupment amount decreases, thus the Secretary would be required to recoup less than 133% of the outlays. Depending on the precise deductible amounts, the uncompensated industry losses (Column D) may eventually rise to be greater than $27.5 billion, which would then mean that the mandatory recoupment provisions would not apply. The Secretary would still retain discretionary authority to apply recoupment surcharges no matter what level uncompensated losses reached.

Table A-1. Example of TRIA Recoupment Calculations

($ billions)

Column A	Column B	Column C	Column D	Column E	Column F	Column G	Column H
Theoretical Insured Losses	Theoretical Insurer Deductible	Insurer 15% share of Insured Losses (0.15x(A-B))	Insurance Industry Un-compensated losses (B+C)	Government 85% share of Insured Losses (0.85x(A-B))	Aggregate Retention Amount (A or $27.5)	Mandatory Recoupment Amount (F-D)	Amount Required to be Recouped (Gx1.33)
$0.1	$0.03	$0.01	$0.04	$0.06	$0.1	$0.06	$0.08
$0.5	$0.15	$0.05	$0.2	$0.3	$0.5	$0.3	$0.4
$1.0	$0.3	$0.1	$0.4	$0.6	$1.0	$0.6	$0.8
$5.0	$1.5	$0.5	$2.0	$3.0	$5.0	$3.0	$4.0

CRS REPORT
Prepared for Members and
Committees of Congress

Summary

Prior to the September 11, 2001, terrorist attacks, insurance covering terrorism losses was normally included in commercial insurance policies without additional cost to the policyholders. Following the attacks, this ceased to be the case as insurers and reinsurers pulled back from offering terrorism coverage. Some feared that a lack of insurance against terrorism loss would have a wide economic impact, particularly because insurance coverage can be a significant factor in lending decisions.

Congress responded to the disruption in the insurance market by passing the Terrorism Risk Insurance Act of 2002 (TRIA; P.L. 107-297). TRIA created a temporary program, expiring at the end of 2005, to calm the insurance markets through a government reinsurance program sharing in terrorism losses. This program was intended to give the industry time to gather the data and create the structures and capacity necessary for private insurance to cover terrorism risk. TRIA did not require premiums to be paid for the government coverage. Instead, it required private insurers to offer commercial insurance for terrorism risk, with the government then recouping some or all federal payments under the act in the years following government coverage of insurer losses.

Under TRIA, terrorism insurance became widely available and largely affordable and the insurance industry greatly expanded its financial capacity. There has been, however, little apparent success in developing a longer-term private solution, and fears have persisted about the economic consequences if terrorism insurance were not available. Congress passed two extensions to the program, one in 2005 (P.L. 109-144) and one in 2007 (P.L. 110-160). The 2005 extension primarily focused on reducing the government's up-front financial exposure under the act, whereas the 2007 extension left most of the up-front aspect of the TRIA program unchanged but accelerated the post-event recoupment provisions. The 2007 legislation also included the only expansion of the TRIA program since initial enactment; it extended the program to cover any acts of terrorism, as opposed to only foreign acts of terrorism.

In the 113th Congress, both the House and the Senate passed legislation that would have extended TRIA, but differences between the bills prevented enactment. The 113th Congress adjourned without extending the program. Thus, per P.L. 110-160, the TRIA program expired at the end of 2014. Although insurance industry capacity has increased since 2002, many still see terrorism as essentially uninsurable. Without TRIA, the insurance industry indicated that terrorism insurance would again become unavailable or unaffordable. Fears were again being expressed that a lack of terrorism insurance may slow down other sectors of the economy.

In the 114th Congress, both the House and the Senate passed the same bill, H.R. 26, and the President signed P.L. 114-1 on January 12, 2015. H.R. 26/P.L. 114-1 extends the program nearly six years while reducing the government's share of the losses compared with the program as it was in 2014. Specifically, P.L. 114-1 gradually (1) increases the program trigger from $100 million to $200 million, (2) reduces the government share of the losses from 85% to 80%, and (3) increases the mandatory recoupment amount to $37.5 billion.

This report briefly outlines the issues involved with terrorism insurance, summarizes extension legislation, and includes a side-by-side comparison of TRIA law and the bills introduced in the 114th and 113th Congresses. For additional information, please see CRS Report R42716, *Terrorism Risk Insurance: Issue Analysis and Overview of Current Program,* by Baird Webel.

Background

Prior to the September 11, 2001, terrorist attacks, insurance covering terrorism losses was normally included in general insurance policies without additional cost to the policyholders. Following the attacks, both primary insurers and reinsurers pulled back from offering terrorism coverage. Because insurance is required for a variety of economic transactions, particularly borrowing for commercial development, many feared that a lack of insurance against terrorism loss would have a wider economic impact.[1]

Congress responded to the disruption in the insurance market by passing the Terrorism Risk Insurance Act of 2002 (TRIA).[2] TRIA created a temporary, three-year terrorism insurance program to calm the insurance markets through a government reinsurance backstop sharing in terrorism losses. The idea was to give the private industry time to gather the data and create the structures and capacity necessary for private insurance to cover terrorism risk. TRIA requires insurers to offer terrorism coverage but does not require commercial policyholders to purchase the coverage. Congress extended the program in 2005[3] and 2007.[4] In 2005, the extension legislation focused on reducing the government's exposure from TRIA by increasing the minimum covered event size, raising the insurer deductible, reducing the government share of losses, and increasing the post-event mandatory recoupment. In 2007, the primary change was to accelerate the after-the-fact recoupment. Although the prospective government share of losses has been reduced over time, the 2007 reauthorization also expanded the program to cover losses from acts of domestic terrorism. Both the House and the Senate passed different TRIA extension bills in the 113th Congress, but final legislation was not enacted. Thus, the TRIA program expired at the end of 2014, as provided for in the 2007 extension.

The initial thresholds of the program when it expired were as follows:

1. A terrorist act must have caused $5 million in insured losses to be certified for TRIA coverage.
2. The aggregate insured losses from a certified act of terrorism must have been $100 million in a year for government coverage to begin.
3. An individual insurer must have met a deductible of 20% of its annual premiums for government coverage to begin.

Once these thresholds were met, the government would have covered 85% of insured losses due to terrorism, with the private insurers retaining 15% of the losses. The government did not charge premiums for this coverage. Instead, if the insured losses were under $27.5 billion, the Secretary of the Treasury was required to recoup 133% of government outlays through a surcharge on commercial property/casualty insurance policies. If insured losses rose above $27.5 billion, the Secretary was required to recoup a reduced amount of the outlays. At some high insured loss level, which depended on the exact distribution of losses, the Secretary no longer was required to

[2] P.L. 107-297, codified at 15 U.S.C. §6701 note.

[3] P.L. 109-144.

[4] P.L. 110-160.

recoup outlays but retained the discretionary authority to do so. Under the law when it expired, all mandatory recoupment was required to be completed by the end of FY2017.

Since TRIA's passage, private industry's willingness and ability to cover terrorism risk have increased. According to industry surveys, prices for terrorism coverage have generally trended downward and approximately 60% of commercial policyholders have purchased coverage over the past few years.[5] The price drops and coverage increases, however, occurred under the umbrella of TRIA coverage, and it is unclear how the insurance market would have reacted to a lasting expiration of the federal program.

Legislation in the 114th Congress

Terrorism Risk Insurance Program Reauthorization Act of 2015 (H.R. 26/P.L. 114-1)

Representative Randy Neugebauer introduced H.R. 26 on January 6, 2015, and the House passed the bill by a vote of 416-5 with one Member voting present on January 7, 2015. The Senate passed the bill on January 8, 2015, on a vote of 93-4 and the President signed P.L. 114-1 on January 12, 2015.

The language of H.R. 26/P.L. 114-1 is identical aside from technical corrections to that of the amended version of the 113th Congress bill, S. 2244, which passed the House on December 10, 2014. P.L. 114-1 includes provisions to

- extend the TRIA program nearly six years, until the end of 2020;
- decrease the federal loss sharing gradually from 85% to 80%;
- increase the program trigger by $20 million per year until it reaches $200 million from $100 million in 2015;
- increase the insurance marketplace aggregate retention amount by $2 billion per year until it reaches $37.5 billion from the $27.5 billion. After it reaches $37.5 billion, the amount is to be set by the Secretary of the Treasury to equal the annual average of aggregate insurer deductibles for the previous three years;
- extend the various dates for mandatory recoupment by seven years;
- change the mandatory recoupment provisions to require that 140% of the federal payments be recouped;
- require the Treasury to study the certification process and issue final rules governing the process, including a timeline;
- require the Treasury to collect additional data on the terrorism insurance market and include that data in an annual report; and

[5] See, for example, Marsh, Inc. *2014 Terrorism Risk Insurance Report*, April 2014.

- require a Government Accountability Office (GAO) study on the possible effects of instituting insurer premiums for TRIA coverage and requiring capital reserve funds for terrorism.

In addition to the TRIA provisions, P.L. 114-1 also includes a Title II relating to insurance agent licensing,[6] a section relating to the makeup of the Federal Reserve Board of Governors,[7] and a Title III amending statutory provisions originating in the 2010 Dodd-Frank Wall Street Reform and Consumer Protection Act[8] relating to derivatives and margin requirements for end users.[9] Similar provisions to Title II and Title III passed the House in the 113th Congress.

Table 1 below presents a side-by-side analysis of the TRIA law as it existed upon expiration and P.L. 114-1. A side-by-side comparison of legislation in the 113th Congress can be found in the **Appendix**.

Table 1. Terrorism Risk Insurance Side by Side: Previous TRIA Statute and P.L. 114-1

Provision	15 U.S.C. §6701 note (as applicable in 2014)	H.R. 26/P.L. 114-1
Title	Terrorism Insurance Program	Terrorism Risk Insurance Program Reauthorization Act of 2015
Termination Date	December 31, 2014 (§108(a))	December 31, 2020 (§101)
Certification of an Act of Terrorism	Terrorist act is to be certified by the Secretary of the Treasury (hereinafter the Secretary) in concurrence with the Attorney General and Secretary of State. Terrorist act must cause $5 million in insured losses to be certified. (§102(1)(A))	Removes the Secretary of State from certification process. Adds "consultation" with the Secretary of Homeland Security. (§105) Requires the Secretary to study and report on the certification process. After this study is completed, the Secretary is to issue rules governing the process, including a timeline as to whether an act is considered an act of terrorism. (§107)
Insured Loss Shared Compensation	Federal share of losses will be 85% for insured losses that exceed the applicable insurer deductible. (§103(e))	Starting in 2016, the federal share of losses will decrease one percentage point per calendar year until it equals 80%. (§102)
Program Trigger	No compensation shall be paid unless the aggregate industry insured losses resulting from a certified act of terrorism exceed $100 million. (§103(e)(1)(B))	Beginning in 2016, program trigger increases to $120 million and then $20 million per year until it reaches $200 million. Applies program trigger to the aggregate losses from multiple acts of terrorism in a calendar year. (§103)
Mandatory Availability	Insurers are required to make terrorism coverage available to insureds. (§103(c))	No change
Aggregate Retention Amount	The aggregate retention amount is the lesser of (1) the total of all insured losses or (2) $27.5 billion. (§103(e)(6))	Beginning in the calendar year of enactment, the retention amount would be the lesser of (1) the total of all insured losses or (2) $29.5 billion, with this amount further increased by $2 billion per year until it reaches $37.5 billion. Once it reaches $37.5 billion, it shall be set by the Secretary to equal the annual average of the sum of insurer deductibles for the previous three years. (§104(1))

Provision	15 U.S.C. §6701 note (as applicable in 2014)	H.R. 26/P.L. 114-1
Mandatory Recoupment of Federal Share	If aggregate insured losses are less than the aggregate retention amount, a mandatory recoupment of 133% of the federal share of the loss will be imposed.	The gradual increase in the aggregate retention (§104(1)) effectively increases the level of mandatory recoupment.
	If aggregate insured losses are greater than the aggregate retention amount but uncompensated insurer losses do not exceed the aggregate retention amount, the mandatory recoupment amount will be reduced by this amount.	Increases the mandatory recoupment to 140% of the federal share of losses. (§104(2))
	If uncompensated insurer losses are greater than the aggregate retention amount, there is no mandatory recoupment but the Secretary retains discretionary recoupment authority. (§103(e)(7))	
Timing of Mandatory Recoupment	Requires expedited collection of recoupment amounts:	Requires expedited collection of recoupment amounts:
	(1) for a terrorist attack before 2011, all required recoupment amounts must be collected by September 30, 2012;	(1) for a terrorist attack before 2018, all required recoupment amounts must be collected by September 30, 2019;
	(2) for a terrorist attack in 2011, 35% of required recoupment amounts must be collected by September 30, 2012, and the balance must be collected by September 30, 2017; and	(2) for a terrorist attack in 2018, 35% of required recoupment amounts must be collected by September 30, 2019, and the balance must be collected by September 30, 2024; and
	(3) for a terrorist attack after 2011, all required recoupment amounts must be collected by September 30, 2017. (§103(e)(7)(E)(i))	(3) for a terrorist attack after 2018, all required recoupment amounts must be collected by September 30, 2024. (§104(2))
Risk-Sharing Mechanisms	No similar provisions	Establishes an advisory committee to encourage the creation and development of private risk-sharing mechanisms. (§110)
Reporting of Terrorism Insurance Data	Requires Secretary to annually compile information on terrorism insurance premiums. To the extent that such data are not otherwise available, the Secretary may require insurers to submit the information to the National Association of Insurance Commissioners (NAIC), which shall make it available to the Secretary. (§108(e))	Beginning in 2016, requires Secretary to collect data from insurers on terrorism insurance coverage, including lines of insurance with terrorism exposure, premiums earned from terrorism coverage, location of exposure, pricing of coverage, take-up rates, and amount of private reinsurance purchased. If such data are available from the states or another source, the Secretary shall collect the data from this source. The Secretary shall issue a report to Congress based on these data. (§111)

Provision	15 U.S.C. §6701 note (as applicable in 2014)	H.R. 26/P.L. 114-1
Definition of Control	An entity is considered to have control over another entity if the first entity has the power to vote 25% of the voting securities; controls the election of the majority of the directors; or the Secretary determines that the entity exercises control after notice and hearing. (§102(3))	Adds the proviso that an entity is not considered to have control if, on the date of enactment, the entity is "acting as an attorney-in-fact ... for the other entity and such other entity is a reciprocal insurer." This proviso, however, does not apply if the entity is defined as having control for reasons other than the attorney-in-fact relationship. (§106(1))
Studies and Reports	The Secretary shall conduct an expedited study of the availability and affordability of group life insurance coverage. (§103(h)) The Secretary shall conduct a study and issue a report on the potential effect of terrorism on life insurance and other personal lines by October 2003. (§103(i)) The Secretary shall conduct a study and issue a report no later than June 30, 2005, on the effectiveness of the program and the capacity of private insurers to offer terrorism coverage after the expiration of the program. (§104(d)) The President's Working Group on Financial Markets is to report on the market conditions for terrorism risk insurance in 2006, 2010, and 2013. (§104(e)) The Government Accountability Office (GAO) shall conduct a study and issue a report on the availability and affordability of Nuclear, Biological, Chemical, or Radiological (NBCR) coverage and the outlook for future coverage by December 2008. (§104(f)) GAO shall conduct a study and issue a report on the availability and affordability of terrorism insurance in specific markets by June 2008. (§104(g))	GAO shall conduct a study and issue a report on the viability of (1) the government collecting up-front terrorism insurance premiums on insurers, including international practices, and (2) the creation of a mandatory capital reserve fund to dedicate capital for terrorism losses before such losses occur within two years from the date of enactment. (§108) The Secretary shall issue a report to Congress based on the terrorism insurance data collected under Section 11 to be completed by June 30, 2017, and annually thereafter. (§111) The Secretary shall conduct an annual study of small-insurer competitiveness and issue an annual report on this study, with the first report not later than June 30, 2016. (§112)

Source: Congressional Research Service (CRS) using material from the U.S. Treasury and http://www.congress.gov.

Notes: Section numbers for the initial TRIA law are as codified in 15 U.S.C. §6701 note. Section numbers for current legislation are from the legislation as introduced. H.R. 26/P.L. 114-1 has several provisions not directly related to terrorism insurance including (1) technical corrections that delete outdated language from several sections of the TRIA statute (Section 106); (2) a section relating to the composition of the Federal Reserve Board of Governors (Section 109); (3) a Title II relating to insurance agent licensing; and (4) a Title III related to derivatives. These sections and titles are not included in the table.

Appendix. Previous TRIA Statute and 113th Congress Legislation

Table A-1. Terrorism Risk Insurance Side by Side: TRIA Statute and 113th Congress Legislation

Provision	15 U.S.C. §6701 note (as applicable in 2014)	S. 2244 (as passed by the Senate)	H.R. 4871 (Title I as reported)	S. 2244 (as passed by the House)
Title	Terrorism Insurance Program	Terrorism Risk Insurance Program Reauthorization Act of 2014	TRIA Reform Act of 2014	Terrorism Risk Insurance Program Reauthorization Act of 2014
Termination Date	December 31, 2014 (§108(a))	December 31, 2021 (§2)	December 31, 2019 (§102)	December 31, 2020 (§101)
Certification of an Act of Terrorism	Terrorist act is to be certified by the Secretary of the Treasury (hereinafter the Secretary) in concurrence with the Attorney General and Secretary of State. Terrorist act must cause $5 million in insured losses to be certified. (§102(1)(A))	Requires the Secretary to study and report on the certification process. After the study is completed, the Secretary is to issue rules governing the process, including a timeline as to whether an act is considered an act of terrorism. (§6)	Beginning in 2015, removes the Secretary of State from the certification process. Adds "consultation" with the Secretary of Homeland Security. Removes the $5 million minimum size for certification. Beginning in 2015, adds a deadline of 15 days for "preliminary certification" and 90 days for "final certification." If no certification is made within 90 days, no certification is possible. (§103) Beginning in 2016, certification is to include whether or not terrorist act is an act of Nuclear, Biological, Chemical, or Radiological (NBCR) terrorism according to the definition added by the legislation. (§104(a))	Beginning in 2015, removes the Secretary of State from the certification process. Adds "consultation" with the Secretary of Homeland Security. (§105) Requires the Secretary to study and report on the certification process. After the study is completed, the Secretary is to issue rules governing the process, including a timeline as to whether an act is considered an act of terrorism. (§107)

Provision	15 U.S.C. §6701 note (as applicable in 2014)	S. 2244 (as passed by the Senate)	H.R. 4871 (Title I as reported)	S. 2244 (as passed by the House)
Insured Loss Shared Compensation	Federal share of losses will be 85% for insured losses that exceed the applicable insurer deductible. (§103(e))	Starting in 2016, the federal share of losses will decrease one percentage point per calendar year until equal to 80%. (§3)	Federal share of losses will be 85% in 2015, 84% in 2016, 83% in 2017, 82% in 2018, and 80% in 2019 except in the case of an NBCR terrorist event. For an NBCR attack, the federal share of losses will remain at 85%. (§104(b))	Starting in 2016, the federal share of losses will decrease one percentage point per calendar year until equal to 80%. (§102)
Program Trigger	No compensation shall be paid unless the aggregate industry-insured losses resulting from a certified act of terrorism exceed $100 million. (§103(e)(1)(B))	No change	Increases program trigger to $200 million in 2016, $300 million in 2017, $400 million in 2018, and $500 million in 2019. Applies program trigger to the aggregate losses from multiple acts of terrorism in a calendar year if the insured losses from each act exceed $50 million. Program trigger for NBCR attacks remains at $100 million. (§104(c))	Beginning in 2016, program trigger increases to $120 million and then $20 million per year until it reaches $200 million. Applies program trigger to the aggregate losses from multiple acts of terrorism in a calendar year. (§103)

Provision	15 U.S.C. §6701 note (as applicable in 2014)	S. 2244 (as passed by the Senate)	H.R. 4871 (Title I as reported)	S. 2244 (as passed by the House)
Treatment of NBCR Terrorism	No similar provisions	No similar provisions	Beginning in 2016, certification is to include whether or not terrorist act is an act of NCBR terrorism according to the definition added by the legislation. (§104(a)) Federal share of losses will be 85% in 2015, 84% in 2016, 83% in 2017, 82% in 2018, and 80% in 2019 except in the case of an NBCR terrorist event. For an NBCR attack, the federal share of losses will remain at 85%. (§104(b)) Program trigger for NBCR attacks remains at $100 million. (§104(c))	No similar provisions
Mandatory Availability	Insurers are required to make terrorism coverage available to insureds. (§103(c))	No change	Small insurers, as defined by the Secretary, may be exempted from mandatory availability upon request. This exemption applies if meeting the make-available requirement is determined by the insurer's domiciliary state insurance to cause financial hardship or be financially infeasible. This determination would be based on criteria set by the Secretary. (§105)	No change

Provision	15 U.S.C. §6701 note (as applicable in 2014)	S. 2244 (as passed by the Senate)	H.R. 4871 (Title I as reported)	S. 2244 (as passed by the House)
Aggregate Retention Amount	The aggregate retention amount is the lesser of (1) the total of all insured losses or (2) $27.5 billion. (§103(e)(6))	Beginning in the calendar year after enactment, the retention amount would be the lesser of (1) the total of all insured losses or (2) $29.5 billion, with this amount further increased by $2 billion per year until it reaches $37.5 billion. (§4(1))	Beginning in 2016, the retention amount would be the lesser of (1) the total of all insurer deductibles in the previous year or (2) the total of all insured losses. (§107)	Beginning in the calendar year after enactment, the retention amount would be the lesser of (1) the total of all insured losses or (2) $29.5 billion, with this amount further increased by $2 billion per year until it reaches $37.5 billion. Once it reaches $37.5 billion, it shall be set by the Secretary to equal the annual average of the sum of insurer deductibles for the previous three years. (§104(1))
Mandatory Recoupment of Federal Share	If aggregate insured losses are less than the aggregate retention amount, a mandatory recoupment of 133% of the federal share of the loss will be imposed. If aggregate insured losses are greater than the aggregate retention amount but uncompensated insurer losses do not exceed the aggregate retention amount, the mandatory recoupment amount will be reduced by this amount. If uncompensated insurer losses are greater than the aggregate retention amount, there is no mandatory recoupment but the Secretary of the Treasury retains discretionary recoupment authority. (§103(e)(7))	The gradual increase in the aggregate retention amount to $37.5 billion (§4(1)) effectively increases the level of mandatory recoupment. Increases the mandatory recoupment to 135.5% of the federal share of losses. (§4(2))	Mandatory recoupment increases to 150% of the federal share of losses beginning in 2016 and all years thereafter. (§106) Beginning in 2016, mandatory recoupment amount is equal to the lesser of (1) the aggregate amount of federal compensation received by insurers or (2) the aggregate retention amount. (§107)	The gradual increase in the aggregate retention (§104(1)) effectively increases the level of mandatory recoupment. Increases the mandatory recoupment to 140% of the federal share of losses. (§104(2))

Provision	15 U.S.C. §6701 note (as applicable in 2014)	S. 2244 (as passed by the Senate)	H.R. 4871 (Title I as reported)	S. 2244 (as passed by the House)
Timing of Mandatory Recoupment	Requires expedited collection of recoupment amounts: (1) for a terrorist attack before 2011, all required recoupment amounts must be collected by September 30, 2012; (2) for a terrorist attack in 2011, 35% of required recoupment amounts must be collected by September 30, 2012, and the balance must be collected by September 30, 2017; and (3) for a terrorist attack after 2011, all required recoupment amounts must be collected by September 30, 2017. (§103(e)(7)(E)(i))	Requires expedited collection of recoupment amounts: (1) for a terrorist attack before 2018, all required recoupment amounts must be collected by September 30, 2019; (2) for a terrorist attack in 2018, 35% of required recoupment amounts must be collected by September 30, 2019, and the balance must be collected by September 30, 2024; and (3) for a terrorist attack after 2018, all required recoupment amounts must be collected by September 30, 2024. (§4(2))	Beginning in 2016, requires that recoupment commence within 18 months of an attack. (§108)	Requires expedited collection of recoupment amounts: (1) for a terrorist attack before 2018, all required recoupment amounts must be collected by September 30, 2019; (2) for a terrorist attack in 2018, 35% of required recoupment amounts must be collected by September 30, 2019, and the balance must be collected by September 30, 2024; and (3) for a terrorist attack after 2018, all required recoupment amounts must be collected by September 30, 2024. (§104(2))
Risk Sharing Mechanisms	No similar provisions	Establishes an advisory committee to encourage the creation and development of private risk-sharing mechanisms. (§9)	Establishes an advisory committee to encourage the creation and development of private risk-sharing mechanisms. (§109)	Establishes an advisory committee to encourage the creation and development of private risk-sharing mechanisms. (§110)

Provision	15 U.S.C. §6701 note (as applicable in 2014)	S. 2244 (as passed by the Senate)	H.R. 4871 (Title I as reported)	S. 2244 (as passed by the House)
Reporting of Terrorism Insurance Data	Requires Secretary to annually compile information on terrorism insurance premiums. To the extent that such data are not otherwise available, the Secretary may require insurers to submit the information to the National Association of Insurance Commissioners (NAIC), which shall make it available to the Secretary. (§108(e))	No change	Beginning in 2016, requires Secretary to collect data from insurers on terrorism insurance coverage, including lines of insurance with terrorism exposure, premiums earned from terrorism coverage, location of exposure, pricing of coverage, take-up rates, and amount of private reinsurance purchased. If such data are available from the states or another source, the Secretary shall collect the data from this source. The Secretary shall issue a report to Congress based on these data. (§110)	Beginning in 2016, requires Secretary to collect data from insurers on terrorism insurance coverage, including lines of insurance with terrorism exposure, premiums earned from terrorism coverage, location of exposure, pricing of coverage, take-up rates, and amount of private reinsurance purchased. If such data are available from the states or another source, the Secretary shall collect the data from this source. The Secretary shall issue a report to Congress based on these data. (§111)
Definition of Control	An entity is considered to have control over another entity if the first entity has the power to vote 25% of the voting securities; controls the election of the majority of the directors; or the Secretary determines that the entity exercises control after notice and hearing. (§102(3))	Adds the proviso that an entity is not considered to have control if, on the date of enactment, the entity is "acting as an attorney-in-fact ... for the other entity and such other entity is a reciprocal insurer." This proviso, however, does not apply if the entity is defined as having control for reasons other than the attorney-in-fact relationship. (§5(1))	Adds the proviso that an entity is not considered to have control if, on the date of enactment, the entity is "acting as an attorney-in-fact ... for the other entity and such other entity is a reciprocal insurer." This proviso, however, does not apply if the entity is defined as having control for reasons other than the attorney-in-fact relationship. (§112)	Adds the proviso that an entity is not considered to have control if, on the date of enactment, the entity is "acting as an attorney-in-fact ... for the other entity and such other entity is a reciprocal insurer." This proviso, however, does not apply if the entity is defined as having control for reasons other than the attorney-in-fact relationship. (§106(1))

Provision	15 U.S.C. §6701 note (as applicable in 2014)	S. 2244 (as passed by the Senate)	H.R. 4871 (Title I as reported)	S. 2244 (as passed by the House)
Studies and Reports	The Secretary shall conduct an expedited study of the availability and affordability of group life insurance coverage. (§103(h)) The Secretary shall conduct a study and issue a report on the potential effect of terrorism on life insurance and other personal lines by October 2003. (§103(i)) The Secretary shall conduct a study and issue a report no later than June 30, 2005, on the effectiveness of the program and the capacity of private insurers to offer terrorism coverage after the expiration of the program. (§104(d)) The President's Working Group on Financial Markets is to report on the market conditions for terrorism risk insurance in 2006, 2010, and 2013. (§104(e)) The Government Accountability Office (GAO) shall conduct a study and issue a report on the availability and affordability of NBCR coverage and the outlook for future coverage by December 2008. (§104(f)) GAO shall conduct a study and issue a report on the availability and affordability of terrorism insurance in specific markets by June 2008. (§104(g))	GAO shall conduct a study and issue a report on the viability of the government collecting up-front terrorism insurance premiums on insurers within two years from the date of enactment. (§7)	The Secretary shall issue a report to Congress based on the terrorism insurance data collected under Section 11 to be completed by June 30, 2017, and annually thereafter. (§110) The Secretary shall conduct an annual study of small-insurer competitiveness and issue an annual report on this study, with the first report not later than June 30, 2016. (§113) The Congressional Budget Office and the Office of Management and Budget shall each conduct a study and issue a report regarding the application of accrual accounting concepts to TRIA and other federal insurance programs not later than 12 months after the date of enactment. (§114) GAO shall conduct a study and issue a report on the viability of (1) the government collecting up-front terrorism insurance premiums on insurers and (2) the creation of a mandatory capital reserve fund to dedicate capital for terrorism losses before such losses occur within two years from the date of enactment. (§115)	GAO shall conduct a study and issue a report on the viability of (1) the government collecting up-front terrorism insurance premiums on insurers including international practices and (2) the creation of a mandatory capital reserve fund to dedicate capital for terrorism losses before such losses occur within two years from the date of enactment. (§108) The Secretary shall issue a report to Congress based on the terrorism insurance data collected under Section 11 to be completed by June 30, 2017, and annually thereafter. (§111) The Secretary shall conduct an annual study of small-insurer competitiveness and issue an annual report on this study with the first report not later than June 30, 2016. (§112)

Notes: Section numbers for the initial TRIA law are as codified in 15 U.S.C. §6701 note. Section numbers for current legislation are from the legislation as amended. S. 2244 as passed by the Senate and the House substitute amendment to S. 2244 also include technical corrections that delete outdated language from several sections of the TRIA statute (Section 5(2) and Section 106, respectively), a section relating to the composition of the Federal Reserve Board of Governors (Section 8 and Section 109, respectively), and a second title in both bills relating to insurance agent licensing. The substitute amendment also adds a Title III related to derivatives. These sections and titles are not included in the chart.
