VR-4: Open Source Loss Simulation Model
2010 Casualty Loss Reserve Seminar

Presented by Robert A. Bear
Consulting Actuary and Arbitrator
RAB Actuarial Solutions, LLC
www.rabsolutions.net
Sponsored by the CAS Dynamic Risk Modeling Committee (DRMC) in 2005, the LSMWP began work in 2006.

Purpose: creation of a simulation model that will generate claims that can be summarized into loss development triangles and complete rectangles.

Deliverables: Open source program available to CAS members, seminars, and a CAS Working Party paper documenting work.

Time Frame: Completed when model and paper are uploaded after this seminar.
LSMWP Paper

- Introduction provides overview of project.
- Survey of existing literature
- Statistical tests of simulated model output: general discussion
- Basic features in the prototype model.
- Documentation of the open source model.
- Testing detailed output and fitting the model.
- Potential applications and model enhancements.
- Appendices: User instructions including parameterization of all distributions included in the model, a bibliography, and technical details on statistical tests performed.
Where can we access Loss Simulation Model and documentation?

- The help files in the new open source Loss Simulation Model document all model features.

- The Loss Simulation Model, together with all model documentation, related papers and seminars, will be located on LSMWP web page: www.casact.org/research/lsmwp

- Program instructions are provided in Appendix A, and are also included within the model and on the LSMWP web page.
Reserve Variability

• If you run at least 100 iterations, the model will generate reserve percentile tables and customary statistics from the simulation results (e.g., mean, standard deviation, minimum and maximum).
• These tables are distributions of payments made subsequent to the assumed valuation date, both by accident year and by calendar year and for all years combined.
• This key model feature enables users to test their models for estimating reserve variability.
• Important application: estimating capital needed to support reserves.
Future Work

• The documentation within the model and on the CAS website will be kept up to date as this open source software is enhanced.

• The DRMC plans to hold a 2011 Call Paper Program soliciting model enhancements and papers applying the Loss Simulation Model to test alternative reserving methods and models.

• Contact DRMC Chairperson if the instructions need clarification or if program bugs are discovered.
Why develop and use a simulation tool?

- “Mistakes are a part of being human. Appreciate your mistakes for what they are: precious life lessons that can only be learned the hard way. Unless it's a fatal mistake, which, at least, others can learn from.”

-- Al Franken
Summary

- The LSMWP developed and fully documented a model that we hope will become a valuable tool in researching loss reserving methods and models.

- We encourage actuaries to develop and document model enhancements through call paper programs.

- We hope that actuaries will use this model to:
  - Better understand the underlying loss development process.
  - Determine which methods and models work best in different reserving situations.
  - Reflect this knowledge in evolving loss reserving practices.
Panel Presentation

• Hai You, Vice President Technology, Goouon Actuarial Solutions: will present the new Loss Simulation Model through examples.

• Glenn G. Meyers, Actuary, ISO Innovative Analytics: will discuss tests of simulated output.

• Joseph O. Marker, President, Marker Actuarial Services LLC: will discuss testing detailed model output and fitting the model.

• Please refer to the LSMWP paper for biographies of this distinguished panel.
