It is customary to hold the examinations in such cities as will be convenient. The Secretary will announce the exact times and locations at which the examinations will be given.

Individual consideration will be given to providing special arrangements for persons with demonstrable physical impairments which would impose a severe handicap if examinations were taken under normal conditions. Advance notice that special arrangements will be needed must be given to the Office of the Society at the time of making application to write an examination.

2. Filing of Application

a. Parts 1-3

A candidate who wishes to take one or more of Parts 1, 2 and 3 must file an application form which may be obtained from the Secretary of the Casualty Actuarial Society. For these Parts, application forms and the appropriate examination fee, in check, draft, or money order made payable to the Society of Actuaries, must be sent to:

Society of Actuaries
208 South LaSalle Street
Chicago, Illinois 60604, U.S.A.

The applications for Parts 1-3 must be received by the Society of Actuaries by March 1 for the May examinations and by September 1 for the November examinations.

b. Parts 4-10

The first time a candidate makes application to take one or more of Parts 4-10, an application obtained from the Secretary of the Casualty Actuarial Society must be filed. Subsequent requests to take other examinations can be accomplished by simply writing to the Secretary of the Casualty Actuarial Society, stating the Part or Parts for which the candidate is applying.

Each request along with the appropriate examination fee, in check, draft, or money order payable to the Casualty Actuarial Society must be sent to:

Casualty Actuarial Society
One Penn Plaza
250 West 34th Street
New York, New York 10119

The application for Parts 4-10 must be received by the Secretary by March 20 for the May examinations and by September 20 for the November examinations.

3. Joint Administration

Part 1, the General Mathematics examination, Part 2, the Probability and Statistics examination, and Part 3, the Applied Statistical Analysis, Operations Research and Numerical Analysis examination, are jointly administered by the Casualty Actuarial Society and The Society of Actuaries.

4. Associateship and Fellowship Examinations

Successful completion of, or credit for, Parts 1 through 7 is required to fulfill the examination requirements for Associateship.

Successful completion of, or credit for, all ten examination Parts is required to fulfill the examination requirements for Fellowship.

5. Fees

The examination fee schedule for 1983 at time of publication is as follows:

- Parts 1-3 ........................................ $45.00 per part
- Parts 4-10 ...................................... $40.00 per part

Candidates writing any of Parts 1-3 overseas or at a specially arranged center must pay an additional $20.00 fee per examination session (May or November).

Please note that all fees are payable in U.S. funds by check, draft, or money order.

6. Late Registration, Refunds, and Transfers of Fees

Parts 1-3. If the application and regular fee are not received on or before March 1 for the May examinations, or September 1 for the November examinations, the candidate may be permitted to write the examination by the payment of a late registration fee of $30.00 for each part in addition to the regular fee for that part. However, under no circumstances will any applications be accepted after April 20 for the May examinations or after October 20 for the November examinations. Also, a registered candidate may request a change of examination center, but the candidate must pay a change-of-center fee of $10.00 for each part. In such cases, every effort will be made to have the candidate's records and supplies on hand at the appropriate examination center in time for the examination. If this effort fails, it must be understood that the
Society or jointly administering or sponsoring organizations will not be held responsible; in the case of a late registration, both the late registration fee and the regular fee will be refunded, while in the case of a request for change in examination center, any change-of-center fee will be refunded. If the candidate’s notice and fees, or request for change of examination center, are received so late that it is manifestly not feasible to arrange for the candidate to write the examination, the fees will be refunded immediately. The organizations are not responsible for difficulties caused by delays in postal service, or for the consequences of failing to receive correspondence because of inadequate postage.

A candidate who has filed an application and does not write the examination should request a refund of the examination fee. This request must reach the Society not later than June 30 for the May examinations or Dec. 31 for the November examinations. Later requests will not be considered. A fee of $20 per examination will be assessed for all refunds. Only examination fees can be refunded. Late registration fees and change-of-center fees are not refundable.

Parts 4-10. Examination fees are payable each time the candidate registers for an examination. Check, draft or money order in U.S. funds payable to the order of the Casualty Actuarial Society must be received by the Secretary by March 20 for the May examinations or by September 20 for November examinations. Late registration will be accepted through April 7 and October 7 if accompanied by a $50.00 late registration fee for each Part. Change-of-center fees will be $10.00 as for the earlier exams.

The same administrative conditions will apply for changes of examination center and for late registration as for the first three exams, with the organization to be contacted being the Casualty Actuarial Society.

A candidate who has filed an application and finds that it will not be possible to take the examination should request a refund of the examination fee. This request must reach the Office of the Casualty Actuarial Society not later than April 20 for the May examinations, or October 20 for the November examinations. Later requests will not be considered. A fee of $10.00 per examination will be assessed for all refunds. The fee of a candidate who is unavoidably absent from an examination will, upon written request within 30 days following the date of such examination, be transferred to any examination given in the next thirteen months. A fee which has been so transferred is not refundable. There will be a $10.00 fee for such transfer, payment for which should accompany the request for transfer. Candidates must register for the examination to be taken even if the fee is being transferred from a prior exam period.

7. Waiver of Examinations for Associateship

Waiver of certain Associateship examinations will be allowed for a candidate who has passed, or been credited with, corresponding examinations for the Society of Actuaries, in accordance with the following:

<table>
<thead>
<tr>
<th>Casualty Actuarial Society</th>
<th>Society of Actuaries</th>
</tr>
</thead>
<tbody>
<tr>
<td>Part 1</td>
<td>Part 1, General Mathematics, passed prior to 1963 (before joint administration)</td>
</tr>
<tr>
<td></td>
<td>Part 2, Probability and Statistics, passed prior to 1965 (before joint administration)</td>
</tr>
<tr>
<td></td>
<td>Part 3, Numerical Analysis (or Finite Differences) and Theory of Interest (or Compound Interest) passed prior to 1975 (before joint administration)</td>
</tr>
</tbody>
</table>

Candidates who take the Advanced Mathematics Test of the Graduate Record Examinations may apply for credit for Part 1. Credit will be granted if the candidate's score on the Graduate Record Advanced Mathematics Test is equivalent, as determined by the Casualty Actuarial Society, to a passing score on Part 1.

An application to the Casualty Actuarial Society for credit may be submitted either in advance of taking the Graduate Record Advanced Mathematics Test or after taking it. Acceptance of applications submitted more than three years after the test has been taken will be at the discretion of the Education and Examination Committee. The required application form can be obtained from the Secretary's Office. A fee will be required for securing a transcript of the candidate's scores on the test; the fee is explained on the application form.

In recent years there has been an increased emphasis in the Graduate Record Advanced Mathematics Test on more advanced mathematical topics. Consequently, the Education and Examination Committee suggests that candidates plan to obtain credit for Part 1 by writing the Society's examination unless they have already taken the Graduate Record Advanced Mathematics Test for another purpose. Candidates should not attempt the latter test solely for the purpose of receiving credit for the Casualty Actuarial Society examination.

The Casualty Actuarial Society does not offer credit for Part 1 on the basis of scores achieved on the Graduate Record Undergraduate Mathematics Test.

The Board of Directors may waive, subject to such other requirements as it may prescribe, any examination of the Casualty Actuarial Society if the applicant has passed any examination required by another recognized actuarial organization that the Board of Directors deems equivalent to such examination of the Casualty Actuarial Society.
8. Conduct of Examinations

The examinations are exclusively in writing. Except as noted in the following paragraphs, no books, papers, typewriters, slide rules, or electronic or mechanical aids to computation of any kind may be brought into the examination room by candidates, nor may any candidate communicate with or obtain any assistance from any other candidate during the examination.

Electronic calculators will be allowed in the examination room for Parts 4-10. For Parts 5-10, electronic calculators, which are to be supplied by the candidate, must meet the following standards to be acceptable:

1. portable
2. battery operated during examination; and,
3. must not be programmable

For Part 4, calculator standards will be supplied upon registration.

It is the candidate's responsibility to see that the calculator used during the examination meets the applicable standards and is in good working order.

Parts 1 and 2 consist entirely of multiple-choice questions, with Part 3 containing a mixture of essay and multiple choice questions. On these examinations each multiple choice problem presented includes five answer choices identified by the letters A, B, C, D, and E, only one of which is correct. A separate answer sheet provides a row of six ovals for each problem. The first five of these, identified with the letters A, B, C, D, and E, correspond to the five answer choices. The sixth oval (described below) is marked "Omit". After deciding which answer is correct, the candidate should blacken the oval which has the same letter as this answer.

Since the answer sheets are scored by optical scanning equipment, it is important that there be only one oval blackened for each question. If the candidate decides not to respond to a question for which an oval has already been blackened, the answer oval should be erased, and the “Omit” oval should then be blackened. This oval is located to the right of the answer Oval “E”. This procedure insures that the scoring equipment will score the question as an omitted question and not be confused by an incompletely erased answer oval. It is not necessary to blacken the “Omit” oval if no answer oval has been blackened. This is because the scoring equipment also scores a question as an omitted question if there are no ovals blackened in the row. Please note that the “Omit” oval appears on the answer sheets for Parts 1-3 only.

9. Grading of Examinations

a) Multiple-Choice and True-False Questions

Scoring of the multiple choice examinations will be done in such a way that there is no advantage or disadvantage to be anticipated from guessing answers in a purely random fashion as compared with omitting the answers entirely.

Parts 1-3. There will be one-fifth point added for each multiple-choice question left blank.

Parts 4-10. There will be no addition for multiple-choice questions left blank, but one-quarter point will be deducted for each incorrect answer. On true-false questions, one point will be deducted for each incorrect answer.

b) Determination of the Pass Mark

The final decision as to where the pass mark shall be set is arrived at by consultation among the Officers of the Examination Committee and the Part Committee. In determining the pass mark, consideration is given both to the performance level of candidates' answers and to the comparative difficulty of the examination, in relation to that of previous examinations. Appropriate recognition is given to any peculiarities that may appear in connection with the answers to any question on an examination despite all the care taken in setting the examination questions.

c) Candidates' Requests for Information

Any candidate for Parts 4-10 can get an analysis of his test paper by writing to the CAS office before the deadline. The normal deadline will be August 15 on May exams and February 15 on November exams. The requests will be batched. The batched requests will go to the Examination Committee about two to four weeks after the deadline. Candidates should receive an analysis normally within two months after the deadline.

The analysis will give an outline of the subject areas in which the student was strong or weak as well as the specific question numbers (on essays) on which he or she scored well, poorly, or in-between. The Examination Committee feels that this kind of information can be developed within a reasonable amount of time and without undue effort. It should provide the educational guidance that most candidates desire.

The Examination Committee is also prepared to do an administrative check for any candidate who appeals a score, to be sure that he or she has been given the proper grade. It will also entertain any inquiries regarding the accuracy or ambiguity of specific exam questions.

Failing candidates for Part 3 will receive, with their notification of grade, an analysis listing their percentile rank by topic. This will enable the candidate to identify areas requiring additional study.

10. Confidentiality of Examination Records

The fact that a candidate has passed a particular examination is considered public knowledge. Any further information as to examinations taken by candidates and grades received by candidates is available only to the candidates themselves and to committee chairmen as required for their committee purposes, unless the candidate requests in writing that such information be provided to someone else.
LIBRARY

All candidates registered for the examinations of the Casualty Actuarial Society and all members of the Casualty Actuarial Society have access to all the library facilities. The CAS Library is located at One Penn Plaza, 250 West 34th Street, New York, New York 10119, Phone: (212) 560-1018—(212) 560-1019.

Books and manuals may be withdrawn from the Library for a period of one month without charge. In general, not more than two references may be in the hands of a borrower at one time.

Address requests for books to:

Secretary
CAS Library Service
One Penn Plaza
250 West 34th Street
New York, New York 10119

Phone: (212) 560-1018
(212) 560-1019

PROCEEDINGS AND OTHER PUBLICATIONS
OF THE SOCIETY

The prices of past editions of the Proceedings and other publications of the Society and a list of those editions still in print are set out in the Year Book of the Society. Those wishing to purchase these publications should write the Secretary:

Secretary
Casualty Actuarial Society
One Penn Plaza
250 West 34th Street
New York, New York 10119

(212) 560-1018

AMERICAN ACADEMY OF ACTUARIES

Satisfactory completion of specified examinations of the Casualty Actuarial Society will satisfy the educational requirements of the American Academy of Actuaries. For further information contact the Academy at 208 South LaSalle Street, Chicago, Illinois 60604.

*Jointly administered with the Society of Actuaries
RECOMMENDATIONS FOR STUDY

The objective of the Casualty Actuarial Society's education and examination process is to assist the candidate in professionally preparing for an actuarial career by managing the varied corporate responsibilities assigned to an Actuary in the casualty insurance field. The Recommendations for Study present the study material that a casualty actuarial candidate should understand thoroughly, and be able to apply professionally to actual casualty insurance situations. The examination process is designed to assure that each successful casualty actuarial candidate attains a satisfactory level of competence in the subject matter.

The examinations for admission to the two grades of membership in the Society are designed to establish the qualifications of candidates. The following Recommendations for Study are provided as a guide for the candidates in their preparation for the examinations. It should be realized that although the examination questions will be largely based upon the textual material cited, they will not necessarily be drawn directly therefrom. The examinations will test not only the candidate's knowledge of the subject matter, but also the candidate's ability to apply that knowledge. Finally, in the development of the syllabus readings and the examination questions, it is assumed that the candidate is familiar with the material covered in earlier parts. Therefore, it is recommended that the candidate take the parts in numerical order.

In their study for the mathematical sections of the Associateship Examinations, candidates are advised to work out as many examples as possible in order to acquire facility in the application of the mathematical principles and methods to specific problems. The questions on the examinations for Parts 1 and 2 are all of the multiple choice type.

In preparing for Parts 7 through 10, the candidate should become familiar with current developments by reading regularly at least two general insurance periodicals.

The references to papers in the Proceedings of the Casualty Actuarial Society are considered to include all discussions of these papers, though the page references cited refer to the papers only. In the case of readings from out-of-print Proceedings, the candidate is responsible only for those discussions reprinted in the CAS Booklets referred to below.

A more detailed reference of the texts cited will be found in the Index To Readings at the end of these Recommendations. The reading materials suggested in these Recommendations are designed to acquaint the candidate with the respective subjects and should not be interpreted as representing views endorsed by the Casualty Actuarial Society.

Study notes and study kits have been prepared in connection with some examinations and can be obtained from the Secretary's office at the following costs (payable in U.S. Funds):

<table>
<thead>
<tr>
<th>Study Kit</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Part 4</td>
<td>$10.00</td>
</tr>
<tr>
<td>Part 6</td>
<td>$13.00</td>

<tr>
<td>Part 9b</td>
<td></td>
<td>5.00</td>
</tr>
</tbody>
</table>

Sample examination questions for Parts 1 & 2 and copies of Parts 5-10 examinations for recent years may be obtained from the Secretary. Candidates should check with the Secretary for whatever study aids are available for Parts 3-4 as well as for any additional information which may be made available for other Parts. Also available without charge from the Secretary is a note entitled "Hints on Study and Exam Techniques."

ASSOCIATESHIP EXAMINATIONS

PART 1

GENERAL MATHEMATICS

This Examination Part is jointly administered by the Casualty Actuarial Society and the Society of Actuaries.

The three-hour multiple-choice examination is based on material usually covered in undergraduate mathematics courses through the differential and integral calculus and a first course in linear algebra. The general scope of the examination is indicated by the following topics:

- Real and complex numbers; elementary set theory, including unions, intersections, and complements; functions, equations and inequalities; analytic geometry of two and three dimensions; standard algebraic and transcendental functions, including polynomial, rational, trigonometric, logarithmic, and exponential functions; limits, continuity, differentiability, and integrability; derivatives, integrals, and partial derivatives; the fundamental theorem of integral calculus; applications of derivatives and integrals, including multiple integrals; finite and infinite sequences and series, including the Taylor series expansion; the mean value theorem; linear equations, vector spaces and generating sets; bases; dimension; subspaces; scalar products; orthogonality; linear transformations; kernel and image space; matrices; determinants; eigenvectors and eigenvalues.

Candidates who have not had mathematics courses covering these topics may be helped by any one of the four texts covering calculus and analytic geometry and any one of the three texts covering linear algebra listed below. These may be considered representative of the many texts used in colleges and universities in the United States and Canada which adequately cover the material upon which the candidate may be examined. Earlier or later editions of the texts listed below contain essentially the same information, and should be adequate for review purposes.

Purcell, E. J. Calculus with Analytic Geometry. (Third Edition)

Bradley, Gerald L. A Primer for Linear Algebra. Chapters 1-6.

An additional reference for those who may want further practice in solving linear algebra problems is Linear Algebra by Seymour Lipschutz (Schaum's Outline Series, McGraw-Hill).
PART 2

PROBABILITY AND STATISTICS

This Examination Part is jointly administered by the Casualty Actuarial Society and the Society of Actuaries.

The three-hour multiple-choice examination is based on material usually covered in undergraduate courses in mathematical probability and statistics. It can be taken by college students who have had a thorough course in these subjects or by persons who have done concentrated reading in these fields. The general scope of the examination is indicated by the following topics, which are among those proposed for a one-year college course in probability and statistics by the Committee on the Undergraduate Program in Mathematics (CUPM) of the Mathematical Association of America.

Sample spaces; axioms and elementary theorems of probability; independence, conditional probability, and Bayes' theorem; permutations and combinations; random variables; binomial, Poisson, normal, chi-square, t, F, and other probability distributions; expectation, mean, variance; and moment generating functions of probability distributions; multivariate distributions; transformations of random variables; conditional and marginal distributions; central limit theorem; point estimation, including maximum likelihood estimation and the application of criteria such as consistency, unbiasedness, and minimum variance; tests of statistical hypotheses, including power functions, Type I and Type II errors, Neyman-Pearson lemma, and likelihood ratio tests; applications of sampling distributions to confidence intervals and to tests for means and variances; regression and correlation; interpretation of experimental results; Bayesian estimation.

The CUPM has reported that statistics courses can be implemented in a variety of ways, and can include different topics with different emphases on topics. That widely divergent approaches are acceptable is illustrated by the many texts appropriate for a one-year college course. Among such texts, the following are representative of those which cover most of the above topics and which provide the mathematical background required for this examination.

Candidates who have mastered the text material and can work the problems in any one of these references should be adequately prepared to handle the mathematical material in this examination.

The following page references to the representative texts listed above are provided to assist candidates in locating some of the appropriate background material for a few selected topics that are included in this examination:

**Moment generating functions of probability distributions:**
2. pp. 197-200 (Volume I).
3. pp. 78.81 and 538-543.

**Applications of chi-square distribution (chi-square tests):**
1. pp. 269-283 and 312-313.
2. pp. 91-99 (Volume II).

**Applications of F distributions (mainly analysis of variance):**

**Regression and correlation:**
1. pp. 73-78, 117-120 and 296-303.

**Bayesian estimation:**
2. pp. 36-42 (Volume II).

It will be assumed that the candidate is familiar with the ordinary deck of fifty-two playing cards and the ordinary six-faced die.
PART 3

This Examination Part is jointly administered by the Casualty Actuarial Society and the Society of Actuaries.

The four-hour multiple-choice examination and essay examination covers the three separate subjects of applied statistical analysis, operations research, and numerical analysis. The minimum standards which will be imposed for each subject are substantially lower than the passing percentage for the entire examination. If a candidate fails to meet the minimum standard for a particular section of an examination, yet would have otherwise passed the examination as a whole, that candidate will receive a score of 5°, which is a failing score. The examination is based on the material found in the textbooks listed below.

For many candidates, Part 3 is the first actuarial examination for which they will be preparing without the benefit of a formal course in the subject material. These candidates will find it helpful to maintain contact with other Part 3 candidates and to take advantage of opportunities to discuss with others questions that are considered difficult. Candidates should not hesitate to consult members of the profession in their own organizations or elsewhere who are knowledgeable on these subjects.

(a) APPLIED STATISTICAL ANALYSIS

The general scope of the applied statistical analysis section of the examination is indicated by the following topics:

Analysis of variance; Regression analysis; Time series analysis.

(b) OPERATIONS RESEARCH

The general scope of the operations research section of the examination is indicated by the following topics:

Linear programming; Dynamic programming; Queueing theory; Decision analysis; Project scheduling; Simulation.

Hillier, F. S. and Lieberman, G. J. Operations Research (Third Edition) Chapters 1-3, 6 (Section 6.6 only), 7, 10 (10.1-10.6 up to the Basic Model with a Finite Queue on p. 424), 16 (to be replaced by Study Note on Simulation presently being written), 18 (Section 18.1 only).

In addition to a thorough knowledge of this manual, the candidate is expected to have worked the problems at the end of each chapter to ensure that he/she has a reasonably sufficient working knowledge of each topic covered on the examination.

The emphasis is primarily on problem-solving and secondarily on theoretical considerations. Recourse is made, as needed, to methods from the calculus and classical algebra in order to present a broad perspective of both the practical and the theoretical aspects of this subject.

(c) NUMERICAL ANALYSIS

This subject encompasses various techniques for handling numerical data. Although many of the principles dealt with lend themselves readily to computer procedures and methods, knowledge of such procedures or methods is neither presupposed nor required for the examination.

The general scope of the numerical analysis section of the examination is indicated by the following topics as covered in the recommended text:

Finite differences; Interpolation with equal intervals; Central difference formulas; Interpolation with unequal intervals; Summation; Approximate differentiation; Approximate integration; Iteration; Systems of linear equations.

Kellison, S. G., Fundamentals of Numerical Analysis. 1974. Chapters 1 (all), 2 (2.1-2.3, 2.6, 2.7); 3 (3.1, 3.2, 3.4, 3.6); 4 (4.1-4.4, 4.6, 4.7); 5 (5.1-5.4 (bit omit example 5.4), 5.7); 6 (6.1, 6.6, 6.7); 7 (7.1-7.3, (formulas 7.2b, 7.10b and 7.11b only)); 8 (8.1-8.4, 8.6); 11 (all); 12 (Recommended Review—not tested); 13 (13.1-13.6, 13.8)
PART 4

Prior to commencing study for this Part, the candidate should read the "Recommendations for Study" section, pages 10 to 12, for study suggestions and guidance in obtaining the 1983 (identical to 1982) credibility study kit, out of print readings, past examinations, and other information important to sitting for this examination. References are listed in the suggested order for study.

(a) MATHEMATICS OF COMPOUND INTEREST

This section represents approximately 30% of the examination. Key topics include:
- Measurement of interest, including accumulated and present value factors; annuities certain; amortization schedules and sinking funds; and bonds and related securities.

(b) LIFE AND CASUALTY CONTINGENCIES

This section represents approximately 35% of the examination.
- Jordan, C. W. Life Contingencies. 1967. (Second Edition). Society of Actuaries. Chapters 1-4 (all sections); 5 (1-5); 6 (1, 6); 7 (1, 2 through formula 7.1, 3); 8 (1-3); 9 (1-3); 10 (1, 2); 14 (1-6).
- In addition, the sections on notation and the problems at the end of the above chapters should also be reviewed.

(c) CREDIBILITY THEORY

This section represents approximately 35% of the examination.

The credibility theory study guide is available from the CAS Office at no charge. A study kit consisting of all the credibility theory readings listed below with the exception of the Statistical Distribution text, and including the Ferguson reading from the Life Contingencies section, is available from the CAS Office at a cost of $10.00.

The following references are suggested as background material for this section. No specific exam questions will be drawn from these references:

PART 5

Prior to commencing study for this Part, the candidate should read the "Recommendations for Study" section, pages 10 to 12, for study suggestions and guidance in obtaining study notes, out of print readings, past examinations, and other information important to sitting for this examination.

Note: Sharing the Risk by Marks and Craigie contains a good basic introduction to insurance. Although this reference is not part of the required readings for Part 5, the candidate may find it useful to review this material as background for this examination. This reading is available from the III at a cost of $3.95.

Section (a) of this examination deals with the basic principles of economics and Section (b) with the theory of risk and insurance. Section (c) covers the insurance product, namely policy forms and coverages. Underwriting and marketing are covered in Section (d).

In studying the references it is recommended that they be read in the order listed.

(a) PRINCIPLES OF ECONOMICS

The candidate will need to have a knowledge of the principles of economics at the college level. The candidate should be familiar with the various key concepts and basic principles of economics included in the recommended reading and be able to explain and apply them.
(b) THEORY OF RISK AND INSURANCE

The candidate should know what risk is, the kinds of risk, and the ways in which they can be handled, with particular emphasis on the relation to insurance.

1983 Study note (Available from the CAS office at a cost of $1.50 per copy.)

(c) POLICY FORMS AND COVERAGE

The insurance policy is the contract describing the services and protection which the insurance company is providing to the insured. It is, in effect, the only “product” which the insurance buyer receives until the time a loss occurs. The candidate should know the policy provisions and the bases of exposure used in the respective lines of insurance, with emphasis on basic coverages and features common to all lines as well as those peculiar to specific lines or types.

Policy provisions change from time to time so that it is essential to supplement the cited texts by study of the contracts currently in use. The candidate will be held responsible for knowledge of the following policy forms (not the associated endorsement):

Personal Auto, Homeowners, Workers Compensation. Current insurance contracts will be considered to be those in the Alliance of American Insurers’ Study Kit of Policies, Forms and Endorsements—Casualty, Fire, Marine and Life, 1982 or a possible 1983 Edition. A review of the National Underwriter Company’s The Fire, Casualty and Surety Bulletins, current edition, may be helpful to the candidate in preparing for this section although examination questions will not be derived from this source.

The manual sections listed should be studied as illustrative of the part played by manuals in the forms and coverage area.

Certain of the references encompass material beyond the scope of this subsection, that is, the determination of manual or class rates and individual risk rating plans. The examination for this section will not reflect such material.

Excerpts from the following manuals:

Insurance Services Office:

National Council on Compensation Insurance:

NOTE: The four manuals listed above should not be requested from either ISO or the NCCI. If a candidate does not have access to this material, excerpts are available from the CAS office which include the pages listed for each manual. The excerpt for each manual is $2.00 per copy.

(d) UNDERWRITING AND MARKETING

Underwriting is a key function in the insurance business with unique qualities which make it critical to the success of the endeavor. Actuaries will often be working closely with underwriters in their day-to-day operations. The candidate should know what the underwriting function is—its basic purpose, principles and activities.

Product design and product modification are areas in an insurance company’s operations in which an actuary may become involved with the marketing function of an insurance company as it relates to pricing, market research, and marketing philosophy. The candidate should be well versed in the responsibilities of the marketing function as well as the basic differences among different marketing systems for insurance products.

PART 6

Prior to commencing study for this Part, the candidate should read the "Recommendations for Study" section, pages 10 to 12, for study suggestions and guidance in obtaining the 1983 study kit, out-of-print readings, past examinations, and other information important to sitting for this examination.

Note: Sharing the Risk by Marks and Craigie contains a basic introduction to insurance. Although this reference is not part of the required readings for Part 6, the candidate may find it useful to review this material as background for this examination. This reading is available from the III at a cost of $3.95.

References are listed in the suggested order for study. The "Study Kit on Ratemaking Developments", listed for both Parts (a) and (b), should be studied in conjunction with several of the individual readings included in the Syllabus. For example, the Fire and Extended Coverage ratemaking sections should be read along with the Hurlery paper, and the section on statistical plans should be studied before reading the individual plans.

(a) PRINCIPLES OF RATERMAKING

Section (a) contains readings which describe ratemaking concepts in broad, general principles as well as in specific detail for many lines of insurance. Certain general subjects of particular importance, such as credibility theory, classification and individual risk ratemaking, trend and loss development factors, and liability increased limits ratemaking are addressed in separate papers.

A candidate for this examination should have a thorough understanding of the general, basic principles of ratemaking such that he or she can analyze data given, select an appropriate ratemaking technique and develop a solution to a numerical problem. In addition, the candidate should be familiar with the ratemaking techniques presented in the readings, being able to compare and discuss why certain procedures are applicable to individual lines of insurance, as well as to work numerical problems.

The candidate should also be prepared to discuss specialized concepts in ratemaking, such as trend and loss development, and consider their relationship to changes in the economic environment.

The candidate is not responsible for current, specific developments in ratemaking procedures. However, a study kit is provided which contains portions of recent rate filings along with pertinent explanatory memoranda. This information is provided so the candidate will be aware of certain current techniques not covered in the various readings. The candidate will be responsible for an understanding of the types of techniques, their application, and how they relate to changes in the economic and social environment.

The following list of topics is typical of those a candidate should be prepared to discuss:

1. The selection and evaluation of ratemaking technique corresponding to the characteristics of a given line of insurance.
   a. pure premium versus loss ratio,
   b. calendar year versus accident year versus policy year,
   c. credibility, and
d. territorial and classification relativities.

2. Methods for trending and projecting losses and premiums (when appropriate).
   a. internal versus external indices,
   b. relation to loss development,
   c. claim cost projection versus current cost index approach, and
d. impact of deductibles, coinsurance and insurance to value programs.

3. The candidate should also be prepared to discuss and apply ratemaking principles to problems which may not have generally recognized solutions.

Longley-Cook, L. H. An Introduction to Credibility Theory. 1962. (Available from CAS office at cost of $1.50)

NOTE: The statistical plans listed above should not be ordered directly from ISO. Instead, if a candidate needs a copy of the plans, an excerpt of each plan is available from the CAS office at a cost of $2.00 per plan. The excerpt includes the pages referenced in the study note on statistical plans included in the study kit.

Study Kit on Ratemaking Developments. (This is the same study kit as required for Part (a)).

PART 7

Prior to commencing study for this Part, the candidate should read the “Recommendations for Study” section, pages 10 to 12, for study suggestions and guidance in obtaining study notes, out-of-print readings, past examinations, and other information important to sitting for this examination.

Section (a) of this examination deals with the form, content and interpretation of the two major reports an insurance company makes to regulatory authorities, and with sources of comparative data. Section (b) deals with the analytical techniques which an actuary may employ to develop certain of the data required for these reports.

(a) INSURANCE ACCOUNTING, EXPENSE ANALYSIS, AND PUBLISHED FINANCIAL INFORMATION

The candidate should obtain a general knowledge of insurance accounting, including its terminology and practice. A suggested basic accounting reference for candidates is the American Institute for Property and Liability Underwriters’ CPCU 8 text, Introduction to Accounting, by A. Thompson Montgomery. The candidate should have detailed familiarity with the contents, purpose, and recent changes in the New Statement Blank and the Insurance Expense Exhibit. This includes a knowledge of the methods of preparation and interrelationships of the various exhibits, schedules, and parts comprising these reports. The candidate should understand the details of and reasons for the differences between the accounting methods employed under statutory and GAAP accounting. The candidate should also understand the differences between the statistics included in these reports and those used for ratemaking and the various types of experience analysis. The candidate should be able to interpret and evaluate data from the reports, identify potential distortions in the data, and suggest possible means of adjusting for any distortions.

(1) Insurance Accounting

- 1983 Study Kit of Current Articles (Available from CAS office at a cost of $2.00).
- Association Form of 1982 Annual Statement Blank for Fire and Casualty Companies including the attending instructions (both individual and consolidated basis).

(3) Published Financial Information

- The candidate should be familiar with the sources of published insurance statistics in order to know where to obtain such information when the need arises. The following annual publications constitute a representative list of such sources:

Best, A.M., Co., Inc.
- Best’s Insurance Reports—Property/Casualty
- Best’s Reproductions of Convention Statements—Property/Casualty
- Best’s Aggregates and Averages—Property/Casualty
- Best’s Executive Data Service
- Best’s Key Rating Guide—Property/Casualty

The National Underwriter
- *Argus F.C. & S. Chart*
- *Argus Chart of Health Insurance*

New York Insurance Department. *Statistical Tables from Annual Statements.*

(b) PREMIUM, LOSS AND EXPENSE RESERVES

An actuary may be expected to design and test reserving methods, and complete Schedules O and P of the Annual Statement. The candidate should be prepared to discuss such topics as:

1. The selection and evaluation of a loss reserving method appropriate to a given line of insurance:
   a. For known claims
   b. For IBNR claims
   c. For all incurred claims

2. Testing of adequacy of previous loss and loss expense reserve levels.

3. Evaluating the adequacy of current loss and loss expense reserve levels.

4. The identification of, and correction for, effects on loss reserves stemming from:
   a. Changes in the loss climate
   b. Changes in a company’s handling of claims
   c. Data Problems

5. Special reserving problems in a line arising from:
   a. Catastrophe losses
   b. Reopened claims
   c. Policies on a claims-made rather than occurrence basis
   d. Fidelity and Surety IBNR
   e. Credit insurance
6. The unearned premium reserves:
   a. Improving its accuracy
   b. The reserve for retrospective returns
   c. Policies on a claims-made basis
   d. Deposit premium policies
7. Allocated loss expense reserves.
8. Unallocated loss expense reserves.

The candidate should also be familiar with current developments in the above areas (a) and (b).

The candidate should be prepared to compare and evaluate the procedures discussed and the arguments advanced in the readings. The answers provided by the candidate will be graded based on their applicability to the specific problem presented and the professional competence evidenced by the answer. While the readings for this part provide the basic factual information necessary, practical experience has often proven helpful in successfully completing the examination.

1 1983 Study Kit of Current Articles (Available from the CAS office at a cost of $2.00).

This is the same study kit as referenced in section (a).

2 Those pages and schedules of the Association form of the 1982 Annual Statement Blank for Fire and Casualty Companies which relate to reserves.

McClenahan, C. L. “A Mathematical Model for Loss Reserve Analysis”. PCAS LXII, 1975. p. 134. (The candidate will not be held responsible for notation or the development of the formulas in this paper.)

Khury, C. K. “Loss Reserves: Performance Standards.” PCAS LXVII, 1980. p. 1. (The candidate will not be responsible for notation or development of the formulas in this paper.)
FELLOWSHIP EXAMINATIONS

PART 8

Prior to commencing study for this Part, the candidate should read the “Recommendations for Study” section, pages 10 to 12, for study suggestions and guidance in obtaining study notes, out-of-print readings, past examinations, and other information important to sitting for this examination.

(a) INSURANCE LAW, SUPERVISION AND REGULATION

Insurance Supervision and Regulation are subjects which are not strictly actuarial in nature, but which affect many areas of the actuary’s work. The candidate should understand the role of the insurance business as an essential service. As a result of the essential and highly technical nature of insurance, a system of regulatory controls has been established to require the industry to demonstrate that it is providing fair and reliable service.

Since no prior legal knowledge is assumed, the first section of readings includes several general texts on business and tort law. This material should provide background and a basic understanding of contract and tort law.

Each state’s Insurance Law provides the basis for insurance regulation. The New York Insurance Law is included as a typical law which has evolved over time. In both the background material and in the law itself, the candidate should concentrate on those concepts of law which relate to the insurance contract, to the conduct of the business of insurance, and to the way insurance is marketed.

The candidate should also be familiar with the major changes in rate regulation and the various approaches currently in use. The candidate should consider how well each style of rate regulation meets the basic objectives of regulation: insurer solvency, availability of insurance, and fair treatment of policyholders and claimants.

Judicial decisions interpreting the law are also an important component of insurance regulation. Several readings summarize significant cases which served to develop legal precedents.

In the last few years, several reports have been issued examining the role of the states in insurance regulation. Excerpts from these reports are included on the syllabus so that the candidate can understand the unique nature of a state regulatory system, insurance’s antitrust immunity and the current proposals for change in this immunity.

The candidate is expected to be able to discuss current developments relating to the topics of insurance law, supervision, and regulation.

(1) Background Law and Insurance

Note: Ch. 26 of Samuelson’s economics text contains a discussion of antitrust law. Although this reference is not part of the required readings for Part 8, the candidate may find it useful to review the material as background for this examination.

The candidate is responsible only for the sections of the law as stated. If studying from publications such as the Consolidated Laws Service, which cite case histories as well as the law itself, the candidate is not responsible for the case histories although they may be helpful in gaining an understanding of the law. Candidates will not be tested on those sections of the New York Laws dealing exclusively with life insurance and/or annuities.

(2) Supervision and Regulation

Mertz, A. C. The First Twenty Years.
Carson, T. O. “Rate Regulation and the Casualty Actuary.” PCAS XXXVIII. 1951. p. 9 (excluding Sections 4 and 5 and appendices)

Report of Economic Advisory Panel—“Competition and Regulation in the Property-Casualty Insurance Industry.”

(The above three items are available from CAS office as excerpts from the Report of the National Commission for the Review of Antitrust Laws and Procedures at a cost of $2.00.)
(b) STATUTORY INSURANCE

This section of this examination part involves a study of insurance coverages mandated by statute or required by regulation. In reviewing the recommended readings, the candidate should be aware of the modifications of the tort law system with the introduction of various "First Party" compensation systems. In addition the candidate should be aware of the relationship of Financial Responsibility laws and various mechanisms for involuntary markets, e.g., assigned risk plans.

The workers' compensation and employer's liability systems are briefly introduced. The large variety of individually tailored state laws in workers' compensation makes this area particularly difficult to master, but the candidate should understand the basic concepts and structure common to the diverse state statutes.

Finally, social insurance plans are presented. The candidate is expected to be familiar with the basic principles and concepts underlying the Social Security system in the United States and with the general actuarial principles involved in the valuation of the system. One is not expected to have detailed knowledge of the current level of benefits or the formulas used to calculate such benefits.

Disability insurance is also treated as social insurance and, therefore, should be approached by the candidate in a manner similar to the Social Security programs. Again, the candidate is responsible for knowledge of current developments relating to statutory insurance.

1) Statutory Automobile Insurance

Note: Ch. 4 of Kulp's casualty insurance text contains a discussion of negligence liability. Although this reference is not part of the required readings for Part 8, the candidate may find it useful to review the material as background for this examination.

Kulp, C. A. and Hall, J. W. *Casualty Insurance*. 1968. Chapters 11 (pp. 418-440 and 455-467), 12 (pp. 479-507) and 13 (pp. 539-579).

American Insurance Association *Summary of Selected State Laws and Regulations Relating to Automobile Insurance*. 1982 Edition:

a. No-Fault Benefits (pp. 1-11)
b. Add-On Benefits (pp. 12-15)
c. Compulsory Liability, Financial Responsibility, and Uninsured Motorists Laws (pp. 43-61)
d. Residual Market Plans (p. 65)

While the candidate is not expected to memorize the detail of this reading, he or she should be familiar with the contents thereof as well as able to recognize major variations in the laws between groups of states.

2) Workers' Compensation

Chamber of Commerce of the United States *Analysis of Workers' Compensation Laws*. 1982. While the candidate is not expected to memorize the detail of this reading, he or she should be familiar with the content thereof and the coverages described.

3) Social Insurance and Allied Programs

Myers, R. J. *Social Security*. 1981. Chapters 4-6, 13 and 15 (Including appendices to Chapters 4, 13)

(c) NAIC

The National Association of Insurance Commissioners is the central body of all state regulation. The NAIC meets regularly to consider current issues of concern. Typically, a task force and an advisory committee are established to make recommendations to a full committee and to the NAIC itself. These recommendations often take the form of a model law to be enacted by each affected state. The following issues, in particular, should be reviewed by the candidate:

- Monitoring Competition
- Proposed Model Open Competition Rating Law
- Arson
- Automobile Risk Classifications

The 1980-1982 NAIC Proceedings should be researched for material on these issues. It is suggested that the individual become familiar with the introductory portion of the Proceedings book in order to understand the structure of the book and of the NAIC itself, find the required information and trace its development through the various committees to ultimate resolution.

**PART 9**

Prior to commencing study for this Part, the candidate should read the "Recommendations for Study" section, pages 10 to 12, for study suggestions and guidance in obtaining study notes. Out-of-print readings, past examinations, and other information important to sitting for this examination.

(a) ADVANCED RATEMAKING

Candidates for this part are expected to have acquired considerable technical knowledge and practical experience in insurance ratemaking. In addition, they should keep in touch with current developments and problems in ratemaking. The examination will assume a working knowledge of basic ratemaking and will deal with advanced problems such as those covered in the papers listed below. The examination will not necessarily be limited to the excerpts expressed in the listed papers. The ability to apply ratemaking knowledge and experience may be tested through questions dealing with problems for which there are no generally recognized solutions. To some degree, they will deal with the types of practical problems which a fully qualified actuary working in ratemaking should be able to solve.

All the papers in this section should be read for illustrations of basic principles and theories, as well as any insights into advanced ratemaking problems and their solutions. In none of the papers is the derivation of formulas or equations to be stressed, but some applications of those techniques may be required. Some papers are included primarily for their historical significance or to illustrate unique solutions to a ratemaking problem such as the Roth crop hail reading.

The readings on credibility on Part 9 are partially duplicated on Part 4. The Education Committee feels strongly that credibility is a subject that every actuary needs to study. Therefore, the overlap will continue for some time. The emphasis, however, will be different. Part 4 students will be expected to relate to credibility mathematically while Part 9 students will be expected to understand the insurance implications as well as the mathematics.

14 1983 Study Kit on Advanced Ratemaking (Available from CAS office at a cost of $2.00).
21 American Academy of Actuaries Committee on Risk Classification "Risk Classification Statement of Principles." June, 1980.
(b) INDIVIDUAL RISK RATING

One of the most important functions performed by an actuary is the rating of individual risks. Prior to Part 9, most of the readings were addressed to group or classification risk rating. This part provides detail readings on individual experience risk rating so that the candidate will be prepared to design and manage an individual risk rating system.

Individual risk rating consists of two principal sections:

1) Prospective rating which is more commonly known as Experience rating.
2) Retrospective rating.

The readings range from those which discuss the theoretical foundation of individual risk rating to those which discuss the application of various plans.

The candidate will be expected to have a good working knowledge of credibility, loss limitation, and rate modification concepts as they apply to prospective and retrospective rating, and loss distribution, insurance charge and excess loss charge concepts as they apply to retrospective rating. The candidate can be expected to apply these concepts in a creative and problem solving manner.

The candidate is also expected to be knowledgeable in the application of individual risk rating plans currently in use (excluding individual state pages) and should anticipate answering questions in the manner of an insurance consultant for an insured. Finally, the candidate should keep abreast of current developments and problems as they apply to individual risk rating.

Candidates unfamiliar with the general principles underlying individual risk rating plans should review Chapter 3 of the Michelbacher and Roos text, Chapter 22 of the Kulp and Hall text, or the section on Merit Rating Plans in Chapter 10 of *Insurance Company Operations*, Volume II, from the American Institute for Property and Liability Underwriters before studying the required readings for this part. The candidate may gain a better understanding of the application of prospective and retrospective rating plans from John R. Stafford’s books, *Workers’ Compensation Experience Rating and Retrospective Rating*, but will not be held responsible for their contents. It is realized that parts of some technical articles cited in the recommended reading for this part are not current. However, the candidate should study all articles for their explanation of theory.

(1) Experience Rating

Snader, R. H., “Fundamentals of Individual Risk Rating and Related Topics” Part II of Study Note (see comments in Section (1)). The candidate should study the following articles and the forms used in the application thereof:

- National Council on Compensation Insurance: *Experience Rating Plan*
(3) Miscellaneous Rating

The candidate should study the following rating plans and the forms used in the application thereof:

Insurance Services Office:
Composite Rating Plan (Automobile, General Liability, Burglary, Glass.)
(Available from CAS office at a cost of $2.00 per copy.)

Insurance Services Office:
Commercial Fire Rating Schedule. Copyright 1975. (Summary available from CAS office at a cost of $2.00 per copy.)

PART 10

Prior to commencing study for this Part, the candidate should read the "Recommendations for Study" section, pages 10 to 12, for study suggestions and guidance in obtaining study notes, out-of-print readings, past examinations, and other information important to sitting for this examination.

Part 10 represents the final step in the examination process and is designed to test both the breadth and depth of the candidate's understanding of the insurance process. The candidate is expected to have acquired considerable technical knowledge and practical experience during preparation for the previous examinations.

The required reading material for this examination is divided into four sections, each of which builds on information covered in previous examinations. Questions may be asked which require use of material mastered in preparation for these previous examinations.

(a) FINANCIAL OPERATIONS OF INSURANCE COMPANIES

This section explores the various relationships that exist between underwriting results, investment income, and taxes that arise out of the underwriting process and total operating income. The candidate is also expected to develop an appreciation of the varying standards employed in measuring overall operations from the perspective of the stockholder, the manager, the regulator, and the policyholder. The candidate should be prepared to compare and evaluate the procedures discussed and the arguments advanced in the readings.

1983 Study Kit of Current Articles (Available from the CAS office at a cost of $5.00 per copy). [1-2 + 17]

2. Deductible and excess coverages, and the problems inherent in pricing these coverages for various lines.

Munich Reinsurance Company, Reinsurance and Reassurance. Vol. I-IV.

Snider, R. H., “Fundamentals of Individual Risk Rating and Related Topics”. Part III of Study Note. (Available from the CAS office at a cost of $1.50)

(c) FORECASTING

An actuary may be expected to develop both short and long range forecasts, and to play a key role in the corporate planning process of an insurance company. This section was designed to familiarize the candidate with various techniques employed in forecasting and planning. It is intended to provide an understanding of the advantages and disadvantages of various forecasting methods, how to interpret statistical measures in evaluating various techniques, and the assumptions underlying each.

(d) CURRENT EVENTS AND ISSUES

This section deals with industry topics of current interest with which the candidate should be familiar.

In preparing for this subject, the candidate is expected to be familiar with major issues reported in the general press and in trade journals. The candidate should be able to define the problem involved, and to discuss both sides of the issue.

The candidate's attention should be directed to the general trade press coverage of current events. In certain instances, however, more detailed knowledge may be required from specific related source documents in order to fully respond to a question.
2. Deductible and excess coverages, and the problems inherent in pricing these coverages for various lines.

Snader, R. H., "Fundamentals of Individual Risk Rating and Related Topics". Part III of Study Note. (Available from the CAS office at a cost of $1.50.)

(c) FORECASTING

An actuary may be expected to develop both short and long range forecasts, and to play a key role in the corporate planning process of an insurance company. This section was designed to familiarize the candidate with various techniques employed in forecasting and planning. It is intended to provide an understanding of the advantages and disadvantages of various forecasting methods, how to interpret statistical measures in evaluating various techniques, and the assumptions underlying each.

(d) CURRENT EVENTS AND ISSUES

This section deals with industry topics of current interest with which the candidate should be familiar.

In preparing for this subject, the candidate is expected to be familiar with major issues reported in the general press and in trade journals. The candidate should be able to define the problem involved, and to discuss both sides of the issue.

The candidate's attention should be directed to the general trade press coverage of current events. In certain instances, however, more detailed knowledge may be required from specific related source documents in order to fully respond to a question.
INDEX TO READINGS

Readings are available through the library of the Casualty Actuarial Society. However, the following information is furnished for those who wish to purchase the references.

American Academy of Actuaries, 208 South LaSalle Street, Chicago, Illinois 60604.
American Institute of Certified Public Accountants, Audits of Fire and Casualty Insurance Companies. Chapter 9, American Institute of Certified Public Accountants, 665 Fifth Avenue, New York, New York 10019.
