SYLLABUS GOALS AND OBJECTIVES

The Casualty Actuarial Society has as one of its primary objectives the development of qualified professionals in the field of casualty actuarial practice. The Casualty Actuarial Society conducts an educational and examination program for prospective members in order to achieve this objective. The syllabus goals and objectives follow:

1. To develop a general understanding of the social, political, regulatory, legal, and economic environment of the business of property and casualty insurance and the historical development of that environment.
2. To develop a thorough understanding of the fundamental mathematical concepts applicable to solving insurance problems and a high degree of skill in their applications.
3. To develop a comprehensive understanding of the business of property and casualty insurance, including underwriting, claims, marketing, finance and how these functions are performed and relate.
4. To develop a working knowledge of insurance policies and contracts.
5. To develop an expert knowledge of a broad range of techniques to solve insurance problems; and to develop the ability to discern the appropriateness of techniques for particular applications based on a knowledge of the underlying assumptions, strengths and weaknesses.
6. To develop an expert knowledge of a broad range of relevant and standard actuarial practice, in order to present a framework for the use of problem solving techniques.
7. To encourage a sense of inquisitiveness and creativity towards insurance problem solving in order to foster an appreciation of the art in actuarial science.

RULES REGARDING EXAMINATIONS FOR ADMISSION

* All information for Parts 1 through 3 (SOA courses 100, 110, 120, 130, 135) is tentative for November, 1988. Final SOA Syllabus reflecting any changes in dates and content will be published in May, 1988 and distributed coincident with transmittal of grades to all candidates registered for Parts 1 through 3 in May, 1988.

It is customary to hold the examinations in such cities as will be convenient. The Secretary will announce the exact times and locations at which the examinations will be given.

Individual consideration will be given to providing special arrangements for persons with demonstrable physical impairments which would impose a severe handicap if examinations were taken under normal conditions. Advance notice that special arrangements will be needed must be given to the Office of the Society at the time of making application to write an examination.

2. Filing of Application

a. Parts 1-3

A candidate who wishes to take one or more of Parts 1 (SOA Course 100), 2 (SOA Course 110) and 3 (SOA Courses 120, 130 and 135) must file an application form which may be obtained from the office of the Casualty Actuarial Society. For these Parts, application forms and the appropriate examination fee, in check, draft, or money order made payable to the Society of Actuaries, must be sent to:
The applications for Parts 1-3 must be received by the Society of Actuaries by December 20 for the February Part 1 examination, by March 20 for the May examinations and by September 20 for the November examinations.

b. Parts 4-10

The first time a candidate makes application to take one or more of Parts 4-10, an application obtained from the office of the Casualty Actuarial Society must be filed. Subsequent requests to take other examinations can be accomplished by simply writing to the office of the Casualty Actuarial Society, stating the Part or Parts for which the candidate is applying. Candidates for Part 8 must specify the United States or Canadian specialty at the time of application.

Each request along with the appropriate examination fee, in check, draft, or money order payable to the Casualty Actuarial Society must be sent to:

Casualty Actuarial Society
One Penn Plaza
250 West 34th Street
New York, New York 10119

The application for Parts 4-10 must be received by the Secretary by March 20 for the May examinations and by September 20 for the November examinations.

3. Joint Administration

The examinations for Parts 1, 2 and 3 are jointly administered by the Casualty Actuarial Society and The Society of Actuaries.

The CAS is a joint sponsor of the prizes awarded for the highest scores on the Part 1 examination.

4. Associateship and Fellowship Examinations

Successful completion of, or credit for, Parts 1 through 7 is required to fulfill the examination requirements for Associateship. Parts 1 and 2 are the same as the Society of Actuaries Course Exam numbers 100 and 110 respectively. Part 3 is administered as three separate examinations corresponding to each subpart. These are the same as the Society of Actuaries Course Exam numbers 120, 130 and 135. They may be taken on separate examination dates such that partial credits are earned until all sections are passed.

Successful completion of, or credit for, all ten examination Parts is required to fulfill the examination requirements for Fellowship. Part 8 now has two sub-divisions covering either United States or Canadian specific material and is considered completed based on either one of the two tracks.

5. Fees

The examination fee schedule for 1988 at time of publication is as follows:

<table>
<thead>
<tr>
<th>Parts</th>
<th>Fee</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-2</td>
<td>Non-refundable: $35.00</td>
</tr>
<tr>
<td>3a</td>
<td>$63.00</td>
</tr>
<tr>
<td>3b</td>
<td>$63.00</td>
</tr>
<tr>
<td>3c</td>
<td>$55.00</td>
</tr>
<tr>
<td>3a + 3b</td>
<td>$86.00</td>
</tr>
<tr>
<td>3a + 3c</td>
<td>$78.00</td>
</tr>
<tr>
<td>3b + 3c</td>
<td>$78.00</td>
</tr>
<tr>
<td>3a + 3b + 3c</td>
<td>$101.00</td>
</tr>
<tr>
<td>4-10</td>
<td>$90.00 for each part</td>
</tr>
</tbody>
</table>

The fee structure for Part 3 is based on a candidate fee of $40.00 regardless of the number of sub-parts taken in one sitting plus $23.00 for each of Parts 3a and 3b and $15.00 for Part 3c.

Candidates writing any of the examinations for Parts 1-3 overseas or at a specially arranged center must pay an additional $35.00 per examination session (February, May or November).

Please note that all fees are payable in U.S. funds by check, draft, or money order.

6. Late Registration, Refunds, and Transfers of Fees

Parts 1-3. If the application and regular fee are not received on or before March 20 for the May examinations or September 20 for the November examinations, a candidate wishing to write an examination in North America must pay a late registration fee of $35.00 in addition to the examination fee. Late registrations will not be accepted from candidates writing outside North America. In no case will applications be accepted after April 20 for the May examinations or after October 20 for the November examinations.

For the February administration of Part 1, the registration deadline is December 20. After December 20, any candidate wishing to write Part 1 in February must pay a late registration fee. No applications will be accepted after January 20. Due to the January release date for November examination results, candidates who wrote the November 1986 Part 1 examination and did not pass may register until January 20 without assessment of a late registration fee. Similarly, candidates who write Part 1 in the February session and do not pass may register
until April 20 for the May examination session without assessment of a late registration fee.

A registered candidate who requests a change in examination center must pay a $15 change-of-center fee. No change in center may be made after January 20 for the February examination, April 20 for the May examinations or October 20 for the November examinations.

If a request for late registration or change of center occurs, the Society will make every effort to have the candidate’s records and supplies on hand at the appropriate center in time for the examination. If this effort fails, however, the Society and any jointly administering or sponsoring organization are not responsible. If either the candidate’s registration and fees or request for change of examination center are received so late that it is not feasible to arrange for the candidate to write the examination, the fees will be refunded. The administering organizations are not responsible for difficulties caused by postal service delays or inadequate postage.

A candidate who submits an application for any of Parts 3a, 3b or 3c and subsequently does not write one or more of these sub-parts should request an examination fee refund. This request must reach the Society no later than June 30 for a May examination or December 31 for a November examination. Later requests will not be considered. A $35 administrative fee per examination is assessed for all refunds. Therefore, no refund is made unless the total fees for sub-parts not written exceed $35. The $40 candidate fee is refundable only if the candidate does not write any sub-parts for which the fee is charged. Only examination fees for Parts 3a, 3b and 3c are refundable. Late registration fees, change-of-center fees and fees for writing overseas or at specially arranged centers will not be refunded in any case.

Parts 4-10. Examination fees are payable each time the candidate registers for an examination. Check, draft or money order in U.S. funds payable to the order of the Casualty Actuarial Society must be received by the Office of the Casualty Actuarial Society by March 20 for the May examinations or by September 20 for November examinations. Late registration will be accepted through April 20 and October 20 if accompanied by a $50.00 late registration fee for each Part. Change-of-center fees will be $15.00.

The same administrative conditions will apply for changes of examination center and for late registration as for the first three exams, with the organization to be contacted being the Casualty Actuarial Society.

A candidate who has filed an application and finds that it will not be possible to take the examination should request a refund of the examination fee. This request must reach the Office of the Casualty Actuarial Society not later than April 20 for the May examinations, or October 20 for the November examinations. Later requests will not be considered. A fee of $15.00 per examination will be assessed for all refunds. The fee of a candidate who is unavoidably absent from an examination will, upon written request within 30 days following the date of such examination, be transferred to any examination given in the next thirteen months. A fee which has been so transferred is not refundable. There will be a $15.00 fee for such transfer, payment for which should accompany the request for transfer. Candidates must register for the examination to be taken even if the fee is being transferred from a prior exam period.

7. Waiver of Examinations for Associateship

It is the policy of the Casualty Actuarial Society not to grant waiver of all or any portion of its examination requirements, either for work experience, contribution to the actuarial literature, or academic courses of study. Individuals who claim competence in the areas covered by the examinations should not have difficulty demonstrating their competence through the examination process.

Waiver of individual examination requirements will be granted by the Board of Directors of the CAS in instances where an applicant has passed or received credit for examinations sponsored by another recognized actuarial organization covering equivalent material in both subject and depth. The granting of waivers by the Board will be based on the recommendation of the Vice President-Membership. His or her recommendation will be guided by the policy established by the Education Policy Committee.

The Education Policy Committee has established the specific program outlined below, covering the most common requests for waiver of examination requirements.

1. Waiver of examination Part 1, 2, or 3 will be allowed for a candidate who has passed or been credited with the corresponding examinations sponsored by the Society of Actuaries prior to the joint administration of those examinations.

2. Candidates who take the Advanced Mathematics Test of the Graduate Record Examinations may apply for credit for Part I. Credit will be granted if the candidate’s score on the test is equivalent, as determined by the CAS, to a passing score on Part I.

3. The CAS also specifically recognizes the examinations sponsored by the British Institute of Actuaries. Credit will be granted for examinations passed or waived in accordance with the following table:
<table>
<thead>
<tr>
<th>CAS</th>
<th>Current Syllabus</th>
<th>Prior Syllabus</th>
</tr>
</thead>
<tbody>
<tr>
<td>Part 1</td>
<td>Associateship Status</td>
<td>I-1</td>
</tr>
<tr>
<td>Part 2</td>
<td>A-1 and A-5</td>
<td>I-2 and I-5</td>
</tr>
<tr>
<td>Part 3</td>
<td>Associateship Status</td>
<td>I-1 and I-3</td>
</tr>
</tbody>
</table>

The Casualty Actuarial Society will grant credit either for exams passed by the Institute or waived by the Institute, except that credit will not be granted for exams waived by the Institute on account of academic records achieved in North American universities.

In these instances, candidates requesting a waiver of an examination requirement should present their request to the Vice President-Membership with appropriate evidence that demonstrates the passing of (or score on) the examinations for which a waiver is requested. Such request should also include an application for membership if one has not already been filed. The Vice President-Membership will review all applications and recommend action to the Board of Directors.

In instances other than those specifically delineated above, candidates should present their request to the Vice President-Membership and include with their applications evidence that demonstrates the asserted equivalence of the examinations passed to those for which a waiver is requested via a list of topics covered, or other relevant material. If such evidence is not included, the Vice President-Membership will request it from the candidate.

In such instances the Vice President-Membership will forward the request to the Education Policy Committee. The Education Policy Committee will then review the request to determine whether the waiver program should be expanded to include the examinations embodied in the candidate’s request.

8. Conduct of Examinations

The examinations are exclusively in writing. Except as is noted in the following paragraphs, no books, papers, typewriters, slide rules, or electronic or mechanical aids to computation of any kind may be brought into the examination room by candidates, nor may any candidate communicate with or obtain any assistance from any other candidate during the examination.

Electronic calculators will be allowed in the examination room for all examinations. For Parts 4-10, electronic calculators, which are to be supplied by the candidate, must meet the following standards to be acceptable:

1. portable and silent
2. battery operated during examination
3. must not be programmable: and
4. must not emit distracting noises

For Parts 1-3, the only acceptable calculator is that sold by the Society of Actuaries. This should be purchased from the Society of Actuaries in advance of the examination, as none will be available for purchase at the time of the examination.

It is the candidate’s responsibility to see that the calculator used during the examination meets the applicable standards and is in good working order.

Parts 1, 2, and 3 consist entirely of multiple-choice questions. On these examinations each multiple choice problem presented includes five answer choices identified by the letters A, B, C, D, and E, only one of which is correct. A separate answer sheet provides a row of six ovals for each problem. The first five of these, identified with the letters A, B, C, D, and E correspond to the five answer choices. The sixth oval (described below) is marked “Omit”. After deciding which answer is correct, the candidate should blacken the oval which has the same letter as this answer.

Since the answer sheets are scored by optical scanning equipment, it is important that there be only one oval blackened for each question. If the candidate decides not to respond to a question for which an oval has already been blackened, the answer oval should be erased, and the “Omit” oval should then be blackened. This oval is located to the right of the answer oval “E”. This procedure assures that the scoring equipment will score the question as an omitted question and not be confused by an incompletely erased answer oval. It is not necessary to blacken the “Omit” oval if no answer oval has been blackened. This is because the scoring equipment also scores a question as an omitted question if there are no ovals blackened in the row. Please note that the “Omit” oval appears on the answer sheets for Parts 1-3 only.

9. Grading of Examinations

a) Multiple-Choice and True-False Questions

Scoring of the multiple choice examinations will be done in such a way that there is no advantage or disadvantage to be anticipated from guessing answers in a purely random fashion as compared with omitting the answers entirely.

Parts 1-3. There will be one-fifth point added for each multiple-choice question left blank.

Parts 4-10. There will be no addition for multiple-choice questions left blank, but one-quarter point will be deducted for each incorrect answer. On true-false questions, one point will be deducted for each incorrect answer.
b) Determination of the Pass Mark

The final decision as to where the pass mark shall be set is arrived at by consultation among the Vice President-Membership, the Officers of the Examination Committee and the Part Committee. In determining the pass mark, consideration is given both to the performance level of candidates' answers and to the comparative difficulty of the examination in relation to that of previous examinations. Appropriate recognition is given to any peculiarities that may appear in connection with the answers to any question on an examination despite all the care taken in setting the examination questions.

c) Defective Questions

Occasionally, through error or because of varying interpretations, a question appearing on the examination is found to be ambiguous. If you feel a question is ambiguous, you must bring this to the attention of the Casualty Actuarial Society in writing within two weeks after the date the examination was administered. Your letter should give detailed reasons why you feel the question is ambiguous. The Examination Committee will investigate all questions brought to its attention in this way, and may make allowance in the grading process for answers which could be correct under an interpretation other than the one anticipated in setting the question. Any correspondence on questions which does not reach the CAS office within two weeks will be disregarded for grading purposes.

d) Candidates' Requests for Information

Any candidate for Parts 4-10 can get an analysis of his or her test paper by writing to the CAS office before the deadline. The normal deadline will be August 15 on May exams and February 15 on November exams. The requests will be batched. The batched requests will go to the Examination Committee about two to four weeks after the deadline. Candidates should receive an analysis normally within two months after the deadline.

The analysis will give an outline of the subject areas in which the student was strong or weak as well as the specific question numbers (on essays) on which he or she scored well, poorly, or in-between. The Examination Committee feels that this kind of information can be developed within a reasonable amount of time and without undue effort. It should provide the educational guidance that most candidates desire.

The Examination Committee is also prepared to do an administrative check for any candidate who appeals a score to be sure that he or she has been given the proper grade.

10. Confidentiality of Examination Records

The fact that a candidate has passed a particular examination is considered public knowledge. Any further information as to examinations taken by candidates and grades received by candidates is available only to the candidates themselves and to committee chairmen as required for their committee purposes, unless the candidate requests in writing that such information be provided to someone else.

11. Disciplinary Action

Candidates for the Casualty Actuarial Society’s examinations are expected to follow the rules and procedures included in the “Instructions to Candidates” printed on their examination books and announced by the supervisors at the examination locations. These standards may seem stricter than those which candidates are accustomed to in other examination environments. The Casualty Actuarial Society maintains these strict standards because the examinations are such a significant part of a candidate’s career. Therefore, equitable administration of the examinations and enforcement of the highest standards of conduct cannot be emphasized too strongly.

Candidates should understand that the Casualty Actuarial Society will pursue any evidence of a candidate not adhering to the spirit of the examination rules and will respond to violations with appropriate disciplinary action.
**LIBRARY**

All candidates registered for the examinations of the Casualty Actuarial Society and all members of the Casualty Actuarial Society have access to all the library facilities. The CAS Library is located at One Penn Plaza, 250 West 34th Street, New York, New York 10119, Phone: (212) 560-1018—(212) 560-1019—(212) 560-1020.

Books and manuals may be withdrawn from the Library for a period of one month without charge. In general, not more than two references may be in the hands of a borrower at one time.

Address requests for books to:
Casualty Actuarial Society
Library Service
One Penn Plaza
250 West 34th Street
New York, New York 10119
Phone: (212) 560-1018 (212) 560-1019 (212) 560-1020

**PROCEEDINGS AND OTHER PUBLICATIONS OF THE SOCIETY**

The prices of past editions of the Proceedings and other publications of the Society and a list of those editions still in print are set out in the Yearbook of the Society.

Those wishing to purchase these publications should write the Secretary, Vice President—Administration
Casualty Actuarial Society
One Penn Plaza
250 West 34th Street
New York, New York 10119
Phone: (212) 560-1018 (212) 560-1019 (212) 560-1020

**AMERICAN ACADEMY OF ACTUARIES**

Satisfactory completion of specified examinations of the Casualty Actuarial Society will satisfy the educational requirements of the American Academy of Actuaries. For further information contact the Academy at 500 Park Boulevard, Itasca, Illinois 60143.

RECOMMENDATIONS FOR STUDY

The objective of the Casualty Actuarial Society's education and examination process is to assist the candidate in professionally preparing for an actuarial career of managing the varied corporate responsibilities assigned to an Actuary in the casualty insurance field. The Recommendations for Study present the study material that a casualty actuarial candidate should understand thoroughly, and be able to apply professionally to actual casualty insurance situations. The examination process is designed to assure that each successful casualty actuarial candidate attains a satisfactory level of competence in the subject matter.

The examinations for admission to the two grades of membership in the Society are designed to establish the qualifications of candidates. The following Recommendations for Study are provided as a guide for the candidates in their preparation for the examinations. It should be realized that although the examination questions will be largely based upon the textual material cited, they will not necessarily be drawn directly therefrom. The examinations will test not only the candidate's knowledge of the subject matter, but also the candidate's ability to apply that knowledge. Finally, in the development of the syllabus readings and the examination questions, it is assumed that the candidate is familiar with the material covered in earlier parts. Therefore, it is recommended that the candidate take the parts in numerical order.

In their study for the mathematical sections of the Associateship Examinations, candidates are advised to work out as many examples as possible in order to acquire facility in the application of the mathematical principles and methods to specific problems. The questions on the examinations for Parts 1, 2, and 3 are all of the multiple choice type.

In preparing for Parts 7 through 10, the candidate should become familiar with current developments by reading regularly at least two general insurance periodicals.

The references to papers in the Proceedings of the Casualty Actuarial Society (PCAS) are considered to include all discussions of these papers, though the page references cited refer to the papers only. In the case of readings from out-of-print Proceedings, the candidate is responsible only for those discussions reprinted in the CAS Booklets referred to below.

A more detailed reference of the texts cited will be found in the Index To Readings at the end of these Recommendations. The reading materials suggested in these Recommendations are designed to acquaint the candidate with the respective subjects and should not be interpreted as representing views endorsed by the Casualty Actuarial Society.

If a new edition or printing of any text becomes available, the student should WRITE — NOT PHONE — the CAS office for instructions regarding its acceptability and the appropriate chapters/pages in the new edition which correspond to the printed study requirements.

A dagger (†) beside a reading indicates that it is either an addition to the recommended readings or that there has been a material change to a previously included reading.

Study notes and study kits have been prepared in connection with some examinations and can be obtained from the Society's office at the following costs (payable in U.S. Funds):

<table>
<thead>

Sample examination questions for Parts 1 & 2 and copies of Parts 5-10 examinations for recent years may be obtained from the Casualty Actuarial Society office. Illustrative answers for essay questions on Parts 4-10 are available upon request. Also available without charge is a note entitled “Hints on Study and Exam Techniques.”

In referring to a published prior examination, students should keep in mind that the questions are based on the Course of Reading in effect for that particular examination and many not in all instances reflect the current Course of Reading. Students may also expect future examinations to vary somewhat as to the proportion of question style and subjects. New forms of questions may appear from time to time, and the total number of questions may be increased or decreased.

Other material available for a charge from the Casualty Actuarial Society office:

**Part 5**

**Part 6**
Longley-Cook, L. H., *An Introduction to Credibility Theory*. 1962. $3.00

**Part 8**
Joskow, P. L., “Cartels, Competition and Regulation in the Property-Liability Insurance Industry.” $5.00
Troxel, T. and Breslin, C.L., *Property-Liability Insurance Accounting and Finance*. $3.00

NAIC Financial Condition Examiners’ Handbook — Introduction” $3.00
“Post-Assessment Property and Liability Insurance Guaranty Fund” $3.00
Duncan, M.P., “An Appraisal of Property and Casualty Post-Assessment Guaranty Funds.” $3.00
The following four readings for the Canadian specialty are available at a combined cost of $3.00.
Neal, J., “Canadian Workers’ Compensation.”
Tate, H., “The Canada Pension Plan.”
Coward, L.E., “Provincial Hospital and Medical Insurance Plans.”
Bedard, M., “Canadian Unemployment Insurance.”

**Part 10**
Leibowitz, M.L. and Weinberger, A., “Optimal Cashflow Matching” $5.00

ASSOCIATESHIP EXAMINATIONS

PART 1

CALCULUS AND LINEAR ALGEBRA — SOA Course 100

This Examination Part is jointly administered by the Casualty Actuarial Society and the Society of Actuaries.

The three-hour multiple-choice examination is based on material usually covered in undergraduate mathematics courses through the differential and integral calculus and a first course in linear algebra. The general scope of the examination is indicated by the following topics:

- Real and complex numbers;
- Elementary set theory, including unions, intersections, and complements;
- Functions, equations and inequalities;
- Analytic geometry of two and three dimensions;
- Standard algebraic and transcendental functions, including polynomial, rational, trigonometric, logarithmic, and exponential functions;
- Limits, continuity, differentiability, and integrability;
- Derivatives, integrals, and partial derivatives;
- The fundamental theorem of integral calculus;
- Applications of derivatives and integrals, including multiple integrals;
- Finite and infinite sequences and series, including the Taylor series expansion;
- The mean value theorem;
- Linear equations, vector spaces and generating sets;
- Bases, dimensions, and subspaces;
- Scalar products, linear transformations, and kernel and image space;
- Matrices, determinants, eigenvectors and eigenvalues.

Candidates who have not had mathematics courses covering these topics may be helped by any of the four texts covering calculus and analytic geometry and either of the two texts covering linear algebra listed below. These may be considered representative of the many texts used in colleges and universities in the United States and Canada which adequately cover the material upon which the candidate may be examined. Earlier or later editions of the texts listed below contain essentially the same information, and should be adequate for review purposes.

Johnson, R. E., Kiokemeister, R. L. and Wolk, E. S., Calculus with Analytic Geometry (Sixth Edition).

Purcell, E. J. and Varberg, D., Calculus with Analytic Geometry (Fifth Edition).

Bradley, G. L., A Primer for Linear Algebra, Chapters 1-6.

Kolman, B., Introductory Linear Algebra With Applications (Third Edition).

An additional reference for those who may want further practice in solving linear algebra problems is Linear Algebra by Seymour Lipschutz (Schaum's Outline Series, McGraw-Hill).
PART 2

PROBABILITY AND STATISTICS — SOA Course 110

This Examination Part is jointly administered by the Casualty Actuarial Society and the Society of Actuaries.

The three-hour multiple-choice examination is based on material usually covered in undergraduate courses in mathematical probability and statistics. It can be taken by candidates who have had thorough college courses in these subjects or by persons who have done concentrated reading in these fields. The general scope of the examination is indicated by the following topics, which are among those proposed for a one-year college course in probability and statistics by the Committee on the Undergraduate Program in Mathematics (CUPM) of the Mathematical Association of America:

- Sample spaces;
- Axioms and elementary theorems of probability;
- Independence, conditional probability, and Bayes' theorem;
- Permutations and combinations;
- Random variables;
- Binomial, Poisson, normal, chi-square, t, F, and other probability distributions;
- Expectation, mean, variance, and moment generating functions of probability distributions;
- Multivariate distributions;
- Transformations of random variables;
- Conditional and marginal distributions;
- Central limit theorem;
- Point estimation, including maximum likelihood estimation and the application of criteria such as consistency, unbiasedness, and minimum variance;
- Tests of statistical hypotheses, including power functions, Type I and Type II errors, Neyman-Pearson lemma, and likelihood ratio tests;
- Applications of sampling distributions to confidence intervals and to tests for means and variances;
- Regression and correlation;
- Method of Least Squares;
- Interpretation of experimental results;
- Bayesian estimation.

The CUPM has reported that statistics courses can be implemented in a variety of ways, and can include different topics with different emphases on these topics. That widely divergent approaches are acceptable is illustrated by the many texts appropriate for a one-year college course. Among such texts, the following are representative of those which cover most of the above topics and which provide the mathematical background required for this examination:

Candidates who have mastered the text material and can work the problems in any one of these references should be adequately prepared to handle the mathematical material in this examination.

The following page references to the representative texts listed above are provided to assist candidates in locating some of the appropriate background material for a few selected topics that are included in this examination:

**Moment generating functions of probability distributions:**
2. pp. 197-200 (Volume I).
3. pp. 78-81 and 538-543.

**Applications of chi-square distribution (chi-square tests):**
1. pp. 269-283 and 312-313.
2. pp. 91-99 (Volume II).

**Regression and correlation:**
1. pp. 73-78, 117-120 and 296-303.

**Bayesian estimation:**
2. pp. 36-42 (Volume II).

It will be assumed that the candidate is familiar with the ordinary deck of fifty-two playing cards and the ordinary six-faced die.

PART 3

This Examination Part is jointly administered by the Casualty Actuarial Society and the Society of Actuaries.

This examination is administered as three separate examinations corresponding to each subpart as listed below. They may be taken on separate examination dates such that partial credits are earned until all sections are passed.

For many candidates, Part 3 is the first actuarial examination for which they will be preparing without the benefit of a formal course in the subject material. These candidates will find it helpful to maintain contact with other Part 3 candidates and to take advantage of opportunities to discuss with others questions that are considered difficult. Candidates should not hesitate to consult members of the profession in their own organizations or elsewhere who are knowledgeable on these subjects.

Study notes are available for each part from the Society of Actuaries at a charge. The notes include past multiple choice exams and an Introductory Study Note which contains important information about the examination, including any changes to the readings, errata and descriptions of examination formats. If there is any conflict between information contained in the Syllabus and that contained in the Introductory Study Note, the latter will govern. Candidates are urged to order the study notes for each part they plan to take.

An order form for these study notes is included on page 63. Included on page 65 is a form for study groups and classes. All correspondence should be with the Society of Actuaries.

(a) APPLIED STATISTICAL METHODS - SOA Course 120

The general scope of this one-and-one-half hour multiple-choice examination is indicated by the following topics:

Analysis of variance; Regression analysis; Time series analysis.

Miller, R. and Wichern, D., Intermediate Business Statistics (1977), Chapter 4 (up to but not including Tukey’s Test on page 158), Chapters 5-8 (except Section 5.10), Chapters 9-11 including supplements. Chapters 1-3 provide a good review of concepts contained in Part 2; however, they will not be tested directly.

Study note available from the Society of Actuaries at a cost of $9.00. (Code 30-11-83)
(b) OPERATIONS RESEARCH - SOA Course 130

The general scope of this one-and-one-half hour multiple choice examination is indicated by the following topics:

    Linear programming: Project scheduling; Dynamic programming; Integer
    programming: Queuing theory; Simulation: Decision analysis.

Hillier, F. S. and Lieberman, G. J., /Introduction to Operations Research/ (Fourth
Edition). Chapters 1, 3-5, 6 (Sections 6.1-6.4 only), 10 (Section 10.6 only),
11, 13 (Section 13.3 only). 16 (Sections 16.1-16.6, up to but not including
the Finite Queue Variation of the M/M/s model).

Study notes available from the Society at a cost of $12.00 include:

  An Introduction to Stochastic Simulation (Code: 30-33-86)

  Decision Analysis (Chapter 4 of /A Study Manual for Operations Research by
  E. A. Narragon/ (Code: 30-32-84).

(c) NUMERICAL METHODS - SOA Course 135

This subject encompasses various techniques for handling numerical data. Although many of the principles lend themselves readily to computer procedures and methods, knowledge of such procedures or methods is neither presupposed nor required for the examination. The general scope of this one-hour examination is indicated by the following topics:

    Iteration: Interpolation; Numerical integration: Linear systems.

Burden, R. L. and Faires, J. D., /Numerical Analysis/ (Third Edition). Chapters 1
(Sections 1.1*-1.3). 2 (Sections 2.1-2.5). 3 (Sections 3.1-3.4 and 3.6**), 4
(Sections 4.3-4.6), 6 (Sections 6.1-6.7). (If studying from the Second Edition,
omit Sections 1.3, 2.5 and 6.7).

Study note available from the Society of Actuaries at a cost of $8.00.

*Knowledge of this section will be assumed as background material for ques-
tions; however, questions will not be directly based on this section.

**As related background material for Cubic Splines, the student should read
pages 137 and 138 up to the paragraph following table 4.1. However, exami-
nation questions will not be based on these pages. (Corresponding pages for
the Second Edition are 125 and 126).

PART 4

Prior to commencing study for this Part, the candidate should read the "Re-
commendations for Study" section, pages 14 to 17, for study suggestions and
guidance in obtaining the Part 4 study kit, out-of-print readings, past examina-
tions, and other information important to sitting for this examination. Ref-
ences are listed in the suggested order for study.

*Items marked with an asterisk (*) constitute the 1988 study kit, which is
available from the CAS office at a cost of $20.00. Each reading was also included
in the 1987 study kit.

(a) MATHEMATICS OF COMPOUND INTEREST

This section represents approximately 25% of the examination. Key topics include:

    Measurement of interest, including accumulated and present value factors;
    annuities certain; amortization schedules and sinking funds; and bonds and
    related securities;

Edition. (Excluding Sections 4.7, 4.8, 5.6, 6.8, 6.9, 6.10, and all of Chapter 7).

(b) LIFE AND CASUALTY CONTINGENCIES

This section represents approximately 25% of the examination.

Bowers, N.L., Gerber, H.U., Hickman, J.C., Jones, D.A. and Nesbitt, C.J., /Act-
uarial Mathematics/, 1986. Chapters 3 (all sections except 3.6), 4 (4.1-4.3
and 4.6), 5 (5.1-5.4, 5.6), 6 (6.1-6.3, 6.6), 7 (7.1-7.4), 8 (8.1-8.5), 9 (9.1-9.3). In
sections 5.6 and 6.6 the student is not responsible for formulas dealing with
withly payments.

Ferguson, R. E., "Actuarial Note on Workmen's Compensation Loss Reserves," /PCAS
118-122.

(c) CREDIBILITY THEORY

This section represents approximately 25% of the examination.

Hossack, I.B., Pollard, J.H. and Zehnwirth, B., /Introductory Statistics with
Applications in General Insurance/, 1983. Chapters 4 (all sections), 8 (excluding
8.7).

Herzog, T.N., /An Introduction to Bayesian Credibility and Related Topics/, 1985,
Casualty Actuarial Society.

Venter, G.G., /Limited Fluctuation Credibility with the Normal Power Approxima-
tion/, 1985, Casualty Actuarial Society.

*This text is also on Part 5.
(d) LOSS DISTRIBUTIONS

This section represents approximately 25% of the examination.

Many actuarial problems involve the analysis of incurred losses for an insured event. Often it is impossible to determine the exact distributions of certain losses. Thus in practice, the objective may be to find reasonable and usable approximations to those distributions. The loss distributions text describes some of the methods for doing this. Chapter 2 and the appendix of this text describe a variety of mathematical distributions which may be helpful in this process. Through study of the required sections below, the candidate is expected to become familiar with some uses of these distributions. The candidate will not be tested directly on the distributions themselves; rather the emphasis will be on using these distributions in a problem solving way. Solutions to selected exercises from the text are available at no charge from the CAS office. In order to promote the proper emphasis on the preparation for this exam, the Appendix of Loss Distributions (pp. 217-332) will be provided to students at the time of the examination.

---

PART 5

Prior to commencing study for this Part, the candidate should read the “Recommendations for Study” section, pages 14 to 17, for study suggestions and guidance in obtaining study notes, out-of-print readings, past examinations, and other information important to sitting for this examination.

Note: Sharing the Risk by Marks and Craigie contains a good basic introduction to insurance. Although this reference is not part of the required readings for Part 5, the candidate may find it useful to review this material as background for this examination. This reading is available from the Insurance Information Institute at a cost of $3.50.

In studying the references it is recommended that they be read in the order listed.

(a) PRINCIPLES OF ECONOMICS

The candidate will need to have a knowledge of the principles of economics at the college level. The candidate should be familiar with the various key concepts and basic principles of economics included in the recommended reading and be able to explain and apply them.

Samuelson, P. A. and Nordhaus, W. D., *Economics* (12th Edition), 1985. Chapters 5-10, 12, 13 (pp. 241-247), 14 (pp. 268-271, 275-283), 15-19, 21, 22, 23 (pp. 502-517), 40: exclude appendices except for chapters 8, 18, 19 and 22. (While the candidate will not be tested on chapters 1-4 and 20, the candidate may find it useful to review these chapters as background for this examination.)

(b) THEORY OF RISK AND INSURANCE

The candidate should know what risk is, the kinds of risk, and the ways in which they can be handled, with particular emphasis on the relation to insurance.

Bowers, N. L., Gerber, H. U., Hickman, J. C., Jones, D. A. and Nesbitt, C. J., *Actuarial Mathematics*, 1986. Chapter 1. (The student may continue to use the former Study Notebook which is an earlier edition of the same reading. A copy of this reading is available from the CAS office at a cost of $3.00.)

Beard, R. E., Pentikainen, T. and Pesonen, E., *Risk Theory: The Stochastic Basis of Insurance* (Third Edition), 1984. Chapters 1, 2 (excluding 2.6 (d) and 2.9 (i)), 3 (3.1-3.3).
(c) INSURANCE EXPOSURES AND COVERAGE

The insurance policy is the contract describing the services and protection which the insurance company is providing to the insured. It is, in effect, the only "product" which the insurance buyer receives until the time a loss occurs. The candidate should know the policy provisions and the bases of exposure used in the respective lines of insurance, with emphasis on basic coverages and features common to all lines as well as those peculiar to specific lines or types.

†The candidate will be held responsible for knowledge of the following policy forms (not the associated endorsements) included in the study kit. Manual excerpts should be studied as illustrative of the part played by manuals in the forms, coverages and rating area.

Study Kit of Policies and Manuals, 1987. (Available from the CAS office at a cost of $10.00 per copy.) Contents include:

- Insurance Services Office:
  - Personal Automobile Policy. (Edition 6-80).

- Commercial General Liability Policy:

(d) UNDERWRITING, MARKETING AND CLAIM FUNCTIONS

Underwriting is a key function in the insurance business with unique qualities which make it critical to the success of the endeavor. Actuaries will often be working closely with underwriters in their day-to-day operations. The candidate should know what the underwriting function is—its basic purpose, principles and activities.

Product design and product modification are areas in an insurance company's operations in which an actuary may become involved with the marketing function of an insurance company as it relates to pricing, market research, and marketing philosophy. The candidate should be well versed in the responsibilities of the marketing function as well as the basic differences among different marketing systems for insurance products.

The settlement of claims determines losses which are the key component for insurance ratemaking and reserving. The actuary should know how claims are settled, relevant policy provisions and how loss reserves are established.

PART 6

Prior to commencing study for this Part, the candidate should read the “Recommendations for Study” section, pages 14 to 17, for study suggestions and guidance in obtaining the study kit, out-of-print readings, past examinations, and other information important to sitting for this examination.

Note: *Sharing the Risk* by Marks and Cuisine contains a basic introduction to insurance. Although this reference is not part of the required readings for Part 6, the candidate may find it useful to review this material as background for this examination. This reading is available from the Insurance Information Institute at a cost of $5.50. (Contact publisher)

References are listed in the suggested order for study. The “Study Kit on Ratemaking Developments”, listed for both Parts (a) and (b), should be studied in conjunction with several of the individual readings included in the Syllabus. For example, the Fire and Extended Coverage ratemaking sections should be read along with the Hurley paper.

(a) PRINCIPLES OF RATERE MAKING

Section (a) contains readings which describe ratemaking concepts in broad, general principles as well as in specific detail for many lines of insurance. Certain general subjects of particular importance, such as credibility theory, classification and individual risk ratemaking, trend and loss development factors, and liability increased limits ratemaking are addressed in separate papers.

A candidate for this examination should have a thorough understanding of the general, basic principles of ratemaking such that he or she can analyze data given, select an appropriate ratemaking technique and develop a solution to a numerical problem. In addition, the candidate should be familiar with the ratemaking techniques presented in the readings, being able to compare and discuss why certain procedures are applicable to individual lines of insurance, as well as to work numerical problems.

The candidate should also be prepared to discuss specialized concepts in ratemaking, such as trend and loss development, and consider their relationship to changes in the economic environment.

The candidate is not responsible for current, specific developments in ratemaking procedures. However, a study kit is provided which contains portions of recent rate filings along with pertinent explanatory memorandum. This information is provided so the candidate will be aware of certain current techniques not covered in the various readings. The candidate will be responsible for an understanding of the types of techniques, their application, and how they relate to changes in the economic and social environment.

The following list of topics is typical of those a candidate should be prepared to discuss:

1. The selection and evaluation of ratemaking techniques corresponding to the characteristics of a given line of insurance.
   a. pure premium versus loss ratio.
   b. calendar year versus accident year versus policy year.
   c. credibility, and
   d. territorial and classification relativities.

2. Methods for trending and projecting losses and premiums (when appropriate).
   a. internal versus external indices.
   b. relation to loss development.
   c. claim cost projection versus current cost index approach, and
   d. impact of deductibles, coinsurance and insurance to value programs.

3. The candidate should also be prepared to discuss and apply ratemaking principles to problems which may not have generally recognized solutions.

Longley-Cook, L. H., _An Introduction to Credibility Theory_, 1962. (Available from CAS office at cost of $3.00)

Head, G. L., *Insurance to Value*, 1971, Chapters 1, 2, 6-8, and Appendices 1-4.

†Study Kit on Ratemaking Developments, 1988. (Available from the CAS office at a cost of $25.00. An update to the 1986 study kit is available from the CAS office at a cost of $35.00.) The following study kit articles pertain to Section (a)-Principles of Ratemaking:

**NOTE 1** - Workers Compensation 1985 State X Rate Filing - Excerpts

**NOTE 2** - Expense Provisions in the Rates

**NOTE 3** - Automobile Physical Damage - Ratemaking

**NOTE 4** - Fire - Statewide Rate Level Analysis - Classification Relativity Analysis

**NOTE 5** - Extended Coverage - Statewide Rate Level Analysis - Classification Relativity Analysis

**NOTE 6** - Casualty Contingencies (Exposure Draft) Chapter 11 - "Classification Ratemaking"

**NOTE 7** - Surety Association of America - Ratemaking and Review Procedures

**NOTE 8** - Casualty Contingencies (Exposure Draft) Chapter 13 - "Deductibles, Excess Covers, and Coinurance Clauses"

**NOTE 12** - Group Insurance Premium Development

**NOTE 13** - Gross Premiums for Individual Health Insurance

(b) DATA FOR Ratemaking

Section (b) includes readings which cover the planning and use of internal statistical material, the compilation and presentation of insurance statistics for statistical and ratemaking purposes, and the sources and uses of external statistics, particularly as they may be required in insurance administration and ratemaking.

The candidate should be familiar with the data captured in the individual statistical plans, being able to compare the different plans, noting limitations and possible areas of improvement. The relationship to the various ratemaking techniques should be noted.

Study Kit on Ratemaking Developments. (This is the same study kit as required for Part (a)). The following study kit articles pertain to Section (b) - Data for Ratemaking:

**NOTE 2** - Policy Year and Calendar Year Calls for Compensation Experience by State as of December 31, 1983.

**NOTE 10** - Statistical Plans.

**NOTE 14** - Excerpts from Statistical Plans.

*This text is also on Page 3*.

*Study Kit *1988*

*Note 9 was deleted*

*Note 14 added*
PART 7

Prior to commencing study for this Part, the candidate should read the “Recommendations for Study” section, pages 14 to 17, for study suggestions and guidance in obtaining study notes, out-of-print readings, past examinations, and other information important to sitting for this examination.

The candidate should be prepared to answer questions regarding current developments in subjects covered by this examination. To prepare for this, the candidate should regularly read at least two general insurance periodicals. A list of the more important current events topics will be provided to students in advance of the exam. This list will cover the principal areas but may not cover every current event topic tested on the exam.

Section (a) of this examination deals with the analytical techniques which an actuary may employ to develop premium, loss and expense reserves. Section (b) deals with the form, content and interpretation of the two major reports an insurance company makes to regulatory authorities and with sources of comparative data.

(a) PREMIUM, LOSS AND EXPENSE RESERVES

An actuary may be expected to design and test reserving methods, and complete Schedules O and P of the Annual Statement. The candidate should be prepared to discuss such topics as:

1. The selection and evaluation of a loss reserving method appropriate to a given line of insurance:
   a. For known claims
   b. For IBNR claims
   c. For all incurred claims
2. Testing of adequacy of previous loss and loss expense reserve levels.
3. Evaluating the adequacy of current loss and loss expense reserve levels.
4. The identification of, and correction for, effects on loss reserves stemming from:
   a. Changes in the loss climate
   b. Changes in a company’s handling of claims
   c. Data problems
5. Special reserving problems in a line arising from:
   a. Catastrophe losses
   b. Reopened claims
   c. Policies on a claims-made rather than occurrence basis
   d. Fidelity and Surety IBNR
   e. Credit insurance

6. The unearned premium reserve:
   a. Improving its accuracy
   b. The reserve for retrospective returns
   c. Policies on a claims-made basis
   d. Deposit premium policies
7. Allocated loss expense reserves.
8. Unallocated loss expense reserves.

The candidate should be prepared to compare and evaluate the procedures discussed and the arguments advanced in the readings. The answers provided by the candidate will be graded based on their applicability to the specific problem presented and the professional competence evidenced by the answer. While the readings for this part provide the basic factual information necessary, practical experience has often proven helpful in successfully completing the examination.

Readings

Study Kit of Current Articles. 1986. (Available from the CAS office at a cost of $3.00).
2. AICPA, “Discounting Claims of Insurance Enterprises.”

Those pages and schedules of the Association form of the 1987 Annual Statement Blank for Fire and Casualty Companies which relate to reserves.

McClanahan, C. L., "A Mathematical Model for Loss Reserve Analysis," *PCIS*. 1975, p. 134. (The candidate will not be held responsible for notation or development of the formulas in this paper.)

Khury, C. K., "Loss Reserves: Performance Standards," *PCIS*. 1980, p. 1. (The candidate will not be responsible for notation or development of the formulas in this paper.)

(b) INSURANCE ACCOUNTING, EXPENSE ANALYSIS, AND PUBLISHED FINANCIAL INFORMATION

The candidate should obtain a general knowledge of insurance accounting, including its terminology and practice. A suggested basic accounting reference for candidates is the American Institute for Property and Liability Underwriters' CPCU 8 text, *Introduction to Accounting* by A. Thompson Montgomery. A suggested basic overview of insurance accounting is *Basic Concepts of Accounting and Taxation of Property/Casualty Companies*, a monograph by the Insurance Information Institute. The candidate should have detailed familiarity with the contents, purpose, and recent changes in the Annual Statement Blank and the Insurance Expense Exhibit. This includes a knowledge of the methods of preparation and interrelationships of the various exhibits, schedules, and parts comprising these reports. Instructions for preparation of the Annual Statements are available from the NAIC. Examination questions regarding preparation of the Annual Statement will not require the candidate to purchase the instructions. The candidate should understand the details and reasons for the differences between the accounting methods employed under statutory and GAAP accounting. The candidate should also understand the differences between the statistics included in these reports and those used for ratemaking and the various types of experience analysis. The candidate should be able to interpret and evaluate data from the reports, identify potential distortions in the data, and suggest possible means of adjusting for any distortions.

Readings

National Association of Insurance Commissioners, Proceedings, Financial Condition (EX4) Subcommittee Blanks Task Force for 1983 through 1987, as applicable to the Fire and Casualty Blank.

FELLOWSHIP EXAMINATIONS

PART 8

Prior to commencing study for this Part, the candidate should read the “Recommendations for Study” section, pages 14 to 17, for study suggestions and guidance in obtaining study notes, out-of-print readings, past examinations, and other information important to sitting for this examination.

The candidate should be prepared to answer questions regarding current developments in subjects covered by this examination. To prepare for this, the candidate should regularly read at least two general insurance periodicals. A list of the more important current events topics will be provided to students in advance of the exam. This list will cover the principal areas but may not cover every current event topic tested on the exam.

In each section, there is a body of core material for which each student will be responsible. The remaining material in the section is divided according to the country, either the United States or Canada, for which it is primarily relevant. The student may choose to be tested on either the material designated Canadian or the material designated as United States and must declare this choice at the time of registration. All students will be tested on the core material. An asterisk is shown beside the United States material and a diamond is shown beside Canadian material.

(a) INSURANCE LAW AND STATUTORY INSURANCE

Insurance law, statutory insurance, and regulation are subjects which are not strictly actuarial in nature, but which affect many areas of the actuary’s work. The candidate should understand the role of the insurance business as a supplier of an essential service. Because of the essential and highly technical nature of insurance, a system of regulatory controls has been established to require the industry to demonstrate that it is providing fair and reliable service.

Since no prior legal knowledge is assumed, the first section includes several readings on tort law. This material should provide background and a basic understanding of how tort law underlies the insurance contract.

This background material is followed by a study of insurance coverages mandated by statute or required by regulation. In reviewing the recommended readings the candidate should be aware of the modifications of the tort law system with the introduction of various “first party” compensation systems. In addition the candidate should be aware of the relationship of financial responsibility or compulsory insurance laws and various mechanisms for involuntary markets: e.g., assigned risk plans.

The workers’ compensation and employer’s liability systems are briefly introduced. The large variety of individually tailored state or provincial laws in workers’ compensation makes this area particularly difficult to master, but the
candidate should understand the basic concepts and structure common to the
diverse state or provincial statutes.

Finally, social insurance plans are presented. The candidate is expected to be
familiar with the basic principles and concepts underlying the Social Security
system in the United States or the social insurance systems in Canada and with
the general actuarial principles involved in the valuation of these systems. One
is not expected to have detailed knowledge of the current level of benefits or the
formulas used to calculate such benefits.

(b) REGULATION AND REGULATORY ISSUES

This section includes readings covering both the fundamentals of insurance regulation and a discussion of important issues that confront a regulator. The basis for insurance regulation is the law of the particular jurisdiction, either state, provincial or federal. The New York Insurance Law and various Canadian laws are included as typical laws that have evolved over time. In both the background material and in the law itself, the candidate should concentrate on those concepts of law which relate to the insurance contract, to the conduct of the business of insurance, and to the way insurance is marketed.

Judicial decisions interpreting the law are also an important component of insurance regulation. Several readings summarize significant cases which served to develop legal precedents.

In recent years, several reports have been issued examining the role of governments in insurance regulation. Excerpts from these reports are included on the syllabus so that the candidate can understand the unique nature of a state regulatory system, insurance's antitrust immunity and proposals for change in this immunity.

The candidate should be familiar with the major changes in rate regulation and the various approaches currently in use. The candidate should consider how well each style of rate regulation meets the basic objectives of regulation: insurer solvency, availability of insurance, and fair treatment of policyholders and claimants.

The candidate should be familiar with a wide range of issues that affect the attention of regulators: ratemaking, classification, shared markets, availability of insurance, insurer profitability, monitoring for solvency, guaranty funds (limiting the harmful effects of solvency if monitoring does not prevent it), insurance groups, policy language and unfair competition. The candidate should not only understand the importance of such areas for regulators but also the methods that are used to achieve regulatory goals.

The National Association of Insurance Commissioners is the central body of all state regulation. The NAIC meets regularly to consider current issues of concern. Typically, a task force and an advisory committee are established to make recommendations to a full committee and to the NAIC itself. These recommendations often take the form of a model law to be enacted by each affected state.

The NAIC Proceedings provides material on a wide range of subjects affecting insurance regulation. Before reading material listed on the syllabus it is suggested that the individual review the introductory portion of the Proceedings book and become familiar with the structure of the books and of the NAIC itself in order to facilitate location of the required information and trace its development through the various committees to ultimate resolution.

Although there are specific citations for the following topics, the candidate is also responsible for current developments:

i) Availability

ii) Guaranty Funds

iii) Nuclear Risk (Part 8a)

(1) Introduction to Regulation

Joskow, P. L., “Cartels, Competition and Regulation in the Property-Liability Insurance Industry,” (Available from the CAS office at a cost of $5.00.)

Mintel, J., Insurance Rate Litigation, 1983, Chapter 5. (The candidate will not be tested on details of cases mentioned only briefly, but will be responsible for knowledge of cases treated in some depth.)

*New York (State) Laws, Statutes, etc., New York Insurance Law, Articles 1-3 (except 303-313). (The candidate is responsible only for the sections of the law as stated. If studying from publications such as the Consolidated Laws Service, which cite case histories as well as the law itself, the candidate is not responsible for the case histories although they may be helpful in gaining an understanding of the law. Candidates will not be tested on those sections of the New York Laws dealing exclusively with life insurance and/or annuities.)

PART 9

Prior to commencing study for this Part, the candidate should read the "Recommendations for Study" section, pages 14 to 17, for study suggestions and guidance in obtaining study notes, out-of-print readings, past examinations, and other information important to sitting for this examination. This candidate should be prepared to answer questions regarding current developments in subjects covered by this examination. To prepare for this, the candidate should regularly read at least two insurance periodicals. A list of the more important current events topics will be provided to students in advance of the exam. This list will cover the principal areas but may not cover every current event topic tested on the exam.

(a) ADVANCED RATEMAKING

Candidates for this part are expected to have acquired considerable technical knowledge and practical experience in insurance ratemaking. In addition, they should keep in touch with current developments and problems in ratemaking. The examination will assume a working knowledge of basic ratemaking and will deal with advanced problems such as those covered in the papers listed below. The examination will not necessarily be limited to the excerpts expressed in the listed papers. The ability to apply ratemaking knowledge and experience may be tested through questions dealing with problems for which there are no generally recognized solutions. To some degree, they will deal with the types of practical problems which a fully qualified actuary working in ratemaking should be able to solve.

All the papers in this section should be read for illustrations of basic principles and theories, as well as any insights into advanced ratemaking problems and their solutions. In none of the papers is the derivation of formulas or equations to be stressed, but some applications of those techniques may be required. Some papers are included primarily for their historical significance or to illustrate unique solutions to a ratemaking problem.

Finger, R. J., "A Note on Basic Limits Trend Factors," PCAS LXIII, 1976, p. 106. Please note that one of the reviews appears in 1981.
American Academy of Actuaries Committee on Risk Classification, "Risk Classification Statement of Principles," June 1980.

(b) INDIVIDUAL RISK RATING

One of the most important functions performed by an actuary is the rating of individual risks. Prior to Part 9, most of the readings were addressed to group or classification risk rating. This part provides detail readings on individual experience risk rating so that the candidate will be prepared to design and manage an individual risk rating system.

Individual risk rating consists of two principal sections:

1) Prospective rating which is more commonly known as Experience rating.

2) Retrospective rating.

The readings range from those which discuss the theoretical foundation of individual risk rating to those which discuss the application of various plans. The candidate will be expected to have a working knowledge of credibility, loss limitation, and rate modification concepts as they apply to prospective and retrospective rating, and loss distribution, insurance charge and excess loss charge concepts as they apply to retrospective rating. The candidate can be expected to apply these concepts in a creative and problem solving manner.

The candidate is also expected to be knowledgeable in the application of individual risk rating plans currently in use (excluding individual state pages) and should anticipate answering questions in the manner of an insurance consultant for an insured. Finally, the candidate should be abreast of current developments and problems as they apply to individual risk rating.

Candidates unfamiliar with the general principles underlying individual risk rating plans should review Chapter 22 of the Kulp and Hall text, or the section on Merit Rating Plans in Chapter 10 of Insurance Company Operations, Volume II, from the American Institute for Property and Liability Underwriters before studying the required readings for this part. The candidate may gain a better understanding of the application of prospective and retrospective rating plans from John R. Stafford's books, Workers' Compensation Experience Rating and Retrospective Rating, but will not be held responsible for their contents. It is realized that parts of some technical articles cited in the recommended reading for this part are not current. However, the candidate should study all articles for their explanation of theory.

1) Experience Rating

Snader, R. H. "Fundamentals of Individual Risk Rating and Related Topics," Part I of Study Note. (This study note is available from CAS office at a cost of $3.00. Since it represents a compilation of several articles, it should be read in conjunction with the other readings of this section.)
The candidate should study the following rating plans and the forms used in the application thereof:

National Council on Compensation Insurance:

Insurance Services Office: Experience and Schedule Rating Plans (3/87 edition) applicable to:
General Liability (Included in Study Kit).

Surety Association of America:
Experience Rating Plan — Financial Institutions.

(2) Retrospective Rating

Snader, R. H., “Fundamentals of Individual Risk Rating and Related Topics,” Part II of Study Note (see comments in Section (1)).

The candidate should study the following retrospective rating plans and the forms used in the application thereof:

National Council on Compensation Insurance:

Insurance Services Office:
Retrospective Rating Plan for Automobile, General Liability, Glass and Theft (7/87 edition) (Included in Study Kit)

(3) Miscellaneous Rating

The candidate should study the following rating plans and the forms used in the application thereof:

Insurance Services Office:
Composite Rating Plan (2/86 edition) (Automobile, General Liability, Glass and Theft) (Included in Study Kit)

ISO Commercial Risk Services:
Commercial Fire Rating Schedule. Copyright 1985. (Included in Study Kit.)

(c) EXCESS RATING

This section deals with various techniques for risk sharing between an insured and an insurer.

The candidate should have a general knowledge and understanding of deductible and excess coverages, and the problems inherent in pricing these coverages for various lines.

†Finger, R. J., “Estimating Pure Premiums by Layer,” PCAS LXIII, 1976, p. 34.
PART 10

Prior to commencing study for this Part, the candidate should read the “Recommendations for Study” section, pages 14 to 17, for study suggestions and guidance in obtaining study notes, out-of-print readings, past examinations, and other information important to the candidate for this examination.

The candidate should be prepared to answer questions regarding current developments in subjects covered by this examination. To prepare for this, the candidate should regularly read at least two general insurance periodicals. A list of the more important current events topics will be provided to students in advance of the exam. This list will cover the principal areas but may not cover every current event topic tested on the exam.

Part 10 represents the final step in the examination process and is designed to test both the breadth and depth of the candidate’s understanding of the insurance process. The candidate is expected to have acquired considerable technical knowledge and practical experience during preparation for the previous examinations.

The required reading material for this examination is divided into four sections, each of which builds on information covered in previous examinations. Questions may be asked which require use of material mastered in preparation for these previous examinations.

(a) FINANCIAL OPERATIONS OF INSURANCE COMPANIES

This section explores the various relationships that exist between underwriting results, investment income, and taxes that arise out of the underwriting process and total operating income. The candidate is also expected to develop an appreciation of the varying standards employed in measuring overall operations from the perspective of the stockholder, the manager, the regulator and the policyholder. The candidate should be prepared to compare and evaluate the procedures discussed and the arguments advanced in the readings.

National Association of Insurance Commissioners, Measurement of Profitability and Treatment of Investment Income in Property and Liability Insurance, June 1970, Parts I, II, III (A: B: Sections 1-5 only, C), IV (A, C, D), V.

Brubaker, R.E., “A Constrained Profit Maximization Model for a Multi-Line Property/Liability Company,” Total Return Due a Property/Casualty Company, 1979 Casualty Actuarial Society Discussion Paper Program, p. 28. Candidate is not responsible for the detailed iterations in the exhibits. (1979 discussion papers are out of print; this article is available from the CAS library.)

Beckman, R. W., “Federal Income Taxes,” PCAS LVIII, 1971, p. 1. (Note: The student will not be responsible for specific questions regarding the tax law at the time this paper was written. The student is responsible for current tax law as included in Gleeson and Lenrow. This paper is to be studied for the analytic techniques it presents.)

(b) REINSURANCE

This section deals with various techniques for risk sharing between an insurer and a reinsurer.

The candidate should have a general knowledge and understanding of various types of reinsurance, the purpose and/or function of each type, reinsurance programs, reinsurer underwriting, the effects of reinsurance transactions on company operating results and other financial information, as well as methods employed to analyze costs.

†Strain, R. W., (Editor) Reinsurance, 1980, The College of Insurance. Chapters 3, 9, 12, 14, 21. (The student may find the following companion book helpful in preparing for this material: Reinsurance Practices—A Workbook with Cases.)
(d) VALUATION TOPICS

This section presents an introduction to several concepts involved in the valuation of insurance companies. The candidate is expected to develop an understanding of the various techniques presented in the readings and be able to apply these techniques in a problem-solving situation. Since the concept of valuation is a developing area of actuarial practice, the candidate should be prepared to compare and evaluate the procedures discussed and the arguments advanced in the readings.

†Leibowitz, M. L. and Weinberger, A., "Optimal Cash Flow Matching," 1985, Salomon Brothers, Inc. (Available from the CAS office at a cost of $5.00.)

(e) FORECASTING

In addition to employing forecasting techniques in both ratemaking and reserving, an actuary may be expected to develop both short and long range forecasts and to play a key role in the corporate planning process of an insurance company. This section is designed to familiarize the candidate with various techniques employed in forecasting and planning. It is intended to provide an understanding of the advantages and disadvantages of various forecasting methods, how to interpret statistical measures in evaluating various techniques, and the assumptions underlying each.

†Wheelwright, S.C. and Makridakis, S., *Forecasting Methods for Management* (Fourth Edition), 1985, Chapters 1-6, 9, 12 and 13. (Candidates are presumed to be familiar with the material on regression in chapters 7 and 8, which is also covered in the Miller and Wichern text on Part 3a-SOA Course 120.)

INDEX TO READINGS

Readings are available through the library of the Casualty Actuarial Society. However, the following information is furnished for those who wish to purchase the references.
