

By Rajesh Sahasrabuddhe

- Both subscripts of the numerator of the second term of the right side in Equation 3.10 should be  $i$ :

$$F_{i,j}^X = F_{n,j}^B \times \frac{LEV(X; \Phi_{i,\infty}) / LEV(B; \Phi_{i,\infty})}{R_j(X, B)} \quad (3.10)$$

- The paragraph that follows equation 3.10 should reference Equations 3.10 and 3.7 instead of 3.8 and 3.6, respectively.
- The cross references for columns (7) and (8) of Example 3 should be LEV [exponential(q);x]=  $\theta * (1 - \exp(-x/\theta))$
- The cross reference for column (10) of Example 3 should be “Selected.”
