PERSONAL STATEMENT:

There has been an increase in the number of insurers that encourage policyholders to use internet connected devices within the home, such as water sensors and smart thermostats. Some insurance companies have developed products that supply information from these devices that will be used for improving risk management, the claims process, marketing, and ratemaking. For insurance companies that are evaluating whether to adapt a similar program, what are some considerations in developing an effective program? What are the benefits and concerns of implementing this program?
