The syllabus for this four-hour exam is defined in the form of learning objectives, knowledge statements, and readings.

**LEARNING OBJECTIVES** set forth, usually in broad terms, what the candidate should be able to do in actual practice. Included in these learning objectives are certain methodologies that may not be possible to perform on an examination, such as complex simulations, but that the candidate would still be expected to explain conceptually in the context of an examination.

**KNOWLEDGE STATEMENTS** identify some of the key terms, concepts, and methods that are associated with each learning objective. These knowledge statements are not intended to represent an exhaustive list of topics that may be tested, but they are illustrative of the scope of each learning objective.

**READINGS** support the learning objectives. It is intended that the readings, in conjunction with the material on earlier examinations, provide sufficient resources to allow the candidate to perform the learning objectives. Some readings are cited for more than one learning objective. The CAS Syllabus & Examination Committee emphasizes that candidates are expected to use the readings cited in this Syllabus as their primary study materials.

Thus, the learning objectives, knowledge statements, and readings complement each other. The learning objectives define the behaviors, the knowledge statements illustrate more fully the intended scope of the learning objectives, and the readings provide the source material to achieve the learning objectives. Learning objectives should not be seen as independent units, but as building blocks for the understanding and integration of important competencies that the candidate will be able to demonstrate.

Note that the range of weights shown should be viewed as a guideline only. There is no intent that they be strictly adhered to on any given examination—the actual weight may fall outside the published range on any particular examination.

The overall section weights should be viewed as having more significance than the weights for the individual learning objectives. Over a number of years of examinations, absent changes, it is likely that the average of the weights for each individual overall section will be in the vicinity of the guideline weight. For the weights of individual learning objectives, such convergence is less likely. On a given examination, in which it is very possible that not every individual learning objective will be tested, there will be more divergence of guideline weights and actual weights. Questions on a given learning objective may be drawn from any of the listed readings, or a combination of the readings. There may be no questions from one or more readings on a particular exam.

After each set of learning objectives, the readings are listed in abbreviated form. Complete text references are provided at the end of this exam syllabus.

Items marked with a bold **OP** (Online Publication) are available at no charge and may be downloaded from the CAS website.

Please check the “Syllabus Updates” section of the CAS Web Site for any changes to the Syllabus.
A. Basic Techniques for Ratemaking

Range of weight for Section A: 45-55 percent

This section introduces the general principles of ratemaking as well as specific details regarding data requirements, calculations, key assumptions, and implementation-related issues. Candidates require a thorough understanding of basic ratemaking so that they will be able to analyze data, select appropriate techniques, and develop solutions to problems. This section addresses the advantages and disadvantages of the various ratemaking techniques as they are applied to specific situations and different lines of business. Classification of insureds for the purpose of risk stratification and other important ratemaking topics, such as coinsurance and catastrophe provisions, are also examined in this section.

- Werner & Modlin, Chapters 1, 3, 6, 12, 16, and Appendices A-D
### LEARNING OBJECTIVES

4. Calculate the underwriting expense provisions underlying the overall rate level indication.

<table>
<thead>
<tr>
<th>KNOWLEDGE STATEMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Expense categories (e.g., commission, general, other acquisition, taxes, licenses, and fees)</td>
</tr>
<tr>
<td>b. Sources of data and selection criteria</td>
</tr>
<tr>
<td>c. Profit and contingency provisions</td>
</tr>
<tr>
<td>d. Net cost of reinsurance</td>
</tr>
<tr>
<td>e. Cost of capital</td>
</tr>
<tr>
<td>f. Fixed expenses and variable expenses</td>
</tr>
<tr>
<td>g. Differences in procedures for loss adjustment expenses versus underwriting expenses</td>
</tr>
<tr>
<td>h. Permissible loss ratio</td>
</tr>
</tbody>
</table>

Range of weight: 0-5 percent

**READINGS**

- Werner & Modlin, Chapters 1, 7, and Appendices A-D

### LEARNING OBJECTIVES

5. Calculate the overall rate level indication using the pure premium and loss ratio methods and argue the merits of each.

<table>
<thead>
<tr>
<th>KNOWLEDGE STATEMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Assumptions of each method</td>
</tr>
<tr>
<td>b. Mechanics associated with each method (including organization of the data)</td>
</tr>
<tr>
<td>c. When each method works and when it does not</td>
</tr>
</tbody>
</table>

Range of weight: 3-6 percent

**READINGS**

- Werner & Modlin, Chapters 1, 8, and Appendices A-D
### LEARNING OBJECTIVES

**6.** Describe, analyze, and validate the considerations beyond the calculated cost-based estimate of the rate when selecting a final rate change to implement.

**KNOWLEDGE STATEMENTS**

- **a.** Calculated cost-based rate
- **b.** Regulatory constraints
- **c.** Operational constraints
- **d.** Marketing constraints:
  - Competitive comparisons
  - Close ratios
  - Retention ratios
  - Growth
  - Distributional analysis
  - Policyholder dislocation analysis
- **e.** Lifetime value analysis
- **f.** Optimized pricing
- **g.** Underwriting cycles

Range of weight: 0-5 percent

**READINGS**
- Werner & Modlin, Chapter 13

---

**LEARNING OBJECTIVES**

**7.** Explain the purpose for segregating data into homogeneous groups and summarize the considerations for determining such groups.

**KNOWLEDGE STATEMENTS**

- **a.** Standard of Practice, ASOP 12
- **b.** Criteria for selection of classification grouping
- **c.** Credibility
- **d.** Adverse Selection
- **e.** Practicality

Range of weight: 0-5 percent

**READINGS**
- ASOP 12
- Werner & Modlin, Chapter 9
## LEARNING OBJECTIVES

### KNOWLEDGE STATEMENTS

**8. Develop rating differentials for classification and territory and relatiivities for deductibles and increased limits.**

- a. Formulae and process for each rating differential or relativity
- b. Credibility and complements of credibility
- c. Off balance
- d. Capping of change
- e. Loss elimination
- f. Basic limits versus total limits
- g. Layers of loss
- h. Expense adjustments
- i. Shortcomings of Univariate Methods
- j. Benefits of Multivariate Methods
- k. Generalized Linear Models:
  - Output
  - Diagnostics, including Standard Errors, Deviance Tests, Chi-Square Test, and Consistency Test
  - Model Validation

Range of weight: 10-14 percent

### READINGS

- Werner & Modlin, Chapters 9-12, 15 and Appendices E-F

---

**9. Assess the considerations for implementing rates to achieve an organization’s goals.**

- a. Rating algorithms
- b. Rating variables and differentials
- c. Fixed expenses, if applicable
- d. Expense fee calculation
- e. Calculation of final rates
- f. Minimum premiums
- g. Non-pricing solutions

Range of weight: 0-3 percent

### READINGS

- Werner & Modlin, Chapter 14
### LEARNING OBJECTIVES

10. Calculate premium for policies with coinsurance provisions.

<table>
<thead>
<tr>
<th>KNOWLEDGE STATEMENTS</th>
</tr>

</tr>
<tr>
<td>e. Coverage issues</td>
</tr>
<tr>
<td>f. Guaranteed replacement cost</td>
</tr>
<tr>
<td>g. Formulae for coinsurance</td>
</tr>
</tbody>
</table>

Range of weight: 0-5 percent

### READINGS

- Werner & Modlin, Chapter 11

---

### LEARNING OBJECTIVES

11. Perform basic individual risk rating calculations.

<table>
<thead>
<tr>
<th>KNOWLEDGE STATEMENTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>a. Purpose of individual risk rating</td>
</tr>
<tr>
<td>b. Schedule rating</td>
</tr>
<tr>
<td>c. Manual rating</td>
</tr>
<tr>
<td>d. Retrospective rating</td>
</tr>
<tr>
<td>e. Experience modification</td>
</tr>
<tr>
<td>f. Composite loss-rated risks</td>
</tr>
<tr>
<td>g. Experience period</td>
</tr>
<tr>
<td>h. Credibility</td>
</tr>
<tr>
<td>i. Layers of loss</td>
</tr>
<tr>
<td>j. Large dollar deductibles</td>
</tr>
</tbody>
</table>

Range of weight: 0-5 percent

B. Estimating Claim Liabilities

Range of weight for Section B: 45-55 percent

This section explores basic techniques that actuaries use to estimate unpaid claims for both insurance entities and also for non-insurance entities that retain risk. The American Academy of Actuaries’ Standard of Practice related to the estimation of unpaid claims is also examined in this section.

<table>
<thead>
<tr>
<th>LEARNING OBJECTIVES</th>
<th>KNOWLEDGE STATEMENTS</th>
</tr>
</thead>
</table>
| 1. Describe, analyze, and validate the information requirements for estimating unpaid claims. | a. Types of data and their sources  
b. Role of homogeneity and credibility of data in the process of estimating unpaid claims  
c. Fundamentals of different types of insurance (e.g., long tail versus short tail lines of business, low frequency versus high frequency lines)  
d. Organization of data: calendar year, accident year, policy year, underwriting year, report year  
e. Insurer’s environment  
f. Importance of accurate estimates of unpaid claims |

Range of weight: 2-6 percent

READINGS
- Friedland, Chapters 1, 3, and 4
- ASOP 43

<table>
<thead>
<tr>
<th>LEARNING OBJECTIVES</th>
<th>KNOWLEDGE STATEMENTS</th>
</tr>
</thead>
</table>
| 2. Build and analyze claim development triangles. | a. Purposes of the development triangle  
b. Development triangle as a diagnostic tool  
c. Examples and uses of diagnostic development triangles:  
- Claim and claim count  
- Ratio of premium to claims  
- Average values triangles  
- Ratios of claims and counts |

Range of weight: 2-6 percent

READINGS
- Friedland, Chapters 5-6
### LEARNING OBJECTIVES

3. Construct and appraise unpaid claims estimates using each of the following estimation techniques:
   - Development technique, including case outstanding technique
   - Expected claim technique
   - Bornhuetter-Ferguson technique
   - Cape Cod technique
   - Frequency-Severity techniques
   - Benktander technique

   Range of weight: 14-20 percent

### KNOWLEDGE STATEMENTS

a. Standards of Practice, ASOP 43
b. The claim process
c. Assumptions of each estimation technique
d. Mechanics associated with each technique (including organization of the data)
e. Reporting and payment patterns
f. When each technique works and when each does not
g. Key terms: case outstanding, paid claims, reported claims, incurred but not reported, ultimate claims, claims related expenses, reported and closed claim counts, claim counts closed with no payment, insurance recoverables, exposures, experience period, maturity or age, and components of unpaid claim estimates

### READINGS

- Friedland, Chapters 1-12, and 15
- ASOP 43

---

### LEARNING OBJECTIVES

4. Assess the influence of operating changes on the estimation of unpaid claims.

   Range of weight: 0-5 percent

### KNOWLEDGE STATEMENTS

a. How internal operating changes affect estimates of unpaid claims:
   - Claims processing
   - Underwriting and policy provisions
   - Marketing
   - Coding of claim counts and/or claim related expenses
   - Treatment of recoveries such as policyholder deductibles and salvage and subrogation
   - Reinsurance

### READINGS

- Friedland, Part 3 (Chapters 6-15)
### LEARNING OBJECTIVES

5. Adjust data and/or estimation techniques for changes in the:
   - Internal environment (e.g., claims processes that result in shift in the adequacy of case outstanding or shift in settlement rates, change in mix of business, change in rate level)
   - External environment (e.g., inflationary or legal environment)

### KNOWLEDGE STATEMENTS

- a. Effect on estimation techniques due to change in: rate levels, claim ratio, mix of business
- b. Use of trend factors and tort reform factors in estimation techniques
- c. Identification of changes in case outstanding adequacy
- d. Adjustment for changes in case outstanding adequacy
- e. Identification of changes in rate of claims settlement
- f. Adjustment for changes in rate of claims settlement
- g. Berquist-Sherman techniques
- h. Adjustment for large losses

Range of weight: 5-9 percent

### READINGS

- Friedland, Chapters 7-14

---

### LEARNING OBJECTIVES

### KNOWLEDGE STATEMENTS

- a. Salvage and subrogation
- b. Reinsurance
- c. Key assumptions of estimation techniques

Range of weight: 0-5 percent

### READINGS

- Friedland, Chapter 14
## LEARNING OBJECTIVES

### KNOWLEDGE STATEMENTS

7. Estimate unpaid claim adjustment expenses.
   - a. Organization of the data
   - b. Estimation of unpaid ALAE
   - c. Estimation of unpaid ULAE
   - d. Key assumptions of estimation techniques
   - e. Strengths and weaknesses of the estimation techniques for claim related expenses

Range of weight: 2-7 percent

### READINGS

- Friedland, Chapters 1, 3, 16, and 17

---

8. Appraise and validate the results of the estimation process for adequacy and reasonableness.

Range of weight: 4-8 percent

### KNOWLEDGE STATEMENTS

- a. Components of evaluation:
  - Multiple methods
  - Explanation of differences
  - Test statistics (e.g., claim ratios, severities, pure premiums, frequencies, indicated unpaid claims)
- b. Monitoring and interim valuations

### READINGS

- Friedland, Chapter 15
