Paper Outline

- Introduction
- Notation
- The Hayne MLE Models
- Practical Issues (Algorithm Enhancements)
- Diagnostics
- Using Multiple Models
- Future Research
- Conclusions

Paper Outline

- **Practical Issues (Algorithm Enhancements)**
 - Negative Incremental Values
 - Standardized Residuals
 - Using an N-Year Average
- **Practical Issues (Algorithm Enhancements)**
 - Missing Values
 - Outliers
 - Heteroscedasticity
 - Heteroecthesious Data
 - Parameter Adjustments
 - Tail Extrapolation
 - Incurred Data

The Hayne MLE Models

- Start with a triangle of cumulative claim data:

| | | <i>d</i> | | | | | |
|----------|------------|----------|----------|----------|------------|------------|----------|
| | | 1 | 2 | 3 | ... | n-1 | n |
| <i>w</i> | 1 | c(1,1) | c(1,2) | c(1,3) | ... | c(1,n-1) | c(1,n) |
| | 2 | c(2,1) | c(2,2) | c(2,3) | ... | c(2,n-1) | |
| | 3 | c(3,1) | c(3,2) | c(3,3) | ... | | |
| | ... | ... | ... | | | | |
| | n-1 | c(n-1,1) | c(n-1,2) | | | | |
| | n | c(n,1) | | | | | |

- For Hayne MLE, we will use the incremental claim data:

| | | <i>d</i> | | | | | |
|----------|------------|----------|----------|----------|------------|------------|----------|
| | | 1 | 2 | 3 | ... | n-1 | n |
| <i>w</i> | 1 | q(1,1) | q(1,2) | q(1,3) | ... | q(1,n-1) | q(1,n) |
| | 2 | q(2,1) | q(2,2) | q(2,3) | ... | q(2,n-1) | |
| | 3 | q(3,1) | q(3,2) | q(3,3) | ... | | |
| | ... | ... | ... | | | | |
| | n-1 | q(n-1,1) | q(n-1,2) | | | | |
| | n | q(n,1) | | | | | |

The Hayne MLE Models

- We can also use an exposure adjustment – e.g., ultimate claim counts:

| | | <i>d</i> | | | | | | |
|----------|------------|----------|----------|----------|------------|------------|----------|------------|
| | | 1 | 2 | 3 | ... | n-1 | n | u |
| <i>w</i> | 1 | b(1,1) | b(1,2) | b(1,3) | ... | b(1,n-1) | b(1,n) | ⇒ b(1,u) |
| | 2 | b(2,1) | b(2,2) | b(2,3) | ... | b(2,n-1) | | ⇒ b(2,u) |
| | 3 | b(3,1) | b(3,2) | b(3,3) | ... | | | ⇒ b(3,u) |
| | ... | ... | ... | | | | | ... |
| | n-1 | b(n-1,1) | b(n-1,2) | | | | | ⇒ b(n-1,u) |
| | n | b(n,1) | | | | | | ⇒ b(n,u) |

- Adjusting for exposures, $A(w,d) = \frac{q(w,d)}{b(w,u)}$, we get average claim severity:

| | | <i>d</i> | | | | | |
|----------|------------|----------|----------|----------|------------|------------|----------|
| | | 1 | 2 | 3 | ... | n-1 | n |
| <i>w</i> | 1 | A(1,1) | A(1,2) | A(1,3) | ... | A(1,n-1) | A(1,n) |
| | 2 | A(2,1) | A(2,2) | A(2,3) | ... | A(2,n-1) | |
| | 3 | A(3,1) | A(3,2) | A(3,3) | ... | | |
| | ... | ... | ... | | | | |
| | n-1 | A(n-1,1) | A(n-1,2) | | | | |
| | n | A(n,1) | | | | | |

The Hayne MLE Models

- The Hayne MLE formulation is as follows:

$$A(w, d) = M(\boldsymbol{\theta})$$

$$E[A(w, d)] = \mu$$

$$\text{Var}[A(w, d)] = \frac{e^{\kappa} (\mu^2)^{\rho}}{N(w)} = e^{\kappa - \ln[N(w)]} (\mu^2)^{\rho}$$

Where: $\boldsymbol{\theta}$ = a parameter vector

$N(w)$ = exposures for year w

κ = a variance parameter

ρ = a variance parameter

- Model includes implicit structural heteroscedasticity for both w and d .

The Hayne MLE Models

- Five different model structures are defined:

- **Berquist-Sherman:**

$$E[A(w, d)] = f(d) \times e^{wG}$$

Where: $f(d)$ = average incremental by development period

G = constant accident period trend

- **Cape Cod:**

$$E[A(w, d)] = \begin{cases} G(1,1), & w = 1, d = 1 \\ G(1,1) \times G(w), & w > 1, d = 1 \\ G(1,1) \times f(d), & w = 1, d > 1 \\ G(1,1) \times G(w) \times f(d), & w > 1, d > 1 \end{cases}$$

Where: $G(1,1)$ = constant or scale

$G(w)$ = exposure year factors

$f(d)$ = development period factors

The Hayne MLE Models

- Five different model structures are defined:

- **Chain Ladder:**

$$E[A(w, d)] = \begin{cases} G(w) \times f(d), & w = 1, d < n \\ G(w) \times [1 - \sum_{d=1}^{d=n-1} f(d)], & w = 1, d = n \\ \frac{G(w) \times f(d)}{\sum_{k=1}^{k=n+1-w} f(k)}, & w > 1, d < n \\ \frac{G(w) \times [1 - \sum_{d=1}^{d=n-1} f(d)]}{\sum_{k=1}^{k=n+1-w} f(k)}, & w > 1, d = n \end{cases}$$

Where: $G(w)$ = cumulative value for accident period

$f(d)$ = development period factors

The Hayne MLE Models

- Five different model structures are defined:

- **Hoerl Curve:**

$$E[A(w, d)] = e^{G(1) + d \times f(1) + d^2 \times f(2) + \ln(d) \times f(3) + w \times G(2)}$$

Where: $G(1) = \text{constant level}$

$G(2) = \text{constant trend by accident period}$

$f(1), f(2), f(3) = \text{factors for development lags: } d, d^2, \ln(d)$

- **Wright:**

$$E[A(w, d)] = e^{G(w) + d \times f(1) + d^2 \times f(2) + \ln(d) \times f(3)}$$

Where: $G(w) = \text{level per accident period}$

$f(1), f(2), f(3) = \text{factors for development lags: } d, d^2, \ln(d)$

The Hayne MLE Models

- 1) Use Maximum Likelihood to solve for the model parameters, including the variance-covariance matrix
- 2) Sample new parameters using the multi-variate Normal distribution
- 3) Using sampled parameters, calculate sample mean and standard deviation for each incremental value (whole rectangle)
- 4) For each incremental value, generate random sample from mean and standard deviation for that cell using the Normal distribution
- 5) Multiply random sample for each cell times exposures
- 6) Sum future values to get total unpaid
- 7) Repeat steps 2) to 6) a significant number of iterations

The Hayne MLE Models

For “Berquist-Sherman” model:

- Here’s a simple example using a 6 x 6 triangle:

Cumulative Data

| | 1 | 2 | 3 | 4 | 5 | 6 |
|---|-----|-----|-----|-----|-----|-----|
| 1 | 95 | 150 | 170 | 200 | 215 | 220 |
| 2 | 110 | 160 | 175 | 205 | 210 | |
| 3 | 105 | 165 | 190 | 210 | | |
| 4 | 120 | 155 | 185 | | | |
| 5 | 130 | 170 | | | | |
| 6 | 125 | | | | | |

Incremental Data

| | 1 | 2 | 3 | 4 | 5 | 6 |
|---|-----|----|----|----|----|---|
| 1 | 95 | 55 | 20 | 30 | 15 | 5 |
| 2 | 110 | 50 | 15 | 30 | 5 | |
| 3 | 105 | 60 | 25 | 20 | | |
| 4 | 120 | 35 | 30 | | | |
| 5 | 130 | 40 | | | | |
| 6 | 125 | | | | | |

1) Actual Cumulative Data

2) Actual Incremental Data

The Hayne MLE Models

For “Berquist-Sherman” model :

- Here’s a simple example using a 6 x 6 triangle:

Exposures (Claim Counts)

| | 1 | 2 | 3 | 4 | 5 | 6 | <u>u</u> |
|----------|---|-------|-------|-------|-------|-------|----------|
| 1 | 5 | 9 | 11 | 13 | 14 | 15 | 15.0 |
| 2 | 7 | 11 | 13 | 15 | 16 | | 17.1 |
| 3 | 6 | 10 | 12 | 14 | | | 16.1 |
| 4 | 8 | 12 | 14 | | | | 18.8 |
| 5 | 6 | 10 | | | | | 15.9 |
| 6 | 7 | | | | | | 18.1 |
| Factors: | | 1.625 | 1.190 | 1.167 | 1.071 | 1.071 | |

Average Severity Data

| | 1 | 2 | 3 | 4 | 5 | 6 |
|---|------|------|------|------|------|------|
| 1 | 6.33 | 3.67 | 1.33 | 2.00 | 1.00 | 0.33 |
| 2 | 6.42 | 2.92 | 0.88 | 1.75 | 0.29 | |
| 3 | 6.53 | 3.73 | 1.56 | 1.24 | | |
| 4 | 6.40 | 1.87 | 1.60 | | | |
| 5 | 8.15 | 2.51 | | | | |
| 6 | 6.89 | | | | | |

3) “Use” Ultimate Exposures

4) “Average” Incremental Data

The Hayne MLE Models

For “Berquist-Sherman” model :

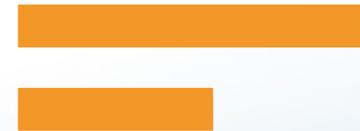

- Here’s a simple example using a 6 x 6 triangle:

Model Parameters from Maximum Likelihood Estimation

| | 1 | 2 | 3 | 4 | 5 | 6 |
|----------------|-------|-------|-------|-------|-------|-------|
| Mean | 6.644 | 2.889 | 1.310 | 1.624 | 0.653 | 0.277 |
| Std Dev | 0.643 | 0.312 | 0.196 | 0.246 | 0.189 | 0.180 |

| | Trend | K | p | AIC | BIC |
|----------------|-------|-------|-------|-------|-------|
| Mean | 0.005 | 0.556 | 0.450 | 57.71 | 61.02 |
| Std Dev | 0.024 | 0.439 | 0.180 | | |

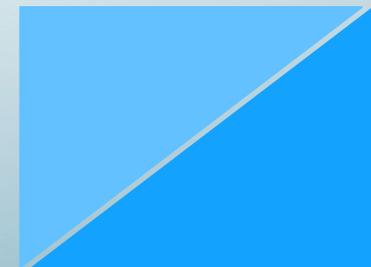

5) Estimate Model Parameters

Fitted Incremental Values

| | 1 | 2 | 3 | 4 | 5 | 6 | Future |
|---|------|------|------|------|------|------|--------|
| 1 | 6.68 | 2.90 | 1.32 | 1.63 | 0.66 | 0.28 | - |
| 2 | 6.71 | 2.92 | 1.32 | 1.64 | 0.66 | 0.28 | 0.28 |
| 3 | 6.74 | 2.93 | 1.33 | 1.65 | 0.66 | 0.28 | 0.94 |
| 4 | 6.78 | 2.95 | 1.34 | 1.66 | 0.67 | 0.28 | 2.61 |
| 5 | 6.81 | 2.96 | 1.34 | 1.67 | 0.67 | 0.28 | 3.96 |
| 6 | 6.85 | 2.98 | 1.35 | 1.67 | 0.67 | 0.29 | 6.96 |
| | | | | | | | 14.75 |

5) Fitted “Average” Incremental

The Hayne MLE Models

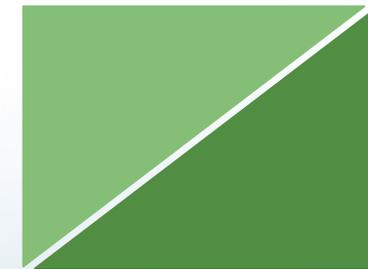

For “Berquist-Sherman” model :

- Here’s a simple example using a 6 x 6 triangle:

Fitted Incremental Variances

| | 1 | 2 | 3 | 4 | 5 | 6 | Future |
|---|------|------|------|------|------|------|--------|
| 1 | 0.80 | 0.55 | 0.39 | 0.42 | 0.28 | 0.19 | - |
| 2 | 0.75 | 0.52 | 0.36 | 0.40 | 0.26 | 0.18 | 0.18 |
| 3 | 0.78 | 0.53 | 0.37 | 0.41 | 0.27 | 0.19 | 0.33 |
| 4 | 0.72 | 0.50 | 0.35 | 0.38 | 0.25 | 0.17 | 0.49 |
| 5 | 0.78 | 0.54 | 0.38 | 0.42 | 0.28 | 0.19 | 0.65 |
| 6 | 0.74 | 0.51 | 0.35 | 0.39 | 0.26 | 0.18 | 0.80 |
| | | | | | | | 1.20 |

5) Fitted Incremental “Std Dev”

Random Parameters

| | 1 | 2 | 3 | 4 | 5 | 6 |
|------|--------|--------|--------|--------|--------|--------|
| Rand | 0.2744 | 0.3944 | 0.1414 | 0.6189 | 0.8761 | 0.4298 |
| Mean | 6.258 | 2.711 | 1.067 | 1.641 | 0.852 | 0.245 |
| | Trend | K | p | | | |
| Rand | 0.9616 | 0.1284 | 0.6877 | | | |
| Mean | 0.038 | 0.030 | 0.651 | | | |

6) Sample Random Parameters

The Hayne MLE Models

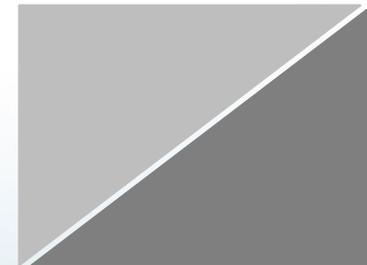

For “Berquist-Sherman” model :

- Here’s a simple example using a 6 x 6 triangle:

Incremental Values from Sample Parameters

| | 1 | 2 | 3 | 4 | 5 | 6 | Future |
|---|------|------|------|------|------|------|-------------|
| 1 | 6.50 | 2.82 | 1.11 | 1.70 | 0.88 | 0.25 | - |
| 2 | 6.75 | 2.92 | 1.15 | 1.77 | 0.92 | 0.26 | 0.26 |
| 3 | 7.01 | 3.04 | 1.19 | 1.84 | 0.95 | 0.27 | 1.23 |
| 4 | 7.27 | 3.15 | 1.24 | 1.91 | 0.99 | 0.28 | 3.18 |
| 5 | 7.55 | 3.27 | 1.29 | 1.98 | 1.03 | 0.30 | 4.59 |
| 6 | 7.84 | 3.40 | 1.34 | 2.06 | 1.07 | 0.31 | 8.17 |
| | | | | | | | <hr/> 17.44 |

7) Sample “Average” Incremental

Incremental Variances from Sample Parameters

| | 1 | 2 | 3 | 4 | 5 | 6 | Future |
|---|------|------|------|------|------|------|------------|
| 1 | 0.89 | 0.51 | 0.28 | 0.37 | 0.24 | 0.11 | - |
| 2 | 0.85 | 0.49 | 0.27 | 0.36 | 0.23 | 0.10 | 0.10 |
| 3 | 0.90 | 0.52 | 0.28 | 0.38 | 0.25 | 0.11 | 0.27 |
| 4 | 0.85 | 0.50 | 0.27 | 0.36 | 0.23 | 0.10 | 0.44 |
| 5 | 0.95 | 0.55 | 0.30 | 0.40 | 0.26 | 0.12 | 0.57 |
| 6 | 0.91 | 0.53 | 0.29 | 0.38 | 0.25 | 0.11 | 0.76 |
| | | | | | | | <hr/> 1.09 |

7) Sample Incremental “Std Dev”

The Hayne MLE Models

For “Berquist-Sherman” model :

- Here’s a simple example using a 6 x 6 triangle:

Sample Random Values

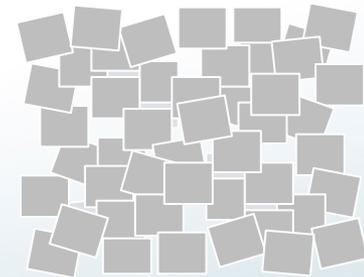

| | 1 | 2 | 3 | 4 | 5 | 6 |
|---|--------|--------|--------|--------|--------|--------|
| 1 | 0.9974 | 0.3210 | 0.6092 | 0.6171 | 0.3584 | 0.8885 |
| 2 | 0.4619 | 0.2849 | 0.4047 | 0.7240 | 0.2322 | 0.1297 |
| 3 | 0.4338 | 0.3252 | 0.2019 | 0.6761 | 0.6951 | 0.7265 |
| 4 | 0.4406 | 0.6977 | 0.8119 | 0.2503 | 0.4591 | 0.9582 |
| 5 | 0.3158 | 0.2606 | 0.4297 | 0.4608 | 0.4738 | 0.6451 |
| 6 | 0.1455 | 0.5928 | 0.6287 | 0.7430 | 0.8789 | 0.6591 |

Sample Incremental Values

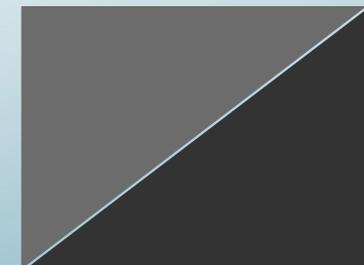

| | 1 | 2 | 3 | 4 | 5 | 6 |
|---|------|------|------|------|------|------|
| 1 | 8.97 | 2.58 | 1.19 | 1.81 | 0.80 | 0.39 |
| 2 | 6.67 | 2.64 | 1.09 | 1.98 | 0.75 | 0.15 |
| 3 | 6.86 | 2.80 | 0.96 | 2.01 | 1.08 | 0.34 |
| 4 | 7.15 | 3.41 | 1.48 | 1.67 | 0.97 | 0.46 |
| 5 | 7.10 | 2.92 | 1.24 | 1.94 | 1.01 | 0.34 |
| 6 | 6.88 | 3.52 | 1.43 | 2.31 | 1.36 | 0.35 |

| Future |
|--------|
| - |
| 0.15 |
| 1.42 |
| 3.10 |
| 4.53 |
| 8.97 |
| 18.16 |

8) Sample Random Values

8) Sample Incremental Values

The Hayne MLE Models

For “Berquist-Sherman” model :

- Here’s a simple example using a 6 x 6 triangle:

Sample Incremental Values x Exposures

| | 1 | 2 | 3 | 4 | 5 | 6 | Unpaid |
|---|-----|----|----|----|----|---|-----------|
| 1 | 135 | 39 | 18 | 27 | 12 | 6 | - |
| 2 | 114 | 45 | 19 | 34 | 13 | 3 | 3 |
| 3 | 110 | 45 | 15 | 32 | 17 | 5 | 22 |
| 4 | 134 | 64 | 28 | 31 | 18 | 9 | 58 |
| 5 | 113 | 47 | 20 | 31 | 16 | 5 | 72 |
| 6 | 125 | 64 | 26 | 42 | 25 | 6 | 163 |
| | | | | | | | <hr/> 318 |

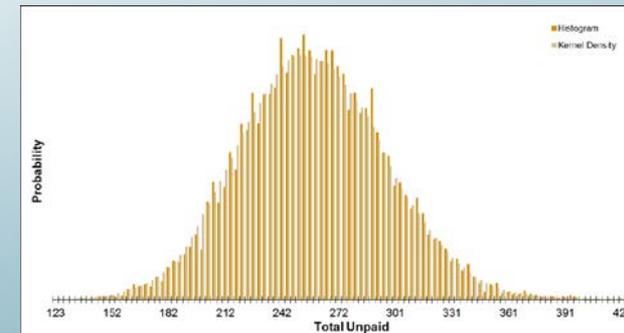

9) Convert to Unpaid

- Repeat steps 6 – 9 → 10,000 times!

Simulation Results

| | Mean | Std Dev | CoV | Min | Max | 75.0% | 99.0% |
|--------------|--------------|-------------|--------------|--------------|--------------|--------------|--------------|
| 1 | - | - | - | - | - | - | - |
| 2 | 4.7 | 4.7 | 100.0% | (31.0) | 33.0 | 8.0 | 17.0 |
| 3 | 15.1 | 7.4 | 48.6% | (25.0) | 48.0 | 20.0 | 33.0 |
| 4 | 48.8 | 12.3 | 25.2% | 2.0 | 106.0 | 57.0 | 79.0 |
| 5 | 63.1 | 13.5 | 21.4% | (2.0) | 119.0 | 72.0 | 96.0 |
| 6 | 126.0 | 20.0 | 15.9% | 56.0 | 224.0 | 139.0 | 175.0 |
| TOTAL | 257.8 | 38.5 | 14.9% | 123.0 | 420.0 | 283.0 | 352.0 |

Paper Outline

- Practical Issues (Algorithm Enhancements)
 - Negative Incremental Values
 - Standardized Residuals
 - Using an N-Year Average
 - Missing Values
 - Outliers
